VOLUME I

TRANSCRIPT OF RECORD

Supreme Court of the United States

OCTOBER TERM, 1961

No. 304

CONTINENTAL ORE COMPANY, ET AL.,
PETITIONERS,

vs.

UNION CARBIDE AND CARBON
CORPORATION, ET AL.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS
FOR THE NINTH CIRCUIT

PETITION FOR CERTIORARI FILED AUGUST 11, 1961
CERTIORARI GRANTED OCTOBER 23, 1961

No. 16149

United States
Court of Appeals
for the Ninth Circuit

CONTINENTAL ORE COMPANY, a Partnership, and HENRY J. LEIR, ERNA D. LEIR, LINA SCHLOSS, as Individuals and as partners under the trade name and style of CONTINENTAL ORE COMPANY,

Appellants,

vs.

UNION CARBIDE AND CARBON CORPORATION; UNITED STATES VANADIUM CORPORATION; ELECTRO METALLURGICAL COMPANY; ELECTRA METALLURGICAL SALES CORPORATION; ELECTRO METALLURGICAL COMPANY OF CANADA, LIMITED; VANADIUM CORPORATION OF AMERICA,

Appellees.

Transcript of Record

In Seven Volumes

VOLUME I.

(Pages 1 to 416, inclusive)

Appeal from the United States District Court
for the Northern District of California.
Southern Division

INDEX

[Clerk's Note: When deemed likely to be of an important nature, errors or doubtful matters appearing in the original certified record are printed literally in italic; and, likewise, cancelled matter appearing in the original certified record is printed and cancelled herein accordingly. When possible, an omission from the text is indicated by printing in italic the two words between which the omission seems to occur.]

Answer of Union Carbide and Carbon Corp. and U. S. Vanadium Corp.	26
Answer of Vanadium Corporation of America	34
Appeal:	
Certificate of Clerk to Transcript of Record on	106
Designation by Appellees Union Carbide Corp. et al of Record on (USCA)	2064
Notice of	105
Statement of Points and Designation of Record on (Appellants'—USCA)	2058
Stipulation and Order Re Exhibits on (USCA)	2056
Supplemental Designation of Appellees of Record on (USCA)	2067
Certificate of Clerk to Transcript of Record	106
Complaint	3
Designation of Record on Appeal:	
Appellants' (USCA)	2063
Appellees' (USCA)	2064
Appellees' Supplemental (USCA)	2067
Instructions Requested by Plaintiffs	42
Instructions Requested by Vanadium Corp. of America, et al	69, 99
Judgment	104

Names and Addresses of Attorneys 1
Notice of Appeal 105
Statement of Points and Designation of Record (Appellants'—USCA) 2058
Stipulation and Order re Exhibits (USCA) .. 2057
Transcript of Proceedings and Testimony ... 110

Exhibits for Plaintiffs:

6—Location of Mills, VCA and USVC 2069
Admitted in Evidence 116
7—Answer to Interrogatory No. 7 2072
Admitted in Evidence 116
8—Answer to Interrogatory No. 17 2073
Admitted in Evidence 117
11—Pricing Formula, September, 1944. Robison to Burwell 2075
Admitted in Evidence 120
Excerpts Read 361-364
12—Mining Claims on Vanadium Bearing Ore Owned by USVC 2088
Admitted in Evidence 122
22—Bureau of Mines Certificate, USVC, 5/28/58 2111
Admitted in Evidence 132
23—Bureau of Mines Certificate, VCA, 5/28/58 2112
Admitted in Evidence 132
33—Letter, 9/14/38, Van Fleet to Burwell 174-177, 339
34—Letter, 9/19/38, Van Fleet to Gormely, et al 199-206

Transcript of Proceedings—(Continued):
Exhibits for Plaintiffs—(Continued):
35—Letter, 11/2/41, Warren to Haldane, et al 2114
Excerpts Read 219-220
36—Letter, 9/24/41, Haldane to Weston, et al 228
37—Telegram, 2/29/44, Burwell to Haldane 243, 454, 593
38—Memo and Letter, 3/6/44, Haldane to Rafferty 2117
Excerpts Read 244
39—Letter, 3/21/44, Viles to Kett 2121
Excerpts Read 248
40—Request for Oxide, Continental to VCA, 11/16/43 271
41—Letter, VCA to Continental, 11/19/43 271-272
42—Request for Oxide, Continental to Electro Met & Reply, November, 1943 ..... 272-273, 543-544
44—Contract, 6/30/39, VCA and USVC ... 2122
Admitted in Evidence 282
45—Letter, 4/7/42, Burwell to VCA 2125
Admitted in Evidence 283
46—Letter and Agreement, 9/26/41, USVC and VCA 2126
Admitted in Evidence 294
Excerpts Read 548
55—Interoffice Memo, Sterling to Kett, 10/22/39 and Memo, Kett to Bransome, 10/3/38 2133
Admitted in Evidence 325

Transcript of Proceedings—(Continued):
Exhibits for Plaintiffs—(Continued):
56—Memos. Kett to Sterling, 9/12/39 and 6/26/40 2135
Admitted in Evidence 326
58—Letter, 1/22/48, Burwell to Kaiser 2141
Excerpts Read 532-534, 553
59—Press Release, Dec. 17, 1948, John K. Gustafson 535-536
59A—Portion of Press Release Read by Burwell 550-551
62—Special Report, 2/20/42, Laub 672, 1331
Letter, 3/14/42, Laub to Bransome, ...673, 1333, 1941
Spec. Report, 4/14/42, Laub ..675, 1334, 1945
Letter, 4/22/42, Sterling to Kett ...676, 2144
63—Letter, 3/11/40, Lippa to Vanadium Corp. of America 779, 1069, 1303, 1352
Letter, 4/8/40, Lippa to Vanadium Corp. of America 780, 1069, 1303, 1352
Letter of 4/20/40, from Laub to Apex 780, 1069, 1303, 1353
64—Agreement, 5/15/40, Anaconda and USVC 2147
Letter 12/1/42, USVC to Anaconda ... 2149
Excerpts Read 591-592
68—Letter, 9/1/38, Haldane from Van Fleet 2151
Excerpts Read 628-629, 1438-1441
69—Letter, 6/26/41, Kett to Bransome 2154
Admitted in Evidence 630
70—Letter, 8/31/41, Kett to Bransome 2156
Admitted in Evidence 630

Transcript of Proceedings—(Continued):
Exhibits for Plaintiffs—(Continued):
71—Letter, 6/13/40, Sterling to Kett 2157
Admitted in Evidence 631
72—Letter, 12/27/41, Weston to Haldane .. 2159
Admitted in Evidence 631
73—Letter, 5/10/44, Priestley to Du Dot, Remmers et al 2160
Excerpts Read 632
74—Toll Agreement, 1/26/43, USVC and Nisley & Wilson 2162
Admitted in Evidence 677
75—Telegram, 1/13/44, Nisley & Wilson to Continental 757-759
76—Letter, 1/31/44, Nisley & Wilson to Continental 762-763
77—Letter, 6/14/41, Leir to Roser 776
Letter, 6/16/41, Leir to Gormely 776-777
Letter, 7/31/41, Gormely to Leir 777-778
78—Interoffice Memo, 2/14/47, Gibbons to Girdler 780-781
Letter, 2/24/47, Girdler to Continental Ore 781-782
Letter, 3/7/47, Mirel to VCA 782-783
Letter, 3/13/47, Girdler to Continental .. 783
79—Sales Data of Continental, 1940-1944 ... 2169
Admitted in Evidence 797
80—(Iden.) Letter, 1/19/43, Leir - Walker 805-806
110—Letter-Contract, 1/4/44, Imperial P & C and Henry J. Leir et al 2175
Excerpts Read 1014

Transcript of Proceedings—(Continued):
Exhibits for Plaintiffs—(Continued):
111—Letter-Contract, 2/10/43, Climax and Continental 1016
113—Letter, 11/10/43, WPB to Haldane ... 1020
114—Letter, 12/5/44, Imperial to Continental 1022
115—Letter, 4/9/45, Imperial to Continental . 2179
Letter, 4/13/45, Imperial to Continental 2180
Letter, 5/11/45, Imperial to Continental 2181
Excerpts Read 1024
117—Letter, 9/4/40, Continental to Apex ... 2182
Letter, 9/9/40, Apex to Continental ... 2184
Letter, 5/24/41, Apex to Continental .. 2186
Copy of Agreement, 5/41, Apex and Continental 2187
Agreement, 7/1/38, Apex and Societe D'Electro-Chimie de Brignoud 2190
Excerpts Read 1051
118—Two Documents Showing Source of Continental Supply 2202
Admitted in Evidence 1066
119—Two Documents Showing Continental Sales of Vanadium 2212
Admitted in Evidence 1090
120—Statement of Continental Costs, Sales, Etc. 2213
Admitted in Evidence 1094
122—Correspondence re Termination of Apex Contract, February-March, 1942 2215
Excerpts Read 1188
Admitted in Evidence 1096

Transcript of Proceedings—(Continued):
Exhibits for Plaintiffs—(Continued):
127—Letter, 1/13/42, Continental to Apex ... 2222
Admitted in Evidence 1240
129—Letter, 10/27/41, Continental to Apex .. 2223
Letter, 12/19/41, Continental to Apex .. 2223
Letter, 12/22/41, Lippa to Continental . 2224
Admitted in Evidence 1240
130—Exchange of Correspondence, April, 1942, Apex and Continental re Sale of Equipment 2225
Admitted in Evidence 1241
131—Exchange of Correspondence re Blanding Mines, 1940-1942, ... 2229
Admitted in Evidence 1242
Excerpts Read 1752, 1756-1758, 1759-1760, 1801
132—Correspondence re Vanadium 1939-1941 —VCA 2252
Admitted in Evidence 1245
144—Apex Correspondence re Defense Plant Corp., 1941 2266
Excerpts Read 1310-1312
145—Letter, 12/20/41, DPC to Apex 1315
146—Exchange of Correspondence, Apex and OPM, 1941 2270
Excerpts Read 1317-1318
147—Letter, 9/17/43, Hill to Edwards 1563
148—Memo, 2/4/44, Hill to Edwards 1565
149—File of Documents, Maggie "C" 1939-1941 2276
Excerpts Read 1573

Transcript of Proceedings—(Continued):
Exhibits for Plaintiffs—(Continued):
150—Computation, USVC-VCA Business Maggie "C" 2322
Admitted in Evidence 1583
Excerpts Read 1584
153—Letter, 10/14/41, Holmes to Burwell .. 1650
156—Letter, 11/19/41, Milenski 1733
157—Agreement, 6/12/42, VCA and Blanding 2341
Excerpts Read 1792-1793
158—Letter, 3/17/44, Continental to Milenski 1787, 2353
Letter, 3/17/44, Continental to Milenski 2354
159—Letter, 2/23/42, Blanding to Apex 1805
160—Excerpt from Minutes of 5/7/42, Board of Directors of VCA 2355
Excerpts Read 1850
161—Telegram, 10/4/39, Jaoul Electro Chimie to Bransome 1882
162—Letter, 11/3/39, Electro Met to VCA ... 2356
Excerpts Read 1885
163—Cable, 11/8/39, VCA to Trochim 1887
164—Letter, 11/9/39, VCA to Societe d'Electro Chimie 1891
165—Cable, 12/14/39, Bransome to Trochim 1893-1894
166—Letter, 3/28/40, Bransome to Painvin .. 1899
171—Letter, 5/25/43, Bransome to Viles 1958

Transcript of Proceedings—(Continued):
Exhibits for Defendant Union Carbide and Carbon Co.:
A—Wire, 3/10/41, Burwell to Van Fleet . 358
B—Agreement, 2/25/42, USVC and Metals Reserve 2358
Excerpts Read 368-369
C—Agreement, 4/9/42, USVC and Metals Reserve 2363
Excerpts Read 371-373
D—Agreement, 5/9/42, USVC and Metals Reserve 2369
Excerpts Read 374-375
E—Agreement, 11/2/42, USVC and Metals Reserve 377-380
F—Letter, 10/2/42, Hill to Whitaker ..381-383
G—Letter, 10/12/42, USVC to Nisley & Wilson 384-385
H—Letter, 10/13/42, Hill to Smith 386-389
I—Letter, 10/22/42, Hill to Smith 2381
Admitted in Evidence 393
J—Letter, 11/19/42, Bridgman to USVC 2385
Admitted in Evidence 394
K—Letter, 11/25/42, Bridgman to USVC 2387
Excerpts Read 395-396
L—Telegram, 1/7/43, Burwell to Masters . 2390
Excerpts Read 398
M—Telegram, 1/19/43, Hill to Burwell .399-400
N—Letter, 5/4/43, Emigh to Continental Ore 402-403

Transcript of Proceedings—(Continued):
Exhibits for Union Carbide—(Continued):
O—Letter, 10/12/43, Emigh to Hill, w/ enc. 2391
Excerpts Read 404-406
P—Letters re Termination of Vanadium Program 408-414
Q—Letter Agreement, May 11, 1943, Union Mines Development Corp. and United States of America 2397
Excerpts Read 418-421, 438-441
R—Report of Operations of USVC of 11/30/43 and Letter of 12/20/43 2410
Admitted in Evidence 437
S—Burwell Report, 2/25/46 "Historical Outline" 445-447
T—Letter, 10/4/44, Burwell to Smith 2417
Excerpts Read 450
U—Agreement, 10/13/44, U. S. Vanadium Corp. and Metals Reserve Co. 2418
Admitted in Evidence 452
V—Contract No. W-7405 eng-201, 9/1/43, Between United States and U. S. Vanadium Corp. 459-460
Y—Letter, 5/5/44, Hadlock to Colorado Area Engineer 464
Z—Letter, 7/3/44, Metals Reserve to Union Mines 2430
Excerpts Read 466
2-A—Letter, 5/20/47, Metals Reserve to Union Mines 2433
Excerpts Read 467-468

Transcript of Proceedings—(Continued):
Exhibits for Union Carbide—(Continued):

For Appellees.

In the District Court of the United States, Northern District of California, Southern Division

No. 29008H

CONTINENTAL ORE COMPANY, a partnership; and HENRY J. LEIR, ERNA D. LEIR, LINA SCHLOSS, as individuals and as partners under the trade name and style, CONTINENTAL ORE COMPANY, Plaintiffs,

vs.

UNION CARBIDE AND CARBON CORPORATION, UNITED STATES VANADIUM CORPORATION, ELECTRO METALLURGICAL COMPANY, ELECTRO METALLURGICAL SALES CORPORATION, ELECTRO METALLURGICAL COMPANY OF CANADA, LIMITED, VANADIUM CORPORATION OF AMERICA, DOE ONE, DOE TWO, DOE THREE, DOE FOUR, DOE FIVE, DOE SIX, and DOE SEVEN, Defendants.

COMPLAINT

The above-named plaintiffs bring this action against the above-named defendants, and for claim of relief, they complain and allege as follows:

I.

Jurisdiction and Venue

1. This complaint is filed and these proceedings are instituted against the above-named defendants

under Section 15 of Title 15 U.S.C.A., being a part of the Act of Congress of July 2, 1890, c.649, 26 Stat. 209, as amended, entitled "An Act to Protect Trade and Commerce Against Unlawful Restraints and Monopolies," commonly known as the Sherman Act and the Clayton Act.

2. Each of the corporate defendants transacts business, maintains offices and may be found in San Francisco, California.

II.

Description of the Parties

3. The Continental Ore Company is a partnership composed of Henry J. Leir, Erna D. Leir and Lina Schloss, all of New York City, New York. It is successor in interest to the Continental Ore Corporation which was incorporated under the laws of the State of New York on June 16, 1939. On May 5, 1942, Henry J. Leir, Erna D. Leir and Lina Schloss, the sole stockholders in Continental Ore Corporation, formed a partnership under the name of Continental Ore Company. On October 10, 1942, the said partnership acquired all of the assets and assumed all of the liabilities of the Continental Ore Corporation, which was dissolved on the same date. Continental Ore Corporation and its successor partnership, Continental Ore Company, hereinafter referred to as "Continental," have been engaged in the business of manufacturing and distributing ferro-alloys and of distributing non-ferrous minerals, ores and metals.

4. Union Carbide and Carbon Corporation (here-

inafter referred to as "Union Carbide") is hereby made a defendant herein. Union Carbide is a corporation organized and existing under the laws of the State of New York, with its principal place of business at 30 East 42nd Street, New York, New York.

5. United States Vanadium Corporation (hereinafter referred to as "U.S.V.") is hereby made a defendant herein. U.S.V. is a corporation organized and existing under the laws of the State of Delaware, with its principal place of business at 30 East 42nd Street, New York, New York. All of the stock of U.S.V. is, and at all times hereinafter mentioned has been, owned by the defendant Union Carbide.

6. Electro Metallurgical Company (hereinafter referred to as "Electromet") is hereby made a defendant herein. Electromet is a corporation organized and existing under the laws of the State of West Virginia, with its principal place of business at 30 East 42nd Street, New York, New York. All of the stock of Electromet is, and at all times hereinafter mentioned has been, owned by the defendant Union Carbide.

7. Electro Metallurgical Sales Corporation (hereinafter referred to as "Electromet Sales") is hereby made a defendant herein. Up to March 14, 1949, Electromet Sales was a corporation organized and existing under the laws of the State of New York, with its principal place of business at 30 East 42nd Street, New York, New York. All of the stock of Electromet Sales was owned by the defendant Union Carbide. On March 14, 1949, Electromet Sales merged into Union Carbide.

8. Electro Metallurgical Company of Canada, Limited (hereinafter referred to as "Electromet of Canada") is hereby made a defendant herein. Electromet of Canada is a corporation organized and existing under the laws of the Dominion of Canada, and maintains offices at 30 East 42nd Street, New York, New York. All of the stock of Electromet of Canada is, and at all times hereinafter mentioned has been, owned by the defendant Union Carbide.

9. Vanadium Corporation of America (hereinafter referred to as "V.C.A.") is hereby made a defendant herein. V.C.A. is a corporation organized and existing under the laws of the State of Delaware, with its principal place of business at 420 Lexington Avenue, New York, New York.

10. The true names or capacities, whether corporate, associate or otherwise, of defendants, Doe One, Doe Two, Doe Three, Doe Four, Doe Five, Doe Six and Doe Seven, are unknown to plaintiff, and plaintiff therefore designates them by such fictitious names, and when their true names are discovered, this complaint will be amended accordingly.

11. Whenever it is hereinafter alleged in this complaint that any defendant corporation did any act or thing, such allegation shall be deemed to mean that the officers, agents, and employees of the said defendant authorized, ordered or did such act or thing for and on behalf of said defendant corporation while actively engaged in the management, direction, control and operation of the business affairs of said corporation.

III.

Nature of the Trade and Commerce

A. The Commodity and Its Uses

12. Vanadium is a metallic element which is principally used as an alloy in steel. The addition of vanadium to steel increases the tensile and torsional strength of the steel and imparts toughness thereto. Vanadium steels are used in the manufacture of high-speed tools, armor plate, locomotive axles, drills, piston rods, transmission shafts, gun barrels, automobile parts, steel castings, springs, bolts, nuts, tubing, airplane propellers, crankshafts, and various other steel products. Minor quantities of vanadium are used in the chemical industry as a catalyst, in the ceramics industry, and for other industrial purposes.

13. The largest consumers of vanadium in the United States are steel manufacturers, and most of the vanadium used in steel is in the form of ferrovanadium, which is a mixture of iron and vanadium in which the vanadium content ranges from 35 per cent to 80 per cent.

14. The principal source of vanadium is vanadium-bearing ore, although minor quantities of vanadium have been produced from soot and flue dust collected from marine boilers burning Venezuelan and Mexican oils. During the period from 1933 to June 1, 1946, a major part of all vanadium produced in the United States was produced from vanadium ore bodies lying in the western part of the State of Colorado, the eastern part of the State

of Utah, and the northern parts of the States of New Mexico and Arizona. A substantial part of all vanadium consumed in the United States was produced in this country during said period from vanadium-bearing ores and concentrates imported into this country from Peru. Some vanadium was produced as a by-product of mining operations conducted primarily for other minerals.

15. The vanadium contained in vanadium-bearing ores and other vanadium-bearing materials is extracted therefrom in the form of vanadium oxide, which is a material containing a chemical mixture of vanadium and oxygen, combined with a minor amount of sodium and other impurities. Vanadium oxide is converted to ferro-vanadium in electric furnaces or through an alumino-thermic process. Most vanadium oxide produced in this country is converted to ferro-vanadium.

16. Vanadium-bearing ore mined in the States of Colorado, Utah, Arizona and New Mexico has been sold and shipped in interstate commerce to the defendants in Colorado and other states of the United States. Vanadium oxide produced in the States of Colorado and Pennsylvania has been sold and shipped by the defendants in interstate commerce to the States of New York, Pennsylvania, Ohio, West Virginia and Illinois and other States of the United States, and in foreign commerce to purchasers in foreign nations. Ferro-vanadium produced in New York, Pennsylvania, Ohio, West Virginia, and Illinois has been sold and shipped by the defendants in interstate commerce to steel produc-

ers and other purchasers in numerous states of the United States other than the state in which the same was produced and in foreign commerce to foreign nations.

B. Background of the Industry

I. V.C.A.

17. In or about 1911, V.C.A. entered the vanadium business by the purchase of vanadium-bearing ore bodies in the Republic of Peru and a ferro-vanadium plant at Bridgeville, Pennsylvania. In addition to its Peruvian deposits, V.C.A. acquired, prior to the year 1931, extensive vanadium ore deposits and a vanadium oxide mill site in the State of Colorado. V.C.A. has produced vanadium oxide and ferro-vanadium in its plant in Pennsylvania from ores mined in Peru, Colorado, Utah, New Mexico and Arizona and from flue dust, vanadium oxide and other vanadium-bearing materials purchased by V.C.A.

18. Prior to the year 1931, V.C.A. depended almost entirely for a source of vanadium on ores produced from its properties in Peru, which were shipped from Peru to V.C.A.'s ferro-vanadium plant at Bridgeville, Pennsylvania. During the years 1931, 1932 and 1933, V.C.A. made no substantial imports of vanadium-bearing ores from Peru and did not resume importation on any large scale until the year 1937. This cessation of imports was due in part to the imposition by Peru in 1931 of an export tax on vanadium ore and in part to the fact

that during the same year the grade of ore mined in the Peruvian mines of V.C.A. changed to an extent that required the development of new concentration processes. In the year 1939, V.C.A. commenced the mining of vanadium ore in the United States and the production of vanadium oxide therefrom by constructing and operating a vanadium oxide mill in Colorado.

II. Union Carbide and Subsidiaries

19. In 1926, Union Carbide acquired vanadium bearing ore deposits and a vanadium oxide mill near Rifle, Colorado, and a ferro-vanadium plant in Ohio. U.S.V. was organized as a wholly-owned subsidiary of Union Carbide to acquire, develop, and mine vanadium-bearing ore deposits, to purchase ore, and to produce vanadium oxide. In 1927, U.S.V. commenced the production of vanadium oxide at the Rifle mill. In 1936, U.S.V. constructed an additional vanadium oxide mill in Colorado and in 1937 began producing vanadium oxide in that mill.

20. Vanadium oxide produced by U.S.V. in Colorado was shipped for conversion into ferro-vanadium to plants in Ohio, New York, and West Virginia which were operated by Electromet and U.S.V. Ferro-vanadium produced by Electromet and U.S.V. has been transferred to Electromet Sales for sale to purchasers in many states of the United States and foreign countries. Some of the vanadium oxide produced by U.S.V. has been trans-

ferred to Electromet Sales for sale to purchasers in the United States and foreign countries. Union Carbide coordinates the activities of its aforesaid subsidiaries, and participates in the formulation of the policies of said subsidiaries. A major part of all vanadium sold by Electromet Sales has come from vanadium oxide produced in Colorado by U.S.V., although Electromet has produced some vanadium oxide from vanadium-bearing materials purchased from other sources, and both U.S.V. and Electromet have purchased vanadium oxide produced by others.

III. Independent Producers

21. Until about the year 1936, very little, if any, vanadium-bearing ore was mined in the States of Colorado, Utah, Arizona, and New Mexico primarily for its vanadium content, with the exception of that mined by U.S.V. in connection with its vanadium oxide mill at Rifle, Colorado. In the year 1936, independent mine owners and producers in said states commenced the mining of vanadium-bearing ores primarily for their vanadium content. Between 1937 and 1939, U.S.V. and V.C.A. started to purchase vanadium-bearing ores mined by independent producers in the Colorado-Utah area.

22. During the period from 1936 to 1943, inclusive, various small independent vanadium oxide mills produced vanadium oxide in the Colorado-Utah area. Most of the vanadium oxide produced in these oxide mills up to the summer of 1940 was sold in the foreign market. Thereafter, most of the

vanadium oxide produced by independent producers was sold to U.S.V. and V.C.A.

23. During the period from 1929 to the date of the filing of this complaint, Electromet and V.C.A. were the only producers of ferro-vanadium in the United States with the exception of the years 1936, 1937 and 1940 to 1944, when small amounts of ferro-vanadium were produced by other companies including Continental.

C. Control of the Industry

24. During the period from 1933 to the date of the filing of this complaint, Electromet, U.S.V. and V.C.A. produced over 99 per cent of all ferro-vanadium produced in the United States, and during said period, V.C.A. and Electromet Sales sold in excess of 99 per cent of all ferro-vanadium sold and consumed in the United States.

25. During the period from 1933 to the date of the filing of this complaint, V.C.A. and U.S.V. produced over 90 per cent of all vanadium oxide produced in the United States, and during said period Electromet Sales and V.C.A. sold approximately 99 per cent of all the vanadium oxide sold and consumed in the United States.

26. During the period from 1933 to the date of the filing of this complaint, V.C.A. sold approximately two-thirds of all ferro-vanadium and vanadium oxide sold by defendants, and Electromet Sales sold approximately one-third of all said ferro-vanadium and vanadium oxide.

IV.

The Combination and Conspiracy

27. Beginning in or about 1933 and continuing thereafter up to the date of the filing of this complaint, the defendants and others acting in concert with them have violated and are now violating Sections 1 and 2 of the Sherman Act by unlawfully contracting, combining and conspiring to monopolize, monopolizing and attempting to monopolize and by unlawfully contracting, combining and conspiring to restrain trade and commerce among the several states and with foreign nations in ferro-vanadium and vanadium oxide.

28. The said unlawful conspiracy to monopolize, monopoly and attempts to monopolize, contracts, combinations and conspiracies to restrain trade and commerce in the production, sale and distribution of ferro-vanadium and vanadium oxide have consisted and do consist of a continuing agreement and concert of action among the defendants, the substantial term of which agreement and the means of such concert of action being as follows:

(a) That the defendants control and dominate the production of vanadium ore and the production and sale of ferro-vanadium and vanadium oxide by:

(1) Purchasing or acquiring control over substantially all commercially available vanadium-bearing ore deposits in the United States and substantially all vanadium oxide produced by others in the United States;

(2) Refusing to sell vanadium oxide to other pro-

ducers or potential producers of ferro-vanadium in the United States or to purchasers for resale in the United States;

(3) Entering into annual requirement contracts with the principal purchasers of ferro-vanadium in the United States so as to preclude others from securing the business of such purchasers;

(4) Depriving other producers of vanadium oxide of a competitive market for their vanadium oxide.

(b) That defendants eliminate and suppress competition between themselves and with others in the production and sale of vanadium oxide and ferro-vanadium, by:

(1) Apportioning and dividing sales of ferro-vanadium and vanadium oxide in the ratio of approximately two-thirds to V.C.A. and one-third to Electromet Sales;

(2) Assisting each other to maintain their control and domination over the sale of ferro-vanadium and vanadium oxide and their respective percentages of the sales thereof by supplying or helping to provide each other with necessary supplies of vanadium-bearing ore and vanadium oxide to enable them to carry out the allocation and division of sales aforesaid:

(3) Fixing identical prices for the sale of ferro-vanadium and vanadium oxide and for the purchase of vanadium-bearing ore;

(4) Refraining from competing with each other in making purchases of or otherwise acquiring control over vanadium oxide produced by others.

(c) That the defendants agree among themselves to fix prices for the sale of ferro-vanadium and vanadium oxide, and for the purchase of vanadium-bearing ore.

29. To effectuate the aforesaid combination and conspiracy, and as a part thereof, the defendants throughout the period from 1933 to the date of the filing of this complaint, regularly and continuously did the things which they agreed to do, as aforesaid, and more specifically, among others, did the following things:

(a) Agreed that Electromet Sales and U.S.V. would supply V.C.A. with large quantities of vanadium oxide to enable V.C.A. to maintain its position as the largest seller of ferro-vanadium and vanadium oxide in the United States, and that prices for ferro-vanadium and vanadium oxide would be raised. Pursuant to said agreement, the following things, among others, were done:

(1) Electromet Sales, between 1933 and 1939, inclusive, supplied V.C.A. with several million pounds of vanadium oxide at prices substantially below those charged to other purchasers during said period;

(2) Between 1939 and 1942, U.S.V. produced vanadium oxide from ore mined by U.S.V. from V.C.A. ore bodies, and during 1939 and 1940 delivered vanadium oxide to V.C.A. at a cost to V.C.A. below the prices charged for vanadium oxide to other purchasers;

(3) V.C.A. utilized the vanadium oxide obtained from Electromet Sales and U.S.V. to meet orders from its customers and continued to sell approximately two-thirds of all ferro-vanadium and vanadium oxide sold by the defendants to consumers in the United States and foreign countries;

(4) Prices for ferro-vanadium and vanadium oxide to purchasers other than the defendants themselves were increased by the beginning of 1934 and were maintained at the increased levels from that time to the date of the filing of this complaint.

(b) Throughout the period from 1939 to the date of the filing of this complaint, U.S.V. and V.C.A. agreed upon the prices to be paid by them to independent miners for vanadium ore, and purchased vanadium ore at said prices.

V.

Elimination of Continental From Vanadium Industry

30. One of the direct effects proximately caused by the monopolistic practices herein alleged, as intended by defendants, was the elimination from the industry of independent producers and distributors of ferro-vanadium and vanadium oxide. One of the companies so eliminated from the industry was Continental. The acts and practices leading to the restraint upon the trade of Continental were as follows:

31. The plaintiff Henry J. Leir has been engaged in the alloy metal business for a great many years.

In 1933 Henry J. Leir and his wife organized a Luxemburg firm in the alloy metal field which operated under the trade-name and style of "Societé Anonyme Des Minerais," hereinafter called "Minerais." The principal business operations of this firm took place in France and Belgium up to 1939.

32. In January, 1938, plaintiff Henry J. Leir visited the United States and, shortly thereafter, entered into a contract with the Apex Smelting Company of Chicago, hereinafter called "Apex." The contract is dated July 1, 1938 between Minerais and Apex. Under the terms of the said contract, Minerais granted to Apex rights to a secret, high-vanadium content ferro-vanadium process. Net profits were to be divided equally between the contract parties, the contract to run for fourteen years with a provision that Apex should have the right to cancel in the event that in any two successive years it failed to make a net profit from the business of Seven Thousand Five Hundred Dollars ($7,500) a year. At the same time, Apex and Minerais entered into a contract whereby Henry J. Leir agreed to handle the ferro-vanadium sales for Apex on a commission basis and Henry J. Leir further agreed to secure vanadic acid supplies for Apex. In the meantime, as hereinbefore stated, the Leirs had organized the Continental Ore Corporation which became, in place of Henry J. Leir, the exclusive sales agent for Apex throughout the United States except for the states of Indiana, Illinois, Wisconsin and California.

33. By virtue of the monopolization of vanadium-bearing ores and vanadic acid, as hereinbefore alleged, and the refusal of Union Carbide and V.C.A. to sell Apex, Apex was unable to operate profitably for the specific reason that it was unable to obtain vanadic acid, and was thus compelled to cease manufacture of ferro-vanadium. Until Apex and Continental were stopped, Apex produced and Continental distributed substantial quantities of ferro-vanadium. Operations under the contract with Apex extended from the spring of 1940 to the spring of 1942.

34. Continental started to ship vanadium compounds from premises they had rented on Long Island, New York, in August of 1942. It made substantial shipments of ferro-vanadium both in the United States and to Canada from the Long Island location, where it had installed grinding and mixing machinery. Its business in Canada was effectively eliminated by defendants as hereinafter more fully stated. The monopolistic practices of defendants made difficult the purchase of the raw materials by Continental from which to process vanadium compounds, and finally in 1944, Continental discontinued shipping from its Long Island location because the difficulty of securing raw materials rendered it commercially impossible to operate profitably. In their efforts to deprive Continental of access to vanadium-bearing ores and vanadium oxide, the defendants acquired ownership or control of deposits and mills of Continental's suppliers and agreed to and did carry on preemptive buying pro-

grams featuring premium payments to established and potential suppliers of Continental.

35. In the spring of 1944, Continental entered into a contract with Imperial Paper and Color Corporation of Glen Falls, New York, hereinafter called "Imperial," whereby Imperial agreed to process ferro-vanadium and vanadium oxide and Continental agreed to act as sales agent for its entire output, in addition to undertaking to secure the necessary raw materials. At the end of the year 1944, Imperial was compelled to abandon the contract with the consent of Continental because of the inability of Imperial or Continental to secure vanadium oxide or vanadium-bearing ores. Throughout this period of time, Continental had secured orders for all of the ferro-vanadium to be produced by Imperial and/or Apex, but it was unable to fill the said orders because of the inability to secure ferro-vanadium for lack of the raw materials.

36. As a further part of the conspiracy to restrain and monopolize, as hereinbefore alleged, defendants agreed to allocate the Canadian market among themselves and to preclude Continental from serving established Canadian customers and from spreading its sales to other Canadian firms. Throughout the year 1942, Continental shipped to Atlas Steels Limited of Canada, hereinafter called "Atlas," substantial quantities of its vanadic acid under the trade name of Van-Ex and substantial quantities of a high content ferro-vanadium (seventy to eighty per cent vanadium) which it pro-

duced. The product of Continental was preferred by Atlas and other Canadian customers because of its high-vanadium content. The ferro-vanadium produced by V.C.A. and U.S.V. contained only thirty-five to forty per cent vanadium. Continental was eliminated from the Canadian market entirely in 1943 because prior thereto the defendant Electromet of Canada, a wholly owned subsidiary of Union Carbide, had been appointed as purchasing agent of the Metals Controller of Canada in the allocation of ferro-vanadium to Canadian steel firms. The defendant Electromet of Canada, under the direction of Union Carbide, made an agreement with Union Carbide, U.S.V. and V.C.A. to split the allocation of ferro-vanadium between U.S.V. and V.C.A. and to eliminate Continental entirely from the Canadian market.

37. Pursuant to the agreement thus made, Electromet of Canada refused to permit Atlas to purchase from Continental, from which it had contracted to purchase, despite the fact that Atlas demanded to be permitted to make the purchase because of its preference for Continental's product. Instead Atlas and other Canadian customers were compelled because of the agreement between the defendants Union Carbide, U.S.V., V.C.A. and Electromet of Canada to import ferro-vanadium from the United States from either U.S.V. or V.C.A. Atlas and other Canadian customers attempted throughout the year 1943 to secure shipments from Continental but were precluded from doing so by the aforesaid agreement between Electromet of

Canada, Union Carbide, U.S.V. and V.C.A. It was the intent, purpose and effect of the aforesaid agreement between Electromet of Canada, Union Carbide, U.S.V. and V.C.A. to eliminate Continental from the business of distributing ferro-vanadium and vanadium products in Canada.

38. In June of 1943, M. D. Arrouet, an official of one of the defendants, orally informed Continental that it had no place in the vanadium business either in Canada or in the United States. He further informed Continental that it should desist from attempting to conclude pending negotiations for an arrangement with Climax Molybdenum Corporation to manufacture vanadium for Continental's account. The principal business of Climax was molybdenum. Arrouet threatened that if Climax undertook the manufacture of ferro-vanadium for Continental, the defendants would enter the molybdenum industry as a reprisal against Climax.

39. Finally in 1944, Continental was forced to leave the vanadium industry altogether. It could no longer continue to operate profitably because of the dominant position defendants had acquired in the industry by the monopolization of the raw materials; their refusal to sell Continental for processing in its plant or others with which it had contracted, as aforesaid; the elimination of Continental from the Canadian markets; the threats of reprisal for persisting in the industry; the contracts, combination, conspiracy, monopoly and attempts to monopolize, as hereinbefore stated.

VI.

The Effect of the Case of United States v. Union Carbide and Carbon Corporation et al.

40. Under the provisions of Section 16 of Title 15, U.S.C.A., a final judgment rendered in a suit by the United States to the effect that a defendant has violated the antitrust laws shall be prima facie evidence against such defendants in any suit brought by a private party against such defendants under the antitrust laws as to all matters respecting which the said judgment would be an estoppel as between the Government and the defendants.

41. On June 27, 1946, the Grand Jury under the jurisdiction of the District Court of the United States for the District of Colorado returned an indictment against all of the defendants named in this complaint charging them with violations of the Sherman Act by reason of the same contracts, combination, conspiracy and monopoly as charged in this complaint.

42. In May of 1948, the United States Attorney filed an information against all of the defendants named herein charging them with violations of the Sherman Act by reason of the same contracts, combination, conspiracy and monopoly alleged in this complaint.

43. The running of the Statute of Limitations against the plaintiffs herein was suspended by the return of the said indictment and by the filing of the said information from June 27, 1946 to the date of the filing of this complaint in accordance with

the express provisions of Title 15, U.S.C.A., Section 16.

VII

Effects of the Combination, Conspiracy and Monopoly in Restraint of Trade

44. By reason of the aforesaid violations of the antitrust laws, defendants have injured the business of plaintiffs by effectively eliminating them from the vanadium industry; they have suppressed competition and have monopolized the business of mining and processing vanadium-bearing ores, of manufacturing and distributing vanadium compounds; they have eliminated competition among themselves and prevented new competition; they have exacted monopoly profits from consumers of vanadium compounds in the United States and in Canada; the prices of ferro-vanadium and vanadium oxide have been maintained at unlawfully high and artificial levels; the prices paid for vanadium-bearing ore to independent owners and miners in the states of Colorado, Utah, New Mexico and Arizona have been maintained at unlawfully low and artificial levels, except where necessary to engage in a preemptive buying program to prevent the raw materials from being purchased by potential competitors; and they have denied to consumers the benefits of economy and superiority of the vanadium compounds manufactured by Continental.

45. The injury to the business of plaintiffs was directly intended by defendants and was proximately caused by the monopolistic practices herein

alleged. Plaintiffs have lost business; the value of their trade-marks has been diminished; markets and customers which they have obtained in open competition with defendants have been taken away from them; their investments have been lost; the good will attaching to the business of Continental has been impaired—all to the damage of plaintiffs in the sum of Five Hundred Twenty-Eight Thousand Dollars ($528,000).

Wherefore, Plaintiff Prays Judgment As Follows:

1. That summons issue to each of the defendants commanding it to answer the allegations contained in this complaint, and to abide by and perform such orders and decrees as the Court may make in the premises;

2. That plaintiffs receive with interest as damages for the injury to their business the sum of Five Hundred Twenty-Eight Thousand Dollars ($528,000) and that the said sum be trebled to One Million Five Hundred Eighty-Four Thousand Dollars ($1,584,000) and that the Court award reasonable attorneys' fees, all in accordance with Section 4 of the Clayton Act (15 U.S.C.A. 15) in such cases made and provided.

3. That the aforesaid combination and conspiracy, contracts, agreements, arrangements and understandings in restraint of interstate and foreign trade and commerce, conspiracy to monopolize, attempts to monopolize and monopolization of interstate and foreign trade and commerce be adjudged

and decreed to be unlawful, and that the contracts, agreements, arrangements, understandings and practices alleged in this complaint be adjudged and decreed to be in violation of Sections 1 and 2 of the Sherman Act.

4. That the Court adjudge and decree that the defendants have combined and conspired to restrain unreasonably and have conspired to monopolize, attempted to monopolize and have monopolized the interstate and foreign trade and commerce in the mining, processing, manufacturing, distribution and sale of vanadium compounds in violation of Sections 1 and 2 of the Sherman Act.

5. That defendants be ordered to divest themselves of such vanadium or vanadium-bearing ore deposits and ore-processing mills as in the opinion of this Court is deemed necessary to establish competition in the industry.

6. That plaintiffs recover their costs herein.

7. That plaintiffs have such other and further relief as the Court may deem proper.

JOSEPH L. ALIOTO,
Attorney for Plaintiff.

CADWALADER, WICKERSHAM
& TAFT,
Of Counsel.

[Endorsed]: Filed July 15, 1949.

[Title of District Court and Cause.]

ANSWER OF UNION CARBIDE AND CARBON CORPORATION AND UNITED STATES VANADIUM CORPORATION

Come now the defendants Union Carbide and Carbon Corporation and United States Vanadium Corporation severally and, answering the complaint of the plaintiffs herein, each for itself separately and not one for the other nor jointly, admit, deny and aver as follows:

1. They admit the averments in paragraphs 1, 4, 5 and 7 of the complaint, except the averment in paragraph 5 that all of the stock of United States Vanadium Corporation is and at all times in the complaint mentioned has been owned by the defendant Union Carbide and Carbon Corporation, which averment they deny to the extent that it alleges such ownership after November, 1935, and except the averment in paragraph 7 that Electro Metallurgical Sales Corporation is made a defendant herein, which averment they deny; they deny the averments in paragraphs 27, 28, 29, 30, 34, 37, 44 and 45, and they are without knowledge or information sufficient to form a belief as to the truth of any of the averments in paragraphs 3, 9, 10, 11, 17, 18, 24, 25, 26, 31, 32 and 35.

2. They admit so much of paragraph 2 of the complaint as avers that Union Carbide and Carbon Corporation and United States Vanadium Corporation transact business and may be found in San

Francisco, California; they deny that Electro Metallurgical Sales Corporation and Electro Metallurgical Company of Canada, Limited, or either of them, do or does business, maintain or maintains an office in or may be found in San Francisco, California. And further answering the averments in the said paragraph 2, they aver that Electro Metallurgical Company was liquidated and its assets transferred to Union Carbide and Carbon Corporation on November 30, 1948, and that it was dissolved January 5, 1949, that Electro Metallurgical Sales Corporation was merged with Union Carbide and Carbon Corporation March 14, 1949, and that Electro Metallurgical Company of Canada, Limited, neither does business, maintains an office nor is found nor can be found in San Francisco, California, nor in the United States of America; and they are without knowledge or information sufficient to form a belief as to the truth of any of the averments in the said paragraph concerning Vanadium Corporation of America.

3. They admit that the stock of Electro Metallurgical Company was owned by defendant Union Carbide and Carbon Corporation until January 5, 1949; they deny all averments in paragraph 6 of the complaint which are not in this answering paragraph expressly admitted.

4. They deny the averments of paragraph 8 that Electro Metallurgical Company of Canada, Limited, is, or has been made, a defendant herein, that the stock of the said company was owned by Union

Carbide and Carbon Corporation at any time before December 1935, and that the said corporation maintains offices in New York, New York; and they admit the averments of the said paragraph which are not in this answering paragraph expressly denied.

5. Answering the averments of paragraphs 12 to 16, consecutive and inclusive, they deny that vanadium steel is used in many of the products set forth in paragraph 12, they deny that they have sold or shipped in interstate commerce vanadium oxide produced by them in Pennsylvania, they deny that they have sold or shipped in interstate commerce ferrovanadium produced by them in Pennsylvania or Illinois. They neither admit nor deny the averments of the said paragraphs which are not hereinabove in this answering paragraph expressly denied, but they demand strict proof thereof.

6. They admit the averments of paragraphs 19 and 20, except that they deny that Union Carbide and Carbon Corporation acquired vanadium bearing ore deposits or a vanadium oxide mill near Rifle, Colorado, or a ferrovanadium plant in Ohio, and deny that the said corporation coordinates the activities of its subsidiaries and participates in the formulation of their policies, except in so far as cooperation is legally inherent in the relationship of a parent and a subsidiary.

7. Answering the averments of paragraph 21, they admit that between 1937 and 1939 United States Vanadium Corporation purchased some va-

nadium bearing ores from other producers in the Colorado-Utah area; but they are without knowledge or information sufficient to form a belief as to the truth of any of the averments in the said paragraph which are not in this answering paragraph expressly admitted.

8. Answering the averments of paragraphs 22 and 23, they admit that there were other producers during the period alleged therein; but they are without knowledge or information sufficient to form a belief as to any of the averments in said paragraphs which are not in this answering paragraph expressly admitted.

9. They are without knowledge or information sufficient to form a belief as to the truth of the averments in paragraph 33 that Apex produced and Continental distributed substantial quantities of ferrovanadium and that their operation under the said contract extended from the spring of 1940 to the spring of 1942, and they are without knowledge or information sufficient to form a belief as to the truth of any of the remaining averments in the said paragraph 33.

10. Answering the averments of paragraph 36, they admit and aver that defendant Electro Metallurgical Company of Canada was appointed and served as purchasing agent of the Metals Controller of Canada and as such agent followed the directions of said Metals Controller of Canada.

11. They are without knowledge or information

sufficient to form a belief as to the truth of the averments in paragraph 38 that the principal business of Climax was molybdenum; and they deny the remaining averments in said paragraph 38; and further answering, they aver that the said M. D. Arrouett was not and is not an officer or executive of Union Carbide and Carbon Corporation, but was and is an employee of the said corporation and was wholly without authority to speak for or to represent the said corporation in any of the matters concerning which he is alleged to have spoken, that he had and has no connection with and no authority to represent United States Vanadium Corporation, Electro Metallurgical Company, Electro Metallurgical Sales Corporation or Electro Metallurgical Corporation of Canada, Limited, in any capacity whatsoever.

12. They are without knowledge or information sufficient to form a belief as to the truth of the averments in paragraph 39 that in 1944 Continental was forced to leave the vanadium industry altogether or at all; and they deny the remaining averments in said paragraph 39.

13. Answering the averments of paragraph 41, they deny that an indictment was returned against all the defendants named in this complaint and they aver that the said indictment, on motion of the United States Attorney for the District of Colorado, was dismissed on September 21, 1948.

14. Answering the averments in paragraph 42, they admit that an information was filed as in the

said paragraph alleged, but they deny that it was filed against all the defendants in this action, and they deny that it charged the defendants therein with all the violations involved in this action.

15. The averments in paragraphs 40 and 43 are averments of conclusions of law and require no answer.

16. They deny all averments of the complaint herein which they have not expressly admitted or have not expressly denied, or as to which they have not averred that they are without knowledge or information sufficient to form a belief as to the truth thereof.

For a Second and Further Defense These Answering Defendants Aver:

The complaint herein fails to state sufficient facts to constitute a claim upon which relief can be granted.

For a Third and Further Defense These Answering Defendants Aver:

To the extent that the injury or injuries complained of in the said complaint were not sustained by plaintiffs, or any of them, within three years next prior to June 27, 1946, which was the date of the indictment referred to in the said complaint, relief for or on account of the said injuries, if any there were, cannot be had or recovered herein because the cause of action therefor is barred by Sub-

division 1 of Section 338 of the Code of Civil Procedure of the State of California.

For a Fourth and Further Defense These Answering Defendants Aver:

To the extent that the alleged claims and alleged rights of action set forth in the complaint did not accrue within three years next prior to June 27, 1946, which was the date of the indictment referred to in the complaint, the same are barred by the statute of limitations and particularly by Subdivision 1 of Section 338 of the Code of Civil Procedure of the State of California.

For a Fifth and Further Defense These Answering Defendants Aver:

That the plaintiffs have neglected to avail themselves of any right which they might have had against these answering defendants for an undue and unreasonable length of time during which time these answering defendants have unalterably changed their position; and that the plaintiffs have been and are guilty of such delay and laches as to bar them from the relief prayed for or from any relief in equity.

For a Sixth and Further Defense These Answering Defendants Aver:

1. Throughout the war period defendants and certain subsidiaries acted for and on behalf of the United States Government and as its agent in many

activities relating to uranium and vanadium, including the acquirement of ore, the operation of plants, and the disposition of products. Uranium and vanadium occur together in carnotite and roscoelite ore, the principal uranium source in the United States. These operations were governed by contracts with the Government, many of which bound the defendants to the utmost secrecy under penalty of criminal liability under the Espionage laws of the United States.

2. Defendants say that they cannot properly defend this case without a full and complete disclosure of their activities and the activities of the subsidiaries of Union Carbide and Carbon Corporation acting in behalf of the United States and its various agencies and a full disclosure of all of the activities of the United States in the vanadium-uranium fields.

3. Such disclosure, unless authorized by the proper Government authorities, would violate the criminal statutes of the United States, and therefore, unless such disclosure is so authorized, these answering defendants will ask that this action be dismissed.

Dated: San Francisco, California, November 15, 1949.

[Title of District Court and Cause.]

ANSWER OF DEFENDANT VANADIUM CORPORATION OF AMERICA

Comes now the defendant Vanadium Corporation of America and answering the plaintiffs' complaint, admits, denies and avers as follows:

First Defense

The Complaint fails to state a claim against said defendant upon which relief can be granted to the plaintiffs collectively or to any plaintiff severally.

Second Defense

1. Said defendant admits that the complaint in this action purports to have been filed under "An

Act to Protect Trade and Commerce Against Unlawful Restraints and Monopolies," as alleged in said paragraph, but denies that it has ever at any time engaged in any activity prohibited by said act.

2. Said defendant denies each and every allegation contained in paragraph 2 of the complaint, in so far as such allegations relate to it, and except as so denied states that it is without knowledge or information sufficient to form a belief as to the truth of any of the allegations contained in said paragraph.

3. Said defendant states that it is without any knowledge or information sufficient to form a belief as to the truth of the allegations contained in paragraphs 3, 4, 5, 6, 7 and 8 of the complaint.

4. Said defendant admits the allegations contained in paragraph 9 of the complaint, except it states that it has its principal executive office at 420 Lexington Avenue, New York, New York.

5. Said defendant states that it is without any knowledge or information sufficient to form a belief as to the truth of the allegations contained in paragraphs 10 and 11 of the complaint.

6. Said defendant states that it is without any knowledge or information sufficient to form a belief as to the truth of the allegations contained in paragraph 16 of the complaint in so far as they relate to other defendants, and states that said defendant has not produced ferro-vanadium in New York, Ohio, West Virginia or Illinois.

7. With respect to paragraph 17 of the complaint, said defendant denies that it entered the va-

nadium business in or about 1911; alleges that it was incorporated in or about September, 1919, and thereafter acquired certain vanadium-bearing ore bodies in the Republic of Peru and a ferro-vanadium plant at Bridgeville, Pennsylvania; admits that it acquired, prior to the year 1931, certain ore deposits and a vanadium oxide mill site in the State of Colorado; admits that it has produced vanadium oxide and ferro-vanadium in its plant in Pennsylvania from ores mined in Peru and from flue dust and other vanadium-bearing materials which it has purchased; and admits that it has produced ferro-vanadium at its said plant from vanadium oxide purchased by it and from vanadium oxide produced at its plants in Colorado and Utah from ores mined in Colorado, Utah, New Mexico and Arizona. Except as herein admitted and alleged, it denies each and every allegation contained in the said paragraph of the complaint.

8. With respect to paragraph 18 of the complaint, said defendant alleges that an import tax was imposed by Peru prior to 1931, but was increased in or about that year; alleges that its cessation of imports from Peru beginning in 1931 was in large part due to reduction in volume of defendant's business; denies that it commenced the production of vanadium oxide or constructed or operated a vanadium mill in Colorado in 1939; and otherwise admits the allegations contained in said paragraph of the complaint.

9. Said defendant states that it is without any knowledge or information sufficient to form a belief

as to the truth of the allegations contained in paragraphs 19 and 20 of the complaint.

10. With respect to paragraph 21 of the complaint, said defendant denies that it started to purchase vanadium-bearing ores mined by independent producers in the Colorado-Utah area between 1937 and 1939, but admits that it purchased such ores in 1940 and subsequent years; and it otherwise states that it is without any knowledge or information sufficient to form a belief as to the truth of the allegations contained in the said paragraph of the complaint.

11. With respect to paragraph 22 of the complaint, said defendant states that it is without any knowledge or information sufficient to form a belief as to where the vanadium oxide produced in small vanadium oxide mills in the Colorado-Utah area was sold, except it admits that subsequent to 1940 it purchased certain quantities of vanadium oxide produced by certain of such mills.

12. Said defendant states that it is without any knowledge or information sufficient to form a belief as to the truth of the allegations contained in paragraphs 23, 24, 25 and 26 of the complaint.

13. Said defendant denies each and every allegation contained in paragraphs 27, 28, 29 and 30 of the complaint.

14. Said defendant states that it is without any knowledge or information sufficient to form a belief as to the truth of the allegations contained in paragraphs 31 and 32 of the complaint.

15. Said defendant denies each and every allegation contained in paragraph 33 of the complaint, except it states that it is without any knowledge or information sufficient to form a belief as to the quantities of ferro-vanadium produced by Apex and distributed by Continental, or as to operations under any contract with Apex.

16. With respect to paragraph 34 of the complaint, said defendant states that it is without any knowledge or information sufficient to form a belief as to the truth of the allegations contained in the first two sentences of said paragraph; and it otherwise denies each and every allegation contained in the said paragraph of the complaint.

17. Said defendant states that it is without any knowledge or information sufficient to form a belief as to the truth of the allegations contained in paragraph 35 of the complaint.

18. Said defendant denies each and every allegation contained in paragraph 36 of the complaint, except it states that it is without any knowledge or information sufficient to form a belief as to the truth of the following statements contained in said paragraph 36:

> "Throughout the year 1942, Continental shipped to Atlas Steels Limited of Canada, hereinafter called 'Atlas', substantial quantities of its vanadic acid under the trade name of Van-Ex and substantial quantities of a high content ferro-vanadium (seventy to eighty per cent vanadium) which it produced. The product of

Continental was preferred by Atlas and other Canadian customers because of its high-vanadium content."

19. Said defendant denies each and every allegation contained in paragraph 37 of the complaint.

20. Said defendant states that it is without any knowledge or information sufficient to form a belief as to the truth of the allegations contained in paragraph 38 of the complaint, except it admits, upon information and belief, that the principal business of Climax Molybdenum Corporation was the production of molybdenum, and denies that said defendant ever threatened, or authorized anyone on its behalf to threaten, that it would enter the molybdenum industry as a reprisal against Climax.

21. Said defendant is without knowledge or information sufficient to form a belief as to the truth of the allegation contained in paragraph 39: "Finally in 1944, Continental was forced to leave the vanadium industry altogether." Said defendant denies each and every other allegation contained in said paragraph, and alleges that if Continental was forced to leave the vanadium industry, as alleged in said paragraph, such leaving was due to causes other than any action of any kind of said defendant, and that said defendant neither caused nor contributed to such action on the part of Continental.

22. With respect to paragraph 40 of the complaint, said defendant states that the allegation is a mere conclusion of law, without application to this case, and that no judgment has been rendered to the effect that said defendant has violated the

antitrust laws in any respect; it denies that said paragraph contains a true and complete statement of the provisions of section 16 of Title 15, United States Code, and begs leave to refer to said statute for a true, complete and accurate statement of the terms thereof.

23. Said defendant denies each and every allegation contained in paragraph 41 of the complaint, except it admits that on or about June 27, 1946, an indictment returned by the Grand Jury against certain of the defendants named in the complaint herein was filed in the District Court of the United States of America for the District of Colorado, charging the defendants named therein with violation of the Sherman Act, which indictment was dismissed on or about September 21, 1948, on motion of the United States; and it begs leave to refer to the said indictment for a true, complete and accurate statement of the charges thereof.

24. Said defendant denies each and every allegation contained in paragraph 42 of the complaint, except it admits and alleges that in or about September, 1948, an information was filed against certain of the defendants named in the complaint herein, which information charged the defendants named therein with violation of the Sherman Act, and begs leave to refer to the information for a true, complete and accurate statement of the charges therein contained.

25. Said defendant denies each and every allegation contained in paragraphs 43, 44 and 45 of the complaint.

Third Defense

The right or rights of action set forth in the complaint did not accrue within three years next before the commencement of this action.

Fourth Defense

Any and all claims, damages and causes of action referred to in the complaint, and each and every part thereof, which did not accrue within three years of the commencement of this action are barred by the provisions of section 338, subdivision (1), of the California Code of Civil Procedure.

Fifth Defense

Plaintiffs, and each of them, are barred by reason of laches from maintaining this action and from obtaining the relief or any part thereof prayed for in the complaint.

Wherefore, said defendant prays that it be dismissed hence with its costs of suit herein incurred, and for such other and further relief as the court may deem just and proper.

PLAINTIFFS' JURY INSTRUCTIONS

Comes now the plaintiffs in the above-entitled action and submit to the Court their jury instructions. Instructions as to the credibility of witnesses and such other general instructions as the Court deems necessary to this action have been omitted.

Dated: June 1, 1958.

/s/ JOSEPH L. ALIOTO,
Attorney for Plaintiffs,

CADWALADER, WICKERSHAM & TAFT, Of Counsel.

Instruction No. 1

The plaintiff in this action is Continental Ore Company, a partnership composed of Henry J. Leir, Erna D. Leir and Lina Schloss. This partnership is a successor in interest to the Continental Ore Corporation which was incorporated under the laws of the State of New York on June 16, 1939. On May 5, 1942, these parties formed a partnership doing business as Continental Ore Company.

The plaintiff is and has been engaged in the business of arranging for the manufacture and distribution of ferro alloys, and the distribution of nonferrous minerals, ores and metals.

The defendants in this action are as follows:

Union Carbide and Carbon Corporation, a New York corporation. This corporation directly controls

and operates the following subsidiary corporations which have certain specified functions and duties. They are called units of Union Carbide and Carbon Corporation.

United States Vanadium Corporation, sometimes referred to as "U.S.V.", is a New York corporation and is the unit of Union Carbide which acquires and produces vanadium-bearing ore and vanadium oxide. Vanadium is essentially used by steel makers as an alloy which increases the strength of steel and its resistance to fatigue. It is used particularly in high speed steels and in a variety of high strength steels. U.S.V. is a part of the Alloys and Metals Division of Union Carbide.

Electro Metallurgical Company, sometimes referred to as Electromet, is a unit of Union Carbide in the Alloys and Metal Division. From January 1, 1933 to February 23, 1949, Electromet was engaged in the production of ferrovanadium and vanadium oxide, among other activities. Electromet is the brand name of Union Carbide's ferro alloys and metals. Electromet was formed in 1906 when the predecessor to Union Carbide and Carbon Company went into the business of making ferro alloys and alloying metals in electric furnaces.

The present defendant Union Carbide and Carbon Corporation was organized in November, 1917. Its units at that time included Union Carbide Company, Electro Metallurgical Company, National Carbon Company, Inc., The Prestolite Company, Inc. and the Linde Air Products Company.

After 1948, Electromet's activities in the vanadium field were assumed by Electro Metallurgical Division of Union Carbide.

Electro Metallurgical Sales Corporation, sometimes referred to as "Electromet Sales", is also a corporation in the Alloy and Metals Group of Union Carbide. Prior to March, 1949, it was engaged in distributing or selling the ferro alloys and alloying metals of Union Carbide. In March, 1949, it was merged into Union Carbide.

Electro Metallurgical Company of Canada, Limited, sometimes referred to as "Electromet of Canada", is a Canadian corporation. It is also in the Alloys and Metals Group of Union Carbide. It is in charge of the distribution or selling of ferro alloys and alloying metals of Union Carbide in Canada.

The above-mentioned defendants then are what may called the "Union Carbide defendants."

Also named as a defendant in this action is a corporation which is not owned by Union Carbide, or a subsidiary or affiliate of it. This defendant is Vanadium Corporation of America, sometimes referred to as "V.C.A." It is a Delaware corporation with its principal place of business in New York City. This corporation is engaged in the business of acquiring, producing and distributing vanadium and vanadium products. A large portion of the stock of this corporation is owned by Air Reduction Company, Inc.

Officers

A. Vanadium Corporation of America

Mr. A. A. Corey, Jr. was president of Vanadium Corporation of America until 1934, at which time he was succeeded by Mr. E. D. Bransome.

Mr. Patrick J. Gibbons served as Executive Vice President of V.C.A. He has also served as a member of the Board of Directors and of the Executive Committee. He was also in charge of the production and refining of ferrovanadium and vanadium oxide.

Mr. Dennis W. Viles served as a Vice President of V.C.A. and was also in charge of mining.

Mr. Gustav Laub was a Vice President of V.C.A. and was also in charge of the distribution and sale of ferrovanadium and vanadium oxide.

Mr. F. F. Kett served as general manager of the Mining Division of V.C.A.

B. Union Carbide and Carbon and Its Subsidiaries

The persons having overall executive supervision over the mining, production, refining and distribution of ferrovanadium and vanadium oxide of the Alloy Group of Union Carbide were:

Mr. F. P. Gormely, deceased, from January 1, 1933 to July 13, 1944;

Mr. W. J. Priestley, from July 13, 1944 to January 20, 1948;

Mr. W. E. Remmers, from January 20, 1948 to July 15, 1949;

The persons in charge of the mining and/or refining of vanadium-bearing ore and the production and/or refining of vanadium oxide were:

Mr. J. R. Van Fleet, deceased, from January 1, 1933 to April 8, 1947;

Mr. Blair Burwell, Assistant to Van Fleet and Vice President, 1944 et seq.;

Mr. W. E. Remmers, from April 8, 1947 to January 20, 1948.

The persons in charge of the distribution of vanadium oxide were:

Mr. J. R. Van Fleet, deceased, from January 1, 1933 to April 8, 1947;

Mr. J. D. Swain, from April 8, 1947 to July 15, 1949.

The persons in charge of the distribution of ferrovanadium were:

Mr. J. M. Price, from January 1, 1933 to September 27, 1935; and

Mr. J. D. Swain, from September 27, 1935 to July 15, 1949.

Modified: Exception allowed. E.S.V., Judge.

Instruction No. 2

This action is brought under the Sherman and Clayton Acts.

The plaintiffs bring their case on a specific enactment of Congress known as Section 4 of the Clayton Act. This statutes provides as follows:

"Section 4. That any person who shall be injured in his business or property by reason of anything forbidden in the antitrust laws may sue therefor

in any district court of the United States in the district in which the defendant resides or is found or has an agent, without respect to the amount in controversy and shall recover threefold the damages by him sustained, and the cost of suit, including a reasonable attorney's fee."

It is alleged by the plaintiffs that the defendants have violated Sections 1 and 2 of the Sherman Act. Section 1 of the Sherman Act states as follows:

"Section 1. Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared to be illegal * * *"

Section 2 of the Sherman Act states as follows:

"Section 2. Every person who shall monopolize or attempt to monopolize, or combine or conspire with any other person or persons, to monopolize any part of the trade or commerce among the several States, or with foreign nations, shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding five thousand dollars, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court."

Given: E.S.V., Judge.

Instruction No. 3

All of the parties defendant are corporations. In that connection I instruct you that a corporation is held to the same measure of liability as an indi-

vidual. A corporation acts through its officers, directors and agents and may through one or more of them conspire with another corporation or with other individuals. Any act of an officer, director or agent of a corporation which is done within the scope of his duties or authority you may consider to be an act of the corporation itself.

Given: E.S.V., Judge.

Instruction No. 4

The parent corporations which are defendants in the present case and which I have mentioned are not chargeable with the acts of their subsidiary corporations solely because they are parent corporations, but if you should find that one or more of the parent corporations used their ownership of the subsidiaries to cause such subsidiaries to act in their behalf, then such parent corporations are liable for the resulting acts of the subsidiaries. For example, the defendant United States Vanadium Corporation is a wholly-owned subsidiary of the defendant Union Carbide. If you should find that Union Carbide used its direct ownership of United States Vanadium Corporation to cause the participation of it in an illegal conspiracy, monopoly, or attempt to monopolize, which, in turn, deprived the plaintiffs of opportunities to manufacture and distribute vanadium products, then you may attribute the activities of United States Vanadium Corporation to Union Carbide in your determination of whether or not the defendants, or any of them, are guilty of an illegal conspiracy.

Loew's Inc. v. Cinema Amusements, (Tr. 1049) Approved 210 F. 2d 86, 92 (10th Cir. 1954).

Modified: E.S.V., Judge.

Instruction No. 5

Section 1 of the Sherman Act condemns conspiracies to restrain trade.

Section 2 of the Sherman Act condemns conspiracies to monopolize and individual attempts to monopolize any part of interstate trade and commerce.

A conspiracy is an agreement between two or more persons to do an unlawful thing or to do a lawful thing in an unlawful manner.

The antitrust laws contemplate that a conspiracy may exist between affiliates of a parent corporation.

Kiefer Steward Co. v. Joseph E. Seagrams & Sons, 340 U. S. 211, 71 S. Ct. 259.

Continental Ore Company in this action complains that the defendants have done the following, in summary:

1. They have conspired to restrain interstate trade and commerce by conspiring to exclude independent producers and distributors of vanadium products, to fix prices, to discriminate against independents, and to refuse to deal with independents.

2. They have conspired to monopolize the interstate vanadium industry so as to completely control and dominate this industry to the exclusion of other independent producers and distributors.

Continental Ore Company claims that it had the know-how and the organization to enter into the

vanadium industry and to distribute large amounts of vanadium pentoxide and ferrovanadium. It claims that pursuant to the conspiracies of the defendants it has been prevented from operating successfully as a distributor of vanadium products during the period 1938 to 1944 and that the effect of these conspiracies was to virtually eliminate it from the vanadium industry after 1944.

This is their first claim. Secondly, they claim that Section 2 of the Sherman Act condemns the intention to monopolize interstate trade and commerce by individual corporations, and that each corporate defendant attempted to monopolize the vanadium industry and exclude Continental from successful operation in it, as heretofore set forth.

Thirdly, Continental claims that the affiliated companies of Union Carbide formed a separate conspiracy to monopolize the vanadium industry and to restrain trade in that industry and to exclude Continental from successful operation in the vanadium industry, as heretofore set forth.

I will now instruct you on the status of the law as to charges of the plaintiff.

Modified: E.S.V., Judge.

Instruction No. 6
Conspiracy

Continental Ore Company, in order to prove the existence of a conspiracy need not show you an express, formal agreement to do so. You are allowed to infer the existence of a conspiracy from a course of dealings or through an exchange of words and

from acts done. An unlawful conspiracy is often formed without simultaneous action or agreement on the part of the conspirators. Plaintiffs are seldom capable by direct testimony or evidence to prove a conspiracy. Therefore, the law allows you as members of the jury to infer the existence of a conspiracy from things actually done, taking into consideration all of the facts and circumstances surrounding the conduct of the parties who are charged with the conspiracy. Proof of conspiracy, however, requires more than merely suspicion or conjecture, and there must be either direct proof of conspiracy or circumstantial evidence sufficiently strong to give rise to an inference of a conspiracy. It is sufficient, however, if the plaintiffs establish by a preponderance of the evidence, or the greater weight of the evidence, that two or more parties, in any manner, came to a mutual understanding to establish a common and unlawful design.

Interstate Circuit, Inc. v. United States (1939) 306 U. S. 208; Ball v. Paramount Pictures, Inc., (1948) 169 F. 2d 317; Wm. Goldman Theatres v. Loew's, Inc. (1945) 150 F. 2d 738; United States v. Paramount Pictures, Inc., et al. (1948), 334 U. S. 131.

Given: E.S.V., Judge.

Instruction No. 7

Conspiracy to Monopolize

Section 2 of the Sherman Act condemns the entering into a conspiracy, by otherwise competitive parties, to monopolize an industry.

Ladies and gentlemen, if you find that the defendants Union Carbide and/or its affiliates, and Vanadium Corporation of America conspired together, and that these two corporations together possessed over 90 per cent control of the production of vanadium oxide or over the sales of vanadium pentoxide and/or ferrovanadium, then you should find that the defendants are in violation of Section 2 of the Sherman Act.

The term "monopolize" as used in Section 2 of the Sherman Act means the joint acquisition or maintenance by the members of a conspiracy formed for that purpose, of the power to control and dominate interstate trade and commerce in a commodity to such an extent that they are able, as a group, to exclude actual or potential competitors from the field, accompanied with the intention and purpose to exercise such power.

The essential element of the illegal monopoly or monopolization charged is the existence of a combination or conspiracy to acquire and maintain the power to exclude competition to a substantial extent.

"A correct interpretation of Section 2 of the Sherman Act is that it is unlawful for parties to combine or conspire to acquire or maintain the power to exclude competitors from any part of the trade or commerce among the several states or with foreign nations, provided they also have such a power, as a group, to exclude actual or potential competition from the field and provided that they have the intent and purpose to exercise that power."

United States v. American Tobacco Co., et al. (1946), 328 U. S. 781.

Modified: E.S.V., Judge.

Instruction No. 8
Monopolization

Section 2 of the Sherman Act also condemns the monopolization of interstate trade and commerce. This is to be distinguished from conspiracy to monopolize. For "monopolization" may be committed by one party, and it means the attainment of a position of power in an industry so as to be able to exclude others or to fix prices. Upon the attainment of such power by a single corporation, coupled with the showing of the employment of methods, means and practices which are in themselves in restraint of trade, said party has unlawfully monopolized in violation of Section 2 of the Sherman Act.

United States v. American Tobacco Co., et al. 328 U. S. 781.

Modified: E.S.V., Judge.

Instruction No. 9
Attempt to Monopolize

Even if a party is unsuccessful in obtaining control over an industry, he may still be in violation of Section 2 of the Sherman Act if he is found to have a specific intent to acquire a monopoly position. Although the party is unsuccessful in attaining full monopoly power, he will be in violation of the anti-trust laws if he has a specific intent to acquire a

position whereby he is able to exclude others or to fix prices.

The "intention" involved here is that the party had a specific intent to monopolize; that is, the evidence shows that the party possessed conscious knowledge and desire to gain monopoly.

United States v. Aluminum Co. of America, (1945) 148 F.2d 416; United States v. Socony Vacuum Oil Co. et al. 310 U. S. 150, 224, Footnote 59.

Modified: E.S.V., Judge.

Instruction No. 10
Conspiracy to Refuse to Deal With Plaintiff

It is charged by the plaintiff that the defendants conspired to refuse to sell vanadium supplies to it.

It is well established that an agreement, combination or conspiracy between two or more persons engaged in interstate commerce to withdraw or withhold customers from another, or with a class of others is violative of the antitrust laws. It is a violation of Section 1 of the Sherman Acts which condemns agreements to restrain trade.

Standard Oil Co. v. Moore, (1957) 1957 Trade Cases §68,861; Northern Pacific Ry Co. v. United States (1958) 78 S. Ct. 514.

Given: in substance. E.S.V., Judge.

Instruction No. 11
Conspiracy to Fix Prices

It is unlawful per se for two or more competitors to fix prices, and any scheme or plan which fixes

prices is unlawful under the antitrust laws. The existence of uniformity of prices between two or more competitors is relevant evidence from which it may be inferred that a conspiracy to fix prices existed.

United States v. Socony Vacuum Oil Co. 310 U. S. 150.

Modified: E.S.V., Judge.

Instruction No. 12
Summary of Plaintiffs' Charges

If you find from the greater weight of the evidence that the defendants here conspired to monopolize the vanadium industry, and succeeded in that enterprise to the injury and damage of Continental, then Continental is entitled to prevail.

The Sherman Act condemns the conspiracy or agreement between competitors to join forces to gain control or to exclude others. If you find from the preponderance of the evidence that this conspiracy had the effect of excluding the plaintiffs from the vanadium industry or preventing Continental from operating successfully, the plaintiffs have established their case.

Further, if you find that any one of these defendants, either Union Carbide, or any one of its affiliated corporations, or Vanadium Corporation of America attempted to monopolize the vanadium industry and had the intent to exclude the plaintiffs from the industry, or used its power and resources to prevent the plaintiffs from successfully operating

in the vanadium market, or to exclude it, the plaintiffs have established their case.

Further, if you find that the affiliated corporations of Union Carbide combined and conspired to monopolize the vanadium industry and had the intent to exclude Continental from the industry, or used their power and resources to prevent Continental from successfully operating in the vanadium market, or to exclude it, the plaintiffs have established their case against these corporations.

Rejected: E.S.V., Judge.

Instruction No. 13
Interstate Trade and Commerce

The Sherman Act applies to conduct in or affecting interstate trade or commerce. Commerce is interstate when it concerns more than one State.

Commerce comprehends intercourse for the purposes of trade in any and all of its forms, including the transportation, purchase, sale and exchange of commodities.

The business of the defendants is in interstate commerce. As to Union Carbide and its affiliates, they mined substantial quantities of vanadium ore in several states of the United States. This ore was then milled at Rifle, Colorado and Uravan, Colorado. This milled product was then shipped in substantial quantities in interstate commerce to processing plants located in Ohio, New York and West Virginia. This processed vanadium was then sold in interstate commerce in substantial quantities to

large interstate concerns and to purchasers in foreign commerce.

V. C. A. mined substantial quantities of vanadium ore during most of the time herein concerned, or else acquired vanadium ore from others. V. C. A. processed its milled ore in its plant in Pennsylvania from sources of supply located in Colorado, Utah, New Mexico and Arizona. It sold substantial quantities of vanadium products in interstate commerce to large interstate customers and to purchasers in foreign commerce.

The activities of the defendants involved herein thus were in or affected a substantial amount of interstate commerce.

In addition, Continental was a company operating in the channels of interstate and foreign commerce.

United States v. South Eastern Underwriters' Ass'n, 322 U. S. 533; Radovich v. National Football League et al., 77 S. Ct. 390.

Rejected: E.S.V., Judge.

Instruction No. 14

In addition to establishing the conspiracies and plans I have outlined to you, plaintiff must also establish that these acts had a proximate impact on his business or trade which caused injury to it.

Bigelow v. R.K.O. Radio Pictures, Inc., 327 U. S. 251.

Rejected: E.S.V., Judge.

Instruction No. 15

Damages

If you are satisfied that the plaintiff has proved by a greater weight of the evidence that the defendants have violated the antitrust laws by entering into a conspiracy to monopolize the vanadium industry, or by individually attempting to monopolize the vanadium industry, and such conduct had a proximate injurious impact on plaintiffs' business, then, you may assess damages in this action based upon probable and inferential proof as well as direct and positive proof.

The purpose of awarding damages in a private antitrust case is to put the plaintiff in as good a position as if the conspiracy or the monopolization had not occurred.

Thus, if you find that violations of the antitrust laws have occurred, the defendants, by their own wrong, have prevented you from knowing exactly and with mathematical certainty what would have occurred to plaintiffs but for these violations of antitrust laws. The law, therefore, allows you, the jury, to arrive at an award of damages based on your judgment from relevant data introduced in evidence so as to compensate the plaintiff for all damages proximately caused by the acts of the defendants which have violated the antitrust laws.

Storey Parchment Co. v. Paterson Parchment Paper Co., 282 U. S. 555; Eastman Kodak Co. v. Southern Photo Materials Co., 273 U. S. 359;

Bigelow v. R.K.O. Radio Pictures, Inc., 327 U. S. 251.

Rejected: E.S.V., Judge.

Instruction No. 16

The antitrust laws contemplate that those who have conspired or planned to monopolize should not profit by their own wrong, and the most elementary conceptions of justice and public policy require that the wrongdoer shall bear the risk of uncertainty which his own wrong has created. The wrongdoer may not object to the plaintiff's reasonable estimate of the cause of injury or its amount, supported by reasonable data, because not based on more accurate data which the wrongdoer's misconduct has rendered unavailable.

The constant tendency of the law is to find some way in which damages may be awarded where a wrong had been done. Difficulty of ascertainment of the precise amount of damages suffered is not allowed to confuse the right of recovery for a proven invasion of a plaintiff's rights.

Bigelow v. R.K.O. Radio Pictures, 327 U. S. 359.

Rejected: E.S.V., Judge.

Instruction No. 17

An injured plaintiff under Section 4 of the Clayton Act is entitled to damages for the following injuries:

1. The expenses involved in establishing a business;

2. The increased costs incurred in running the business by reason of the violations of the antitrust laws;

3. The inability to make profits which would otherwise have been made but for the violations of the antitrust laws and their impact on the plaintiffs' business;

4. The diminished value of the plaintiffs' business by reason of its being excluded from the market by violations of the antitrust laws.

William Goldman v. Loew's Inc., 150 F.2d 738, 69 Fed. Supp. 103; Storey Parchment Co. v. Paterson Parchment Paper Co., 282 U. S. 555, 51 S. Ct. 248; Eastman Kodak Co. v. Southern Photo Materials Co., 273 U. S. 359, 47 S. Ct. 400.

Rejected: E.S.V., Judge.

Instruction No. 18

Continental Ore Company is entitled to an award of damages caused by the acts of the defendants during the period from October 10, 1939 to July 15, 1949.

Steiner v. Fox West Coast (9th Cir) 232 F. 2d 190; Hess v. Anderson Clayton Co., (D. C. Cal.) 20 F.R.D. 466; Aerojet Sales Co. v. Columbia Steel Co., 119 Fed. Supp. 693.

The United States complaint filed against these defendants on June 27, 1946, allowed tolling of the statute of limitations under Title 15, U.S.C.A. Section 16.

By Act of Congress, the running of the statute of limitations applicable to violations of the federal antitrust laws was suspended from October 10, 1942 to June 30, 1946.

Act of October 10, 1942, Chap. 589, 56 Stat. 781, as amended by Act of June 30, 1945, Chap. 213, 59 Stat. 306, 15 U. S. Code, Sec. 16, note.

Rejected: E.S.V., Judge.

Instruction No. 19

Damage Calculations

Assuming that you have found that the defendants have violated the antitrust laws to the injury of the plaintiff here, as I have previously instructed you, you are entitled to award the plaintiff damages for all wrongs proximately caused by the violations of the antitrust laws on plaintiffs' trade and business.

In arriving at damages you are not to render a verdict based on guess work or speculation, but based on the relevant data and evidence submitted by the parties.

In this connection, I am going to instruct you as to what is proper in arriving at your estimate of the damages suffered.

The plaintiff has no way of knowing with a certainty what its profits or the value of the business would have been but for the violations of the antitrust laws; therefore, it can only approximate damages by the use of relevant and reasonable data.

Plaintiff Continental claims that during the period 1938 to 1944 it was curtailed in its operations, and it lost profits that it would have otherwise obtained in a free and open competitive market denied to it by the alleged violations of the antitrust laws.

Plaintiff further claims that the defendants ended its ability to enter into the vanadium market after 1944 and effectively excluded it from this market. It therefore claims damages from 1944 to 1949 for the loss of profits that it suffered by being unable to operate at all in the vanadium industry.

In your calculation of damages, you should consider the business records of the plaintiff, the experience and know-how and knowledges of the LEIRS, the success of the defendants as disclosed in their business records, and the expert opinion of the witnesses.

If you find that in the light of this evidence the plaintiff suffered a curtailed operation during the period 1938 to 1944 which caused it to lose profits it would have otherwise made, you should award it damages to compensate for the loss of profits it so suffered.

You may further award damages for any out of pocket expenses and loss of earnings suffered by the plaintiffs in attempting to operate Continental if said expenses and loss of earnings were caused by the defendants.

You may further award damages for the increased costs of operations caused by a price-fixing combination, if you should find that the defendants agreed to fix the prices of vanadium oxide and vanadium ore.

Further, if you find, in the light of this evidence, that plaintiffs suffered an inability to operate in the vanadium industry by reason of the acts of the defendants in violation of the antitrust laws after 1944, you should award damages to compensate plaintiffs for this loss of profits so suffered during the period from 1944 to July 15, 1949. To repeat, in arriving at an award of damages to restore to plaintiffs the profits which would have otherwise been made but for the conduct of the defendants, you may consider the business records of the plaintiff Continental, the business records of the defendants, and their success in the vanadium market, and the expert opinions of the witnesses.

It is proper for you to consider the share of the market controlled by the defendants and their sales and profits in the vanadium industry. It is proper for you to consider the opinions of Mr. Leir and Mr. Wolf as to what their business potentials were and what percentage of the market they estimate Continental would have achieved but for the violations of the antitrust laws by defendants which injured Continental's business.

Flinkote Company v. Lysfjord, 246 F.2d 368.

Rejected: E.S.V., Judge.

Instruction No. 20

In arriving at an award of damages to restore the profits that the plaintiff Continental would have obtained in a market free of violations of the anti-trust laws of the defendants, you may base your award of damages on gross profits if you find that the plaintiff has satisfied you by a preponderance of the evidence or the greater weight of the evidence that it would have incurred no additional or little additional increased expenses in operating its business had it been selling vanadium products at the volume estimated by the expert witnesses.

Wm. Goldman v. Loew's, Inc., 69 Fed. Supp. 103; Triangle Conduit & Cable Co. v. National El. Prod. Corp., 152 F 2d 398.

Rejected: E.S.V., Judge.

Instruction No. 21

Relevancy of Other Business Success of Plaintiff

Further, in considering your estimate of the amount of damages suffered by the plaintiff, it is proper for you to consider the success of the plaintiff's business in other industries and to arrive at an award of damages based on the consideration of the growth of the plaintiff's business in free and uncurtailed industries.

Frey & Sons v. Welch Grape Juice Co. (4th Cir.), 240 Fed. 114.

Rejected: E.S.V., Judge.

Instruction No. 22

When you calculate damages—and I am assuming for the purpose of this instruction that you reach the point of calculating damages—your duty is to calculate as accurately as you can and honestly as you can the amount, if any, which you decide the plaintiffs have lost over the period from October 10, 1939 to July 15, 1949 by reason of the acts of the defendants. I want to make very explicit that you should not let any outside factors influence you. You should not, for example, be in any way influenced by the fact that some or all of the defendants may be large corporations. Your estimate should not be effected in any way by the fact that there are numerous defendants. It is not your job to speculate upon how or to what extent any judgment rendered in this case may be paid or who will pay it. Similarly, you should not be influenced in any way by the fact that the plaintiffs may have continued to operate their business at a profit. The question is not what earnings they did have but what additional earnings they would have had. You should not be concerned with the fact that the full amount of the damages asked in the case is large. Some cases are big cases and some are small, but in every case the damage question is the same: just what amount of damage in dollars and cents has the defendants' wrong caused the plaintiff. So, in this regard, you should not compromise at all but you should render a clear and accurate verdict for the amount of damages which you think are shown by the evidence, no more and no less.

Bigelow v. R.K.O. Radio Pictures, 327 U. S. 251, 262-3 (1951); Cape Cod Food Products v. National Cranberry Assn., 119 F. Supp. 900, 911, 917 (D. Mass. 1954); Sablosky v. Paramount Film Distributing Corp., 137 F. Supp. 929, 941 (E.D. Pa. 1955).

Rejected: E.S.V., Judge.

Instruction No. 23

There has been evidence offered in this case that at certain periods of time some of the defendants or their officers acted as agents of Metals Reserve Company, a government corporation. You are instructed that if any of these defendants used these agency powers for the purpose of carrying out or assisting any combination or conspiracy to restrain trade or to monopolize trade in the vanadium industry, or any actual monopolization thereof, the fact that they might have been government agents at the time does not immunize their conduct.

Furthermore a violation of the antitrust laws may be carried out by acts which standing alone may be legal, but if they form part of an illegal combination or conspiracy to restrain or to monopolize, then you may consider them together with all of the other evidence in the case to arrive at your verdict.

For example, there is evidence in the case that during a period of time the defendant United States Vanadium Company was given authority

to buy ore for MRC, paying therefor no more than 50c per pound. Nevertheless if that defendant arrived at those prices as a result of agreement or collaboration or concert of action with any other defendant, then the fact that it was acting as agent for MRC does not immunize conduct that is otherwise unlawful under the instructions I have given.

Crummer v. Du Pont (5th Cir.), 223 F.(2) 238; cf. United States v. Socony Vacuum Co., 310 U. S. 150.

Refused; exception allowed: E.S.V., Judge.

Instruction No. 24

The evidence in the case shows that at certain time the plaintiffs purchased vanadium oxide or ferrovanadium from the defendants. If you find under my prior instructions that the defendants fixed the prices for vanadium and vanadium oxide and ferrovanadium by agreement or concert of action between themselves, then you may award to plaintiffs as damages the difference between the prices charged and your estimate from the evidence of what those prices would have been in the absence of any violations formed and carried out by the defendants. In this connection you may take into consideration the prices charged by defendants on sales between themselves.

Atlanta v. Chattanooga Foundry, etc., 127 F. 23, 61, aff. 27 S. Ct. 65, 203 U. S. 391.

Refused; exception allowed: E.S.V., Judge.

Co-conspiracy Instruction
Instruction No. 25

If you find from independent evidence that there existed a conspiracy between Union Carbide or United States Vanadium Corporation and Vanadium Corporation of America such as the testimony of Blair Burwell or the Agreement of June 30, 1939, as example, then all the interoffice letters and memoranda introduced in evidence as against one party may be considered by you as admissible against the other defendants as declarations of a co-conspirator so far as they were in furtherance of the conspiracy, and such declarations of a conspirator may then be considered by you as binding on all the defendants.

Schine Chain Theatres v. United States, 334 U. S. 110, 68 S. Ct. 947; United States v. Vehicular Parking, 52 Fed. Supp. 751; Hitchman Coal & Coke Co. v. Mitchell, 245 U. S. 229, 38 S. Ct. 65.

Refused; exception allowed: E.S.V., Judge.

Acknowledgment of Service Attached.

[Endorsed]: Filed June 25, 1958.

[Title of District Court and Cause.]

INSTRUCTIONS REQUESTED BY DEFENDANTS VANADIUM CORPORATION OF AMERICA, UNION CARBIDE CORPORATION, AND UNITED STATES VANADIUM CORPORATION

May it please the Court:

Without waiving their right jointly or severally to request further and additional instructions which may become necessary or desirable as the trial proceeds, permission for which is hereby respectfully requested in accordance with Rule 19 of the Rules of Practice of the United States District Court for the Northern District of California, the defendants respectfully request the court to give the following instructions.

/s/ JOSIAH G. HOLLAND,
/s/ E. R. NEAHER,
/s/ JOHN A. SUTRO,
/s/ ALLAN N. LITTMAN,

Attorneys for Defendant Vanadium Corporation of America.

/s/ RICHARD J. ARCHER,
/s/ GIRVAN PECK,

Attorneys for Defendants Union Carbide Corporation and United States Vanadium Corporation.

Defendants' Proposed Instruction No. 1

You are instructed to return your verdict in favor of defendant Vanadium Corporation of America.

Refused: E.S.V., Judge.

Defendants' Proposed Instruction No. 2

You are instructed to return your verdict in favor of defendant Union Carbide and Carbon Corporation.

Refused: E.S.V., Judge.

Defendants' Proposed Instruction No. 3

You are instructed to return your verdict in favor of United States Vanadium Corporation.

Refused: E.S.V., Judge.

Defendants' Proposed Instruction No. 4

You are instructed that this case does not involve any issue with respect to any period prior to July 6, 1938.

Given: E.S.V., Judge.

Defendants' Proposed Instruction No. 5

The parties in this case are as follows:

Plaintiffs are Henry J. Leir, Erna D. Leir and Lina Schloss, who are partners under the trade name and style of Continental Ore Company. That company has its office and place of business at 500 Fifth Avenue, in the City and State of New York.

Defendant Union Carbide and Carbon Corpora-

tion is a New York corporation with its principal place of business at 30 East 42nd Street, New York, New York.

Defendant United States Vanadium Corporation was a Delaware corporation, all the stock of which had been owned by the defendant Union Carbide and Carbon Corporation. Its principal place of business was 30 East 42nd Street, New York, New York.

Defendant Vanadium Corporation of America is a Delaware corporation having its executive office at 420 Lexington Avenue, City and State of New York and is not affiliated in any way with the other two defendants.

Given in substance. E.S.V., Judge.

Defendants' Proposed Instruction No. 6

This action was brought to recover damages claimed to have been suffered by the plaintiffs by reason of an alleged violation of the antitrust laws of the United States. That is to say, plaintiffs contend that defendants have violated the antitrust laws and that plaintiffs were eliminated from the Vanadium industry by this alleged violation of law. Those contentions are denied by each and all of the defendants.

Given: E.S.V., Judge.

Defendants' Proposed Instruction No. 7

The gist of plaintiffs' complaint is that the part of their business concerned with brokerage and

jobbing of vanadium products which they began in July, 1938, was damaged and finally eliminated in 1944 as the alleged result of an alleged unlawful combination and conspiracy among defendants to control the vanadium industry.

Plaintiffs specify that the alleged acts and practices of the defendants which directly and proximately affected them were:

1. Apex Smelting Company of Chicago, Illinois, with which plaintiffs had an exclusive brokerage contract to sell its ferrovanadium production, and under which operations commenced in the spring of 1940, was compelled to cease the manufacture of ferrovanadium in the spring of 1942 because it was unable to operate profitably for the reason that it was unable to obtain vanadium oxide.

2. The failure of plaintiffs' own operation on Long Island, New York, begun in August, 1942, because of the difficulty of securing raw materials which made it commercially impossible to operate profitably.

3. Imperial Paper and Color Corporation of Glen Falls, New York, was forced to abandon in 1944 a contract made in that year with plaintiffs, under which plaintiffs were to act as sales agent for Imperial's entire output of ferrovanadium and vanadium oxide. This is alleged to have been due to Imperial's and plaintiffs' inability to secure vanadium oxide or vanadium-bearing ores.

4. The loss in 1943 of a Canadian customer, Atlas Steels, Limited, and plaintiffs' elimination from the Canadian market as a result of activities of Elec-

tro Metallurgical Company of Canada, then the agent of the Canadian Government in the wartime allocation of ferrovanadium to Canadian steel firms. Plaintiffs further allege that these activities embraced an agreement by defendants to divide the Canadian market among themselves and exclude plaintiffs.

5. Either plaintiffs and Climax Molybdenum Corporation, or both, were deterred in June, 1943, from concluding negotiations for Climax to manufacture ferrovanadium for plaintiffs' account by threats of reprisal by an alleged official of defendant Union Carbide.

Defendants deny that they conspired or combined as aforesaid, or that any act of theirs injured plaintiffs' business in vanadium products.

Given: E.S.V., Judge.

Note: Number 5 of the alleged specified unlawful acts and practices refers to action taken by Electro Metallurgical Company of Canada as agent of the Canadian government. Defendant Union Carbide has filed its memorandum with the court in support of the proposition that it cannot be liable for such acts. If the court so rules, we respectfully request that specification number 5 be omitted from this instruction.

Defendants' Proposed Instruction No. 8

In their answers all of the defendants and each one of them specifically deny the material allegations of plaintiffs' complaint which the Court has

just summarized for you and each and every one of the claims made by the plaintiffs in their complaint.

Given: E.S.V., Judge.

Defendants' Proposed Instruction No. 9

It is the duty of the court to rule on questions of law, the admission of evidence and the conduct of the trial generally, and finally, when all the evidence is in and the jury has heard the arguments of counsel, to instruct the jury as to the law that will control and govern your determination of this case.

It is your duty as jurors to accept the law as stated by the court in these instructions and to apply it to the facts as found by you. You, the jurors, are the sole and exclusive judges of the facts. You pass upon and determine the credibility of the witnesses and the weight of the evidence. It is your duty to determine the facts based upon the evidence which has come from the witnesses and the exhibits in the case and from no other source. When you have determined the ultimate facts from a consideration of the evidence, you apply the law to the facts as found by you.

Given in substance. E.S.V., Judge.

Based upon Judge Weinfeld's instructions to the jury on February 25, 1953 (Stenographer's Notes, pp. 1545-1547) in J. J. Theatres v. Twentieth Century Fox Film Co., et al. (S.D.N.Y. No. 49-80) reversed on other grounds (2 Cir. 1954) 212 F. 2d 840.

Defendants' Proposed Instruction No. 10

For reasons deemed sufficient by the court, certain issues have been withdrawn from this case. You are instructed that in your deliberations you are to disregard any issues which have been withdrawn from your consideration and any comments of counsel about such issues.

Given: E.S.V., Judge.

Defendants' Proposed Instruction No. 11

You may not presume that the defendants, or any of them, are liable to plaintiffs simply because plaintiffs have sued them and filed a complaint alleging a conspiracy and resulting damages. Neither may you presume that the defendants are not liable simply because they have in their answers denied the allegations made in plaintiffs' complaint.

Given: E.S.V., Judge.

Defendants' Proposed Instruction No. 12

Counsel, in arguing this case to you, have commented upon and argued upon the facts, as is their privilege and their duty. If you find any variance between the facts testified to by the witness or as shown by the documentary evidence, and what has been stated to you by counsel to be the facts, to the extent of such variance you must consider only the facts testified to by the witnesses or as shown by the documentary evidence.

Given: E.S.V., Judge.

United States v. Dried Fruit Ass'n. of California (N.D.Cal. 1944) 4 F.R.D. 1, 6.

Defendants' Proposed Instruction No. 13

At times throughout the trial, the court has been called upon to pass on the question whether or not certain offered evidence might properly be admitted. With such rulings and the reasons for them, you are not concerned. Whether offered evidence is admissible is purely a question of law, and from a ruling on such a question you are not to draw any inference as to what weight should be given the evidence, or as to the credibility of a witness. In admitting evidence to which an objection is made, the court does not determine what weight should be given such evidence. As to any offer of evidence that was rejected by the court, you, of course, must not consider the same. As to any question to which an objection was sustained, you must not conjecture as to what the answer might have been or as to the reason for the objection.

When the court has struck out evidence previously admitted, you are instructed that you are not to consider such evidence on any matter or for any purpose. Where the court has advised you that certain evidence is to be considered with relation to a particular defendant, you may not, of course, consider such evidence in relation to any other defendant.

Given: E.S.V., Judge.

The first paragraph of this instruction is based upon Instruction No. 36 as given by Judge Foley in United States v. Las Vegas Merchant Plumbers Ass'n. (D.C.Nev. No. 12173) affirmed (9 Cir. 1954) 210 F.2d 732, certiorari denied (1954) 348 U.S. 817.

Defendants' Proposed Instruction No. 14

The mere fact that plaintiffs have seen fit to join a number of parties as defendants does not mean that all or any of them are liable. Plaintiffs' claim must be judged separately as to each defendant, and the position of each defendant should be judged on its own merits.

This is especially true wherever the facts, circumstances or nature of the charges made or defenses asserted differ with regard to one defendant from those regarding all or some of the remaining defendants.

Each defendant is entitled to individual consideration of the evidence as applied to it to determine whether that particular defendant participated in any combination or conspiracy. No defendant should be prejudiced in the minds of the jurors merely because it has been named by the plaintiffs with others, as a defendant in this case.

Given: E.S.V., Judge.

Defendants' Proposed Instruction No. 15

You should not allow the fact that the defendants in this case are corporations to influence your verdict in any way. Whether you like or dislike corporations is beside the question. It is your duty to give these corporations the same impartial consideration in weighing the evidence and in arriving at a verdict as you would give to any individual.

Given in substance. E.S.V., Judge.

Defendants' Proposed Instruction No. 16

I shall now instruct you how you shall evaluate the testimony and the exhibits which have been tendered to you. It is basic to your consideration of the evidence that you bear firmly in mind that the plaintiffs have the burden of proof regarding all the issues which I have just outlined to you.

This means that on each of these issues the plaintiffs must prove their contentions by what is called a fair preponderance of the evidence. The fair preponderance of the evidence does not necessarily mean the greater number of witnesses, but it means the greater weight of the evidence taken altogether.

It is said by the courts that the preponderance of the evidence means the evidence of greater convincing force. It means evidence which satisfies the conscience and brings conviction to an intelligent mind.

You must weigh the evidence as though it were placed on a scale. If the scale is weighted in favor of the plaintiffs—that is to say, if they have produced evidence of the greater convincing force—they have sustained their burden of proof. If it is weighted in favor of the defendants or if it is evenly balanced, the plaintiffs have failed to sustain their burden. Unless you are satisfied that plaintiffs have met their burden of proof, you must return a verdict for the defendants.

Given: E.S.V., Judge.

Emich Motors v. General Motors (7 Cir. 1950) 181 F.2d 70; Northwestern Electric Co. v. Federal Power Com'n (9 Cir. 1943) 134 F.2d 740, 743, affirmed (1944) 321 U.S. 119; Bachman v. Order of United C. Travelers of America (N.D.Fla. 1943) 50 F.Supp. 87, 90.

Defendants' Proposed Instruction No. 17

You will in no event make any finding in this case which is based on speculation and conjecture rather than competent evidence and the inferences reasonably to be drawn therefrom. It is not enough that there has been created in your minds some doubt or suspicion as to the conduct of the defendants. The plaintiffs must produce proof of such a nature as carries a conviction to your minds, such as would influence you in the conduct of your own business or daily affairs. The character of the proof must be such as you would be willing to act upon and base a judgment upon in the disposal of important matters.

Given: E.S.V., Judge.

First sentence quoted from the Court's instructions to the jury in Theatre Investment Co. v. R.K.O. Radio Pictures (W.D.Wash. Civil No. 1414) (Tr., p. 18). Remainder quoted from Judge Coleman's instructions to the jury in Theatre Enterprises v. Paramount Film Distrib. Corp. (D.C. Md.) as set forth in the opinion of the court of appeals (4 Cir. 1953) 201 F.2d 306, 314, affirmed (1954) 346 U.S. 537.

Defendants' Proposed Instruction No. 18

There are two kinds of evidence, direct and circumstantial. Direct evidence is that kind of evidence by which a fact is proved directly and without inference from other facts. Circumstantial evidence is that kind of evidence by which an inference of an unknown fact is drawn from the existence of known facts. In arriving at your verdict you are to consider all of the evidence, both direct and circumstantial.

Given: E.S.V., Judge.

Quoted from the court's instructions to the jury in Theatre Inv. Co. v. RKO Radio Pictures (W.D. Wash., Civil No. 1414) (Tr. p. 17).

Defendants' Proposed Instruction No. 19

Before a fact can be said to have been proved by circumstantial evidence alone, it is necessary not only that the circumstances proved by the evidence shall reasonably give rise to an inference of such fact but also that no other equally reasonable inference can be drawn from the same circumstances. If two equally reasonable inferences can be drawn from circumstances proved by the evidence, one consistent with the fact sought to be proved and the other inconsistent therewith, you should not infer the fact sought to be proved from such circumstances alone.

Given: E.S.V., Judge.

Pennsylvania R. Co. v. Chamberlain (1933) 288 U.S. 333, 339-340; J. B. Lippincott Company v.

Federal Trade Commission (3 Cir. 1943) 137 F.2d 490, 494; Standard Oil Company of California v. Moore (9 Cir. 1957) 251 F.2d 188, 210, certiorari denied (June 2, 1958).

Defendants' Proposed Instruction No. 20

In evaluating the testimony to decide whether the plaintiffs have sustained their burden of proof, you will have to decide what credibility is to be attached to the testimony of the various witnesses. Whether you believe or do not believe the witnesses, and the weight to be attached to their testimony, is a matter for your sole and exclusive judgment.

In passing upon the credibility of the various witnesses, it is your right to accept the whole or any part of their testimony, or to discard or reject the whole or any part.

It is your over-all duty to scrutinize carefully the testimony given, and in so doing you are to consider the following:

The circumstances under which the witness testified; his demeanor and manner on the witness stand; his intelligence; the extent to which his testimony is contradicted or corroborated by other evidence, if at all; the reasonableness or unreasonableness of his story; his apparent candor and fairness or the lack thereof; and any other matter which reasonably sheds light upon his reliability as a witness.

Given: E.S.V., Judge.

United States v. Dried Fruit Ass'n. of California (N.D.Cal. 1944) 4 F.R.D. 1, 5-6; Windsor Theatre Co. v. Walbrook Amusement Co. (4 Cir. 1951) 189 F.2d 797, 798-799.

Defendants' Proposed Instruction No. 21

There are several modes of impeaching or discrediting a witness. He may be impeached by evidence that he has made, at other times, statements inconsistent with his present testimony. He may be impeached by contradictory evidence or by evidence that his general reputation for truth, honesty or integrity is bad. He may be impeached by evidence that he is biased against or hostile toward the party against whom he testifies. He may be impeached by evidence that he has an interest in the litigation or that there is pending litigation between him and the party against whom he testifies.

If it is shown that a witness has testified falsely in one part of his testimony, you are at liberty to disregard the testimony of that witness entirely, or in part.

Given: E.S.V., Judge.

Fed. Rules Civ. Proc., Rule 43A; Cal. Code Civ. Proc., secs., 2051, 2052, 2061 (subsec. 3); Wigmore on Evidence (3d Ed. 1940) Vol. III, sec. 949, p. 502; United States v. Cohen (3 Cir. 1947) 163 F. 2d 667, 669.

Defendants' Proposed Instruction No. 22

The purpose of the antitrust laws is to prevent and declare unlawful contracts, combinations and conspiracies designed to unduly restrain competition, or to monopolize, or to unduly obstruct the free course of trade among the different states and with foreign countries. The restrictions imposed by this law were intended to frustrate unreasonable restraints, but not to prevent the use of reasonable means to protect interstate commerce from injurious or destructive practices or the promotion of competition upon a sound basis.

Given: E.S.V., Judge.

United States vs. Dried Fruit Ass'n of California (N.D.Cal. 1944) 4 F.R.D. 1, 6-7.

Defendants' Proposed Instruction No. 23

You are instructed as a matter of law that neither of the defendants by itself possessed sufficient market power in the vanadium industry so that it could have monopolized the vanadium industry.

Refused: E.S.V., Judge.

United States v. du Pont & Co. (1956) 351 U.S. 377, 389-404.

Defendants' Proposed Instruction No. 24

The plaintiffs' complaint is brought under the anti-trust laws. In so far as this action is concerned, unless there has been agreement, combination or conspiracy among two or more persons, the antitrust laws are not applicable. While the agree-

ment, combination or conspiracy can be established by circumstantial evidence without direct proof, still when all is said and done, it is the true and ultimate fact which must prevail. Either there is some agreement, combination or conspiracy or there is not. Unless you find by a preponderance of the evidence that two or more defendants joined together in an agreement, combination or conspiracy by reason of which plaintiffs were injured, you must find for the defendants. Moreover, you cannot find against any defendant who was not a party to an agreement, combination or conspiracy by reason of which plaintiffs were injured.

Given: E.S.V., Judge.

United States v. Morgan (S.D.N.Y. 1953) 118 F. Supp. 621, 634."

Defendants' Proposed Instruction No. 25

In this type of action, the burden is upon the plaintiffs to prove the four basic elements of their claim:

(a) They must prove that the defendants did in fact engage in an unlawful agreement or conspiracy.

(b) They must prove that overt acts were committed or performed by defendants pursuant to the unlawful agreement or conspiracy.

(c) They must prove that these acts injured them and were the direct, immediate and proximate cause of such injury.

(d) They must prove their damages.

I shall explain all of these important terms to you as I proceed with my instructions.

Given: E.S.V., Judge.

Burnham Chemical Co. v. Borax Consolidated (9 Cir. 1948) 170 F.2d 569, 571; Suckow Borax Mines Consol. v. Borax Consolidated (9 Cir. 1950) 185 F.2d 196, 208.

Defendants' Proposed Instruction No. 26

I turn to the first element of plaintiffs' claim, the unlawful conspiracy.

An unlawful conspiracy is an agreement or understanding, express or implied, between two or more persons, to do an illegal act, or to do a legal act in an illegal manner. The essence of the conspiracy is the unlawful agreement or combination. A conspiracy is sometimes defined by the courts as a partnership in an illegal enterprise.

In this case the claim is that the defendants entered into an agreement or combination to restrain and monopolize interstate and foreign trade in vanadium products. The burden is on the plaintiffs to establish the existence of such a conspiracy during the time plaintiffs were in business. If you find that the plaintiffs have not proved that there was such a conspiracy between the defendants, you should not consider any other issues in the case and you must return a verdict for the defendants.

Given: E.S.V., Judge.

United States v. Kissel (1910) 218 U.S. 601, 607-608; U. S. v. Socony-Vacuum Oil Co. (1940) 310

U.S. 150, 253-254; United States v. Dried Fruit Ass'n of California (N.D.Cal. 1944) 4 F.R.D. 1, 7; Marino v. United States (9 Cir. 1937) 91 F.2d 691, certiorari denied (1937) 302 U.S. 764; Lynch v. Magnavox Co. (9 Cir. 1938) 94 F.2d 883, 889.

Defendants' Proposed Instruction No. 27

The mere fact that the businesses of defendants in the production and sale of ferrovanadium and vanadium oxide when added together constitute a large percentage of the business of producing and selling such products in the United States is not a fact from which, standing alone, you can find or infer that defendants have combined or conspired to monopolize interstate trade or commerce within the meaning of section 2 of the Sherman Act.

Refused: E.S.V., Judge.

Defendants' Proposed Instruction No. 28

The law recognizes the right of any trader or manufacturer engaged in a private business freely to exercise his own independent discretion as to the parties with whom he will deal or refuse to deal.

Given: E.S.V., Judge.

United States v. Colgate & Co. (1919) 250 U.S. 300; Times-Picayune Publishing Co. v. United States (1953) 345 U.S. 594, 625; Paramount Film Distributing Corp. v. Applebaum (5 Cir. 1954) 217 F.2d 101, 124.

Defendants' Proposed Instruction No. 29

If a prospective buyer indicates to a seller in advance that he would not buy at the seller's current price for similar sales, the seller's failure to offer goods at that price does not evidence a refusal to deal.

Given: E.S.V., Judge

Standard Oil Company of California v. Moore (9 Cir. 1957) 251 F.2d 188, 203, certiorari denied (June 2, 1958).

Defendants' Proposed Instruction No. 30

The court instructs you that if any defendant acted on the basis of its own business judgment, no inference of conspiracy can be drawn against that defendant, even though after weighing all of the circumstances your own personal opinion might be that the defendant's judgment was incorrect. You cannot find that the defendants entered into an unlawful agreement or conspiracy because you disagree with their business judgment.

Given: E.S.V., Judge.

G. & P. Amusement Company v. Regent Theatre Company (N.D. Ohio 1952) 107 F.Supp. 453, 459.

Defendants' Proposed Instruction No. 31

You are instructed that mere uniformity of prices in the sale of commodities such as vanadium products are not in themselves sufficient evidence of an unlawful agreement or conspiracy since uniformity in price may result solely from economic forces.

Given: E.S.V., Judge.

Based upon Pevely Dairy Co. v. United States (8 Cir. 1949) 178 F.2d 363, 368-370, certiorari denied (1950) 339 U.S. 942.

Defendants' Proposed Instruction No. 32

You may consider diversity of business practices among defendants as tending to show the absence of any unlawful agreement or conspiracy among them.

Given: E.S.V., Judge.

United States v. Morgan (S.D.N.Y. 1953) 118 F.Supp. 621, 634, 699-700; Tag Mfgrs. Institute v. F.T.C. (1 Cir. 1949) 174 F.2d 452.

Defendants' Proposed Instruction No. 33

In reaching a conclusion as to the existence of the conspiracy as charged and whether each defendant was a member, you must do so without regard to, and independent of, the acts and declarations and statements of the others.

The existence of the conspiracy cannot be established against any co-defendant by the acts or declarations of his alleged co-conspirators done or made in his absence. The existence of the conspiracy and each defendant's connection with it must be established by independent proof based upon the reasonable inferences to be drawn from such defendant's own acts, his own declarations and his conduct.

Given: E.S.V., Judge.

Glasser v. United States (1942) 315 U.S. 60, 74-75; Mayola v. United States (9 Cir. 1934) 71 F.2d 65, 67.

Defendants' Proposed Instruction No. 34

The acts or statements of employees, agents or officers of a corporation can only be considered as acts or statements of that corporation if the evidence shows that the corporation through its shareholders, board of directors or authorized management officers vouched for part or all of an employee's, agent's or officer's statement.

It is not necessary to show that the statement was expressly vouched for. If authorized management officers direct that business be conducted in reliance upon a particular intramural statement or report, and it is so conducted without reservation, the corporation has by implication, adopted the statement or report, and is chargeable with it as an admission.

Given: E.S.V., Judge.

Standard Oil Company of California v. Moore (9 Cir. 1957) 251 F.2d 188, 218, certiorari denied (June 2, 1958).

Defendants' Proposed Instruction No. 35

Evidence of acts and declarations of agents or employees of each of the defendants are not to be considered as evidence against other alleged members unless you first find from substantial evidence, independent of such acts or declarations, that there was a conspiracy between the defendants.

Given: E.S.V., Judge.

Glasser v. United States (1942) 315 U.S. 60, 74-75; Standard Oil Company of California v. Moore (9 Cir. 1957) 251 F.2d 188, 219, certiorari denied June 2, 1958).

Defendants' Proposed Instruction No. 36

Before you may find the existence of an unlawful agreement or conspiracy by circumstantial evidence alone, the facts relied upon must be of such nature and so related that it is the only conclusion that can fairly and reasonably be drawn from them. It is not sufficient that the facts and circumstances merely be consistent with the conclusion sought to be established. They should be inconsistent with any reasonable theory to the contrary.

Given in substance. E.S.V., Judge.

United States v. Aluminum Co. of America (S.D. N.Y. 1939) 1 F.R.D. 1; Standard Oil Company of California v. Moore (9 Cir. 1957) 251 F.2d 188, 210, certiorari denied (June 2, 1958); Metropolitan Casualty Ins. Co. v. Smith & Smith (9 Cir. 1932) 58 F.2d 699.

Defendants' Proposed Instruction No. 37

If you find that any defendant adopted a business practice similar to that of another defendant, this is circumstantial evidence from which various inferences may be drawn. It is plaintiffs' contention that such similar business practice, if any you find, is reasonably consistent only with unlawful agreement or conspiracy among defendants. It is

defendants' contention that such similar business practices as you may find are either the result of the standardized nature of their products or of other economic factors confronting all defendants alike, or the result of the necessity upon each defendant to meet its competition, or the result of a belief independently arrived at by each defendant that such business practice was least expensive, most efficient or otherwise the best course for it to follow.

Plaintiffs have the burden of proof on this issue. You must find for the defendants unless you find that the inference suggested by plaintiffs is the only conclusion that can fairly and reasonably be drawn from the similarity of business practices of any of the defendants.

Given: E.S.V., Judge.

Theatre Enterprises v. Paramount Film Distrib. Corp. (4 Cir. 1953) 201 F.2d 306, affirmed (1954) 346 U.S. 537; Fanchon & Marco Inc. v. Paramount Pictures (S.D. Cal. 1951) 100 F.Supp. 84, affirmed (9 Cir. 1954) 215 F.2d 167, certiorari denied (1953) 345 U.S. 964.

Defendants' Proposed Instruction No. 38

The last instruction which the Court has given you, is intended to advise you as to what is an unlawful agreement or conspiracy. The Court does not mean to suggest by any instruction given by the Court, that the existence of an unlawful agreement or conspiracy has been established. That

question, like the other questions of fact in this case, is for you to decide.

The Court will now instruct you as to the rules which you must follow in evaluating the evidence for the purpose of determining whether or not an unlawful agreement or conspiracy has been proved.

Refused: E.S.V., Judge.

Defendants' Proposed Instruction No. 39

Only if you find (1) that defendants entered into an unlawful conspiracy in violation of the antitrust laws; (2) that they performed overt acts in furtherance thereof; (3) which acts proximately caused injury to the plaintiffs, will you reach the question as to how to fix the plaintiffs' damages, if any. I will give you instructions on the question of damages in a later part of this charge.

Refused: E.S.V., Judge.

Defendants' Proposed Instruction No. 40

Not only must the plaintiffs in this case prove a conspiracy in violation of the antitrust laws; they must, in addition, show that the defendants committed or performed overt acts in furtherance of that unlawful conspiracy. Plaintiffs are private parties suing for damages. This is not a governmental suit. Private parties, unlike the Government, must prove more than a public wrong; they must prove that the public wrong is a private wrong to them. Private civil antitrust actions are founded not upon the mere existence of a conspiracy, but upon injuries which result from the com-

mission of forbidden overt acts by the conspirators. Therefore, no private action accrues from the mere agreement or conspiracy itself, because standing alone a conspiracy does not invade any private rights. The plaintiffs must accordingly prove that in carrying out the conspiracy which they claimed existed, the defendants performed overt acts which have had a direct detrimental impact upon their business. The burden is on the plaintiffs to establish such overt acts.

Given: E.S.V., Judge.

Burnham Chemical Co. v. Borax Consolidated (9 Cir. 1948) 170 F.2d 569, 571; Glenn Coal Co. v. Dickinson Fuel Co. (4 Cir. 1934) 72 F.2d 885, 887; Suckow Borax Mines Consol. v. Borax Consolidated (9 Cir. 1950) 185 F.2d 196, 208; Momand v. Universal Film Exchange (D.Mass. 1942) 43 F.Supp. 996, 1007, affirmed (1 Cir. 1948) 172 F.2d 37; Wolfe v. National Lead (N.D.Cal. 1953) 15 F.R.D. 61.

Defendants' Proposed Instruction No. 41

The court in instructing you concerning the measure of damage does not mean to intimate in any way that plaintiffs are entitled to recover in this case. Neither should the fact that counsel for the parties have discussed the question of damages be considered by you in determining whether or not the plaintiffs are entitled to recover in this case. That is a question which is left solely for you to determine upon the law and the evidence.

Refused: E.S.V., Judge.

Emich Motors Corp. v. General Motors Corp. (7 Cir. 1950), 181 F.2d 70.

Defendants' Proposed Instruction No. 42

In determining whether or not plaintiffs have been injured and damaged by reason of the defendants' alleged unlawful conspiracy, you must determine whether or not plaintiffs have established with reasonable certainty that but for the conspiracy they would have had vanadium products to sell and would have sold them at a profit.

Given: E.S.V., Judge.

Wolfe v. National Lead Company (9 Cir. 1955), 225 F.2d 427, 431.

Defendants' Proposed Instruction No. 43

The damages which you may properly award to plaintiffs, if you find that plaintiffs have any right to recover damages, are limited to those actual damages which can be determined from the evidence, and do not include claimed damages which are merely speculative, remote or uncertain. Actual damages must be proved by facts from which their existence is logically inferable and cannot be supplied by conjecture.

Given: E.S.V., Judge.

Keogh v. C. & N. W. Ry. Co. (1922), 260 U. S. 156, 165; Ronson Patents Corp. v. Sparklets Devices (E.D. Mo. 1953), 112 F. Supp. 676, 692; Ebeling v. Foster & Kleiser Co. (W.D. Wash. 1935), 12 F. Supp. 489.

Defendants' Proposed Instruction No. 44

In determining whether plaintiffs were injured or damaged as a result of the alleged unlawful activities of the defendants, you may consider the conditions of business prevailing at the time, including abnormal shortages in vanadium products caused by war, the effect of government controls upon the maximum sale prices of vanadium products, government purchasing policies for both vanadium ore and finished products, export embargoes, and government priority and allocation regulations upon domestic distribution.

Given: E.S.V., Judge.

Wolfe v. National Lead Company (9 Cir. 1955), 225 F.2d 427, 431.

Defendants' Proposed Instruction No. 45

If you find that plaintiffs stopped such business as they may have had in ferrovanadium or vanadium oxide at a time when they were able to buy vanadium oxide from any supplier, whether that supplier might have been either of the defendants or any other person or Government agency, at prices which would have enabled the plaintiffs to make a profit, then you cannot find that plaintiffs lacked supplies of vanadium products to sell as a result of the activities of the defendants or any of them.

Given: E.S.V., Judge.

Rushing v. Metro-Goldwyn-Mayer Distributing

Corp. (5 Cir. 1954), 214 F.2d 542, 544; American Can Co. v. Russellville Canning Co. (8 Cir. 1951), 191 F.2d 38, 55-56.

Defendants' Proposed Instruction No. 46

You are instructed that plaintiffs are not entitled to recover any element of damages which could have been avoided through the exercise of reasonable efforts on their part. Plaintiffs are not entitled to increase their damages through inaction, but must take all reasonable steps to mitigate their damage and reduce their loss. In determining whether plaintiffs have discharged their duty to mitigate damages, you may consider whether reasonable men in plaintiffs' position would have accepted offers made to them, either before or after they ceased their vanadium business, to supply them with vanadium oxide at prices which would have permitted them to operate at a profit. You may consider whether reasonable men in plaintiffs' position could have made arrangements to process ferrovanadium and whether reasonable men in their position would have made additional efforts to find either suppliers of vanadium oxide or processors of ferro vanadium.

If you find that by any of these means plaintiffs could reasonably have avoided the cessation of their vanadium business or could have recommended it at any later time, you must limit plaintiffs' damages to those losses they would have suffered had they taken such steps.

Given: E.S.V., Judge.

American Can Co. v. Russellville Canning Co. (8 Cir. 1951), 191 F.2d 38, 55-56.

Defendants' Proposed Instruction No. 47

If you find that plaintiffs suffered damage by reason of the alleged unlawful activities of the defendants, you are to proceed to determine the amount of damages so caused to plaintiffs.

In this case plaintiffs' claim for damages is based upon the claim that they lost profits as a result of the alleged unlawful activities of the defendants. Plaintiffs must prove the amount of such lost profits, if any, only by evidence from which a just and reasonable inference can be drawn. You may not speculate as to the amount. Your determination must be based on evidence as to the persons from or through whom plaintiffs would probably have been able to obtain vanadium products, persons to whom plaintiffs would probably have been able to sell the vanadium products they so obtained, and the net profit which plaintiffs would probably have obtained on any such transactions.

Given: E.S.V., Judge.

Wolfe v. National Lead Company (9 Cir. 1955), 225 F.2d 427, 431; Central Coal & Coke Co. v. Hartman (8 Cir. 1901), 111 Fed. 96, 100, 102; O'Halloran v. American Sea Green Slate Co. (2 Cir. 1915), 229 Fed. 77, 81.

Defendants' Proposed Instruction No. 48

In the event that you find by a preponderance of the evidence that plaintiffs were injured by the

acts of the defendants, you are instructed that this alone is not sufficient to permit you to award damages to the plaintiffs. Injury to the plaintiffs individually is not sufficient to warrant recovery by plaintiffs in a civil action under the antitrust laws. Plaintiffs, in addition, must establish by a preponderance of the evidence that the acts which caused them injury were part of an illegal agreement or conspiracy which was reasonably calculated to prejudice the public interest by unduly restricting the free flow of interstate commerce. In other words, even if you should find that there were acts of the defendants directed at plaintiffs alone, this is not sufficient. You must find that defendants were engaged in a conspiracy to injure the general public by restraining the free flow of interstate commerce, and that it was by reason of this general conspiracy that plaintiffs' business was destroyed.

Given: E.S.V., Judge.

Shotkin v. General Electric Co. (10 Cir. 1948), 171 F.2d 236; Feddersen Motors, Inc. v. Ward (10 Cir. 1950), 180 F.2d 519; Klor's Inc. v. Broadway Hale Stores (9 Cir. 1958), CCH Trade Reg. Rep., par. 69,007.

Defendants' Proposed Instruction No. 49

Plaintiffs are in no event entitled to damages for any period prior to October 10, 1941.

Refused: E.S.V., Judge.

Cal Code Civ. Proc., sec. 340, subd. 1.

Defendants' Proposed Instruction No. 49A

Plaintiffs are in no event entitled to damages for any period prior to October 10, 1939.

Given in substance: E.S.V., Judge.

Cal. Code Civ. Proc., sec. 338, subd. 1.

[Endorsed]: Filed June 25, 1958.

[Title of District Court and Cause.]

DEFENDANTS' REQUESTED REVISED AND ADDITIONAL INSTRUCTIONS

May it please the Court:

Defendants respectfully request the court to give the following additional jury instructions Nos. 7A, 21A, 23A, 30A and 50, and withdraw Nos. 7, 21, 23, 34 and 39 of the instructions previously proposed by defendants.

Dated June 20, 1958.

/s/ JOSIAH G. HOLLAND,
/s/ EDWARD R. NEAHER,
/s/ JOHN A. SUTRO,
/s/ ALLAN N. LITTMAN,

Attorneys for Defendant, Vanadium Corporation of America.

/s/ RICHARD J. ARCHER,
/s/ GIRVAN PECK,

Attorneys for Defendants, Union Carbide Corporation and United States Vanadium Corporation.

Defendants' Proposed Instruction No. 7A

The gist of plaintiffs' complaint is that the part of their business concerned with brokerage and

jobbing of vanadium products which they began in July, 1938, was damaged and finally eliminated in 1944 as the alleged result of an alleged unlawful combination and conspiracy among defendants to control the vanadium industry.

Plaintiffs specify that the alleged acts and practices of the defendants which directly and proximately affected them were:

1. Apex Smelting Company of Chicago, Illinois, with which plaintiffs had an exclusive brokerage contract to sell its ferrovanadium production, and under which operations commenced in the spring of 1940, was allegedly compelled to cease the manufacture of ferrovanadium in the spring of 1942 because it was unable to operate profitably for the reason that it was unable to obtain vanadium oxide.

2. The failure of plaintiffs' own operation on Long Island, New York, begun in August, 1942, because of the alleged difficulty of securing raw materials which made it commercially impossible to operate profitably.

3. Imperial Paper and Color Corporation of Glen Falls, New York, was allegedly forced to abandon in 1944 a contract made in that year with plaintiffs, under which plaintiffs were to act as sales agent for Imperial's entire output of ferrovanadium and vanadium oxide. This is alleged to have been due to Imperial's and plaintiffs' inability to [illegible]ure vanadium oxide or vanadium-bearing ores.

Defendants deny that they conspired or combined as aforesaid, or that any act of theirs injured plaintiffs' business in vanadium products.

Given; modified: E.S.V., Judge.

Defendants' Proposed Instruction No. 21A

There are several modes of impeaching or discrediting a witness. He may be impeached by evidence that he has made, at other times, statements inconsistent with his present testimony. He may be impeached by contradictory evidence, or by evidence that he is biased against or hostile toward the party against whom he testifies.

If it is shown that a witness has testified falsely in one part of his testimony, you are at liberty to disregard the testimony of that witness entirely, or in part.

Given: E.S.V., Judge.

Fed. Rules Civ. Proc., Rule 43; Cal. Code Civ. Proc., secs. 2051, 2052.

Defendants' Proposed Instruction No. 23A

This case does not concern monopolization or attempted monopolization or restraint of trade by any one defendant nor by the Carbide companies as a group. It concerns only the plaintiffs' claim that defendant Vanadium Corporation of America and the Carbide defendants together agreed, conspired or combined to monopolize or to restrain trade unreasonably. Unless you find such an agreement there is no violation of law in the present

case. It is only an agreement, conspiracy or combination to do these things with which we are concerned. Unless you find by a preponderance of the evidence that the defendants in the Union Carbide group joined together with the defendant Vanadium Corporation of America in an agreement, combination or conspiracy, by reason of which plaintiffs were injured, you must find for the defendants.

Refused: E.S.V., Judge.

United States v. U. S. Steel Corp. (1920), 251 U. S. 417, 444-445; United States v. Aluminum Co. of America (2 Cir. 1945), 148 F.2d 416, 432; Alexander Milburn v. Union Carbide & Carbon Corp. (4 Cir. 1926), 15 F.2d 678, certiorari denied (1927) 273 U. S. 757.

Defendants' Proposed Instruction No. 30-A

The Court instructs you that to the extent that any defendant acted on behalf of the Government of the United States or on behalf of one of its agencies or services, and in the scope of its duties in that regard, any such actions cannot be violations of the antitrust laws. No such actions form any proper part of plaintiffs' proof of conspiracy to monopolize or to restrain trade in the present case, nor may plaintiffs recover any damages which may have resulted from such actions.

Given: E.S.V., Judge.

Parker v. Brown (1943), 317 U. S. 341, 352; Stroud v. Benson (E.D. N.C. 1957), 155 F. Supp.

482, 493; Keogh v. C. & W. Ry. Co. (1922), 260 U. S. 156, 165.

Defendants' Proposed Instruction No. 50

In measuring the damages, if any, to which plaintiffs may be entitled you are not to consider gross profits in fixing the amount of damages. You must limit your consideration to the net profits or losses of the plaintiffs in determining what net profits, if any, they lost by reason of the unlawful activities of the defendants.

Plaintiffs must satisfy you by a preponderance of the evidence that they would in fact have made net profits in addition to any net profits they actually made and they must furnish you with a fair and reasonably accurate standard for measuring just what that additional net profit would have been. If they have not furnished you with such a standard and if you have no means of ascertaining what their damages may be other than by speculation and guess work, in such event you must return a verdict for the defendants.

Given, as modified: E.S.V., Judge.

Wolfe v. National Lead Company (9 Cir. 1955), 225 F.2d 427.

[Endorsed]: Filed June 25, 1958.

In the District Court of the United States, Northern District of California, Southern Division

No. 29008-H

CONTINENTAL ORE COMPANY, et al.,
Plaintiffs,

vs.

UNION CARBIDE AND CARBON CORPORATION, et al., Defendants.

JUDGMENT

This action having been tried and a general verdict for the defendants having been duly rendered on the 24th day of June, 1958,

It is considered and adjudged by the Court that the plaintiffs take nothing by their complaint and that the same be dismissed and that the defendants

have judgment on the verdict against the plaintiffs upon the issues in this action and recover from the said plaintiffs their costs taxed at $.....

By the Court: June 25, 1958.

/s/ EDGAR S. VAUGHT,
United States District Judge.

Approved as to form:

Plaintiffs' Exhibits 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 66, 67-A, 67-B, 67-C, 67-D, 67-E, 67-F, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 142, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170 and 171;

Defendant, Union Carbide and Carbon Corporation, exhibits A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z, 2-a, 2-b, 2-c, 2-d, 2-e, 2-f, 2-g, 2-h, 2-i, 2-j, 2-k, 2-l, 2-m, 2-n, 2-o, 2-p, 2-q, 2-r, 2-s, 2-t, 2-u, 2-v, 2-w, 2-x, 2-y, 2-z, 3-a, 3-b, 3-c, 3-d, 3-e, 3-f, 3-g, 3-h, 3-i, 3-j, 3-k, 3-l, 3-m, 3-n, 3-o, 3-p, 3-q, 3-r, 3-s, 3-t, 3-u, 3-v, 3-w, 3-x, 3-y, 3-z, 4-a, 4-b, 4-c, 4-d, 4-e, 4-f, 4-g, 4-h, 4-i, 4-j, 4-k, 4-l, 4-m, 4-n, 4-o, 4-p, 4-q, 4-r, 4-s, 4-t, 4-u, 4-v, 4-w, 4-x, 4-y, 4-z, 5-a, 5-b, 5-c, 5-d, 5-e, 5-f, 5-g, 5-h, 5-i, 5-j, 5-k, 5-l, 5-m, 5-n, 5-o, 5-p, 5-q, 5-r, 5-s, and 5-t;

Defendant, Vanadium Corporation, exhibits 1-a, 1-b, 1-c, 1-d, 1-e, 1-f, 1-g, 1-h, 1-i, 1-j, 1-k, 1-l, 1-m, 1-n, 1-o, 1-p, 1-q, 1-r, 1-s, 1-t, 1-u, 1-v, 1-w, 1-x, 1-y, 1-z, 2-a, 2-b, 2-c, 2-d, 2-e, 2-f, 2-g, 2-h, 2-i, 2-j, 2-k, 2-l, 2-m, 2-n, 2-o and 2-p.

I further certify that the Plaintiffs' Exhibits 32, 65, 126, 139, 140 and 141 are not included in this record for the reason they do not appear in the records in this office.

In witness whereof, I have hereunto set my hand and affixed the seal of said District Court this 21st day of August, 1958.

[Seal] C. W. CALBREATH,
Clerk,

/s/ By MARGARET P. BLAIR,
Deputy Clerk.

The United States District Court, Northern District of California, Southern Division

No. 29008

CONTINENTAL ORE COMPANY, a partnership, et al., Plaintiffs,

vs.

UNION CARBIDE AND CARBON CORPORATION, et al., Defendants.

REPORTER'S TRANSCRIPT

Monday, June 2, 1958, 10:00 o'clock a.m.

Before: Hon. Edgar S. Vaught, Judge.
Appearances: For the Plaintiffs: Joseph L.

Alioto, Maxwell Keith, John E. Sullivan, Donald Garibaldi; for the Defendant, Union Carbide and Carbon Corporation: Messrs. Morrison, Forester, Holloway, Shuman & Clark, by Richard J. Archer; for the Defendant, Vanadium Corporation of America: Messrs. Pillsbury, Madison & Sutro, by Allan N. Littman, J. G. Holland and E. R. Neaher.

* * * * * [1*]

Mr. Holland: In any event, these facts, ladies and gentlemen, were all in the possession of the Antitrust Division of the United States Government which brought a case against these defendants, a criminal case, charging these [55] defendants with violation of the antitrust laws. That case was tried in Denver, Colorado, a year ago, approximately, this same time, and resulted in the acquittal of all of the defendants in this case, and that's another reason why we feel that these early matters should not be gone into and the case should not be dragged out by them. We feel that the case should start with the coming of Mr. Lear to this country.

* * * * *

Mr. Alioto: If your Honor please, we have had a good deal of pre-trial discovery with respect to undisputed facts and particularly with respect to the existence of certain mills and the statistics on the sales of oxide and ferrovanadium. At this time plaintiff will offer its exhibits first in order responses to interrogatories previously propounded

---

* Page numbers appearing at top of page of Reporter's Transcript of Record.

to both Union Carbide and Vanadium Corporation of America which set forth the production of fused vanadium oxides from various mills of each of the defendants for the period 1933 to 1947.

Mr. Archer: What is the reference number?

Mr. Alioto: This is 8-G of yours, United States Vanadium Corporation, and it is Exhibit 3 of the Vanadium Corporation of America, setting forth the total vanadium oxide from 1933 to 1947, and then there is a quantity of other vanadium products submitted by Union Carbide under Interrogatory 8-G. We offer this as plaintiff's exhibit first in order.

Mr. Archer: 8-G is in that?

Mr. Alioto: Yes.

Mr. Holland: If the Court please, we have no objection to the statistics, but this raises right off the bat the question of how far back we are going to go. These statistics go back to the year 1933.

The Court: You will be limited to what has transpired since 1938.

Mr. Alioto: How does your Honor wish to handle [63] this physically so far as the document itself is concerned? All these statistics are on the same document. We can have them rewritten at some later time.

The Court: Very well. It will be admitted with the understanding that that portion of it which

relates to what occurred prior to 1938 will not be submitted to the Jury.

(The document in question was thereupon received in evidence and marked Plaintiff's Exhibit 1.)

Mr. Alioto: We will offer as plaintiff's exhibit next in order the figures heretofore offered by the defendants, Vanadium Corporation of America and Union Carbide Company with respect to the quantitative yearly total of ferro-vanadium produced in the years 1933 to 1947.

The Court: The same ruling will be made on that.

(The document in question was thereupon received in evidence and marked Plaintiff's Exhibit 2.)

Mr. Alioto: This matter comes up, I take it, on an objection to the figures prior to 1938.

The Court: Yes.

Mr. Alioto: And I take it nothing need be done to preserve our record on the matter.

The Court: No.

Mr. Alioto: We offer as next in evidence with respect to both corporations figures previously secured by pre-trial discovery relating to the domestic sales of the [64] Vanadium Corporation of America and of Union Carbide of total pounds of ferro-vanadium and pentoxide in the years 1933 to 1944. They are in such form that all these figures are on one sheet, your Honor.

The Court: That will be admitted insofar as it refers to the sales after 1938.

(The document in question was thereupon received in evidence and marked Plaintiff's Exhibit 3.)

Mr. Alioto: At this time, if your Honor please, we offer as our exhibit next in order the price lists of the Union Carbide Company for a period in 1933 up through 1944, showing the prices at which vanadium products were sold by the Union Carbide Company.

Mr. Archer: May I see that?

Mr. Alioto: Yes.

Mr. Archer: One of these was corrected. The vanadium oxide prices are not correct. You have them in the answers to the requests for admissions. If you want to put it in subject to correction, that is all right.

Mr. Alioto: The problem is they are not segregated here so I do not see how I could have an alternative. We will put the other answer in and that will clearly appear, I think. We will offer it subject to that condition, if your Honor please.

The Court: Very well. That will be admitted insofar as it relates to matters after 1938.

(The document in question was thereupon received in evidence and marked Plaintiff's Exhibit 4.)

Mr. Alioto: Plaintiff offers as its exhibit next in order the price lists of the Vanadium Corporation of America covering the period of time from 1933—the prices of ferro-vanadium and pentoxide—down to the period of time through 1945.

The Court: Same ruling.

(The document in question was thereupon received in evidence and marked Plaintiff's Exhibit 5.)

Mr. Alioto: If your Honor please, we won't stop now to read some of these things to the Jury. We think we can present them in some kind of tabular form that will make some sense and be intelligible.

We offer now pre-trial statements of the Vanadium Corporation of America setting forth the location of the mills of that company and the time of acquisition of those mills.

The Court: What dates does that refer to?

Mr. Alioto: If your Honor please, the date indicates the original acquisition, for example, on September 16th, 1919, of a plant at Bridgeville, but they had that plant during the entire period of time here involved.

Mr. Holland: May I see it?

Mr. Alioto: Yes. [66]

Mr. Holland: We have no objection to that.

Mr. Alioto: Attached to that same exhibit, if your Honor please, is the same information with respect to the United States Vanadium Corporation showing the location of their mills and the location of their plants for the manufacture of ferro-vanadium as well.

Mr. Holland: Do you have the references to the interrogatories so I can write them down? It will save me time looking at them.

Mr. Alioto: This one is in Interrogatory Number 7.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 6.)

[See Book of Exhibits.]

Mr. Alioto: Along those same lines, giving more specific dates with respect to the acquisition of certain plants, we offer the Answer of the Vanadium Corporation of America to Interrogatory Number 7 that we acquired in the pre-trial proceedings.

Mr. Holland: Is the question on there?

Mr. Alioto: The question reads, "State the location of any mills and refineries for the processing of vanadium bearing materials or for the manufacture of ferro-vanadium owned, operated or leased by you or your subsidiaries and the length of time each has been under the ownership and lease."

Mr. Holland: We object to the extent that the question calls for mills owned by the defendant or leased during [67] a period prior to 1938.

The Court: Does that limit the time?

Mr. Alioto: If your Honor please, so far as I know, all the mills and the properties set out here were operated by the Vanadium Corporation after 1938.

The Court: Very well. Let it be admitted.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 7.)

[See Book of Exhibits.]

Mr. Alioto: We offer as our exhibit next in order the Answer of Vanadium Corporation of

America to Interrogatory Number 17, setting forth the volume by years of vanadium oxide purchased from Union Carbide by the Vanadium Corporation of America for the period from 1933 through 1939 and the prices at which this vanadium oxide was purchased by these defendants.

Mr. Holland: That is subject to the same ruling, if your Honor please?

Mr. Alioto: I submit, if the Court please, I would like to make a statement with respect to that.

The Court: It will be admitted insofar as it involves 1938 and after, not prior thereto.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 8.)

[See Book of Exhibits.]

Mr. Alioto: We will offer next in evidence the Answer to Interrogatory Number 19, which discloses a joint operation of certain vanadium bearing ore mines by the Vanadium [68] Corporation of America and Union Carbide during the year 1939. That is the Answer by each of the defendants in this case.

Mr. Archer: This refers to the years 1939 and 1940, your Honor.

The Court: Admit it.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 9.)

Mr. Holland: We would like to enter our objection to the admission of that exhibit at all in evidence in that this is not based on a period of time, your Honor, because this comes after the

1938 period. This was an agreement under which, on payment of a toll charge, the United States Vanadium Corporation mined and milled ore belonging to the Vanadium Corporation, and delivered the oxide to the Vanadium Corporation, paying a toll charge of 65 cents to 75 cents a pound. We make the objection for the reason that we are concerned here with activities or alleged activities which damaged Mr. Leir, and this has no evidentiary bearing upon the damage suit.

Mr. Alioto: I submit, if your Honor please, that that is being offered under the issue of conspiracy and combination to violate the anti-trust laws during the period of time in question.

The Court: It may be admitted. Exception allowed. I do not see its materiality now, but we will come to that later. [69]

Mr. Archer: Your Honor, may I interpose here just a moment? Rather than have me stand up every time Mr. Holland stands up, could it be understood that if one of us makes an objection it will go for both unless——

Mr. Holland: Unless disavowed.

Mr. Archer: Unless disavowed.

The Court: I suppose that last won't be considered as a conspiracy.

Mr. Alioto: I am sure we will have a lot of that during this trial, if your Honor please, and more so than we had in the older days.

If your Honor please, I understand the Court's ruling with respect to the period of time involved. For purposes of the record, however, we at this

time think that in the sequence of the presentation we should offer into evidence the basic agreement for the sale of a million pounds of vanadium oxide, one million to one and a quarter million from one defendant to the other. The contract is dated September, 1933, and there are other contracts bringing that up through January, 1936. We will offer that in evidence at this point.

Mr. Holland: We object, your Honor.

The Court: Objection sustained.

Mr. Alioto: In a separate category are similar contracts for the sale of material between one defendant to the other which are dated November 18th, 1938 and June 30th, [70] 1939, respectively. One is for the sale of 130,000 pounds of vanadium oxide at 80 cents a pound and the other is for the sale of one carload at 80 cents a pound with a correction to 65 cents a pound, the first date being November 18th, 1938, and the second June the 30th, 1939. We offer them jointly as one exhibit.

Mr. Holland: Your Honor, we enter the same objection that we did to the—not based on time—the one you overruled.

The Court: This is within the date period. Overruled. Exception allowed.

Mr. Alioto: This is during the same period of time they were refusing to supply oxide to the plaintiff.

Mr. Holland: If the Court please, may I ask that Mr. Alioto in offering his exhibits, since there is a question of admissibility, not to quote imme-

diately the exhibits until they have been admitted?

Mr. Alioto: That exhibit has been admitted.

The Court: The exhibit will be admitted. Exception allowed.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 10.)

Mr. Alioto: We offer as our exhibit next in order, your Honor, a document dated September 1944, from Mr. J. L. Robinson of the United States Vanadium Corporation, that [71] is, the Union Carbide group, to Mr. Blair Burwell, Vice-President of the United States Vanadium Corporation, which sets forth a history of ore prices charged by the United States Vanadium Corporation from October of 1938 through May of 1944. This is the price list of the pricing formula of the United States Vanadium Corporation for the purchase of ore, and we expect to offer following this the same document of prices paid by Vanadium Corporation for ore. We will offer it in evidence.

The Court: Submit it to Counsel, please. Let it be admitted.

Mr. Alioto: I suggest that they be admitted as one exhibit.

(The documents referred to were thereupon received in evidence and marked Plaintiff's Exhibit 11.)

[See Book of Exhibits.]

Mr. Alioto: We offer in evidence as our exhibit next in order the mining claims on vanadium bearing ore owned by the defendant United States

Vanadium Corporation. These mining claims we secured in answer to an interrogatory, if your Honor please, and they list the date of acquisition of these various mining claims as well as the location of the mining claims involved.

Mr. Archer: A great many of these are prior to 1938 and on that ground I object.

The Court: Are any of them prior to 1938?

Mr. Alioto: Yes, your Honor. This is their [72] entire acquisition program, but the exact date is shown in each case. Many of them are within the period, many prior to the period.

Mr. Archer: This is patented and non-patented mining claims containing vanadium bearing ore which have been owned by United States Vanadium Corporation, and then it lists the date of acquisition. To those that show prior to 1938 I object.

The Court: The objection is sustained as to those prior to 1938.

Mr. Alioto: May I state in respect to those, and I think Mr. Archer can check me if I am inaccurate, that though acquired prior to 1938, they were held in 1938 and forward.

The Court: You can state what they held in 1938.

Mr. Alioto: Well, all of these were held at that time, if your Honor please. The date of acquisition —in other words, they may have acquired it in 1927 but they had it 1938 on.

The Court: How would the date of acquisition be material?

Mr. Alioto: It simply shows the date of acquisition, if your Honor please, but these are mining claims in existence as of 1938.

The Court: That is all right. Let it be admitted.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 12.)

[See Book of Exhibits.]

Mr. Alioto: We offer the same kind of list of mining claims on the Colorado Plateau owned by the defendant Vanadium Corporation of America.

Mr. Holland: There is no substantial merit to this, but to keep my position consistent I will object to that prior to 1938. Practically everything was acquired after 1938.

The Court: Admit it.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 13.)

Mr. Alioto: We offer as our exhibit next in order, pursuant to pre-trial discovery, a document setting forth all of the purchases of vanadium ore concentrates and vanadium source materials made by the Vanadium Corporation of America from the dates 1933 to 1944. The document does not segregate them in any other way as to date.

Mr. Holland: To which we object to all references prior to 1938, your Honor.

The Court: The objection is sustained. It will be admitted without exception.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 14.)

Mr. Alioto: We offer a similar document secured in pre-trial discovery prepared by the Union Carbide organization showing purchases made from the period 1933—but there [74] are only a few purchases made then—through 1942 in the one case, this being a statement of flue dust, vanadic acid and ferro-vanadium purchased and a statement showing the vanadium bearing materials purchased from others, excluding vanadium ore, during the period 1936 to 1945. However, the document, though requesting information for that period, has the information in the years 1939, 1940, 1941, 1942, 1943 and 1944. I do not see anything of 1936 on that document. These are materials purchased from independent sources, so-called.

Mr. Archer: There are a few 1933 purchases. I do not think they are particularly significant, but to preserve the record I will make the same objection.

The Court: The same order will be made.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 15.)

Mr. Alioto: We offer next, if your Honor please, a document secured in pre-trial discovery which sets forth the identity of the purchasers of vanadium products from these defendants, and this document is set forth to show the buyers of vanadium products they had in each of the years from

1933 to 1944, disclosing whether or not they purchased in that year. We will offer that as plaintiff's exhibit next in order.

Mr. Holland: To which we enter the chronological objection, objecting to anything prior to 1938.

The Court: The objection will be sustained as to all items prior to 1938.

(The documents referred to were thereupon received in evidence and marked Plaintiff's Exhibit 16.)

Mr. Alioto: We offer as against Mr. Holland's client, the Vanadium Corporation of America, the same listing with respect to customers. This is a breakdown setting forth the customers for each of the years from 1933 through 1944.

Mr. Holland: I am sorry. I thought you said the last one.

Mr. Alioto: Union Carbide was the one offered previously.

Mr. Holland: I object to this one on anything prior to 1938.

The Court: The same ruling will apply. That portion prior to 1938 will be excepted.

(The documents referred to were thereupon received in evidence and marked Plaintiff's Exhibit 17.)

Mr. Alioto: We offer, if your Honor please, a statistical study prepared by the Union Carbide defendants or one of its affiliates setting forth the production from each of its plants for the period—it comes from their file—for the period 1927 to

1945, showing the production from each of its plants as well as production from other plants, such as Gateway Alloys, Vanadium Corporation of America, the production, both private and governmental, of the Vitro Chemical [76] Company, North Continental Mines, Blanding, Nisley and Wilson and others. We offer that as plaintiff's exhibit next in order. It is on one document, if your Honor please, which comes from the files of the defendant in this form.

Mr. Archer: Your Honor, this document was handed to me by Counsel the other day and I have not been able to check either the accuracy or where it was made and it does go back to 1926. It also has certain Canadian figures and I would object entirely to the Canadian figures on the ground of the memorandum which I previously submitted, and I would have to object at this time on the ground that no foundation was laid. I have not been able to check to see whether this was made by us. It is my guess that this was used, prepared, or one of the papers used in preparing an exhibit for the prior litigation, and so consequently I do not believe it would be a business record of our company. It would be specially prepared, and until I could object to it I would want to object to it on the ground there is no foundation.

The Court: What is the statement of Counsel as to where that came from?

Mr. Alioto: This document came from the gentleman who is the Vice-President and a Director of the United States Vanadium Company, Mr. Bur-

well. However, since the question of foundation has been raised, if the Court please, I think it is admissible, but Mr. Burwell is going to be here, and we will [77] ask him about it, unless the Court wants to rule on it at this time.

The Court: Let it be admitted subject to further objection except that portion prior to 1938.

objection except that portion prior to 1938.

Mr. Holland: Are you just offering that against Union Carbide?

Mr. Alioto: I am offering it at this point against Union Carbide only.

Mr. Archer: Did your Honor rule on the Canadian statistics in there?

Mr. Alioto: We think they are relevant, if your Honor please.

The Court: Canadian?

Mr. Alioto: Yes, Mr. Leir marketed in the Canadian market from the United States.

The Court: When?

Mr. Alioto: It covers the period, as everything else does, of this study made by them, not by us. It covers the period 1927 to 1945 but has the Canadian figures for the period 1931 to 1945 for each year.

Mr. Archer: I would object to not only prior to 1938 but even through the later period because, as alleged in the Complaint, the department we are talking about, Electromet of Canada, was operating as the agent of the Canadian Government.

Mr. Alioto: I do not think we have reached that question here. This is simply the status of the

Canadian market at the time. It was a market in which we marketed.

The Court: Let it be admitted with the exception of what occurred prior to 1938, and this other matter can be raised later.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 18.)

Mr. Alioto: If your Honor please, we offer as our exhibit next in order—and again I say we make no attempt to read them to the Jury at this time but to have them in some kind of tabular form at a later time after the evidence has been admitted—we offer in evidence as our exhibit next in order the number of total requirements contracts for ferro-vanadium and for vanadium oxide made by each of these defendants, as well as the volume in pounds that was sold under these total requirements contracts. They cover the years 1933 to 1949. As I say, the answers were procured for all those years without segregation on one piece of paper.

Mr. Archer: How do you tell which is which defendant?

Mr. Alioto: One shows, "VCA"——

Mr. Archer: I think you ought to mark on there——

Mr. Alioto: You have no objection to my marking "Union Carbide"? This is an exhibit, if your Honor please, to an interrogatory and the identification of the corporation was [79] was made on the first page of the interrogatory. Is there any question about that, Mr. Archer?

Mr. Archer: I assume that is correct.

Mr. Alioto: If there is any question about it, we will substitute.

Mr. Holland: We make the usual objection to the period prior to 1938 and then, your Honor, I think we should point out that, as alleged in the Complaint, and as we admit, and as these figures show, we, as all others in the ferro-alloy industry, entered into requirements contracts with the steel mills. We would make a contract with a steel mill to supply all of its requirements for a year, whatever they would give us. I believe Mr. Leir has done the same thing and also has taken requirements contracts from one of the defendants at least here. We do not think that it has any probative value whatever in this case, the fact that we made the usual, customary total requirements contract with the purchaser year by year in the industry which we did.

Mr. Alioto: I submit, your Honor, that if the evidence shows that two people have 100% of an industry——

The Court: What difference does it make if they owned it all?

Mr. Alioto: That is the point I want to make, if your Honor please. If two people have 100% of an industry, and each of them makes total requirements contracts which [80] obligate the buyer not to buy from anybody else——

The Court: Well, if there is nobody else interested in the proposition but those two, how would that be a monopoly?

Mr. Alioto: But there was somebody interested in the proposition, because we tried to sell them and we came up to a situation where people—

The Court: Is it your contention they were required to sell if they didn't want to sell?

Mr. Alioto: No, I do not think I have made plain the background of this point. These are requirement contracts between the Vanadium Corporation of America, for example, and its customers, and between Union Carbide and its customers, which obligate its buyers, the steel mills and others, not to purchase from the plaintiff.

The Court: Is that in the exhibit now, your statement?

Mr. Alioto: Yes, your Honor.

Mr. Holland: No.

The Court: Let it be admitted except that portion that relates to incidents prior to 1938.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 19.)

The Court: Exception allowed.

Mr. Alioto: Now, then, we offer, if your Honor please, a statement of profits from the year 1933 to 1947 in [81] the uranium-vanadium business of each of the defendants involved, being answers to Interrogatory Number 33, as previously pointed out, to each of these defendants. And again, if your Honor please, that does cover the period 1933 to 1947 on one sheet of paper without segregation, but we offer the entire document in order to preserve our record.

The Court: Let it be admitted subject to the elimination of that portion prior to 1938.

Mr. Alioto: Thank you.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 20.)

Mr. Archer: Your Honor, I guess I was a little slow. May the record show an objection on the grounds that our profits on these materials is irrelevant, ours being an entirely different business from the plaintiff's business.

The Court: What is the purpose of the exhibit?

Mr. Alioto: The purpose, if your Honor please, is that it appears from recent decisions of the Court of Appeals for the Ninth Circuit——

The Court: Don't argue the case. Just tell me what the exhibit is.

Mr. Alioto: The purpose is to show the facts, the state of the industry, the vanadium industry, and the facts relating to the vanadium industry during the period of time when the plaintiff was operating in it. [82]

The Court: The objection will be sustained. Exception allowed.

Mr. Alioto: We offer next, if your Honor please, a statement secured in prior discovery in this case setting forth the vanadium bearing ores mined by each of the defendants for the period 1933 to 1947 in terms of——

The Court: What is that again? State that again.

Mr. Alioto: These are the vanadium bearing

ores mined by them and vanadium bearing ores purchased by each of the defendants for the period 1933 to 1947. We will offer that in evidence as our exhibit next in order.

Mr. Holland: Objection to anything prior to 1938, your Honor.

The Court: It will be admitted subject to the elimination of that portion prior to 1938.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 21.)

Mr. Alioto: Finally, on this statistical matter, if your Honor please, we offer in evidence the certified copies from the Bureau of Mines of the United States setting forth for the United States Vanadium Corporation all of the ore produced by it in terms of V_2O_5 content, that is, in terms of vanadium content, for the years 1933 to 1947.

Mr. Archer: The only year prior to 1938 is 1937 in here, your Honor. [83]

The Court: I beg your pardon?

Mr. Archer: It shows the year 1937 on this exhibit of the United States Vanadium Corporation and after that year we object. It shows production only for each of the years 1937 to and including 1947, and I object to the year 1937 and then 1945 to 1947 after the plaintiff went out of business.

The Court: It is sustained so far as 1937 is concerned. I do not know about the other yet.

Mr. Holland: Is this offered for the purpose of impeaching our figures? I see some slight variations here.

Mr. Alioto: No, you will recall your figures are based upon ores mined, not with respect to vanadium content. Then after the proceedings before Judge Harris we worked out an arrangement where your reports to the Bureau of Mines setting forth the V_2O_5 content would be done. It was pursuant to that arrangement that we secured those figures, and they show the situation for 1940 to 1947.

Mr. Holland: There is nothing before 1938 on our exhibit.

The Court: Very well.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 22.)

[See Book of Exhibits.]

Mr. Alioto: I offer now the material for the Vanadium Corporation of America that Mr. Holland and I have just discussed as plaintiff's exhibit next in order. [84]

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 23.)

[See Book of Exhibits.]

Mr. Alioto: Now we offer in evidence, if your Honor please, and I think this will conclude our statistical picture from which we will offer tabulations at a later point, the answers to Interrogatory 8-H by the Union Carbide Corporation and by Vanadium Corporation of America, setting forth the quantity of vanadium oxide and vanadium bearing ore, and in the case of the Vanadium Corporation of America, ferro-vanadium as well, which each of

these defendants purchased from the Metals Reserve Company in the years 1943 and 1944.

Mr. Holland: No objection.

The Court: Let it be admitted.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 24.)

Mr. Alioto: At this time, if your Honor please, the plaintiff proposes to call its first witness. I note it is three o'clock and I do not know your Honor's practice with respect to recesses here.

The Court: We will have a ten minute recess at this time.

(Recess.) [85]

Mr. Alioto: If your Honor please, there are two short matters I would like to clear up. I believe that during the objections on the matter of the chronology of the years involved that counsel and I sometimes used the expression "after '38" or "since '38" and sometimes "before '38." Now, it is my understanding that the ruling up to this point excludes matters prior to '38. Is that correct?

The Court: That's right.

Mr. Alioto: So that the year '38 would be in?

The Court: Well, it would be the date——

Mr. Alioto: The date of the Apex contract is July of 1938, the first contract.

The Court: The first act of your client.

Mr. Alioto: It would be July of 1938.

The Court: That would make it prior to July of 1938.

Mr. Alioto: All right.

Now, then, if your Honor please, the Court excluded a document with respect to the profits of this company from the years '33 to '47, and I would like it marked for identification so that it will be in the record.

The Clerk: Defendants' 20 marked for identification.

(Document re profits of defendants 1933-1947 marked for identification Plaintiff's Exhibit 20.) [86]

Mr. Alioto: The Court also excluded——

The Court: What is it? I didn't get your statement as to what it is you are offering.

Mr. Alioto: This exhibit was excluded by the Court which showed the profits of these defendants and I would like it marked so that we will have a record on the exclusion, if your Honor please, marked for identification.

The Court: The objection is sustained on that.

The Clerk: That is Exhibit 20 for identification.

Mr. Alioto: The Court also excluded the contract of September, 1933, between the two defendants, which we would also like marked for identification so that it will be identified in the record as an excluded contract.

The Clerk: Plaintiff's Exhibit 25 for identification.

(Contract of September, 1933, between defendants marked for identification Plaintiff's Exhibit 25.)

Mr. Alioto: The plaintiff will call Mr. Blair Burwell.

BLAIR BURWELL

a witness on behalf of the plaintiff, having been first duly sworn, testified as follows:

The Clerk: State your name, your occupation and your address to the Court and jury. [87]

The Witness: My name is Blair Burwell. My profession is mining engineer. My residence is in Grand Junction, Colorado.

Direct Examination

Q. (By Mr. Alioto): Mr. Burwell, you were at one time a vice president of the United States Vanadium Corporation, were you not?

A. That's correct.

Q. You were also a——

The Court: Just a moment. What is that corporation?

Mr. Alioto: A vice president of the United States Vanadium Corporation, which is one of the affiliates of the Union Carbide.

The Court: All right. I understand.

Q. (By Mr. Alioto): You were also a director of the United States Vanadium Corporation, were you not, Mr. Burwell?

A. During a period of that time.

Q. And you were also the general mining superintendent of that organization for a period of time, were you not?

A. No, I was the assistant to the vice president in charge of operations, general assistant of the manager or—we never used the "superintendent of operation" term, just to be correct.

(Testimony of Blair Burwell.)

Q. Now, Mr. Burwell, would you be good enough to tell us something about your professional and educational background and experience? [88]

A. By education, I first served in the school of hard knocks, of course as all mining engineers do, and I started first science and engineering under—at the University of Denver in 1910, particularly the rare metals—under a very good teacher, Dr. Engle. And after a break, during the war, and while I was earning money to go through school, I entered the Colorado School of Mines and graduated in 1919 with a degree of engineering in mines, with particular attention and majored in what was called the rare metals, which was radium, uranium, and all these things that involved this Colorado Plateau area.

I continued in my profession. Up to the present time I have held many corporate positions. Professionally, I have acted as the appraiser for the Department of Justice in the Colorado Plateau on the extent and value of the vanadium lands for the Ute Indian settlement case. I have written, of course, many technical documents. I am an active consultant—I have an active—I have been a consultant for the Atomic Energy Commission, in writing technical articles, analysis of ore deposits of the Colorado Plateau containing vanadium, uranium, some of which are still subject to secrecy classification. I have published probably a dozen various articles on the science and technology of uranium, vanadium and tungsten. [89]

(Testimony of Blair Burwell.)

At the present time I am nearing retirement, I am director of three or four companies that are engaged in the mining business. I am a director of the Federal Home Loan Bank Board, which is rather a strange assignment for a mining engineer. I am also a director of the Metal Mining Fund of the State of Colorado, which has to do with the resources of that State.

That's about the essence of it.

Q. Now, then, having given us your professional background, would you be good enough to give us a statement or a short sketch of your various corporate relationships, particularly with reference to the defendants herein involved?

A. I will start in '38. At that time I was in charge of the operations of the mills and mines of the United States Vanadium Corporation producing vanadium and uranium.

1941 and '42. '42 I became vice president of that company. I continued in that position until 1947.

I was also vice president of the Union Mines and Development Company and a director of that company. That company was a top secret company. It was organized to appraise the world resources of uranium which closely involved the Colorado Plateau.

I also had an assignment in the military intelligence at that time which concerned the same matter.

Prior to this period my background went back [90] to—my first contact with the mining of these particular ores, the production of vanadium, began

(Testimony of Blair Burwell.)

in 1919, and has continued, with a few interruptions, since that time.

At the present time my corporate interests, I am president of the Salt Lake Tungsten Company —we have mines—refineries in Salt Lake City. I am a director of that company.

I am chairman of the Board of the Minerals Engineering Company. That company organized to develop the vanadium and uranium resources in 1948.

I am director of the Climax Uranium Company which operates a large processing plant producing both vanadium and uranium in Grand Junction, Colorado.

I am also—I have these other positions, outside of the mining field, which I think I have already covered.

Q. Now, Mr. Burwell, would you be good enough to give us the nature of your experience on what has been called the Colorado Plateau, and if you would be good enough to locate that for us to start with, and then give us your experience on that?

A. Yes, I will do so and endeavor to make it as non-technical as a mining engineer can, and I will speak in this regard in the professional sense, the description. I think——

Q. In that connection, did you bring certain ores with you that are typical of the ores mined on the Colorado Plateau? A. That is true. [91]

Mr. Alioto: If your Honor please, I wonder if

(Testimony of Blair Burwell.)

we could use this table either near the witness or have him step down to this table.

The Court: What is your question again?

Mr. Alioto: My question is to develop the nature of the Colorado Plateau and his experience.

The Court: Let him tell us about it. I would like to hear it. Let him tell what it is.

The Witness: Well, if your Honor please, I would be very glad to do so in simple language, and I think there are samples of ore here and some —that contain the vanadium and uranium.

The Court: I don't care anything about the ore. I want to know—he is asking you for this territory. Now, what territory is ordinarily——

The Witness: The territory of the Colorado Plateau, your Honor and the jury, covers an area somewhat greater than any one single State. It covers approximately 160,000 square miles, and roughly the Colorado Plateau means the plateaus that are on the range of the Colorado River and some rough canyon country, and over that thousands and thousands of square miles of country there are layers of standstone rocks that went in them, there are hundreds of thousands of occurrences of vanadium and uranium-bearing ore. The extent of it now covers much of the State of New Mexico, a good deal [92] of the State of Arizona, the western part of Utah, the western part of the State of Colorado, and extends up into Wyoming.

The Colorado Plateau, your Honor, is probably the richest mining district in the United States at

(Testimony of Blair Burwell.)

this time with a value in terms of its vanadium, its uranium and its potentials for the future. So it's not a single mine. The ores that occur there contain both vanadium and uranium. They are in the same mineral. They are invisible. The economics are all the same. The processing of one or the processing of the other throughout the years the Colorado Plateau has been developed have usually controlled the development of this great resource. There is no region, no region in the world, as important to the security of the United States as the Colorado Plateau is today, and the fact that the Colorado Plateau has been developed as a result of the atomic energy program and the unselfish contributions of the Union Carbide Company and other companies in developing this area is one reason now, at the brink of atomic threat, that we can sit comfortably in the United States and say, well, it isn't here yet and maybe we will be all right.

So it is a country, it is a deposit, it is an area far beyond a chunk of rock or a bit of policy in regard to who sold which and what. However, as the ores of this country had special markets and that they had to seek their outcome through special developments, through limited special markets, not like gold or silver or copper that you can sell to the Mint, the [93] development of this great resource of the Colorado Plateau has been intermittent, alternately boom and bust. We have the great uranium boom at the present time that peo-

(Testimony of Blair Burwell.)

ple know about. Its output today is running approximately a third of a billion dollars a year. And in terms of the security of the United States there is probably no part of this whole United States as important to the average little guy, the average citizen, as the Colorado Plateau.

Now, in this whole picture you have an ore—we have an ore—there is a piece of ore—I won't belabor you with the technical description—but that ore, the mining of it, the developing of it, has either been for vanadium or for uranium or for one or the other, has been on the dumps or one or the other has been utilized and, therefore, the billion dollar prize of this great region rested on the control of the special industries that were developing the region. There probably never was, in my thirty-five years as a mining engineer, throughout the world such a rich prize that was so difficult to tell anybody about. There's probably the secrecy angle alone on this thing; the lawyers, antitrust cases, the fighting and pulling back and forth and conflict of the control for this region has utterly confused the issue, your Honor.

Now, while this case, Continental Ore, is here before you and the jury, it is only a small part of this picture. Today I can say this, as a professional engineer, as a qualified [94] person, with Q clearance of the Atomic Energy Commission, that this field today has broken all of the old restraints. The market limitations which I have complained so much about in my endeavors to operate an area,

(Testimony of Blair Burwell.)

it is now something for the American engineers, the American companies that contribute to be proud of.

We're going back to '38 in this picture and so, as I testify here with no particular interest and nonetheless the last debris of this story to be cleaned up, I must tell you in simple language the limitations and the rewards and the means that people use to either to attempt to control the region or by their patriotic effort to serve this country what has held this thing back or what has pushed it ahead.

I apologize for so much talking, your Honor, but this is not a little thing that can be discussed in narrow confines of the framework of the fingers of one case.

The Court: Well, is it an expensive proposition?

The Witness: Everything, your Honor, is expensive in this case, but there again, and in respect of vanadium, the expense of producing vanadium, as a metallurgist, a person that has to deal with costs, to pay the payroll, this is my viewpoint, that I have paid the payroll and dug the ore and drilled the rock, the cost of producing vanadium is a function of how much you've got, how cheaply—how big the deposits are, how accessible they are to roads, and what profits you have [95] between the miner who is digging the ore out of the ground and the steel boys that use it in the final analysis, and that gets into one of the funda-

(Testimony of Blair Burwell.)

mental relationships of this whole business of the Colorado Plateau.

The Court: Now, is it——

The Witness: It's not expensive.

The Court: Is it in the nature of a gamble?

The Witness: It is not in the nature of a gamble, your Honor. It has never been in the nature of a gamble. It has never been in the nature of a gamble wherever competent business, good judgment on marketing and the reasonable amount of initiative and energy was used in developing the process. Now, in my experience, vanadium in this area, in the Colorado Plateau, could be produced cheaper than anywhere in the world. At the present time this area is producing ninety some per cent of all the world's production of vanadium, and the cost of producing vanadium, if there is one profit between the man that digs it out and mills it and the man that uses it for steel, or so on, it could be produced quite cheaply.

Now, this is the conflict, your Honor, a policy that has dogged this region ever since. In between the miner and the man that uses it, the steel plant, are middle men. Now, if the middle man, which might be the ferro alloy business, happens to own the mines, that's just a happenchance; but if the middle man, who happens to be the ferro alloy business, [96] exacts a profit on top of what the miner asks to have to pay for his expenses of drilling and blasting the ore, and the two were piled one on top of the other, granted the mate-

(Testimony of Blair Burwell.)

rial becomes expensive. But throughout the development of the alloy field, and this is abundantly clear to those of us who have lived this thing as part of our business, the whole story of what cost alloys are is what volume you can make, how you can serve the end user and how much you can produce at that volume, and the answer is purely research.

Now, in the particular case of the vanadium——

The Court: Just a moment. What was your question? Your first question? I am afraid that we are getting into outer space here just a little.

Q. (By Mr. Alioto): Well, let me ask you now, Mr. Burwell, specifically, what was the economic situation on the Colorado Plateau in 1938 and 1939?

A. Thank you. I will try to answer that more closely.

Mr. Holland: What do you mean by "the economic situation"? I think you ought to specify a little more what your——

Q. (By Mr. Alioto): Just tell us as you saw it as an officer of one of these defendant companies or as an employee of one of these defendant companies, what was the situation with respect to the Colorado Plateau in '38.

A. I will answer that by inventorying the situation in[97] mid-'38 as what existed, what was being produced, what the market was and what the cost was in mid-'38. I—we—I will now speak in this tense—that I was then operating—an officer of the Carbide—operating these plants. In mid-'38

(Testimony of Blair Burwell.)

we had just finished doubling the plant—the capacity of one of our plants that took the ore from the ground and put it into fused oxide or material for the alloy boys, and that doubling of that plant was at the request of the corporation, the Vanadium Corporation of America, to do so. The Vanadium Corporation of America——

Mr. Holland: I object to this. He is trying indirectly to go into the whole picture prior to 1938.

The Witness: This is '38.

Mr. Alioto: If your Honor please, he is talking about 1938.

The Court: What is this company that you are talking about?

The Witness: The United States Vanadium Corporation. At this time we had just finished, in mid-'38, doubling our plant at Uravan to deliver vanadium oxide.

The Court: What was the cost of that plant, do you remember?

The Witness: That plant was about a million-two or three hundred thousand dollars—I don't remember exactly the figures. But we had increased that plant for the purpose [98] of supplying additional vanadium to the Vanadium Corporation of America, another defendant in this suit.

Mr. Holland: Your Honor, that question of whether they were supplying it for the Vanadium Corporation of America goes into the early history of this case and will require us to go back to 1933.

Mr. Alioto: He is speaking of 1938.

(Testimony of Blair Burwell.)

Mr. Holland: You didn't ask this question.

Mr. Alioto: We are speaking of '38.

The Court: Do you know who the purchaser of your product was in 1938?

The Witness: Yes, your Honor. Yes, your Honor. I had built the plant in '38 for the purpose of supplying the Vanadium Corporation at that time.

The Court: All right.

The Witness: It doesn't go back a time. The steel that was used to double the plant in mid-'38 was supplied by the Vanadium Corporation of America. By '38 we had started to produce approximately a million and a half pounds of vanadium oxide, but sales demands were running—were decreasing rapidly, and the supply of—the orders coming in for the vanadium in '39—I will go from '38. We had finished the plant, a plant to do a certain job for both companies. By '39 the plant was finished. But the object of the plant, in '39 we were not able to sell—to turn the vanadium completely [99] over to the Vanadium Corporation of America, we had a million some thousand pounds on hand at that particular time unsold.

The Court: Could you sell it then to anybody else?

The Witness: We tried to, your Honor, and in order to sell it, because we were facing the laying off of several—oh, four or five hundred employees and people who were working—at that time we made a study of the situation about the sales of vanadium and why we couldn't sell it. Now, our

(Testimony of Blair Burwell.)

cost at that time in producing vanadium in Uravan was approximately 40 or 45 cents a pound. Our contracts, agreements, in '38 to sell to the Vanadium Corporation of America were 80 cents a pound. We had 40 cents a pound to the good if they would take what they were supposed to take. The plant was built to take 750,000 pounds a year —those were my instructions that I got as the builder of the plant—of vanadium oxide for the Vanadium Corporation. The price that we would get in order to make ferro-vanadium and sell it through the Electro Metallurgical Company, again at a profit to the Electro Metallurgical Company, was $1.10. So between our 40 cents cost and the $1.10 that we could sell it through our—the marketing—the man that was hired to sell the vanadium for the Carbide Corporation, was the difference between 40 cents and $1.10, which was approximately 70 cents a pound, and that is almost twice as much as it costs us to get it out. Now, obviously vanadium was selling cheap—it's not a difficult thing to produce——

The Court: Just there now. You had this supply, this extra supply of vanadium on hand?

The Witness: That's right.

The Court: Could you sell that to anybody you wanted to?

The Witness: We could if we made the price attractive. It was no question that if you want to sell vanadium or you wanted to sell potatoes, that you could sell it if you made a price attrac-

(Testimony of Blair Burwell.)

tive enough to the people to buy it. You would say, "Here, I will sell you vanadium at a price that will enable you to use more of it or enable you to buy it from me," and that's competitive pricing.

The Court: Well, did you have any applications for the purchase of vanadium at that time which you refused?

The Witness: No, no, we felt that the price of vanadium was unduly high in view of its cost, your Honor, and we had a million and a half pounds of vanadium on hand which we couldn't sell but which we could sell if we would reduce the price, and therefore we held a conference about that time to see what we could do to preserve our operation.

Mr. Holland: May I ask who you mean by "we"?

Q. (By Mr. Alioto): Who held the conference?

A. Well, that conference, Mr. Holland, was—there were many conferences, and they went on for the period of six months, [101], principally between Mr. J. R. Van Fleet, the president of our company, Mr. Pat Gormley, who was I think president of Electro Metallurgical Company at that time; I believe other members of the Electro Metallurgical Company were in the various discussions, and I think Mr. Sneath was consulted in regard to this matter—and particularly Mr. Sneath. Mr. Sneath, who has a very broad experience in the ferro alloy business, represented what we call the European group of Carbide. They had access to sales in Europe for vanadium. And so we appealed to Mr. Sneath at a meeting in '39, I believe, for

(Testimony of Blair Burwell.)

help in disposing of this surplus property in Europe or some place. We couldn't—we endeavored to reduce the price to make our product more in demand in the United States, but we were denied that remedy at that time. We were operating under a split policy setup with Union Carbide. On one hand, the policies of sales in the United States were administered by the Electro Metallurgical Sales Company, with the exception of intermediate products which I personally sold or some of our other officials. [102] But so far as the vanadium oxide and ferro-vanadium went, we couldn't prevail upon the Electro Metallurgical Company to reduce the price to one quite in reasonable relationship to our cost. In going ahead with the inventory in 193——

The Court: What did you do with that inventory that you had on hand?

The Witness: We sold a million to Mr. Sneath, whom we appealed to if we couldn't do something about reducing the price in this country. We appealed to Mr. Sneath for relief, and he negotiated a sale through the foreign department, which was closely allied to the cartel group, for a million and a quarter or a million pounds of vanadium oxide, which was shipped to the New York harbor, rebarreled, sent to England and distributed into Germany.

Mr. Archer: Your Honor, I move to strike as a conclusion his statement that the foreign department was closely allied with a cartel.

(Testimony of Blair Burwell.)

The Court: What do you mean by the "foreign department"?

The Witness: The foreign department of Union Carbide and Carbon Corporation, which has, as Mr. Holland just mentioned, all these businesses in Europe, even by American companies, was dealt with through so-called cartels.

Q. (By the Court): What do you mean by a "cartel"?

A. A cartel is an agreement among producers or vendors of [103] metals or material to sell as a unit and on a fixed price and a certain allocation of the sale, and that is the way most of the alloy business in Europe has been handled and is being handled at this time. In this country, of course, the cartel has been thrown out by our anti-trust laws, but it is the customary, accepted way of doing business, and every company——

Q. In your judgment was there anything irregular in handling it that way?

A. No, your Honor, there was not. We were endeavoring to sell our vanadium. There wasn't anything irregular about selling a million and a quarter pounds through the cartel in Europe, no. If they paid us $1.30, and we got $1.40 a pound, and we paid Sir Edwin Davies a 10 cents a pound commission, it was good business and we were glad to get it, but the point at issue is this, that it was only a temporary respite and we had 90 per cent of the available vanadium for the future, accessible vanadium in a great empire, and we had men

(Testimony of Blair Burwell.)

and homes and people to work, and our problem was to set up a permanent relationship for the future and not depend upon emergency sales from time to time.

Therefore, while we were glad to have the help that Bill Sneath gave us in this particular thing, we knew that it only postponed an evil day of reckoning. I mean some day when we had to roll up our sleeves and get a market of our own in the United States we could do it and keep our people working. [104] And we were well aware at that time we were restricted in our sales in this country.

Q. (By Mr. Alioto): By whom?

Mr. Archer: I object to the question, your Honor, as calling for the conclusion of the witness.

The Court: If you know, now, of your own knowledge.

A. As the producer and executive in charge of producing materials from the mine it was part of my duties, your Honor, to know what the marketing conditions were and where it went, and under what condition, what setup, and over the period of time prior to 1938 which limits me to some extent to answer your question, I, to my satisfaction, to the best of my knowledge, knew that there was an agreement between the Vanadium Corporation of America and the United States Electro Metallurgical Company which restricted——

Mr. Holland: Just a minute.

I object to any period prior to 1938.

(Testimony of Blair Burwell.)

The Court: The objection will be sustained.

What you know you might testify.

The Witness: I am sorry.

Q. (By the Court): Were you present at the time that agreement was made?

A. Your Honor, this was not an agreement of the type where everybody got around a table and made signed articles. [105]

Q. Were you present?

A. No, I was not present. It wasn't any one particular meeting. But to my knowledge——

The Court: The objection is sustained.

Your statement will be a conclusion.

Q. (By Mr. Alioto): Did you have a meeting in 1938 with Mr. Gormley and Mr. Van Fleet at Uravan? A. Yes, we did.

Q. Who were Mr. Gormley and Mr. Van Fleet?

A. Mr. Van Fleet was the vice-president of the U. S. Vanadium Corporation at that time, and Mr. Gormley, I believe, was vice-president of the Electro Metallurgical Company.

Q. (By the Court): What would be the purpose now in producing large quantities of this vanadium if you could not sell it?

A. The reason for producing large quantities of vanadium, we produced it in anticipation of selling it, according to our market analysis, and what we believed it could be sold at the price, just like a farmer, when he grows a lot of wheat, he looks ahead next year——

Q. Why didn't you sell it at that time?

(Testimony of Blair Burwell.)

A. We couldn't sell it, your Honor, because we couldn't cut the price to a point where we could sell it in the United States. [106]

Q. (By Mr. Alioto): Why couldn't you cut the price?

A. We couldn't cut the price because the Metallurgical Company wouldn't let us.

Q. Why did they say they wouldn't let you? What reason did they assign?

Mr. Archer: I object to that, your Honor. I think we ought to have some foundation as to time and place of any conversation. Otherwise it seems to be clearly hearsay.

The Witness: Your Honor, over a period of 20 years I served the Union Carbide Company and part of my duties, of course, was the question of marketing a product of our mines. It was essential. Now, there was no one meeting, no one person. It was the ordinary course of business. There were maybe a hundred meetings that took place, when I went to New York and would discuss these things upstairs with Mr. Gormley, and we would get together in various groups and discuss our marketing problems and what we were going to do in the way of research to develop more markets and what we were going to do to sell our vanadium and new products to get it on the market at a lower price.

Q. (By the Court): What was the price now at which you were permitted to sell it?

A. The price of the ferro-vanadium at that time, to my [107] best knowledge, was running some-

(Testimony of Blair Burwell.)

where around $3.00 to $3.10 a pound, $2.90 to $3.20, depending upon grade, the pounds of vanadium content in the ferro alloy, and we believed we could sell vanadium at a price of $2.50 a pound, vanadium ferro alloy, and make the same profit on our mining venture, keep our people working and move our vanadium that we had in great abundance, because we had to produce it in abundance to make it cheaply. We could move it in great abundance at $2.50 a pound, and detailed studies of the metallurgy and the cost and the prices of the reduction, and those things, were made, and I helped make them, as I say, and I was in at the meetings when they were made.

Q. What price were you permitted to sell it at?

A. The price we were permitted to sell it at was $3.00 to $3.20 a pound, but at the same time we were selling the raw material at a price of 30 cents a pound under the open market to the Vanadium Corporation of America, and they were rather concerned at that time about the market situation. I think Mr. Holland——

Q. You made a contract to sell them at that price?

A. That is correct, and I think that is in the exhibits, and I remember the case.

Q. You thought then that was a pretty good price, didn't you?

A. No. Eighty cents a pound was a good price to us. [108]

Q. Yes.

(Testimony of Blair Burwell.)

A. If we could sell the ferro-vanadium that would result from 80 cents a pound at $2.50 a pound, the vanadium in the final product, that is what we received for it, but if we sold at 80 cents a pound to a second hand, another person, who in turn sold it for $3.10 and pocketed 30 cents a pound more profit just because he was there, why, the vanadium still was not priced at a point that would stimulate consumption or add a market.

Now, in the case of vanadium, I think it is very essential to know that the usages of vanadium have been clearly determined to be — at least I am satisfied, as a professional metallurgist—at function of price.

The great rival of vanadium is molybdenum. They did the same thing in many fields. And therefore it was a conflict between vanadium and molybdenum as to price, as to who would get the great and growing market in engineering steels.

Now, the great producer of molybdenum was the Climax Molybdenum Company, and their first operations were constricted and non-profitable because they couldn't mine enough, and they had to put their molybdenum into the ferro alloy industry and make ferro-molybdenum, and then they went into steel, and the engineering of steel consumption was all vanadium, it had a great future, because this was the dawn of all the alloy steel period. Molybdenum, however, — Climax Molybdenum revolted [109] against the payment of toll or high profits to the ferro alloy business, and in this case he went

(Testimony of Blair Burwell.)

to the Electro Metallurgical Company and started a method——

Mr. Archer: Your Honor, I object to that as calling for a conclusion.

The Witness: It is not.

Mr. Archer: I do not know what he means by paying toll or profits, but if he is talking about some kind of agreement——

The Witness: So they went directly, your Honor, to selling their molybdenum into steel with no intervening profits or costs to go into steel, and when they did that molybdenum became cheaper than vanadium. Then molybdenum began to sell 20, 30, 40 million pounds a year, and vanadium, instead of chrome vanadium steel, you saw chrome molybdenum steel coming out, not because molybdenum was better, but simply cheaper.

Q. (By the Court): How did that affect your supply of vanadium?

A. It affected it very clearly this way, your Honor: If we could reduce the price of our vanadium to $2.50 a pound, and from $3.00 to $3.50 in ferro, we could close the gap between molybdenum and vanadium and sell our vanadium in this growing field in alloys. Therefore all we needed to do to unlock the door was to open our minds and our operations, was to [110] reduce the price to make it competitive.

Q. What did you do?

A. We didn't do anything, your Honor. We couldn't do anything.

(Testimony of Blair Burwell.)

Q. You could not sell the——

A. We couldn't because there was an agreement between these two companies, to the best of my knowledge.

Mr. Holland: I object, your Honor.

The Witness: That prevented us from reducing the price of the vanadium and ferro-vanadium, and we continued to sell vanadium oxide to the Vanadium Corporation of America. Instead of cutting the price on our huge output to stimulate production in Colorado——

Q. (By the Court): They took all the vanadium that you could make, did they?

A. No, no, no. Their prices, their markets were becoming more and more restricted all the time. I made a study of this as a part of my business.

Q. Why couldn't they?

A. Their markets and uses of vanadium were being constantly lowered because the steel people were constantly using molybdenum.

Q. Just a moment. If they could buy it at 80 cents and there was a market for it at $2.50, why couldn't they take it all?

A. Because it would cost the difference between 80 cents and $2.50 to convert it from the oxide into the ferro-vanadium. It was a low profit step. In other words, if you take oxide at 80 cents a pound of oxide, and it takes two pounds of the oxide to make a pound of the metal, you have two times 80, which is $1.60, that it costs to convert it, and it costs about 50 cents a pound at that time,

(Testimony of Blair Burwell.)

or 60 cents a pound, to convert it, so $2.10,—and it costs something to sell, and it costs something for research. So at $2.50, buying it at 80 cents, there was a very meager profit, and they could not cut—so the profit at $3.10 or $3.00 was quite substantial. But at $3.00 or $3.10 they were losing the market that they could get if they went to $2.50. But if their costs of 80 cents prevented them from reducing it to $3.00, which was a reasonable price to carry on the good work that V.C.A. was doing, the Vanadium Corporation were obviously estopped from the remedy of expanding markets and expanded usages of this material, and that was the conflict of policy between the operating group, myself as a mining engineer,——

Q. Did you regard that as a difference in business judgment?

A. That is true, your Honor, that is true. It was simply a disagreement of policies within a great company. But that went on. I was a loyal Carbide official, and I had risen up [112] to a fair place in the ranks the hard way. But we would not necessarily agree. We might at one time have executives of the Carbide who would say, "Here, let's go out and cut the price of vanadium and get the market," and if you would let me open the shutter behind 1938 I will tell you about it, but I can't do it. That is the thing we started in this field to do, just this.

However, that is a misfortune, when you amputate this problem by the legs, for here you don't

(Testimony of Blair Burwell.)

get the whole story. Therefore, however, this remedy and this procedure by Carbide officials, such as Beno Shea, such as other technical men who had vision and initiative, envisioned using all this abundance for this purpose.

Q. You regard that as a difference in judgment of men in authority?

A. As to the policy.

Q. As to the policy?

A. Whether that policy was restrictive, or in restraint of trade, or whether it injured other people who were trying to get into the picture is beside the answer. However, I will continue, though.

As the 1938-1939 inventory goes along—and I will endeavor to answer your questions—1939 came on, and the first anti-trust investigation came into that region. That is when Sherman Arnold first started looking into the mineral [113] industry, and it immediately caused a great deal of self-concern in the great Carbide Company. They had 63 separate companies loose-held, and it was feared that the investigation might spread to other companies and other relationships, and quite rightly so. I hold no brief for some of this anti-trust thing that has gone on. Some of it is right and just and some of it is not. But we fought. We were concerned in 1939 and concerned in 1940.

Q. What did you do in 1939?

A. In 1939 we began to lay our plans to proceed alone again and try to cut the price of vanadium to the point that we could market independ-

(Testimony of Blair Burwell.)

ent of marketing through another company who was a competitor in the final product. We had started to lay our plans in that connection, and 1941 and 1942 came on, and then the war hit us. And now we had a situation that was entirely different develop. For the first time there was no matter or question of who was your customer. Uncle Sam needed the vanadium. V.C.A. was trying to get all the vanadium they could out of Peru. They were torpedoing ships, and we all threw together on a program, and the Carbide Company was made agents of four metal reserves for vanadium procurement and put in additional plants to meet that emergency need without regard to costs, because the chrome vanadium was needed for turbine plates and things that were absolutely essential. Molybdenum could not answer. [114]

Then there was still another great thing developed. Of course, by this time we knew, as engineers, and all of us knew, and I think even the V.C.A. knew, because they had some smart men in the field, too, that this field was a rich prize, one of the greatest mineral resources of all time for new things in energy and new things in steel. Therefore the control of the future lay in who had the first market place and the first plants to take it on, and a trickle at that time would become a river of money later on.

Q. After the war who controlled the situation?

A. Your Honor, during the war the United States Vanadium Corporation and the Union Car-

(Testimony of Blair Burwell.)

bide I think controlled the situation. We had 90 percent of the field.

Q. What control did the government exercise at that time?

A. Well, the government exercised two controls. They appointed agents or contractors to produce the vanadium, and the government, speaking in the broad sense, the Army, moved in with regard to the uranium in the ore that came out of the same material.

Q. What I am getting at is did the government fix the price?

A. The government fixed the price limit that could be paid for vanadium ore, and the government also, the metal reserves, set a price, I believe, and whoever they distributed this vanadium oxide to, it was open and above board, because [115] all the vanadium was under allocation by the government.

Q. Who determined the producers, the government or the individual?

A. I am not too—my recollection is a little bit unclear, but my recollection is that the War Production Board allocated to consumers the vanadium oxide based upon the need and the necessity in the war effort that they would establish, and after the War Production Board allocated the vanadium oxide, then the metal reserve wanted the companies that were directed to so do would deliver that material to the particular applicant.

(Testimony of Blair Burwell.)

Q. But that was all done under orders of the government?

A. That was done under the orders of the government.

So in this period between 1942 and 1945 we had no problem, really, of marketing vanadium, but, however, there was one vastly more important matter that was coming up. We also—our company, and I as an individual,—were named as a part of the operations in vanadium, because we had a background back before 1938, to be the top secret contractors for the Manhattan District to procure the uranium for the atomic bomb out of that area, and not only that—to make a world appraisal of where uranium lay throughout the world, and what activities were needed, and in case the atomic energy succeeded, and it was abundantly clear at that time the Colorado Plateau—we spent millions of dollars of government money in [116] surveying the resources of this vanadium-uranium-bearing ore. It was abundantly clear that the security of the country depended upon us having enough uranium from these uranium-bearing ores for the future to——

Q. To get to the point, during this period you mentioned from 1942 on, or 1941, what control did the defendants, the owners of the property, what control did they have over production or price, so far as the government was exercising some control?

A. Up to 1944, your Honor, the owners of the property were free to sell the ore to government

(Testimony of Blair Burwell.)

purchase stations, and they were free to sell their product on a guaranteed market. There was no matter or question of how much they had. They could always sell it.

Q. But the price was fixed by the government?

A. Your Honor, it was fixed within a range, but as vanadium was under allocation, the price was also determined by the government in allocating it.

The Court: At this time we will recess until ten o'clock tomorrow morning.

(Whereupon a recess was taken until Tuesday, June 3, 1958, at 10:00 o'clock a.m.)

June 3, 1958, 10:00 o'clock a.m.

BLAIR BURWELL

a witness on behalf of the plaintiff, having been previously duly sworn, resumed the stand and testified further as follows:

Direct Examination—(Continued)

Q. (By Mr. Alioto): Mr. Burwell, yesterday there was a good deal of conversation about the Colorado Plateau. Will you be good enough to look at that map that I am handing you and state generally for the record what it is?

A. That is a map of the Colorado Plateau.

Q. On this map, Mr. Burwell, you will notice there appear certain designations such as Uravan,

(Testimony of Blair Burwell.)

Paradox, Gateway, Slick Rock and Moab. What are those designations?

A. Those are districts or portions of the Colorado Plateau.

Mr. Alioto: We ask, if your Honor please, that this map be marked at this time simply for identification.

The Court: Very well.

(The map referred to was marked Plaintiffs' Exhibit No. 26 for identification.)

The Court: I expect that counsel have examined the map and know what it is?

Mr. Archer: I have not seen it, your Honor, but I presume it is of the Colorado Plateau. [119]

The Court: You may look at it and see if you have any objection.

Mr. Alioto: I am not offering it in evidence, your Honor, but simply at this time ask that it be marked for identification for the pictorial reference.

Q. Mr. Burwell, in connection with your association with the Union Carbide and Carbon Corporation and its subsidiaries and your service as a director and a vice-president of the United States Vanadium Corporation, did you have an opportunity to know the corporate relationships between Union Carbide, Electro Metallurgical Company, the United States Vanadium Company and others? A. Why, yes.

Q. I will ask you if you will be good enough to look at a chart which we have prepared on this

(Testimony of Blair Burwell.)

matter, and would you be good enough to state what, to your knowledge, this chart actually represents, and whether it represents the corporate setup of the Union Carbide and Carbon Corporation? You will note it shows Electro Metallurgical Company is a subsidiary of the Union Carbide; Electro Metallurgical Sales is a subsidiary of Union Carbide; Electro Met of Canada is a subsidiary, and United States Vanadium Corporation, another Electro Met company.

Does that actually represent the corporate setup of the Union Carbide Company?

A. To what time do you refer? [120]

Q. Let us say in the period of 1938.

A. It shows the corporate setup. It changed from time to time.

Q. 1939, since that is the date to which we are directing our attention at the moment.

A. I think that is pretty closely the organization.

Q. Under that we have listed certain men: Mr. W. J. Priestley; Mr. B. O'Shea; Mr. J. R. Van Fleet; Mr. Blair Burwell; Mr. F. H. Haggerson; W. H. Sneath; J. A. Rafferty; and Mr. M. D. Arrouet.

To your knowledge, were those men connected with one or more of the corporations set forth in that chart in 1938?

A. I believe that is correct. I am a little uncertain about Mr. Sneath. I believe he was a vice-president of the Metallurgical Company, but that is the only question I have.

(Testimony of Blair Burwell.)

Q. In any event, Mr. Sneath was certainly connected with one of the corporations within the Union Carbide setup?

A. He was connected with the Union Carbide and Carbon complex. I think that is right.

Mr. Alioto: We will ask that this be marked for identification at this time, if your Honor please.

(The chart referred to was thereupon marked Plaintiffs' Exhibit No. 27 for identification.)

Mr. Alioto: I have in mind, if your Honor please, certain letters will be read. This should enable the Jury to [121] identify the connection of the men involved.

Q. Mr. Burwell, simply for purposes of illustration, we had some testimony yesterday about vanadium ore. I hand you a piece of the ore. Will you be good enough to state whether that is generally the type of vanadium ore that is found on the Colorado Plateau, or one of the types?

A. That is typical of the ore of the Colorado Plateau.

Q. What is contained in this ore, Mr. Burwell?

A. Vanadium, uranium and radium.

Q. Vanadium, uranium and radium. What is the yellow streak that appears in the ore?

A. That is a mineral of vanadium and uranium called carnotite.

Q. This is the carnotite ore that some of these letters refer to?

A. That is called carnotite ore.

Q. After the ore has been treated in the mill.

(Testimony of Blair Burwell.)

I think you testified that there is a product that comes out that is called red cake. I hand you a bottle that is marked "Vanadium pentoxide."

A. This is a purified red cake which contains very little soil, but practically you would call that a red cake.

The Court: What is that?

A. This is brown oxide, vanadium oxide, and red cake is vanadium oxide, your Honor. Practically I can answer you [122] that is red cake.

Q. The Court and Jury, you know, are not experts on these metallurgical subjects. What is oxide?

A. Oxide is a combination of vanadium and oxygen. Vanadium is a metal in its elemental form, and when it is combined with oxygen, it is vanadium oxide, and this is vanadium oxide. It is not the metal. The metal is what is needed to go into steel. So between the ore, which is the oxide of vanadium, and steel, the metal, you have to take the oxygen away from it, and then it becomes a metal and becomes usable steel.

Mr. Alioto: May we ask, if your Honor please, that the ore itself be marked for identification?

The Court: Very well.

(The sample of ore referred to was thereupon marked Plaintiffs' Exhibit No. 28 for identification.)

Mr. Alioto: The witness in his previous answer referred to this as being vanadium pentoxide of a certain type. May we ask that this be marked now

(Testimony of Blair Burwell.)

for identification so the record will be clear at this point.

The Court: Very well, let it be admitted.

(The sample of vanadium pentoxide was thereupon marked Plaintiffs' Exhibit No. 29 for identification.)

Q. (By Mr. Alioto): I will show you another bottle. Is this more properly [123] red cake?

A. That is more properly red cake.

Q. A less refined material?

A. A less refined material. It is less highly refined than the other, but this is more properly red cake.

The Court: Let us define that.

The Witness: Red cake is a miner's or metallurgical term. He calls it red cake. It is vanadium oxide; just because it is red. It is a workingman's term, not a technical term.

Mr. Alioto: We ask that this bottle of red cake be marked for identification, if your Honor please.

(The bottle of red cake referred to was thereupon marked Plaintiffs' Exhibit No. 30 for identification.)

Q. (By Mr. Alioto): I will show you a bottle containing some black oxide material. Would you be good enough to identify that, sir?

A. That is fused vanadium oxide, and that is red cake that has been converted from a powder into a fused material ready for the electric furnace of the steel boys or whoever wants to use it.

(Testimony of Blair Burwell.)

Q. This is the final product of the mill, is it not, of the Western mills?

A. That is the final product of the mills out West.

Q. This is vanadium oxide of which we speak?

A. That is correct.

Q. (By The Court): Is that liquid or mineral?

A. That is solid.

Mr. Alioto: May we have that marked for identification, and I would like to hand it up to the Court.

(The black oxide sample referred to was thereupon marked Plaintiffs' Exhibit No. 31 for identification.)

The Witness: If your Honor please, you can open the top. You will see it is a crystalline hard material that has been fused and heated in the furnace.

Q. (By Mr. Alioto): That black cake, so called, or rather, the fused oxide, the last exhibit in, is that the material from which the ferro-vanadium is made? A. That is right.

Q. And what is ferro-vanadium?

A. Ferro-vanadium is a combination of iron and vanadium in varying proportions. It is an iron and vanadium metal. Iron is a metal; vanadium is a metal. Oxygen has been taken away from it.

Q. Without being too technical about the matter, Mr. Burwell, will you just state generally and concisely the methods by which the vanadium oxide is processed into ferro-vanadium?

(Testimony of Blair Burwell.)

A. There are two methods. I will tell you one. The most expensive as to plant equipment, the one which was earliest, was the method of using an electric furnace, electrodes. [125] The vanadium oxide or the vanadium ore is put into an electric furnace and the arc is started and a little carbon is added and the material is melted down and the oxide is burned away from it by the carbon under high temperatures, and it becomes ferro-vanadium under the agencies of electric heat.

I think that is the process that was used by the Vanadium Corporation until comparatively recently, and is also used by metallurgical companies to some extent in their work.

The other method, the method that is most widely used to date, is a simpler method in which the vanadium oxide which you see there is simply mixed with ground-up aluminum powder, and the aluminum powder and the ground-up vanadium are put in a pot, and ignited by a simple device, and then it all begins to burn. The aluminum metal tears the oxygen away from the vanadium oxide, and the result of that process is ferro-vanadium.

It is a very inexpensive method to do it, because your heat in the form of aluminum, instead of getting it from a electric arc, is gotten in that way, so it is quite a simple matter to do it.

Q. (By The Court): This ferro-vanadium is nothing more than uniting iron with vanadium?

A. That is correct, your Honor.

Q. (By Mr. Alioto): This method you have

(Testimony of Blair Burwell.)

called the inexpensive method; is there a shorthand trade name for it?

A. Aluminum thermic reduction, I believe is the term. [126]

Q. You say that is the lesser—so far as expense is concerned, it is the less expensive method, is that not true? A. Oh, by far.

Q. From that same ore—I hand you a very solid black substance—would you be good enough to tell us what that is?

A. That is a uranium metal, and that is part of the atomic fuel to an atomic energy plant. This is the uranium metal that came from that ore, or from any other uranium ore. This is a pure piece of uranium metal. This is the start of the atomic energy.

Mr. Alioto: We ask that this be marked, if your Honor please, as our exhibit next in order for identification.

(The sample of the uranium referred to was thereupon marked Plaintiffs' Exhibit 32 for identification.)

Mr. Alioto: I wonder if I might have those exhibits after the court has viewed them.

The Witness: Could I introduce something there? The sample of the uranium metal is beginning to get somewhat radio-active, and I suggest that that not be kept very long. Return it to me where I can put it in a brief case under protection.

Q. (By Mr. Alioto): All right, we will do that.

A. In other words, it would be rather risky to

(Testimony of Blair Burwell.)

handle that by inexperienced hands, and I wouldn't like it to get out of my possession or get into somebody else's hands. [127]

Mr. Alioto: We have not introduced it into evidence for that reason.

The Witness: In fact, I don't like it to be handled too much, if you please.

Q. (By Mr. Alioto): I have been doing it. I will hand it back to you right now, since I have been doing it.

A. All right. This builds up its radioactivity. It doesn't have it at the start. It builds up its radioactivity and begins to form plutonium and that is the way they made one of the bombs.

Q. Mr. Burwell, I have placed this material with the ore, the unrefined red cake, and then the more refined red cake, and finally the black cake, or the used vanadium oxide. During the period of time, say 1938 as the year to begin with, in that period of time was the red oxide sold commercially or was it all processed into the fused oxide?

A. The great bulk was processed into fused oxide. A very small amount was sold as red oxide.

Q. For what purpose was the red cake so-called sold?

A. As a catalyst in the manufacture of sulphuric acid and things of that sort.

Mr. Alioto: At this time, if your Honor please, the Plaintiff offers in evidence as its exhibit next in order a document about which we have already

(Testimony of Blair Burwell.)

had some pre-trial stipulations about genuineness and authenticity, dated [128] September 14, 1938, from Mr. Van Fleet to the witness, Mr. Blair Burwell. It was after the period of time we are discussing.

Mr. Archer: Your Honor, I would like to note an objection for the record that this is a letter from Mr. Van Fleet to Mr. Burwell. Mr. Van Fleet is deceased, and consequently I object on the grounds it is hearsay. It has some speculations of his and is not in the form of an admission or business record.

Mr. Holland: Is this offered only against the Union Carbide?

Mr. Alioto: At the moment it is offered only against the Union Carbide. I might just identify Mr. Van Fleet.

Q. Would you be good enough to state what position Mr. Van Fleet held in 1938?

A. Vice-President of the U. S. Vanadium Corporation.

Q. Was he also a Director of the U. S. Vanadium Corporation at the time?

A. I believe so.

Q. Would you be good enough to say whether with respect to mining he was the principal managing officer of the United States Vanadium Corporation at the time? A. That is correct.

The Court: Very well, let it be admitted. [129] Exception allowed.

(Testimony of Blair Burwell.)

(The document referred to was thereupon received in evidence and marked Plaintiffs' Exhibit 33.)

Mr. Alioto: Ladies and gentlemen, this is a letter written on September 14th, 1938, from Mr. Van Fleet, Vice-President of the United States Vanadium Company, to Mr. Blair Burwell of the United States Vanadium Corporation in Uravan, Colorado.

Q. Uravan, Colorado, was the place where you had your mill, is that correct, Mr. Burwell?

A. That is correct.

Mr. Alioto: (Reading).

"Dear Blair:

"As I discussed with you the other night on the telephone, it has become very important that we find out accurately and definitely who is producing vanadium ore and where it is going. Along with this, we want to know the quality of the ore shipped so that we can get a line on the pounds of V_2O_5. I realize that some of the quality will have to be estimated, but we ought to get a very accurate line on what the shipments have been from southeastern Utah and southwestern Colorado. We may have to do something about this production, and if information could be obtained on what they get for this ore, it would help [130] out. For instance, Harbison told me that he received 42c per pound for V_2O_5 and 60c per pound for U_3O_8."

Q. What is U_3O_8?

(Testimony of Blair Burwell.)

A. That is uranium oxide, uranium metal and oxygen combined. That is the way it was formed in the ore. [131]

"For instance, Harbison told me that he received 42 cents per pound for V_2O_5 and 60 cents per pound for U_3O_8 on a low-grade Polar Mesa ore, but if the V_2O_5 went over seven percent and the U_3O_8 over two percent he received 45 cents per pound on V_2O_5 and 80 cents per pound for U_3O_8. These are pretty high prices for us, but it may be necessary to finally do something about it.

"I have an idea that this production of ore which is going to Europe and Japan is quite a quantity of V_2O_5, and more than we think it is. I have been talking about this for some time here in New York, stating that the high prices maintained for V_2O_5 in Europe invite and stimulate this kind of competition and can eventually support a considerable vanadium business, with possibly later on a plant.

"In this respect I have had some correspondence with King"——

Who was King?

A. W. G. Haldane, my second in command.

Q. At Uravan?

A. My assistant to me, that's right.

Q. He was second in command in 1938?

A. To me.

Q. (Continuing reading): "In this respect I have [132] had some correspondence with King about the application made by Balsley and Kipe

(Testimony of Blair Burwell.)

for a freight rate on vanadium ore to Castletown, New York, where it is claimed the ore will be reduced. We cannot get any line on this plan here, and at Castletown there is no plant now available for this kind of work.

"I hope you will be able to put somebody on this and make a very careful canvass of the situation. If you could have a talk personally with Balsley you could probably find out all about it. In talking to Balsley it would be to his advantage to give you this information because I have an idea he is not making any too much money out of this business, and it might be made easier for him on some kind of a combination with us if we decided to do something about it, rather than to fight it. We could, of course, run all this business out—but it would not be good policy to hint of this or threaten.

"In this connection I would like to have a line on the Shattuck Chemical Company production. They are selling fused oxide not only in this country, but in Europe. Their oxide is low-grade containing only a little over 50 percent V_2O_5, but they are selling it for less money. I have an idea their production is only about 25 tons of fused oxide a year, but you [133] may be able to get a closer line on this. From the record you will be able to gather on the shipments to Vitro, we can get a line on their production of V_2O_5.

"I have a pretty good line on the production of vanadium in Mammoth, Arizona, as it is all sold through a friend of mine here in New York.

(Testimony of Blair Burwell.)

"Will you please see what you can do about this for me?

"Very truly yours,

"J. R. Van Fleet."

Now, Mr. Burwell, do you know what he is referring to—what is Mammoth?—"the production of vanadium in Mammoth, Arizona,"—what was that about?

A. There was a mine and a mill in Mammoth, Arizona, producing molybdenum and vanadium, and that was the mine.

Q. Who was running that mine, if you remember?

A. I am not sure. I believe it was the Mammoth St. Anthony Mining Company. That is my recollection.

Q. Did you or anybody in the United States Vanadium Corporation negotiate for taking over the production of Mammoth St. Anthony?

A. We negotiated, yes.

Q. Was——

A. The company negotiated. I ran the test work on the [134] concentrate.

Q. Did you thereafter buy that production?

A. No.

Q. Do you know what happened to that production?

A. For awhile I believe it went to Germany, and then it went to the Vitro Chemical Company during the war.

Q. Now, prior to the war period in 1942 did any

(Testimony of Blair Burwell.)

of the Mammoth production go to the United States?

A. I believe it did but I am not clear on that.

Q. Were you the man who personally negotiated for the Mammoth production?

A. I was only one man that assisted in it. I was not the man.

Q. Did those negotiations take place shortly after this letter was written, which is September 14th?

A. I don't recall just when it occurred, but I—my memory isn't clear about that. I don't recall.

Q. Now, Mr. Burwell, in September of 1938 your company wasn't short of vanadium oxide, was it?

A. Short? We were facing a shutdown because we had too much vanadium, and I had a lot of employees I was afraid I would have to lay off. We had 1,400,000 pounds at the end of '38 that we hadn't sold.

Q. If you had so much vanadium that you couldn't sell, were facing a shutdown, why did you try to buy the Arizona [135] production from Mammoth St. Anthony?

A. Keep it off the market.

Q. Keep it off what market?

A. The vanadium market.

Q. In the United States?

A. That's right.

Q. Did you at or about that same period try to buy any other independent production?

(Testimony of Blair Burwell.)

A. (No response.)

Q. How about Vitro?

A. No, I don't recall any negotiations with Vitro. I don't recall that we ever bought any vanadium from Vitro, or negotiated for it.

Q. Do you recall any negotiations with anybody else during that 1938-39 period?

A. That's 20 years ago.

Q. I know, sir.

A. I am getting a bit old.

Q. How old are you, by the way, Mr. Burwell? Do you have any objection to stating it?

A. No. I am 63, and I will be 64 this fall.

Q. Thank you, sir.

The Court: Just a kid.

Go ahead.

Mr. Alioto: I know that. [136]

A. There were other negotiations to buy output from different mills. The date—I am not sure they negotiated to buy the vanadium—I think—from the Blanding Mines. The date, again, I am not sure.

Q. (By Mr. Alioto): Was it before 1941?

A. I believe so, but I am not sure, unless I would search the records or search my files.

Q. Did you personally participate in those negotiations with the Blanding Mines?

A. Yes, I did.

Q. And were you authorized to do so by Mr. Van Fleet or anybody else?

A. Oh, certainly.

(Testimony of Blair Burwell.)

Q. Did you acquire the production of the Blanding Mine?

A. I don't recall that I did. I believe that the production from the Blanding Mines was very small and uncertain, and that the plant failed for lack of technical competency in producing it.

Q. At the time you were negotiating for the production of the Blanding Mines did you need vanadium oxide? A. No.

Q. What was the purpose of negotiating with them, then, to buy that production?

A. We were controlling the output of vanadium, keeping it [137] off the market.

Q. What market, the United States market?

A. The United States market.

Q. Was it your purpose to keep it out of the hands of independent producers of ferro-vanadium?

Mr. Holland: I suggest that Mr. Alioto be sworn if he is going to testify, your Honor.

The Court: Yes, I think your questions are rather leading and suggestive.

The objection is sustained.

Q. (By Mr. Alioto): During this period of time when you say you had so much of this—so much vanadium oxide—that you were talking about closing down the plant, did you have a meeting in Uravan with Mr. Gormely and with Mr. Van Fleet?

A. Yes, we did.

Q. Uravan, again, is the location of your mill on the Colorado Plateau; that's correct, is it not?

(Testimony of Blair Burwell.)

A. That's correct.

Q. Do you recall who else was present at that meeting, if anybody?

A. There were a number of our staff members there—Mr. Gormely, Mr. Van Fleet, I believe Mr. Haldane was there, Mr. Weston, members of our administrative staff.

Q. Now, Mr. Gormely was one of the New York executives, [138] was he not?

A. He was the operating vice-president in charge of Electro Metallurgical Company, as I recall at this time.

Q. What was said at that conference? Give us the substance of it as best——

Mr. Archer: May we have the date of it?

Q. (By Mr. Alioto): Could you fix the date any more exactly than the year 1938?

A. My recollection, it was in the fall of 1938. Mr. Gormely spent a week or ten days visiting all the western mines. We were endeavoring to avoid the snowstorms out in California. So I think it was the fall of '38.

Q. You say the snowstorms in California?

A. That's right. Up on the High Sierras.

Q. O. K. A. It snows up there sometimes.

Q. It snows down here sometimes; down South sometimes, too.

And then what happened?

A. Our problem was a severe one. We had a million four hundred and some thousand pounds of vanadium oxide in the excess of sales accumu-

(Testimony of Blair Burwell.)

lated in the warehouses at that time, were facing a shutdown. We had, of course, a large organization. We had—my problem—and I presented Mr. Gormely and [139] Mr. Van Fleet—is what to do about our continuing increasing of unsold vanadium stocks. We had just finished the year before an additional capacity to produce 750,000 pounds for the Vanadium Corporation of America. They had not taken that vanadium. I reported at that time that we either faced another shutdown of our organization, disbanding of our people, such as we did in 1932 for the same reason, unless we could do something about selling our vanadium.

Now, I made a study and presented it to Mr. Gormely, Mr. Van Fleet, of the cost of our vanadium at that time, what we could produce ferro-vanadium for, and why couldn't we do something about getting our vanadium sold on the market; that we were in danger again of losing our whole objective of a vanadium business and of vanadium operation on the Colorado Plateau. Our costs at that time—and I remember figures far better than I do names—was just a shade under 35 cents a pound of V_2O_5—mining, four dollars some cents a ton; smelting, and with amortization, I think our costs were approximately 39 cents.

If we took the vanadium, I reported, that we were producing at practically 40 cents, and converted it into ferro-vanadium, it would result in the cost of ferro-vanadium of approximately one dollar—let's see—$1.30 a pound of V. Ferro-vanadium.

(Testimony of Blair Burwell.)

I believe, at that time was selling for $2.60-$2.70, depending upon whether it was a high purity grade. [140] The difference between $1.30 and $2.60 is $1.30 a pound of V. profit to our venture. Whether it went in the pockets of Electro Metallurgical or whether it went into the pockets of United States Vanadium didn't make much difference. We could easily sell vanadium at $2.25 a pound and still make approximately 90 cents a pound of V., 45 cents a pound of oxide. That was 100 percent profit. In other words, we had the cheapest vanadium in the world. Why didn't we sell it? Why couldn't we go ahead?

Mr. Gormely reported on their efforts to sell Silvaz. Mr. Gormely had been very sympathetic about our position and our venture and our division, and he had attempted to sell vanadium in another form, which he called Silvaz, which was a cheaper method of putting vanadium into steel, and they made Silvaz and had delivered some to test customers. I had cooperated with him, Mr. Van Fleet had cooperated with Mr. Gormely, Mr. Ernie Doom, Union Carbon Research Corporation, Mr. Bransome, and the rest of the organization, in the project of selling something that wasn't ferro-vanadium, and Mr. Gormely reported as to what had happened with our Silvaz, and he said that the Vanadium Corporation had complained there had been a breach of their understanding, and that they were forced to discontinue the production of Silvaz.

Then I said why——

(Testimony of Blair Burwell.)

Q. Who was forced to discontinue the production of Silvaz? [141 Who?

A. The Electro Metallurgical Company.

Q. What else did Mr. Gormely say?

A. Mr. Gormely said——

Mr. Holland: Just a minute.

If the Court pleases,——

Q. (By Mr. Holland): Is Mr. Gormely still alive? A. No, unfortunately.

Mr. Holland: Well, we feel, your Honor, that we can't possibly cross-examine on this; that it is a dead man's statement of what someone else told him, made to Mr. Burwell. It is double-hearsay, and we object to the evidence and ask that it be stricken.

Mr. Alioto: If your Honor please, this was the top executive of the Electro Metallurgical Company at the time. Mr. Bransome and Mr. Laub of Vanadium Corporation are still living and are going to be here, so they can contradict that testimony if they want to.

Mr. Holland: He doesn't say who told Mr. Gormely that. He just says Vanadium Corporation did.

Mr. Alioto: But the president——

Q. (By The Court): Let me understand your statement again, Mr. Witness. Mr. Gormely made the statement to you? [142]

A. That's correct.

Q. And what did he say?

A. He said that they had—that the Vanadium

(Testimony of Blair Burwell.)

Corporation had objected to the sale of Silvaz as a means as against the agreement with regard to vanadium sales, and that therefore they had to discontinue the production of this Silvaz.

They said further that the Vanadium Corporation had stated it was simply a subterfuge or device to sell vanadium outside of their agreement.

Q. Who was present at that time?

A. Myself, Mr. Weston, Mr. Haldane, Mr. Van Fleet, and Mr. Gormely.

The Court: Are any of those gentlemen alive?

Mr. Alioto: Mr. Haldane and Mr. Weston are living.

Mr. Holland: Will they be here?

Mr. Alioto: Do you want to bring them here? You can bring them here.

Mr. Holland: I was just asking you.

Mr. Archer: I think Mr. Weston is dead.

The Witness: Mr. Weston died last week.

Mr. Holland: Mr. Weston died last week.

Mr. Alioto: Mr. Haldane is living, if your Honor please.

Mr. Holland: But isn't Mr. Haldane in such bad health that he couldn't come here? [143]

The Witness: I think that's correct. He is 85 years old and he can't move out of the house.

Mr. Holland: Well, there isn't a one of them that is available, then, your Honor.

The Court: The objection will be sustained. Exception allowed. There will be no possible way to cross-examine a witness on those matters—that is,

(Testimony of Blair Burwell.)

to produce evidence, if those gentlemen are all dead.

Mr. Alioto: But the problem is this, if your Honor please: This witness is not dead, and he was there, and he was their official.

The Court: The Court ruled.

Mr. Alioto: Yes, if your Honor please. We will have an exception, I take it, on that?

The Court: Exception allowed.

Mr. Alioto: Thank you.

Q. (By Mr. Alioto): What else did Mr. Gormely tell you at that time?

Mr. Archer: May we have the same objection, your Honor, to this conversation with Mr. Gormely?

Mr. Alioto: This is their own vice-president and director on the stand, if your Honor please, so far as Union Carbide is concerned.

The Court: You are assuming that there was something else said. [144]

Q. (By Mr. Alioto): What, if anything else, was said at that time, Mr. Burwell?

A. There was.

Mr. Holland: Now, if your Honor please, this——

Q. (By The Court): Have you stated the conversation, now, in substance?

A. Your Honor, no. The conversation covered days of discussion. There were problems of this plant——

Mr. Holland: Before he gives the conversation——

A. ——there were being things discussed——

(Testimony of Blair Burwell.)

Mr. Holland: We would like to object before he gives the conversation. [145]

This is a vital operation. There were many subjects discussed.

Q. (By The Court): Have you stated the substance of the conversation you had?

A. Well, this was a small portion of the conversation. They all related to the same matter.

Q. Let me ask you this question: At the time you had these conferences, when you had this extra supply of vanadium on hand, was there a market for vanadium?

A. We believe so. It was being sold.

Q. Who were the purchasers of vanadium at that time?

A. Your Honor, you mean vanadium in steel?

Q. Yes.

A. Well, nearly all the steel companies that made alloy steel—the Crucible Steel Company, First Sterling—there are probably a dozen companies or more that were producing vanadium in steel.

Q. The steel companies that were purchasing, were they your customers?

A. They were customers who buy ferro-vanadium, yes.

Q. Was there any market for that particular material other than the steel mills? A. No.

Q. Was anybody else interested in this then except your company and the steel mills so far as the sales were concerned? [146]

A. Vanadium Corporation of America. They

(Testimony of Blair Burwell.)

were also selling competitively to the steel people. In other words, there were two people selling to the steel industry, both selling the same product, both for the same purpose, and to maybe 50 customers.

Vanadium is widely used, your Honor. It is used in every variety of engineering steels, so there is hardly a steel company that does not buy vanadium in one form or another. The Vanadium Corporation of America was selling ferro-vanadium the Metallurgical Company was selling ferro-vanadium to the steel people, and there was a market. But our problem was that much of our vanadium was going to the Vanadium Corporation of America, who in turn made ferro-vanadium and they were selling ferro-vanadium in competition with Electro Metallurgical Company to the steel people. But we were in the dual position of selling our raw material to our competitors supposedly to the steel people. Therefore the situation, your Honor. That is the essence of the whole thing.

Q. Was there a demand by the steel mills for the ferro-vanadium?

A. Yes, there was a demand. Vanadium is one of the most essential, necessary elements of steel. There is always a market.

Q. Why didn't you, if the steel mills wanted it, if they were demanding it and you had a supply, why didn't you sell it? [147]

A. That is why I was asking the question, your Honor. I was the operator of the mines. I had peo-

(Testimony of Blair Burwell.)

ple to employ. I was asking, "Why don't we sell it to our customers, the steel people?" The steel people, too, were just like any other purchaser of alloy materials. They could use vanadium, needed vanadium for essential things, but they could also purchase molybdenum, too. They could buy other things —chromium—they bought other alloys. Therefore if we could present vanadium to them at a little cheaper price, we knew, and there was a report prepared, that we could use it.

Q. The substance of your conversation in this conference, then, was that these other parties did not want to reduce the price any, is that it?

A. That is correct, and the survival of our particular company, and my particular job depended upon moving this particular vanadium into the steel people.

Q. What did you finally do about it?

A. Nothing.

Q. Did you close the mine?

A. No. Soon after that, your Honor, we had the start of World War II. That saved our bacon. Pardon me for my expression, but soon after that, 1939 and 1940, the demand for vanadium especially began to come from Europe. The armaments prior to World War II started, and immediately there was a flow of vanadium. [148]

In 1939 we sold a million and a quarter pounds just for that purpose, starting a war.

Q. You did not sell what you had on hand?

(Testimony of Blair Burwell.)

A. No, we didn't until 1939, when we had to move some of it into Europe for war purposes.

Q. How soon after 1938 was it that you disposed of the supply that you had on hand?

A. It was——

Q. Approximately.

A. I think probably a year or two years.

Q. 1939 and 1940?

A. 1939 and 1940 we began to dispose of our product.

Q. And you did dispose of it?

A. That is right, we moved a lot of it down into the Americas, into the steel mills, but we moved it into Europe where the preparation for World War II was going on. It started, and the use of vanadium in war was just doubled. They used ten times as much vanadium when war came along——

Q. In 1939 and 1940, you had no trouble in disposing of your product?

A. I believe that is essentially correct, your Honor. I would have to check it, but from 1940 or 1941, there was no problem in disposing of our vanadium, no.

Q. Let me ask you this: At that time your customers were only the steel mills? [149]

A. That is right, essentially so.

Q. (By Mr. Alioto): Mr. Burwell, when you told Mr. Gormely, "Why don't we reduce the price to sell the vanadium in 1938," what did he say?

Mr. Holland: Your Honor, I object. That is the same question you already ruled upon.

(Testimony of Blair Burwell.)

The Court: It is repetition. He said that they objected. They did not want to sell it at that price.

Mr. Alioto: If your Honor please, there was a lot more to this conversation.

The Court: I know. You can have this conversation extended over weeks, but we are not going to do it. He has covered the situation now. Let us go to something else.

Mr. Alioto: I want to be deferential about this matter, if your Honor please, but may I indicate to the Court, privately or otherwise, what the rest of the conversation was? It is a matter of testimony in other proceedings and it is very important to the plaintiff.

The Court: I prefer that the witness testify. You can state whether there was anything else now, other than what you have related.

The Witness: Yes. We discussed the matter of reducing the price of vanadium——

Mr. Holland: I object, your Honor, to his stating what it was. We have an objection as to this conversation on [150] the ground we can't cross-examine on it.

Mr. Alioto: I submit, if your Honor please, it is a matter of cross-examination. There are two living witnesses to this conversation, and this is a corporate matter, and I do not think the rule with respect to dead persons applies to corporate agents.

Furthermore, they have their top executives at the time, Mr. Bransome and Mr. Laub, here in San Francisco right now.

(Testimony of Blair Burwell.)

Mr. Holland: They will be here, but he doesn't say who said it.

Q. (By the Court): Will you state who made the statement in your further testimony? Don't say "they," but mention the one who made the statement.

A. Mr. Gormely made most, made the statement with regard to Silvaz and he made the statements with regard to the MacQuaig report——

Mr. Holland: I object, your Honor, to his stating—you asked who made the statement and he is trying to get the statement into the record.

Mr. Alioto: Your Honor has in mind that these are the top executive officers of these companies.

The Court: The objection is sustained, subject to change if the circumstances justify it. I do not know how they could cross-examine the witness or how they could [151] produce other witnesses here if they are all dead.

Mr. Alioto: The witnesses are not dead who were parties to this arrangement, if there was an arrangement.

The Court: Who are the others?

Mr. Alioto: Mr. Bransome, Mr. Kett, Mr. Laub and Mr. Gibbons, the four top personnel of the Vanadium Corporation of America, and they are all living, every one of them. Mr. Burwell is here. He can be cross-examined. He was a director of this company.

The Court: Go ahead and let us not have any repetition. Overruled. Exception allowed.

(Testimony of Blair Burwell.)

Q. (By Mr. Alioto): What was said by Mr. Gormely when you said that—when you asked him about reducing the price?

Mr. Holland: That is what we object to, your Honor, and your Honor has ruled.

The Court: That is repetition.

Mr. Alioto: No, I do not believe he has completed the conversation, if your Honor please.

Q. Don't tell us what you have already said.

A. I answered that question. I think I answered that question.

Q. Was anything said about other alloys at that time?

The Court: Well, now, just a moment. Let him state what was said, but don't suggest to him the substance of [152] his answer.

A. The conversation, of course, covered a lot. I was taking in the conversation and I said, "Why didn't we go ahead and cut the price of vanadium?" I believed that the Vanadium Corporation of America could not produce vanadium at a price of $2.25 a pound and survive.

Mr. Gormely said that would put the Vanadium Corporation out of business.

I said, "All right, suppose you do put them out of business. What is the difference? We have people down here working—the survival of our business or the survival of the Vanadium Corporation business?" I said, "Where do our loyalties lie? Why don't we put the Vanadium Corporation out of business?" That is clear words.

(Testimony of Blair Burwell.)

He said, "If we put the Vanadium Corporation out of business, we would lose our control competitor in ferro-chrome."

That, your Honor, is the cold words. There is nothing wrong about that.

Q. Was anything said about the MacQuaig report at that time?

Mr. Archer: I object, your Honor.

The Court: Sustained.

Mr. Holland: That was a 1935 matter.

Mr. Alioto: I am talking about what was said in 1938. [153]

The Court: Don't put the words in the witness' mouth. Let him testify to what was said there.

Q. (By Mr. Alioto): What else was said there?

The Court: Don't lead the witness.

Q. (By Mr. Alioto): What else was said there?

A. We discussed the MacQuaig report. I discussed the MacQuaig report. I collaborated in the MacQuaig report. I wrote a portion of the MacQuaig report. I asked them about the MacQuaig report.

Mr. Holland: Your Honor, this is all matters going back to 1935.

Q. (By the Court): When was that?

A. The MacQuaig report was 1935, your Honor. It pertained to the problem we were discussing in 1938.

Q. (By Mr. Alioto): Did you discuss this report in 1938 at Uravan with Gormely and Van Fleet? A. That is correct.

(Testimony of Blair Burwell.)

Q. What was said about it?

Mr. Holland: We object, your Honor.

The Court: The objection is sustained. It has reference to something that occurred in 1935.

Mr. Alioto: Your Honor, the conversation did not occur in 1935.

The Court: I understand it didn't, but he has stated the substance of the conversation. [154]

Mr. Alioto: No, he has not, if your Honor please. He hasn't at all.

The Court: Go ahead and answer the question. Let us see what it is.

Q. (By Mr. Alioto): What was said about the MacQuaig report? A. The MacQuaig——

Mr. Holland: Your Honor, we object——

The Court: Don't state the substance of the MacQuaig report. Just state what was said there.

A. Gormely said we could not follow the recommendations of the MacQuaig report because the sales department would not allow them to do it, wouldn't allow them to cut the price of vanadium, and for the same reason he said we couldn't go ahead and sell Silvaz because we would destroy the Vanadium Corporation as a company, and their competitive value in ferro-chrome would be lost, or else some of the steel companies would pick them up, and the company then, the Vanadium Corporation of America, would be a captive company, making the other alloys, and they would lose their own business in ferro-alloys. It was too great a risk to

(Testimony of Blair Burwell.)

run to destroy the Vanadium Corporation of America.

Q. (By Mr. Alioto): Did you in September of 1938 understand what Mr. Gormely meant by their value in ferro-chrome?

Mr. Archer: I object, your Honor. [155]

The Court: Sustained.

Q. (By Mr. Alioto): In 1938 did Mr. Gormely tell you——

The Court: Now, just a minute. Don't lead the witness.

Mr. Alioto: All right, if your Honor please.

Q. State whether or not Mr. Gormely—just say yes or no, please—explained to you in 1938 in Uravan what the relations were between V.C.A. and Union Carbide on ferro-chrome?

A. Yes, he did.

Q. What did he say? Just tell us what he said and nothing else and what you said.

Mr. Archer: Your Honor, I object to this. This is clearly irrelevant. This is a vanadium case, possibly a uranium case, but certainly not a ferro-chrome case.

Mr. Alioto: I submit, if your Honor please, the witness has already testified.

The Court: Let us see now. What did this refer to?

The Witness: I am getting a bit confused now about some of this give and take.

The Court: Restate your question.

(Question read.)

(Testimony of Blair Burwell.)

A. Yes, he told me.

Q. What did he tell you?

A. He told me that the Vanadium Corporation of America had been established as a friendly competitor to sell low [156] carbon ferro-chrome in the United States, and the reason for that was to forestall anti-trust action that might come up in the future. That was on the advice of their attorneys at that time.

Mr. Alioto: We offer in evidence as our exhibit next in order a letter of September 19th, 1938, at or about the same time from Mr. Van Fleet to Mr. Gormely, Mr. Swain and Mr. Sneath.

Q. First of all, Mr. Burwell, will you be good enough to identify Mr. Swain and Mr. Sneath?

A. Mr. Swain, I believe, was an official of the Electro Metallurgical Sales Corporation, and Mr. Sneath—I have already testified to that.

Q. Was Mr. Swain an important official of that company?

A. Yes, I think he was a vice-president of the sales organization.

Mr. Alioto: We will offer this in evidence, if your Honor please.

Mr. Archer: May I have the same objection that I had to the previous exhibit?

Mr. Holland: May I see what it is?

Mr. Alioto: I thought I had left it on the desk, Mr. Holland. I am sorry.

Mr. Holland: I take it this is not offered against the Vanadium Corporation? [157]

(Testimony of Blair Burwell.)

Mr. Alioto: At the present time it is offered against Union Carbide.

Mr. Archer: This is again by Mr. Van Fleet, who is dead, and Mr. Gormely.

The Court: I don't understand.

Mr. Archer: I am objecting on the ground of hearsay. This is by Mr. Van Fleet, who is dead, and Mr. Gormely, who is dead.

Mr. Alioto: And Mr. Swain and Mr. Sneath are dead?

Mr. Archer: No, they are not.

Mr. Alioto: We will offer it.

(The document referred to was thereupon received in evidence and marked Plaintiffs' Exhibit No. 34.)

The Court: Just a moment, now. The Court has not ruled on that at all. This is a letter from whom to whom?

Mr. Alioto: Mr. Van Fleet to Mr. Gormely entitled "Competitive Vanadium Ore Production September, 1938."

The Court: How are you identifying that?

Mr. Alioto: This document we have already had pre-trial stipulations with respect to genuineness and authenticity.

Mr. Archer: No objection on the ground of authenticity.

The Court: Very well. It will be admitted. [158]

Mr. Alioto: This letter is dated September 19th, 1938 from Mr. Van Fleet to Mr. Gormely. Mr.

(Testimony of Blair Burwell.)

Swain and Mr. Sneath. It is entitled "Competitive Vanadium Ore Production," and it is from New York City.

The Court: Just a moment before you start on that. We will take a ten-minute recess.

(Recess.) [159]

Mr. Alioto: Ladies and gentlemen, at the recess I started to read the letter which is dated September 19, 1938. It is written by Mr. Van Fleet to Mr. Gormely, to Mr. Swain, to Mr. Sneath, and the subject matter title is "Competitive Vanadium Ore Production" (reading):

"Dear Mr. Gormely:

"A preliminary investigation of the vanadium ore production in southeastern Utah and southwestern Colorado has been made. The investigation is being continued and will be made complete at a later date. Preliminary figures indicate that the V_2O_5 content of the ore which has been shipped already this year up to September 1st amounts to approximately 225,100 pounds. It is thought that for the balance of this year production will be at about the same rate, and the total ore production will amount to approximately 338,000 pounds contained V_2O_5.

"The preliminary report does not give exports to Europe, but seven cars containing 34,000 pounds V_2O_5 have been shipped to Japan already this year. An approximate list of those shipments to September 1, 1938, follows:

"Japan ..... 7 cars 34,000 lbs. V_2O_5

"Vitro Mfg. Co..... 29 cars 125,500 lbs. V_2O_5

(Testimony of Blair Burwell.)

"Shattuck Chemical Co.	2 cars	5,800 lbs. V_2O_5
"North Continent Mining Co. (Produced)		40,000 lbs. V_2O_5
"Miscellaneous		20,000 lbs. V_2O_5
		"225,100 lbs. V_2O_5

"The seven cars of ore which were sent to Japan were produced from the Temple Mountain, Yellow Cat and Polar Mesa properties in southeastern Utah. A Japanese outfit started to build a mill at Temple Mountain to concentrate ore from the many dumps. They worked about 60 days, apparently ran out of money and left the property—leaving unpaid bills. The ore shipped from Yellow Cat and Polar Mesa was purchased from the operators of those properties.

"The Vitro Manufacturing Company has purchased 29 cars containing 125,500 pounds V_2O_5. This ore also contains better than two percent U3O8."——

Incidentally, Vitro is one of the ceramic manufacturers in the United States?

The Witness: That's correct. They made colors out of vanadium.

Q. (By Mr. Alioto): It is one of the large American companies, is it not?

A. (Witness nods head affirmatively.)

Mr. Alioto (continuing reading): The Vitro Manufacturing Company has purchased 29 cars containing 125,500 pounds V_2O_5. This ore also con-

(Testimony of Blair Burwell.)

tains [161] better than two percent U3O8. The Vitro Manufacturing Company process this ore for the uranium and sell the vanadium residue in some convenient form, recently reported as being fused oxide. It is not known at present where this vanadium goes. About half of these 29 cars have been produced at Polar Mesa by Harbison and Kipe. They receive high prices for this ore, namely, 45 cents per pound of V_2O_5 and 80 cents per pound of U3O8 contained in the ore. Vitro pays the freight from Utah.

"The Shattuck Chemical Company of Denver has purchased two cars of rather low-grade ore containing 5,600 pounds of V_2O_5. These two cars were specially selected uranium ore and contained higher uranium in proportion to V_2O_5 than most shipments.

"The North Continent Mining Company has a small plant in the Paradox Valley and has produced about 40,000 pounds"——

Q. (By Mr. Alioto): Now, the Paradox Valley directly adjoined Uravan, did it not?

A. Yes. But that statement isn't quite correct. The plant was not in Paradox Valley, but forty miles south of Paradox Valley.

Q. Forty miles south? [162]

A. (Witness nods head affirmatively.)

Mr. Alioto (continuing reading): "The North Continent Mining Company has a small plant in the Paradox Valley and has produced about 40,000 pounds of V_2O_5 so far this year. This production is

(Testimony of Blair Burwell.)

sent to the Shattuck Chemical Company in Denver. This production of the North Continent Mining Company purchased by Shattuck rather checks previous information that Shattuck Chemical Company produces and markets between 50,000 and 75,000 pounds of V_2O_5 yearly. They put this in the form of fused vanadium oxide with varying degrees of purity and containing from 51 to 75 percent V_2O_5.

"There has been an estimated miscellaneous production of approximately 20,000 pounds V_2O_5 from various sources.

"If the production for the rest of 1938 is in proportion, the entire 1938 production will amount to approximately 338,000 pounds contained V_2O_5 from these ore sources.

"The Mammoth Mine in Arizona has an appreciable production of vanadium. Several years ago the Molybdenum Corporation of America built a mill at Mammoth with which to process ores extracted from the New Year and Mohawk properties. They entered [163] into a contract with the owners of the Mammoth mine adjoining, to also treat ores from that mine. The treatment and recoveries were not satisfactory to Mammoth. Consequently, about January 1, 1938, Mammoth purchased the mill from the Molybdenum Corporation and took over the milling operation. Concentrates are made in this mill containing gold, lead, molybdenum and vanadium. The concentrates contain about five percent V_2O_5 and seven percent MoO_3."——

(Testimony of Blair Burwell.)

Q. (By Mr. Alioto): "M_0O_3." What is that?

A. M_0O_3, molybdic oxide.

Mr. Alioto (continuing reading): "We have looked over this operation, obtained samples of concentrates and are able to check up fairly well the production. The present capacity of the Mammoth mill would yield approximately 100,000 pounds V_2O_5 yearly, which checks closely with the 1937 production amounting to 90,000 pounds V_2O_5 purchased by Associated Metals and Minerals Company.

"The Mammoth mine is owned by Lloyd-Smith, owner of Time, Life and Fortune magazines, and it is incorporated under the name of Mammoth Saint Anthony Company. Foster Naething is the general manager of [164] this company and is a very competent mining engineer.

"If we add this 100,000 pounds V_2O_5 to the competitive ore production listed above, the total competitive production for 1938 will be approximately 438,000 pounds V_2O_5. There are many attractive occurrences of carnotite ore in the Southwest, and the production could easily be twice as much—given adequate financing and management.

"One potential producer of V_2O_5 is the Anaconda Copper Company. In Idaho they produce phosphate rock, moving it to Anaconda, Montana, for processing into fertilizer and phosphoric acid. The plant for this purpose at Anaconda is in connection with the smelter where they obtain cheap acid. This phosphate rock all contains a small amount of vanadium, and a process has been developed for recover-

(Testimony of Blair Burwell.)

ing the vanadium from the phosphoric acid solution.

"They expected to be producing vanadium this year, after installing equipment costing about $200,000, but they did not feel inclined to proceed with this expenditure this year. I imagine when business is better they will begin producing fused oxide. It is estimated that this plant will produce approximately 100,000 pounds of V_2O_5 yearly, and we have agreed to purchase the output. [165]

"The International Vanadium Corporation has taken over the lead vanadate property at Dripping Springs, Arizona. It is now being managed by one de Villiers, who was for a time employed at Rhodesian Broken Hills. The company is now well financed and the plan is to produce lead vanadate concentrates containing 17 percent V_2O_5. de Villiers claims that he can do this for 19 cents per pound of V_2O_5, producing four tons of concentrates per day. This production, if carried through, would amount to approximately 40,000 pounds V_2O_5 monthly, or 480,000 pounds yearly. They expect to be in production in about three months.

"I have recently made two visits to Dripping Springs and one of our field engineers has sampled the Dripping Springs mine. We have paid particular attention to this operation from its inception several years ago. We could never check the quality or quantity of ore claimed. The last sampling, which was very comprehensive, confirmed our previous impression, and we cannot see

(Testimony of Blair Burwell.)

how a profitable operation can be maintained at this place. The ore is entirely too low-grade—containing approximately .20 percent V_2O_5, with a small tonnage. There will be, however, some concentrates made at this place, [166] as in the past, but we anticipate that after a few months this operation will have to close.

"For the last two years we have been making a comprehensive investigation of all vanadium resources in the Southwest, which we expect to finish this season. Several attempts have been made to erect small roasters, mills and other equipment for processing these ores on a small scale. So far all of these attempts have met with failure. There is a new one going in now at Gateway and is being managed by Harry Brown, who up until about nine months ago was employed by us at Uravan as a draftsman. It is reported that Harry Brown is being backed by his father and has raised $20,000 with which to install a 20-ton plant which will be designed to produce fused oxide. He intends to make the roaster from original designs, and it is evident additional funds will be necessary. The ore will be obtained from Polar Mesa and from the deposits on the other side of the Dolores River in the vicinity of Gateway. There are a number of small high-grade deposits in this locality.

"Probably the best of the outside resources are in the southeastern Utah around Blanding and in Dry Valley. Last year, as a result of our investigations, [167] we considered that we should purchase

(Testimony of Blair Burwell.)

additional property in that locality, and $200,000 was put into the original 1938 budget to cover these purchases. Due to poor business conditions, however, it was not thought desirable to pursue recommendations for this purpose. We will renew this request in the 1939 budget."——

Then follows the last paragraph (continuing reading):

"We have already purchased two or three groups of claims which were potential producers and could be the nucleus of an operation. The intensive development during the past year has made it more imperative to continue this policy, and it now appears that we should purchase some properties and possibly install a small plant in southeastern Utah to forestall serious competition. A definite recommendation will be made on this as soon as the field work has been finished.

"Very truly yours,

"J. R. Van Fleet."

Q. (By Mr. Alioto): Now, again, Mr. Burwell, in September, 1938, when he states, with respect to Anaconda—I am sorry, I lost that reference for a moment—yes, when he states with reference to Anaconda (reading): [168]

"It is estimated that this plant will produce approximately 100,000 pounds V_2O_5 yearly, and we have agreed to purchase the output."——

did you need vanadium oxide? Did you need Anaconda's vanadium oxide in September, 1938?

(Testimony of Blair Burwell.)

A. No.

Q. Why did you buy it?

A. To keep it off the market.

Q. Which market?

A. The American market.

Q. Now, Mr. Burwell, this letter is written by Mr. Van Fleet to Mr. Gormely, Mr. Swain, and Mr. Sneath. Did Mr. Van Fleet personally acquire all of the competitive information set forth in the letter, or did you acquire it?

A. I acquired it.

Q. At whose direction?

A. Mr. Van Fleet.

Q. And for what purpose?

A. For the purpose of the report to the directors as outlined (indicating).

Q. Did Mr. Van Fleet tell you why he wanted this competitive information?

A. To make a report to the directors.

Q. Was there any policy of the United States Vanadium Corporation in that September of 1938—— [169]

Mr. Holland: He is leading the witness again.

The Court: Yes.

Mr. Holland: He isn't getting the answers he wants——

Mr. Alioto: Now, Mr. Holland, I object to the reference we weren't getting the answers we want. If we weren't getting the answers we want you wouldn't be objecting.

The Court: Now, just a minute, gentlemen.

(Testimony of Blair Burwell.)

Mr. Alioto: Thank you, Judge. I think Mr. Holland objects. I will reframe it if he does.

The Court: Reframe it.

Mr. Holland: I'm not mad.

Mr. Alioto: I'm not mad, either, Joe. I'm not mad about anything.

Q. (By Mr. Alioto): Now, Mr. Burwell, state whether or not there was in existence in September of 1938 a policy of the Vanadium Corporation with respect to competitive enterprises.

Mr. Archer: Still leading. I object.

The Court: Sustained. It is calling for a conclusion.

Q. (By Mr. Alioto): State whether or not there was, in September of 1938, a communication from any superior of yours in United States Vanadium Corporation or Union Carbide with respect to a policy [170] on competitive activities on the Colorado Plateau. A. Yes, there was.

Q. Was this an oral or a written communication to you? A. Oral.

Q. And who gave you that oral communication?

A. Van Fleet.

Q. Anybody else? A. (No response.)

Q. What was that policy as communicated to you?

Mr. Archer: Your Honor, I object to that as calling for a conclusion——

The Court: Calls for what he has in mind.

The Witness: Shall I answer it?

The Court: Go ahead.

(Testimony of Blair Burwell.)

A. Well, I was—my instructions were to acquire all the properties in the Colorado Plateau that would possibly produce vanadium in competition with the United States Vanadium Corporation.

Q. (By Mr. Alioto): To acquire them for what reason?

A. To keep them off the market as producers of vanadium.

Q. What market?

A. The American market.

Q. (By the Court): Well, now, did you regard that investment in this [171] business—. Here your company had large investments down there. Did you regard that as a good business proposition, the purchase of——

A. Yes, your Honor. Your Honor, at that time we knew we had a billion-dollar field, and we were playing the cards for a billion-dollar field. And the way you get a billion-dollar natural resource is to acquire it this way. So all may be the tooth and the fang, but this is the way mining engineers proceed —business people proceed — to acquire, control a natural resource, and this policy was directed to me by Mr. Van Fleet, and it was also directed to me previously by other corporation officials previous to 1938. This was a policy that continued from 1926 and had never been stopped.

Q. (By Mr. Alioto): Was it part——

Q. (By the Court): What was your investment, the investment of the defendant companies, in this field?

(Testimony of Blair Burwell.)

A. (Witness searching brief case.)

Q. Just approximately.

A. (After producing document): In order that my memory won't trick me, your Honor,——

Q. (By Mr. Archer): What are you reading from, Mr. Burwell?

A. Personal documents of mine. [172]

There was $1,400,000 invested at that time.

Mr. Archer: Could we identify what he is reading from there?

Mr. Alioto: Now,——

Mr. Archer: Could we have identified what he was reading from? Is it——

The Witness: I was refreshing my memory.

Now I will answer your question, Mr. Archer. There was $1,400,000, in my recollection.

Q. (By Mr. Alioto): Did you build a plant at Durango? A. I did.

Q. How much did it cost you to build that plant?

A. $103,000.

Q. How much would it have cost to build a good, adequate vanadium oxide plant on the Colorado Plateau in 1938, Mr. Burwell, producing, let us say, 15,000 pounds of V_2O_5 a year? A. A year?

Q. A month. I am sorry. 15,000 pounds a month.

A. Of course, that's a very small plant. There were a number of plants built for about $50,000 to do that job. I believe that would be the figure.

Q. Now then, with respect to the question asked you by the Court as to whether or not you consid-

(Testimony of Blair Burwell.)

ered it a good business policy to acquire these properties that might become [173] competitive if you didn't acquire them, even though you didn't need the vanadium oxide at the time, why did you consider it a good business policy?

A. Because in our appraisal of the Colorado Plateau, and our viewed anticipation of the vanadium markets and the uranium markets that we anticipated that we would need all the ore that was in this region for future markets, and that we could obtain large profits and large returns as a result of this investment, in the same way that an oil company, for instance, buys or acquires oil reserves far ahead of their immediate needs.

Q. Was it part of this policy under your directions that you would eliminate any existing competition?

Mr. Archer: I object to the question.

The Court: Sustained. Not the proper question.

Q. (By Mr. Alioto): Do you know Mr. Bransome of the Vanadium Corporation of America?

A. Very well.

Q. Have you ever had any business meetings with Mr. Bransome of the Vanadium Corporation of America? A. A number of them.

Q. A number of them? A. Yes.

Q. Specifically, did you have a meeting with Mr. Bransome [174] of the Vanadium Corporation of America in or about 1939?

A. I believe that's correct. If my memory is correct, it was just prior to the starting of the Van-

(Testimony of Blair Burwell.)

adium Corporation's plant, and I think it was '39 or '40.

Q. When you say it was just prior to the starting of the Vanadium Corporation plant, do you mean a plant that they started in '39 or '40 on the Colorado Plateau? A. At Naturita.

Q. Located at Naturita. Would you be good enough, by reference to Plaintiffs' Exhibit 26 for identification, to indicate generally where Naturita is?

A. (indicating) Approximately where my finger is pointing.

Q. Just between Uravan and Bull Canyon?

A. And Bull Canyon.

Q. Now, just before the Vanadium Corporation of America opened that mill you say you had a meeting with Mr. Bransome, is that right?

A. That is my recollection.

Q. And where, if you recall, was that meeting held? A. That was in New York.

Q. And who was at that meeting?

A. Mr. Van Fleet, myself, and Mr. Bransome.

Q. Was anybody else present on behalf of the Vanadium Corporation of America? [175]

A. I don't recall anybody else.

Q. Where was that meeting held?

A. My recollection, it was at a club in New York. I don't recall the name of the club.

Q. What was Mr. Bransome's position with the Vanadium Corporation of America at the time?

A. I believe he was president.

(Testimony of Blair Burwell.)

Q. Who fixed that meeting place, at a club in New York?

A. Mr. Bransome. It was his club.

Q. His club? Was there any reason why the meeting wasn't held in his office or your office?

A. We suggested other meeting places, but the club was selected because it was less public.

Q. Did Mr. Bransome tell you that he wanted to meet at the club because it was less public?

Mr. Holland: I object to all these leading questions.

The Court: It is not a proper question.

Mr. Holland: Let the witness testify. [176]

Q. (By Mr. Alioto): You say it was Mr. Bransome, you testified it was Mr. Bransome who fixed the club as a meeting place?

A. That is correct.

Q. In connection with the fixing of that meeting place, did he say anything to you?

The Court: What difference does it make? How is it material who selected the place?

Q. You went, did you? A. I did.

The Court: Go ahead.

Mr. Alioto: May I continue the question?

The Court: Not along that line you can't.

Mr. Alioto: If your Honor please, I would like at some appropriate point to make an offer of proof because I think it is relevant and I think the Court will agree that it is relevant as to why that place was selected.

(Testimony of Blair Burwell.)

The Court: He stated it was a private place. I think that is sufficient.

Mr. Alioto: I won't pursue it if the Court won't let me, but I submit there is an extreme relevancy to the selection of the place, as to why they selected it, why they did not transact this business in their business offices.

The Court: They can transact it down on the street corner, but it is immaterial. What difference does it [177] make? They agreed on this place. Now, go ahead.

Mr. Alioto: I will go ahead.

Q. Tell us as best you remember what discussion took place between you, Mr. Van Fleet and the President of Vanadium Corporation of America?

A. My recollection is this, that Mr. Bransome had told us that they were getting ready to rebuild and start a vanadium plant which had been inactive since 1934 in Naturita and he wished to discuss with us the problem of the ore purchasing and working together in that area because the Uravan plant was 16 miles down the river from this ideal plant, and as long as they were going to be neighbors in the area, they would like to discuss the points of mutual interest with regard to labor rates, what we paid miners, what we paid for ore, what we paid for trucking on contracts, that they would like to work with us in the matter of—these matters—and we discussed—I discussed and Mr. Van Fleet participated in the conversation—we told him —I advised him what our labor rates were, about

(Testimony of Blair Burwell.)

what we were paying for trucking per ton mile, and what we were paying for the purchase of ore at that time. We were buying a relatively minor amount of vanadium ore delivered at the plant.

Q. What did you tell him about your ore process if you remember the substance of it?

A. I told him we were paying approximately, I think, 20, [178] 21 cents per pound of vanadium content in the ore, depending upon the grade. That is, the richer the ore, we might make a little higher price, and if it was a little lower grade, we might make a little lesser price, but in general, the basing point was 21 cents a pound, and that had been established as the figure, because it was our approximate cost of producing ore at our own mines.

Our policy at that time I discussed — Mr. Van Fleet discussed—was to purchase the ore at about the same price as it would cost us to produce it from our own mines. In other words, if we could get it from somebody else and conserve our own resources at the same cost we could mine it ourselves, that was the course. Mr. Bransome wanted to know what that price was. We told him, and Mr. Bransome, to my best recollection, said, "All right, we will work with you and we will follow the general or pricing schedule that you have. That was the principal discussion at this meeting.

Q. Did you in fact after that meeting pay 21 cents for your ore?

A. We did, for a while.

(Testimony of Blair Burwell.)

Q. Do you know whether or not the Vanadium Corporation of America paid 21 cents for this ore?

A. I did.

Q. Did you have a subsequent meeting with Mr. Bransome out in Colorado? [179]

A. Yes, we had a subsequent meeting in Colorado. My best recollection——

Q. Do you recall where it was?

A. My best recollection was it was near Dove Creek.

Q. Where is Dove Creek?

A. That is south of—It is in the Colorado Plateau near the little town of——

Q. Would it be on this map or would it be off the map? A. No, it is on the map.

Q. Would you indicate approximately where Dove Creek is in relation to that Colorado Plateau?

A. It is right here (indicating).

Q. In the so-called Slick Rock mining area?

A. That is right. That is my best recollection. The ore prices——

Q. Excuse me, Mr. Burwell, before we go on to the discussion, who was present at that meeting besides you and Mr. Bransome?

A. My recollection was that Mr. Kett was there and some of our personnel.

Q. Was a Mr. Hill there?

A. I am not sure, but I believe he was. At least he was in charge of the ore buying situation and he may or may not have been there, I don't recall for sure.

(Testimony of Blair Burwell.)

Q. Would you identify the position Mr. Bransome held at [180] that time in the Vanadium Corporation of America?

A. It was the same, the President of Vanadium Corporation.

Q. What was the position Mr. F. F. Kett held in the Vanadium Corporation of America at that time?

A. I believe Mr. Kett was either Vice-President or General Manager of Mining Operations.

Q. In any event, he was the general manager of their mining operations? A. That is right.

Q. Do you recall the approximate time of this meeting?

A. No, I do not. This is a long time ago. I don't remember the details.

Q. Do you know where the meeting was?

A. To my recollection it was in the ore buying station that we were operating for Metals Reserves.

Q. The fact that there was a Metals Reserves Office involved, would that help you fix the time? It would have to be after 1940, wouldn't it?

A. I think it was 1942, somewhere around 1942.

Q. Up to that point you were buying ore from the miners at 21 cents, weren't you?

A. That is correct.

Q. What happened at that meeting? Just tell us the substance of what you said, what Mr. Kett said, what Mr. [181] Bransome said or what anybody said?

A. At this meeting or at this particular time,

(Testimony of Blair Burwell.)

and with the qualification that this was some time ago, Mr. Bransome said that the prices that we had been paying, 21 cents a pound, was only resulting—he couldn't get enough ore at 21 cents a pound to feed his mills, that he, the V.C.A., were dependent upon purchased ore while you fellows—me, Blair Burwell—have all your mines; you are not dependent upon purchasing ore. We were only purchasing about ten or fifteen per cent of our ore.

He said, "We are not going to go along with the 21 cents any longer. We are going to pay 31 cents whether you like it or not."

Q. What did you say?

A. I said, "All right, we will pay 31 cents, too."

Q. After that meeting did both of you pay 31 cents for the ore? A. We did.

Q. Do you know a man named Ralph Blitz?

A. Yes.

Q. Who was he?

A. I think he was their general superintendent or local plant manager at Naturita—the Vanadium Corporation plant after it resumed operations in 1942.

Mr. Alioto: At this time, if your Honor please, [182] we offer into evidence as our exhibit next in order, a letter dated November 2nd, 1941, written by S. Power Warren to Mr. Blair Burwell and Mr. W. G. Haldane on the interoffice correspondence stationery of the United States Vanadium Corporation.

(Testimony of Blair Burwell.)

Q. Before we make the offer formally, would you be good enough to identify Mr. S. P. Warren?

A. He was our general superintendent of the U. S. Vanadium, general superintendent at Uravan, Colorado.

Mr. Alioto: We will offer this into evidence, if your Honor please. The authenticity has already been established in pre-trial conferences.

The Court: Very well, it may be admitted.

Mr. Alioto: I will offer——

(The document referred to was thereupon received in evidence and marked Plaintiffs' Exhibit No. 35.)

[See Book of Exhibits.]

Mr. Alioto: I would like permission to read the portion of it relating to Mr. Blitz at this point. If anybody else wants to read any other portion, I have no objection.

Mr. Archer: What page is that?

Mr. Alioto: That is on page 3. This is written by Mr. Warren, the superintendent at Uravan, to Mr. Haldane, with a copy to Mr. Blair Burwell, under date of November 2nd, 1941:

"In connection with this sampling plant, [183] and with the necessity for good samples, I feel I have run onto an interesting condition which may or may not exist, but which I will call to your attention, and await your suggestions.

"As you well know, the Vanadium Corporation of America have been having a hard time getting ore. When they first came into the district, or rather,

(Testimony of Blair Burwell.)

when I first arrived here, there was plenty of evidence that they were increasing the price paid for outside ore. Blair's trip in here and his discussion with Blitz remedied that matter."

Q. Do you remember that discussion with Mr. Blitz, Mr. Burwell? A. Yes.

Q. Where did it take place?

A. I don't recall for sure; either Naturita or Uravan. I think probably Uravan.

Q. Was Mr. Blitz at the time superintendent for the Vanadium Corporation of America?

A. He was.

Q. Was anybody else present at that discussion?

A. I don't recall.

Q. Will you be good enough to state the substance of what was said?

Mr. Holland: If the Court please, Mr. Blitz, the [184] only one there present, is deceased, and we object to it.

Mr. Alioto: I submit, if your Honor please, that this is a corporate act, following a meeting with Mr. Bransome.

The Court: Who was Blitz, now?

Mr. Alioto: He was the superintendent of their mines.

Mr. Holland: Mill.

Mr. Alioto: Mill, and this relates, or is in line with the conversations the witness has attributed to Mr. Bransome and Mr. Keet, who were their top officials, and this subject matter of ore prices was discussed. It is an important act.

(Testimony of Blair Burwell.)

Mr. Holland: This is a minor official who is now deceased and has been for some years.

The Court: You are asking now for Mr. Blitz' conversation?

Mr. Alioto: The conversation which Mr. Burwell, the witness in the chair, had with Mr. Blitz, and it relates to subject matter that Mr. Bransome and Mr. Keet had previously participated in, according to this witness' testimony. I submit it is a corporate act, and the fact that Mr. Blitz is not available for testimony does not make it inadmissible.

The Court: Go ahead and answer the question. I [185] do not see its materiality.

The Witness: I asked Mr. Blitz what he was paying for ore and he told me. I don't remember exactly what it was, but it was more than 21 cents. And I asked him to check with Fred Kett as to what the prices of ore we agreed to be.

I said, "You had better check this matter with Fred and see what his ore prices are. If you will ask Fred, I would appreciate it."

And that is all I said.

Ralph said he would talk to Mr. Kett. I suppose he did. I don't know. That is the last I heard of it.

Q. (By Mr. Alioto): Did you thereafter speak either to Mr. Kett or to Mr. Blitz on the subject matter? A. No.

Q. Do you know whether thereafter the Vanadium Corporation of America paid the 21 cents for the ore? A. I think that is correct.

(Testimony of Blair Burwell.)

Q. Mr. Burwell, I want to take you to a meeting with Mr. Bransome at the end of 1947 or the beginning of 1948. Do you recall having a meeting with him? We are getting farther apart. We are getting up to 1947 or 1948. Do you recall a meeting with him on the subject of uranium as against vanadium production was brought up in either December of 1947 or January of 1948?

A. December 1947 or January of 1948? [186] Yes, yes, I had a talk.

Q. Where do you recall was that meeting held?

A. At the office of the Vanadium Corporation of America in New York.

Q. Who was present at that meeting?

A. Mr. Bransome.

Q. And yourself? A. That is right.

Q. Nobody else? A. That's right.

Q. Will you be good enough to tell us the substance of what you said and what Mr. Bransome said on the occasion of that meeting?

A. That is a big answer. I will endeavor to answer it as concisely as I can, your Honor. Many years have elapsed.

Mr. Archer: Your Honor, may I interpose just one question?

Q. Were you still employed by United States Vanadium at this time?

A. I had resigned December 11, 1947, and I was just trying to—no, I had resigned on December 11, 1947, prior to this conversation.

Mr. Archer: Then I object to the conversation.

(Testimony of Blair Burwell.)

I take it it is not offered against the United States Vanadium.

Mr. Alioto: This conversation at this point is [187] offered against the Vanadium Corporation of America as a declaration of its President, who, of course, is alive.

Q. Will you be good enough to state what was said?

The Court: Answer the question.

A. I told Mr. Bransome that we had been—I had been concerned with the problem of uranium production for the atomic period we were entering, that we had prepared—that I had prepared a proposal for the building of a central plant on the Colorado Plateau near Naturita which would have a capacity of from 500 to a thousand tons per day, and I had directed and designed with the Manhattan District's pilot plant operations conducted in 1943 a process study, assisted by Union Carbide, which was a plant design. This plant was designed to recover the uranium first using a soda ash leatching process, the same process practically that Naturita is using today, and that the vanadium that was in the ore would be held as a residue to be marketed with or in proportion with vanadium markets, and that the respect this proposal had been made was that we would not hold back the production of uranium by forcing it to come through plants that processed for vanadium first and then for uranium, which was limiting uranium production, that this plant had been designed and prepared for the ob-

(Testimony of Blair Burwell.)

jective of meeting the future needs of the Colorado Plateau.

I felt it was a very essential thing everybody who [188] had any interest in the field would cooperate with it, that I had been in touch with this problem with the Union Carbide and submitted a plan and proposal to the Union Carbide in a previous year, of Mr. Rafferty and Mr. Van Fleet and the rest of the Union Carbide group that I had worked with had approved it as a solution of the problem that was dogging us or troubling us, and the utilization of the ores of the Colorado Plateau for uranium production free from the limitations of the uranium business.

This plan I discussed with Ted Bransome. I told him that I had previously talked with Mr. March Hurst, who was President then and is President now of the Molybdenum Corporation of America, that I had recommended to the Atomic Energy Commission, that I had recommended to the Union Carbide Company that the Molybdenum Corporation of America be given the operation of this plant independent of the Vanadium Corporation of America, of the U. S. Vanadium Corporation, in order that these warring differences and disputes over vanadium market could be eliminated in the future, and that this plant had cost the government, the United States Government, approximately $400,000 for pilot planting in Grand Junction, Colorado, that it was fully developed, that it was the plan for the future, that General Groves and the Manhattan

(Testimony of Blair Burwell.)

District had approved this plan as one means of continuing without the ups and downs in the harnessing of this region in the two-way vanadium [189] market, and the finagling that was going on with those questions that you have heard in this court.

Mr. Bransome questioned me about this plan in some detail. I told them that Mr. Hurst did not feel at the moment that he wanted to get into the picture unless everybody would agree that an independent alloy-producer or operator was mutually desirable. I do not think Mr. Hurst was very warm to the proposal, anyway.

Mr. Bransome said, "Blair, supposing——"

Q. Mr. Burwell, by inadvertence you are putting your hand over your mouth.

A. I am sorry.

Q. That is all right.

A. Independent producers of ore, and there were a number at that time that had developed—"I suppose these independent producers of ore had vanadium and uranium ore and brought their ore up to this central plant that you propose. The vanadium then would be turned back to them to sell or to dispose of, isn't that correct?"

I said, "Yes, that's correct." I said, "We cannot in this particular emergency deny any person the right to get his vanadium back," that this situation had now become bigger than either the Union Carbide or the Vanadium Corporation of America in my estimation.

(Testimony of Blair Burwell.)

Then he asked this: What would happen if somebody [190] like Continental Ore or Mr. Leir shipped some ore to this central plant? Would he get the vanadium back?

I said, "Surely, he would."

So would anybody else who owned the ore. They would all have to have the same right.

Mr. Bransome said, he paced back and forth in his office, he said, "That would put Mr. Leir in the vanadium business and that is what we are trying to keep him out of."

And I looked at Ted and I turned around and walked out of the door. And that was the end of the conversation.

The plan was never put into effect.

The Court: The plan was not carried out?

A. No, because of the objection.

Q. (By Mr. Alioto): Did you have any agreement on the Colorado Plateau with Vanadium Corporation of America that you would respect each other's customers?

Mr. Holland: I object, your Honor. He is starting to lead the witness again.

The Court: I didn't get your question.

Q. (By Mr. Alioto): The question is: Did you have any agreement on the Colorado Plateau with the Vanadium Corporation of America that you would respect each other's customers with respect to all purchases?

(Testimony of Blair Burwell.)

A. I don't quite understand. Do you mean the miners?

Q. The miners, yes. [191]

A. In other words, if there was a miner selling ore to the Vanadium Corporation, that we would not attempt to buy his ore?

Q. That is what I mean. Now, just a minute. There is an objection.

Mr. Holland: I just objected to the form of the question.

The Court: He has answered.

Mr. Holland: Calling for the conclusion of the witness. He can state the agreement if there is such an agreement.

Q. (By Mr. Alioto): What was your answer?

A. There was no agreement that I had any part of.

Mr. Alioto: We will offer in evidence and ask to be marked as Plaintiffs' next in order a letter dated December 24th, 1941, from Mr. Haldane to Mr. Western, to Mr. Burwell and to Mr. Coleman.

Q. Would you be good enough to identify Mr. A. H. Coleman, Mr. Burwell?

A. He was assistant general superintendent at Uravan at one time and then became general superintendent, depending on the time of that letter.

Q. This letter is dated in 1941. What would Mr. Coleman's position have been in 1941?

A. I don't recall for sure, either general superintendent [192] or assistant general superintendent.

Mr. Alioto: We will offer this document into

(Testimony of Blair Burwell.)

evidence, if your Honor please. Its authenticity and genuineness have already been established in the pre-trial proceedings.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit No. 36.)

Q. (By Mr. Alioto): This document is dated December 24th, 1941, "Custom Ore, United States Vanadium Corporation, Mr. W. G. Haldane."

What was his position in 1941, Mr. Burwell? Was he your assistant then?

A. He was my assistant.

Q. This letter is directed to Mr. J. E. Weston with copies to Mr. Burwell and Mr. Coleman. It is an airmail letter from New York to Uravan, Colorado:

"Dear Joe:

"Yesterday Mr. Kett of the Vanadium Corporation of America called up protest against some attempt on our part to take a customer away.

"The story is that you went to one Lyen operating in the Cedar District, offering him $2.00 per ton above the established rates, which he in turn reported to the Vanadium Corporation of America. Knowing nothing of the circumstances surrounding the case or of Lyen, either, I advised Mr. Kett that I [193] would look into the matter. Will you kindly give me the details of this case.

"With kind regards, and with best wishes to yourself and Mrs. Weston for a Happy and Prosperous New Year, I am

(Testimony of Blair Burwell.)

"Yours very truly, Mr. W. G. Haldane."

It is now 12:00 o'clock. Does your Honor want to take the recess?

The Court: We will recess until 2:00 o'clock.

(Whereupon a recess was taken until 2:00 o'clock this date.) [194]

Tuesday, June 3, 1958—2:00 O'Clock P.M.

BLAIR BURWELL

a witness on behalf of the plaintiffs, on the stand at the time of recess, having been previously duly sworn, resumed the stand and testified further as follows:

Direct Examination—(Resumed)

Q. (By Mr. Alioto): Mr. Burwell, I direct your attention now to a meeting of the board of directors of Union Carbide sometime in 1946. Do you recall attending such a meeting? A. I do.

Q. Was this the board of directors of the top corporation itself, or one of the subsidiaries?

A. Well, it was a meeting not of the board of directors, but of the executive officials of—the vice-presidents of Union Carbide & Carbon Corporation.

Q. And do you recall the approximate date of that meeting?

A. I believe it was in the latter part of '46, possibly in November, December.

(Testimony of Blair Burwell.)

Q. It was in the post-war period, in any event?

A. That's right.

Q. Do you recall who was present at that meeting?

A. Yes, I do. Mr. Haggerson, president of the company, presiding; Mr. Priestley, president, then, of metal-chemical [195] division; Mr. Rush, I believe, who was counsel—I don't think he had an official position—he might have; Mr. Davidson, as I recall, president of Union Carbide & Carbon Company—vice-president of the company; Mr. McClure, I believe, vice-president of one of the divisions. I believe there were three or four other vice-presidents of the corporation who constituted the active management of the Union Carbide & Carbon Corporation.

Q. You were present at that meeting, were you?

A. I was present at that meeting.

Q. Where was the meeting held?

A. It was held on the 18th floor, I believe, of the 30 East 42nd Street general offices, in the meeting room off Mr. Haggerson's private office.

Q. That is the Union Carbide Building?

A. Union Carbide.

Q. In New York? A. That's correct.

Q. Will you tell us as best you remember the substance of the conversations that were had there with respect to vanadium?

A. The purpose of my appearing before this committee was to——

(Testimony of Blair Burwell.)

Mr. Archer: Could we have the conversations, your Honor?

The Court: Beg your pardon? [196]

Mr. Archer: Could we have the conversations, rather——

Mr. Alioto: That is what he was giving.

Mr. Archer: I thought he was talking about the purpose of it.

The Court: Well, it is introductory, I think.

The Witness: That's correct. You have to understand the purpose before you would understand the conversation, Mr. Archer.

A. (continuing) I was appearing before the corporation at the request of Mr. Rafferty to explain the expenditure of approximately $57,000 for the uranium-vanadium plant at Rifle, Colorado. This plant was a new plant, contained new methods of processing, and was planned as part of the future corporation policy to produce uranium and vanadium. I had spent approximately $70,000 without getting the proper or the usual budget approval, because the project had developed between formal budget meetings of these general officers. And as it was technically an overrun of budgets, I was requested by the corporation to explain the reason for—as a matter of more or less routine. This group was meeting to consider other similar budget overruns that had occurred in the fall of the year after the regular budget meeting, which I think had occurred sometime previously. There was approximately, I would imagine, four or five million dol-

(Testimony of Blair Burwell.)

lars involved in overruns [197] that were being discussed.

Q. (By Mr. Alioto): Who presided at that meeting?

A. Mr. Haggerson presided at that meeting.

Mr. Priestley requested me to explain the expenditure of seventy or eighty thousand dollars, somewhere in that amount—it was not a great amount—in that meeting for the six month period for the uranium-vanadium plant, and that I proceeded to do, to the directors, with an introduction that this was the start of the corporation uranium participation in the future after the atomic bomb had fallen, and the thing—and the completion of the Manhattan District Project. And I told the group of directors something of the objectives of the corporation as I represented it at that time in this particular meeting, towards the future importance of uranium in the atomic program, to the corporate opportunity of the Union Carbide Company.

Mr. Priestley interrupted the general statement by asking me if we were going to produce additional vanadium as a result of this uranium plant. And I explained to Mr. Priestley, and to the directors and the vice-presidents, that we would, of course, produce some additional vanadium, but the principal purpose was uranium for the future.

Mr. Priestley took me somewhat to task for spending any money for uranium at this time, when we would produce [198] vanadium that we couldn't sell.

(Testimony of Blair Burwell.)

My discussion then, in order to sell, or to convey to the directors the reasons for my expenditure of corporate funds, that the future of uranium was so important that uranium had to be obtained ahead of vanadium, and without any regard to whether you would sell vanadium or not.

And Mr. Priestley indicated that he didn't think uranium was of any immediate importance to the corporation, and how was I going to sell the vanadium that I was getting from this additional uranium plant?

And I again, I believe quite patiently, although I was becoming slightly irritated, conveyed the purpose of this uranium-vanadium plant.

Mr. Priestley asked me how much vanadium we had unsold at that time. I told him approximately a million pounds, a million and a quarter.

He said, "How are you going to sell this additional vanadium?"

"Well," I said, "I imagine that could be disposed of if we would reduce the price, research the usages of vanadium more intensely." We were already doing that. I felt that vanadium could be taken care of.

And he again said, "I don't see any justification for you producing any more vanadium at this time at a uranium plant, because if you can't sell it, what are you going to do [199] with it, how are you going to sell the vanadium?"

I therefore then told Mr. Priestley that it was not my business to sell vanadium; that if he

(Testimony of Blair Burwell.)

couldn't sell vanadium, to please say so, and that we would take over the job of selling vanadium, and I would assure him that I wouldn't sell vanadium or make a deal to the V.C.A., nor would I be indicted by the Anti-Trust Division again—I had already been indicted——

Q. (By the Court): You had already what?

A. I had been indicted. I was under criminal indictment at that time for vanadium——

Q. (By Mr. Alioto): For anti-trust violations in the vanadium industry?

A. I said I would sell this vanadium "if you can't."

Mr. Haggerson pounded the table and said the conversation was getting rather out-of-hand.

I said, "If there are any more questions in regard to the uranium, gentlemen, please let me know," and I left the meeting.

Q. I think at the time you made your statement as to what you told Mr. Priestley about his inability to sell, you had your hand over your mouth, and I am not sure that I quite understood it. What was it, precisely, you told Mr. Priestley when you started out saying "If you can't sell it, turn it [200] over to the United States Vanadium Corporation"?

A. "We will sell it and we won't have to make a deal to the V.C.A. to do it, either."

Q. Now, in the same year did you have a conversation with Mr. Priestley, that same Mr. Priestley, and Mr. Rafferty, in about October of 1946, in New York, with respect to some competitive bid-

(Testimony of Blair Burwell.)

ding to the United States Government on vanadium?

A. I believe that's correct. And—I am not sure—it ran ahead of this meeting of the directors, or whether it was behind it.

Q. Whether it was ahead of this meeting or behind it, do you recall that it was sometime in 1946?

A. I believe that it was in October of '46. I am not sure.

Q. Do you recall where that meeting was?

A. Mr. Rafferty's office.

Q. Do you recall who was present?

A. In New York. Mr. Priestley, Mr. Rafferty, myself.

Q. Who was Mr. Rafferty?

A. Mr. Rafferty was senior vice-president of Union Carbide and Carbon Corporation, chairman of the board of United States Vanadium Corporation.

Q. And who was Mr. Priestley at that time?

A. Mr. Priestley at that time I believe was vice-president of the corporation in charge of the metal division. [201]

Q. Is that vice-president of Union Carbide & Carbon, the top corporation?

A. That's correct.

Q. Did he have an office, also, in the Electro Metallurgical, in United States Vanadium?

A. I believe he did. Yes — now, I am not quite too sure about whether he had an office in United States Vanadium Corporation. He shortly after-

(Testimony of Blair Burwell.)

wards, or at that time, was president of United States Vanadium Corporation.

Q. What was the substance of the discussion you had at that meeting in New York?

A. Well,——

Q. I'm sorry. At that time you were the vice-president of the United States Vanadium Corporation, were you not? A. That's correct.

Q. And you were a director of the United States Vanadium Corporation? A. That's correct.

Q. And you were head of the mining functions for that company, were you not?

A. Well, I was vice-president in charge of all the operations, which included mining.

Q. All right. Tell us the substance of that conversation, Mr. Burwell.

A. I have a memorandum which will refresh my memory—— [202]

Q. Well, can you remember the conversation without the memorandum? Do you recall the subject matter of it? What did it relate to?

A. Well, I will have to give this—the conversation—if we chop it there, it's hard for me to answer it. I will have to tell you why this conversation occurred—I mean how—what—how I happened to be in Mr. Rafferty's office.

Q. Well, how were you in the office?

A. Because it doesn't make sense to answer questions——

Q. I understand.

A. It would be just futile to do it.

(Testimony of Blair Burwell.)

Q. Why were you in that office?

A. Sometime before that we had a million and a half, two million pounds of vanadium—a few weeks before that the government, the treasury procurement in Washington, announced their intention to buy vanadium for the stock pile at that time, and announced that they would accept bids for that vanadium oxide from various—from the vanadium companies, whoever would have the vanadium.

I discussed this matter with Mr. Priestley and, I think, Mr. Remmers, and Mr. Rafferty, Mr. Van Fleet—the matter of policy meeting. And I was directed to make a bid to the treasury procurement in Washington for this vanadium at 98 cents a pound.

At that time Mr. Priestley said he thought we ought to [203] go after the business and authorized me—we all agreed that we would bid 98 cents per pound. We had information, or some supposition, or some knowledge, that probably the Vanadium Corporation of America would bid $1.00.

So I made the bid for 98 cents a pound, and had a call from Washington that a larger amount of vanadium would be included if we would reduce the price slightly; that we were the low bidder; and would pay the freight—and I think that meant something like 97 cents a pound. It would involve from 98 cents, a cent a pound for the reduction for freight—that we could have the entire stock pile order, as we were low bidder on that basis.

(Testimony of Blair Burwell.)

So I conveyed this to Mr. Priestley, Mr. Remmers, Mr. Rafferty, chairman of the board, Mr. Van Fleet.

Shortly after that Mr. Priestley had called me and told me not to agree to the 97 cents a pound; that he thought it would be better to give the Vanadium Corporation part of the business, and that I should withdraw my offer or go to Washington and tell them that we ought to consider the other vanadium producers in this business.

And I promptly rang Mr. Rafferty up on the P-A-X phone, the little intercommunicating phone between my office, 1426, and the 18th floor, Mr. Rafferty's, and told Mr. Rafferty that I had this call from Bill Priestley, and that he wanted to back out on the sale and tell the government that [204] we would reconsider—like to have the Vanadium Corporation included in this business.

Mr. Rafferty said, "Come on up. Bill is in front of me right now. I'm just getting into this thing."

And now is the meeting that you asked me.

Q. All right. What happened at that meeting, then?

A. I sat on the corner over at one side. Mr. Priestley was sitting in the front, on the little chair on the carpet. Mr. Rafferty was sitting in his —Mr. Rafferty is the senior vice-president, atop Mr. Priestley in prestige. Mr. Rafferty was talking to Mr. Priestley when I came in, and I sat over—sat down in the corner on a chair.

Mr. Priestley—or Mr. Rafferty was questioning

(Testimony of Blair Burwell.)

Mr. Priestley about this thing, and he says, "Bill, what do you mean about—what do you mean about giving V.C.A. a part of this business? I thought we had agreed that we would try to move our excess stocks and get it out of here."

"Well," Mr. Priestley said, "I believe that I considered—I think Blair ought to go down to Washington and get ahold of"—I think his name was Chaffee—"and tell him that V.C.A. ought to be considered in this position."

Mr. Rafferty said, "Bill, Blair over here is under indictment for this monopoly case. Of course, you know that." He said, "That would be very unwise, for us to go down to Washington, or for Mr. Burwell to go down there and openly ask [205] for the Vanadium Corporation to be included in their business. What is your idea, Bill? What's going on about this business?"

Mr. Priestley said, "Well, I have just heard that the—had word from Mr. Swain"—I knew Mr. Swain, vice-president of the Electro Metallurgical Company. Mr. Priestley said, "Mr. Swain has just told me a short time ago that he had prevailed upon the Vanadium Corporation of America to increase the price of ferro-chrome silicon to the point that it would not be used as a substitute for low-carbon ferro-chrome, and I don't want to antagonize the V.C.A. at this time, and therefore, I would like to have part of this business so we can continue along."

Mr. Rafferty said, "Mr. Priestley, do I under-

(Testimony of Blair Burwell.)

stand that you are still conniving on this business with the V.C.A.? I thought we were all over that kind of monkey-business." And he took Mr. Priestley pretty much at heart. I was sitting there, now, to be frank, enjoying it just a little bit.

End of the conversation.

Q. Now, at that time Mr. Priestley was, in fact, was he not, the head man in the vanadium business for Union Carbide?

A. Well, I would judge he would be. We had somewhat a mixed command.

Q. (By the Court): What was the result of your deliberations?

A. The result of the deliberations, your Honor, I went [206] back to my office on the 14th floor, and Mr. Rush called me up and asked me about the conversation.

Q. (By Mr. Alioto): Who was Mr. Rush?

A. He was attorney for Union Carbide & Carbon Corporation.

He said he had just heard it from Mr. Rafferty, and he said Mr. Haggerson had already got hold of the story. "Hold tight, will you?"

Q. (By the Court): Said what?

A. "Don't do anything."

And a short time afterwards one of the—I had a message; I think it came from Mr. Rafferty, or Mr. Priestley, or from somebody upstairs, that told me to go ahead with Mr. Chaffee on our 97-cent bid. And so we went ahead and sold vanadium on the 97-cent bid.

(Testimony of Blair Burwell.)

Q. (By Mr. Alioto): Was this as late as October, 1946?

A. That is my best recollection.

Q. I want to direct your attention now, Mr. Burwell, to a plant that you folks had down in Durango. I think you have already testified that you built that plant for something more than a hundred thousand dollars during the war.

A. That's right.

Q. Was that built with government funds or with private funds? [207]

A. Government funds.

Q. And you actually supervised the building of that plant, did you? A. I did.

Q. And you ran it? A. I did.

Q. Now then, that plant was actually a government plant during the time you were operating it, wasn't it?

A. It was a government plant operating by United States Vanadium Corporation as agents for the Metal Reserve Company.

Q. Did you folks have some kind of an option to buy that plant at the termination of the war?

A. We had an option to purchase the plant for its cost less depreciation, so much a year, which amounted to approximately $25,000 a year.

Q. You bought this plant for $25,000?

A. No; the depreciation amounted to $25,000 a year.

Q. Well, you bought the whole plant?

(Testimony of Blair Burwell.)

A. At any time the government declared it surplus, at $25,000 a year, approximately,——

Q. Do you recall what it was you paid for this plant?

A. I would say about $75,000.

Q. How many tons were you—what was the capacity of that plant with respect to the tonnage of ore? [208]

A. A hundred tons a day.

Q. A hundred tons a day.

Now, before you exercised that option to buy that plant from the government had you heard from any source that some competitors were trying to get ahold of it? A. Yes. [208-A]

Q. (By Mr. Alioto): Who were the competitors who were trying to get hold of it?

A. Mr. Sitton and Mr. Brinker. Mr. Sitton was a mine owner, a miner, at Delta Creek, Colorado.

Q. And who was Mr. Brinker?

A. Mr. Brinker was a metallurgical engineer living in Durango, Colorado. I think he is at present employed by the Vanadium Corporation of America.

Mr. Holland: Good man.

Q. (By Mr. Alioto): At that time did they propose to set up an independent operation in Durango?

A. I don't know what they proposed.

Mr. Archer: I object.

Mr. Alioto: Let me put this document in itself and we will get to it directly. We will offer as

(Testimony of Blair Burwell.)

Plaintiffs' Exhibit next in evidence a telegram from Mr. Blair Burwell to Mr. W. G. Haldane on February 29th. The telegram does not have the date but I think the connecting correspondence will fix it in 1944.

Q. Is that your recollection as to the year in which you sent the telegram?

A. I think that is about right.

Mr. Archer: Yes, it is February 29th.

Mr. Alioto: 1944. Mr. Archer, would you have any objection as to my writing "1944" on February 29th? [209]

Mr. Archer: I would appreciate it.

Mr. Holland: This is offered against whom?

Mr. Alioto: It is offered against Union Carbide and its subsidiaries. We will offer this in evidence, if your Honor please.

(The telegram referred to was thereupon received in evidence and marked Plaintiffs' Exhibit No. 37.)

Mr. Alioto: I would like to read this to the Jury, if I may. It is very short. It is a telegram from Mr. Blair Burwell to Mr. W. G. Haldane:

"Brock advises that Brinker with Sitton and other promoters are reported to be planning to take the Durango plant in case we do not recapture it stop. This is rumor only but suggest you advise Mr. Rafferty regards. Blair Burwell."

Q. Who is Brock, Mr. Burwell?

(Testimony of Blair Burwell.)

A. He was our general superintendent at the plant at Durango at that time.

Mr. Alioto: We offer as Plaintiffs' Exhibit next in order a memorandum from Mr. Haldane to Mr. Rafferty, with a copy to Mr. Blair Burwell, dated March 6th, 1944. The authenticity and genuineness has already been worked out in pre-trial stipulations, if your Honor please.

(The document referred to was thereupon received in evidence and marked Plaintiffs' Exhibit No. 38.) [210]

[See Book of Exhibits.]

Mr. Alioto: This exhibit, ladies and gentlemen, dated March 6, 1944, starts out by saying, "Dear Mr. Rafferty: I am attaching hereto a memorandum summarizing the situation at Durango."

And the attached memorandum under the title is "Durango Plant." The following language appears: "United States Vanadium Corporation considers it highly essential that it acquire this plant for the following reasons:

"1. To maintain its position in the vanadium industry of the Southwest. Repeated reports have reached this company of plans of outsiders to acquire the plant in the event United States Vanadium Corporation decides not to exercise its option. The injection of additional operators in this field would undoubtedly seriously disturb conditions in the vanadium industry in the post-war period."

This is 1944.

Q. Mr. Burwell, who were the so-called outsiders

(Testimony of Blair Burwell.)

who were trying to acquire this plant? Was it Mr. Sitton?

The Court: Now, just let him answer. Do you know?

A. That was contained in the report, the telegram in which I said Sitton, Brinker and other people. They were the people I was mentioning. Mr. Haidane to my knowledge referred to those people. [211]

Q. (By Mr. Alioto): At this time in 1944 there was no shortage of vanadium, was there?

A. No, no.

Q. In other words, this is March 6, 1944.

A. No, we had large stocks of vanadium.

Q. As a matter of fact, the Metal Reserves program with respect to some of the independent mills like Nisely and Wilson had already been terminated? A. That is right.

Q. By this date? A. That is right.

Q. Isn't it a fact, Mr. Burwell, that the purpose of this Durango acquisition was to keep out competition?

The Court: Now, just a moment.

The Witness: I think the purpose——

The Court: Just a minute. Your question is leading and suggestive. Let him state the facts.

Q. (By Mr. Alioto): State the facts with respect to the purpose for the acquisition of the Durango plant.

The Court: Why did you want to buy the plant? Did you think it was a good proposition?

(Testimony of Blair Burwell.)

The Witness: We wanted the plant to keep control of the production of vanadium.

The Court: That was your business, wasn't it?

The Witness: That was our business. [212]

The Court: Did you see anything wrong about that or improper?

The Witness: Not at that time, as a loyal Carbide employee, no. That was part of the job, to fortify the corporation's position.

Q. (By Mr. Alioto): When you answered the judge's question and said you bought the plant in order to control the production, what did you mean by that?

A. Well, to keep other production from coming in from other people.

Q. You mean competitors?

A. Well, the vanadium on the market in competition with us.

Mr. Alioto: We offer next, if your Honor please, on this subject matter a letter of the Vanadium Corporation of America dated March 21, 1944.

Mr. Holland: Just a minute. Can I see it for a minute, counsel?

Mr. Alioto: Yes.

Q. (By the Court): This plant that you speak about buying from the Government, did you say the Government put up the money to build it and you operated it?

A. That is correct.

Q. When you bought it you merely continued your operation?

(Testimony of Blair Burwell.)

A. Correct. We operated for the Government account, [213] delivered the vanadium to the Government, when we were operating during that period. When we were operating for our own account we used the vanadium for our own purposes.

Q. (By Mr. Alioto): Were you operating both the Uravan and the Durango plants after this acquisition?

A. Refresh my memory on the dates there, please.

Q. March of 1944.

Mr. Archer: I believe it was October, 1944, Mr. Burwell, when you bought the plant.

A. I believe the Uravan plant was shut down in mid-1944, but we were operating a plant at Rifle at that time, and the plant of Uravan was operated until mid-1944, when we shut down because we had over stocks of vanadium.

Q. In other words, you shut down your Uravan plant before you bought the Durango plant?

A. If these dates are correct.

Q. Mr. Archer has given us the date of October, 1944, the actual purchase of the plant.

A. I think that is correct.

Mr. Alioto: We will offer in evidence a letter from Mr. D. W. Viles, Assistant Manager, Western Division, Naturita, Colorado, to Mr. F. F. Kett, General Manager, Mining Division of the Vanadium Corporation of America, under date of March 21, 1944.

(Testimony of Blair Burwell.)

Mr. Archer: I take it this is against only Vanadium? [214]

Mr. Alioto: That is correct, at this moment.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 39.)

[See Book of Exhibits.]

Mr. Alioto: This letter by the Assistant Manager of the Western Division of the Vanadium Corporation of America reads as follows:

"In regard to the purchase of the Dry Valley property belonging to the Moly Corporation, there is considerable low-grade ore in the Frisco and Water Falls group and this property, in my mind, if it could be purchased, say for $2,000, would be a good investment if only to prevent some outsider getting ideas in regard to the Monticello plant."

Q. Mr. Burwell, I want to direct your attention to some meetings with respect to the sales and the business of the Union Carbide and/or its subsidiaries. Do you recall a meeting at the Vitro Corporation plant at Pittsburgh in 1940?

A. Yes.

Q. Do you recall who was present at that meeting?

A. I believe Mr. Fleck of Vitro Corporation, Mr.—the Secretary. I don't recall his name myself.

Q. Was his name Strodd?

A. Mr. Strodd. [215]

Q. What was your position with the United

(Testimony of Blair Burwell.)

States Vanadium Corporation at the time? That was in 1940.

A. Well, I was assistant to Mr. Van Fleet in charge of operations under Mr. Van Fleet.

Q. What was the conversation that took place?

Mr. Archer: I object to that, your Honor. This was with Vitro. It certainly has nothing to do with these defendants.

Mr. Alioto: Your employee was there. This man was the assistant to the General Manager in charge of mining. I do not see how he can say it has nothing to do with him.

The Court: Go ahead and answer the question. Exception allowed. I do not see its materiality.

Mr. Alioto: I think it will be established in a moment, if your Honor please.

Mr. Holland: Mr. Alioto, may I ask you against whom this is offered?

Mr. Alioto: As of the moment it is being offered only against Union Carbide and not against your client, Mr. Holland.

The Witness: Will you repeat the question, please?

Q. (By Mr. Alioto): What was the substance of the conversation between you, Mr. Vitro and Mr. Strodd in 1940?

A. I discussed with Mr. Strodd and Mr. Fleck the sale of the remaining uranium. We had the uranium concentrates [216] available at that time produced at Uravan.

(Testimony of Blair Burwell.)

Q. What were they using the uranium concentrates for?

A. They were using it for pigments.

Q. Pigments?

A. And also the concentrates contained vanadium in about equal quantity, and I discussed the disposal of the vanadium along with the uranium. I was negotiating a sale to the Vitro Chemical Company for approximately 100,000 pounds of uranium, which we later carried through. Mr. Stodd went over and discussed with me at that time also their needs for vanadium. They had use for vanadium and had use for vanadium and had been using fused oxide for the purposes of their plant. They were having trouble with it because it was not quite adaptable to conversion into colors. I asked him where they got it. He said they were getting it from VAC. I asked him why they were using fused oxide, the hard stuff there, instead of red cake. He said they had never used the red cake. I suggested that we would sell him the red cake instead of the Vanadium Corporation of America fused oxide.

He was interested in using red cake. We discussed the technology involved with Mr. Strodd, and beyond that we concluded or set up the basis for the sale of uranium, and that was the end of the conversation.

Q. Now, then, did you subsequently report this conversation to anybody in the Union Carbide organization?

(Testimony of Blair Burwell.)

A. Yes, my recollection—I was in Pittsburgh, and as a [217] matter of courtesy I called on the local vice president or whoever is in charge of sales for Metallurgical Company. I think that was Mr. Dutot.

Q. How do you spell that name?

A. D-u-t-o-t, I believe.

Q. And he was connected with the Electro Metallurgical Company?

A. He was connected with Electro Metallurgical Sales.

Q. Did they have an office in Pittsburgh?

A. They had an office in Pittsburgh, and I recall talking to he and I think his representative. Now, there may have been others there. I think there were. I think there was a Mr. Ford also there at that time. I mentioned the sale of vanadium coming up to red cake and took Dutot—called him "Baldy"—a little bit to task for not selling vanadium, that we had a great stock of vanadium, a surplus of it out West and our mines were shutting down. And Mr. Dutot said, "VC is selling their vanadium." The VAC had apparently been selling their vanadium, and we were not calling on the VAC customers.

Q. How did it mappen that you were in Pittsburgh trying to sell this red cake to the Vitro Company?

A. I was not trying to sell the red cake to the Vitro Company. I was trying to sell uranium, and as a side issue and incidental toward the sale of

(Testimony of Blair Burwell.)

uranium I came in contact with the fact that they had a market for vanadium, and that [218] the vanadium market amounted to a hundred thousand pounds of vanadium oxide, and it was an important sale. So I went after the sale, although I was no salesman on uranium—in fact, this was something on the side. I am not a salesman and I really did not call I think for the purpose of selling vanadium. I probably was a little bit semi-critical of the Carbide's organization for sleeping at the switch when there was a market for a hundred thousand pounds of vanadium going begging there, and we picked up the market.

Q. (By the Court): You said you made the deal?

A. I made the deal in this way, that I reported it then to New York and let the Electro Metallurgical Sales make the contracts for the vanadium oxide, but I was the person who brought them together and engineered the sale and then later——

Q. The sale was made in accordance with your suggestion? A. That is correct.

Q. (By Mr. Alioto): That is the red cake sale?

A. That is right, and we sold them 100,000 pounds of uranium approximately for around a dollar a pound, and we sold them the vanadium and red cake for some price similar to that, set the prices on those.

Q. Do you recall a meeting with Mr. Dutot in July, 1946, with respect to sales matters?

A. Yes.

(Testimony of Blair Burwell.)

Q. Where was that meeting held? [219]

A. That was also in Pittsburgh.

Q. Who was present on that occasion?

A. Mr. R. D. Sullivan, Mr. Dutot, and I believe again Mr. Ford.

Q. Do you recall what was said?

A. Again I will have to tell you the background of what we said, because what I said would not make sense.

Q. All right.

A. If I could have that leeway in answering the question.

The Court: Go ahead.

A. I had gone to Pittsburgh with Mr. Sullivan and the General Superintendent of our mines for two purposes: One was to obtain certain types of drill steel from the Crucible Steel Company for our mining operations out west, and Mr. Sullivan also was directing or assisting in the sales of a new division that U. S. Vanadium had organized called the Metal-Chemical Division of U. S. Vanadium. Mr. Sullivan was sales manager as well as superintendent out west, and I think one of those exhibits has the little indication of the Metal-Chemical Division of U. S. Vanadium.

Anyway, we went down there for two purposes. One was to see about selling tungsten concentrates which we were making out in our mines in California, and at the moment had too much of—couldn't sell—and also making an arrangement to get some special drill steel made by Crucible Steel

(Testimony of Blair Burwell.)

for [220] purposes in our mines, as the drill steel had a hole inside, a hollow drill steel that enabled us to get more air down into the drill, into the bit. And so we asked Mr. Dutot if he could arrange a meeting with the president of the Crucible Steel Company. We had a carload or better ordered of steel, an important thing, and I said we should get some reciprocity on this thing. "We have vanadium, we have tungsten and other things. Let us work this so if we buy a carload of drill steel, let's see what we can do about getting some of this vanadium business and some of the uranium business." He arranged a meeting with the president of the Crucible Steel, and I don't recall his name at the moment.

Mr. Archer: Is that Mr. Felsinger?

The Witness: Mr. Archer, I don't remember that name either. I don't think it was.

Mr. Archer: It wasn't Mr. Cauldin, was it?

Mr. Alioto: I think Mr. Archer would no longer object on the basis of leading questions.

The Witness: I have a terrible memory for names and I am always apologetic about it.

Q. (By Mr. Alioto): In other words, it was the president of the Crucible Steel Company?

A. That is right. So we met with the Crucible Company, but Mr. Dutot, before we left, he said, "Don't mention vanadium to the Crucible Steel. Don't bring it up. Don't try to sell [221] them vanadium as a favor to me."

I said, "Why?"

(Testimony of Blair Burwell.)

"Well, they have been getting their vanadium from the Vanadium Corporation of America, ferro-vanadium, and we were told not to approach the customers of Vanadium Corporation of America, and so you will embarrass me if you talk to them about it."

Well, we did talk to the Crucible Steel about taking and smelting tungsten and placed an order shortly afterwards for a carload of steel, and I went to New York and reported the matter to Mr. Rafferty. [222]

Q. Did Mr. Dutot tell you who gave you those instructions?

A. He said he got his instructions from Mr. Remmers and Mr. Priestley—those were his superiors in the company.

Q. And this was in October of—in July of 1946, was it? A. I think that's right.

Q. Now, Mr. Burwell, there is one more meeting out in Colorado I would like to cover before we go into the matter of joint operations of the two companies on the Colorado Plateau after 1938.

Now, with respect to that meeting do you recall——.

The Court: Before you get to that——

Mr. Alioto: Yes, sir.

Q. (By The Court): Now, was there anything unusual in having these arrangements with people that you were on good terms with? In other words, did you think it was all right to try to take a customer away from another company?

(Testimony of Blair Burwell.)

A. Why, I think so, if we had unsold vanadium and men that we were having to lay off. The essence of our whole enterprise depended upon going to a customer, or actively sell our wares. It was considered good business in the end corporation. With expanded sales, the usual way they did was competitive calls and maybe lower price. They might—the usual manner to go into business. Why, I don't think it's the usual thing not to do it. [223]

Q. Suppose this other company tried to make a sale to one of your good customers that had been with you a long time, what would have been your attitude?

A. That would be perfectly all right. If they could give better prices, better services, we would have to whip up our ability to produce, ability to sell, or get out of the business.

The Court: All right, go ahead.

Q. (By Mr. Alioto): Now then, with respect to any additional meeting at Colorado, do you know a Mr. Sneath?

A. Yes, I knew Mr. Sneath.

Q. Who was he?

A. Mr. Sneath was an officer, I think vice-president, of Electro Metallurgical Company. I think he was president of Electro Metallurgical Company at Canada. He had other positions in Europe. I don't know exactly. The subsidiary in Norway—Electric Furnace Plant at Sauda, Norway. He was an officer of the company.

(Testimony of Blair Burwell.)

Q. Did you have a meeting with Mr. Sneath out in Colorado in 1939? A. Yes.

Q. Where was that meeting held?

A. At the Uravan plant.

Q. Was anybody there besides Mr. Sneath and yourself? [224]

A. Mr. Van Fleet, I believe—I am sure Mr. Weston was there; Mr.—a number of our—I'm not sure that Mr. Haldane was there—I don't think so. We had other employees—superintendents and other active people.

Q. (By The Court): These were all officers of the subsidiary companies of the Vanadium Company? A. That's right.

Q. (By Mr. Alioto): Would you be good enough to tell us the substance of those conversations, Mr. Burwell?

Mr. Holland: Is this being offered against Carbide?

Mr. Alioto: It is offered against the Carbide on the usual——

A. In order to answer you intelligently and tell what this meeting was, what led up to it——

The Court: Go ahead.

A. (Continuing) ——Mr. Van Fleet and Mr. Sneath came out together by arrangement with Mr. Gormely the year before and went all over the mine area, the mining properties, with the purposes of seeing what our producing capacity was in vanadium, and discussing the problem of disposing of excess vanadium which we had on hand

(Testimony of Blair Burwell.)

in 1939. Again our situation had continued to become somewhat troublesome and desperate. We had [225] an increasing stock of vanadium, even over the '38 danger point.

Q. (By the Court): What year was this?

A. '39, the year after the Gormely meeting.

Mr. Gormely suggested that we get Sneath out there to see what he could do to sell this vanadium to Europe to some of his friends across the water, and if we could get Mr. Sneath down to Uravan and show him the layout and—he had never been out there,—but that he might understand what this thing was all about, in so far as our mines went, and our needs for selling our output.

And so Mr. Sneath and Mr. Van Fleet arrived at Uravan for the purpose—that purpose, and the conversation occurred with that background.

I participated in this discussion and reviewed the fact again that we were producing vanadium quite cheaply, something like 35, 38 cents a pound; we were the lowest cost producers in the world; and we had a great volume of vanadium there, and we had to look ahead to the future to get markets. But meantime we had 1,700,000 or more pounds of unsold vanadium which we were unable to sell because the Vanadium Corporation of America had started in to import vanadium from their new concentrating plant in Peru and had more or less broken off the volume of purchases of oxide from us, and we [226] were needing to move that amount or vanadium or we would have to shut down.

(Testimony of Blair Burwell.)

Mr. Sneath promised to do what he could abroad to sell this excess vanadium, and he said he had friends and associates over there, particularly Sir Edmund Davies, who was working closely with him in England. Sir Edmund Davies was, Mr. Sneath told me—and I also knew it before from conversations with his group—was associated with Union Carbide in England and in the Rhodesian Chrome Company and the African Manganese Company, and he was a part or an associate in the so-called cartel group that handled the affairs of Carbide in chrome, manganese, and alloys, in Europe.

And as the conversation proceeded beyond the question of the immediate disposal of vanadium, which Mr. Sneath promised to look into as soon as he got back to New York, and we continued the discussion in the evening, and we had very fine steaks and some very good Scotch whiskey, and a very—everybody got discussing the background of the European situation and the marketing of vanadium and chromium, ferro alloys, and the history of the ferro-chrome business, and Mr. Sneath reviewed at that time, at the time following World War I, when the Germans were actively engaged in the dumping of surplus materials in other countries at lower prices, in excess of what they could absorb in Germany, and it was about that time that the Anti-Dumping Act was brought up against the Germans, [227] and Sneath mentioned that the Germans had started dumping the low-carbon ferro-chrome, which was the main money-maker

(Testimony of Blair Burwell.)

of Electro Metallurgical Company—that paid 75 percent of the profits of Electro Metallurgical Company—had begun to dump low-carbon ferro-chrome into the United States and in England, and they, therefore, set up a counter-activity against the German cartel, which was principally directed by—headed by the senior Gruenfeld, which—who I am sure many people in this courtroom know—he was the head of the German alloy trust. And due to the manipulation of the cartel, there was only one or two alloy plants running in all England after World War I. The chromium was being imported out of Germany back into England.

The Saude works was created, I was told, to supply England and the United States and the European market with the cheap hydroelectric power of Norway. Therefore, to protect their own business on low-carbon ferro-chrome, Mr. Sneath told how they cut the price and dumped the chromium, ferro-chromium, into Germany, tit-for-tat, for everything that the Germans had started dumping in their territory. That is the conventional, usual way these cartels work, until they get together.

Q. Now you are relating a statement by Mr. Sneath?

A. The conversation, yes, sir.

Q. That is Mr. Sneath's statement as what occurred over there in Europe? [228]

A. That's right.

Q. (By Mr. Alioto): This statement was made in 1939? A. At this time,——

(Testimony of Blair Burwell.)

Q. Yes.

A. ——when I was taking part in the conversation. I was with Mr. Van Fleet, exploring the whole arrangements that they made.

The further information that I got from Mr. Sneath, as I best recall it, was that the Germans agreed not to dump any more low-carbon ferro-chrome or alloys into certain trade areas if Electric Furnace Company of Norway would not dump any in their back yard, in their trade areas. And so it was closed out.

It developed soon after that that without any competition, without anybody producing low-carbon ferro-chrome in the United States but Electro Metallurgical Company, that the danger of investigation became known to Mr. Sneath, they felt they had done a job, the attorneys advised them to go ahead and set up some competition in the United States of low-carbon ferro-chrome, or encourage somebody to become a competitor of low-carbon ferro-chrome in the United States; otherwise they would be subject to anti-trust action that was then beginning. I think that's the first time——

Mr. Holland: May it please the Court, your Honor [229] felt, I think, that this case should not go back of 1938. If we go into this old picture on the basis that somebody told it to Mr. Burwell in 1939, we will have to go into all of it, too.

Mr. Alioto: Now, if your Honor please, he is about to come to a portion of the conversation that relates to Mr. Holland's client and the vanadium

(Testimony of Blair Burwell.)

business, and I think he should be permitted to finish a conversation that was given in '39.

Mr. Holland: It's all pre-'38 stuff.

Mr. Alioto: Relating to '39, relating to the existence of a situation in '39.

Mr. Holland: No; it is just nice conversation they had after a couple of Scotches.

Mr. Alioto: I think if he has an objection——

Q. (By the Court): Go ahead and finish your story. Limit it to the conversation.

Q. (By Mr. Alioto): Now, the conversation with respect to the Vanadium Corporation——

A. I was told that the Vanadium Corporation was set up there by agreement or understanding, not written, to sell low-carbon ferro-chrome in the United States, although they didn't produce it, the Vanadium Corporation. Mr. Reece was [230] the one that had carried on those discussions, Mr. Holland.

Q. (By Mr. Holland): He is dead, isn't he?

A. He is, unfortunately. Too many people are dead in this picture.

Anyway, Mr. Sneath said that the company was set up, Vanadium Corporation, to sell low-carbon ferro-chrome, and in turn for which Carbide, they had agreed—he had agreed that the Union Carbide-Electro Metallurgical Company would not compete in the vanadium field in the alloys, would let the Vanadium Corporation of America set the price and be the leaders in the market.

Mr. Holland: I ask that all be stricken, your

(Testimony of Blair Burwell.)

Honor. That all goes to pre-'38 material. Or that the defendants be permitted to introduce anything pre-'38 that they wish.

Mr. Alioto: I think, if your Honor please, it is a statement as to an agreement with respect to prices.

Q. (*By the Court*): You say it is '39?

A. Yes.

Mr. Alioto: Yes.

Q. (By the Court): When was this agreement that you are talking about?

A. I don't know. Mr. Sneath didn't tell me the date of [231] the agreement. But it was prior to '38.

The Court: Well, the jury will disregard this statement.

Mr. Alioto: Well, let me ask——

Q. (By Mr. Alioto): In that connection, Mr. Burwell, whether Mr. Sneath at that time said or implied that the agreement was still in effect as of '39?

Mr. Holland: He is leading the witness again.

The Court: That is leading and suggestive. You can ask him what occurred there. Don't tell him what occurred, but ask him what occurred.

Mr. Alioto: Well, I have in mind, if your Honor please, that I think the sense of the conversation up to this point is precisely an explanation of why they couldn't move these big stocks.

Q. (By Mr. Alioto): Mr. Burwell, am I mistaken—did you testify in this record that there

(Testimony of Blair Burwell.)

was a discussion of why—how to move the stocks you had on hand?

A. Why, sure. That was the purpose of the meeting. This was incidental to the problem of the meeting. And we couldn't move our stock because Mr. Sneath—the agreement—Mr. Van Fleet stated that the agreement was in force, to the best of his knowledge; we couldn't sell vanadium, according to this [232] agreement.

Mr. Alioto: Excuse me.

I was requesting, in view of that, your Honor, that the Court reconsider its direction to the jury to disregard the conversation. Here was an explanation of why they couldn't sell their stocks in 1939.

The Court: Yes, I understand that.

Mr. Holland: And further, your Honor, Mr. Burwell——

The Court: Mr.—one of these officers, he said.—

The Witness: Van Fleet.

The Court: ——they had an understanding or agreement prior to '38.

The Witness: Well, Mr. Gormely had told me that the year before; in a private meeting in '38 Mr. Gormely said that the agreement was still in force; they couldn't get around it.

Mr. Archer: I didn't get that. May I have it read back?

Mr. Holland: Further, your Honor, Mr. Burwell testified yesterday that they did sell this stock, and that Mr. Sneath did sell it to Europe.

(Testimony of Blair Burwell.)

Mr. Alioto: Sold it abroad; not in the United States. [233]

Mr. Holland: At a higher price than he could have gotten in the United States.

The Court: We will have to go back to '38 for any agreements or understandings.

Mr. Alioto: Well, I want to be sure the record is—I am not sure about the state of the record.

The Court: You can have an exception to the ruling of the Court. Let's get along with this case.

Mr. Alioto: Well, I want to exhaust this conversation, if your Honor please, because I think the record is now muddied on this conversation, and I think I owe it to my clients to try to get it cleared up. I would like to proceed in that fashion. I don't want to be frightened into not protecting this record for these people, if your Honor please.

The Court: We are taking a lot of time on this —a lot of time.

Mr. Alioto: If it relates to the existence of an agreement in 1939, we consider it rather important. I would appreciate——

The Court: Go ahead with your question and we will see whether or not it is material.

Mr. Alioto: Thank you.

Q. (By Mr. Alioto): Now, with respect to this conversation, has it been your testimony that the purpose of this meeting was to figure [234] out ways and means of selling the excess stock you had?

Mr. Holland: I object to the question——

(Testimony of Blair Burwell.)

A. Yes, I testified to that——

The Court: That is in the record; he has testified to that.

Q. (By Mr. Alioto): Did you at that time say anything about lowering the price in order to sell the stock? A. Yes,——

Mr. Holland: I object——

A. ——we did.

Mr. Holland: ——to the leading questioning.

The Court: Objection sustained.

Q. (By Mr. Alioto): State whether or not you made any suggestion about disposing of the stock.

The Court: Now, just a moment.

Just let him state what happened there. Don't tell him what happened, but let him state what happened.

Q. (By Mr. Alioto): State, if you will, what was said by you, or by Mr. Sneath, or by Mr. Van Fleet.

The Court: I think you have already gone over this before.

A. We — I recommended — the purpose of the visit was to [235] discuss the disposal of the stocks, and we recommended the sale of this vanadium by reducing the price and selling it in the United States.

Mr. Sneath said he would try to sell it in Europe: he didn't think he wanted to—could sell it in the United States.

Q. (By the Court): He said what?

A. He didn't think we should sell it in the

(Testimony of Blair Burwell.)

United States by lowering the price, and he thought he should—could sell it in Europe.

Q. Mr. Sneath? A. Mr. Sneath.

Q. Well, now, he is not—he was not connected with any of these companies?

Mr. Alioto: Yes, if your Honor please—a very important official of Union Carbide.

The Court: Let the witness testify.

A. Mr. Sneath is connected with these companies, yes; he was vice-president of Electro Metallurgical Company.

Q. (By the Court): Oh. That is one of the subsidiary companies?

A. That's right. And he is living.

Mr. Alioto: And I understand he is going to be here, if your Honor please. [236]

Q. (By Mr. Alioto): Now, did Mr. Sneath on that occasion tell you why it shouldn't be sold in the United States at a lower price?

A. I can't say that he told me why—just why. We all knew why. But I don't remember that he sat there and said, "Blair, we can't sell it because we have an agreement with these boys not to——"

Mr. Holland: Object to having him testify to what he didn't say.

The Court: Let's not say what he didn't say.

Q. (By Mr. Alioto): The point we are getting at, Mr. Burwell, in what relation, or in connection with what subject, did he tell you the story about ferro-chrome and vanadium?

A. Well, in connection—ferro-chrome, the story,

(Testimony of Blair Burwell.)

what he explained to us, because of this ferro-chrome agreement they could not cut the prices in the United States and undersell the Vanadium Corporation. That was the point of the whole story about ferro-chrome. That was the background for the reason why——

Mr. Holland: This is an indirect way of going—

Mr. Alioto: Just a minute.

I think there should be an objection and not a statement.

Mr. Holland: I object and ask that the answer be [237] stricken on the ground that it is an indirect way of attempting to go prior to '38, which your Honor has ruled is not to be a part of this case.

Mr. Alioto: Submit, if your Honor please, that the witness has said that the reason they couldn't cut the price in '39——

The Court: The jury will be instructed—is instructed to disregard now these matters that occurred prior to '38.

Exception is allowed.

Q. (By Mr. Alioto): Now I want to ask you, Mr. Burwell, about certain joint operations between the Vanadian Corporation of America and—

Does your Honor want to take a recess at this time? I note that the Court is looking at a watch.

The Court: Take a recess for about ten minutes.

(Short recess.) [238]

Q. (By Mr. Alioto): Mr. Burwell, I believe

(Testimony of Blair Burwell.)

you testified that there was no shortage of vanadium in November, 1953, and you fix it by the fact that you started to suspend some of the metal reserves contracts in or about that time?

A. That is correct.

Mr. Holland: Mr. Alioto, wasn't that 1940——

Mr. Alioto: No, 1943.

Q. I will ask you, isn't it a fact that at the end of 1943 you gave notice to Nisley and Wilson, the independent oxide producer at Gateway, that the Government contract would not be renewed?

A. That is correct.

Q. Do you have any recollection as to whether or not there was a shortage of vanadium oxide at the end of 1943?

A. There was no shortage. There was a surplus of vanadium at that time.

Mr. Alioto: We offer at this time, if the Court please, a request of the Continental Ore Company to the Vanadium Corporation of America for oxide in November, 1943.

Mr. Holland: No objection.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 40.)

Mr. Alioto: We offer as plaintiff's exhibit next in evidence an answer of the Vanadium Corporation of America to the Continental Ore Company with respect to this matter. [239]

(Testimony of Blair Burwell.)

(Whereupon, document referred to above was received in evidence and marked Plaintiff's Exhibit 41.)

Mr. Archer: What is the date of that?

Mr. Alioto: The date of the response is November 19, 1943.

Mr. Holland: May it please the Court, may I ask this: These letters we have admitted the authenticity of. The first letter to which I made no objection was one from Mr. Leir, is that correct?

Mr. Alioto: That is correct, and the second one is one from Mr. Gustaf Laub, the Assistant Vice-President of the Vanadium Corporation of America.

Mr. Holland: Are you planning to call Mr. Leir to testify?

Mr. Alioto: Oh, yes, Leir will testify in this case. Are you planning to call Mr. Laub?

Mr. Holland: Yes, we are calling Mr. Laub.

Mr. Alioto: We offer as plaintiff's exhibit next in order a request in November, 1943, or rather two requests made to the metallurgical company by the Continental Ore Company and the answer of the Electro Metallurgical Sales Corporation to the Continental Ore Company.

Mr. Archer: May I have the dates on these?

Mr. Alioto: Yes. The date of the first letter of the Continental Ore Company is November 17, 1943; the second [240] date is November 30, 1943;

(Testimony of Blair Burwell.)

the letter of Electro Metallurgical Company to Continental Ore Company is November 30, 1943.

(The documents referred to were thereupon received in evidence and marked Plaintiff's Exhibit 42.)

Mr. Alioto: I respectfully request permission of the Court to read these letters to the jury. They are requests and answers.

The first letter is from the Continental Ore Company, dated November 16, 1943, to the Vanadium Corporation of America, Attention: Mr. Laub:

"Gentlemen:

"Re: Vanadium Pentoxide

"We would appreciate your offering us: 10,000 to 15,000 pounds of V_2O_5 contained in vanadic oxide, per month.

"We would be ready to sign a contract with you for a fixed length of time.

"Very truly yours,

"Continental Ore Company,

"Henry J. Leir."

The answer of Vanadium Corporation dated November 19, 1943:

"Gentlemen:

"Re: Vanadium Pentoxide

"In response to your inquiry of November 16th requesting quotation on 10,000 to 15,000 pounds, monthly, of V_2O_5 contained in vanadic oxide, we regret very much that due to our present commitments we are not in the position to take on this additional tonnage at the present time.

(Testimony of Blair Burwell.)

"Perhaps if you are still interested at a later date and our situation changes, we will be glad to look into the matter further at that time.

"Regretting our inability to be of service to you at this time, we are,

"Very truly yours,

"Gustaf Laub, Assistant Vice-President."

Mr. Holland: May it please the Court—pardon me, Mr. Alioto, I do not mean to interrupt you—but may I ask Mr. Alioto if Mr. Leir will testify in respect to these matters? I want to be able to cross-examine Mr. Leir on those matters.

Mr. Alioto: If your Honor please, when Mr. Leir testifies, counsel can cross-examine about these matters if he wants to, but I submit that is independent evidence standing on its own feet. Mr. Leir will be here to testify.

Now, the next exchange of correspondence is between the Continental Ore Company and the Electro Metallurgical Sales Corporation.

On November 17, 1943, a letter from Mr. Leir to the Electro Metallurgical Sales Corporation:

"Gentlemen:

"We would appreciate your offering us: 10,000 to 15,000 pounds of V_2O_5 contained in fused vanadic oxide, per month.

"We would be ready to sign a contract with you for a fixed length of time.

"Very truly yours,

"Continental Ore Company,

"Henry J. Leir."

(Testimony of Blair Burwell.)

On November 30th, Mr. Leir writes again and says, this being to Electro Metallurgical Sales Corporation:

"We have not as yet received a reply from you to our letter of November 17th, of which we enclose a copy since the original may have gone astray.

"We would very much appreciate hearing from you regarding this matter at your earliest convenience.

"Very truly yours,

"Continental Ore Company,

"Henry J. Leir."

The answer of the Metallurgical Sales Corporation of the Union Carbide is dated November 30, 1943.

Mr. Archer: This obviously is not an answer. I think there is a later letter there.

Mr. Alioto: The answer states as follows:

"Referring to your inquiry for fused vanadic oxide, [243] in view of the many uncertainties prevailing at the present time, we do not feel that we should undertake supplying your regular requirements for this material.

"Very truly yours,

"Electro Metallurgical Sales Corporation,

"By W. E. Remmers."

Q. (By Mr. Alioto): Did it ever come to your attention, Mr. Burwell, that the Continental Ore Company had made a contract with the Apex Smelting Company for the manufacture of ferrovanadium?

(Testimony of Blair Burwell.)

A. Oh, I had heard about it, Mr. Alioto, not in any official and definite way.

Mr. Alioto: We offer at this time, if your Honor please, a series of inter-office correspondence, inside the Vanadium Corporation of America.

Mr. Archer: These are not offered against Union Carbide?

Mr. Alioto: That is correct.

Mr. Archer: Or in connection with Mr. Burwell's testimony.

Mr. Alioto: I did not understand that last remark.

Mr. Archer: You asked Mr. Burwell about this, and he said he had not heard about it.

Mr. Alioto: I simply asked him whether he had heard about it. That is all I asked. He said he had. Now, [244] then, we offer as against Vanadium Corporation of America a series of inter-office memoranda dated February 20, 1942, March 14, 1942 and April 14, 1942, relating to the Apex Smelting Company, as one exhibit.

Mr. Holland: To which we object, your Honor, on the ground no proper foundation has been laid for it. These letters concern the relations between Mr. Leir and the Apex Smelting Company, of which Mr. Burwell knows nothing. There has been no foundation laid to show that they are in any way relevant. It will depend upon the testimony of Mr. Leir in respect to his Apex contract to prove their relevancy. They are introduced out of order.

(Testimony of Blair Burwell.)

Mr. Alioto: If your Honor please, these stand on their own, and they show negotiations between this organization and Apex Smelting Company with respect to the Continental contract. I did not understand. Is the objection on the basis of irrelevancy or immateriality?

Mr. Holland: No proper foundation laid as yet.

The Court: Between the defendant company and Apex, you say; does it refer to Mr. Leir?

Mr. Alioto: Oh, yes. That is all it refers to. This is not between this company and Apex. This is between one member of this defendant company and another member of the same company. As long as the objection has been made that no foundation has been laid, I take it, Mr. Holland, in accordance with our prior understanding that there is a stipulation of genuineness and authenticity.

Mr. Holland: Oh, yes, they are authentic.

Mr. Alioto: And that Mr. Bransome, one of the men to whom it is directed, was President of the Vanadium Corporation of America.

Mr. Holland: Yes.

Mr. Alioto: Mr. Laub was the Vice-President.

Mr. Holland: That is correct.

Mr. Alioto: And Mr. Christianson was a Vice-President.

Mr. Holland: There has been no foundation laid as to the relevancy of any correspondence relating to Apex Smelting Company. The proper order would be to put in Mr. Leir's contracts with the Apex Company.

(Testimony of Blair Burwell.)

The Court: Perhaps it would be better for you to offer it in order.

Mr. Alioto: If your Honor please, there is testimony by this witness, while he is still on the stand, about a conversation with Mr. Bransome in which Mr. Bransome is purported to have said they were trying to keep the Continental Ore Company out of the vanadium business. I submit it is in the proper development of this witness' testimony, and I think we ought to give some manner in the order of proof, that this testimony of attempting to get at Apex ought to go in at this [246] point. I would like your Honor to read that. I think its relevancy is immediate apparent.

Mr. Boiland: It is 1942 correspondence, and the testimony relating to Mr. Bransome was in 1948 or December, 1947. It has nothing to do with the conversation in 1947.

The Court: The objection is sustained, temporarily. You can introduce it at the proper time.

Q. (By Mr. Alioto): Mr. Burwell, did your company have any joint mining operations on the Colorado Plateau with the Vanadium Corporation of America in 1938 or thereafter?

A. Not joint mining operations, no. We mined properties of the Vanadium Corporation of America. We had no joint mining operation.

Q. You say you mined on properties that belonged to Vanadium Corporation of America?

A. Yes, we mined on properties belonging to the Vanadium Corporation of America.

(Testimony of Blair Burwell.)

Q. Do you have some name in the industry or in the trade by which you used the properties of Vanadium Corporation of America, that your company mined in 1938 or 1939?

A. Yes, they are designated by the names of the mining claims. There was a Maggie C., the Coloradian, the Donald L. mining claims in the Paradox mining region.

Q. Would you be good enough to designate on this map, if you would, Mr. Burwell, the approximate location of those [247] mining claims of the Vanadium Corporation of America which your organization mined?

A. They would be approximately under the "a" of "Uravan," right here in the Colorado Plateau.

Q. Would all the claims mentioned by you in this record be located where you have indicated?

A. At the start, all claims. Later on, they expanded into Dry Valley.

Q. Did you personally participate in the negotiations—first of all, were there negotiations with the Vanadium Corporation of America about mining these claims? A. Oh, yes.

Q. And mining on their claims?

A. That is right. I participated in the discussions, arrangements of the mining, the terms of the mining and all the details.

Q. With whom did you negotiate or who was the party representing the Vanadium Corporation of America in these discussions?

A. My recollection is Mr. Kett.

(Testimony of Blair Burwell.)

Q. What was Mr. Kett's position?

A. He was General Manager for the Vanadium Corporation of America.

Q. Could you fix the approximate time of these discussions?

Mr. Holland: Do you want to put in the contract? That will fix the date. [248]

The Witness: I believe it is a matter of record and it speaks for itself as to the time.

Q. (By the Court): What kind of contract or what kind of arrangement did you have?

A. There was an agreement called the Maggie C. agreement drawn up between the two companies.

Q. What kind of agreement did you have?

A. It was an agreement that we would mine the ores from these mines belonging to Vanadium Corporation of America, process the ore in the Uravan plant, and turn the vanadium oxide over to the Vanadium Corporation of America for a charge, a total charge of 65c a pound, and that I believe was prior to 1939. I believe it went back to 1937-'38, but I wouldn't say for sure.

Q. Well, let me show you the contract. I think the date is in 1939. [249]

Mr. Alioto: I can fix the date by offering, if your Honor please, the minutes of the Vanadium Corporation of America. They don't contain the actual date, but there is a reference to the date on the appropriation which I think fixes the time in '39.

Mr. Holland: We have no objection to the intro-

(Testimony of Blair Burwell.)

duction of this, your Honor, provided the agreement itself is offered.

Mr. Alioto: The agreement itself will be in after we fix these negotiations, Mr. Holland.

We will offer it in evidence.

The Clerk: Plaintiff's Exhibit 43 admitted and filed into evidence.

(Minutes of Vanadium Corporation of America received in evidence and marked Plaintiff's Exhibit 43.)

Q. (By Mr. Alioto): Now, then, regardless—I think that regardless of the date which you may have in mind at the moment, would you be good enough to tell us what discussions took place between you and Mr. Kett about your company mining their claims?

A. Yes. Mr. Kett and myself discussed the arrangements for producing vanadium from their claims, and I was advised by Mr. Van Fleet to enter into these negotiations and arrangements of details with Mr. Kett because Vanadium Corporation of America had come to him in New York and requested a certain amount of [250] vanadium to be delivered to them, and they proposed, as long as they did not have an operating plant in that country, that we would use our plant and mill their ore both in their mines and that was in their stockpile and in their mill bins at Naturita.

And so on those directions from New York, Mr. Van Fleet who had been in touch, I presume, with the Vanadium Corporation in New York, I dis-

(Testimony of Blair Burwell.)

cussed with Mr. Kett—and to my best recollection—maybe there were others there at the time, but I think he was the one—an arrangement whereby we would take the ore out of the mill bins at Naturita of the Vanadium Corporation mill that had been mined or out of their stockpile at their mill at Naturita, which was about 14 miles from the mines, and then go upon these mining claims and mine and deliver ore and deliver to them the vanadium, and we would be paid 65c a pound for our services in mining and milling and in the production of the fused oxide for the recovered vanadium and delivered to them under that arrangement.

Mr. Kett was to have access to the records and to look over the mining operations and make any suggestions as to the method of mining and other details, I believe, were arranged between us as to carrying on the work.

Q. (By Mr. Alioto): Mr. Kett was to have access to whose records?

A. U. S. Vanadium Corporation's records—of production, [251] the tons removed, the grade and percentage of vanadium oxide, all the things that made up the accounting for vanadium.

Q. Now, was that agreement in fact carried out?

A. Yes, it was carried out and completed, insofar as this area and discussion——

Q. Do you recall the approximate period of time that it took to carry out that agreement?

A. I believe it took a year or possibly two years to mine and remove the ore of the particular min-

(Testimony of Blair Burwell.)

ing claims that I mentioned, the Maggie C. and other claims. Approximately two.

Mr. Alioto: Now, Mr. Holland, I do not happen to have the contract with me at the moment——

The Court: Do you happen to recall when that began?

The Witness: I am trying to refresh my memory. It may have been '42. No, it was prior to the Vanadium Corporation starting their plant. And you have the date here. I am confused a little on this thing. I would rather not——

Mr. Alioto: If your Honor please, Mr. Holland suggested that he would like the contract at this point. We have no objection to that, but I don't have my copy available at the moment. I will be very happy to have your copy, Mr. Holland.

The Witness: I think it was probably '39, and I refresh my memory by looking back. This is 20 years after it [252] happened and I am not infallible.

Mr. Holland: Here is a somewhat battered original, Mr. Alioto (handing to counsel).

Mr. Alioto: Fine. Thank you.

I will be very happy to have this copy replaced and returned to you, unless you have no desires in the matter.

Offer it into evidence, if your Honor please, the contract that the witness has referred to.

The Clerk: Plaintiff's 44 admitted and filed into evidence.

(Testimony of Blair Burwell.)

(Contract received in evidence and marked Plaintiff's Exhibit 44.)

[See Book of Exhibits.]

Q. (By Mr. Alioto): The date of this contract, signed by Mr. Bransome and Mr. Van Fleet, is June 30 of 1939. Now, then, Mr. Burwell, I show you a copy of a document which purports to be signed by you, written to the Vanadium Corporation of America under date of April 7, 1942, and ask you if that refreshes your memory as to when —how long you operated on the Vanadium Corporation of America claims.

A. Could I see the letter, please?

Q. Yes, sir, after Mr. Holland has looked at it.

Mr. Holland: Are you referring to the Maggie C. operation under the Maggie C. contract?

Mr. Alioto: We will get to it. You take a look at this letter, Mr. Burwell, and you explain to us—you [253] explain for us to which of the claims that letter refers (handing to witness).

A. (Witness examining.) This letter refers to the operations of the claims I just mentioned, the Maggie C. and others in Colorado, and also includes a later addition to the contract in Dry Valley, Utah; in 1942 that this arrangement and mining had been completed, and this states that this is the final statement. I signed it. I remember the letter.

Q. The final statement is under what date, Mr. Burwell?

A. 1942, April 7 of 1942.

Mr. Alioto: Thank you. We will offer this in

(Testimony of Blair Burwell.)

evidence, your Honor, as the plaintiff's exhibit next.

Mr. Holland: Dry Valley——

Mr. Alioto: We are going into the Dry Valley agreement. We have a copy of it, Mr. Holland.

Offer this into evidence.

The Clerk: Plaintiff's Exhibit 45 admitted and filed into evidence.

(Letter April 7, 1942, Burwell to V.C.A. received in evidence as Plaintiff's Exhibit 45.)

[See Book of Exhibits.]

Q. (By Mr. Alioto): Now, then, Mr. Burwell, we want to cover—I think I started out—we will go into a few of these joint arrangements and the next in order would be the Dry Valley. Did you personally participate in any negotiations with the Vanadium Corporation of America with respect to that [254] property?

A. Yes. In the same way that I participated in the Maggie C. and Cripple Creek, and, in fact, it was a continuation of the same kind of negotiations. But the Dry Valley area, however, was not in Colorado; it was over in this section in Utah (indicating).

Q. When you say——

A. Where my finger is (indicating).

Q. When you say "this section in Utah," you are pointing your finger at a section approximately two inches above the word "Monticello"?

A. That's right, and approximately 75 miles west of the Maggie C. and Cripple Creek.

(Testimony of Blair Burwell.)

Q. Would you be good enough to state the facts with respect to what that Dry Valley operation was about?

A. Well, the Dry Valley operation was a continuation of the Maggie C. contract, because after we had mined all the available ore out of the Maggie C. and other claims that were contained in the original agreement, the Vanadium Corporation needed more vanadium than was contained in those ores and so they drew ahead on their account; in other words, they asked for vanadium to be delivered in advance of mining and they owed the U. S. Vanadium Corporation vanadium in excess of what was obtained from the Maggie C. claims. Therefore, the Dry Valley property had been acquired by U. S. Vanadium Corporation some [255] time after that and afterwards was turned back to the Vanadium Corporation of America due to a conflict between the two companies in policy. And I won't bring that in. And, therefore, the Dry Valley had belonged to the Vanadium Corporation of America at that time under lease arrangements but United States Vanadium Corporation was mining it, and we proceeded to mine the additional ore out of the Dry Valley claims that was needed to give the Vanadium Corporation the pounds of vanadium oxide which they had drawn ahead of their account on the Maggie C.

They had asked for more vanadium than was contained in the ores and we gave them the vanadium before the vanadium was produced out of

(Testimony of Blair Burwell.)

the ores. We had lots of vanadium on hand and, therefore, when we came to settle up the account, they had received more ore on the delivery agreement than they had provided ore for in the original setup. Therefore, another area was allotted for the purpose of supplying that additional vanadium. It was somewhat mixed up and somewhat complex, but that's the best I can give you in answering it.

Q. Well, let's start at the beginning of that again. Let's start at the beginning. The Dry Valley claims were first owned by United States Vanadium Corporation, is that a fact?

A. Yes. They had an agreement to purchase from Molybdenum Corporation of America, and the Dry Valley claims had been part [256] of our acquisitions in Utah which were planned back in 1938—and I think you read a letter here about—and as part of a mill and processing plant which United States Vanadium Corporation was preparing to build in Monticello, Utah, and which United States Vanadium Corporation had acquired a plant site and the water rights—permission to use the water from the city of Monticello. We acquired the Dry Valley claims from Molybdenum Corporation of America as a result of a negotiation that was—and examination that started as early as 1938—in fact, far beyond—before that I made an examination in '31 for the same purpose. And I had a subsequent examination made in 1938 by Mr. Aime of our corporation, who reported on the reserves of the Dry Valley claims.

(Testimony of Blair Burwell.)

I discussed with Mr. Van Fleet and I also discussed with the Molybdenum Corporation, in company with Mr. Van Fleet, the acquisitions of the Dry Valley claims as a part of another plant that we were planning to build at Monticello, Utah, which is very tributary to the Dry Valley claims. That was a part of a proposal that we had made to the Metal Reserve and the War Production Board about 1942. And the Dry Valley claims were tributary to Monticello where we had preparations made to build a 100-ton-a-day plant before the Molybdenum Corporation—the Vanadium Corporation of America had thought of or contemplated a plant there, according to our knowledge.

Therefore, our acquisition of the Dry Valley claims [257] from Molybdenum Corporation was carried on by discussion between myself and Mr. Van Fleet and the Molybdenum Corporation officials, and also as a companion and accompanying part of a discussion of properties that belonged to the same corporation, Molybdenum Corporation of America in the Gateway district, tributary to the Gateway alloys mill, and over the period of years that we had been in touch with this Molybdenum Corporation as a part of our program of U. S. Vanadium Corporation expansion into Utah, and I have letters that I have written to the Carbide recommending this in '38——

Q. Excuse me—Mr. Burwell, you did acquire the rights to those claims, is that correct?

A. That's correct.

(Testimony of Blair Burwell.)

Q. It was about 1940, was it?

A. We were—I think that was correct.

Q. All right.

A. And we were mining those claims—started to mine those claims and had an ore purchase station near those claims on the main highway that goes between the railroad and Monticello, about six or eight miles distant from these mining claims, which were upon the cliffs in the valley just to the east—we had approximately 20, 25,000 tons that we had gathered there in a huge pile, by our scales, and sampling plant preparatory to moving them into Monticello for the vanadium plant. [258]

It's a long story.

Q. Well, let me ask you this——

The Court: Let's get down to this. When did you sell these claims to the other company?

The Witness: We didn't sell these claims to the other company, your Honor. The Vanadium Corporation of America, Mr. Bransome went to Mr. Haggerson and complained that we had bought these claims by the use of unfair information and demanded that these claims be turned over to the Vanadium Corporation of America because Mr. Van Fleet was a man of low repute and he had listened to a telephone conversation or heard about the price and that he had gone in and bought them at the time the Vanadium Corporation of America was considering buying them for some $200,000. But the story was entirely false. But Mr. Haggerson, the President of U. S. Vanadium Corporation,

(Testimony of Blair Burwell.)

President of the Electro Metallurgical Company, listened to Mr. Haggerson and called Mr. Van Fleet up on the telephone and said that Ted Bransome was raising questions and feels that we should turn back to the V.C.A. these claims that we bought in Dry Valley and asked him to meet with Mr. Bransome and settle the matter.

Well, we had purchased the claims, we were operating the claims, we were in possession of the property involving thirty-five or forty mining claims. We had, of course, been in touch with those claims since 1931, before the V.C.A. was [259] ever in that field, before Mr. Bransome ever heard about that country.

Therefore, Mr. Bransome and Mr. Van Fleet met, and I heard the story from Mr. Van Fleet—this is what he told me of the meeting. He came back——

The Court: What finally happened then?

The Witness: We were ordered to turn over the properties to the Vanadium Corporation by Mr. Haggerson, give them back to the Vanadium Corporation, because they had decided—the Vanadium Corporation—that they needed the plant, and Mr. Haggerson said, "Let Mr. Bransome have the claims," and there was quite——

The Court: This is what was done?

The Witness: That is what was done.

The Court: You mined the claims on the same—under the same agreement that you had mined these others?

(Testimony of Blair Burwell.)

The Witness: We were—yes—well, when this happened, we were mining the claims for our own purpose, not for the agreement.

When this happened, we said, "Well, there is one way to do this, they owe us vanadium for the Maggie C.; then if we have to give the claims up by order of Mr. Haggerson, we will go ahead and mine out the additional ore that we have coming from the Maggie C. agreement."

And so I negotiated with Mr. Kett an extension of the [260] Maggie C. agreement, but applying to Dry Valley, and when we got through mining that additional ore, I don't think they had very much luck getting back to the mines. I mean, we gutted the mines out as best we could and took the ore out and piled it up at the intersection of the road.

That isn't all the story, but that is all the answer to this.

Q. (By Mr. Alioto): Well, ultimately you did turn those claims over to the Vanadium Corporation of America, didn't you?

A. We were forced to, yes. We turned them over.

Q. You say you were forced to. You were forced to by whom? A. Mr. Haggerson.

Q. Who was he at the time?

A. President of U. S. Vanadium Corporation.

The Court: That was one of the subsidiaries?

The Witness: Of our group. In other words, this is an inter-company quarrel, your Honor. This is something that was going on in the family.

(Testimony of Blair Burwell.)

Q. (By Mr. Alioto): When you say it was an "inter-company quarrel," you mean that you and Mr. Van Fleet wanted to keep the claims.

A. Yes. We quarreled with Mr. Haggerson and we quarreled with them about turning these claims over to the Vanadium [261] Corporation.

Q. In any event, Mr. Haggerson of the Union Carbide subsidiary——

A. Overruled us.

Q. ——directed you to give them to the Vanadium Corporation of America?

A. That is correct.

Q. And that was done?

A. That was done.

Q. In approximately what year was it done?

A. Well, it was done prior to 1942. I think it was about 1941, because we mined for about six or eight months and that was prior to this 1942 letter.

Q. Now I am going on to another subject, Mr. Holland. If you want that contract in evidence, I have no objection to putting it in for you.

Mr. Holland: I think that you should.

Mr. Alioto: I think that speaks for itself. You can put it in if you want.

Mr. Holland: It will give the picture.

Mr. Alioto: All right.

Mr. Holland: I want to.

Mr. Alioto: All right, if you want to. You will supply a copy to put in? We have no objection to it.

Mr. Holland: All right. We will get it. [262]

(Testimony of Blair Burwell.)

Mr. Alioto: All right, as soon as you have one available, I will put it in for you, Mr. Holland.

Q. Now, then, Mr. Burwell, I want to call your attention to another mining transaction with respect to the Gateway area. Do you recall that there was a little independent mill around Gateway called Gateway Alloys, Inc. in 1939-1940?

A. Oh, yes. Yes, I am very familiar with the Gateway Alloys Company area.

Q. Incidentally, was that a very good ore body around—Gateway? I want you to point Gateway out first so that the jurors might see generally where it is.

A. That's it right here. There has been about $20,000,000 worth of vanadium uranium taken out of that area. Sure, it's a good area. [263]

A. Oh, my!

Q. All the property was in the hands of an independent, was it not?

A. It was in the hands of the Molybdenum Corporation of America, and the independent had a lease on that from the Molybdenum Corporation where they were paying for the property at so many cents a pound of vanadium mined. They still had control of it, but the fee rested with the Molybdenum Corporation.

Q. Did there come a time when you had a discussion with Mr. Van Fleet about what the policy of your company would be with respect to this little independent mine?

A. Well, I had conversations with Mr. Van

(Testimony of Blair Burwell.)

Fleet, or he had conversations with me, and I think they are covered by letters that have already been introduced.

Q. Did you agree on some plan of action with respect to that?

A. Well, I followed out instructions.

Q. What were the instructions with respect to this little mine, a rather valuable mine that was owned by the independent?

A. Well, to discourage them in any way we could. They offered the vanadium oxide to us for sale. I offered them 65c a pound for the oxide. We couldn't offer them any more. We didn't encourage them to produce any vanadium. We discouraged them. [264]

Q. Did you ever get your hands on that claim?

A. Oh, yes.

Q. How did that happen?

A. We made an arrangement with the Molybdenum Corporation of America to sublease under Brown the claims that are in the cliffs and mountains around the Gateway alloy plant. The Gateway alloy plant was down in a canyon, and these mines are about 1500 or 2,000 feet above it. The roads and trails went up. Took a lease on these claims, sublease, and paid the balance of the royalties into the Molybdenum Corporation, an on-the-ground deal and an overriding royalty to Harry Brown, and I think we moved out 12 to 15,000 pounds of easily accessible cheap ore from there to Uravan, a haul of about 65 miles. We constructed a road

(Testimony of Blair Burwell.)

up there and we cleaned out their accessible ore deposits.

Q. Wasn't that more expensive than the ore you could have mined from your own properties?

A. Yes, that ore cost us more than the ore we had immediately available at our own plant, because our own plant was located right here and our mines were within ten miles of that plant, and these mines were located at Gateway, and we had 45 to 65 miles of haul down a rough road here and, of course, that haul was costly.

Q. If that cost you more to get that ore rather than to get your own ore, why did you do that?

A. Well, we wanted to keep another vanadium operation from getting started.

Mr. Holland: Do you want these on Dry Valley, Mr. Alioto, the Dry Valley agreements?

Mr. Alioto: Yes.

Q. Whose instructions were you operating under when you did that?

A. I was operating under the instruction of Mr. Van Fleet, from the letters you have already introduced.

Q. (By the Court): Was that during the War?

A. No, this is prior to the War, your Honor. This was prior to the War.

Q. When was it?

A. I think this was 1939, if I am not mistaken, 1939.

Q. (By Mr. Alioto): As a matter of fact, that mill did go broke, didn't it, about 1940?

(Testimony of Blair Burwell.)

A. It did.

Mr. Alioto: Now, as an accommodation to my fine friend from Denver, I would like to offer the contracts he has handed me as exhibits next in order.

Mr. Holland: Thank you very much, Mr. Alioto.

Mr. Alioto: That is all right. I am glad to do it in this connection.

(The documents referred to were thereupon received in evidence and marked Plaintiff's Exhibit 46.)

[See Book of Exhibits.]

Q. (By Mr. Alioto): In 1946, Mr. Van Fleet was the Chairman of the Board of the United States Vanadium Corporation, was he not?

A. 1946? He was chairman just before he died.

Q. And you were a director?

A. I was a director and so was he.

Q. And a vice-president?

A. That is right.

Q. And the head man on mining operations?

A. That is right.

Q. Did there come a time when you had a discussion with Mr. Van Fleet about removing certain files from the United States Vanadium Corporation?

Mr. Archer: Your Honor, I object to this. This was long before this lawsuit was filed and could have no possible relevancy here. The files were all produced in Denver and I do not see what they have to do with this lawsuit.

(Testimony of Blair Burwell.)

Mr. Alioto: It was seven years after the plaintiff went into business—eight years after the plaintiff went into business, when he was still trying to get into it.

The Court: What files are you talking about?

Mr. Alioto: Some of the files that have been presented in this courtroom, among others. I offer to prove, if your Honor please, and I made a statement already in my opening statement, that there was an attempt to destroy certain [267] files and that certain of them were preserved because of the belief that the uranium production was going to be inhibited by reason of being tied to the vanadium sales and certain agreements in connection with vanadium sales.

The Court: Go ahead and ask your question.

Q. (By Mr. Alioto): Did you have such a discussion with Mr. Van Fleet?

A. Yes, I did.

Mr. Holland: This is not offered against the Vanadium Corporation?

Mr. Alioto: No, it is offered against the Union Carbide, Mr. Holland.

Mr. Holland: Thank you.

Mr. Alioto: I thought you said "good." I am sorry.

Mr. Holland: I didn't hear you.

Q. (By Mr. Alioto): Where did that discussion take place, if you recall, Mr. Burwell?

A. Las Vegas, Nevada, at the El Rancho Vegas Hotel.

(Testimony of Blair Burwell.)

Q. Prior to that time, did you and Mr. Van Fleet have a controversy with Mr. Priestley about vanadium production or your uranium production?

A. I had a conversation at this directors' meeting that I think you asked me questions about—officials of Carbide. That was in 1946, too. [268]

Q. Who was present at this meeting in Las Vegas besides you and Mr. Van Fleet?

A. Just myself, Mr. Van Fleet, and his wife was there.

Q. Was Mr. Van Fleet sick at the time?

A. Yes.

Q. Would you be good enough to state the substance of that conversation, Mr. Burwell?

A. Again, I will have to give you a statement of what led up or it wouldn't make sense. May I do so?

Q. If you will state it factually, sir.

A. Mr. Van Fleet asked me to meet him in Las Vegas, Nevada. He had had an operation for cancer, and he had picked up his wife in San Francisco, visiting her mother, and was going through to Tucson, and he wanted me to meet him there. wired me, and I came in from the East and met him.

He had been badly cut up under surgery, and he told me this. He said, "I wanted you to meet me here today, Blair. I don't feel that I have long to live. I have a number of records of the vanadium case, the operations of the Union Carbide which I have taken to my apartment. They are

(Testimony of Blair Burwell.)

copies of letters. You have seen them all, and I have put them in a briefcase down in my apartment and I told Mrs. Orr"—who was the maid who cleaned the apartment. "She lives a couple of floors below and keeps the key, because there is nobody else there. In case I die, I want you to take those records—those records [269] are to be sent out to you, and I want you to do this with them and for this reason."

He reviewed the story of the uranium field and the vanadium business. He reviewed the War period and the Manhattan district period, which was just over.

He said, "I feel that the security of the United States depends upon getting a supply of vanadium-uranium in the future from the Colorado Plateau, and if the vanadium—if it is channeled through the vanadium industry as it has been in the past, and which I believe is going to be done, we will only get 300,000 pounds of uranium a year, and if we do not have more than 300,000 pounds a year of uranium, we are in peril in the United States in the future. The issue has become bigger than the corporation. The issues in this thing are beyond corporate interests. And while I have been a loyal carbide man for 30 years, I have come to the conclusion that Mr. Priestley and Mr. Remmers and Mr. Haggerson are, unfortunately, too unaware of the essentials of producing uranium, and that they may prevail upon the Atomic Energy Commission, which is just being formed, to channel the vana-

(Testimony of Blair Burwell.)

dium — the uranium production of this Colorado Plateau through the vanadium interests, in tune with vanadium sales on the markets, and the life and death of our country, I feel, rests in opening the reserves of uranium which we know exist and of which we have made surveys. [270]

"Now, the situation has gone beyond mere corporate interest, and I am in the position of telling you that if you think that the security of the United States demands that this program be stopped and this perversion of our resources should be stopped, you take these records and give them to the Department of Justice or you do anything that you can to stop any more of this monkey business."

He said, "I will probably be misunderstood, why I should do these things. Some of these letters more or less damn me for being partisan to the corporation, sure, as long as the corporation interest and its financial interests are involved, that position I would take, that nobody would ever hear anything outside of the corporation about it, but you take these records, and when I die and you think that the situation is that Priestley and Remmers will forget and overlook the tremendous amount of research reports, proposals to a general gross of the Manhattan district and be so careless of the reputation of Union Carbide that they would expose that company to censure, you would have to take them and give them to the Department of Justice or do what you need.

"I feel," he said, "that I would fail in my duty

(Testimony of Blair Burwell.)

as a Carbide official if I expose this corporation to the danger of being blamed in the future for not taking care of its national opportunities."

Q. Did he then hand you certain documents?

Mr. Archer: Your Honor, I move to strike this testimony. The testimony obviously involves the question of whether we produced enough uranium for the Atomic Energy Commission. We certainly can not try that in this lawsuit even if we wanted to. It concerns a period after 1946, and this is something which is obviously classified, and we can't try in this lawsuit.

Mr. Alioto: If your Honor please, the testimony is already in this record——

The Court: The objection is sustained. It is immaterial. It has nothing to do with the issues in this case. I do not know how much you are going to cover in territory in this case.

Mr. Alioto: We are about to finish, your Honor.

The Court: If we can get down to the lawsuit and try the lawsuit itself, the Court would feel better about it.

Mr. Alioto: We were about to finish, if the Court please, by handing him some of those documents.

The Court: The objection is sustained and the jury will disregard the statement. We will recess at this time until 10:00 o'clock tomorrow morning.

(Recess until 10:00 o'clock a.m. tomorrow, Wednesday, June 4, 1958.) [272]

June 4, 1958, 10:00 o'clock a.m.

The Clerk: Continental Ore Company versus Union Carbide and Carbon Corporation, et al, further trial.

Mr. Holland: Ready.

Mr. Alioto: Ready.

BLAIR BURWELL,

a witness on behalf of the plaintiffs, having been previously duly sworn, resumed the stand and testified further as follows:

Direct Examination—(Continued)

Q. (By Mr. Alioto): Now, Mr. Burwell, I want to conclude this examination by directing your attention to certain independent mills that operated on the Colorado Plateau for a short period of time and that figured in the supply to the Continental Ore Company.

Did you know an oxide mill on the Colorado Plateau called the Mesa Vanadium Mill?

A. Yes, I did.

Q. Could you, by reference to that map that is before you—and we could turn it so that the Jury in back may see it—could you by reference to that map locate the approximate location of the Mesa Vanadium Mill?

A. Yes. It's in the same general uranium district just where my finger is, called Disappointment Creek.

(Testimony of Blair Burwell.)

Q. Disappointment Creek is in that area that is called [274] the Slick Rock area?

A. That's right.

Q. On the map there.

Do you recall who it was that was operating the Mesa Vanadium Company?

A. It was a group of Grand Junction businessmen, oh, Mr. Claybaugh is one, and an attorney—I don't recall his name—a group of local businessmen.

Q. Do you recall approximately when it was that that mill was started in that area?

A. I think about 1939, somewhere in there.

Q. At that period of time, Mr. Burwell, there was a market for vanadium oxide in export, was there not?

A. I believe that's correct.

Q. And do you recall what the export price of vanadium oxide was at that time from these independent mills?

A. That I do not know precisely. Approximately $1.10 a pound, $1.00 to $1.10 a pound.

Q. Do you recall what your price was to the oxide mills at the time for vanadium oxide?

A. $1.10.

Q. Did you have a 65-cent price in 1939 for any of these mills?

Mr. Archer: I object to that as leading. He already testified to $1.10. [275]

The Court: Sustained. Let the witness testify.

The Witness: Repeat the question, please.

(Testimony of Blair Burwell.)

Q. (By Mr. Alioto): Well, that question is withdrawn.

What is your best recollection as to the price paid by the United States Vanadium Corporation for vanadium oxide in August of 1939?

Mr. Archer: I object, your Honor. It has been asked and answered.

Mr. Alioto: Let him answer.

The Court: Repeat your question, please.

Q. (By Mr. Alioto): Give us your best recollection now of the price paid by the United States Vanadium Corporation under your general duties to the independent mills for vanadium oxide in 1939.

A. You mean for red cake?

Q. Let's take the red cake first.

A. Anywhere from 50 to 65 cents—it was no fixed price, simply a matter of negotiation.

Q. All right. And you carried on those negotiations, didn't you?

A. That's correct.

Q. Now, did there come a time when you decided, in connection with your duties, to do something about this Mesa Vanadium Mill?

A. That's correct. [276]

Q. And what was it that you did?

A. We took over the operation of the Mesa Vanadium Mill; run a test operation on it for a short period of time; shut it down and used it as an ore-buying station; purchased it from the——

(Testimony of Blair Burwell.)

Mr. Holland: That evidence is not offered against the Vanadium Corporation, I take it?

Mr. Alioto: No, at the present time it is being offered only as against Union Carbide.

Q. And do you recall when it was that you shut it down? A. Not exactly.

Q. Did you need a mill at that time?

A. No.

Q. Mr. Burwell?

A. No, we did not need a mill at that time.

Q. If you didn't need a mill, why did you take it over and shut it down?

A. We needed an ore-buying station at that time. We didn't need the mill.

Q. Why did you buy the mill if you didn't need it?

A. To keep it out of production.

Q. Do you know another little independent mill that started around 1940 at Loma?

A. Yes, I do.

Q. Do you know a man named Morrison?

A. I don't recall.

Q. Would you be good enough to indicate on that map the approximate location of the Loma Mill?

A. Approximately at this point on the Colorado River, just west and north of Grand Junction.

Q. Is that called the Yellow Cat Mining District area? A. No.

Q. What is that called?

(Testimony of Blair Burwell.)

A. It's in the Grand Junction Valley. It's approximately 90 miles east of the Yellow Cat area.

Q. Did you hear in the course of your duties as an officer of United States Vanadium Corporation that some independent was trying to start a mill up there? A. At Loma?

Q. Yes.

A. Oh, yes, I knew that they were starting a mill at Loma.

Q. Did you do anything about that? Let me ask this: Prior to the time that you heard about this mill was United States Vanadium purchasing ore in the area of that mill?

A. No. Prior to the starting of that mill we were not purchasing ore in the area, any areas close to this mill.

Q. Well, then, after the mill started, did you start buying ore there?

A. Where do you mean? In the area tributary to the mill?

Q. Yes.

Mr. Archer: Could we have the date of this?

Q. (By Mr. Alioto): What year was this?

A. It would be somewhere around '41 or '40-'41. I'm not too sure of the date.

Mr. Holland: Mr. Alioto, the testimony with respect to the Loma mill is offered only against Carbide?

Mr. Alioto: Yes, at this point, Mr. Holland, that is correct.

Q. The pending question is: After you heard

(Testimony of Blair Burwell.)

about somebody wanting to start this mill in that area, did you take any steps about buying ore in the area that was tributary to the mill?

A. Why, we started an ore-buying station in the area at Thompsons, Utah, which is directly west of it on the railroad, and from which the Loma mill was obtaining its ore supply.

Q. And what was——

A. That's the Yellow Cat area.

Q. Did you need the ore at that time?

A. No.

Q. Why did you set up that ore-buying station right by this mill?

A. Well, there were two reasons: one was to, of course, to acquire the ore for future needs of the corporation, and we also purchased the ore to keep it away from the Loma mill.

Q. Did you pay more for that ore than you paid for ore [279] in the vicinity of your Uravan plant?

A. No. We paid the same price.

Q. Did you have to haul it some considerable—a great distance—a greater distance than ordinarily would be the case?

A. Yes. We had to haul it approximately 150 miles compared to about 7 or 8 miles.

Q. So that ore cost you more, did it not?

A. That's right.

Q. Were you under some instructions to keep that ore away from this little mill?

Mr. Archer: I object to that as leading.

(Testimony of Blair Burwell.)

The Court: Sustained. Leading and suggestive.

Q. (By Mr. Alioto): You stated in your testimony that you bought that ore—one of the reasons for buying that ore was to keep it away from this mill? A. That's right.

Q. Did you succeed in keeping it away from the mill?

A. The mill closed down for lack of ore.

The Court: Well, could the mill purchase ore the same as you did? A. They could.

The Court: At the same price?

A. They could.

Q. (By Mr. Alioto): Did you outbid them for any of [280] that ore?

Mr. Archer: I object to that as leading.

Mr. Alioto: All right. I was trying to follow up the Court's question.

Q. Let me ask it this way——

The Court: He said the same price.

Q. (By Mr. Alioto): What was the difference, approximately, to you in buying that ore from that station, and transporting it to Uravan, as against buying the ore in the vicinity of Uravan?

A. The difference was the cost of the haul from that point to Uravan.

Q. And that was a haul of 150 miles, did you say? A. Approximately.

Q. All right. How much did that haul cost, approximately?

A. Five cents a ton-mile—seven dollars and a half a ton.

(Testimony of Blair Burwell.)

Q. Was there any hauling allowance of any type made to the miners in that area from that ore-buying station of yours? A. No.

Q. Do you recall the approximate price you paid for that ore?

A. As I told you before, we paid approximately the same price in Uravan, and to the best of my recollection it was somewhere around 20, 21 cents.

Q. Now, since—well, I think you already have given the reason for your establishing the ore-buying station there.

Now, I want to direct your attention to — we spoke about the Gateway situation yesterday. I think we p[illegible]ably covered it.

Incidentally, do you know the name of the man who was the founder, the original founder of the Vanadium Corporation of America?

A. Oh, yes.

Q. What was his name?

A. J. J. Flannery. He was the founder of the whole vanadium business in the United States.

Q. And how did you come to know him?

A. Well, I knew him in 1920. I was a young agent around the school. He was the owner of the Standard Chemical Company, which was purchased later by the Union Carbide and became the Uravan plant. I knew him when he was visiting the operations at Uravan.

Q. Did you——

A. They called it the Joe Junior Mill—that was for his son Joe Junior Flannery.

(Testimony of Blair Burwell.)

Q. Did you work for Mr. Flannery?

A. I worked for Mr. Flannery.

Q. For how long? A. Two years. [282]

Q. And Mr. Flannery was the man who founded the predecessor company to the Vanadium Corporation of America?

A. Mr. Flannery had founded the American Vanadium Company.

Q. Which was later purchased by the Vanadium Corporation of America, was it?

A. That was my understanding.

Q. Did Mr. Flannery ever tell you how much money he started with in the vanadium business?

Mr. Archer: I object to that, your Honor. This is long before 1938.

The Court: Yes, sustained.

Mr. Alioto: I understand, if your Honor please, that there has been some testimony here about how much money you need to get into the vanadium business.

Mr. Holland: The cost of getting into the business in 1920 has no relation to the cost of getting in it in 1938.

Mr. Alioto: I think, if your Honor please, that is a relevant——

The Court: The Court has ruled on it.

Mr. Alioto: All right, if your Honor please.

I am aware of the Court's ruling with respect to the matter of not introducing material prior to 1938. However, I am also aware of the fact that I am under some obligation to make a record on

(Testimony of Blair Burwell.)

it because of our position that the testimony now makes relevant the precise nature of the agreement which [283] existed in 1938, and we say that the precise nature of that agreement is set out very specifically in documents written by the leading officers of the United States Vanadium Corporation and of the Vanadium Corporation of America. One of those documents, of course, is in the MacQuigg report, of which we had some conversation about, and I would like to lay a foundation for that matter, if your Honor please.

Q. Mr. Burwell, I show you a copy of a document which I would respectfully ask that the Court mark it for identification.

The Clerk: Plaintiffs' 47.

(Whereupon the document referred to was marked Plaintiffs' Exhibit No. 47 for identification.)

Mr. Holland: Are you going to make an offer of proof?

Mr. Alioto: No.

Q. Mr. Burwell, would you be good enough to look at that document and then, without revealing its contents, just state generally what it is.

A. Yes. This is a report on vanadium by one of the metallurgists for the Union Carbide and Carbon Research Corporation. It pertains to——

Mr. Holland: You said without revealing what was in it.

The Court: Don't state the substance of it. What is the date of it?

(Testimony of Blair Burwell.)

Mr. Alioto: I think the date you will find in that first page at the bottom, Mr. Burwell.

A. It is June 1935.

Q. Would you be good enough, Mr. Burwell, to identify the Union Carbide & Carbon Research Corporation? What is it?

A. May I look at your chart, please?

Q. It doesn't appear directly on the chart, but does it have some relationship to the companies that do appear on the chart, Plaintiffs' Exhibit 27 for identification?

A. It is a research organization which is operated by the Union Carbide & Carbon Corporation, and particularly under the jurisdiction and management of the Metallurgical Company.

Q. (By the Court): What is a research corporation?

A. A research corporation, your Honor, is a group, or a manner of organizing a group of research people in a corporation to do research on problems of metallurgy, or problems of making new products, or problems of marketing, and often those research groups are contained in a corporate organization for the purpose of financing, or for the purposes peculiar to their——

Q. Was it unusual for these companies that were engaged in these mining operations to engage in very extensive research investigation of the material and the manner of manufacture and the future of the development?

A. No, your Honor; it is the usual thing.

(Testimony of Blair Burwell.)

Q. (By Mr. Alioto): Did there come a time when the officials of the [285] United States Vanadium Corporation and Electro Met delegated to the research organization of Carbide the task of making a study of the vanadium problem as it existed in 1935? A. They did.

Mr. Archer: I object to the question, your Honor, not only on the time basis, but it is leading and suggestive.

The Court: The objection is sustained and the jury will disregard the answer.

Q. (By Mr. Alioto): Would you tell us with respect to the document which has now been marked Plaintiffs' Exhibit 47-D for identification, whether that document ever came up for discussion among the leading officials of the United States Vanadium Corporation and the Electro Metallurgical Company?

Mr. Archer: I object, your Honor.

The Court: That is prior to 1938?

Q. (By Mr. Alioto): Well, was it discussed at any time after January 1, 1938?

A. Yes, it was discussed in 1938, it was discussed in 1939, it was discussed in 1940, 1941, 1942, 1943, and 1944.

Q. What was the nature of the discussion that took place about this document after January 1, 1938?

Mr. Archer: I object, your Honor. I think we ought to establish who was present, and that sort of thing. [286]

(Testimony of Blair Burwell.)

Mr. Alioto: We are going to do that.

Mr. Holland: If the Court please, Mr. Alioto, who never gives up, is now attempting, through conversations subsequent to 1938, to go into this whole pre-1938 and 1939 matter.

The Court: The Court has ruled on this, that transactions prior to 1938 are incompetent.

Mr. Alioto: Yes, if your Honor please.

The Court: The plaintiff in this case, according to your allegations and your proof, started in business in 1938.

Mr. Alioto: That is correct.

The Court: The gist of this lawsuit is really not constitution of the monopoly, but it is whether or not this plaintiff was damaged because of these various defendants, and, of course, that can only be after he went into business. Now, what transpired when he was still in Europe is incompetent, and the Court holds that all of these transactions prior to 1938 are incompetent.

Mr. Alioto: Yes, I am aware of the Court's ruling. As I pointed out just before I started my inquiry, I recognize that. But now, if your Honor please, I would like to show through this witness that there was an agreement in existence in 1938 and 1939 which directly impinged upon and damaged this plaintiff. [287]

The Court: We are not going into what transpired before 1938.

Mr. Alioto: My question asks him for discussions after January 1, 1938.

(Testimony of Blair Burwell.)

The Court: I understand. The objection will be sustained. I just don't want to go into it at all. You are going into it in another way. That is directly opposite to the Court's ruling.

Mr. Alioto: No, I do not mean to be, if your Honor please. I think the Court knows that I have not been otherwise than deferential to the Court. However, in carrying out what I conceive to be the things that have to be done here in order to preserve this record, it is my understanding of the law, from United States versus Standard Oil, for example, that if you prove an existing agreement, say in 1939, once you have established that there is such an agreement in 1939, that thereafter you may show the nature of that agreement by its origin. That is the basis I am talking about.

The Court: You may show any transactions that took place after 1938, but you cannot base your question on what occurred prior to that time. The Court has ruled on that.

Mr. Alioto: I understand that, your Honor, but so the Court will not think I am being anything but respectful, I want to point out—whether I am correct in my view—I want [288] to establish the existence of an agreement in 1938.

The Court: What you are trying to do is to show an agreement that existed long years before 1938, and that was discussed at a later date.

Mr. Alioto: No, that is the opposite of what I am trying to do, if your Honor please. What I

(Testimony of Blair Burwell.)

am trying to do is to show that there was this agreement in 1938. That is the first step.

Now, I think the Court has heard enough evidence from this witness to know that there was some kind of collaboration between these two defendants. But quite aside from that, what I want to show is that there was this agreement. Then the question is, What is the nature of this agreement?

The only way you can know the nature of this agreement, if it started in 1935 and continued through 1938,——

The Court: The Court has ruled on the point. Let us go to something else. You may have an exception.

Mr. Alioto: May I, so I won't have to take up the time of the Court and the jury further, at this time make an offer of proof along these lines, if your Honor please?

Mr. Holland: I believe the offer of proof should be made in chambers.

The Court: You can make a general statement, but not the contents, now.

Mr. Alioto: I do not intend to go into the [289] contents, if your Honor please. I intend to make a general statement, and I will hand the document to Mr. Holland, so there won't be any question about my revealing the contents of it.

Mr. Holland: I know Mr. Alioto's general statements, and I think we are precluded, of course, from going prior to 1938. This was all taken up in the other case to which I referred in my open-

(Testimony of Blair Burwell.)

ing statement. Your Honor wanted to limit the proof. Now, I believe if you want to limit the proof, that this offer of proof should be made in the absence of the jury, your Honor.

Mr. Alioto: With respect to Mr. Holland's statement, if your Honor please, documents prior to 1938 were admitted in the other case.

Mr. Holland: That is exactly what I said. The whole thing was brought out in that case, and we were acquitted.

Mr. Alioto: Acquitted after a ten-year delay, yes.

The Court: Your offer of proof is as to the contents of agreements made prior to 1938?

Mr. Alioto: No, if your Honor please, it is not.

The Court: What is it?

Mr. Alioto: My offer of proof is to prove the nature of the agreements that existed from January 1, 1938, to [290] the date of the filing of this complaint. That is all I offer to prove. And I offer to prove that from documents which were executed prior to 1938, but which in detail set out the precise agreement which existed from 1938 to 1947.

May I give you this example, if your Honor please: Let us assume I make a lease, an ordinary lease,——

The Court: Your offer of proof is denied. Exception allowed. We are not going back into—you will get back to '49 if we go very much further.

Mr. Alioto: If the Court will indulge me 30 more seconds to complete the record, I would at

(Testimony of Blair Burwell.)

this time formally offer into evidence that document dated June 19, 1935, which has been marked Exhibit 47-D for identification.

The Court: Very well.

Mr. Alioto: May we have the nature of the objection to the document? Is there any question about authenticity? I do not want any question about that.

Mr. Holland: No question of authenticity. The nature of our objection was made before the case started, and the Court ruled at that time.

The Court: The objection will be sustained. Exception allowed.

Mr. Alioto: I do not believe, if your Honor please, with deference, that at this stage of the proceeding the record shows the nature of the objection being made by Mr. Holland [291] and Mr. Archer.

Mr. Holland: I think the record shows before the case ever started we made an objection in your chambers. We filed a pre-trial brief with the Court. I do not see any point in dragging this on.

Mr. Alioto: There was no record made in chambers, if your Honor please.

The Court: The objection is sustained. Exception allowed. Proceed.

Mr. Alioto: May I have a series of documents referring to this report written by the chief managing agent of the United States Vanadium Corporation—I would like to have these marked as our exhibit next in order, and I would respectfully re-

(Testimony of Blair Burwell.)

quest that they be marked as a group, if you would, sir. They are being offered at this point solely against the Union Carbide Company. There was no objection by Union Carbide Company to the previous exhibit, which was not offered against the Vanadium Corporation of America, but it was the Vanadium Corporation of America that objected. So we have a record here that is very much upset, I think, if your Honor please.

Mr. Archer: I think the Court stated at the beginning of the trial an objection made by one defendant would accrue to the other unless I disavowed it, and I would state my objection to these on the same basis as in the memorandum, [292] and on the basis they are incompetent, irrelevant and immaterial.

The Court: The objection will be sustained.

Mr. Alioto: When you say they are incompetent, I take it, Mr. Archer, you are not objecting on the ground of authenticity?

Mr. Archer: I take it they are all ones I have seen.

Mr. Alioto: Yes, they are the ones about which we had the pre-trial stipulation. In other words, the genuineness of the document set forth in the exhibit which is now marked 48 for identification is conceded, Mr. Archer?

Mr. Archer: Well, if you tell me they are the ones I looked at——

Mr. Alioto: You look at them. They concern

(Testimony of Blair Burwell.)

Mr. Van Fleet, Mr. Burwell, and the other folks like that.

Mr. Holland: I have not seen the documents, but I will concede it.

Mr. Archer: Yes.

Mr. Alioto: So we will offer that in evidence, if your Honor please. I understand the Court has rejected that evidence.

The Court: The objection is sustained and an exception is allowed.

Mr. Alioto: In order further to make the record [293] on this I now offer in evidence and ask to be marked for identification at the present time, only, documents of both companies, Vanadium Corporation of America and Union Carbide, written prior to January 1, 1938, but which evidence joint communication between the companies respecting agreements which we maintain were in effect in 1938, as this witness has testified. After I get these back——

Mr. Holland: I object to it as incompetent, irrelevant and immaterial.

Mr. Archer: Same objection, your Honor.

The Court: Objection sustained.

Mr. Alioto: Would the Court have any objection if we have these marked as one group?

The Court: You may do that.

(The documents referred to were marked Plaintiffs' Exhibit No. 48 for identification, as a group.)

(Testimony of Blair Burwell.)

Mr. Alioto: I think I simply asked that they be marked for identification at this point.

Mr. Neaher: Mr. Alioto, may I suggest that you mark as one group the Union Carbide documents, and keep the V.C.A. separately?

Mr. Alioto: I have no objection to doing that.

We ask to be marked for identification, if your Honor please, documents of Union Carbide, being letters dated March 9, 1938, March 31, 1937, November 3, 1937, and December 29, 1936. [294] I will ask that these documents of Union Carbide, between officers such as Mr. Van Fleet, Mr. Gormely and Mr. Burwell, be marked for identification as a plaintiffs' exhibit—only for identification at this point.

(The documents referred to marked as Plaintiffs' Exhibit No. 49 for identification.)

Mr. Alioto: We now offer these documents which have been marked 49 for identification into evidence.

Mr. Holland: Objection. The objection has already been made.

Mr. Archer: Same objection.

The Court: Are you offering them for identification?

Mr. Alioto: No.——

The Court: The objection is sustained. Exception allowed.

Mr. Alioto: I now ask that there be marked documents of the Vanadium Corporation of America, being a communication between the secretary,

(Testimony of Blair Burwell.)

Mr. P. J. Gibbons, to Mr. B. B. Bransome, president, Mr. Charles Reece, Mr. Davis, Mr. King, Mr. Dunne and Mr. Gibbons. It is a memorandum on a conference held in the New York office. I ask that be marked for identification together with a document entitled "Conference on Raw Material Situation Held in New York Office," between the following gentlemen: Mr. Bransome, Mr. Davis, [295] Mr. Reece and Mr. Gibbons, with the report on this conference by Mr. Gibbons dated February 9, 1937. I will ask that that be marked for identification together with the other document of the Vanadium Corporation of America.

(The documents referred to were re-marked as Plaintiffs' Exhibit No. 50 for identification.)

Mr. Alioto: We will now offer these documents into evidence, if your Honor please.

Mr. Holland: To which we object on the usual grounds.

The Court: Objection. Exception allowed.

Mr. Alioto: I would now like to offer a series of documents, if your Honor please, by both companies, which I will offer separately, that relate to direct negotiations of the two companies involved, they being dated, this group, the Union Carbide group, March 25, 1936, a letter from Mr. Van Fleet to Messrs. Gormely, Haggerson, Sneath and Priestley; a letter dated March 25, 1936, marked "Vanadium Situation, Vanadium Corporation of America," from Mr. Van Fleet to Mr. Gormely, Mr. Haggerson, Mr. Sneath and Mr. Priestley; and a

(Testimony of Blair Burwell.)

letter dated March 25, 1936, marked "Vanadium Situation, Vanadium Corporation of America," from Mr. Van Fleet to Mr. Gormely, Mr. Haggerson, Mr. Sneath and Mr. Priestley.

I will ask that these Union Carbide documents, about which I understand that there is no question of authenticity, [296] Mr. Archer, be marked for identification at this point.

(The documents referred to were marked Plaintiffs' Exhibit No. 51 for identification.)

Mr. Alioto: We will offer Plaintiffs' 51 into evidence, if your Honor please.

Mr. Archer: To which we object on the grounds stated in the memorandum filed, and that they are incompetent, irrelevant and immaterial.

The Court: Objection sustained. Exception allowed.

Mr. Alioto: I respectfully ask the clerk if he will be good enough to take these documents and mark them for identification, if it is all right with the Court.

(The documents referred to were marked Plaintiffs' Exhibit No. 52 for identification.)

Mr. Alioto: These documents are documents of the Vanadium Corporation of America about which, Mr. Holland, I take it there is no question of authenticity?

Mr. Holland: Correct.

Mr. Alioto: And they relate, if your Honor please, to joint conferences between personnel of Vanadium Corporation of America and the Union

(Testimony of Blair Burwell.)

Carbide Corporation. They are dated November 6, 1935, November 13, 1935, November 15, 1935, July 10, 1934, July 6, 1934, March 13, 1934, April 3, 1935, April 2, 1935, it being the contention of the plaintiff that these documents set forth the nature of the agreement existing from [297] 1938 to 1949. We will offer them for that purpose.

Mr. Holland: To which we object on the usual grounds, your Honor.

The Court: Objection sustained and exception allowed.

Mr. Alioto: I am about to finish this very shortly, your Honor. I am trying to get it down as hurriedly as possible. Another two minutes should do it.

I now would ask that this next series of documents be marked for identification.

Again, Mr. Archer, I take it there is no question about the authenticity and genuineness of these documents, and there is no objection based upon foundation. I am sure of that. I do not think there is.

Mr. Archer: There is no question of the authenticity of those.

Mr. Alioto: I mean where these things are signed, for example, by the president and the vice-president of the companies.

Mr. Archer: Oh, yes, those are the signatures of the men they purport to be, and if there are no copies of those signatures I will stipulate that they all signed them.

(Testimony of Blair Burwell.)

Mr. Alioto: These documents, if your Honor please, are documents of the Union Carbide Company, and are interoffice memoranda and letters involving the top officials of [298] these companies with respect to the matter of vanadium, and we offer them into evidence at this time for the purpose of establishing the origin of the conspiracy claimed by the plaintiff in 1933, which the plaintiff contends existed from January 1, 1938, through 1949, and these documents we believe show the nature of the combination between these defendants which existed in 1938, 1939, 1940, and through 1949. We will offer these into evidence at this point, if your Honor please.

Mr. Archer: Same objection, your Honor.

The Court: Objection sustained and exception allowed.

(The documents referred to were marked Plaintiffs' Exhibit No. 53 for identification.)

Mr. Alioto: We offer next a set of minutes of the Vanadium Corporation of America dated the 4th day of April, 1943.

(The minutes referred to were marked Plaintiffs' Exhibit No. 54 for identification.)

Mr. Alioto: We will now offer this in evidence, if your Honor please, to prove the nature of the combination existing from 1938 to 1949, and also to show the origin of the combination which existed during those years.

Mr. Holland: Same objection, your Honor.

(Testimony of Blair Burwell.)

The Court: Objection sustained. Exception allowed. [299]

Mr. Alioto: To complete the record on the examination of this witness, if your Honor please, I would like to offer at this point two documents of the Vanadium Corporation of America dated after January 1, 1938, and relating to the Gateway Alloys Company, around Gateway, about which this witness testified yesterday.

The Court: What are the dates?

Mr. Alioto: I will give those to your Honor.

Mr. Holland: No objection from Vanadium Corporation.

Mr. Alioto: The dates, if your Honor please, are October 22, 1939, and October 3, 1938, and you recall the witness gave some testimony about this Gateway Alloys Company in the years 1938 and 1939. These are documents from the other company relating to the same matter.

We will offer these two documents in evidence, and respectfully ask the clerk to mark them as one exhibit.

(The documents referred to were marked Plaintiffs' Exhibit No. 55 for identification.)

Mr. Alioto: They are offered against the Vanadium Corporation of America at this time.

Mr. Archer: I would object, your Honor. Some of them refer to their comments about our company. I am sure I can understand why Mr. Holland does not object to their calling us names, but I

(Testimony of Blair Burwell.)

would object to their going into [300] evidence on any basis.

The Court: What are they?

Mr. Alioto: If your Honor please, the Brown mentioned there is the Brown connected with the Gateway Alloys about which the Court heard testimony yesterday. [300-A]

Mr. Archer: There is only one to which I am objecting and I don't know which one it is on.

Mr. Alioto: I think it is the second one you are objecting to.

Mr. Archer: They are both marked as one exhibit.

Mr. Alioto: Well, I will segregate the exhibits if there is going to be an objection to one only.

The Court: The objection will be overruled. Exception allowed. I don't see the materiality.

Mr. Alioto: Well, we will tie it in later on. This is one of the sources of supply where the plaintiff company that devolved later on, if your Honor please. It will be tied up.

The Clerk: Plaintiffs' Exhibit 55 admitted and filed into evidence.

(The memo, October 22, 1939, from Robert Sterling to Frederick F. Kett, marked in evidence Plaintiffs' Exhibit No. 55.)

[See Book of Exhibits.]

Mr. Alioto: We have no other questions at this point, if your Honor please, but I would like the opportunity, in chambers, as Mr. Holland suggests, to make a rather extensive offer of proof on addi-

(Testimony of Blair Burwell.)

tional testimony that this witness would give on the combination charged here covering the period prior to 1938; it being our contention that this detailed offer of proof will show on its face that it relates to the same [301] agreement that was in existence between '38 and '39 and explains the nature of the component parts of that agreement. So I would like to conclude my examination of the witness now and respectfully request the Court to give me that opportunity to make an extended offer of proof, for the record, in chambers or any other place the Court desires.

The Court: Very well.

Mr. Holland: Do you want these (indicating documents)? We object to this.

Mr. Alioto: We will offer into evidence the document that I have just received from—that I have just handed to Mr. Holland for his inspection—being documents dated June 26, 1940, and September 12, 1939.

Mr. Holland: To which we have no objection, your Honor.

The Court: Very well.

The Clerk: Plaintiffs' 56 admitted and filed into evidence.

(Memo, September 12, 1939, from Frederick F. Kett to Robert Sterling, received into evidence and marked Plaintiffs' Exhibit No. 56.)

[See Book of Exhibits.]

Mr. Alioto: Now, this document, if your Honor please, the Vanadium Corporation of America, en-

(Testimony of Blair Burwell.)

titled "Vanadium Bearing Raw Material," is a breakdown of Peruvian ore and its uses and certain processes concerning it for the years '35 to [302] '39, so that there are two years in the scope of your Honor's ruling and three years out of it, but it is one document, and I don't know how it can be segregated, but I think if your Honor looks at the nature of the document that it will——

Mr. Holland: We object to anything prior to '38. If you want to confine this case to '38 on—because that is a summary of what happened from '35 to '40.

Mr. Alioto: To '40. See, it includes some years in and some years are out, but it is a summary about uses, if your Honor please, and statistics——

Mr. Holland: Statistics for those years that your Honor has ruled are not material to this case.

The Court: Well, it may be admitted, but excluded therefrom will be all reference to prior to 1938.

Mr. Alioto: All right.

The Clerk: Plaintiffs' Exhibit 57 admitted and filed into evidence.

(Document "Vanadium Bearing Raw Materials" 1935-1939, received in evidence and marked Plaintiffs' Exhibit No. 57.)

Mr. Alioto: (Following comment between counsel outside of hearing of reporter) I think perhaps we can agree on a process of doing that, Mr. Holland. I don't see any difficulty on that.

I take it that my concluding the direct exami-

(Testimony of Blair Burwell.)

nation is subject to my right to make the offer of proof? [303]

The Court: You may recall this witness for other purposes. Very well.

Cross-Examination

Q. (By Mr. Archer): Mr. Burwell, I believe that it is your testimony that in 1938 at Uravan the United States Vanadium Corporation had approximately $1,250,000 invested in fixed assets in the vanadium oxide plant, is that not correct?

A. I think that's approximate.

Q. And approximately $1,400,000 invested in mines and development work at that time?

A. No. I think the entire investment in mines and plants was somewhere between one million, $1,400,000.

Q. $1,400,000 for mines—— A. And——

Q. ——and the equipment?

A. They were not segregated.

Q. How many tons a day was the Uravan plant capable of producing in 1938?

A. Approximately 250 tons a day.

Q. What in your opinion was the most economical size of a plant for producing vanadium oxide in 1938 and 1939?

A. The most economical size would be the largest possible mill you could build, maybe a thousand, two thousand tons a day, as now exists, Mr. Archer.

Q. That's right. Now—and then you would reach

(Testimony of Blair Burwell.)

a point on the lower side below which a plant would be uneconomical, is that correct?

A. No, that is not technically correct because you might have a very rich ore and you could use a very inexpensive plant and you come out with the same end cost.

You might have a very poor ore and require a very expensive plant to come out with the same cost.

So the relevancy there is the kind of ore that you had to treat. For instance, as Mr. Holland brought out, the early V.C.A. plant treated ore running about 20 per cent vanadium. The early investment was significant, 20, 25 thousand dollars. But when the ore became weaker and the high-grade ore was gone, then many hundreds and hundreds of thousands of dollars had to be put to get a same end result on the cost.

Maybe I am over-belaboring this point, but it is not a fixed thing, Mr. Archer. It is dependent upon the richness of the ore.

Q. Well, speaking of a sustained operation from 1938 to, say, 1946, sometimes you had richer ores and sometimes you had poorer ores, is that not correct?

A. Some mines and some mining districts had a proportion of richer ore. Some mines had a proportion of leaner ore. Therefore, the early mines were very small and they worked on very rich ore and they came out with the same cost, the same numbers. [305]

(Testimony of Blair Burwell.)

Q. And when the ore was exhausted, they would no longer be economical, would they?

A. When the higher grade ore would begin to be exhausted, then more and more investments were put in for larger plants, more efficient plants, to make up the deficiency in the richness of the ore. So, it is not a fixed thing, it is a continually moving thing.

Q. In about 1938, from '38 to '44, your ore averaged about two per cent vanadium oxide, is that not correct? A. I think——

Mr. Alioto: The entire area or restricting that——

Mr. Archer: I am talking about Uravan.

A. The ore varied between three and three and a half per cent and one per cent, and an average of about 1.8.

Q. 1.8 per cent. Now, what kind of a system did you use for making vanadium oxide out of the vanadium ore, in 1938 to 1946?

A. We used a salt roasting process where the ore was mixed with salt and heated at red heat, and the vanadium was then made soluble by the action of the salt and the heat and separated from its worthless gang and the uranium, and then recovered by other methods from there on.

Q. But this method alone would not produce any uranium oxide, would it? [306]

A. It would, if the leaching solutions were alkaline, had sodium carbonate in it, which was a method used by the Vanadium Corporation later.

(Testimony of Blair Burwell.)

Q. Would it require additional work to make a uranium oxide plant to produce uranium oxide from the same plant?

A. Well, yes. Although the vanadium extract plants could be partially modified so that in the process of extracting the vanadium in the solutions, in the water, you would also extract a portion of the uranium in the water. That water then is separated and the uranium and vanadium, but that, of course, requires an additional plant that you—an auxiliary plant to recover a portion of it. That was used by the Vanadium Corporation of America but not by the U. S. Vanadium Corporation.

Q. At the time when uranium then became valuable and you were processing the carnotite and roscoelite ores, but particularly the carnotite ores, the economical plant then would be required to process both vanadium oxide and uranium oxide, is that not correct?

A. Why, of course an economical plant is required for anything you do, Mr. Archer.

Q. Well, that is what I mean, but you couldn't just buy the ore and process vanadium oxide and compete with a plant which from the same ore was processing both vanadium oxide and uranium oxide, could you? [307]

A. You're in a technical question, would you please repeat that so I could give you the accurate answer?

(Question read by the reporter.)

(Testimony of Blair Burwell.)

A. Yes, you could.

Q. (By Mr. Archer): Would you explain how you would do that?

A. Yes, you might have a very rich ore; you could be processing for vanadium and you could compete with another plant that was processing both vanadium and uranium of higher grades. It's a matter of relevancy as to the ore supply. The key in all of this, Mr. Archer, is the richness of the ore supply and the processing plant is simply something that is fitted to the economic problem of the ore. The ore controls. Therefore, you can't say that the tail wags the dog or the plant controls the industry. The ore controls the industry.

Do I make myself clear?

Q. Yes. So that it would depend upon the kind of ore. But if both plants were operating from the same kind of ore, the plant which was processing both vanadium and uranium would be a more economical plant, would it not?

A. If there were the same grade, the same richness, the same impurities and the same costs of ore, you would be correct. But never did those same duplication factors arise. They don't exist.

Q. In your testimony this morning you referred to the [308] Mesa Vanadium Mill down at Disappointment Creek, did you not?

A. That's right.

Q. You couldn't recall the lawyer's name who was in on that with Mr. Claybaugh, but his name was Charles Holmes, was it not?

(Testimony of Blair Burwell.)

A. That's right.

Q. He is still living now in Grand Junction, Colorado? A. I believe he is, yes.

Q. Now, this vanadium mill that you were talking about, could fit in this room, could it not, it could fit in about half of this room? A. No.

Q. How much bigger?

A. Well, I think there were two or three acres where they received the ore, had scales, they had outside tanks, they had a little pan, they had a coal pile. I have been there many a time, Mr. Archer, and I don't think you could——

Q. I realize the land—but I am talking about this roaster where they made the vanadium oxide.

A. Well, the roaster that they made the vanadium oxide probably would go between this wall and over to where the partition is.

Q. In your knowledge you had acquired of the Loma mill, which was operated by Messrs. Morrison and Ackerman, did you acquire knowledge of the litigation between Morrison and Ackerman?

A. Well, no. I heard that there was some litigation but I didn't inquire about that. I didn't know anything about it.

Q. You didn't know the basis of that litigation.

I believe that it is your testimony that in 1938 and 1939 it was your opinion that the price of ferro-vanadium should have been reduced to $2.25 per pound?

A. That's correct, Mr. Archer.

Q. This is what you testified to yesterday; on

(Testimony of Blair Burwell.)

Monday you testified, at this time, that it was $2.50, and at that time you were speaking of prices of $2.90 to $3.10? A. That's correct.

Q. And you found out overnight that the prices were $2.70 to $2.80 and $2.90. And so now it is your testimony now it should be $2.25?

Mr. Alioto: I believe the record speaks for itself. There is no reason to make an argumentative summary of the record.

The Court: This is cross-examination. Proceed.

Q. (By Mr. Archer): What I am getting at, all I want to say, Mr. Burwell, that when the prices came down from the $3.00 prices to the $2.70, 2.80, 2.90, you revised your opinion from $2.50 to $2.25, isn't that correct?

A. No, I think the record of my previous statements in this regard were based upon $2.25 vanadium—the price of [310] ferro-vanadium varied from $2.50 or $2.60 and later on I think to $3.10, but you must recall this is a little while ago.

Q. That is what I am getting at.

A. And, however, I can tell you the arithmetic that governed this, which was regardless of the price, end price at the moment. You see, Mr. Archer, it takes two pounds of the oxygen and the vanadium together to make one pound of the metal, allowing for losses, and so the metallurgists, myself, use a convenient kitchen arithmetic. We just take the price of the oxide, the vanadium oxide, and multiply it by two. That means if it cost 40 cents to make the red cake, the fused oxide, multi-

(Testimony of Blair Burwell.)

plied by two, the vanadium metal or the vanadium, that is, will cost 80 cents, and that we knew that the ordinary cost of reducing it to the ferro vanadium by taking one pound of aluminum per pound of vanadium, which is 25 or 30 cents, and the labor, which was 10 or 15 cents, amounts to 50 cents.

So conveniently you could add to the 80 cents of vanadium your cost, 50 cents, which I believe is $1.30 a pound of vanadium metal in the product that you are going to seek a market for.

Now, of course, you must have a profit on that. You must pay your sales costs. But the profit and your sales costs must be tailored to the needs of the customer.

Therefore, between $1.30 and $2.60, or $3.10 or [311] whatever it is—isn't particularly relevant—as long as you know that you can produce it at a price well under $3.00 or $2.60. Therefore, if the price of vanadium was $2.60, you would have $1.30 a pound of vanadium metal to pay the ferro alloy plant, to pay the profits to the mine, the miners.

Now, you could divide that any way you want, but it isn't relevant in this position to go to the end price. The relevancy is what it cost you to produce and how much you could afford to charge the customer for your profits. Now, that is a matter of your sales. You must understand what I mean.

Q. I may have misunderstood your testimony but, as I understand your testimony it was in 1938

(Testimony of Blair Burwell.)

that by reducing the price of vanadium, ferro-vanadium, to $2.25, you would enable it to compete with molybdenum in what we call engineering or constructural alloy steels.

A. Exactly so.

Q. Now, one of the functions of ferro-vanadium in constructional alloy or engineering steels is also to control grain size, is that not correct?

A. Now, Mr. Archer, it does a dozen things.

Q. I am just asking the one.

A. It controls grain size, as one of the functions. You are correct.

Q. Now, in 1938 and '39 what was molybdenum selling for? [312]

A. In what form, Mr. Archer? There are a number of forms of molybdenum.

Q. In the form in which it was used in constructional alloy steel by the steel makers.

A. Well, you have to—there is—it's sold as ferro-molybdenum; it's sold as calcium molybdate, and it is sold as molybdic oxide.

Q. What was ferro-molybdenum selling for?

A. Well, I don't recall offhand. You will have to excuse me for not being a walking statistician, but I believe the price of ferro-molybdenum and ferro—ferro-molybdenum was somewhere around one fifty, one seventy-five a pound of molybdenum contained.

Q. Did ferro-vanadium in the period commencing 1938 also meet some competition from alumi-

(Testimony of Blair Burwell.)

num in constructional engineering and alloy steels in controlling grain size?

A. Only to the limited extent as concerns one of the qualities of vanadium. That was grain size. But, of course, that was only one of about twelve other qualities that was involved in it.

Q. And what was aluminum selling for in 1938-39?

A. I think around 25 cents a pound, somewhere in there.

Q. Mr. Burwell, referring to this chart which has been marked Plaintiffs' Exhibit 27, and these corporations, you were only an officer of the United States Vanadium Corporation, [313] isn't that correct? I mean—I don't say "only an officer." I don't mean it that way, Mr. Burwell. I mean that of these corporations, the only one of which you were an officer was the United States Vanadium Corporation?

A. In this period of time to 1947?

Q. 1939 to 1946.

A. No, I was also an officer of the Union Mines Development Company.

Q. Union Mines Development Company, which is not on this chart, is it?

A. No, it is not on this chart.

Q. No.

A. But it was a Union Carbide and Carbon Corporation company.

Q. That's correct.

(Testimony of Blair Burwell.)

A. The fact that it wasn't on the chart isn't particularly relevant.

Q. No, not at this point, at any rate.

But you weren't an officer of Electromet Sales or Electromet of Canada? A. No.

Q. You weren't an officer of the parent company? A. No.

Q. You became an officer of United States Vanadium Corporation in 1944, you became a vice-president when Mr. Van Fleet became president, isn't that correct? [314]

A. Somewhere around that time. The record speaks for itself.

Q. Now, prior to 1944 who had been the president or who had been the president of the United States Vanadium Corporation, between 1938 and 1944?

A. I think the record would state. My recollection is that Mr. Haggerson was president at the time, Mr. Fred Haggerson.

Q. Now, neither Mr. Haggerson nor Mr. Van Fleet is living at the present time, are they?

A. Unfortunately, no.

Q. What was your position in the Union Mines?

A. Union Mines Development Company?

Q. Union Mines Development Company. Is it company or corporation? I'm not sure which. Whichever it is.

A. I believe I was a director and a vice-president.

Q. And who was the president, Mr. Van Fleet?

(Testimony of Blair Burwell.)

A. Mr. Van Fleet.

Q. Mr. Burwell, I hand you—I want to refer to these exhibits, they are Plaintiffs' Exhibits 33 and 34. These are the exhibits. The first one, Exhibit 34—I guess we will take 33, it is the earliest—. That is from Mr. Van Fleet to Mr. Burwell, September 14, 1938, regarding outside vanadium ore production. And Exhibit 34 is dated just five days later, from Mr. Van Fleet to Mr. Gormely, copies [315] to Mr. Swain and Mr. Sneath regarding competitive vanadium ore production.

A. That's correct.

Q. And I believe you testified that—you said that these were your instructions about acquiring competitive ore and claims.

A. Yes, that's right.

Q. Now, referring first to Exhibit 33. If you will notice in the third paragraph it states:

"In this respect I have had some correspondence with King * * *"

King was Mr. Haldane, who was under you.

"* * * about the application made by Balsley and Kipe for a freight rate on vanadium ore to Castletown, New York, where it is claimed the ore will be reduced. We cannot get any line on this plant here and at Castletown there is no plant now available for this kind of work."

Well, Balsley and Kipe were not members of the United States Vanadium or employees of Union Carbide, were they?

A. No, they were independent miners.

(Testimony of Blair Burwell.)

Q. And what about this plant at Castletown, did you know anything about it in 1938?

A. I don't remember at this time. I don't recall anything about Castletown. [316]

Q. You don't recall anything right now?

A. No.

Q. Do you recall that they refined flue dust there and made vanadium oxide, does that refresh your recollection? A. At Castletown?

Q. At Castletown.

A. No, I just don't recall, Mr. Archer.

Q. So in your investigations of your competitors, you do not recall investigating the Castletown Manufacturing Company, do you?

A. No. That was in the East, Mr. Archer.

Q. I see. Now, refer to Exhibit 34, Mr. Burwell, which——

The Court: Just a minute. We will take a few minutes' recess.

(Short recess taken.) [317]

Mr. Archer: Shall I proceed, your Honor?

The Court: Very well.

Q. (By Mr. Archer): What happened to Exhibits 33 and 34, Mr. Burwell?

A. They are right here, Mr. Archer.

Q. I show you now Plaintiffs' Exhibit 34, Mr. Burwell. This is a letter dated September 19, 1938, from Mr. Van Fleet to Mr. Gormely, which makes reference to competitive vanadium ore production, does it not? A. That is right.

Q. You have already testified that you did not

(Testimony of Blair Burwell.)

purchase the output of the Vitro Manufacturing Company, isn't that correct? That is the first one referred to.

A. I don't recall the testimony, Mr. Archer, about purchasing the Vitro Manufacturing output. I don't recall that.

Q. Do you recall whether you did or did not purchase it?

A. Do you mean the output of fused vanadium oxide?

Q. That is right, from Vitro.

A. No, I don't think we purchased it, to the best of my knowledge.

Q. Subsequently, during the war period, do you recall that they processed an Otavi ore for the Metals Reserve Company, or did you have anything to do with that?

A. I think they did. I just knew of that casually, and not of my own direct knowledge. [318]

Q. The next two companies are the Shattuck Chemical Company and the North Continent Mining Company. That is really the same company, isn't it? I think it is on the second page of the exhibit.

A. Well, yes and no. The North Continent Mining Company was separate from the Shattuck Chemical Company. They delivered ore to the Shattuck Chemical Company for awhile, and then later there was some separation of the companies. I don't remember.

(Testimony of Blair Burwell.)

Q. North Continent had its own oxide plant after that, isn't that correct?

A. I think that is true. I think they started the North Continent Mining Company mining richer ore and shipping it to the Shattuck Chemical Company, and then later on they built their own plant at Slick Rock.

Q. You did not buy their production of vanadium oxide, did you?

A. No, we bought their production of ore.

Q. The Metals Reserve Company?

A. I believe—I am not too clear on it, but I believe U. S. Vanadium bought some of their ore directly.

Q. Yes, I think they did, but most of the ore that was bought from North Continent was bought for Metals Reserve, particularly prior to 1944?

A. I don't remember the proportion, Mr. Archer. I think [319] we bought twenty-five, twenty-eight hundred tons of high-grade ore from North Continent for U. S. Vanadium Corporation.

Now, there was additional ore purchased for the Metals Reserve about the same time, and then following that we purchased the ore for U. S. Vanadium Corporation at Durango.

Q. Then the next company on here is the Mammoth mine in Arizona, which was associated with the Molybdenum Corporation of America, is that not correct?

A. Well, it just says "Miscellaneous," Mr. Archer.

(Testimony of Blair Burwell.)

Q. I think you have to turn to page 2. They have it underlined, or Mr. Van Fleet has it underscored in the letter.

A. Yes. What is your question about it?

Q. The production from the Mammoth mine went to the Molybdenum Corporation of America, is that not correct?

A. I don't know that that is correct.

Q. You do not know one way or the other, is that right?

A. The vanadium in the ore concentrates produced I do not believe went to Molybdenum Corporation.

Q. Or did it go to Vitro?

A. I believe it went to Vitro, and it is possible that the molybdenum, after separation, went to the Molybdenum Corporation.

Q. I think my recollection fails me. I believe you did testify it went to Vitro, Mr. Burwell.

A. I am not sure, but I think that is the case, Mr. Archer. [320]

Q. If you will turn to page 3, we come to the Anaconda Copper Company. A. Yes, sir.

Q. You will notice in the second paragraph there on page 3 Mr. Van Fleet states:

"They expected to be producing vanadium this year after installing equipment costing about $200,000, but they did not feel inclined to proceed with this expenditure this year. I imagine when business is better they will begin producing fused oxide. It is estimated that this plant will produce ap-

(Testimony of Blair Burwell.)

proximately 100,000 pounds of V_2O_5 yearly, and we have agreed to purchase the output."

Do you recall testifying yesterday, when Mr. Alioto asked you about this, that in September, 1938, you had a large inventory of vanadium oxide? Do you recall that?

A. That is correct.

Q. You did not mean to imply in your testimony yesterday, though, that you had purchased the Anaconda Copper Company's output in 1938, did you?

A. Well, I believe we purchased it in 1939. I am not sure when we started purchasing, but I remember that Anaconda was beginning to produce in 1938, and I was at their plant at Anaconda at that time and went into the question of design [321] with Mr. Frick, their chief metallurgist, and instead of producing fused oxide, which would involve an expensive plant, we assisted—I and our engineers—in making a plant to produce just red cake.

Q. That is the red cake (indicating)?

A. That is right.

Q. The intermediate?

A. And we proceeded to move the red cake to Rifle, or to wherever we desired to convert it——

Q. You moved it to Rifle——

Mr. Alioto: Wait a minute.

I do not think he should interrupt the witness in the middle of a sentence.

(Testimony of Blair Burwell.)

Mr. Archer: I beg your pardon.

I think the answer has gone away beyond my question, but you can finish your answer. Go ahead.

The Witness: Would you review your question?

Q. (By Mr. Archer): I was just asking whether or not you bought their production in 1938.

A. But I don't recall as to when we began to buy the production.

Q. Now, my second question is: They never produced fused oxide, did they?

A. They produced red cake. [322]

Q. (By the Court): What?

A. They produced red cake.

Q. (By Mr. Archer): That is the intermediate product?

A. That is right. Because it cost a great deal of money to make the fused oxide from the red cake.

Q. And the red cake was processed, as you started to say, at Rifle, wasn't it?

A. That is right.

Q. And when did Rifle go into operation, Mr. Burwell? A. I believe 1940 or 1941.

Q. 1941, wasn't it?

A. I am not sure. But we processed red cake, or received red cake, at other plants, too, before that. You see, we processed red cake at Uravan. I am not sure whether this went prior to that to Uravan, or whether it went to Niagara Falls. We were using red cake for manufacturing ammonium meta vanadate, another salt, and I believe we used

(Testimony of Blair Burwell.)

the dry red cake for other purposes than making fused oxide. So the record as to where we used the red cake from Anaconda, we used it for two things: We used it for making fused oxide, and we also used it for making ammonium meta vanadate, a catalyst in which red cake is ideally suited. That manufacture amounted to 100,000 pounds a year, and was carried on at either Niagara Falls or the old [323] Rifle plant which was rebuilt in 1941. You see, a Rifle plant was actually built in 1926, so we still had a plant site and equipment there part of the time.

Q. But it was not operating?

A. No, it was not operating. That is the roasting plant. We also had at Uravan a plant for making vanadate, and I do not recall the details of where all this went at that time.

Q. I was trying to establish the date when you purchased it, Mr. Burwell.

Mr. Alioto: Exhibit 14 shows the date, Mr. Archer, if you want to use it.

A. That is in the record, I believe, as to the date they purchased it, and I wouldn't trust my memory at this time.

Q. (By Mr. Archer): Referring to Exhibit 34, Mr. Burwell, the one that you have in your hand, the next competitive ore produced, or referred to, is the International Vanadium Corporation, a lead vanadate property at Dripping Springs. This operation failed because it was uneconomical, was it not, Mr. Burwell?

(Testimony of Blair Burwell.)

A. That is what Mr. Van Fleet says. I did not have any direct knowledge of this operation.

Q. In regard to the Gateway Alloys plant, which you showed to the jury here at Gateway, the Gateway mill was originally run by Brown and Bowman, was it not? It was built by Harry Brown, Jr.?

A. It was built by Harry Brown, Jr., and operated by Harry Brown. Mr. Bowman was a banker.

Q. Mr. Bowman was a banker. And they mined the Calamity claims, and the Outlaw, and the Maverick claims, did they not—what we refer to as those claims? A. That is right.

Q. And those claims were owned by the Molybdenum Corporation of America, were they not?

A. That is right.

Q. And Harry Brown and Mr. Bowman contracted to purchase those claims from the Molybdenum Corporation, did they not?

A. I think that is right.

Q. And they started their operation at Gateway? A. Yes.

Q. The question I wanted to ask was, I believe you testified yesterday that U.S.V., United Vanadium, your company, mined those claims in 1939, and that the Gateway Alloys plant failed in 1940. I want to suggest now, wasn't it just the reverse? Didn't they operate in 1939 and come to you in the spring of 1940 and ask for some assistance?

A. Well, now, the dates and sequence are approximate. I think in my testimony I qualified that.

(Testimony of Blair Burwell.)

You have to be a bit merciful. This has been a long time ago.

Q. I understand completely.

A. But I think it might have been one way or the other. [325] The sequence was approximately as you stated.

Q. That is right. So in 1939 this was a period of foreign sales of vanadium oxide they were operating? In other words, the foreign countries were tooling up, and we had not gotten into the war production as strongly as we got into it later on. That is correct, isn't it?

A. Yes. I didn't know where their sales went.

Q. Oh, you didn't know?

A. In fact, they didn't make very many sales, Mr. Archer.

Q. In the spring of 1940 you do recall that the administration in Washington began to curtail foreign shipments of vanadium oxide, and finally put an embargo on them completely in July of 1940, do you not?

A. I don't know that of my own knowledge. I think that is a matter of record. If you state that is the case, that is probably it.

Q. When Harry Brown came to you in regard to mining the Calamity and Outlaw claims, didn't he tell you that he was behind on his payments to the Molybdenum Corporation of America, and ask you to take over the lease for a year and make the payments, to see how they could go—say that the claims would stay in his control?

(Testimony of Blair Burwell.)

A. Yes, that is right.

Q. And so then you mined for a year, until 1941, and you turned it back? [326]

A. That is right.

Q. And it was subsequent to that time that Mr. Nisely started to mine the claims and to operate the Gateway mill, isn't that right?

A. That is correct.

Q. Now, if you will look at the map there of Gateway around the Calamity and the Outlaw claims, there are many—the Maverick claim—there are many other vanadium ore resources up there in addition to those claims which the United States Vanadium Corporation mined, are there not, and they were there from 1938 to 1946?

A. Well, you are asking me a question about other vanadium claims. Will you tell me which vanadium claims you are referring to?

Q. There are many others. There is the Arrowhead group, is there not?

A. Arrowhead was not developed and known to contain any ore at that time.

Q. But it was developed subsequently to that time?

A. But it had no ore. It was not known to be a mining claim. There was even a question of title on the Arrowhead claim at that time, because there was no ore, just a scratch in the sage brush, and there wasn't anything showing.

Q. You mean you had not discovered the ore there?

(Testimony of Blair Burwell.)

A. Yes. But you asked me—— [327]

Q. I will withdraw——

A. If there are claims known to be vanadium-bearing and having vanadium.

Q. I think I said known claims. I do not mean known claims. I am saying that there were vanadium resources there, known or unknown, discovered or undiscovered, in addition to the Calamity, Outlaw, and Maverick claims, in 1938?

A. I can't testify as unknown and undiscovered claims and answer your question in this court, Mr. Archer.

Q. I am not asking you whether you knew about them then.

A. Would you repeat your question?

Mr. Alioto: He is asking him what he knows now as compared with what he knew then. As long as we are speaking about the time——

Mr. Archer: My purpose is to show that in the area of the Gateway mills there is, and has been throughout this entire period, a large supply of vanadium ore.

Mr. Alioto: Your question includes undiscovered.

The Court: You can ask him that question.

The Witness: You see, what you are trying to ask me, Mr. Archer,—and I will try to answer it—to a certain extent I see your point. Surely the area up on these mesas contained vanadium-bearing formations. Its potential was quite extensive. Later I made an appraisal of this area. This ore was tributary to the Gateway mill. And I believe my

(Testimony of Blair Burwell.)

later appraisal, to give you pretty close figures, which I made for the Department of Justice in the Union land case, was a hundred and sixty some thousand tons of vanadium ore and five or six million pounds of vanadium oxide. But, Mr. Archer, the ore that was contained in those areas is under deep burial and could not be mined competitively at that time.

Now, the ore that Harry Brown was mining, and the immediate ore that could be mined to make the plant work, was the ore that was laying close to the surface and in pits, that any man with a shovel and a strong back could walk up there, load it into a truck and take it away. There was probably fifteen or twenty thousand tons of cheap available ore just lying right on the surface in the Calamity properties that Mr. Brown was trying to operate.

Back of those claims, under the Arrowhead and under deeper cover—and they are still mining them—there was other ore, but it would cost a great deal more, and you couldn't get into that property unless you started in through the edge of the rim.

So all we did to help Mr. Brown out and offer to take care of the situation in controlling the district, which were my instructions and which I carried out, was to take all of the surface ore that was available that could be economically taken down to the Gateway plant, and to do that—you apparently know something about that region—we built a road, not [329] down to Gateway; we built a road up the other side, that went down to Mesa Creek, with

(Testimony of Blair Burwell.)

bulldozers and graders, which was of no use to the Gateway plant, but over that road we cleaned up all the surface available ores on the claims that bordered the top of the mesa, so when we were through we had all the available cheap ore that could possibly be used to implement a small plant.

Now, later on, when you get into a different phase, where the high-, rich-grade ore is exhausted, then you can go into deeper digging and more venture, and then the thing becomes economic under a new pattern. That is what exists today. That region today is producing about $15,000,000 worth of uranium and vanadium.

Q. But it takes a lot of money to develop it, doesn't it?

A. It takes a progressive amount of money. I mean, you start with a high-grade ore on the surface and maybe a little plant, and then, again, the development of these things is a progressive one. After you have the ore that runs two or three percent of vanadium on the surface that can be mined for $1.50 or $2.00 a ton, and hauled to the plant for maybe three or four dollars more, after that you have to begin looking for the stuff in deeper areas. That cheaper ore can go into a pot-sized plant, and maybe you can make some money on it if you have a plant and the cheap, rich ore on the surface. But later on, as you exhaust that area, then it comes to the [330] question of rolling up your sleeves and putting in a million-dollar plant. And, as a matter of fact, that is just exactly what happened later

(Testimony of Blair Burwell.)

on in that particular area. But the control of the whole thing is the available ore on the surface.

Q. At the time you made the agreement with Harry Brown and Mr. Bowman to mine these claims for a year you considered that it was a favorable purchase of ore for the United States Vanadium Company, did you not?

A. Assuredly, or we would not have done so.

Q. Regardless of whether you were keeping it out of competition?

A. Regardless of what we did, we did it for the good of the policy of the company.

Q. It was an economical thing so far as the ore was concerned, wasn't it?

A. The policy of the company had two phases: One was the economies of the moment, and the other was the projected economies of the future. We were always doing something. We might mine ore that cost us more money than it was worth at the moment, to start an operation, because five years from then we knew the ore would become valuable. This is the strategy of all mineral deposits. [331]

Q. In other words, there were good, sound business and engineering reasons for mining those ores at that time?

A. Of course good, sound engineering and business reasons, and reasons for the future. Even then you were looking at uranium from that far, that was one of the richest uranium areas in all the early days. And in '39 we had already had the knowledge that there was going to be something for

(Testimony of Blair Burwell.)

uranium because it was 1939 when the first breakthrough on uranium occurred in Germany. If you will look at your records.

Q. Now, you also testified yesterday in regard to Dry Valley in the Monticello area, you recall that? A. Yes, I recall testifying.

Q. Are they on this map?

A. I think I pointed that out to the Jury, Mr. Archer; I believe it was over across the state line into Utah, about where my finger is pointing, and I think maybe 75-80 miles from Uravan and this other operation in Colorado.

Q. Now, the Dry Valley claims were also originally owned by the Molybdenum Corporation of America, were they not, or a part of them, the ones you were referring to yesterday?

A. They were owned by many, many people in the course of their ownership.

Q. Let's say——

A. About that time you're——

Q. ——in 1938, Molybdenum Corporation had it? [332]

A. They acquired it from Floyd Ackerman.

Q. And then the next person who acquired them was Leverett Davis from Salt Lake City, Vanadium Products Corporation?

A. That may be the case. The record speaks for itself. I think he did—there was a man who was trying to make an operation over there. I believe that's the name.

Q. He had some tie-up with this fellow Balsley

(Testimony of Blair Burwell.)

that we have referred to, the independent operator, did he not?

A. I don't recall, but that could easily be.

Q. Well, don't you recall, however, that you and Mr. Van Fleet bought these claims, some claims, in Dry Valley? A. We acquired them, yes.

Q. Well, didn't you acquire them from Mr. Balsley and from Leverett Davis?

A. We acquired them from whoever had the title at the moment. But the underlying ownership, just like over in Gateway, rested with the Molybdenum Corporation, and—whatever the record is, Mr. Archer. I believe you—you probably are correct, that Mr. Balsley—I believe I discussed it with Mr. Balsley, and now that you refresh—our engineer, Mr. Emigh, investigated the properties when they were held by Mr. Balsley under a leasing arrangement, much the same as the other side of the state line.

Q. And Mr. Emigh, his name is spelled E-m-i-g-h, is that right? [333]

A. That's right. He was one of our mining engineers in U. S. Vanadium Corporation. Now with Monsanto.

Q. And he was one of the New York employees who was in charge of the metal reserve program, wasn't he? A. No, he wasn't, no.

Q. Wasn't he under you in regard to that?

A. No. Mr. Emigh was working under me at that time or delegated to our operation at Uravan.

(Testimony of Blair Burwell.)

Q. Oh, at that time. I guess I was too early. But——

A. Later on he did some work. I mean, the task of those engineers was shifted from one to the other. There was really no dividing line as to their work or their responsibility.

Q. Well, to go back to this time when you acquired the Dry Valley claims from Leverett Davis and Mr. Balsley, you recall that Balsley and Leverett Davis came to a disagreement and that Balsley came in to see you and said that Leverett Davis had gone east to see Vanadium Corporation?

A. You say so. I don't know.

Q. I wonder if you recall it.

A. I don't recall it.

Q. I show you a copy of a telegram from Blair Burwell to J. R. Van Fleet dated March 10, 1941, and ask if that refreshes your recollection—if you can identify the telegram and whether it refreshes your recollection as to the occasion when you acquired the Dry Valley claims? [334]

A. (Witness examining) Yes. I think this does, does state something along that connection with relationship to your question. I just can't at the moment identify—let me read this again (witness examining). I can't get the date on this, Mr. Archer.

Q. Let me see if I can help you.

A. (Witness examining.)

Q. It looks—it says 1941—— A. 1941.

Q. And then March the 10th.

(Testimony of Blair Burwell.)

A. (Witness examining his briefcase) Excuse me. Let me just check something here. (Examining documents) I believe in 1938 we have a record of an examination of that property by Mr. G. Donald Emigh, and I have a file number in the Carbide files of that examination, which was at Mr. Balsley's—that Mr. Balsley was named as the man that he saw.

Now, if I could—don't fumble around too much, I could find that reference.

Q. (By Mr. Archer): I'm thinking of the time when United States Vanadium Corporation took over these claims.

A. Well, the date on that, I am confused. The date looks different from the telegram.

Mr. Alioto: That is March 10, 1941?

Mr. Archer: March 10, 1941.

A. Whatever the record is. If that is the record, that's it. [335]

Mr. Archer: Could I have this letter marked in evidence, this telegram?

Mr. Alioto: We have no objection.

The Clerk: Defendant's U, Exhibit A, admitted and filed in evidence.

(Whereupon, telegram dated March 10, 1941, Burwell to Van Fleet, was received in evidence and marked Defendant U's Exhibit A.)

Mr. Archer: I want to read part of this, your Honor.

It is from Blair Burwell to J. R. Van Fleet, dated March 10, 1941:

(Testimony of Blair Burwell.)

"Balsley Telephones Wants to Know if We Are Interested Dry Valley Stop Apparently Balsley Is In Disagreement With Davis Who Is In East Promoting Something Stop Will See Balsley Tomorrow and Advise You of Situation Stop"

Then, the rest is about railroad fares.

The Witness: Why don't you read the rest?

Mr. Archer: Has that something to do with it?

The Witness: It's pertinent.

Mr. Alioto: Yes, it certainly does. Read the last three lines—"This Plan Looks Increasingly Interesting"——

Mr. Archer: It says: [336]

"Railroad Will Establish Tariff On Ore If Requested Thompsons to Rifle Two Twenty Five Proportional From Cisco and Green River Stop This Plan Looks Increasingly Interesting Will Have Dickson Estimate For You On Rebuilding Roaster Leaving For Grand Junction Tonight."

Does that refer to Rifle or Dry Valley?

A. That refers to the Monticello plant, the whole Dry Valley situation that I was testifying here that resulted in so much acrimonious debate in the previous trial. It is very pertinent because, you see, this freight rate was being set up because after we had been denied the opportunity to build a plant at Monticello and use—in that area, because the water had been taken away from us by——

Q. By Mr. Holland's clients over there?

A. Why, we switched immediately—why, we switched immediately to double the capacity at Rifle

(Testimony of Blair Burwell.)

and move about 20,000 tons of stockpile ore that we had stockpiled in Monticello to Rifle, and at this time it was being done in a big jump to prevent Mr. Haggerson coming in and ruling that he be given that ore. That was the request, that we not only give the ore pile to Mr. Haggerson—to Mr. Bransome of the Vanadium Corporation of America—we were fighting this situation and that was an emergency freight rate which was set in operation in 48 hours to move ore into Rifle plant instead of [337] moving it into Monticello. So that there is a lot of story behind that telegram.

Q. That's right. Then it says——

A. A part of the conflict between these two companies, Mr. Archer.

Mr. Alioto: Which two companies?

Mr. Archer: Between which two companies?

A. The Vanadium Corporation of America and U. S. Vanadium Corporation.

Q. They were successful, though, in getting the plant at Monticello, were they not?

A. Yes, they had a little more success on the top side than we did.

Q. Mr. Burwell, you have testified here about various ore prices and how they were set. Do you recall in September, 1944, asking Mr. Robison to make a survey of the ore prices which had been used by United States Vanadium prior to that time?

A. Well, I probably did, if it is a matter of record.

Q. I show you what has been marked Plaintiff's

(Testimony of Blair Burwell.)

Exhibit 11. Part of this is V.C.A. exhibits which don't—I hope don't concern you. Here's your letter and here's the reply. They are already in evidence.

A. (Witness examining) Yes. Now, what is your question regarding this?

Q. The following letter is the reply—not the following, [338] those are the V.C.A.—. The first letter—these are somehow mixed up here, but this is his reply to your request for a survey of the ore prices.

A. (Witness examining) Yes, I think this letter—I know the people. Of course it was written.

The Court: What is your question?

Mr. Archer: I wonder if he could identify those letters. A. I just have.

Q. Is his reply correct as to the ore prices paid and how they were set by United States Vanadium?

A. At this moment I can't state if it is correct. It may be, but—I know the people. Now, Mr. Jack Robison—. What is the date of that letter?

Q. September, 1944.

A. Mr. Robison was general superintendent at that time. But he entered the employment of the company, I think, about 1940-'41.

Q. But you asked him to check with Joe Weston?

A. I asked him to check with Joe Weston. Now, maybe those figures are right, I don't recall.

Q. Well——

A. I presume that they are. I presume that they are.

(Testimony of Blair Burwell.)

Q. Wasn't this report to you made by your inferiors? A. That's right. [339]

Q. You didn't object to it, did you?

A. Well, I don't believe so. It would be——

Mr. Archer: Your Honor, I should like to read these two letters, if I may.

The Court: Very well.

Mr. Archer: The first is a letter dated September 14, 1944, from Blair Burwell to J. L. Robison, copies to W. G. Haldane—we have identified—and J. E. Weston.

"Dear Jack:

"We have recently been asked for a review of ore prices and ore buying arrangements since 1926 in Colorado."

We don't go back that far in the answer, though, your Honor.

"I wish you and Joe Weston would go over this and give me a summary of our past procedure in this connection. Joe can probably supply a great deal of information from his memory as to Uravan ore purchases beginning in 1936.

"It would be of value to make a running story of what range of prices existed and when changes occurred and the reasons for these changes of price."

This is the reply dated September 25, 1944, from Mr. Robison to Mr. Burwell, copy to Mr. Haldane.

"Dear Blair: [340]

"In reviewing the ore purchase records in Uravan V. P. Plant——"

(Testimony of Blair Burwell.)

That means vanadium paradox—correct?

A. Yes.

Mr. Archer: (Reading.)

"* * * and checking with Joe Weston, we submit the following information concerning ore purchases at Uravan.

"1. The earliest ore settlement found on record was for October, 1938. From October, 1938 to September, 1939, the purchase of ore was, in most cases, by special arrangement for individual purchases. Ore purchased on V_2O_5 contained was 17c per pound for 2% V_2O_5 ore, increasing one cent per pound for each per cent increase above 2%."

Then he goes through the scale of prices, which are here if some one of you want to read, you can.

The Witness: Doesn't he bring out the matter of hauling allowance?

Mr. Archer: I am getting to that—in one, yes. I have just skipped part of this paragraph on the prices.

"During this time, the ore which was being offered for sale was not considered greatly important due to the fact that the stockpiles were being increased by Company mining operations." [341]

A. That's right.

Q. (By Mr. Archer): In other words, during the period '38 through, let's say, '40, you got most of your ore from your company mines?

A. That's right.

Q. Actually, throughout the entire period of '46,

(Testimony of Blair Burwell.)

you always got most of your ore from the company mines on your own plants, isn't that correct?

A. That's correct.

Q. And that was what led to this 40c price on ore, isn't—I mean, 40c cost on oxide? In other words—— A. That's right.

Q. That's right. And you couldn't have had a 40c cost on oxide if you had been buying ore at 21c and 31c, could you? A. No.

Q. All right.

"2. By September, 1939, more ore was offered for sale and it seemed necessary to establish a regular market price. Attachment No. I lists the prices which were paid at this time.

"3. On January 1, 1941, we increased the amount paid to the sellers by paying 5c per ton mile in addition to the price schedule shown on Attachment I. In order to encourage production from mines located at such a distance from the [342] plant, transportation allowances were necessary for the continuance of these operations."

So you paid the miners, in addition to the cost of the ore, you paid them for hauling it to the various stations?

A. In some cases, yes. There were negotiated prices on varying locations, varying conditions.

Q. (Reading.)

"4. In June, 1942, an additional allowance of $1.50 per ton on ore delivered was added to the schedule Attachment I in order to meet competi-

(Testimony of Blair Burwell.)

tion with plants more favorably located to receive ore from south and southwest areas."

A. That was the Vanadium Corporation plant.

Q. So you put on the hauling allowance in order to meet the competition from them?

A. $1.50 was the difference between hauling ore from the Naturita plant down to the Uravan plant, because the highway—the road went through Naturita and went on down to the Uravan. Therefore, the $1.50 was just the differential between the two plants. I believe that was the case.

Q. And that was in order to keep the miners that were closer to Naturita—in order to get them to bring the ore up to you?

A. Well, most of those miners weren't at Naturita. They were 50 miles south or—— [343]

Q. In other words, to get them to haul past Naturita?

Mr. Alioto: Just a minute, Mr. Archer. I think you should let the witness finish his answers without interrupting him the way you have been doing here. I will object on that ground, if your Honor please.

Mr. Archer: I'm sorry, Mr. Burwell.

The Court: We have been generous now in permitting counsel. Don't interrupt.

Mr. Archer: I'm sorry, your Honor. Go ahead.

A. What is your question?

Q. (By Mr. Archer): I believe I had asked the question: The reason you paid the $1.50 hauling allowance was to get the ore from miners located

(Testimony of Blair Burwell.)

nearer to Naturita and you were saying they were farther south.

A. Yes, it was simply to make the same price at Uravan for a miner for his ore delivered as it was at the V.C.A. plant at Naturita 50 miles up the river.

Q. Did V.C.A. pay a hauling allowance?

A. Well, they, I believe, did pay a certain hauling allowance to Naturita later, Mr. Archer.

Q. I mean in June, '42.

A. You have got to give me a little help in your question.

Q. In June of 1942, at this time?

A. Well, I don't just offhand recall that.

Q. You don't recall? [344]

A. You are simply reading a letter of Mr. Robison's that records what the factual record was. Now, if it is beyond that letter, why, ask your question about it on the time and what hauling allowance and what distance, and I think I could help you.

Q. Well, specifically, it is stated in here that in June, 1942 an additional allowance of $1.50 per ton on ore delivered was added to the schedule.

A. I believe I covered your question.

Q. Then what I wanted to know was whether, at that same time, you knew whether V.C.A. was also paying that hauling allowance?

A. At this time, Mr. Archer, I just don't recall.

Q. You don't recall that.

The rest of the letter, if anybody wants to read

(Testimony of Blair Burwell.)

it, it recalls 1941 special purchases, Harold Stone——

A. Mr. Archer, in relationship to one of your questions—it will just take a swift minute. This study, this is correct. I recollect now the letter. The prices, as I said, being 16c in the early days, were based upon the man's mine and so we bought the ore at his mine. Now, whatever the price was, if it was 17c, it took 5c more to take it to Uravan. So when we talk two languages, we talk about price, we always considered in the office, in the administrative end of it, the cost at our ore bins; but what we might have paid the miner, 17c or [345] even 10c, if it was far distant at the location of his mine, then we paid the charges on the trucks to bring it. He didn't have to pay it. So there is a great deal of detail there that I think is really immaterial as far as the accuracy—I think around 21c delivered. It was just an approximation I testified to. And I think it is essentially correct.

Q. So that they had, then, to be altered to meet the conditions as they arose?

A. As I testified, to meet the conditions, the locations and the various positions of the miner.

The Court: We will recess at this time until 2:00 o'clock.

(Recess until 2:00 o'clock p.m.) [346]

June 4, 1958—2:00 O'Clock P.M.

Mr. Archer: May I proceed, your Honor?

The Court: You may.

BLAIR BURWELL

resumed the stand and testified further as follows:

Cross Examination—(Continued)

Q. (By Mr. Archer): Mr. Burwell, I think several times during your direct examination you referred to the Meta' Reserves Company. I hand you what purports to be an agreement between Metal Reserves Company and the United States Vanadium Corporation, dated February 25, 1942, and ask you whether you can identify that.

A. I can identify it.

Mr. Archer: I offer in evidence, your Honor, this agreement dated February 25th, 1942, between the United States Vanadium Corporation and Metal Reserves Company.

Mr. Alioto: No objection.

(The document referred to was thereupon received in evidence and marked Defendant Union Exhibit B.)

[See Book of Exhibits.]

Q. (By Mr. Archer): Mr. Burwell, this agreement is signed by G. Temple Bridgeman, Executive Vice-President for Metal Reserves Company. Were you acquainted with him? A. I was.

Q. He had never been employed by Union Carbide or its subsidiary, had he?

A. Not to my knowledge.

Q. And it is signed by United States Vanadium Corporation: by J. R. Van Fleet, whom we have already referred to.

Your Honor, I would like to read just a few of

(Testimony of Blair Burwell.)

these provisions. If anybody wants to read more, they can.

Mr. Alioto: What capacity did Mr. Van Fleet sign in, Mr. Archer?

Mr. Archer: Vice-president.

Mr. Alioto: Vice-president. Thank you.

Mr. Archer: (Reading.)

"U. S. Metal Reserves Company, Washington, D. C., February 25th, 1942.

"United States Vanadium Corporation.

"Re: Vanadium Agency Agreement.

"Gentlemen: In accordance with the recommendation of the War Production Board, we wish to proceed with the program for increasing the supply of vanadium urgently needed for war requirements, by producing vanadium from the non-commercial lead vanadate properties of the Southwest with which you are familiar. Accordingly we hereby appoint you our agent, subject to cancellation in our sole discretion upon one month's notice to carry out this program on the terms [348] set forth below.

"1."

The first paragraph relates to investigation.

The second paragraph:

"Development and Production. You will purchase concentrates from third parties required for the program in such quantities and on such terms recommended by you and approved by us.

"You will recommend for our approval plans and designs for the development, equipment and operation of a particular property in its entirety, or

(Testimony of Blair Burwell.)

covering certain stages thereof from time to time, such recommendation to specify, as far as practicable, the equipment and facilities, the leases, the contracts and the purchases involved and estimated costs thereof."

"Upon our written approval of the development of a particular property, you will take all the necessary steps as recommended to develop and equip the property, mine and mill the ore for the concentrate smelted and refined, and to act as our selling and shipping agent in disposing of the vanadium and other materials purchased or produced."

It goes into cost and some of the details, the fee of $1,000 a month, and the last paragraph, paragraph six, reads: [349]

"We agree to protect, indemnify and save you harmless from and against all claims and demands made against you and all judgments, loss or damages incurred by you in the performance of this agency within the authority granted which are not the result of your negligence or intentional misconduct."

Q. Mr. Burwell, who in the United States Vanadium Corporation handled this lead vanadate operation, do you recall?

The Court: Just a moment. What is the date of that letter?

Mr. Archer: February 25, 1942.

The Court: To whom was it addressed?

Mr. Archer: Well, it is a letter agreement from

(Testimony of Blair Burwell.)

the Metal Reserves Company to the United States Vanadium Corporation.

The Court: The United States Vanadium Corporation is a subsidiary of the principal defendant here?

Mr. Archer: Of Union Carbide, not the principal defendant.

The Court: One of the defendants. Pardon me for interrupting your questioning.

Q. (By Mr. Archer): I will restate the question, Mr. Burwell. I was wondering who were the individuals in the United States Vanadium that handled this red vanadate operation.

A. This was principally handled directly by Mr. Van Fleet [350] and myself. I did a small amount of work with it, but the lead vanadate program and agency as defined was a very minor thing. It fizzled out, so it did not become important at all. Mr. Van Fleet did most of the direct handling of that.

Q. This was not on the Colorado Plateau?

A. This was not on the Colorado Plateau.

Q. (By The Court): What territory did this cover?

A. Arizona, the State of Arizona, your Honor, principally.

Q. (By Mr. Archer): Would this be in the area of where the Mammoth-Saint Anthony Mine was? A. That is right.

Q. You have already referred to that several times? A. That is right.

Mr. Alioto: May I have that, Mr. Archer?

(Testimony of Blair Burwell.)

Q. (By Mr. Archer): I now show you an agreement dated April 9, 1942, between Metal Reserves Company and United States Vanadium Corporation, entitled "Re Agency Agreement, Sandstone Vanadium, Durango Project," and ask you whether you can identify that.

Mr. Alioto: Mr. Archer, if you are worried about authenticity, we will stipulate to that. Don't waste any time on it. We will take your representation.

Mr. Archer: Thank you. These are all originals signed.

Could I have this marked as Defendants' Exhibit next [351] in order?

(The document referred to was thereupon received in evidence and marked Defendant U's Exhibit C.)

[See Book of Exhibits.]

Q. (By Mr. Archer): I would like to read portions of this. This again is signed by Mr. G. Temple Bridgman for Metal Reserves, and J. R. Van Fleet, United States Vanadium Corporation.

The Court: This Metal Reserves Company was a government agency?

The Witness: It was a government corporation, wholly owned agency of the government.

Mr. Archer: "Metal Reserves Company, Washington, D. C., April 9th, 1942.

"United States Vanadium Corporation, 30 East 42nd Street, New York, N. Y.

"Re Agency Agreement, Sandstone Vanadium, Durango Project.

(Testimony of Blair Burwell.)

"Gentlemen:

"In accordance to the recommendation of the War Production Board, we wish to proceed with a program for increasing the supply of vanadium urgently needed for war requirements by purchasing the vanadium or the non-commercial sandstone ore properties of the Southwest with which you are familiar."

Q. Now, the sandstone ore properties were which area? [352]

A. The Colorado Plateau.

Q. This is the area about which you are generally—most familiar? A. That is right.

Q. "In your letter of March 18, 1942, you informed us of several possible locations for vanadium reduction plants in the Southwest. With the exception of a proposed plant at Durango, Colorado, it is our understanding that each plant would cost in excess of $100,000 and would therefore be handled as a Defense Plant Corporation project if and when approved. As the Durango plant will not cost in excess of $100,000, we are writing this letter to authorize you to proceed on terms similar to the vanadium agency agreement of February 25th, 1942, covering the lead vanadate properties. The Durango plant and any other plants approved by and constructed for the Defense Plant Corporation will be operated by you at the expense and under the direction of this company under a single operating agreement to be entered into hereafter between your company and this company."

(Testimony of Blair Burwell.)

It then goes into the acquisition of the plant, purchase of material, costs and disbursements, and it has the same indemnity clause as the prior agreement.

Mr. Alioto: Mr. Archer, that document referred to [353] a prior letter. Do you have the prior letter by any chance?

Mr. Archer: I will look for it. These are Metal Reserves' files and if I can find the letter I will get it, or send for it.

Q. (By the Court): From this date, 1942, how long did you operate under the direction of the Government in accordance with those letters?

A. Your Honor, are you asking me that question?

Q. Yes, sir.

Mr. Archer: Your Honor, I have one more letter, one more agreement. Maybe I should put that in first. Pardon me for interrupting.

The Court: Very well.

Mr. Archer: May I have this, the vanadium agency agreement dated May 9th, 1942, between Metal Reserves and United States Vanadium Corporation, marked as Defendant's Exhibit next in order.

Mr. Alioto: We will stipulate to authenticity.

(The document referred to was thereupon received in evidence and marked Defendant U's Exhibit D.)

[See Book of Exhibits.]

(Testimony of Blair Burwell.)

Mr. Archer: This is a regular agreement, not a letter agreement, dated May 9th, 1942.

"Witnesseth, that whereas the increased domestic production of vanadium and its ore concentrates and the expansion of facilities within the United States [354] for such production are necessary to the national defense, and to the successful prosecution of the war efforts of the United States;

"And whereas, in accordance with the recommendation of the War Production Board an agreement dated April 9th, 1942, has been entered into between Metals and Vanadium for the construction of such facilities in the vicinity of Durango, Colorado, the cost not in excess of $100,000, and to have a capacity for the treatment of approximately 100 tons of vanadium ores per day in the production of vanadium ore concentrates, said facilities hereinafter called the Durango plant;

"And whereas in accordance with a recommendation of the War Production Board it is contemplated that additional facilities estimated to cost approximately $400,000 will be constructed as hereinafter mentioned in the vicinity of Grand Junction, Colorado, to have the capacity for the treatment of approximately 100 tons of vanadium ores per day in the production of vanadium ore concentrate, said facilities being hereinafter called the Grand Junction plant——"

Q. That Grand Junction plant was not constructed for Metal Reserves, was it?

A. It was never constructed at all.

(Testimony of Blair Burwell.)

Q. Not constructed at all. Then the first paragraph [355] relates to the construction of a grand Junction plant. The second paragraph:

"Operation of plants and purchases of ores. Vanadium shall operate the plants for Metals' account. Metals will have at its option representatives at the plant who will act independently in sampling of shipments and have sole custody of all control samples.

"Vanadium shall exert its best efforts to purchase for Metals' account vanadium ore suitable for treatment in the plants at reasonable prices not to exceed 50 cents per pound of vanadium pentoxide contained, delivered at suitable loading points or ore-receiving stations, unless Metals shall hereafter authorize the payment of prices for such ores in excess of said 50 cents per pound.

"Vanadium will also upon request of Metals, act as agent for Metals in selling or otherwise disposing of and shipping the production of the plants. Detailed instructions covering the sales will be forwarded to Vanadium at a later date. Employees of Vanadium will not be employees of Metals for any purposes hereunder."

This is signed by G. Temple Bridgman and the secretary's name for Metal Reserves Company, I cannot read. [356]

For United States Vanadium Corporation it is signed by Mr. Gormely and it says, "Vice-President" at that time.

Q. Is that correct? It must be.

(Testimony of Blair Burwell.)

A. I just don't offhand know. Mr. Gormely might have been, at least he might have been created vice-president for that purpose.

Q. This was May, 1942. You were made vice-president in 1944? A. He could have been.

Q. (By the Court): How long did these contracts remain in effect?

A. Your Honor, my best recollection, about a year and a half, possibly two years from the time they started. In other words, from 1942 to mid-1943 or 1944.

Q. During that time who controlled the disposition, the sale of vanadium in the United States?

A. The Vanadium Corporation of America, I believe, was controlling the distribution and sale of the major part of the vanadium in the United States. The Electro Metallurgical Company was controlling the disposition of a minor part. There was no one in control. It was relative.

Q. In what manner were the sales, the disposition of this vanadium made during that period? Who determined the purchasers?

A. The War Production Board, I believe determined the purchasers of the vanadium resulting from the Metal Reserves, [357] and, as a matter of fact, for a period of time they controlled all purchasers. I believe that was the time that vanadium was under allocation. In other words, whoever used vanadium or whoever used other metals similar to vanadium had to go to the government agencies, which were, I think, the War Production Board, if

(Testimony of Blair Burwell.)

I am not mistaken, and obtain an allocation upon showing of the fact that it was going into the war effort and that they had a consumer who had a war contract and who would certify that he needed it.

So, for this time, I think that vanadium was all under allocation.

Q. Then what authority would any of the defendants in this case have to dispose of vanadium during that period without the approval of the War Production Board?

A. Well, to my best recollection, your Honor, I think it would all depend upon the War Production Board's disposition.

Mr. Archer: As Defendant's exhibit next in order, I will offer a letter agreement dated November 2nd, 1942, between Metal Reserves Company and United States Vanadium Corporation modifying the last exhibit.

Mr. Alioto: May I have that date again, Mr. Archer?

Mr. Archer: November 2nd, 1942.

Mr. Alioto: No objection.

(The document referred to was thereupon received in evidence and marked Defendant U's Exhibit E.) [358]

Mr. Archer: This is signed by G. Temple Bridgman and Van Fleet:

"Gentlemen:

"Reference is made to the Vanadium Agency

(Testimony of Blair Burwell.)

Agreement dated as of May 9, 1942, between your Corporation and this Company, the third sentence of Paragraph 2 which provides in part for the purchase of your Corporation for the account of this Company of vanadium ores 'suitable for treatment in the Plants,' i.e., the vanadium ore treatment plants at Durango and Grand Junction, Colorado. In view of (1) the fact that construction of the Grand Junction plant is, as you know, being deferred, (2) the arrangements which have been made for the operation of the vanadium ore treatment plant at Monticello, Utah by Vanadium Corporation of America, as Agent for this Company, and (3) the contemplated delivery of ore purchased by your Corporation, as our Agent, for treatment at the Gateway, Colorado plant of Gateway Alloys, Inc., now being operated by Messrs. Nisley & Wilson, we believe it advisable to modify the third sentence of Paragraph 2 of the above agreement to read as follows:

"'Vanadium shall exert its best efforts to [359] purchase for Metals' account vanadium ores suitable for treatment in such vanadium ore treatment plants as Metals shall from time to time designate, including the Plants, at reasonable prices not to exceed fifty cents (50c) per pound of vanadium pentoxide contained, delivered at suitable loading points or ore receiving stations, unless Metals shall hereafter authorize the payment for prices for such ores in excess of said fifty cents (50c) per pound. Vanadium shall treat ore so purchased in

(Testimony of Blair Burwell.)

the Plants, or shall sell such ore to others for treatment in the other vanadium ore treatment plants designated hereunder by Metals, or shall deliver such ore for treatment in plants so designated on such terms as may be authorized by Metals.'

"Accordingly, we hereby amend said Agreement by deleting therefrom the third sentence of Paragraph 2 and substituting in lieu thereof the language quoted in the immediately preceding sentence of this letter. If this amendment is acceptable to you, please sign and return to us the enclosed copy of this letter, to constitute an amendment as of the date hereof to said Agreement dated as of May 9, 1942. [360]

"Pursuant to said Agreement dated as of May 9, 1942, as so amended, we hereby designate the above-mentioned plant at Monticello, Utah, as one of the plants to be supplied with vanadium ore purchased by you as our Agent under said Agreement, and accordingly we request you, as promptly as possible, to make the necessary arrangements to supply Vanadium Corporation of America with ore so purchased. A substantial part of the ore to be supplied by you for the operation of the Monticello plant is to be purchased by you from that Corporation, and includes both production from its mines as well as ore presently stockpiled at the Monticello plant. You are to purchase ore currently produced by Vanadium Corporation of America in accordance with said Agreement dated as of May 9, 1942, as amended; instructions governing the purchase of

(Testimony of Blair Burwell.)

ore stockpiled at the Monticello Plant will be given to you at a later date."

Q. Mr. Burwell, do you recall the name of the individual who ran the ore stockpiling plant at Monticello?

A. Just at the moment — I think Mr. Holland can give us a bit of help. He is working for you in Durango right now.

Mr. Holland: Pardon me?

Mr. Archer: Paig Edwards? [361]

A. Paig Edwards.

Q. He was hired by Mr. Whitaker, was he not?

A. Well, technically, I don't think that's quite correct. I think Mr. Van Fleet knew Paig Edwards and Mr. Whitaker was acting as an umpire in the matter of the question between the two companies. Mr. Edwards then was officially the designate of Mr. Whitaker, but he was paid by Metals Reserve on that account. I don't know the mechanics of who hired him.

Q. And Mr. Whitaker reported directly to Mr. Bridgman, didn't he?

A. Well, he reported directly to Metals Reserve. I don't know who in Metals Reserve. Mr. Bridgman was only there a short time, and he was followed shortly after by another man, Mr. Henry DeWitt Smith.

Q. I show you a letter dated October 21, 1942, from Mr. Hill to Mr. Whitaker, copy to you, and ask you whether you can identify this letter and the individuals referred to?

(Testimony of Blair Burwell.)

A. (Witness examining): Yes, I have a copy of this letter right here.

Mr. Alioto: We make no question of identification, Mr. Archer.

(Inaudible remark of witness.)

Mr. Archer: I think his secretary signed it, but who was John W. Hill or who is he or what——

A. He was the engineer in charge of the Metals Reserve [362] agency, under my direction.

Q. Where was his office?

A. Grand Junction, Colorado.

Q. And at this time you were in New York, your address at 30 East 42nd Street?

A. That's right.

Mr. Archer: I offer that as Defendant's exhibit next in order.

Mr. Alioto: No objection.

The Clerk: Defendant U's Exhibit F admitted and filed in evidence.

(Whereupon, copy of letter dated October 2, 1942, J. W. Hill to Orville R. Whitaker, was received in evidence and marked Defendant U's Exhibit F.)

Mr. Archer: It is addressed to Mr. Orville R. Whitaker, 932 Equitable Building, Denver, Colorado.

"Dear Mr. Whitaker:

"I just had a copy of a wire from Mr. H. DeWitt Smith, Metals Reserve Company, Washington, D.C."

(Testimony of Blair Burwell.)

He was the president, was he not — or Temple Bridgman?

A. No, I think he followed Mr. Bridgman. He's vice-president—he was an officer of Metals Reserve, anyway.

Mr. Archer: (Reading)

"I just had a copy of a wire from [363] Mr. H. DeWitt Smith, Metals Reserve Company, Washington, D. C., that was addressed to Mr. Blair Burwell, concerning the Nisley-Wilson Vanadium Mill at Gateway, Colorado. The wire requested our cooperation with Nisley and with you. Please advise me what arrangements have been made by the Metals Reserve Company with you concerning this operation.

"Mr. Harry Gardner and Mr. Frank Nisley, Jr., were in this office yesterday, in the presence of Mr. Burwell and myself, and we discussed the possibility of Metals Reserve Company furnishing Nisley and Wilson with ore, and Nisley and Wilson should mill the ore and deliver the vanadium oxide concentrate to the Metals Reserve at a contract price; therefore, the price of the ore is not a consideration. However, the grade would be established at a minimum of 2.00% V_2O_5 and the ore was to come from the Gateway area in order to get the proper character of ore.

"Mr. Gardner stated that he estimated, and it would be necessary to confirm his estimate with his partners, that the vanadium oxide could be produced at $.90 per pound, in other words, they would

(Testimony of Blair Burwell.)

mill the ore for a cost of $.90 per pound. In my [364] opinion this seems a little high.

"However, Mr. Gardner stated that before he could consider this further, he would have to check with the War Production Board as they have wired him that arrangements were being made for their operation."

Do you recall this conference among yourself, John Hill, Frank Nisley and Harry Gardner?

A. Mr. Archer, what is the date of that letter again?

Q. October 2, 1942.

A. And the question, do I recall——?

Q. Just, recall the conversation as stated here.

A. In New York?

Q. Well—— A. Washington?

Q. It sounds as though it's in Grand Junction.

A. Yes, I do recall that conversation.

Q. And who was Harry Gardner?

A. Well, he was one of the owners or one of the partners of Nisley — Gateway Alloys Company, at that time, I believe.

Q. I show you a copy of a letter dated October 12, 1942, from United States Vanadium Corporation, Agent for Metals Reserve Company, Blair Burwell, to Messrs. Nisley and Wilson, and ask you whether you can identify that?

A. (Witness examining): Yes, I can identify it, as my letter. [365]

Mr. Archer: I offer this as defendant's exhibit next in order, your Honor.

(Testimony of Blair Burwell.)

Mr. Alioto: No objection.

The Clerk: Defendant's U's Exhibit G admitted and filed into evidence.

(Whereupon, letter of October 12, 1942, U. S. Vanadium to Messrs. Nisley and Wilson, was received in evidence and marked Defendant U's Exhibit G.)

Mr. Archer: This is a letter dated October 12, 1942, from Mr. Burwell, copies to J. R. Van Fleet, H. DeWitt Smith, Orville Whitaker.

The letter is to Nisley and Wilson, Leasers, Gateway Alloys Company, Gateway, Colorado.

"Gentlemen:

"In regard to the proposed arrangements for supplying your operation with ores by the Metals Reserve Company, it will be necessary for you to furnish the Metals Reserve Company with a statement of detailed estimated cost of converting Metals Reserve Company ore to fused oxide.

"These statements of detailed cost should show the direct labor, salaries—Mr. Nisley and Mr. Wilson, supplies and repairs, depreciation, mill rental, profit, and any other costs which you estimate enter into this operation. [366]

"In accordance with our meeting in Denver on October 9, with Mr. Orville Whitaker, we will recommend for the consideration of Metals Reserve Company the arrangement discussed in Denver.

"The Metals Reserve Company in Washington has requested the detail of this estimated cost in

(Testimony of Blair Burwell.)

order that they may consider the matter and prepare a contract which would meet the requirements of the Metals Reserve Company.

"Mr. Hill is proceeding immediately with arrangements to establish an ore purchasing station at Gateway and to create a stockpile of ore at that point in anticipation of the completion of this arrangement.

"At the present time, the entire ore purchases in the Gateway-Uravan area do not equal the amount that you state you require for your mill, and it will be necessary to work out some arrangement to place the Calamity-Maverick mining areas into production.

"The United States Vanadium Corporation will be glad to cooperate with you in obtaining the necessary supply of ore as soon as we are authorized by the Metals Reserve Company in Washington."

Mr. Burwell, it states in here that "it will be necessary [367] to work out some arrangement to place the Calamity-Maverick mining areas into production." Do you know what that referred to?

A. Yes.

Q. What? A. What it says.

Q. Do you know what were the problems?

A. Well, you see, previously to this, Mr. Archer, as I believe I previously testified, that the available, accessible ore on the Calamity-Maverick mesa had been gathered up and mined and taken to Uravan—I believe that's correct—and, therefore, the properties were depleted to regular accessible ore.

(Testimony of Blair Burwell.)

And again following my previous testimony, I believe I stated it was necessary to dig under greater depths and open up new tunnels and start again, because you had harvested what was readily available and you had to start a new preparation or a new harvest. That is what that meant.

Q. Well, I now show you a letter dated October 13, 1942, from J. W. Hill to H. DeWitt Smith, copies to Mr. Van Fleet, yourself, W. G. Haldane and Mr. Orville Whitaker, and ask you if you can identify that letter?

A. (Witness examining): This is his signature. I don't know the letter, of course.

(Whereupon, letter dated October 13, 1942. Hill to Smith, was received in evidence and marked Defendant U's Exhibit H.) [368]

Mr. Archer: In this letter, Mr. Hill states to Mr. Smith:

"We are transmitting herein an estimate of cost of operation of the Nisley and Wilson Vanadium Mill at Gateway, Colorado, which has been prepared by Messrs. Nisley and Wilson in connection with the proposed treatment of Metals Reserve Company ore at the Gateway Plant.

"At the present time, this plant is not being operated at its estimated full capacity of 20 tons per day and Mr. Nisley and Mr. Wilson state that the figures submitted are estimates only and may vary somewhat with actual operation.

"While the costs appear to be much higher than

(Testimony of Blair Burwell.)

we experience in a larger plant, a more economical arrangement, it would be our recommendation that Metals Reserve Company make an arrangement with Messrs. Nisley and Wilson for the treatment of Metals Reserve ore at their plant and deliver fused vanadium oxide of suitable specifications to Grand Junction, Colorado, at a price of $.85 per pound for 1.50% V_2O_5 contained vanadium ore; $.80 per pound for 2.00% V_2O_5 contained vanadium ore; $.75 per pound for 2.50% V_2O_5 contained vanadium ore."

Then I will skip a paragraph. It says: [369]

"It is recommended that tailings from this operation remain the property of Metals Reserve Company and be stored and preserved by Nisley and Wilson in accordance with instructions from Metals Reserve Company."

Now, of what did those tailings consist, Mr. Burwell?

A. They consisted of approximately 25% of the total vanadium, the lead ore, and all the vanadium that was in that ore.

Q. Do you know what happened to the tailings from the Nisley and Wilson operation that were preserved for the Metals Reserve Company?

A. Well, I believe part of them were washed away by the river and part of them were purchased and moved up to Uravan later on as part of the Manhattan District project.

Q. Then the uranium process?

A. And the vanadium process.

(Testimony of Blair Burwell.)

Mr. Archer: Continuing reading:

"At the present time, ores sufficient for this operation are not available in the Gateway District and arrangements will have to be made to stimulate the production of the Calamity District mines of Brown and Bowman, under contract from the Molybdenum Corporation of America, as well as other surrounding areas now under development.

"In proceeding with the arrangements for the Calamity District mines, this office will endeavor to procure an adequate engineering report of the district that can be used for a basis of securing development and working capital loans from the Metals Reserve Company if the same are necessary to expedite production.

"We believe the Calamity District can be developed into a substantial vanadium producer that will supply ore in excess of the Nisley-Wilson Plant capacity.

"At the present time, ore purchases by the United States Vanadium Corporation, at Uravan, from all the areas tributary to the Uravan Plant, do not reach the total tonnage required by Nisley and Wilson.

"We are proceeding with the installation of an ore purchase station at Gateway and the organization of a mining program on the Calamity District claims, subject to the agreement of the interested parties, and we will exert every effort to see that the Nisley and Wilson Plant is supplied with all

(Testimony of Blair Burwell.)

the ore possible if the Metals Reserve Company enters into the agreement as suggested."

Did Mr. Hill and Mr. Haldane, under you, make every [371] effort to put the Nisley and Wilson plant into operation for the Metals Reserve Company? A. That's right, we did.

Q. Do you recall that one of the difficulties in getting the Nisley and Wilson Mill into operation was due to the fact that Gateway Alloys was in bankruptcy and certain of the claims were subject to the orders of the bankruptcy court and the claims of certain creditors?

A. I believe there was something in that connection. The detail I don't remember.

Q. Do you recall who mined those claims for Metals Reserve—I will withdraw the question.

Didn't Ennis Cole mine the Calamity mines for Metals Reserve and turned their proceeds, the ore, over to the Nisley and Wilson plant?

A. I think that's right. I think we got ahold of Ennis Cole, who is a good miner, and had equipment, and arranged—Mr. Hill arranged with him to start mining and developing the area in question.

Q. Well, prior to that time, Ennis Cole had been the trustee in bankruptcy of the Gateway Alloys' claims, had he not? A. Well, I don't know.

Q. You don't recall that?

A. I don't recall. I believe that——

Q. I show you a letter from John Hill, United States [372] Vanadium Corporation, Agent for Metals Reserve, dated October 22, 1942, to Mr. De-

(Testimony of Blair Burwell.)

Witt Smith, copies to J. R. Van Fleet, yourself, and Mr. Haldane, and ask you whether you can identify that?

A. (Witness examining) I can identify it.

Mr. Archer: I offer this as defendant's exhibit next in order. It shows the prices paid for the ore in the Cateway District.

The Court: Mr. Burwell, how many corporations or individuals were engaged in different mining projects in this particular territory?

A. At this particular time?

The Court: Well, from '38 to '46.

A. Let me give some thought to that answer, your Honor. There were probably 40 or 50 small mining groups and small mining companies, small mining individuals, who employed one or up to twenty-five men during this period, and they all together produced 170,000 tons of ore in that period from the various plants.

The Court: Did any of those fail for lack of capital or lack of engineering knowledge or want of—because they didn't discover——

A. I thought there were a few casualties in the group. Some of them did. Just at the moment, I can't recall their names. I believe there were one or two over in Moab who [373] couldn't meet their payroll, but, as a rule, we had an elastic price arrangement of 50c a pound—as you note in these contracts, and it was designed for just that particular purpose.

In other words, if you note, this contract which

(Testimony of Blair Burwell.)

is 50c compared to, say, 31c that previously existed. In the conferences that led to setting up this metals reserve program, we contemplated the fact that many of these people had remote areas and required road-building and more assistance to start up or to meet an initial need than the larger mining groups who were established. And, therefore, we requested a formula—I think that was my request—of 50c a pound which in some cases, if a miner was facing trouble, maybe we would pay him 38c, it might have been in one place—it wasn't a fixed 50c. If he would show he would fail if he didn't get more money, why, then, we would raise the price to give him a fair profit and still bring the ore out for the metal needs. [374]

The Witness: It was an elastic arrangement.

Q. (By The Court): What number of those that had invested in these leases and operations actually had mills that processed the ore?

A. I recall three, your Honor.

Q. What I am getting at, were there a number who mined the ore and sold the ore and did not pretend to process it?

A. The greater number of the people that were mining ore were people who had mines but had no mills, and therefore this program of the Durango mill and the Monticello mill was to give them a processing outlet for their ores and fused oxide, and I believe there were probably 20 or 25 or more of those miners, miners in groups, who up to that time did not have a processing mill available, and

(Testimony of Blair Burwell.)

therefore had not been able to operate prior to that.

Q. Who would buy the ore in that territory?

A. Well, up to the Metal Reserve program, the Vanadium Corporation of America and the United States Vanadium Corporation were buying the ore at a price which was roughly based on the cost of mining. In other words, it was not a high price; it was simply a price that was somewhat equivalent to the cost of producing the ore from their own mine. In this—this particular program to meet war needs was a somewhat abrupt reversal of previous policies that had been contained up to that time, and when the War Department asked me and Mr. [375] Van Fleet into a conference to get more vanadium, we said these people who have not had a processing plant or been able to get ore or operate, that if we provide them with a processing outlet in various plants, then we can increase the output of vanadium for the war effort.

And so we were asked—the Vanadium Corporation was asked to provide a plant, and we were asked to provide a plant where plants and war processing centers would be located, operated at government expense, to give the owners of the mines their outlets in fused oxide.

Therefore the whole program of Metal Reserves was somewhat of an abrupt reversal of previous policies by giving those 25 or 30 small miners an outlet at government expense.

Q. Let me ask you this: What could these miners, whether they were corporations or individuals,

(Testimony of Blair Burwell.)

that operated these mines and had no mills to process, what could they have done with the ore had they not sold it to these mills?

A. You mean prior to this?

Q. Yes, sir.

A. They couldn't do anything with their ore.

Q. What I am getting at is, was it anything unusual or out of the ordinary to purchase ore from these various mines that did not have mills?

A. No, no, no. As a matter of fact, that was very often in their mind. A miner might think he was not getting enough [376] from his ore to live on. He would complain about what he got, which is chronically the case, but it is the usual thing, your Honor.

Mr. Archer: Your Honor, I offer as defendants' exhibit next in order, Mr. Hill's request to Mr. Smith in a letter dated October 22, 1942, for approval of entering into a lease with the trustee of the Gateway Alloys, Inc., for the ore at the Gateway mill.

Mr. Alioto: No objection.

(The letter referred to was marked Defendant U Exhibit I in evidence.)

[See Book of Exhibits.]

Mr. Archer: And just to complete the record, Mr. Burwell, I will show you Mr. Bridgman's letter dated November 19, 1942, to the United States Vanadium Corporation, copies to you and to Mr. Hill, approving Mr. Hill's request.

I offer that as defendants' exhibit next in order.

(Testimony of Blair Burwell.)

Mr. Alioto: No objection.

(The letter referred to was thereupon marked Defendant U Exhibit J in evidence.)

[See Book of Exhibits.]

Q. (By The Court): At the time this contract was made with the government in 1942 what was the status of your supply of ore or vanadium with these defendant companies?

A. The United States Vanadium Corporation has a relative abundance of ore, your Honor. They owned most of their own [377] mines, while the Vanadium Corporation of America, who had newly entered the field and did not have mining properties, was rather deficient and more dependent upon buying ore.

Q. Did you have quite a quantity of ore on hand, or vanadium on hand, at the time you made this agreement with the government?

A. No, at the time we made the agreement with the government the war needs had taken over. All the vanadium that we could possibly produce was being shipped to the war effort. Everything was empty of vanadium. War had entirely changed all our market position.

Q. (By Mr. Archer): Mr. Burwell, I show you now a letter from G. Temple Bridgman of the Metal Reserves Company to the United States Vanadium Corporation dated November 25, 1942. Attention, Mr. J. R. Van Fleet, vice-president, copies to Messrs. Nisely and Wilson, Blair Burwell.

(Testimony of Blair Burwell.)

O. R. Whittaker, and J. W. Hill, and ask you whether you can identify that letter.

A. Yes, I believe I can.

Q. This was your authorization to enter into the toll agreement with Nisely and Wilson, is that correct?

A. I think that is correct, without reading the details.

Mr. Archer: I offer this as defendants' exhibit next in order.

Mr. Alioto: No objection. [378]

(The letter referred to was thereupon marked Defendant U Exhibit K in evidence.)

[See Book of Exhibits.]

Mr. Archer: Your Honor, this has a designation of "Restricted" on it by the government, but it has been declassified. It just happened that this copy was not crossed out. I will read just one paragraph with regard to this, or a few sentences in regard to this authorization (reading):

"If this agreement as enclosed is acceptable to you and Messrs. Nisely and Wilson, we authorize you as agent for this company to execute it, provided your counsel is satisfied that the lease under which Messrs. Nisely and Wilson are operating the Gateway plant is valid and binding upon the parties thereto. We have obtained a copy of this lease together with other related documents from counsel for Messrs. Nisely and Wilson, and these documents, together with a copy of the accompanying letter of their counsel, are enclosed herewith."

(Testimony of Blair Burwell.)

The enclosed agreement provides in substance that:

"For a period of 90 days your corporation, as agent, will supply vanadium ore for the operation of the Gateway plant; that such ore will be treated at such plant in consideration of the treatment charges specified in the agreement; and that all fused vanadium oxide, together with all tailings, produced [379] from such ore will be returned to you, as agent, at the Gateway plant.

"The agreement has been prepared upon the basis of a term of 90 days from the date of its execution, it being contemplated that the operation of the plant during this period will furnish a basis for subsequent agreement.

"Accordingly, during the term of the enclosed agreement, you should request and obtain from Messrs. Nisely and Wilson such complete information as to costs of operation, et cetera, as may be necessary for this purpose. You will act as shipping agent for this company, arranging for the shipment of vanadium oxide and tailings returned to you by Messrs. Nisley and Wilson to consignees designated by us, and following our written instructions as to means of transportation, routing and forwarding bills of lading, invoices and other related documents."

Q. Mr. Burwell, do you know to whom the production from the Nisley and Wilson mill was consigned by the Metal Reserves Company?

A. No, I don't recall at this time.

(Testimony of Blair Burwell.)

Q. Do you recall that before you could get the agreement executed you had some difficulty or some delay in getting the [380] approval of the Molybdenum Corporation of America, who owned part of the leases in this area?

A. That might have been the case, but I don't recall.

Q. I will show you a telegram—I do not think it shows the date on it—oh, yes, it does—January 7, 1943, from Blair Burwell, United States Vanadium Corporation, Agent for Metal Reserves Company, to Harry K. Masters, and ask you whether you can identify that.

A. Yes, I think so. It was a detail that had to do with the contract.

Mr. Archer: I offer this as defendants' exhibit next in order.

Mr. Alioto: Have you identified the handwriting on this, Mr. Archer?

Mr. Archer: I don't know.

Mr. Alioto: Can Mr. Burwell?

Q. (By Mr. Archer): Can you identify the handwriting?

A. I am not sure. I think that is Mr. Masters' writing, but I wouldn't say.

Mr. Alioto: We have no objection in any event to the introduction of the exhibit.

Mr. Archer: I think it is Mr. Masters'.

The Witness: I don't think it is important. Just a note about what he did. I think it is Mr. Masters' telegram, [381] and I think he simply noted on

(Testimony of Blair Burwell.)

there that that came from the Mineral Reserves file, Mr. Archer.

Q. (By Mr. Archer): It came from the Molybdenum Corporation files, so it must be his handwriting.

(The telegram referred to was marked Defendant U Exhibit L in evidence.)

[See Book of Exhibits.]

Mr. Archer: In other words, it is a copy of the one that was received, not the one that was sent. It states (reading):

"January 7, 1943

"Harry K. Masters

"C O Molybdenum Corporation of America

"Operation of Gateway Alloys Plant

"U. S. Now Shut Down Pending Molybdenum Corporation Agreement of Reece Referring to Our Letter December Twelfth and Your Reply December Twenty-One Stop. Would Very Much Appreciate Your Final Approval, Which I Understand Depends Upon Your Counsel James S. Crawford Stop. If Approved Will You Please Wire Mr. J. W. Hill, Grand Junction, So That The Gateway Alloys Trustees Can Proceed With Delivery of Ore and Start Plant Operations. Regards.

"Blair Burwell

"United States Vanadium Corporation, [382]

"Agents For Metal Reserves Company."

Q. (By Mr. Archer): Do you recall, Mr. Burwell, that you also participated in attempting to ar-

(Testimony of Blair Burwell.)

range some financing for the Nisley and Wilson mill so that its capacity could be enlarged?

A. I possibly could have done so. I remember that the local bank needed some assurance as to the matter, and I think that I spoke to the bank and told them that I would back up or guarantee certain financial transactions in accordance with our *Metal Reserves* agreement.

Q. I will show you a copy of a telegram dated January 19, 1943, from John Hill to Mr. Blair Burwell and ask you whether that refreshes your recollection.

A. Why, yes. I recall now that they had gone to the RFC for operating money, and that the procedure was quite—would take a long time, and we assisted them in their request for the RFC, but decided they could not move fast enough, so the result, I think, was the reason for this telegram.

Mr. Archer: I will offer the telegram as defendants' exhibit next in order.

Mr. Alioto: No objection.

(The telegram referred to was thereupon marked Defendant U Exhibit M in evidence.)

Mr. Archer: Telegram dated January 19, 1943 (reading): [383]

"Mr. Blair Burwell
"Room 1426 30 East 42nd Street
"New York, N. Y."——

from John Hill (continuing reading):

(Testimony of Blair Burwell.)

"Nisley and Wilson Cancelling Request For RFC Loan Stop. I Recommend Metal Reserves Advance Them $4800 For Working Capital and Certain Fixed Capital Necessary Before Plant Is Placed Into Operation At Maximum Capacity Stop. Advance to Be Repaid In Ninety Days By Deducting Ten Cents a Pound V_2O_5 Produced Stop. Ore Supply Seems Assured For Twenty Days Stop. Letter Follows."

Q. (By Mr. Archer): Do you recall whether they finally made the advance from Metal Reserves, or whether they finally got the RFC loan?

A. My best recollection, Mr. Archer, is that we let them have the money from the Metal Reserves. I believe I recommended the Metal Reserves give them that assistance.

Q. In any event, they did get the money to go ahead with that operation?

A. Yes. You see, they had a $50,000 plant originally, and they were converting to meet some problems, and they had not quite finished that conversion and needed a certain amount of money to complete that. So I think the story was there was some urgency in how fast they got the money, and because [384] of that the Metal Reserves advanced them money, which they were authorized to do under the approval of the Metal Reserves in Washington.

Q. Do you recall what those problems were?

A. Oh, I think they were minor problems of the plant, such as they had to replace a fan that was

(Testimony of Blair Burwell.)

not the proper type of fan. We had other questions. I don't remember the details.

Q. Technical problems?

A. Technical problems.

Mr. Archer: Does your Honor want to recess now?

The Court: Very well, we will recess for ten minutes.

(Short recess.) [385]

Mr. Archer: Shall I proceed, your Honor?

Q. You will recall, Mr. Burwell, that I had asked you if you knew where the production from the Nisley and Wilson plant under the Metals Reserve operation went, and I believe you said that you did not recall. Is that correct?

A. That's correct.

Q. I now show you a letter from G. Donald Emigh—I believe we referred to him before.

A. That's right.

Q. And he was a mining engineer that worked for United States Vanadium Corporation?

A. Correct.

Q. Letter from G. Donald Emigh, United States Vanadium Corporation as agent for Metals Reserve Company, to Continental Ore Company, 500 Fifth Avenue, New York City, Attention Mr. Wolf, dated May 4, 1943, copies to J. R. Van Fleet, Blair Burwell and J. W. Hill, and ask you whether you can identify that?

(Witness examining.)

A. Well, that's his signature. I can identify it.

(Testimony of Blair Burwell.)

Mr. Alioto: Excuse me, Mr. Archer. Is this being offered to show where Nisley and Wilson production went?

Mr. Archer: I was going to ask Mr. Burwell if this would refresh his recollection.

Mr. Alioto: You are not offering it then? [386]

Mr. Archer: I am going to offer it.

Mr. Alioto: Well, I am going to object to it, if your Honor please, because if it is intended to show that this production went to Continental Ore Company, it is contrary to the fact.

Mr. Archer: I agree, it is contrary to the fact.

Mr. Alioto: Oh, all right. We would like——

The Court: I have no idea what it would show. But is it competent evidence?

Mr. Alioto: I don't think it is, if your Honor please. It is—well, we have no objection to it. The facts will develop. Well, just—we will not object to it. We have no objection to it being received in evidence, if your Honor please.

The Clerk: Defendant U's Exhibit N admitted and filed in evidence.

(Letter, May 4, 1943, G. Donald Emigh to Continental Ore Company, received in evidence and marked Defendant U's Exhibit N.)

Mr. Archer: A letter dated May 4, 1943, from United States Vanadium Corporation, as agent for Metals Reserve Company, to Continental Ore Company, 500 Fifth Avenue, New York City, Attention Mr. M. Wolf.

(Testimony of Blair Burwell.)

"Enclosed is copy of our letter asking Ledoux and Company to analyze shipments of fused vanadium [387] oxide from the Nisley-Wilson plant, Gateway, Colorado, on their arrival at Langeloth, Pennsylvania.

"We are asking our Colorado office to mail you both in New York and at Langeloth copies of the bills of lading on the date shipments are made.

"Will you please advise Ledoux and Company on arrival of product at Langeloth so that they can arrange to weigh, sample and analyze shipments."

Q. Mr. Burwell, I now show you——

Mr. Alioto: Excuse me, would you have any objection to having the witness identify what Langeloth is, if he knows?

Q. (By Mr. Archer): Langeloth, Pennsylvania, is where Climax Molybdenum Company has their plant, that's correct, is it not?

A. That's correct.

Mr. Alioto: Thank you.

Q. (By Mr. Archer): Mr. Burwell, I show you a letter dated May 12, 1943, from G. Donald Emigh to Mr. J. W. Hill, Supervising Engineer, copy to J. R. Van Fleet and Blair Burwell, and ask you whether you can identify that letter, together with the enclosure.

A. (Witness examining) I believe I could identify it. There's a lot of detail in there that I——

Q. In substance the—— [388]

A. In substance.

Q. In substance it refers to the extension of the

(Testimony of Blair Burwell.)

Nisley and Wilson toll agreement through the year 1943?

A. And the metallurgical recoveries and other matters in regard to the operation.

Mr. Alioto: We have no objection, Mr. Archer.

Mr. Archer: Offer it as defendants' next in order.

The Clerk: Defendant U's Exhibit "O" admitted and filed in evidence.

(Letter October 12, 1943, G. Donald Emigh to J. W. Hill, w/enclosures, received in evidence and marked Defendant U's Exhibit "O".)

[See Book of Exhibits.]

Mr. Archer: There is just one statement I would like to read. First, in the attachment from Mr. Emigh, United States Vanadium Corporation, as agents for Metals Reserve Company, to Metals Reserve Company, Washington, D. C., Attention: Mr. H. DeWitt Smith, "Subject: Toll Agreement (Nisley-Wilson):

"Gentlemen:"

I will just read one paragraph:

"From our wire of June 30th to you and from conversations in the interim, we have recommended to you that the treatment charges to be paid under this supplemental agreement should initially be the same as [389] those provided for in the toll agreement dated January 6, 1943. We are in this letter hereby reaffirming that our examination of the records of the Nisley-Wilson operation, copies of which have been sent you, indicates to us that

(Testimony of Blair Burwell.)

present toll charges are necessary for the maintenance of this operation. It is our recommendation that these charges remain unchanged at this time."

The second attachment is a letter of the same date, October 12, 1943, from Mr. Emigh to the Metals Reserve Company, Attention: Mr. H. DeWitt Smith, Subject: Nisley-Wilson Vanadium Operation.

"Gentlemen:

"In the August Progress Report on the vanadium operations, three copies of which were sent recently to your Mr. Petterson, it was pointed out that recovery to date in the Nisley-Wilson vanadium mill at Gateway, Colorado, is between 66.30% and 67.80%."

Q. Now, what does that mean, Mr. Burwell?

A. It meant that is the amount of total vanadium in the ore that was recovered in fused oxide.

Q. This is a technical matter or a metallurgical matter, is it? A. Yes.

Mr. Archer: (Reading.) [390]

"The toll agreement of January 26, under Clause 6, provides that the V_2O_5 content of the fused vanadium oxide produced shall not be less than 70.00% of the V_2O_5 content in the ore treated.

"With present recovery figures at hand, it is apparent that the operators of the Nisley-Wilson plant are not making the 70.00% recovery. In our judgment this plant is being handled in an efficient manner and the recoveries being made are

(Testimony of Blair Burwell.)

not out of line with those effected at other vanadium plants in this region.

"We recommend to Metals Reserve Company, therefore, that in the Toll Agreement dated January 26, 1943, in Clause 6, the minimum recovery figure of 70.0% be changed to 6.50%."

Q. And that change was made, was it not, Mr. Burwell?

A. I presume so. I don't know.

Q. Do you recall that the Metals Reserve program was terminated in part at the end of 1943 and the beginning of 1944?

A. I believe that's correct.

Q. And this was pursuant to instructions from the Metals Reserve Company, was it not?

A. That's right.

Q. I now show you a letter—a copy of a letter—it is unsigned—dated December 1, 1943, from Metals Reserve Company, Washington, D.C., to the United States Vanadium Corporation, to which are attached copy of a letter of the War Production Board dated November 22, 1943, H. G. Batchelor, to The Honorable Secretary of Commerce, Washington 25, D.C., copy of a letter from the War Department, Headquarters, Army Service Forces, Washington, 16 November 1943, Major General Lucius B. Clay, to W. L. Clayton, Assistant Secretary of Commerce, and a letter dated November 24, 1943, to Major General Lucius B. Clay, Director of Materiel, Army Service Forces, from W. L. Clayton, Assistant Secretary, and ask you whether

(Testimony of Blair Burwell.)

you can identify those and whether those were your instructions on the termination of the Metals Reserve program?

A. (Witness examining.) I will do the best I can. That's a pretty big order.

Q. I think all the copies are referred to in the top letter.

A. This is a whole string of letters here, apparently, that refer to the authority that created the Metals Reserve program. (Examining.) And I believe that this is in accordance with their structure. I can't identify all these letters of Clay or the rest —It looks like it was in the usual course of business in connection——

Mr. Alioto: If I could see that, we will obviate any question of identification. You won't have any trouble about it, Mr. Archer. [392]

(Counsel examining.)

Mr. Alioto: Do you want to put them all in?

Mr. Archer: As one exhibit.

Mr. Alioto: Well, they are from third parties who aren't here. But we will waive the objection on it, if your Honor please.

Mr. Archer: I believe they are official acts, your Honor.

Mr. Alioto: Well, they are not official acts in that sense.

Mr. Archer: I offer them as defendants' exhibit next in order.

The Clerk: Defendant U's Exhibit "P" admitted and filed in evidence.

(Testimony of Blair Burwell.)

(Group of letters referred to was received in evidence as Defendant U's Exhibit "P".)

Mr. Alioto: This is being offered solely to establish the date of termination, is that it, Mr. Archer?

Mr. Archer: The date and the reasons for the termination and the basis upon which the United States Vanadium Corporation, a defendant in this lawsuit, acted as agent for the Metals Reserve Company.

Mr. Alioto: All right, we have no objection on that basis.

Mr. Archer: Letter dated December 1, 1943, from [393] G. Temple Bridgman to United States Vanadium Corporation, agent for Metals Reserve Company, 30 East 42nd Street, New York, New York.

"Re: Contract AA-92 Grand Junction Program

"Gentlemen:

"This acknowledges your letter of November 19, outlining a tentative program for curtailment of the vanadium program, in reply to our letter of October 20 on the same subject.

"For your information, as our agents under Contract AA-92, we are enclosing a copy of letter from Mr. H. G. Batcheller, Operations Vice Chairman of the War Production Board, to the Honorable Jesse H. Jones, Secretary of Commerce, advising that the War Production Board's interest and responsibility in the vanadium program as to the operation of government vanadium plants at Monti-

(Testimony of Blair Burwell.)

cello, Utah, and Durango, Colorado, and as to vanadium procurement program, has been withdrawn.

"I also enclose an exchange of correspondence between Major General Lucius D. Clay, Director of Materiel, Army Service Forces, and Mr. W. L. Clayton, Assistant Secretary of Commerce, with reference to the possible extension of this program.

"In view of the above, we request that you arrange, if possible, for the cancellation by mutual consent [394] of the Garfield lease and the termination of the Garfield operating agreement, both effective on or before February 29, 1944. In the event that cancellation by mutual consent cannot be arranged, will you kindly advise us promptly and we will take other steps into consideration for cancelling this agreement.

"We are advised that the Nisley and Wilson toll agreement expires on January 1, 1944. We request that you give Nisley and Wilson thirty days' notice that this toll agreement will not be extended beyond its expiration date unless you have reason to believe that this program should be continued in the interest of the procurement of other products than vanadium."

Q. Do you know what other products were referred to, Mr. Burwell? A. Uranium.

Mr. Archer: (Reading.)

"In connection with the present ore production program, in view of Mr. Batcheller's Letter of November 22nd, will you kindly take the necessary

(Testimony of Blair Burwell.)

steps to promptly curtail the purchase of ores which are of interest only for their vanadium content. The details procedure for curtailment of purchases of such ores is a matter for your own judgment, except that we would like such purchases discontinued not later than [395] February 29, 1944, except in such exceptional instances where substantial expenditures for development have been made by the operation. In connection with such latter instances, we would appreciate specific comments and recommendations from your agency before commitments are made to prolong any purchase program beyond February 29, 1944."

Attached to this are several letters, which I shall attempt to read in sequence.

November 16, 1943, War Department, Headquarters Army Service Forces, Washington.

Lucius D. Clay, Major General, General Staff Corps, Director of Materiel, to W. L. Clayton, Assistant Secretary of Commerce, Lafayette Building, Washington, D.C.

"Dear Mr. Clayton:

"Confirming our telephone conversation today, it is necessary to the war effort that the Metals Reserve Company continue operations on a full-time basis at the vanadium plants at Durango, Colorado, and Monticello, Utah.

"It is further requested that the Metals Reserve Company continue the operation of its Vandium Ore procurement under the agency of U. S. Vanadium Company."

(Testimony of Blair Burwell.)

November 24, 1943, from W. L. Clayton, Assistant Secretary, to Major General Lucius D. Clay:

"Dear General Clay:

"I have your letter of November 16, 1943, and in accordance with your request Metals Reserve Company will continue the full-time operation of its vanadium plants at Durango, Colorado and Monticello, Utah and will continue its ore procurement program under the agency of the United States Vanadium Corporation pending the completion of arrangements discussed on November 6, 1943, between War Production Board, War Department and Metals Reserve Company.

"It is our understanding that all the foregoing activity after December 31, 1943 will be for the account of the War Department for the Corps of Engineers, which will complete necessary arrangements with Metals Reserve Company prior to that time.

"As there are numerous operating details to be worked out in order to continue those functions in the manner you wish, it is suggested that the representatives of the Corps of Engineers immediately get in touch with Mr. H. DeWitt Smith of Metals Reserve Company, inasmuch as all such arrangements should be concluded before the first of the year." [397]

Then the letter from H. G. Batcheller, Operations Vice Chairman, War Production Board, to The Honorable, The Secretary of Commerce, dated November 22, 1943 (reading):

(Testimony of Blair Burwell.)

"Early in the war period, as a result of a critical shortage of vanadium, numerous steps were taken by the War Production Board and its predecessor organizations looking toward expansion in the production and supply of this material to meet the needs of the war program.

"Included in this overall program was the erection of two new plants to treat vanadium ores and production of vanadium pentoxide (V_2O_5) therefrom. One of these plants at Monticello, Utah, is a Defense Plant Corporation project, operated by Metals Reserve Company; the other at Durango, Colorado, is the property of Metals Reserve Company, operated for them under an agency agreement. A further arrangement was later made with Nisley & Wilson (Gateway Alloys Company) at Gateway, Colorado, to process certain vanadium ores for the production of vanadium pentoxide.

"As an essential part of the vanadium program, there was also set up a vanadium agency through Metals Reserve Company for a program of developing ore reserves and the procurement of ores for government plants. Two problems have now come up as a [398] result of which it appears necessary to completely alter the responsibilities and functional operation of the entire vanadium program.

"In the first place, the supply-demand situation of vanadium has changed substantially in recent months. It now appears that the total requirement of vanadium can be supplied by those plants which are owned and operated by private industry with-

(Testimony of Blair Burwell.)

out recourse to either of the two government plants referred to above or to the program with respect to subsidized operation at the Nisley & Wilson, Gateway plant.

"In this connection, it is important that the operations at all three of these plants, although previously necessary in the interest of the war program, have been carried out at a loss to the government because of costs involved which were in excess of the price which could be realized for the final product: vanadium pentoxide.

"At the same time, it has developed that the Army is actively interested in this same vanadium program for reasons other than vanadium. This Army program has reached a point where the entire emphasis of the program is now on materials other than vanadium. Under the circumstances, therefore, the program can no longer be considered a vanadium program and it cannot continue to be operated as such, by or under the direction of the War Production Board.

"It is imperative, therefore, in view of the current vanadium situation, in view of the completely changed character and emphasis in this program, and in view of certain other features of the program making a joint or collateral program impossible, that the entire responsibility and operating direction of the vanadium program, including plants and ore procurement be transferred from the War Production Board to the Army.

"This matter has been under discussion for some

(Testimony of Blair Burwell.)

time with the Armed Services and this conclusion was mutually agreed upon by all interested parties, including the Army Service Forces, Metals Reserve Company and War Production Board in accordance with the attached memorandum of a meeting held on November 6, 1943.

"Accordingly, we wish to advise you that the War Production Board's interest and responsibility in the vanadium program as outlined is withdrawn to be shifted, in accordance with whatever arrangements may be made, to the Army, the Army Service Forces, [400] or whatever appropriate division may be designated."

Mr. Alioto: If your Honor please, I believe the first sentence of this letter indicated that it was a reaction of the Metals Reserve Company to a letter from the United States Vanadium Corporation dated November 19, 1943.

Do you have that letter?

Mr. Archer: If we have it we will produce it.

Mr. Alioto: Do you have it. Do you know whether you have it?

Mr. Archer: I do not know whether I have it, but I will look for it.

Mr. Alioto: I would think that is a rather important letter, because everything is a reaction to what they say as to the supply situation of that time, and I would respectfully request an order of the Court that Vanadium Corporation produce that letter of November 19th.

(Testimony of Blair Burwell.)

Mr. Archer: We will be glad to produce it if we have it.

Mr. Alioto: Tomorrow morning?

Mr. Archer: If we have it. I will look for it tomorrow.

The Court: If you have it, produce it.

Mr. Archer: Sure. I have no objection to that. I would object to counsel's statement that this letter is all a reaction to the Metals Reserve letter, because I think the [401] attached letter explains the purpose of the letter.

The Court: The letter speaks for itself.

Q. (By Mr. Archer): Mr. Burwell, I now show you what has previously been marked as Exhibit 1 in the deposition of Robert D. Nininger and ask you whether you can identify this exhibit.

Mr. Alioto: Did the witness write this letter or receive a copy of it, Mr. Archer?

The Witness: I have received a copy of this letter, but I am a little bit concerned, because this is a top secret Manhattan Project, and "secret" had been marked off. It has been declassified. But it does not show the initial of whoever declassified it.

In this particular document, this has something to do with the survey of S-37, which I think I know what it is—I know what it is—and this is addressed to Union Mines Development Company.

Mr. Archer, can you tell me whether or not you have examined this more in detail, that this document pertained to all the Union Mines Development, or only a portion of it?

(Testimony of Blair Burwell.)

Mr. Archer: All of it cannot be declassified. I subpoenaed all of it from the Atomic Energy Commission—I subpoenaed all that could be declassified. And that is what they gave me. You will notice there are deletions in there.

The Witness: I would raise a bit of a question on [402] this document.

Q. (By Mr. Archer): As to whether it can be declassified?

The Witness: Now, for instance, could I ask you, the S-37 resources, does that include resources both in Canada and here, for instance?

Mr. Archer: Just what it says there.

The Witness: What does it say?

Mr. Alioto: Has the witness seen this document before?

The Witness: You say you have cleared this with the government. I was one of the people who used to make these classification stamps on here, Mr. Archer.

Q. (By Mr. Archer): You are familiar with this contract, are you?

A. Oh, my, yes; I lived with it.

Q. You were an officer of the Union Mines Company, weren't you? A. That is right.

The Court: What is your question?

Mr. Archer: I just wanted him to identify the contract.

A. Well, I can identify that there was this contract, yes.

The Court: That is all he has asked. [403]

Appeal from the United States District Court
for the Northern District of California,
Southern Division

(Testimony of Blair Burwell.)

Mr. Archer: Your Honor, I do not know what procedure you wish to follow, whether you want this taken off the deposition or to remain with the deposition, but I would like to offer in evidence as defendants' next in order, first a letter-agreement dated May 11, 1943, between Union Mines Development Corporation, by Mr. J. R. Van Fleet, president, signed by United States of America by K. D. Nichols, Lieutenant Colonel, Corps of Engineers, Contracting Officer, with the Exploration and Development Contract No. W-7405 Eng-78, signed by K. D. Nichols, or signed by the United States of America, K. D. Nichols, Contracting Officer, and Union Mines Development Corporation, by J. R. Van Fleet, President. And the date of that is the 17th day of April, 1944, effective as of the 11th day of May, 1943.

Mr. Alioto: Have you identified the Union Mines Development Company, as to what that is?

Mr. Archer: I think Mr. Burwell has already testified to that.

The Witness: Yes, I can identify the Union Mines Development Corporation as a company organized by the Union Carbide & Carbon Corporation, and its officers were Mr. Van Fleet, president and director, I was vice-president and director.

Q. (By Mr. Archer): And it operated on the Colorado Plateau, did it not? [404]

A. No; it operated all over the world.

Q. And that included the Colorado Plateau?

A. That is right.

(Testimony of Blair Burwell.)

Mr. Archer: I offer this as defendants' exhibit next in order.

Mr. Alioto: We have no objection, if your Honor please.

(The letter-agreement referred to was marked Defendant U Exhibit "Q" in evidence.)

[See Book of Exhibits.]

Mr. Alioto: I understand you are just offering the document, itself—no portion of the deposition.

Mr. Archer: That is right.

Q. (By Mr. Archer): Mr. Burwell, you mentioned the secret notations on here, and so forth. Those were put on pursuant to government order, were they not?

A. That is right, they were a code designation.

Mr. Archer: This letter, dated May 11, 1943, is a letter-contract between the United States, signed by K. D. Nichols, Lieutenant Colonel, Corps of Engineers, to the Union Mines Development Corporation, dated May 11, 1943 (reading):

"Gentlemen:

"The United States of America, acting through the undersigned contracting officer, has requested your corporation to perform the work hereinafter outlined, and we understand that in the interest of the war effort you are willing to exert your best efforts to perform such work, but it is understood that you make no representation or warranty whatsoever and assume no responsibility or obligation that the work can be successfully performed.

"Accordingly, the United States of America, act-

(Testimony of Blair Burwell.)

ing through the undersigned contracting officer, hereby places an order with you, that you shall with the utmost secrecy and dispatch, and in accordance with instructions of the contracting officer, or his duly-authorized representative, furnish all labor, materials and equipment not furnished by the government, and services, and do all things necessary to cover the work anticipated in a survey of S-37"—and then there is a blank——

——"and the development of suitable processes of beneficiation for such S-37."

Q. (By Mr. Archer): Do you know what S-37 referred to, Mr. Burwell?

A. Yes, sir.

Q. To what did it refer?

A. Uranium oxide, U_3O_8.

Q. And that included uranium found in Colorado, on the Colorado Plateau, in conjunction with vanadium? [406]

A. In connection with vanadium.

Mr. Archer (continuing reading): "Your fee for conducting this survey will be determined by the contracting parties at a future date.

"The Secretary of War finds that it is in the interest of the war effort that this work be not delayed awaiting negotiations of a formal contract, and accordingly you are hereby given formal notice to proceed with the survey.

"It is the understanding of the parties hereto and the intention of this contract that all the work is to be performed at the expense of the govern-

(Testimony of Blair Burwell.)

ment, and that the government shall hold you harmless against any loss, expense (including, but not limited to, expense of litigation), or damage (including, but not limited to, liability to third persons because of death, bodily injury, property injury, destruction, patents, or otherwise) of any kind whatsoever arising out of or in connection with the performance of the work, except to the extent that such loss, expense, damage or liability is due to the personal failure on the part of your corporate officers, or other of your representatives having supervision or direction of the work as a whole, to exercise good faith or that degree of care which they normally exercise in the [407] conduct of your business.

"It is understood that disclosure of information relating to the work contracted for hereunder to any person not entitled to receive it, or failure to safeguard all secret, confidential and restricted matter that may come to the contractor or any person under his control in connection with the work under this contract, may subject the contractor, his agents, employees, and sub-contractors, to criminal liability under the laws of the United States.

"It is understood and agreed that the meaning of the code term, S-37, as used herein, as well as the general aims and procedure to be followed in the performance of the work hereunder, shall be set forth in a secret letter from the government to the contractor dated May 11, 1943, the contents of

(Testimony of Blair Burwell.)

said letter constituting a part of this contract to the same extent as is fully set forth herein. A copy of said letter shall be kept on file in the Manhattan District office."

Q. (By Mr. Archer): Mr. Burwell, did Union Mines proceed to make this survey?

A. We surely did. We carried out both the survey and the investigational processes, and I already testified this [408] is Process C, the process that, we felt, would relieve the Colorado Plateau in the future from responsibility, inhibitions and limitations placed by the vanadium industry. And under this same stipulation I spent, personally, $375,000 for pilot-planning a process that would enable us after the war to get vanadium entirely—uranium entirely free from vanadium. And we had consultations with Lieutenant Colonel Nichols, later General Nichols, Mr. Groves, Mr. Rafferty, Mr. Van Fleet and myself, as to this problem to which I have testified in fragments, at this time, that the future of the Colorado Plateau and the procurement of uranium that we had to have and process, that we would obtain the uranium independent and free of the restrictions of the vanadium industry, and not in proportion to vanadium sales.

And this is the conversation—this is the subject—this is the process that I talked to Mr. Bransome about in the spring of 1947, when I tried to enlist his help for the future of this industry.

Q. That was after this contract was terminated?

(Testimony of Blair Burwell.)

A. That is absolutely correct. I am very glad that you brought this up.

The Court: We will recess at this time until ten o'clock tomorrow morning.

(Whereupon an adjournment was taken until Thursday, June 5, 1958, at 10 o'clock a.m.)

Thursday, June 5, 1958, 9:45 O'Clock A.M.

(The following proceedings were had in Chambers, outside the presence of the Jury)

Mr. Alioto: If the Court please, yesterday we offered certain evidence covering the period prior to January, 1939, in the form of documents.

Mr. Holland: Isn't that July 1, 1938, you are talking about?

Mr. Alioto: The documents were all prior to January 1st.

Admittedly, however, the plaintiff made the contract with the Apex Company in July of 1938. The documents offered yesterday were for the purpose of showing the nature of the agreement in 1938 and 1939 and thereafter, but they were prior to both January 1st and July 1st of 1938.

In that same connection, we would like to inquire of the witness now on the stand, Mr. Blair Burwell, about certain policies, agreements and events which took place prior to January 1st of 1938 but which constitute the origin of the agreements that were in effect from 1938 through 1949 and which explain the nature of those agreements that were in effect for that period of time.

It is the theory of the plaintiff in this case that, by way of example, if we had a lease dated January 1, 1933, which [411] was to run for 15 years. In 1940, some question arose as to what was the nature of the relationship between the landlord and the lessee in 1940, covering events in 1940; I think we would immediately go to the 1933 lease to see the nature of the agreement between the landlord and the lessee.

The Court: If it were a matter between the parties to the lease, yes. Agreed.

Mr. Alioto: So it is on that basis that—in other words, we are now contending, if your Honor please, that the agreements in existence in 1938, '39, '40 and up through '49 had a direct impingement upon this plaintiff.

Now, we propose to show the nature of the agreements by the documents evidencing the origin of these agreements.

Specifically, in connection with this witness, we would like to prove the following facts, and while this may sound like a historical recitation, the fact remains that this witness can probably give it in a matter of 15 or 20 minutes—it is for the period prior to '33, and from '33 on—in a relatively short period of time because he did give this testimony in the Denver trial, in the trial of the United States Government against these defendants, charging a violation of the antitrust laws, for which these defendants were acquitted—this witness, we believe, would testify as follows:

That the operation of the Union Carbide Com-

pany in the field of vanadium can be separated into four different periods of time. [412]

The first was the period in which the Union Carbide and Carbon Corporation, through its wholly-owned subsidiary, the Electro Metallurgical Company, made investments in vanadium mines and facilities for the production of ferro-vanadium, investigated competing sources of vanadium, and established its policy for the long-time production of vanadium alloys, a production which remained in existence from 1938 through 1949, except for such modifications that were forced upon that policy by reason of certain Government regulations and Government statutes.

The initial period extended from 1926, when the United States Vanadium Company—when the Rifle Mill was acquired, to 1933, when this operation was closed and the plant dismantled due to certain stocks of unsold vanadium.

The Union Carbide Corporation entered into the vanadium business in 1926 because it had investigated the uses of vanadium in steel and believed that the markets and consumption of vanadium could be increased. The original plant which was purchased was increased to a capacity of 1,200,000 pounds of oxide annually in 1926, for this reason. They were going into this industry competitively rather than collusively.

There was a meeting held in Colorado in 1936, which this witness attended, the witness being Blair Burwell. The other persons present at that meeting

were Mr. John B. Hufford, the [413] Manager of Purchases of Union Carbide, Benjamin O'Shea, the President of Electro Metallurgical Company, Mr. Giles Meade, the Treasurer of Union Carbide and Carbon Corporation.

No question was raised at that time by the Electro Metallurgical Sales Company as to the ability of the company to sell vanadium produced at the expanded operation, and no question was raised about making any agreements with the Vanadium Corporation of America, restricting either production or sales of vanadium. Specifically, no question was raised at this time about setting up an agreement whereby the Vanadium Corporation of America would be permitted to capture between two-thirds and seventy per cent of the market by agreements with Union Carbide not to reduce the price of ferro-vanadium.

In 1927 and 1928, the witness Blair Burwell, together with Mr. J. R. Van Fleet, who later became President of the United States Vanadium Company, were called upon to recommend to the company the purchase of additional reserves of vanadium ore. The witness was advised by Mr. O'Shea, the President of Electro Metallurgical Company, that the company believed that the merits of the vanadium alloy justified Union Carbine and Carbon Corporation in further increasing their production of ferro-vanadium, and they were desirous of taking the leading position in the production and sales of this metal. At that time, vanadium was the leading alloy used in engineering steels and the

use of ferro-molybdenum or molybdenum in steels [414] was secondary to that of vanadium.

The witness thereupon recommended to Mr. O'Shea, Mr. Meade and Mr. Hufford that the properties on the Colorado Plateau be purchased. As a result of this recommendation, certain mine properties in Montrose County were visited by Mr. O'Shea, Mr. Meade, Mr. Hufford, Mr. Van Fleet and the witness in about 1928, and negotiations for the purchase of these properties were initiated through Mr. John B. Hufford and the witness. However, before making this acquisition, it was decided to make an investigation of the Vanadium Corporation of America's mines in Peru to determine the position of this company to produce vanadium in the future and to determine the competitive effect or the competitive advantage that the Union Carbide companies had over the Vanadium Corporation of America.

Accordingly, Mr Van Fleet made a secret visit down to Peru and came back and reported that the high-grade ore of the Peruvian mines of the Vanadium Corporation of America had been exhausted and that, therefore, the Peruvian mines would not be able to compete with the production on the Colorado Plateau. This fact was, of course, later verified and later admitted by the Vanadium Corporation of America. In fact, the Vanadium Corporation of America stopped shipping from Peru for a long period of time and thereafter had to install a very expensive plant for the purpose

of concentrating the lower-grade ores which they retrieved from the mine in question. [415]

Based upon this knowledge of the favorable competitive position which Union Carbide enjoyed over the Vanadium Corporation of America, a definite policy was agreed upon between the officials of Electro Metallurgical Company, specifically Mr. O'Shea, Mr. Hufford, and the officials of the United States Vanadium Company, Mr. Van Fleet and the witness, Mr. Blair Burwell.

That policy was to acquire a monopoly of the mining areas and control of the entire Colorado Plateau. That policy specifically included a direction that any independent competition of oxide mills should be eliminated and any independent competition from producers or miners should be eliminated. That was a specific policy and a policy which remained in effect in 1938 through 1949, and it was on the basis of that policy that this witness took the steps that he did to eliminate the competition from the Gateway area, the Loma area, the Mesa Vanadium Mill area and others about which he has already testified.

However, one modification of that policy was made in the period from 1933 forward, and that was a modification which included definite agreements between the Vanadium Corporation of America and the Union Carbide Company. Those agreements were predicated upon considerations relating to neutralizing competition in the ferro-chrome field and in other alloys. The evidence of this witness will show that very important policy meetings were

held within the Union Carbide organization between [416] 1933 and 1935. The evidence of this witness will show, together with certain documents, that there were also very important policy meetings held between the officials of the Vanadium Corporation and the officials of Union Carbon.

Taking those one at a time, the witness will testify that early in 1934 a study of the vanadium industry was ordered by the top officials of the Union Carbide Company, and these included Mr. MacQuigg of the Research Department; they included Mr. Priestley of Electro Metallurgical Sales, they included Mr. Dutot, Mr. Critchett, the witness, Mr. Van Fleet and others.

As a result of those meetings, the Research Department was ordered and instructed to prepare a report on the competitive situation in vanadium and to prepare recommendations as to what should be done.

The recommendations of the Research Committee were to lower the price of ferro-vanadium to $2.25, but the Research Committee also set up three alternatives, two of which comprehended cooperation with the Vanadium Corporation of America, and the third of which comprehended straight competition with the Vanadium Corporation of America and no agreements on prices, production or the elimination of competition or anything else.

This matter was discussed by the top officials, the witness will testify, of the Union Carbide Corporation, and it was also discussed between the top

officials of the Vanadium Corporation and the Union Carbide. [417]

As a result of these meetings and as a result of these studies, it was formally decided, against the wishes of the witness and Mr. Van Fleet, to abandon the route of competition and to take the route of agreement between Union Carbide and the Vanadium Corporation of America.

Accordingly, an agreement was made. The agreement comprehended that the Vanadium Corporation of America—the agreement was made as a result of direct meetings between the Vanadium Corporation of America and Union Carbide. The agreement contemplated that the competitive disadvantage at which the Vanadium Corporation of America found itself, because its Peruvian mines had lost their high-grade ore, would be compensated for by United States Vanadium supplying to the Vanadium Corporation of America its requirements of vanadium oxide to produce ferro-vanadium.

The agreement also embodied an undertaking by the Electro Metallurgical Sales to let the Vanadium Corporation of America set the price for ferro-vanadium and to let Vanadium Corporation of America have two-thirds to seventy per cent of the market on ferro-vanadium, and that the Vanadium Corporation of America would acquire some of its supplies from the United States Vanadium Corporation—that is, the supplies of oxide.

The agreement also contemplated that they would cooperate with each other on the price, that they

would respect each other's customers, that there would be no competition, no [418] price competition for customers, and also comprehended that they would act jointly in connection with the elimination of competition either in the production of ferro-vanadium or vanadium oxide.

The witness will testify that in making this agreement the United States Vanadium Company, which was the operating company on mines and the production of oxide, disagreed with the position of the Electro Metallurgical Company, and it was the position of the Electro Metallurgical Company that it met with the approval of the board of directors. The Electro Metallurgical Company at the same time not only produced and sold ferro-vanadium but produced and sold other alloys, including ferro-chrome, which were produced and sold by the Vanadium Corporation of America.

The agreement not to compete was made not only on ferro-vanadium and vanadium oxide, it was made as well on ferro-chrome and the other alloys which the defendants produced and sold in common.

This agreement continued without interruption from 1933 right up to the end of 1938 and was implemented by various acts occurring after January 1st of 1938.

It is again the position of the plaintiff that while the meetings evidencing this agreement were, in fact, held before January 1st of 1938, there isn't any question about it that they nevertheless explain the nature of the agreement which [419] was in effect from 1938 to 1949, and upon that basis we

make this offer of proof, and we offer to prove those facts from this witness, and we believe, if your Honor please, that all of those facts can be proved in approximately an hour—the testimony, in approximately an hour, an hour and a half.

Mr. Holland: The Court has already ruled on this.

Do you wish to hear from me?

The Court: You can make your statement, any statements you want to make.

Mr. Holland: I would like to make the statement, first, that I think Mr. Alioto is very optimistic on the time schedule of proving these or attempting to prove these facts, because it took a great deal longer than that in the Denver case.

Also involved, of course, would be all of the proof that the defendants would have to offer to refute those charges, which they were successful in refuting the Denver case.

As Mr. Alioto has said, these facts were all brought out in the Denver case by this witness, and the defendants offered extensive evidence on these facts, and the decision resulted in an acquittal.

It is the position of the defendants that the Court should properly set a time limit behind which we can't go or this case would be dragged out for a long period of time, and that is particularly true in a case where these issues have already been tried once. [420]

If your Honor wants any authority on this propo-

sition, I have some—I will have to go out in the courtroom and get it.

The Court: I don't care to go into that.

Do you have anything to say?

Mr. Archer: Just one. In addition to adopting Mr. Holland's remarks, I want to say that in regard to this report, which is entitled the MacQuigg report, and the rest of the people referred to in the offer of proof, all of them are now dead, except for Mr. Priestley and Mr. Dutot. Mr. Dutot is no longer employed by the company; he is, in fact, employed by a competitor. Mr. Priestley is the only one who is still alive of all of these people that have been mentioned.

Mr. Alioto: In view of the statement of Mr. Archer, may I supplement the offer of proof, in this respect: We do not agree that the principal parties involved in the making of this policy are dead. We think that the principal person in the Electro Metallurgical Company, insofar as the making of this policy of collusion with V.C.A. was concerned, was Mr. Priestley, who is not dead, who is living, and who, as counsel has already stated in the records of this case, will be in attendance at this trial, and I assume that Mr. Priestley is presently in San Francisco.

Mr. Blair Burwell, the witness, is of course alive. He is on the stand at the present time. So we perceive there is [421] no problem about the question of who is dead or who is alive and, furthermore, we don't think that is material. We think that so far as the corporate acts are concerned and cor-

porate records, that the records speak for themselves.

Furthermore, with respect to the comments of Mr. Holland, that this would take a very long time, I don't think the Denver trial went 10-trial days. Did it?

Mr. Holland: Well, it would take another five days here. I think five of them were devoted to this period prior to '38.

The Court: Well, the Court has heretofore indicated his ruling on this matter. I might state further, though, that this is an action by the plaintiffs and before the plaintiffs can recover in this case, it is necessary to show that they have been damaged by some act of the defendants.

Now, during this period of time, the question prior to '38, the plaintiffs were not even residents of the United States; they weren't here. Their company was organized in '38 and '39, and you have been permitted to ask the witness on the stand what the general policy of the companies, the defendant companies, were in 1938 and '39, and he has testified to that.

The Court has permitted some evidence to go in which might go in to show—you asked him the direct question and he answered that they did this to keep these other people from operating. [422]

Now, the plaintiff in this case must show that he has been damaged by some act of these defendants, not in 1933 and 1935, but in 1938 and '39 and '40.

The offer will be refused, and an exception allowed. [422-A]

(Whereupon the Court and counsel for the respective parties entered the courtroom and the following proceedings were had within the presence and hearing of the jury:)

The Court: At this time the Court desires to make an announcement.

Members of the jury and others interested: The Court will recess tomorrow at twelve o'clock. Some other matters have come up which necessitate the attendance of attorneys elsewhere, and their matters will come up after twelve o'clock. So we will recess at twelve o'clock tomorrow.

There is something about a meeting on Monday, but I do not think that will interfere with this court, will it?

Mr. Alioto: Not so far as we are concerned.

Mr. Archer: No, your Honor.

BLAIR BURWELL

a witness on behalf of the plaintiffs, on the stand at the time of yesterday's adjournment, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-Examination—(Resumed)

Q. (By Mr. Archer): Mr. Burwell, I think yesterday, as I read the transcript on page 333, we were talking about the Dry Valley claims. You answered they were owned by many, many people. This is on page 332. I asked the question: [423]

"In 1938 the Molybdenum Corporation had it?"

And on page 333 the answer is:

(Testimony of Blair Burwell.)

"They have acquired it from Floyd Ackerman."

I believe you said "Floyd Odlum," is that right?

A. That is right.

Q. And on page 343, on an occasion when I was reading from one of the exhibits, I read this:

"In June, 1942, an additional allowance of $1.50 per ton on ore delivered was added to the schedule Attachment 1 in order to meet competition with plants more favorably located to receive ore from south and southwest areas."

You answered:

"That was the Vanadium Corporation plant."

By "Vanadium Corporation" you meant the other defendant, Vanadium Corporation of America?

A. That is correct.

Q. Mr. Burwell, I believe you testified in the administration of the Metals Reserve contracts by the United States Vanadium Corporation, that John Hill handled the affairs from Grand Junction under your supervision, is that correct?

A. Yes. He was supervising engineer, I think was his title.

Q. He customarily made reports to Metals Reserve and to you on the operations of the plant at Durango and at Gateway, did he not?

A. That was part of his duty.

Q. I will show you now a report of the United States Vanadium Corporation, agent for Metals Reserve, for November 30th, but it is dated December 20, 1943, John W. Hill, supervising engineer, Met-

(Testimony of Blair Burwell.)

als Reserve Company, and ask you whether this is one of those reports.

A. That is correct, Mr. Archer.

Mr. Archer: I offer this report in evidence as defendants' exhibit next in order.

Mr. Alioto: If your Honor please, I have not seen the report yet, but I do want to make the observation that up to this point we have not objected on the ground of hearsay, but obviously a statement by a man by the name of Mr. Hill to somebody in Washington was never brought to the attention of the plaintiff, and is a hearsay statement. We are going to object on the basis of hearsay, your Honor. We can get all these reports in for the next ten days, it seems to me.

Furthermore, as of this moment, there has been no evidence that we are claiming any damage from anything resulting from the government program, as distinguished from private action, and I just do not see the relevancy of this evidence.

The Court: Overruled. Exception. This is cross-examination.

Mr. Alioto: Incidentally, did you find that [425] letter yesterday that you were going to look for?

Mr. Archer: Yes.

Mr. Alioto: May I take a look at it while you are putting this in?

The Court: This is a report by Mr. Hill, as I understand it.

The Witness: I presume that is it, your Honor. It is a routine report of the operations of Metals

(Testimony of Blair Burwell.)

Reserve which Mr. Hill made of the mill in the producing of ore and the duties we were to carry out with the government.

(The report referred to was thereupon marked Defendant U Exhibit R in evidence.)

[See Book of Exhibits.]

Q. (By Mr. Archer): Mr. Burwell, I would like to invite your attention to the processing plant report for November, 1943, on the Durango plant, which I have marked with a paper clip here, and the processing plant report on the Nisley & Wilson Gateway vanadium mill dated November 30, 1943.

I think I marked the wrong place. Will the Court indulge me a moment here?

That is right. I believe you testified that the Durango plant was built as a hundred-ton-a-day operation, at a cost of approximately $100,000?

A. That is correct.

Q. Does the page to which I referred you in that exhibit [426] show the cost of vanadium oxide to the government at the Durango plant through November, 1943? A. It does.

Q. What is that cost?

A. The cost per pound of V_2O_5, in the material fused oxide sacked, treated, and dated, was $1.52 per pound, and the cost per ton of V_2O_5 contained in the ore was 62.8 cents per pound.

Q. And the finished product, being the cost of V_2O_5 sacked, is that correct?

A. That is correct.

(Testimony of Blair Burwell.)

Q. If you will turn to the second page, where I have a clip, you will see the same kind of report for the Nisley & Wlison mill, is that not correct?

A. That is correct.

Q. What is the cost for the finished vanadium oxide shown there?

A. $1.65 a pound for the treated to date; $1.55 on the current month.

Mr. Archer: Your Honor, when I finished yesterday I was reading an exhibit that I think has been returned by now. I had finished reading the letter-agreement dated May 11, 1943, between the Union Mines Development Corporation and the United States of America, and attached to that is the final contract dated April 17, 1944, effective as of the 11th day of May, 1943. [427] It has the various recitals, and I will read the pertinent paragraphs. If somebody else wants to read others, they can be read (reading):

"Objectives and Scope—Statement of Project

"The contractor shall, at the cost and expense of the government (see Title II) and in accordance with instructions of the contracting officer, exert its best efforts to furnish all labor, materials and equipment not furnished by the government, and otherwise do all things necessary to determine and evaluate the"——

Then there is a blank——

——"resources of S-37."——

Q. (By Mr. Archer): I believe you testified

(Testimony of Blair Burwell.)

S-37 referred to uranium, did you not, Mr. Burwell? A. That is correct.

Mr. Archer (continuing reading): ——"to make recommendations for the acquisition of the strongest possible control of the production and disposal of such resources as may be accessible and are considered to have commercial value, to make recommendations for suitable methods of exploitation of any such resources as may be found, and to make recommendations for the beneficiation of any supplies [428] of S-37 which may be acquired"——

Q. (By Mr. Archer): What does "beneficiation" mean, Mr. Burwell?

A. Processing in plants to recover the minerals and metals that are in them.

Mr. Archer: It goes on to say (continuing reading):

——"Except as the contracting officer may otherwise direct or approve, the contractor shall conduct the project with the utmost secrecy and dispatch and shall not inform its subcontractors or other outside organizations that any of the project is being performed for the government."

Q. (By Mr. Archer): Through the administration of this contract, Mr. Burwell, it is true, is it not, that you were not permitted to say either that you were acquiring the uranium resources, or that you were acquiring them for the government?

A. I think basically that is correct.

Mr. Archer: Reading from Paragraph 2 (c) on page 3 (reading):

(Testimony of Blair Burwell.)

"When promising deposits of S-37 are discovered or are reasonably believed to exist as a result of the work hereunder the contractor shall make recommendations to the contracting officer for the [429] acquisition of the strongest possible control of the production and disposal of the desired resources. In accordance with such recommendations and to the extent directed or approved by the contracting officer, the contractor shall, as a part of the project, exert its best efforts to acquire (by purchase, staking, filing, refiling or otherwise) claims discovered by the contractor in carrying out the project on all mineral deposits containing or believed by the contracting officer and/or by the contractor to contain S-37 or to contain other mineral deposits of value which the government wishes to own directly or through a governmental agency. All such claims so acquired shall be located, filed or otherwise acquired in the name of the contractor or otherwise as the contracting officer shall direct. The contractor is empowered, upon the direction or approval of, and to the extent authorized in writing by, the contracting officer, to purchase or otherwise acquire for the government or a governmental agency, as the contracting officer may direct, hold in its name or otherwise as the contracting officer may direct, secure or grant leases of, obtain options for rights in, assign, transfer, sell or otherwise [430] dispose of metals, minerals, and ores, lands containing metals, minerals, or ores, and claims or other rights with regard to metals,

(Testimony of Blair Burwell.)

minerals or ores. Such right, title and interest to any property, real or personal, leasehold or option, as may be acquired by the contractor pursuant to this paragraph shall, unless such property shall be abandoned or otherwise disposed of as approved by the contracting officer, be held by the contractor for the government or a governmental agency, as the contracting officer may direct, and be turned over to the government or such governmental agency at the request of the contracting officer, subject to any leases, claims, options or other rights in third parties not granted by the contractor or granted by the contractor with the approval of the contracting officer."

There are various provisions in here for the acquisition of these claims.

Then it goes on to say, on page 5, Paragraph Sub-(f) (reading):

"To the extent mutually agreed upon between the parties hereto, research work for the development of varying processes for beneficiation of S-37 occurrences in many different types of ores, milled [431] products and other products shall be carried on."

Q. (By Mr. Archer): Do you recall when the operations under this contract were terminated, Mr. Burwell?

A. Not too definitely, Mr. Archer. I believe it is in the record. There is more than one contract, Mr. Archer. There is an amendment to that contract. But that is equally pertinent.

(Testimony of Blair Burwell.)

Q. There are actually a good many amendments, are there not?

A. Yes. There is a very pertinent amendment.

Q. (By the Court): When was the final contract terminated, the last contract terminated?

A. I believe, your Honor, about 1945, or maybe early 1946, somewhere in that time—between 1944 and 1946, somewhere in that time.

Q. (By Mr. Archer): Mr. Burwell, I show you now a construction, operation and maintenance report of uranium sludge plants operated by the United States Vanadium Corporation in the Colorado area, submitted by Blair Burwell, vice-president, February 25, 1946.

This has substantially been declassified, your Honor, but is not completely. The one part I wish to show the witness is the part entitled "Historical Outline," which has been declassified. [432] I have made a copy.

Mr. Alioto: Where is the full report, Mr. Archer?

Mr. Archer: Right here.

Mr. Alioto: Do you claim that is classified? If it is, what are you doing with it?

Mr. Archer: I have a Q clearance. You will notice on the historical outline the notation "Secret" has been marked out, and I just compared it with the paper I handed you.

The Witness: Yes.

A. This is one, Mr. Archer,—one of two reports which I wrote.

(Testimony of Blair Burwell.)

Q. (By Mr. Archer): And the historical outline is correct, is it not?

A. Yes, it is correct.

Mr. Archer: Your Honor, I now offer in evidence as defendants' exhibit next in order, the historical outline from Mr. Burwell's report.

The Witness: Let me look once more at this historical outline. I was looking at the main report, Mr. Archer. That is a separated document, and I didn't give it the attention I should have—this one right here. It is the same thing. That is correct.

Mr. Alioto: Who is supposed to have written this, counsel? [433]

Mr. Archer: Mr. Burwell. My secretary typed this up from this page.

Mr. Alioto: Does she have a clearance, too?

Mr. Archer: This page has been declassified.

The Witness: Your Honor, I question that.

Mr. Archer: The page?

The Court: Just a moment.

The Witness: I mean, I have been on the inside of this classification, your Honor, and put these stamps on, and I am familiar to a certain extent with what is classified and declassified, and I think that is top secret. I don't think even anybody with a Q clearance today—and I have one—can go back into that material, because contained in there is the pounds of uranium that went into the atom bomb job. That has a top clearance, and I question it.

(Testimony of Blair Burwell.)

Mr. Archer: Mr. Burwell, I am not offering that. I am offering only the historical outline.

The Witness: It is an open document, and it is not contained in the usual security manner that these documents are supposed to be maintained. They are supposed to be in locked files, and certain people are given the combination to it, and well I know that, Mr. Archer. I am afraid we are getting a bit careless here in the legal interpretations of a very essential project. I wish to go on record saying that. [434]

Mr. Archer: Your Honor, this document was kept until about three weeks ago in the office of the Atomic Energy Commission in Oakland, California. At my request it was sent to the Atomic Energy Commission in Washington, D. C., for classification purposes, and was declassified and sent back to me.

Mr. Alioto: Who marked the word "Secret" off this document?

Mr. Archer: I did.

Mr. Alioto: Do you have authority to declassify documents?

Mr. Archer: I had the authority to take the "Secret" off there when I sent it back.

Mr. Alioto: It is a great system we are living under.

But we have no objection to the document going in.

(The report referred to was thereupon marked Defendant U Exhibit S in evidence.)

(Testimony of Blair Burwell.)

Mr. Alioto: Mr. Archer, is it possible for me to see the one page of the book from which that statement was taken?

Mr. Archer: Certainly. As far as I am concerned this has been declassified. Mr. Burwell disagrees with me.

Q. (By Mr. Archer): You will agree there is nothing classified on this [435] exhibit, won't you, Mr. Burwell?

The Court: Go ahead and see what is in it.

Mr. Archer: "Historical Outline."

I am skipping the first paragraph, which is technical, as I see it (reading):

"In the fall of 1942 officers from the Manhattan District"——

Mr. Alioto: Excuse me, Mr. Archer. It is a very short paragraph and goes back to 1937 and 1938. I would appreciate if you would start from the beginning. It is a very short paragraph.

Mr. Archer: I have no objection (reading):

"Historical Outline

"The complete acid leaching process was operated at Uravan, Colorado, in 1937 and 1938, as a continuous sand leaching process. In this operation the filtering units were constructed of stainless steel and rubber to withstand the acid solutions and the green sludge produced was stored in outdoor filter ponds for later treatment. Various types of mechanical difficulties were encountered in this process and rectangular concrete leaching tanks were

(Testimony of Blair Burwell.)

substituted for the acid-proof filters. This operation was mechanically sound and operated for approximately two years. During this operation approximately 250,000 pounds of U_3O_8 was produced in the form of green sludge. During the same period of operation this sludge was refined in Uravan by the sodium carbonate roasting step and a vanadium and uranium concentrate was produced.

"In the fall of 1942 officers from the Manhattan District discussed with United States Vanadium Corporation officials a possible operation in the Colorado area on the production of a uranium product that could be refined at other plants to produce a desired material. The United States Vanadium Corporation officials felt that many improvements were indicated in the present process, and that approximately six months would be required to develop a more satisfactory method of processing the uranium-bearing sands. Officers of the War Department did not feel that the delay could be made, and requested that the company proceed with the present process in which four pounds of U_3O_8 and five pounds of V_2O_5 were recovered from the sand tailings.

"Construction was started by the Stearns-Roger Manufacturing Company on the acid leaching plant at Durango, Colorado, the acid leaching plant at Uravan, Colorado, and the sodium carbonate roasting plant at Grand Junction, Colorado, in the spring of 1943. [437] The two acid leaching plants started operations in July, 1943, and the Grand

(Testimony of Blair Burwell.)

Junction plant started operations in August of 1943. In order to supplement the production from the acid leaching units, a second plant, belonging to the United States Vanadium Corporation, was put in operation at Uravan in June of 1944. The operations were discontinued on all plants in the late summer and early fall of 1945."

Q. (By Mr. Archer): Now, Mr. Burwell, you have referred to the Metals Reserve Company plant.

Mr. Alioto: Excuse me, counsel. Have you finished reading the document?

Mr. Archer: Yes.

Mr. Alioto: If your Honor please, I have no objection to the Court and the jury hearing anything, but now that has been read I think it is manifestly irrelevant to any issue.

The Court: I did not get your statement.

Mr. Alioto: As I say, I have no objection to the Court and the jury hearing anything, if the Court please, but I think it appears, now that it has been read, that it is manifestly irrelevant, and I would like to make a motion to strike the portion of this secret report that has been submitted on the ground it is not relevant. It simply goes to [438] government operation only, not the private actions this witness testified to.

The Court: Overruled. Exception.

Q. (By Mr. Archer): Mr. Burwell, this report refers to an acid leaching plant at Durango, Colorado, does it not? A. That is correct.

Q. We have previously talked here about the

(Testimony of Blair Burwell.)

Durango plant as being operated by Metals Reserve, have we not? A. That is correct.

Q. And this is the plant which United States Vanadium Corporation exercised its option to buy in 1944? A. That is correct.

Q. In addition to the oxide plant, the vanadium oxide plant at Durango, who operated this acid leaching plant for uranium at Durango?

A. U. S. Vanadium Corporation.

Q. For the United States Army?

A. The same company. Another contract. The same company.

Q. And they were operating that plant prior to the time that the United States Vanadium Corporation exercised its option to purchase the plant, did they not? A. Oh, certainly.

Q. After you exercised the option to purchase the Durango plant you continued to operate, to bring the uranium oxide out [439] of the Durango plant for the United States Army?

A. That is correct; and also vanadium at the same time, in the same plant—vanadium and uranium. They were both produced in the same plant.

Q. (By the Court): For the Army?

A. They were both, your Honor, produced in the same plant—vanadium and uranium.

Q. Yes. But were they produced for the Army?

A. They were produced in one plant, the uranium for the Army, and the vanadium was produced for the Army and turned over to the government as part of the stock pile, your Honor.

(Testimony of Blair Burwell.)

Q. That was after you purchased this from the government? After you exercised your option to purchase?

A. Well, I am just a bit unclear, your Honor, about these exact dates. We get a precise definition of dates here. We acquired the property for the United States Vanadium Corporation in accordance with this telegram that was read into evidence a day or two before, and I think if we refer to that date that we had agreed to purchase, it would clear me from any lack of——

Q. What I am getting at is, you had, under your agreement with the government, an option to purchase? A. That is correct.

Q. Now, you exercised that option. [440]

A. We did.

Q. Then after you exercised that option, did you, when you manufactured uranium and vanadium, was that for the government?

A. My recollection, your Honor, is that that portion of the plant that was producing uranium and vanadium was operated for the government. The other portion of the plant, all connected together, really, was operated for private account, both producing the same materials. It was a bit complicated. I do not think it is really too pertinent. If you want more details I will give it, but I don't think we need to take the time to do so.

Q. (By Mr. Archer): I will show you a letter, Mr. Burwell, dated October 4, 1944, from yourself to the Metals Reserve Company, and ask you

(Testimony of Blair Burwell.)

whether or not you can identify that. Maybe that will set the dates.

A. Oh, yes. Thank you very much.

October 4, 1944, is when we purchased the plant, and I enclosed the check.

Mr. Archer: I offer this in evidence as defendants' exhibit next in order, your Honor.

Mr. Alioto: Do you have any objection to reading the purchase price of that plant to the jury, Mr. Archer?

Mr. Archer: No objection at all. [441]

(The letter referred to was thereupon marked Defendant U Exhibit T in evidence.)

[See Book of Exhibits.]

Mr. Archer: This is a letter of October 4, 1944, to Metals Reserve Company, Washington 25, D. C., Attention Mr. H. DeWitt Smith, Executive Vice President (reading):

"Gentlemen:

"In reply to your letter of September 30, 1944, we are enclosing our check for $86,152.16 in payment for purchase of buildings, machinery and equipment located at Durango, County of La Platte, Colorado, as per bill of sale executed on July 31, 1944, from the Metals Reserve Company."——

Do you want me to read the remainder?

Mr. Alioto: So far as I am concerned you have finished reading the purchase price. I don't care for anything else, unless you want to read it yourself.

Q. (By Mr. Archer): Mr. Burwell, I think

(Testimony of Blair Burwell.)

you previously testified you bought this to keep some outsiders from acquiring it, is that correct?

A. That is correct. [442]

Q. Now, when you exercised the option, you dealt directly with these men at Metals Reserve, did you not? A. Correct.

Q. But there were many business reasons for purchasing Durango, were there not?

A. From purchasing direct?

Q. From purchasing Durango. For purchasing the plant. A. Yes, there were.

Q. To replace it or to build a plant of that type would cost roughly three-quarters of a million dollars at the time you exercised your option, would it not? A. That's correct.

Q. So it was obviously good business to exercise your option to buy the plant, wasn't it?

A. Providing we had the ore supply tributary to the plant to use the three-quarters of a million dollar plant, Mr. Archer.

Q. And at the same time, the Metals Reserve had a large stockpile of ore right at the plant?

A. That's right.

Q. In which you made a contract with Metals Reserve to process that ore for them and deliver the oxide to them, did you not?

A. That's correct. It was a stockpile purchased by the government money that had not been processed when the program [443] had been closed and the government decided to, instead of leaving it in ore that couldn't be used, to turn it into prod-

(Testimony of Blair Burwell.)

uets that could be used. That we did under what we call a toll agreement, so much a pound for the job we did.

Q. Is this the agreement about which you are speaking, Mr. Burwell?

A. I quoted from memory 62½ cents a pound of V_2O_5 that we charged.

Q. This is dated October 13, 1944.

A. (Witness examining) That's correct.

Q. It is a conformed copy signed by Mr. Van Fleet and DeWitt Smith.

(To Mr. Alioto) You have a copy.

Mr. Alioto): We have no objection, Mr. Archer.

(Agreement dated October 13, 1944, by and between U. S. Vanadium Corporation and Metals Reserve Company, received into evidence and marked Defendant Union's Exhibit U in evidence.)

[See Book of Exhibits.]

Q. (By Mr. Archer): Mr. Burwell, do you know where the oxide went which you processed or what disposition was made of the oxide—I think it would be better to say—of the oxide that you processed under this contract in October, 1944, for Metals Reserve?

A. Mr. Archer, I don't recall at this time.

Q. May I suggest, it was sent to the Metals Reserve stockpile in St. Louis, Missouri? [444]

A. Well, it was delivered to the order of Metals Reserve. Wherever it went, I don't recall the town or destination, I don't recall.

(Testimony of Blair Burwell.)

Q. But it wasn't for a private account?

A. It was the account of the Metals Reserve, in accordance with the agreement.

Q. That's right. Now, another reason why you thought it was a good idea to purchase the Durango plant was because it was on a very strategic location, located on the railroad serving this and had potentials for the future, is that not right?

A. That is correct.

Q. It had also had housing available?

A. That's correct.

Q. Are you able to recall how much vanadium oxide you processed for the Metals Reserve under this contract? A. The entire contract?

Q. Yes, this last one? A. This last one?

Q. Yes, just this last one, the one in October '44—in other words, the Durango stockpile.

A. I can give you an approximation. Somewhere around 600-650 thousand pounds of V_2O_5.

Q. Referring again to the telegram, you recall that your [445] letter exercising the option to purchase was dated October 12, 1944?

A. The telegram?

Q. No, your letter exercising the option was October 12, 1944. A. Whatever it is.

Q. Yes. A. I don't have a record here.

Q. I have a copy of that telegram but I don't know the exhibit number of the one——

Mr. Alioto: We can find it.

Mr. Archer: Now I will show you Exhibit 37 and Exhibit T.

(Testimony of Blair Burwell.)

Q. Now, Exhibit 37 is your telegram to Mr. Haldane stating that:

"Brock Advises That Brinker With Sitton and Other Promoters Are Reported to Be Planning to Take the Durango Plant in Case We Do Not Recapture It Stop This Is Rumor Only But Suggest You Advise Mr Rafferty Regards Blair Burwell"

This was dated February 29, 1944, correct?

A. That's correct.

Q. And your letter exercising the option is dated October 12, 1944?

A. The same year, following it, that's correct.

Q. Now, you were also informed at that time that there were other outsiders who were trying to acquire the Durango plant, were you not?

A. That's correct.

Q. One of them was Vanadium Corporation of America, the other defendant here, isn't that correct?

A. Why, I heard a rumor to that — but that wasn't the person that I was referring to in the "promoters." "Promoters" was a code word, Mr. Archer.

Q. To whom were you referring?

A. Is a code word established by military intelligence. If you want me to tell that, you clear it with the Army.

Q. You mean you aren't able to state who the other promoters were?

A. If the Court asks me to do it, I will be very happy.

(Testimony of Blair Burwell.)

The Court: No, I don't think you need to.

A. I don't think it's pertinent here at all.

Q. (By Mr. Archer): Well, isn't it a fact, Mr. Burwell, that one of the reasons you exercised the option on the Durango plant was because the Army requested you to prevent it from falling into the hands of some of these people referred to in the code word "promoters"?

A. There were two reasons, Mr. Archer——

The Court: That doesn't answer his question. Answer his question first and then explain. [447]

A. That was correct insofar as that is concerned.

The Court: One question — it may be in the record. What supplies did you have on hand — were there for any of these defendant companies — when these contracts with the government were concluded? What vanadium did you have or alloys?

A. Insofar as the oxide, your Honor, which I do have some recollection, I think exceeded a million pounds at the time all these contracts were concluded. They were from a million to a million and a half pounds. But shortly after that we closed all our plants because we couldn't dispose of the vanadium we had.

The Court: Now, that belonged to the government at that time?

A. That belonged to the companies, the United States Vanadium Corporation.

The Court: Well, was that during the time that the government was operating?

(Testimony of Blair Burwell.)

A. The government operated up to approximately mid-'43 and then—in about a year and half, your Honor, we were operating under government allocations—and in a period of a year and a half we had filled all the needs of the government, and the government says: We don't need any more vanadium, and the companies were operating from mid-'43 on, producing on their own account and we had accumulated, [448] United States Vanadium Corporation—I don't know how much V.C.A. did—approximately a million and a half pounds of vanadium unsold, around '43.

The Court: What disposition did you make of that?

A. Well, that finally was—we shut down our plants about that time, the Uravan plant went down, the Rifle plant continued to operate; the material laid in our warehouses, we shut all our—dismissed all our employees, men; and on or about 1946 this was disposed of to the Treasury Procurement in accordance with the testimony that I made in regard to Mr. Chaffee and the conversation regarding Mr. Priestley down in Washington.

In other words, we finally sold it to the stockpile, a stockpile agreement, a stockpile which was set up later by the government in anticipation that we might have another war and that they didn't want to be caught short with the lack of vanadium for the future. So they set up, after this, the government, a stockpile program to acquire vanadium in anticipation——

(Testimony of Blair Burwell.)

The Court: What I was getting at: Was this supply that you had on hand offered to the general purchasing public?

A. Oh, yes. Oh, yes. We were anxious to sell it. We were trying to beat every doorbell and sell it wherever we could. [449]

The Court: Would you have sold it and did you sell it to anybody that wanted to buy it?

A. We would have sold it to anybody that wanted to buy it. We were anxious to sell it to anybody that wanted to buy it. If we didn't sell it, we had to lay our men off, four or five hundred men. Sure we wanted to sell it.

Q. (By Mr. Archer): Mr. Burwell, when United States Vanadium Corporation processed uranium oxide for the United States Government, the government purchased the oxide, did it not, the uranium oxide?

A. They purchased a small portion of it, Mr. Archer, and they took the other portion, which was a part of the contract—they paid the cost of the processing and we sold the uranium in the ore unprocessed at 25 cents a pound of recovered U_3O_8. I think that was the arrangement.

Q. They also purchased the vanadium, too, the vanadium oxide that resulted?

A. They purchased the vanadium, not in the oxide that resulted, but the vanadium in the material that entered the plant for the recovery of uranium, at the same price, 25 cents a pound.

Q. Well, I will show you the three contracts

(Testimony of Blair Burwell.)

that I have. The first is W-7405 eng-201, dated September 1, 1943, effective as of June 1, 1943, between the United States and United States Vanadium Corporation. [450]

A. What division of the United States?

Q. This is the Army contract.

A. The Army?

Q. Yes.

Contract W-7405 eng-250, dated June 26, 1944, effective as of July 10, 1943, between the United States and the United States Vanadium Corporation.

And Contract No. W-7405 eng-32, entered into May 12, 1943, effective January 25, 1943.

And ask you whether you can identify these contracts. I think one of these you signed and the others Mr. Van Fleet signed.

(Witness examining.)

Mr. Alioto: Mr. Archer, you won't have to waste time on identification if that is what you are talking about. If you will tell me that they are authentic, we will stipulate to that.

The Witness: Yes, these are all—I can identify them all.

Mr. Archer: Your Honor, these are contracts for the production of uranium and vanadium by the defendant United States Vanadium Corporation with the United States of America. I offer them as Defendant's exhibits next in order.

Mr. Alioto: We don't think they are relevant but we have no objection to them. [451]

(Testimony of Blair Burwell.)

The Court: They will be admitted.

If you gentlemen can agree on something, why, we won't pass it up.

(Contract No. W-7405 eng-201, dated September 1, 1943, effective as of June 1, 1943, between United States of America and United States Vanadium Corporation, received in evidence and marked Defendant Union's Exhibit V;

(Contract No. W-7405 eng-250, dated June 26, 1944, effective as of July 10, 1943, between the United States of America and United States Vanadium Corporation, received in evidence and marked Defendant Union's Exhibit W;

(Contract No. W-7405 eng-32, entered into May 12, 1943, effective January 25, 1943, received in evidence and marked Defendant Union's Exhibit X.)

Q. (By Mr. Archer): This may refresh your recollection, Mr. Burwell. I will read them.

This is the first page:

(Reading Defendant Union's Exhibit V)

"This contract, entered into this first day of September, 1943, effective as of the 1st day of June, 1943, by the United States of America (hereinafter called the 'Government'), represented by the Contracting Officer executing this contract, and United States Vanadium Corporation, a corporation organized and existing under the laws of the State of [452] Delaware,"

and it is signed by Lt. Col. John R. Ruhoff, Corps

(Testimony of Blair Burwell.)

of Engineers, for the United States of America, and by J. R. Van Fleet.

"Article I — Scope of this Contract

"(a) The Contractor shall, with the utmost secrecy and dispatch, furnish and deliver to the Government, f.o.b. Contractor's plant at Uravan, Colorado, for a period of two years and such additional period or periods as the Government and the Contractor may agree upon except as provided under Article 8 hereof, sufficient B containing therein approximately C units of D and E units of F per month."

Do you know what the "F" referred to?

A. Yes, you refreshed my memory. That is just what I told you. The F was vanadium in the ore, not in the—not in any concentrate. This is simply an ore transaction, contained, and has nothing to do with fused oxide.

Mr. Archer: (Reading)

"(b) The Government shall pay to the Contractor the sum of $1.10 per G unit for the D contained in the B and thirty cents per G unit for the F contained in the B."

Do you know what the "B" was?

A. Yes, I do. [453]

Q. That's the sludge?

A. One of the sludges.

Q. And the F refers to V_2O_5?

A. That's right.

Q. Well, at any time did the United States

(Testimony of Blair Burwell.)

Vanadium Corporation process the sludge for vanadium oxide for the United States Army?

A. They did during this period, in accordance with this contract.

Q. In producing——

A. On that part of the sludge that was produced under this contract. Of course, there was sludge produced outside of this contract.

Q. That's right. But I am talking—I am speaking of the sludge produced under these contracts, was subsequently converted into vanadium oxide, the fused black, in other words, for the account of the United States Army, was it not?

A. That's right.

Q. Do you know how many million pounds that was?

A. Approximately one million nine hundred and some thousand pounds.

Q. Close to two million pounds?

A. Close to it.

Q. Returning now to the Union Mines operation in acquiring claims in the Colorado Plateau——

A. Just a minute, Mr. Archer. Are you aware of the fact that that vanadium quantity is directly tied to the uranium quantity that went into the atomic bomb?

Q. This, Mr. Burwell, this figure has already been put into evidence by Mr. Alioto, in an exhibit to which I objected, and to which you——

A. All right. It really has nothing to do with

(Testimony of Blair Burwell.)

this trial, but I just, as a matter of—excuse my interruption.

The Court: None of that is likely to explode around here?

A. Well, it's a dead issue now, your Honor, because all this has currently been released, because we have so much of it. In fact, the miners are worrying that they can't continue to produce uranium for the government right now. So it's really a dead issue at the moment, outside of security for the past.

Q. (By Mr. Archer): In your operations under the Union Mines contract did you come in contact with a man named Major Canfield Hadlock?

A. Hadlock?

Q. Yes. A. I believe so.

Q. Do you remember a Lieutenant Joseph Volpe? A. Joseph Balbe?

Q. Volpe (spelling) V-o-l-p-e. [455]

A. Yes. I think he was a security officer.

Mr. Archer: That's correct.

The Court: We will take about a ten-minute recess.

(Short recess taken.)

Q. (By Mr. Archer): Mr. Burwell, I have a document here, and I am not sure whether you can identify it or not. It is a copy of a letter from Mr. Canfield Hadlock, U. S. Engineers Office, Madison Square Area, New York, New York, May 5, 1944, to the Area Engineer, Colorado Area, Grand Junction, Colorado.

(Testimony of Blair Burwell.)

Were you familiar with the United States Engineers Office, Madison Square Area, New York, New York? A. That is right.

Q. What was there?

A. Well, that is where they got the name "Manhattan District" from. It was an office in New York, one of the sub-offices of the Manhattan District, Army Engineers.

Q. (By the Court): You mean a governmental office? A. That is right.

Q. (By Mr. Archer): I wonder if you can identify this letter?

A. Yes, I identify the letter, and also I furnished the information to Mr. Hadlock.

Mr. Archer: I offer this in evidence as defendants' exhibit next in order.

Mr. Alioto: Now, that is a letter from one government official to another government official, and not to this witness, and not to anybody in the United States Vanadium [456] Corporation?

Q. (By Mr. Archer): Was a copy of that furnished to the Union Mines Development Company, Mr. Burwell?

A. No, not the Union Mines Development Company. They were not involved in this at all.

Mr. Alioto: It is manifestly hearsay, if your Honor please.

Q. (By the Court): To whom was it delivered?

A. This letter was delivered to—let me see the letter, your Honor—this letter was delivered to the office of the Manhattan District in New York City,

(Testimony of Blair Burwell.)

from one of their officers, who I think was also in New York City. This was an inter-office communication between one office and another in the same building.

Q. You say you furnished the information?

A. That is correct. This letter involved matters out West as tailings, and I furnished the information which was the basis of this letter.

The Court: The objection is overruled. Exception.

(The letter referred to was thereupon marked Defendant U Exhibit Y in evidence.)

Mr. Archer: The letter is dated May 5, 1944. It states (reading):

"With reference to Paragraph 1 (e) of your second endorsement, this office concurs with the proposed plan to purchase the 1,000 tons of tailings owned by Mr. Hayes Wilson located at the Gateway mill provided that prior to purchase you investigate and find that the material can be processed in the Colorado plant in spite of the earth content. We presume that your purchase price will be governed by the prices paid previously for the Metals Reserve portion of the Gateway tailings.

"With reference to Paragraph 2 of your second endorsement this office concurs in your recommendations to purchase Blanding tailings for processing at Durango. However, prior to purchase will you please advise this office as to the contents of the tailings and the terms under which the purchase will be made?"

(Testimony of Blair Burwell.)

Q. (By Mr. Archer): Mr. Burwell, did the United States Vanadium Corporation process the tailings from the Gateway mill for the United States? A. It did.

Q. Did they process the tailings from the Blanding mines for the United States?

A. It did. [458]

Q. They also processed the Metals Reserve tailings which were located at the Gateway mill for the United States, did they not?

A. It did.

Q. Do you recall, Mr. Burwell, that the Union Mines Development Corporation, in addition to acquiring claims, also made locations—I mean actually purchasing property—they also made locations on the Colorado Plateau for carnotite and related ores?

A. They probably did. I believe they did in some localities.

Q. Do you recall that in order to conceal the precise nature of this operation, that part of it was done for the account of the Metals Reserve Company, even after they had terminated their vanadium program?

A. I do not recall that detail. It is possible.

Q. I will show you a letter dated July 3, 1944, from the Metals Reserve Company to the Union Mines Development Corporation signed by Mr. Van Fleet, and I ask you whether you can identify that.

A. Yes, I can identify it.

Q. Do you recall this transaction?

(Testimony of Blair Burwell.)

A. That is correct, I do.

Mr. Archer: I offer this as defendants' exhibit next in order.

Mr. Alioto: No objection, Mr. Archer.

(The letter referred to was thereupon marked Defendant U Exhibit Z in evidence.)

[See Book of Exhibits.]

Mr. Archer: Letter agreement dated July 3, 1944, between the Metals Reserve Company, signed by Charles P. Henderson, President, Washington, D.C., to the Union Mines Development Corporation, 30 East 42nd Street, New York, signed by Mr. Van Fleet (reading):

"Reference is made to Exploration and Development Contract No. W-7415 Eng-78, effective as of the 11th day of May, 1943, between the United States of America, hereinafter called the government, represented by the contracting officer.

"In aid of the war effort of said contract you are hereby authorized by us to locate on public domain lands in the so-called Colorado Plateau area, within the States of Wyoming, Colorado, New Mexico and Utah, mining claims containing carnotite and related ores subject to the following conditions:

"All locations shall be made in your own name and shall be made on our behalf, and it is expressly understood and agreed that any and all title acquired by you shall be transferred to our name or to the name of our nominee upon our request. The mining claims located pursuant to this authorization shall [460] be only such claims as you shall be

(Testimony of Blair Burwell.)

authorized to locate by the government acting through the contracting officer as provided in Section 2 (e) of Article 1 (a) in Title 1 of the said contract."

Q. (By Mr. Archer): The contract referred to is the contract in evidence here between Union Mines and the Army?

A. That is correct.

Q. To finish that transaction, Mr. Burwell, I show you a copy of a letter dated May 20, 1947, from Emerson Levinson, Executive Director, Office of Metals Reserve, to Union Mines, attention Mr. J. R. Van Fleet, and ask you whether you can identify that letter. A. I can.

Mr. Archer: I offer this in evidence as defendants' exhibit next in order, your Honor.

Mr. Alioto: We have no objection.

(The letter referred to was thereupon marked Defendant U Exhibit 2-A in evidence.)

[See Book of Exhibits.]

Mr. Archer: This letter is dated May 20, 1947, from the Metals Reserve to Union Mines (reading):

"Reference is made to letter-agreement dated July 3, 1944, between Union Mines Development Corporation and Metals Reserve Company, and to Exploration and Development Contract No. W-7415 Eng-78, [461] effective as of the 11th day of May, 1948, between the United States of America themselves.

"As you know, pursuant to Public Law 109, 79th

(Testimony of Blair Burwell.)

Congress, approved June 30, 1945, Metals Reserve Company was dissolved effective July 1, 1945, and all its functions, powers, duties and authority, together with all its documents, books of account, records, assets and liabilities of every kind and nature, were transferred to Reconstruction Finance Corporation, to be performed, exercised and administered by that corporation in the same manner and to the same extent in effect as if originally vested in Reconstruction Finance Corporation.

"Under date of May 1, 1947, we received a letter from Hon. David E. Lillienthal, Chairman, United States Atomic Energy Commission, informing us the contract was transferred to the Atomic Energy Commission pursuant to Executive Order No. 9816, dated December 31, 1946, and requesting that Union Mines Development Corporation be instructed to transfer to the United States of America those mining claims acquired by it under said contract and held for and on behalf of Metals Reserve Company pursuant to said letter-agreement dated July 3, 1944.

"The Commission is arranging for the preparation [462] of the necessary transfer instruments. Please, therefore, transfer to the United States of America, our nominee, all mining claims acquired by you under said letter-agreement dated July 3, 1944. You will please contact the Atomic Energy Commission, which will prepare the necessary transfer instruments. We are forwarding a copy of this letter to the Atomic Energy Commission."

(Testimony of Blair Burwell.)

Q. (By Mr. Archer): And those claims were transferred, were they not, Mr. Burwell, to the Atomic Energy Commission?

A. They eventually were transferred to the United States Vanadium Corporation.

Q. The Metals Reserve claims? A. Yes.

Q. How was that accomplished?

A. Through the Atomic Energy Commission. In other words, the Atomic Energy Commission took title, and then turned them over to United States Vanadium Corporation as a part of another document that you have not read.

The full story, to answer your question fully, and so there could not be any confusion, the transaction of the acquisition of claims to properties was made under the Army contract. Under that contract these properties were acquired. Later on they were transferred to the Atomic Energy Commission. [463] A related part of the Army transaction was that the United States Vanadium Corporation would have the right to mine or use the claims in the future if they so desired.

Q. For the Atomic Energy Commission?

A. No; for their own account.

Q. Is that what the contract says?

A. That is what happened. The United States Vanadium Corporation today is mining some of these claims.

Q. For the Atomic Energy Commission?

A. Mining them today.

Q. For the Atomic Energy Commission?

(Testimony of Blair Burwell.)

A. No. Well, they are mining for the production of vanadium and uranium ore under a lease arrangement with the Atomic Energy Commission.

Q. That is what I meant.

A. That is correct.

Q. The basic ownership is still in the Atomic Energy Commission?

A. That is correct.

Mr. Alioto: I do not know what you mean by "basic ownership."

Q. (By Mr. Archer): The fee is in the Atomic Energy Commission, and the United States Vanadium Corporation is mining them under a lease arrangement with the Atomic Energy Commission?

A. I think that is correct.

Mr. Alioto: Do you have those leases, Mr. Archer?

Mr. Archer: No, I do not.

Your Honor, you will recall yesterday Mr. Alioto asked me for these letters on the termination. I found the letter referred to in the agreement, and I found one other letter. It indicates there is another letter referred to, October 22, but I do not have that, but these two I will ask Mr. Burwell to identify now.

Mr. Alioto: Where is the one of October 22nd that was an attachment to this?

Mr. Archer: As I say, I do not have it. I may have it at the office. But this is the one you asked for yesterday, November 19th.

Mr. Alioto: That is correct.

(Testimony of Blair Burwell.)

We have no objection to that going right into evidence. You do not have to qualify it. Just put it in.

Mr. Archer: I guess they should be marked separately.

First is a letter dated October 25, 1943, from G. Donald Emigh to J. R. Van Fleet.

Mr. Alioto: I have not seen this one, yet. It doesn't make any difference.

Mr. Archer: And as the next exhibit, a letter dated November 19, 1943, from G. Donald Emigh to Metals [465] Reserve Company.

Mr. Alioto: I have no objection to either one of these letters going in.

(The letter of Oct. 25, 1943, was thereupon marked Defendant U Exhibit 2-B in evidence.)

(The letter of Nov. 19, 1943, was thereupon marked Defendant U Exhibit 2-C in evidence.)

Mr. Archer: The first is dated October 25, 1943, Mr. Emigh to Mr. Van Fleet, copy to Mr. Burwell. Inasmuch as counsel requested these, I will read them in their entirety.

Q. (By Mr. Archer): Would you review again who Mr. Emigh was?

A. He was an engineer employed by United States Vanadium Corporation.

Q. (By the Court): What is the date of this letter? A. October 25, 1943.

Mr. Archer (reading): "On October 14th, Metals

(Testimony of Blair Burwell.)

Reserve Company called me to Washington to discuss a curtailment program on their vanadium operation in Colorado. They informed us that in view of the 'easy' vanadium situation they wished to present at once to War Production Board their recommendations that Metals Reserve Company activities in vanadium be curtailed. [466]

"They asked me whether it would not be advisable to send one of their men such as Mr. Jorelamon to Colorado to investigate the situation and recommend a curtailment program. I informed them I thought this was unnecessary and that we would have no objection to recommending a curtailment program if they so desire. By their letter of October 20th they informed us in writing that they thought it desirable to present to the War Production Board a program of curtailment on the Government's activities in vanadium production. Their letter also stated that they would like us to prepare a recommended outline of the procedure for curtailment.

"It is Metals Reserve Company's opinion, so expressed to me verbaily, in our meeting of October 14th, that they should take steps to stop all vanadium ore purchases and deplete present stockpiles of ore. They are, of course, conversant with the Army's interest in this ore and believe that if the Army wants the production to continue it should make arrangements through the War Production Board either to take over the entire operation of ore buying and ore treatment in Colorado, or make

(Testimony of Blair Burwell.)

special arrangements to have Metals Reserve Company continue its present operations. So far as the Army work is [467] concerned, Metals Reserve Company have no official knowledge or any instructions and must, until this condition is changed, view their operations in the light of vanadium production alone.

"I have written Johnny Hill asking him to prepare a report on how he believes the present vanadium operations should be curtailed, after he has discussed the situation with Mr. Burwell. By the time you have this letter, you will have had access to Johnny's report and will probably have discussed the situation with Mr. Burwell.

"In replying to Metals Reserve Company's letter of October 20th asking for our prompt comments, I have stated that we are giving serious consideration to their request for our recommended program and that you will take the matter up with them on your return from the West."

Exhibit C, November 19, 1943, from Mr. Emigh of United States Vanadium Corporation, to Metals Reserve Company, attention Mr. H. DeWitt Smith, Re: Program for Curtailing Vanadium Production (reading):

"Gentlemen:

"In your letter of October 20th you asked us to prepare an outline of the procedure which we would recommend for curtailing vanadium production. You [468] state this curtailment may be desirable in the near future because of the present favorable

(Testimony of Blair Burwell.)

situation of production to consumption. You indicate that such a curtailment program would involve:

"First: the shut-down of the Garfield operation.

"Second: cancellation of the Nisley Wilson contract.

"Third: cessation of purchases from V.C.A. operated mines.

"Fourth: cessation of purchases from properties operated at a delivered cost in excess of 65 cents per pound of contained V_2O_5 f.o.b. Monticello or Durango.

"Attached to this letter is copy of a report dated October 22, 1943, by our Mr. John W. Hill. Mr. Hill's report is an analysis of the present vanadium ore situation as regards ore purchased for Metals Reserve Company. The report is not a recommended method of curtailment, but shows how a curtailment program could be initiated along the lines requested in your letter of October 20th.

"Our recommended program for curtailment differs somewhat from the four points brought up in your letter of October 20th. We cannot recommend that all purchases from V.C.A. operated mines be stopped or [469] that we cease purchasing ore the delivered cost of which at Monticello or Durango exceeds 65 cents per pound of contained V_2O_5. It is our recommendation that a gradual curtailment program be adopted allowing production of ore to gradually die out as mines become depleted, until monthly purchases are so small that all ore purchases can be finally stopped. Such a

(Testimony of Blair Burwell.)

program would extend over the winter months and probably next summer. It would involve, on our part, the following policy:

"(1) Cease negotiations for new ore purchase agreements.

"(2) Freeze the present ore prices.

"(3) Discontinue all forms of development including diamond drilling.

"(4) Stop making advances against ore production.

"(5) Stop any other form of encouragement such as requesting draft deferment for miners, et cetera.

"The program could be further implemented by

"First, Ceasing operations at the Garfield Mine because the ore is low-grade and distant from Agency plants.

"Second, Cease purchases of roscoelite ores in the Placerville District.

"Third, Terminate the Nisley-Wilson Agreement on [470] January 1, 1944.

"If, in Metals Reserve Company's opinion, a curtailment program must be such as to consummate operations more quickly, we suggest and recommend that all ore producers be given sixty days notice that Metals Reserve Company ore purchasing will cease on a certain date. In this matter all ore producers would be given the same treatment regardless of the existence or non-existence of ore purchase agreements.

"In making the above recommendations we have

(Testimony of Blair Burwell.)

in mind that the ore producers have gone to considerable effort in time, money and work to produce ore which they believed was vital and necessary for successful prosecution of the War and, to the best of our knowledge, they have not made any substantial profits. In view of these circumstances we believe that all ore producers should be treated the same in any curtailment program."

Q. (By Mr. Archer): Mr. Burwell, referring again to the Union Mines operation, you recall, do you not, that one of the large independent owners of uranium and vanadium bearing resources in the Colorado Plateau in the period 1933 to 1946 was a company known as Wade & Curran? [471]

A. Well, I wouldn't qualify them as to size, Mr. Archer. They were one of them. They were not one of the large ones. They were substantial.

Q. They were substantial?

A. That is right.

Q. Over on the Navajo Indian Reservation?

A. That is correct.

Q. Did you participate in the acquisition of the Wade & Curran holdings for the Union Mines?

A. I did. [472]

Q. Were they acquired for Union Mines?

A. They were.

Q. Were they acquired for Union Mines?

A. They were—they were leases, they were not properties—they were leases for the Navajo Indian——

(Testimony of Blair Burwell.)

Q. They were government leases on the Navajo—— A. Yes.

Q. ——Indian Reservation?

A. With the Indians. They were simply leases to work these properties.

Q. And Union Mines acquired those leases from Wade and Curran? A. That's right.

Q. Do you recall the date that this occurred?

A. I don't. It surely is a matter of record somewhere.

Q. Well, I show you a letter dated November 30, 1943, from Paul L. Guarin. I believe you have already identified him.

A. I haven't, but I will.

Q. To Mr. W. G. Haldane, Mr. R. H. Ridgway. Who is Paul L. Guarin?

A. He was a lieutenant colonel in the Engineers, Army Engineers, attached to the Manhattan District office.

Q. Mr. Haldane worked under you?

A. Yes.

Q. Who is Mr. Ridgway? [473]

A. Mr. Ridgway was project manager for the Union Mines Development.

Q. (Handing witness letter.)

A. (Examining). That's correct. I can identify the letter.

Mr. Archer: I offer this in evidence as Defendant's Exhibit next in order.

(Letter dated November 30, 1943, Paul L. Guarin to W. G. Haldane and R. H. Ridgway,

(Testimony of Blair Burwell.)

"Wade & Curran—U.S.V. Deal, Navajo Reservation, Arizona," received in evidence and marked Defendant Union's Exhibit 2-D.)

Mr. Archer: This is a letter from Paul Guarin to Mr. W. G. Haldane, Union Mines Development Corporation, dated 30 November 1943, re Wade & Curran-U.S.V. Deal, Navajo Reservation, Arizona.

"Confirming my conversation with Mr. Burwell and you of November 27th, it is my understanding that some time during the early part of 1943, Wade & Curran obtained a prospecting lease on Navajo lands totalling approximately 186 square miles which included the right to select not more than 900 acres for retention in the form of a mineral lease, which selection must be made and filed of record with the Indian Agency not later than a certain date, on or about 1 December 1943. [474]

"Further, I understand that Wade and Curran obtained the above deal as a result of its being the successful bidder at the Indian Agency's sale—the price bid by Wade & Curran being $1000 cash paid at the time the deal was awarded to Wade & Curran and $4000 cash to be paid on or about 1 September 1943."

It is my understanding that "U.S.V.", that refers to United States Vanadium? A. Right.

Mr. Archer: (Reading)

"Also, it is my understanding that U.S.V. made a sub-deal with Wade & Curran on this property some time during the month of August and previous to the time that Union Mines Development

(Testimony of Blair Burwell.)

Corporation did any work on the property and that the Indian Agency later ratified this sub-deal. The essential terms and provisions of the sub-deal, as I understand it, are as follows: (1) U.S.V. paid Wade & Curran $4000 cash which Wade & Curran in turn paid to the Indian Agency on or before the deadline date in order to comply with its obligations concerning the payment of cash bonus price under the terms of the original deal with the Indian Agency as stated above. (2) U.S.V. obtained from Wade & Curran the right to explore the entire property up to the deadline date, at which time final selection of the 900 acres was to be made, (on or about 1 December 1943). (3) The 900 acres finally selected to be divided—300 acres to Wade & Curran and 600 acres to U.S.V.

"On or about 26 August 1943, and subsequent to the date the sub-deal between U.S.V. and Wade & Curran was made, Union Mines started exploratory work on the property with one field party. A few weeks later the Union Mines' exploratory force working on the property was increased to two field parties and during October the force was still further increased to three field parties. The work being done by Union Mines on the property was inspected by a representative from this office during the early part of November and information so gathered indicates that as of that date, the Union Mines' forces had explored most of the property except a relatively small area on the south end and as a result of this work had discovered

(Testimony of Blair Burwell.)

a number of mineral deposits with attractive possibilities. Also, arrangements were then being made to explore the rest of the property during the latter part of November and before the deadline date for selection of the 900 acres to be retained by Wade & Curran and U.S.V.

"After Union Mines began work on the property, [476] Mr. Van Fleet, on several occasions, advised the writer and his associates about the existence of the U.S.V. and Wade & Curran subdeal and said that the matter when it first came up between U.S.V. and Wade & Curran required quick action which prevented any earlier discussions on the subject. He also said that U.S.V. entered into the deal primarily for the benefit of Union Mines in order to facilitate its work on the Navajo Indian Reservation and suggested that arrangements could probably be made for Union Mines to acquire all of U.S.V.'s interest in the deal by reimbursing U.S.V. for the actual expense it had incurred if it were deemed advisable for Union Mines to make such an acquisition.

"In view of the circumstances as explained in the foregoing and because the deadline date for making the final selection of the 900 acres to be retained has now arrived, it is believed advisable at this time to come to a definite conclusion regarding the property ownership policy matters involved between U.S.V. and Union Mines. Before making such a decision, however, it is necessary to thoroughly consider all of the factors involved, and

(Testimony of Blair Burwell.)

in order to do this it is requested that additional information be furnished to this office . . ."

And he states what information he wants.

Subsequently U.S.V. transferred its interest to Union Mines, did it not, Mr. Burwell?

A. Right.

(Discussion between counsel.)

Q. (By Mr. Archer): I will now show you a copy of a letter from John W. Hill to Mr. Van Fleet, copy to Mr. Burwell, Mr. Emigh, dated October 30, 1943, and ask whether you can identify it.

Mr. Alioto: You don't have to identify that. Just put it in, if you want to.

Mr. Archer: Offer this as Defendant's Exhibit next in order.

(Letter October 30, 1943, John W. Hill to Mr. J. R. Van Fleet, received in evidence and marked Defendant Union's Exhibit 2-E.)

Mr. Archer: This is a letter from John W. Hill to Mr. Van Fleet—I will just read the first and last paragraphs. If somebody else wants to read some more, it's all right.

This is dated October 30, 1943.

Q. And John Hill at this time was directing the Metals Reserve program from Durango, is that not correct?

A. No, he was supervising engineer for Grand Junction.

Q. From Grand Junction?

A. That's right.

(Testimony of Blair Burwell.)

Q. And this was prior to the termination of the Metals Reserve vanadium program, October 30, 1943?

A. I presume so. The date speaks for itself.

Mr. Archer: (Reading)

"Dear Mr. Van Fleet:

"I am herewith submitting a report for your approval and transmittal as requested by H. DeWitt Smith, Vice-President of Metals Reserve Company, on October 20, 1943, concerning the curtailment of vanadium production."

Then I skip.

"The Moab ores contain an appreciable quantity of U_3O_8 and should be transferred to the Durango Plant for this reason. The Wade, Curran ores are also high in U_3O_8.

Q. Those are the ores we have just referred to, is that not correct, Mr. Burwell? A. Right.

Q. And U_3O_8 refers to uranium oxide?

A. That's right.

Mr. Archer: (Reading)

"In the attached report, under Durango Ore Supply, it is stated that F. A. Sitton and North Continent Mines, delivering ore to the Dove Creek receiving station, [479] do not have an Ore Purchase Agreement, and their purchases could be terminated immediately. The loss of these two producers to the Durango Plant would seriously affect the U_3O_8 production as these producers are the principal sources of the U_3O_8 to the Durango Plant at this time."

(Testimony of Blair Burwell.)

The Court: At this time we will recess until 2:00 o'clock.

(Thereupon a recess was taken until 2:00 o'clock p.m.) [480]

Thursday, June 5, 1958, 2:00 O'Clock P.M.

(The witness Blair Burwell thereupon resumed the witness stand.)

Cross-Examination—(Resumed)

Q. (By Mr. Archer): Mr. Burwell, I believe when we finished just before noon I had just read a letter from Mr. Hill in which he stated that the North Continent Mines were one of the suppliers of uranium-bearing ores to the Durango plant, do you recall that? A. I do.

Q. They had been supplying the Durango plant under the Metals Reserve program, had they not?

A. Yes.

Q. Shortly after that, this letter—well, in 1943, then the Metals Reserve program was terminated, was it not, or shortly thereafter?

A. I believe that's right.

Q. Were you aware of the fact that in 1943 that the North Continent Mines had shut down their oxide plant out in Colorado?

A. I believe that's correct.

Q. And weren't you aware of the fact that the reason they shut down was because the Securities Exchange Commission had ordered them to do so?

A. No. [481]

(Testimony of Blair Burwell.)

Q. Didn't you hire Slim Lundquist, who had been operating that plant? A. Yes.

Q. And he didn't tell you then that the reason they closed down was because the Securities Exchange Commission had told them to get out of the oxide business?

A. No, I don't recall that.

Q. Well, you do recall, however, that in 1944 the Union Mines Development Corporation acquired the North Continent properties for the Manhattan project?

A. I knew that distinctly.

Q. I show you a letter dated August 5, 1944, from yourself to Paul L. Guarin regarding this and ask if you can identify the letter (handing to witness).

Mr. Alioto: If it is merely authenticity, you don't have to waste time on that.

Mr. Archer: I offer as defendant's exhibit next in order a letter dated August 5, 1944, from Mr. Burwell to Mr. Guarin.

Mr. Alioto: We have no objection to the introduction of that letter.

The Clerk: Defendant's Union Exhibit 2F admitted and filed in evidence.

(Whereupon, letter dated August 5, 1944, Burwell to Guarin, was received in evidence and marked Defendant's Union Exhibit 2F.)

Mr. Archer: This is a letter dated August 5, 1944, from Blair Burwell, Union Mines Develop-

(Testimony of Blair Burwell.)

ment Corporation, to Paul L. Guarin, Major, Corps of Engineers.

"Proposal for the Acquisition of Property of North Continent Mines, Inc.

"Dear Sir:

"You have been furnished a report on the property of the North Continent Mines, Inc. by W. E. Haldane. This report covers the mining property and improvements of the North Continent Mines, Inc. located at Slick Rock, Colorado.

"This property consists of a well-located group of carnotite mining claims, a mill installation, housing and other facilities more completely listed in the accompanying report.

"On this property, as covered by the report, there is estimated to be 68,250 tons of indicated ore, and 65,000 tons of inferred ore containing .25% U_3O_8. There also exist large, favorable, mineralized areas on which no development has been done but in which we believe additional ore can be developed. The property can be purchased for a cash consideration of $200,000.

"I recommend the purchase of the property for this amount for the following reason: [483]

"The amount of ore indicated and inferred, together with the physical assets justify the purchase price. The property occupies a strategic position in the mineral district and will enable adjoining areas to be acquired and developed economically.

"Request for formal approval for this purchase is made.

(Testimony of Blair Burwell.)

"If the contracting officer, or his authorized representative approves, please so indicate by signing this letter in the lower left-hand corner.

"Yours very truly,

"Union Mines Development Corp.

"Blair Burwell."

Then "Approved for the Contracting Officer (signed) Paul L. Guarin, August 5, 1944."

And pursuant to your recommendation, those properties were then acquired, were they not?

A. That's right.

Q. I believe you have already testified that during the period of the Metals Reserve Company operations that the Calamity and Outlaw claims, which had been mined by Molybdenum Corporation of America and then Brown and Bowman and which you had mined for a year or which U. S. Vanadium had mined for a year, were leased from the trustee in bankruptcy of the old Gateways Alloys Corporation and their proceeds used for the [484] Nisley and Wilson mill?

A. That's correct.

Q. Now, after the termination of the Metals Reserve program, those properties were also acquired for Union Mines, were they not?

A. They were.

Q. And one of the reasons for acquiring these properties was because it was a good engineering and economical thing to do for the Manhattan project, isn't that right?

A. I shouldn't split hairs over definitions in an-

(Testimony of Blair Burwell.)

swering your question, Mr. Archer. There wasn't really an economic reason that had anything to do with the Manhattan District. They were a defense —a bomb job—and they didn't have any economies.

Q. Then good engineering?

A. There wasn't an engineering reason, no.

Q. Well, it was to accomplish——

A. There was a good policy—policy reason—put it that way, for acquiring that. That had to do with the Manhattan District's reason for existence.

Q. And one of the reasons, also, was to keep out some of these "promoters" that you have referred to which the Army did not desire to operate the properties, isn't that correct?

A. It might be loosely termed that way.

Q. Mr. Burwell, I believe yesterday or maybe it was the [485] day before, in your testimony, your previous testimony, you referred to a conversation you had in 1940 with Mr. Strodd and Mr. Fleck of the Vitro Chemical Company. I believe that it is in Pittsburgh? A. Yes, that's right.

Q. And the substance of this conversation was that they had been using fused oxide for some of their coloring operations and you had suggested they use red cake?

A. That is what they advised me they had been using, fused oxide, and I advised them to use red cake.

Q. After that you had a conversation, just following that, with Mr. Dutot and Mr. Ford?

A. That is my best recollection.

(Testimony of Blair Burwell.)

Q. And they had stated to you that the Vitro Chemical Company was a V.C.A. customer, but you nevertheless—— Is that what they said?

A. No. I think I stated that Mr. Strodd and Mr. Fleck stated that they had acquired their fused oxide from V.C.A. But they were a V.C.A. customer.

Q. Well, my question is, as a matter of fact, hadn't Vitro been a customer of Electromet prior to 1940 and hadn't Electromet sold them red cake prior to 1940? A. No, I don't recall.

Q. Well, I show you what has been marked as Plaintiff's Exhibit 16 in this action—— [486]

Mr. Alioto: What are you going to do, what are you going to call his attention to?

A. (Witness examining)

Q. (By Mr. Archer): Notice, Mr. Burwell, this is a list of purchasers of vanadium products from Union Carbide, and I invite your attention to Page 8, the name Vitro Manufacturing Company. You will notice that in the dates of purchase they have an asterisk under the year, and ask you what years are indicated there after "Vitro Manufacturing Company"?

A. (Witness examining)

Mr. Alioto: Counsel, you can read those directly. I have no objection to that. It is in evidence. You can show the years involved.

Mr. Archer: Oh, I'm sorry, Mr. Burwell.

It shows here, Mr. Burwell, that the Vitro—

(Testimony of Blair Burwell.)

that Union Carbide was selling vanadium products to Vitro in '38, '39 and '40.

Does that refresh your recollection as to whether they had been a customer of Union Carbide prior to your visit and talk with Mr. Ford—I mean, with Mr. Fleck and Mr. Strodd?

A. I don't recall sales prior to that. My time and testimony involved a visit there. It could have been they bought small amounts of oxide prior to that. But no great quantity.

Mr. Alioto: That doesn't indicate they bought [487] red cake, though, Mr. Archer, does it?

Mr. Archer: I have here the sales——

Mr. Alioto: Excuse me, your Honor——

The Witness: I think they bought vanadium oxide in sludges—in material in combination with uranium.

Mr Alioto: If your Honor please, I don't think Mr. Archer wants to leave any misimpression here. I think you asked him first whether they in fact bought red cake prior to the time and then you——

Mr. Archer: No; this is my examination, Mr. Alioto.

Mr. Alioto: I understand. I'm going to object, if your Honor please.

The Court: Just a minute.

What is your question? State your question and then make your objection.

Q. (By Mr. Archer): Mr. Burwell, I now show you the sales record of Union Carbide with Vitro Manufacturing Company, showing sales for '38,

(Testimony of Blair Burwell.)

'39 and '40 and later years and the indication of sales of products up at the top (handing to witness). See whether you can identify that.

A. (Witness examining) I can only identify this as a sheet that is apparently taken from some —from the sales of—I can't identify it.

Q. You can't identify that?

A. There is no corporate name on it or reference. [488]

Q. I understand that, Mr. Burwell. You didn't have any direct responsibility for sales?

A. I had nothing to do with that sheet or the sales—I know nothing of it.

Q. And that wasn't your direct responsibility in the corporation?

A. No. I was only the—as I mentioned—in '40, I encountered the market. I didn't make the final sale. That went through Electro Metallurgical Company and probably would appear on some sheet similar to that.

Mr. Archer: I have no further questions of this witness at this time. [489]

Cross-Examination

Q. (By Mr. Holland): Your Honor, we weren't in all of these government deals so my examination will be rather short.

As a matter of fact, there was great competition between Vanadium Corporation and Union Carbide as to who would be the agent for Metals Reserve, was there not?

(Testimony of Blair Burwell.)

A. Yes, there was, Mr. Holland.

Q. And Vanadium Corporation was bitterly disappointed that they weren't appointed the agent or, at least, a joint agent, isn't that correct?

A. Yes, there was a conflict between the two groups as to who would be agent.

Q. And they felt that the agency of Metals Reserve which was secured by Carbide gave them a great advantage, did they not?

A. You mean—speaking of Vanadium Corporation?

Q. Yes.

A. Well, I couldn't testify as to what they felt about it. I think they were disappointed, though.

Q. But that was simply one of the many instances of bitter competition in the west between the two companies, was it not?

A. Now, that's correct, Mr. Holland, insofar as the mining properties goes, there is no other record. [490]

Q. You always considered that you were a bitter competitor of Vanadium Corporation, did you not, when *you running* the West for Union Carbide?

A. I believe—why, sure, sure we were, we were bitter competitors with the U. S.—for the Vanadium Corporation in the acquisition of mines, ore deposits.

Q. Ores, and everything else, is that correct?

A. Everything else, in the field.

Q. In the field? A. Yes.

(Testimony of Blair Burwell.)

Q. And now, who established the ore prices that were paid by U. S. Vanadium?

A. Well, they were originally established, Mr. Holland, as a matter of negotiation, in a few instances some outlying mines to fit the circumstances of length of haul and grade of ore. Most of the negotiations, they kind of grew like Topsy, and finally they came to a definite point of establishment some time later, and I believe my testimony has covered that.

Q. Now, you were Topsy's papa, weren't you? I mean, you—what the prices were were determined by you, isn't that correct?

A. Well, basically so. I think, however, that I gave the formula to Mr. Weston and Mr. Haldane to negotiate any price that would result at that time, that is, the cost of vanadium oxide, for approximately the cost to us of mining similar grade of ore. [491]

Q. But the price you paid was considerably higher than the cost from your own mine, wasn't it?

A. Well, our own mines, scattered over areas of 70 miles north and south, 20 miles east and west, so some of our mine costs were quite high, and some of them were, within a mile of the plant, were quite low, so we had to average those figures a great deal.

Q. But the average of those figures would be considerably lower than what you paid the miners for the ore, would it not?

A. At the start of the period they were pretty

(Testimony of Blair Burwell.)

close to the same figure. At the start of the period we were not buying very much ore and our costs were quite low because we were moving not mined ore but dumps and reserves of pre-mined ore that existed on the surface.

For instance, our costs at the start were approximately $1.50-$2.00 a ton for ore and it simply involved picking up mined ore that had been mined ten years before, moving it into the mills.

So it is very difficult to give you an answer on that unless you tell me precisely what area that you want defined.

Q. Well, is that how you got your 40 cents cost because you were processing ore that had been mined years before and that you weren't charging any mining costs against?

A. Our 40-cent cost, Mr. Holland, in '39 or '38 [492] was based upon the average cost and including what ores had been accumulated from prior years and ores that were currently being mined.

Q. It had the advantage of the prior mined ore then, is that correct?

A. It's probable that they did, yes.

Q. And you made the statement, I believe, before today, that you couldn't have maintained a 40-cent cost on purchased ore, isn't that correct—paying 21 cents for your ore, you couldn't maintain a 40-cent cost, didn't you make that statement?

A. Repeat the question again, please. I am a little confused.

Q. I believe you made the statement today that

(Testimony of Blair Burwell.)

—or yesterday—that paying 21 cents a pound for purchased ore from the miners, you could not maintain a 40-cent cost, that the 40-cent cost was the result of company-mined ore being used?

A. Well, I think that is basically the case.

Q. No, this 21-cent price to the miners—— And when you say "miners" you mean mine owners, don't you? A. Mine owners.

Q. You are not talking about the man that gets in and digs out the ore, necessarily, unless the owner happens to work himself, is that correct?

A. Well, we had leases operating our own properties, which were in between the miner working his own property and the lessor working a small deposit of our own.

Q. But when you talk about miners, you are primarily talking about mine owners or leases?

A. Independent, outside mines.

Q. Independent operators?

A. (Witness nods head.)

Q. And you were paying them in 1940 a 21-cent price, is that correct?

A. I believe that's the record, yes.

Q. I think that is what you told Mr. Bransome, wasn't it?

A. I think that's right. That was approximately the average price, depending upon the grade of ore.

Q. And then you made the statement that the miners complained that they weren't being paid a living wage. Was that a correct complaint, a justified complaint?

(Testimony of Blair Burwell.)

A. Well, I couldn't recall—on the justice of their complaint, or answer your question. That is what they complained about.

Q. Well, do you think they were right in that complaint?

A. In some cases, they probably—they probably were.

Q. In other words——

A. It depended upon the individual circumstance. [494]

Q. Well, do you feel that you were actually—when you were in charge of this ore-purchase program—you were paying the miners less than a living wage?

A. Well, we tried to pay the price that we could buy the ore for.

Q. And you were perfectly willing, being in charge of that program, to pay the miners less than a living wage in order to get cheaper ore, is that correct?

A. We didn't inquire into a living wage when we bought the ore, Mr. Holland.

Q. You didn't care, is that right?

A. Well, we didn't know in a particular case what a living wage was. Probably a great number of these miners that were living in various parts of this country, to determine what each miner's living wage was, was entirely beyond my scope and ability to determine.

Q. And we aren't really talking about wages at

(Testimony of Blair Burwell.)

all, anyway, are we? We are talking about the price of ore?

A. We are talking about the price of ore.

Q. And the question of how much money the particular mine owner made out of the ore that you purchased from him depended primarily on how good ore he had, didn't it?

A. How good ore he had.

Q. And how accessible it was?

A. What the grade was, where it was located, and whether [495] it had been, in some cases, mined, pre-mined ore. There was a great deal of ore that was purchased during this program that had been mined ten years before. Radium, for instance. Therefore, the questions of what it cost was academic.

Q. Then if a man had a good mine, and he was a good operator, he would make money on it, wouldn't he? A. Of course.

Q. You stated that you had a conference in New York with Mr. Bransome in 1940 when he was just starting up Naturita, and you discussed ore prices, what was being paid for ore, is that correct? A. That is correct.

Q. Will you give the exact conversation that occurred as exactly as you can remember it?

A. I don't know that I can give the exact conversation. That occurred 18 years ago. But I can tell you I already testified as to the general conversation, Mr. Holland.

Q. Give it as exactly as you can.

(Testimony of Blair Burwell.)

Mr. Alioto: May we establish the persons present, Mr. Holland?

Mr. Holland: You did in the direct testimony.

Q. Who was present at that conversation?

A. Mr. Bransome, Mr. Van Fleet and myself, and we discussed, as I testified before, the problems of operation, of labor rates, of trucking rates, how much we were paying miners, how much we [496] were paying for truckers, and how much we were paying for ore. Mr. Bransome said he would like to cooperate with us and work out the same basis of payment for these various items, such as labor rates, prices for ore.

Q. Confining yourself to the prices for ore, will you give the conversation on that exactly as you can remember it?

A. I said we were paying approximately 21 cents a pound for V_2O_5 ore based upon two per cent ore amenable to the treatment plants, amenable to the process at the treatment plants, and Mr. Bransome said, "All right," he would follow that price.

Q. What did you say after that?

A. Oh, I think I probably said, "That is all right, fine," or something of that sort.

Q. In other words, there was no agreement then to pay a 21-cent price? No one obligated themselves on either side to do it, isn't that correct?

A. The instances that I told him what we were paying. Mr. Bransome said, "We will pay the same rate," and that is all there was to it.

(Testimony of Blair Burwell.)

Q. There was no agreement made, isn't that correct? It was just a conversation.

Mr. Alioto: If your Honor please, I think an agreement is a legal conclusion. He has given the substance, two competitors discussing prices. I will object on that ground. [497]

The Court: State your proposition again, will you?

Q. (By Mr. Holland): Then you did not agree yourself to pay a 21-cent price, is that correct?

A. I simply stated that this was what we were paying, 21 cents. I did not make any agreement or any formal writing.

Q. That is right. You have answered the question.

In this meeting in 1942 at Dove Creek in the ore-buying situation, I believe you testified Mr. Bransome, possibly Mr. Kett, possibly Mr. Hill, and yourself, were there, is that correct?

A. Yes, and possibly the ore-buying stationer. That is my best recollection.

Q. Pardon me. Going back to the 1940 conversation—I will skip the 1942 for a moment—what was it Mr. Bransome said there?

A. "We can't get enough at this 21-cent price to run our plants, and I am telling you we are going to pay 31 cents."

Q. 31 cents?

A. 30 cents, or whatever it was. I said, "All right, we'll pay the same price."

(Testimony of Blair Burwell.)

Q. He did not ask you to agree to pay the same price, did he?

A. No. It was the same kind of a conversation as the earlier one in New York. [498]

Q. As a matter of fact, the 1942 conference came just after U. S. Vanadium had been appointed agent for Metals Reserve, had it not?

A. I think that is the case because we were at a Metals Reserve ore-buying station, or at least that is my recollection.

Q. Pursuant to that agency, U. S. Vanadium Corporation had been out establishing much higher prices for ore than had theretofore been paid in an attempt to get the marginal ores for the war effort, is that not correct?

A. That is correct.

Q. That necessarily had an effect on the price that was paid by the companies on their own ores, didn't it? A. Most certainly.

Q. And it was as a result of that, was it not, that the price was raised to 31 cents, a direct outcome of that?

A. Well, Mr. Bransome raised the price to 31 cents. I don't know what his thinking was, other than he said he couldn't get enough ore for his plants, Mr. Holland.

Q. He raised it and then you decided you would raise also, is that correct?

A. I said, "We will also raise it to 31 cents."

Q. And the time in 1940 when you had this

(Testimony of Blair Burwell.)

Q. There was no agreement made, isn't that correct? It was just a conversation.

Mr. Alioto: If your Honor please, I think an agreement is a legal conclusion. He has given the substance, two competitors discussing prices. I will object on that ground. [497]

The Court: State your proposition again, will you?

Q. (By Mr. Holland): Then you did not agree yourself to pay a 21-cent price, is that correct?

A. I simply stated that this was what we were paying, 21 cents. I did not make any agreement or any formal writing.

Q. That is right. You have answered the question.

In this meeting in 1942 at Dove Creek in the ore-buying situation, I believe you testified Mr. Bransome, possibly Mr. Kett, possibly Mr. Hill, and yourself, were there, is that correct?

A. Yes, and possibly the ore-buying stationer. That is my best recollection.

Q. Pardon me. Going back to the 1940 conversation—I will skip the 1942 for a moment—what was it Mr. Bransome said there?

A. "We can't get enough at this 21-cent price to run our plants, and I am telling you we are going to pay 31 cents."

Q. 31 cents?

A. 30 cents, or whatever it was. I said, "All right, we'll pay the same price."

(Testimony of Blair Burwell.)

Q. He did not ask you to agree to pay the same price, did he?

A. No. It was the same kind of a conversation as the earlier one in New York. [498]

Q. As a matter of fact, the 1942 conference came just after U. S. Vanadium had been appointed agent for Metals Reserve, had it not?

A. I think that is the case because we were at a Metals Reserve ore-buying station, or at least that is my recollection.

Q. Pursuant to that agency, U. S. Vanadium Corporation had been out establishing much higher prices for ore than had theretofore been paid in an attempt to get the marginal ores for the war effort, is that not correct?

A. That is correct.

Q. That necessarily had an effect on the price that was paid by the companies on their own ores, didn't it? A. Most certainly.

Q. And it was as a result of that, was it not, that the price was raised to 31 cents, a direct outcome of that?

A. Well, Mr. Bransome raised the price to 31 cents. I don't know what his thinking was, other than he said he couldn't get enough ore for his plants, Mr. Holland.

Q. He raised it and then you decided you would raise also, is that correct?

A. I said, "We will also raise it to 31 cents."

Q. And the time in 1940 when you had this

(Testimony of Blair Burwell.)

Q. There was no agreement made, isn't that correct? It was just a conversation.

Mr. Alioto: If your Honor please, I think an agreement is a legal conclusion. He has given the substance, two competitors discussing prices. I will object on that ground. [497]

The Court: State your proposition again, will you?

Q. (By Mr. Holland): Then you did not agree yourself to pay a 21-cent price, is that correct?

A. I simply stated that this was what we were paying, 21 cents. I did not make any agreement or any formal writing.

Q. That is right. You have answered the question.

In this meeting in 1942 at Dove Creek in the ore-buying situation, I believe you testified Mr. Bransome, possibly Mr. Kett, possibly Mr. Hill, and yourself, were there, is that correct?

A. Yes, and possibly the ore-buying stationer. That is my best recollection.

Q. Pardon me. Going back to the 1940 conversation—I will skip the 1942 for a moment—what was it Mr. Bransome said there?

A. "We can't get enough at this 21-cent price to run our plants, and I am telling you we are going to pay 31 cents."

Q. 31 cents?

A. 30 cents, or whatever it was. I said, "All right, we'll pay the same price."

(Testimony of Blair Burwell.)

Q. He did not ask you to agree to pay the same price, did he?

A. No. It was the same kind of a conversation as the earlier one in New York. [498]

Q. As a matter of fact, the 1942 conference came just after U. S. Vanadium had been appointed agent for Metals Reserve, had it not?

A. I think that is the case because we were at a Metals Reserve ore-buying station, or at least that is my recollection.

Q. Pursuant to that agency, U. S. Vanadium Corporation had been out establishing much higher prices for ore than had theretofore been paid in an attempt to get the marginal ores for the war effort, is that not correct?

A. That is correct.

Q. That necessarily had an effect on the price that was paid by the companies on their own ores, didn't it? A. Most certainly.

Q. And it was as a result of that, was it not, that the price was raised to 31 cents, a direct outcome of that?

A. Well, Mr. Bransome raised the price to 31 cents. I don't know what his thinking was, other than he said he couldn't get enough ore for his plants, Mr. Holland.

Q. He raised it and then you decided you would raise also, is that correct?

A. I said, "We will also raise it to 31 cents."

Q. And the time in 1940 when you had this

(Testimony of Blair Burwell.)

conversation about the 21-cent price, you were buying very little ore, isn't that correct? [499]

A. A very small proportion of the total ore going into our plants.

Q. Less than ten per cent, is that right?

A. Less than ten per cent.

Q. I believe if you had *had secure* more ore, you would have been perfectly willing to raise your price to get it, would you not?

A. Why, if we needed more ore to fill our plants and to carry out our objectives, we would have paid the price necessary to get it.

Q. That is right. Now, this Dry Valley matter. I realize there has been some unpleasantness about that and I want to avoid that if possible.

A. I hope we can.

Q. I think we can.

A. The only reason I am here at this trial——

Q. I think we can.

The Dry Valley claims you say you looked at as early as 1931, is that correct?

A. That is right.

Q. As a matter of fact, you do not know how early Vanadium Corporation had looked at them, do you?

A. I have no way of knowing that, Mr. Holland. Vanadium Corporation of America was in that field in 1927 examining the properties on the other side. It is possible that they looked at this field at the same time. [500]

(Testimony of Blair Burwell.)

Q. They might even have looked at them before you did, for all you know?

A. Yes. As a matter of fact, I looked at them before 1931.

Q. But you never considered purchasing them, is that correct, until you had determined that you wanted to build a plant at Monticello?

A. We never considered purchasing until we had an economic reason for purchasing them, either a plant at Monticello, or to move ore to Rifle or to Europe.

Q. Your economic reason that prompted you to do it was the hope that you would get a plant at Monticello, was it not?

A. That is correct, fundamentally.

Q. Those claims were peculiarly tributory to Monticello, weren't they? That is, the cost of hauling to Monticello was considerably less than hauling anywhere else, any existing plant?

A. Well, there was no existing plant.

Q. I mean any other plant that existed anywhere, the closest other plant.

A. The closest other plant was Uravan before the Monticello plant, Mr. Holland.

Q. But they were important in the war effort for the operation of a plant at Monticello, were they not?

A. Yes, they were important to the war effort.

Q. And forgetting the unpleasantness that went on at the time, after you had acquired the option to purchase these claims, because of internal mat-

(Testimony of Blair Burwell.)

ters, the Vanadium Corporation was able to obtain the Monticello plant instead of yourself, is that not correct? A. That is correct.

Q. As I say, forgetting the internal troubles between the companies, the Dry Valley agreement eventually resulted in the Vanadium Corporation taking those claims over and paying you your cost, is that not correct?

A. I believe they paid us the cost we had directly in the Dry Valley property, as well as paying us for the vanadium that still remained on the Maggie C. contract.

Q. Yes, but that was a payment under contract, is that right? A. That is right.

Q. So by paying your cost, which as I recall was about $40,000, they were permitted to take them over under the Dry Valley agreement?

A. They were permitted to take them——

Q. Subject to your right to mine them under the Maggie C.?

A. I believe that is correct.

Q. Therefore, in order to get these claims to the Monticello plant for the war effort, this agreement was made, is that correct? [502]

A. State that again.

Q. Primarily to let Vanadium Corporation have these claims so that they could be utilized with the Monticello plant for the war effort, U. S. Vanadium turned them over at their cost, is that correct?

A. Yes, although at that time the plant at Monticello was a Vanadium Corporation plant.

(Testimony of Blair Burwell.)

Q. I am talking about the vanadium—they were turned by U.S.V. over to the Vanadium Corporation?

A. For the Monticello plant of the Vanadium Corporation of America.

Q. That is correct.

A. Because at that time Vanadium Corporation of America plant at Monticello was not planned for a government operated plant.

Q. But that is what it became, did it not?

A. It became that at the request of the Vanadium Corporation of America subsequently.

Q. But it was planned as a supplemental plant to aid the war effort from the very first, was it not?

A. That is correct, that is correct.

Q. And I believe the contract itself shows this thought, because it says,

"Vanadium (which is Vanadium Corporation of America) desires to obtain a larger supply of [503] vanadium ore to enable it to produce vanadium for national defense, and in view of the needs for vanadium of the present emergency, the United States is willing to transfer to Vanadium its rights in said mining claims upon the terms and conditions hereinafter set forth."

Now, who was Arvo Whitaker?

A. He was a consulting mining engineer, Denver, Colorado.

Q. Was he not put in the position of a sort of arbitrator and overseer of what went on in every way on the Plateau in connection with ore-buying

(Testimony of Blair Burwell.)

and so forth, by the government, because, partially, of the bitter competition between U. S. Vanadium and Vanadium Corporation of America?

A. Basically you are right, Mr. Holland. In connection with ore buying, ore acquisitions in plants affected by the Vanadium Corporation of America, Mr. Bransome seldom had some disagreements of procedure.

Q. You always have fought with each other, haven't you?

A. Always—not always, I think——

Q. Well, 90 per cent of the time?

A. That is right. Just good clean competition. However, this was set up, to answer your question, Mr. Whitaker was, at more or less the joint request of both companies appointed to settle the matters of ore distribution to the various government ore, or new ore plants, and he was selected as an [504] independent consulting engineer by the government for that purpose.

Q. And he did an outstanding job, did he not?

A. Yes, he did, as he always does.

Q. Wasn't he considered one of the great engineers of the country?

A. Yes, Mr. Whitaker has a very high reputation, especially in lead, zinc, and other branches of mining. He has very little experience in uranium and vanadium, however. His integrity was unquestioned and his fairness was unquestioned in matters of this kind.

Q. And his assistant, a man named Paige Ed-

(Testimony of Blair Burwell.)

wards, was really doing his leg work for him in the field, is that correct?

A. Yes, and he did also a splendid job. He is working for you at this time.

Q. You have always considered, all the time that you were with U. S. Vanadium, you considered Vanadium Corporation as your principal competitor, did you not? A. Most certainly.

Q. And they were the only competitor you were really worried about, isn't that correct? They were the only ones who really gave you a battle, isn't that right?

A. Well, yes and no. We considered, if you want me to analyze Vanadium Corporation from my viewpoint, as a corporation, it had little or no knowledge of this mining field, but had a strong, a long experience in marketing.

Q. I am talking about your operations in the West.

A. So in the field we felt that they were not formidable at all, as formidable as some of the other companies might be who might have gotten started.

Q. They were the most formidable one you had, though, were they not?

A. Probably so, yes.

Q. And over the years they have proved to be pretty formidable, haven't they?

A. Quite so.

Q. And therefore isn't it a correct statement that when you are worrying about ore claims, oxide,

(Testimony of Blair Burwell.)

falling into the hands of competitors, you were all the time thinking primarily, you and Mr. Van Fleet, of the Vanadium Corporation?

A. Well, it is a broader—no, it was broader than that, Mr. Holland. We had a corporate opportunity, policy involved here in which while we were—we had approximately 90 per cent of the accessible ore deposits and the balance of the ore deposits that was accessible probably rested five per cent with Vanadium Corporation of America and maybe five per cent with what we call independent miners.

Now, we were looking ahead at that time to some time when cost-wise we could put in effect the policy that we [506] had started the field with of selling vanadium at a price to expand its usages to use fully the resources of the field. Therefore, our competition was a double-barreled one: Number one, your company, the Vanadium Corporation of America, had experience and was equipped with processing plants but was poorly equipped at the moment with field knowledge.

Q. It did not have any plant in Colorado until 1940, did it, that is, any operating plant?

A. Well, you had a plant in 1934.

Q. I say an operating plant.

A. You had a plant prior to that in the Placerville District which could have been an operating plant if you had known how to operate it.

Q. But I say it was not operating, was it?

A. Whether it is operating or not, you had the facilities.

(Testimony of Blair Burwell.)

Q. The first time the Vanadium Corporation really came into this field in a serious way was when they opened the Naturita in 1940, isn't that correct? A. No.

Q. I am talking about the Colorado Plateau.

A. I am talking about the Colorado Plateau. I wouldn't regard that as correct, Mr. Holland, from my knowledge of the facts.

Q. What would you say?

A. The first time that you seriously went into this [507] field was in 1934, 1933, when you took over the rare metals plant at Naturita.

Q. I believe that was prior to that.

A. Well, whatever it was. It may be 1932. I guess it was prior to that time. But anyway, in those early times.

Q. We shut that down.

A. You tried to operate it a short period of time.

Q. And then we shut down.

A. You shut down because you couldn't operate it, because you didn't have the ore and you did not have the organization to operate it.

Q. That is correct, and from the time we shut it down until 1940, you were alone in the field there, isn't that correct?

A. Yes, but you had the facilities.

Q. We had the facilities but we were not operating, that is the point I make. From the time we shut the rare metals plant down, whenever that was, until 1940, we did not operate in the Plateau, did we?

(Testimony of Blair Burwell.)

A. Why, you had tried to operate in the Plateau and you were unsuccessful.

Q. That is right, and from the time we were unsuccessful until 1940 we did not operate, isn't that correct, until we started Naturita?

A. That is right. [508]

Q. And during that period you were alone in the field out there, isn't that right?

A. That is right, supplying you with vanadium oxide.

Q. And when you had the policy of buying up claims and trying to produce oxide, wasn't it the Vanadium Corporation of America you were primarily worried about and from whom you were trying to keep the claims and the oxide?

A. We viewed the control—to answer your question more definitely, we viewed the Vanadium Corporation as primarily one of our principal competitors, but we viewed other ownerships of property and other claim owners, independent owners, as potentially more dangerous or more to be considered as a function of our operation in the future than we did Vanadium Corporation of America, because it was obvious the company that had a million dollars worth of plant setting idle in the middle of an area and a yard full of ore, if they could not operate that at that time, were not greatly to be feared insofar as the production went.

But if some operator such as existed before—see, there were five or six operators operating for vanadium prior to that, and any one of those with good

(Testimony of Blair Burwell.)

ownership of ore could have mounted a new plant if they had smart people to do it and knew how to get hold of the mines.

Q. Your answer is very interesting, Mr. Burwell, because I have read you word for word the question I asked you in the [509] Denver case.

Mr. Alioto: Your Honor, I submit that is argumentative. If he wants to impeach him, there is a way of doing that.

The Court: You can ask the question. I see no objection to the question.

Mr. Holland: I read the question word for word from the transcript of the Denver case. Your answer in that case was, "That is correct."

The Witness: It is also correct that you were the principal competitor in this field and one of the big ones, and I also qualified it by saying potentially we regarded other people in the field, old mining areas, undeveloped, such as the North Continent Mines, which had far more ore than the Vanadium Corporation did, or the Gateway area, as potentially important.

Those questions, Mr. Holland, were not asked me, and if you asked me the question——

Q. (By Mr. Holland): I will ask you the question again. I will read it again.

Mr. Alioto: I submit he should not interrupt the witness, if your Honor please.

The Court: It is proper cross-examination.

Q. (By Mr. Holland): I will read you the exact question that I asked you in the Denver case.

(Testimony of Blair Burwell.)

I will read the [510] answer and ask you whether or not that was not your testimony in the Denver case:

"Q. And when you had the policy of buying up claims and trying to corral oxide, wasn't it the Vanadium Corporation that you were primarily worried about, and from whom you were trying to keep the claims and the oxide?

"A. That is correct."

Mr. Alioto: What page is that, Mr. Holland?

Mr. Holland: It is page 615.

Q. Did you or did you not so testify in Denver?

A. I believe that is correct.

Q. Now, Mr. Burwell, I would like to go into this question of this process for producing uranium and throwing away the vanadium that you talked about on your direct examination. I believe it was on December 11th, 1947 that you resigned from the Union Carbide organization, is that correct? A. I think that is correct.

Q. And I believe your testimony was that while you were there at this plant in Grand Junction, which you ran at government expense, you developed a process for extracting the uranium from carnotite and roscoelite ores, throwing the vanadium away in the tailings, is that correct?

A. I wouldn't say throwing the vanadium away in the tailings. [511]

Q. But letting it go into the tailings.

A. Letting it go into the tailings.

(Testimony of Blair Burwell.)

Q. And this you described as an acid leach process, was it?

A. No, no, I described it as a soda leach process, although there is an acid leach process that does the same thing.

Q. How does it compare costwise with the process that extracts—first of all, how does it compare with an acid leach process for the extraction of vanadium?

A. If you will give me a minute, I will give you the exact figures, your Honor. I may take a few minutes because this is a very long paper.

Q. I do not want to take the time, Mr. Burwell.

A. Roughly, with the price of vanadium oxide at 65c, if you gave credit for uranium at a certain price, it was considerably under the 80, 85c a pound cost that I believe existed at that time.

Q. Let me get this. What was it that cost 65c?

A. Sixty-five cents a pound for V_2O_5 would result in the process, providing you gave the credit for uranium at a price, I think, of $8.00 a pound.

Q. Now, this is under your process?

A. That is right. [512]

Q. That is the 65c a pound cost for vanadium oxide?

A. This was not my process. This was the process——

Q. Yes, I understand.

A. ——fathered by the Union Mines, the Manhattan District.

Q. But you had acquired knowledge of it; in

(Testimony of Blair Burwell.)

fact, you had been primarily concerned with developing it, hadn't you?

A. That's right. And basically it is a process used at Anaconda today.

Q. Where is it used at Anaconda today?

A. At the Blue Water plant at Anaconda. They use the soda leaching plant.

Q. Is that the one near Grants, New Mexico?

A. That's right.

Q. That operates on the ores from Ambrosia Lake? A. That's right.

Q. Those ores don't contain vanadium, do they?

A. Yes, they do.

Q. Not in any appreciable quantity?

A. Not in any appreciable quantity, but they do contain some vanadium.

Q. What percentage?

A. Oh, from fifteen hundredths to, occasionally, half a per cent.

Q. In other words, a very small quantity of vanadium in comparison with the carnotite ore?

A. That's right, but still significant.

Q. And that's true of all the ores in the Ambrosia Lake District, is it not?

A. In the main, they are all low in uranium—vanadium.

Q. I'm sorry, I thought you were through.

I believe when you described the Colorado Plateau area, you included the Ambrosia Lake District in it, did you not? A. That's correct.

Q. Did you also include the White Canyon area?

(Testimony of Blair Burwell.)

A. Well, that is part of the Colorado Plateau.

Q. Where is the map?

A. It's right here.

Q. And——

A. White Canyon is right here in—in here some place.

Q. Well, now, this line here does not include Ambrosia Lake, does it? A. Well——

Q. That is in—out to the east?

A. This doesn't say Colorado Plateau. This just states uranium mining districts of Western Colorado, Eastern Utah, Northeastern Arizona, Northwestern New Mexico, so it's not——

Q. I'm not trying to trick you up on the map. I appreciate——

A. This is, this area in black is part—these are simply mining districts, and whereas this map is made by a commercial [514] company, it is not intended to portray the Colorado Plateau.

Q. That's right. I understand. But this is the only map we have.

Now, you did include the Ambrosia Lake area which lies to the east in New Mexico?

A. And geographically it is the same thing. It is——

Q. You included the White Canyon area?

A. That's right.

Q. And you included the Marysvale, Utah area. Would that be in the Henry Mountains division there or close to it?

A. The Marysvale district is not on the drainage

(Testimony of Blair Burwell.)

of the headwaters of the Colorado River, technically, but I think we are splitting hairs whether it is or isn't.

Q. Then Marysvale would be in it and so would the properties around Moab, Utah, the Steen and Pick properties that have become so celebrated?

A. That's right.

Q. Now, those properties that I have named contain very large reserves of uranium, do they not?

A. That's correct.

Q. The Ambrosia field probably contains more reserves than all the rest put together, is that correct? A. Yes, they probably do.

Q. And you say there is a small quantity of vanadium in that ore. In the Marysvale area there is no vanadium, isn't that correct? [515]

A. Marysvale area is a different type of ore, it is not a sedimentary type, to the best of my recollection.

Q. And there is no vanadium in it?

A. No, I don't think so.

Q. That is true also at the White Canyon area, is it?

A. That's true of certain mines in the White Canyon area.

Q. And that would be true of the Happy Jack——

A. Happy Jack, it's true, but there are other mines in the Mare's Tooth, the Cottonwood—which is roughly called the same district—they do contain vanadium.

(Testimony of Blair Burwell.)

Q. In other words, the Happy Jack ore is a copper-uranium ore?

A. The Happy Jack is a special mine, a deeper formation, that carries copper.

Q. A very good one? A. A very good one.

Q. And Steen and Pick, they had a small amount of vanadium, didn't they, in their mine?

A. Well, sometimes they had quite a lot. Some of the ores would run up as high as one per cent.

Q. But typical of the properties I have named, they run high in uranium and very low in vanadium, isn't that correct?

A. High in uranium and low in——

Q. And very low in vanadium.

A. Well, relatively low in vanadium—low and high in lime, [516] which affects the process.

Q. And your process, the process used, you described as particularly adaptable to that type of ore, isn't it? A. Yes, that's correct.

Q. Because you can throw away the vanadium and forget about it.

A. Well, it puts the vanadium in the tailings or in a form that could later be recovered, if necessary.

Q. And if you are operating on a carnotite ore body which runs very high in vanadium and comparatively low in uranium, almost universally the vanadium is kept, is precipitated as a separate product, isn't it?

A. Well, not always. Some of the ores of the Colorado Plateau in the uranium area that's being

(Testimony of Blair Burwell.)

mined for vanadium also, some of those ores are high in lime and have to be treated by a soda ash process—soda ash leaching.

Q. But primarily most of the mills operating on carnotite ores save the vanadium and save it still, don't they?

A. Well, there are—all of them are saving the vanadium, either in tailings or——

Q. I mean in finished product.

A. Yes, that's right.

Q. That is true of the Climax Uranium Mill, isn't it? A. That's true.

Q. Where is that located? [517]

A. Grand Junction.

Q. And, as a matter of fact, you personally superintended the construction of that mill, didn't you? A. That's right.

Q. And didn't you acquire some claims for Minerals Engineering, your corporation acquired some claims around the Calamity group?

A. We did.

Q. In that area?

A. There and other places.

Q. And they are the claims that went in and formed the basis of the Climax Uranium Company?

A. They are some of the claims.

Q. Some of the claims? A. Yes.

Q. And for that you obtained or your company obtained a very substantial interest in the Climax Uranium Company?

A. We obtained a small interest in it.

(Testimony of Blair Burwell.)

Q. About 25%, wasn't it, originally?

A. Originally.

Q. And you were in charge of the construction of that plant, is that right? A. That's right.

Q. And you didn't see fit to put this process in that plant, did you? [518]

A. No, because the ores we had available in that part of the area were low in lime and did not require the soda process.

There are two processes, either of which will recover the vanadium or the uranium head, one or the other. Both processes were patented and turned over to the Climax Uranium Company.

We used either one or the other, depending upon which type of ore we had. If the ores happened to be high in lime, we couldn't use the acid process. If they were low in lime, which they have predominantly, we treated selected ores; we used the acid process.

Q. And produced vanadium oxide, isn't that correct? A. And produced vanadium oxide.

Q. And sold it to the trade and sold it to the stockpile?

A. And to the Vanadium Corporation of America.

Q. And to the Vanadium Corporation of America, is that correct? A. That's correct.

Q. Then isn't it a fair statement that—well, I guess you have already made the statement. I won't go into it again.

Now, since leaving Climax Uranium Company,

(Testimony of Blair Burwell.)

you have again gone into the vanadium business and are a substantial competitor of these defendants, isn't that correct?

A. In the United States?

Q. Well, in the world. [519]

A. Oh, I wouldn't regard it so, Mr. Holland. I think you are overly complimentary. We have, again, a smaller interest in a company that is owned partially by English capital and is shipping into—the company is shipping into European markets.

Q. Aren't you shipping it to the United States also?

A. No, we are not shipping it to the United States.

Q. Are you planning to?

A. No. Never. I don't think we can, on account of the tariff.

Q. Are you in production yet?

A. Yes, we are in production.

Q. Well, I don't want to ask you any business secrets, but you are actually now a competitor in the vanadium business, isn't that correct?

A. Well, competitor of Vanadium Corporation?

Q. Yes.

A. That's a bit complimentary, but when you are dealing with Europe, you are in competition with the Finnish people, the Southwest African people; you are in competition with Norway that is producing vanadium. In Europe, it is only your excess vanadium that is disposed of over there, that you can't sell in the United States.

(Testimony of Blair Burwell.)

Q. But that sometimes make a difference between profit and loss, doesn't it?

A. I wouldn't know. That's your end of the business. [520]

Q. Do you use Mr. Leir and his company as one of your sales agents?

A. No. He is not—he has no financial connection.

Q. You have no business dealings with Mr. Leir of any kind? A. That's correct.

Q. Is that correct? A. That's correct.

Q. When I say you, I mean your South African subsidiary company.

A. That's absolutely correct. I have no personal or company connection, financial or otherwise, with Mr. Leir, excepting for the fact that I think Mr. Leir owns some stock in our little company.

Q. Oh, he is a stockholder in you?

A. A small stockholder.

Q. Mr. Leir, and the Rockefellers, also, aren't they?

A. No. Thanks for the compliment. I don't think the Rockefellers are.

Q. I thought they were. I'm sorry.

A. No, they are not.

Q. Well, now, going back to December, 1947, you went first to Mr. Marks Hirsch, is that correct, with this proposition?

A. You are speaking of this conversation in early '47?

(Testimony of Blair Burwell.)

Q. I thought you said December of '47, after you left Union Carbide. [521]

A. Well, I think it was in the—I think I stated that it was probably in the first of '48 when that happened.

Q. Yes, you said December of '47 or January of '48.

A. January, '48. I think it probably was January of '48. Let's see, maybe I can refer to (examining documents). I think it was just prior to January 22, 1948.

Q. You went to see Marks Hirsch, President of Molybdenum Corporation of America, is that correct? A. That's right.

Q. And will you describe in your own words the proposition you made to him?

A. Yes. I knew Mr. Hirsch, of course as you know, a long period of time in connection——

Q. I don't know Mr. Hirsch.

A. ——in Dry Valley and other vanadium properties, and I explained to him that we were facing a difficult time to the future in regard to the Atomic Energy Program, but that we had prepared as a result of a research program first started by Carbide, taken over by the Manhattan District, to devise a process that would take the vanadium out of the ore first—the uranium out of the ore first and then leave the vanadium in a residue to be turned back for process, and recovered by the owners of the ore; that I had discussed and reported on this matter to the Atomic Energy Commission

(Testimony of Blair Burwell.)

and to our own company previous to this, and that this was part of a project [522] that we had carried on, this war effort. It wasn't particularly my—all my contribution; we had dozens of engineers working on this, including the Union Carbide and Carbon Research Corporation.

Q. And Government people also?

A. And Government people also, observing the operation and the test work.

And it appeared that the only way that we could compose the warring differences of the vanadium industry and prevent a limitation of uranium production in the future was to get some operator of a plant or a central plant who was independent of either the Vanadium Corporation of America or the U. S. Vanadium Corporation, because we had got to the top of policy determination, both internal within the Union Carbide and apparently with other people, and that it was necessary for somebody who didn't have an interest to act fairly for everybody in the field, and that I had thought and recommended the Molybdenum Corporation of America might be a good company to do it.

Q. Pardon me, Mr. Burwell. To whom did you make that recommendation? A. Marks Hirsch.

Q. To whom did you make the recommendation?

A. Of this——?

Q. Of Molybdenum Corporation as being the logical operator?

A. I believe I did that to the Atomic Energy Commission [523] prior to——

(Testimony of Blair Burwell.)

Q. Were you acting as sort of a representative of the Atomic Energy Commission in an endeavor to put——

A. No, I was simply called in at that time—at the time that the Atomic Energy Commission was being formed, to submit recommendations and plans for the development of the Colorado Plateau.

Q. And this was one of your recommendations?

A. That was one of my recommendations, and the same recommendation had been conveyed to Mr. Rafferty and Mr. Van Fleet before. I think I had some correspondence.

Q. But you made this recommendation to the Atomic Energy Commission, is that correct?

The Court: At this time we will take a 10-minute recess.

(Short recess taken.) [524]

Q. (By Mr. Holland): Mr. Burwell, is it a correct statement that at the time you approached March Hearst with this proposition you were more or less acting in accordance with the instructions of the Atomic Energy Commission?

A. No, I was really acting on my own in this connection. I was carrying out recommendations, however, of the Union Carbide, and my group in Union Carbide—Mr. Rafferty, Mr. Van Fleet, and myself—had previously conveyed to the Manhattan District as a solution of this particular problem.

Q. Who owned this process?

A. As it exists now, nobody owns it.

Q. Who owned it then, in 1947?

(Testimony of Blair Burwell.)

A. Nobody owned it.

Q. Was it a perfectly open and public process?

A. That is correct.

Q. Everybody knew about it?

A. That is correct. Well, I wouldn't say everybody knew about it.

Q. Had it been published?

A. I couldn't say. I don't think so.

Q. If you have a reasonably high vanadium ore wouldn't it be better to produce the finished product under your process than just to put it in the tailings and leave it there?

A. That would be true, if you could dispose of your [525] vanadium in a finished product. But here is the problem that confronted us, Mr. Holland: that at the time in 1946 that I was talking about we had completed most of the Manhattan District job and the bomb job. In other words, it had become an accomplished fact. And in order to make the bomb succeed and to fill the pipeline that was required at Oak Ridge and at Hanford, it took so many million pounds of uranium metal, far beyond the capacity of the Colorado Plateau or any other mining district to produce currently at that time. But because there had been a 20-year accumulation of uranium ores from the mining of vanadium, not only here, but in Shinkolobwe, Africa, the jungles of Africa, where they had left the area, and up in Canada at the El Dorado Mine, which was shut down, and the same thing was true of the mines in the jungles of Africa—they were shut

(Testimony of Blair Burwell.)

down and full of water when we started this project—we accumulated and harvested 20 years of mining and got enough uranium to fill the pipeline, without which we never would have succeeded in the Atomic Energy Program.

Now, therefore, it took approximately, oh—I am a little cautious on security on this thing—so many million pounds a year to continue the program of sufficient size to make sure that we would survive in the time of danger following the war. In other words, we gathered in all the 20 years of past stuff, the bomb was finished, the Manhattan District [526] had taken its hat off the hook and walked out the door, and there was confusion about the future policy of this field. We knew that if we returned to the problem of producing uranium as a part of vanadium, and the question you just asked, Why don't you produce the vanadium directly?—if we produced the uranium that came from the vanadium in tune with the vanadium market sales, which we were afraid of, we would have approximately, from the vanadium sales limitation, we would have approximately one-tenth of the uranium that we needed to survive as a nation after this war.

Therefore,—and that was an essential part of our Manhattan District job—we had to prepare for a future program on this Colorado Plateau independent of the companies' interest, independent of the Vanadium interest, independent of Mr. Leir's interest, independent of the thinking of Mr. Bransome, or even myself. And we prepared a program

(Testimony of Blair Burwell.)

of getting uranium in the future independent of the vanadium industry.

Well, if the vanadium industry found a way to sell their vanadium by reducing the price, and the cost of mining of the ore and the grading of it and the hauling into the plant was borne by the government for uranium, and only that amount of vanadium was produced as the market would absorb, obviously we had a safe formula for the future.

Now, here was the place, Mr. Holland,—and you have [527] asked me the question, and I will try to answer it——

Q. I hope you will, sir.

A. ——this way: that we had to devise a method, whether the ores were rich or lean in vanadium, that we would only produce the amount of vanadium that would be sold according to the economics of the situation, so that the uranium would be divorced from the vanadium business, and the security of the country would also be divorced from the quarreling between the vanadium companies, or the inter-quarrelings of vanadium policy.

That was the reason I was requested to go down to Washington by Senator Johnson and Senator Milligan, both of whom I know personally, as you do, because we both live in that State, and Senator Johnson asked me to go down and talk to Admiral Strauss, and one of their engineers called Hugh Kaiser, who is now head of the Academy of Science —Hugh Kaiser was the engineer assigned the job with Union Mines Development Company for the

(Testimony of Blair Burwell.)

secret Manhattan job, and as it appeared we were going from the Army job into the newly-formed Atomic Energy program, it was essential that the Atomic Energy people would have the proper counsel from the experience of the Manhattan District, and background as to the limitations of this field in regard to the uranium process.

At that time, with my knowledge and experience of 22 [528] years with this company, the Carbide Company, I believed there was in existence an arrangement that limited the sales on the market of vanadium.

Now, irrespective of the business reasons behind it, or whether it was for some other dollar consideration than ferro-chrome, this matter had suddenly become bigger than either Carbide or Mr. Hearst or your Mr. Bransome, or anybody, and therefore I was beginning to despair at this time that we would be able to convey to the Atomic Energy Commission the urgency of understanding the situation, so that their newly-formed policies would not be channeled into a restrictive and a small production of uranium in tune with and in proportion to vanadium markets.

Thereupon started the real drama of this situation, and here is the real problem where the whole thing developed.

So the meeting with Mr. Hearst was—followed a meeting at which I had resigned on December 11th, but they had not accepted it.

On December 22nd I had a meeting in Washing-

(Testimony of Blair Burwell.)

ton, and I think I have a reference in a memorandum here that I can give you about that meeting. I didn't particularly name the Molybdenum Corporation of America, but would you like me to read it?

Q. I don't know. Let me see it.

A. Anyway, it is dated. [529]

Q. If you can tell it, why don't you tell it?

The Court: How is that material to the issues in this case?

Mr. Holland: I do not think it is, your Honor, but he went into it on direct.

The Court: All right.

Mr. Holland: I do not believe we need to take the time. I think you described it well.

The Witness: Thank you.

Q. (By The Court): One thing I would like to ask you, Mr. Witness: From 1944 to 1947 what was the general condition of the mining business in this Colorado Plateau?

A. The vanadium mines were shut down. Thousands of men were thrown out of work. We had lots of vanadium we could not sell, and apparently there was the same restrictive policies of pricing and marketing that prevailed at that time, as far as my knowledge is concerned.

Q. Was there any demand for the material?

A. We believed there was, if you would go out and make the price—reduce the price so that you could sell the vanadium in competition with other alloys.

(Testimony of Blair Burwell.)

Q. Was that condition general over the nation?

A. The general situation over the nation at the end of the war, we were just adapting our economy from war to peace [530] time, and really it was the start of the boom. Our automobile companies were just getting under way, and they were using a lot of metal. I think you could say there was plenty of market there if you went out and tried to get it. I think you can always sell something if you have something that is worthwhile selling and you have the proper price.

Q. What I want to know is, in this territory down here, now, that you are speaking about—the Colorado Plateau—what was there in that period from 1944 to 1947 that indicated a desire to control the production of vanadium?

A. What was there that indicated a desire to control the production? I would say that the price of vanadium had not been reduced—and yet that is not the answer you have asked me.

Q. Well, you state now that these mills had an enormous supply on hand, and they had to shut them down. Was there a demand for the production?

A. As I stated, your Honor, there was a demand for the production if the price was reduced so it could compete with other alloys. That was my opinion on it.

Q. (By Mr. Holland): Now, actually, when did Uravan start up again?

(Testimony of Blair Burwell.)

A. I believe about 1949, or 1948. We shut down from 1944 to 1949, about three or four years.

Q. Naturita ran during that period, didn't it?

A. Naturita ran. Naturita had a market, I believe. They would not have run if they didn't.

Q. And between the stockpile and the Korean War which came on there was a tremendous demand for vanadium, wasn't there?

A. Up to 1946 there was a good demand for vanadium, but Union Carbide and the Metallurgical Company were not selling any of it.

Q. It was being sold, wasn't it?

A. I presume it was being sold, yes.

Q. It was being sold into stockpile?

A. Well, the stockpile is a different consideration, Mr. Holland.

Q. That is for the national security, isn't it?

A. Well, that is looking ahead in the future, but it is not a matter of current need.

Q. In case we have war?

A. Looking ahead for another war.

Q. The Atomic Energy Commission had charge of the procurement of uranium in building up uranium supplies for the country, did they not?

A. They started, I believe, in 1947, with their first procurement of uranium.

Q. And they did a very good and pretty successful job of it, did they not? [532]

A. Beginning about nineteen—at first there was a great deal of argument about that.

Q. But they did. Do you want to answer the

(Testimony of Blair Burwell.)

question? Did they, or did they not, do a good job on it?

A. I don't think they did a good job up until about 1950, and from then on they did a splendid job.

Q. You know, do you not, that the Climax Uranium, and the Vanadium Corporation, and the Union Carbide, cooperated fully with the Atomic Energy Commission in order to make that program a success?

A. No question. From 1950 on they all cooperated, and it is the greatest field in the world today, and it is a great achievement. Prior to that, no.

Q. Do you have any letters in connection with this conversation——

Mr. Alioto: May I have the last part of that answer read?

(Answer read by reporter.) [533]

Q. You said 1950, didn't you, Mr. Burwell?

A. That's correct.

Q. Instead of nineteen——.

Have you any letters or correspondence in connection with your conversation with Mr. Bransome in December of 1947?

A. I have a letter—I have a letter which refers to that, which was written on January 22, 1948, which mentions that conversation.

Q. Written by whom?

A. (After examining document) Written by me to Mr. H. D. Kaiser of the Atomic Energy Commission, Washington, D. C.

(Testimony of Blair Burwell.)

Q. May I see it, please?

A. (Handing document to Mr. Holland) The first part is personal matter. The last paragraph is pertinent to this.

Q. You would rather I not read it?

A. Well, you can——

Q. I won't if you don't want me to.

A. Go ahead, go ahead; you might just as well. The previous page, the last paragraph, Mr. Holland.

Q. Pardon me?

A. The previous page, the last paragraph.

(Discussion between counsel.)

Mr. Alioto: I put a document in evidence for you. I would like you to put it in. You remember, I put in a couple for you. [534]

(Further discussion between counsel.)

Mr. Holland: I don't think—of course, I don't think this is material to the issues in the case, and I am not going to put it in as my own exhibit. If you want me to put it in as yours——

Mr. Alioto: If you put it in as my exhibit, I will be very happy to claim it as my exhibit. I would appreciate if you would read that portion of it to the jury, or let me do it.

Mr. Holland: I will glad to.

Mr. Archer: One minute. I would like to take a look at it (examining document).

I guess it wouldn't be offered against us, anyhow. It was after he left us. I take it it isn't offered against us.

(Testimony of Blair Burwell.)

Mr. Holland: This is a copy of a letter——

Q. (By Mr. Holland): Where would the original of this letter be?

A. I wouldn't know. It was written to Mr. Kaiser. Probably at the Atomic Energy Commission. He was the one that arranged—he was one of the men arranged for me to talk to.

Mr. Holland: Will you mark this as plaintiffs' exhibit.

What do you want to do about the personal part of it?

The Witness: Well,——

Mr. Holland: I won't read it to the jury. [535]

The Witness: Just mark off the first paragraphs.

Mr. Alioto: I assume we can substitute a copy, taking anything out that is personal. We can make arrangements between ourselves, Mr. Holland.

The Clerk: Plaintiffs' Exhibit 58 admitted and filed in evidence.

(The letter referred to was thereupon marked Plaintiffs' Exhibit No. 58 in evidence.)

[See Book of Exhibits.]

Mr. Holland: This is a letter to Mr. H. D. Kaiser from Blair Burwell, dated January 22, 1948. It says (reading):

"In the main there does not seem to be much question as to the engineering approach to the problem of processing the carnotite,"——

Q. (By Mr. Holland): You were talking about carnotite ore here, is that correct? A. Yes.

Mr. Holland (continuing reading): ——"but most

(Testimony of Blair Burwell.)

of the questions revolve about the disposal of excess vanadium. In this connection I had an interesting talk with Ted Bransome as a result of a casual meeting which developed into a brief discussion of the western situation. I told Ted that I believed that vanadium could be produced at a by-product price of 65 cents per pound of V_2O_5 from a [536] properly engineered plant with the economies of such a plant, and at the same time would produce uranium for the government at a much lower price than is being considered now. While the price of 65 cents per pound of V_2O_5 would be a Godsend to V.C.A. in view of their present 85-cent cost, the principal concern of T.B. was the possibility that this material would also be available for open market sale at the same price, which might enable competition to enter the ferro-vanadium field by way of Continental Ore or other competitors. The price which I have suggested on my chart at 65 cents is a price better than the more favored cost to either of the two companies when producing at their present sales rate. I think it is going to be difficult to compose the warring interests of the vanadium industry, and that it is going to take a diplomat of the first water to take care of the reasonable interests of the vanadium industry and set aside the ever-present monopoly question which is cited in the present monopoly suit."

Q. (By Mr. Holland): By that you are referring to the suit that was pending in Denver, Colorado? A. Yes. [537]

(Testimony of Blair Burwell.)

Q. In which these defendants were acquitted, is that correct? A. That's correct.

Mr. Holland (continuing reading): "I have a feeling that John Gustafson will be equal to the job. One point of interest here is the apparent feeling among those of our corporation"——

Q. (By Mr. Holland): By that you mean Union Carbide? A. That's right.

Mr. Holland (continuing reading): ——"that we should lean backwards if possible in assisting the Commission in its development of the District, rather than crowd the ills and needs of the vanadium industry into the picture at this time.

"King Haldane sends his best regards to you with the hope that he will see you out in this country soon."

Q. (By Mr. Holland): Well, as a result, the Atomic Energy Commission then took charge of the situation, is that correct?

A. Well, they had taken charge of the situation before that, and this was a conversation in the formative period of the Atomic Energy Commission policy.

Q. And they adopted policies encouraging the search for [538] and the development of uranium, is that correct? A. No.

Q. No? I don't want to get into a collateral matter too much.

A. Do you want another document? I can give you their policy report here.

Q. What is the date on that?

(Testimony of Blair Burwell.)

A. December 17, 1948.

Q. O. K.

A. This is a public advance for release. The statement of John K. Gustafson, the manager of the raw material operation, U. S. Atomic Energy Commission, at a press conference in Denver, Colorado, December 17, 1948.

That was at a Rotary Club meeting. I was present.

Q. Who was Mr. Gustafson?

A. He was manager of the raw material division of the Atomic Energy Commission at that time. Shortly afterward he left.

Mr. Lillienthal was also present at this meeting.

Mr. Archer: What was that last name?

Mr. Alioto: Lillienthal—David Lillienthal.

A. (Continuing) And then this paper, which is an amazing one in view of the record,—in view of the record that we had millions of tons of ore which the Manhattan District would procure—I won't trouble to read you all of it, but I will [539] read the pertinent place.

It says (reading):

"Following the war it was tentatively decided by the Manhattan District to purchase only by-products of uranium, rather than stimulate and support increased production by special incentives. This position was based on the fact"——

he says, which is obviously untrue (continuing reading)——

(Testimony of Blair Burwell.)

——"that the known uranium reserves of the Colorado Plateau were limited, expensive to mine and process, and the only advantage of an accelerated program would be to make this limited supply available sooner. Since the estimated annual production of the Colorado Plateau under the accelerated program would be small in relation to total U. S. requirements in supplies available from foreign sources, it appeared more economical to obtain the vanadium as a by-product from vanadium operations which are geared to the vanadium market."

Now, in view of the fact that already there were documents in the possession of the government, that there was ten years ore supply of uranium available in that area immediately, that this area had produced the essential part of the atomic bomb, this meant that we had lost the battle in so far as freeing ourselves from this program. [540]

Q. (By Mr. Holland): But that was not the ultimate result, was it?

A. No. The ultimate result is a brief I wrote for Mr. Millikan at the Blair House meetings, which is right over there. And if you would like to have that—we might as well introduce the whole thing.

Mr. Alioto: Do you want to put that in evidence?

Mr. Holland: No, it's too long.

The Witness: That has been declassified.

Mr. Alioto: Sure you don't want to?

The Witness: This was requested of me at the

(Testimony of Blair Burwell.)

Joint Session of the House Committee Atomic Affairs Meeting, at the critical Blair House meeting when the U. S. Government was asked to give its atomic secrets to Britain, at the time Fuchs was in the British Atomic Energy Commission, on the plea that there was no uranium in the United States.

Now, until that time I had stayed on the sidelines. I had resigned from the company. And we were much concerned. And Sunday night, at my home in Grand Junction, Mr. Millikan rang me up and told me that there was a meeting in which—that the security of the country was involved—call it the atomic crisis—it was in the headlines—and I wrote that secret brief in which I revealed the whole relationship of the background of this district, the need for uranium production in the future, the result of which was that Mr. [541] Lilienthal eventually lost his position, the Atomic Energy Commission was reorganized; and your company and the Carbide Company, and all of us, now look at a great amount of uranium. Compared to this we have more uranium than in any other part of the world exists. And when you look at the record today, at this time, that this district is the greatest supply in the world that we have; more than for security, we have everything for power. And you look back at this — they said there was little uranium in this field. You could see how dangerously we skinned along the edges of national survival when some of this fumble-stumble guess went in this matter of natural resources.

(Testimony of Blair Burwell.)

That, Mr. Holland, is my story.

Q. It is true, is it not, that these two defendants contributed very considerably to the success of the uranium program? A. Afterwards.

Q. They have? A. Afterwards.

Q. Have they not?

A. Afterwards. However, at this time, the reason that Mr. Van Fleet turned these papers over to the government was that he, as a corporate officer, was big enough, and thought enough of the Union Carbide Company to keep a few men in the Carbide who might have got the corporation into trouble by [542] going ahead with restricted policies in this field, because obviously, if they had followed this policy—and that was dictated, as I was quite sure, by the vanadium interests, advisers to the Atomic Energy Commission at that time—that if that had happened Carbide would have been blamed severely by the public, if it found out that we were in a national crisis and we had no uranium simply because somebody valued dollars more than they did their patriotism.

Q. But that isn't what happened?

A. That didn't happen. It didn't happen just because these things were written.

Q. Because of what you did?

A. I wasn't the martyr in this thing, nor was I the only one, Mr. Holland. There were a lot of engineers who lived in that field just the same as I did, and they all contributed. That's right.

(Testimony of Blair Burwell.)

Q. And these companies contributed, did they not?

A. Oh, unquestionably, your company, Mr. Holland, the Vanadium Corporation, has done a splendid job since that time. I think they did a splendid —the time before that. I have no criticism of the integrity of your people. I don't think you knew the background of what was going on. And I can say that the Carbide, itself, as a whole, is — the great corporation did a splendid job during the war, and the fact that a few people almost got ahold of policies which might have been [543] destructive at the moment doesn't necessarily damn the Carbide Company. Today they are one of the big factors in this field. They only have about 17 percent of the field, and they lost a corporate opportunity that is worth billions to them.

Q. In other words, if they had taken this opportunity they would have controlled this field, is that correct?

A. Well, they could have largely, and, of course, by that same token, if they had controlled the field, if they had done it fairly, if they had done it unselfishly, if they had done it with an eye to their public trust, it would have been good business. I don't think they ever would have been indicted for monopoly on it.

Q. In other words, you believe in the paternal monopoly? A. What?

Q. You believe in a sort of paternal monopoly?

Mr. Alioto: If your Honor please, whether he

(Testimony of Blair Burwell.)

believes in paternal monopoly, I think is aside from any question here.

The Court: I don't know what he means by it.

Mr. Alioto: I don't, either.

Mr. Holland: I don't, either.

The Court: I don't think anybody else does. I am sure the jury doesn't.

A. I believe the matters that are before this Court, the matters of vanadium markets in the past, are more or less [544] dirty dishes that pretty much have to be cleaned up as you go along. I think they are to be regretted. They did exist, and I apologize to the Court if I have taken too much of your time to tell you this story. I thank you very much for not interrupting.

Q. (By the Court): Now, was there any reason why this vanadium that you had on hand from '44 to '48—it could have been sold at the price they wanted for it, couldn't it?

A. It could have been sold at a price and made a profit if the Carbide Company would go after it.

Q. No, that isn't my point. Was there a demand for that vanadium during that period?

A. Well, I believe so.

Q. Well, now, if there was a demand for it and you had plenty of it why wasn't it sold — why couldn't it be sold? A. Your Honor,——

Q. Was it on account of the price?

A. Your Honor, the Electro Metallurgical Company was making no effort to sell it because the customer was the Vanadium Corporation of America.

(Testimony of Blair Burwell.)

Q. Was anybody making any effort to buy it? That's the point.

A. Well, I think they would make some effort to buy it, if somebody would come in and say, "Well, here, we would like [545] to sell you some vanadium. We will give you a good deal and make you a little less price; it's a little better stuff."

Q. I know. Did anybody come around and say, "Here, I need some vanadium and I want to buy it"?

A. Well, I don't think it is handled that way.

The Court: No, I don't think so, either.

Go ahead.

Q. (By Mr. Holland): Mr. Burwell, you say you were not engaged in any business transactions with Mr. Leir at all?

A. That's correct, we had no financial relationship.

Q. Have you had a financial relationship of any kind?

A. Well, I believe, now, that Mr. Leir bought a note of Climax Molybdenum on the market. We possessed Climax Molybdenum uranium note.

Q. What do you mean? A. Six percent.

Q. What do you mean, bought on the market?

A. Well, we had the note. We were trying to sell it to raise some money because our tungsten mines were shut down the other day, and he is a stockholder, and he offered to buy the note because he had some money. We discounted the note. I think it was two hundred and some thousand dollars. And

(Testimony of Blair Burwell.)

he bought the note. We were offering it to other people at the same time. It pays six percent interest. As far as I am [546] concerned it was purely a commercial transaction.

Q. He bought the note from you recently at a discount, is that correct?

A. I think it was a year ago.

Mr. Holland: That is all.

Redirect Examination

Q. (By Mr. Alioto): Mr. Burwell, I want to first take up the Court's question to you about whether or not anybody was trying to make an effort to buy vanadium from you at the time that there was excess vanadium around to be sold. I believe your answer was that nobody was trying to make an effort, is that it?

A. Well, I don't believe anybody was making an effort to sell it. I think that there was a market existing for vanadium. People were trying to buy vanadium, yes.

Q. How about Continental Ore Company and Mr. Leir, were they trying to buy vanadium during this time of excess, from you and from Vanadium Corporation of America?

A. I understand so. I believe they were trying to buy ten or fifteen thousand pounds a month. I think that's here in some of these letters.

Q. (By the Court): When was that? What date? A. In this period.

(Testimony of Blair Burwell.)

Mr. Alioto: I will establish it, if your Honor [547] please.

Q. (By the Court): What date?

Mr. Alioto: I have an exact date on that.

Q. (By Mr. Alioto): I show you a letter marked —I show you Plaintiffs' Exhibit 42 in this case. It is, first, a letter to your organization, Electro Metallurgical Company, November 17, 1943.

Your Honor will recall that this is a month after the document put in by Mr. Archer this morning saying that the supply was now easing, or that supply and demand had worked itself out.

November 17th of 1943 the Continental Ore Company wrote to your corporation and said (reading):

"We would appreciate your offering us 10,000 to 15,000 pounds of V_2O_5 contained in fused vanadic acid per month. We would be ready to sign a contract with you for a fixed length of time."——

Mr. Archer: I object to this — I object to the question.

Mr. Alioto: I haven't asked the question, yet.

Mr. Archer: I thought you had finished.

Mr. Alioto: I haven't asked it, yet.

Mr. Archer: When you finish, let me know.

Mr. Alioto: I don't do things like that around [548] here. I don't know what would happen to me.

The Court: Go ahead.

Q. (By Mr. Alioto): On November 30th, or 13 days later, that letter not having been answered, Continental Ore Company wrote again to your company and said (reading):

(Testimony of Blair Burwell.)

"Gentlemen:

"We have not as yet received a reply from you to our letter of November 17th of which we enclose a copy, since the original may have gone astray. We would very much appreciate hearing from you regarding this matter at your earliest convenience."

And your company replied—November 30, 1943—apparently it had crossed in the mail, unless it was delivered by hand—apparently crossed in the mail, and said (reading):

"Continental Ore Company,

"Mr. Henry J. Leir.

"Gentlemen:

"Referring to your inquiry for fused vanadium oxide, in view of the many uncertainties prevailing at the present time we do not feel we should undertake supplying your regular requirements for this material."

Now, my question to you is, at the time that this request was made of your company, and your company turned it [549] down, did you hear anything inside the organization as to why they wouldn't supply the Continental Ore Company, when they had—when the supply and demand situation on vanadium oxide was not tight? That's the question.

Mr. Archer: I object to the question on the ground the statement is without foundation. He said it was written to his company. It is clearly to the Electro Metallurgical Company. Mr. Burwell has testified he was never an officer or an employee of any company but the United States Vanadium Corporation. [550]

(Testimony of Blair Burwell.)

Q. (By Mr. Alioto): Well, let me just establish some things on that, then. You testified to a number of meetings with Mr. Priestley, Mr. Haggerson, Mr. Sneath, and Mr. Rafferty.

A. That is right.

Q. Were those people connected with the Electro Metallurgical Company? A. They were.

Q. They were the chief managing agents, weren't they? A. They were.

Q. And when you had the meeting of the board of directors that you testified to in 1946, when you and Mr. Priestley had the row about producing uranium, was Mr. Priestley at that time an officer of Electro Metallurgical Company? A. He was.

Mr. Archer: I object to the question. His testimony was it was not a meeting of the board of directors, but a meeting of some executives.

The Witness: They were also directors.

Q. (By Mr. Archer): Was it a meeting of the board of directors?

A. They were both directors and executives, Mr. Archer.

Q. (By the Court): Was this a meeting of the board of directors, or was it just a director or officer talking individually? [551]

A. The executive committee of executives; vice-presidents of the corporation were also directors of the corporation at the same time. They did not call the meeting as a directors' meeting; they called the meeting as a budget committee meeting, technically.

Q. (By Mr. Alioto): And then, in connection

(Testimony of Blair Burwell.)

with the Dry Valley matter, for example, you stated it was Mr. Haggerson who told you and Mr. Van Fleet to turn the properties over to the Vanadium Corporation of America, didn't you?

A. That is correct.

Q. So you had a good deal of contact, didn't you, with the people who sold the product that you produced for them? A. Twenty years of it.

Q. All right.

Now, in the light of this correspondence, and in the light of the questions asked you by the Court as to whether anybody was trying to buy this from you, do you know the reason why the Electro Metallurgical Company would not sell the vanadium oxide to Continental Ore Company when it asked for it—10,000 to 15,000 pounds?

Mr. Archer: I object to the question as without foundation. There is no indication who saw this letter at the time it was written.

Mr. Alioto: Your Honor asked him a number of [552] questions on this line, if your Honor please, and the record——

The Court: I understand exactly what the record is.

Q. (By the Court): When did you first know about this, Mr. Witness? When did you first know about these letters?

A. The letters here? Well, the letters themselves, I had not seen them until they were put before this meeting. I heard about the matter at this time, in

(Testimony of Blair Burwell.)

1943. They were not in my files, these letters, and I didn't see them before this time.

Q. Was this arrangement with the government in force at that time? A. No, it was not.

Q. When did it become effective?

A. The government program ended, I think, shortly before this, and we were shutting down our mines because we had surplus vanadium at the time this letter was written.

Q. In 1943?

A. Late 1943, that is correct. We had vanadium and were shutting our mines down and laying off our people at the time this letter was written. I knew about the Leir incident as a matter of conversations, discussions that came to me naturally in the course of my duties. [553]

Q. (By Mr. Alioto): Did you know at that time that Mr. Leir, or the Continental Ore Company, were trying to buy—was trying to buy vanadium oxide from your company?

A. Oh, yes. I heard that at that time.

Q. Do you know why they would not sell it to them?

A. Well, I heard exactly that they did not want to sell vanadium to Mr. Leir because they wanted to keep him out of the vanadium business. No other reason.

Mr. Alioto: Now then, I would like to just read to the jury, in view of the testimony, a similar letter. This is, again, November of 1943. This is Exhibit 46.

(Testimony of Blair Burwell.)

Mr. Leir wrote to the Vanadium Corporation of America at the same time. This is the other company (reading):

"Gentlemen:"——

this is dated November 16, 1943 (reading):

"Gentlemen:

"We would appreciate your offering us 10,000 to 15,000 pounds of V_2O_5 contained in vanadic acid per month. We would be ready to sign a contract with you for a fixed length of time."

And the answer, November 19, 1943, the same month (reading):

"The Continental Ore Company.

"Gentlemen: [554]

"Re: Vanadium pentoxide.

"In response to your inquiry of November 16th requesting quotation on 10,000 to 15,000 pounds monthly of V_2O_5 content in vanadic acid, we regret very much that due to our present commitments we are not in a position to take on this additional tonnage at the present time. Perhaps if you are still interested at a later date and our situation changes we will be glad to look into the matter further at that time.

"Regretting our inability to be of service to you at this time, we are

"Very truly yours,

"Gustav Loub,

"Assistant Vice President,

"Vanadium Corporation of America."

(Testimony of Blair Burwell.)

Q. (By Mr. Alioto): Now, Mr. Burwell, at this time your company was representing to the United States Government that because the vanadium supply was plentiful they should cut down the production of Nisley & Wilson, wasn't it?

Mr. Archer: I object to the question as leading, your Honor.

The Court: It is leading and suggestive. He is your witness. [555]

Q. (By Mr. Alioto): As of November, 1943, what, if any, reports was your company making to the United States Government about the vanadium situation with respect to whether it was in tight supply or in plentiful supply?

The Witness: I didn't catch that last. I am sorry.

(Question read by the reporter.)

A. We were—my recollection is it was in plentiful supply. It couldn't have been anything else. It was running out of our ears. We had more than we needed. We couldn't sell it.

Q. (By Mr. Alioto): And that is what you told the government, isn't it? A. Oh, yes.

Q. In response to certain questions from Mr. Holland you read a certain statement of Mr. Gustafson as to the vanadium industry.

May I please have that statement you read from, Mr. Holland? The reason, principally, why I want it is because there was a good deal of talk at that time about this document here, this document there,

(Testimony of Blair Burwell.)

and I am sure the record is confused on that matter.

May we have this marked for identification?

(The statement referred to was thereupon marked Plaintiffs' Exhibit No. 59 for identification.)

Q. (By Mr. Alioto): Would you be good enough to look at Plaintiffs' 59 for identification and mark with a pencil and initial that section which you read into the record, so we will know where it is?

A. (Witness marks on exhibit.)

Mr. Alioto: We will offer that section into evidence, if your Honor please, so the record will be clear as to what he was talking about.

The Court: Isn't it already in evidence?

Mr. Alioto: The problem is he read it, and there were a lot of references to this record here, this record there, and I am just afraid the record is somewhat confused. It ought either to be in evidence somewhere, or identified, so it can be referred to, so we will know what we are speaking of.

The Court: Very well. Admitted.

(The portion of the statement marked Plaintiffs' Exhibit No. 59 for identification was marked Plaintiffs' Exhibit No. 59-A in evidence.)

Q. (By Mr. Alioto): Now then, with respect to the last sentence, which I want to read you (reading):

"Since the estimated annual production of th. Colorado Plateau, even under an accelerated program, [557] would be small in relation to the total

(Testimony of Blair Burwell.)

U. S. requirements and to supplies available from foreign sources, it appeared more economical to obtain the uranium as a by-product from vanadium operations which were geared to the vanadium market."

Now, on your examination by Mr. Holland I believe you said that the advice on this matter came from the Electro Metallurgical Sales Company, is that correct?

A. Well, by inference, and by the wording, which was precisely the same as used by representatives of the Electro Metallurgical Company, they were the same words that he used in conferences we had on the matter.

Mr. Alioto: I will make a motion to strike the language "by inference," if your Honor please. This matter ought not to be by inference.

Mr. Holland: Strike the whole thing.

Mr. Alioto: I made a motion to strike the whole thing, didn't I? I am going to get at it directly. The whole thing is stricken, as I understand it.

Q. (By Mr. Alioto): Isn't this almost word-for-word the language used by Mr. Priestley to you at this committee and directors' meeting?

A. That is correct.

Q. At the time you had your fight?

A. That is correct, that is correct. [558]

Mr. Archer: I object to the question as leading.

The Court: Objection sustained. That is purely calling for a conclusion. To say now that that is the language of a certain individual because you had

(Testimony of Blair Burwell.)

heard him use that kind of language before? That is calling for a conclusion.

Mr. Alioto: I am simply asking for the fact, first, if your Honor please, and then I want to develop it further. I want to show that that man was also the adviser to the Atomic Energy Commission at the time.

The Court: Well, we will take a recess, now, until tomorrow morning.

(Whereupon an adjournment was taken until Friday, June 6, 1958, at 10:00 o'clock a.m.)

June 6, 1958, 10:00 o'clock a.m.

The Clerk: Continental Ore versus Union Carbide et al., further trial.

BLAIR BURWELL

a witness called on behalf of the plaintiff, having been previously duly sworn, resumed the stand and testified further as follows:

Redirect Examination—(Continued)

Mr. Alioto: If your Honor please, after yesterday's session there was placed in evidence as Exhibit 59 for the plaintiff a document from this witness to Mr. H. D. Kaiser of the Atomic Energy Commission, and at that time the witness said there were one or two lines of personal matter in it.

The witness has now said that he has no objection to the entire letter going in. Counsel and I have discussed it this morning and Mr. Holland suggests it

(Testimony of Blair Burwell.)

be done in that fashion, and I have no objection to it, so, if it may be the order of the Court that the entire letter, previously marked Plaintiffs' Exhibit 58, shall be received in evidence.

The Court: Very well.

(Letter, 1/22/48, Burwell to Kaiser, received in evidence in its entirety as Exhibit No. 58.)

[See Book of Exhibits.]

Q. (By Mr. Alioto): Now, Mr. Burwell, yesterday we were discussing [561] Plaintiffs' Exhibit 59-A at the adjournment, that being the statement of Mr. Gustafson of the Atomic Energy Commission, dated December 17, 1948, and more particularly that portion of the statement which you marked out and which reads as follows:

"Following the war it was tentatively decided by the Manhattan District to purchase only by-product uranium rather than to stimulate and support increased production by special incentives, and then it appeared more economical to obtain uranium as a by-product from the vanadium operations which were geared to the vanadium market."

Now, had you prior to this time discussed this same subject matter with Mr. Priestley of Electro Metallurgical Company?

A. With Mr. Remmers of the Electro Metallurgical Company and Mr. Priestley, both.

Q. And approximately how long prior to December 17 of 1948 did that discussion between you, Mr. Priestley and Mr. Remmers take place?

A. Approximately a year, a year and a half.

(Testimony of Blair Burwell.)

Q. Where did that discussion take place?

A. One of the discussions took place at the meeting of the Budget Committee of the officers in the Carbide.

Q. Now, on that meeting, you have already testified to [562] that and that's already in the record so there will be no occasion to repeat that, Mr. Burwell, unless there is something you wanted to add that you don't presently remember having testified to.

Now, where did you have this other meeting with him? A. I don't recall the place.

Q. You think it was in New York?

A. There were a number of meetings in which this thing was discussed.

Q. Would you be good enough to give us the substance of your conversations, that is, conversations between you, Mr. Priestley and Mr. Remmers, on this subject?

A. Well, in particular I recall a conversation—I believe it was in Grand Junction, Colorado, with Mr. Remmers,—pertaining to this point.

The Court: Who is Mr. Remmers?

A. Vice-President of Electro Metallurgical Company, Vice-President of Electro Metallurgical Sales.

In which we discussed the future of the Colorado Plateau's operation and I was stating the objectives of acquisition and of plans for the future that had been developed as a matter of corporate policy

(Testimony of Blair Burwell.)

before he came into the picture a year or two before.

Well, I stated I thought that the production of vanadium would have to be subordinated to the production of uranium, that we had prepared at company expense a plan which [563] was the concensus of our opinion of what should be done, and I said that I thought that the uranium field would be opened up in a very short time and suggested we acquire certain mining properties, particularly the Polar Mesa, the Outlaw Mesa, the center of the mesas, various tracts of mining lands that were not at that time acquired.

He said he didn't feel that this program was going to come for another five years.

And I told him I thought he was terribly wrong.

He said he didn't believe that there was any real economies in getting uranium unless it was a by-product from vanadium production tooled to the vanadium sales.

And that was in the third floor of the Electro Building in Grand Junction, Colorado.

The Court: When?

A. To the best of my recollection——

The Court: When?

A. Approximately that conversation, your Honor, I believe was in the fall of 1947, approximately 11 years.

Q. (By Mr. Alioto): Then did you ever discuss that same subject matter with Mr. Priestley of the Electro Metallurgical Company other than in the

(Testimony of Blair Burwell.)

meeting of the Budget Committee that you have already testified to?

A. No, I don't recall. I probably did. I don't recall.

Q. Now, who in 1948, or which companies in 1948 were the [564] advisers to the Atomic Energy Commission, Mr. Burwell? A. 1948?

Q. Yes. I am trying to——

A. I don't recall.

Q. ——relate this to the statement of Mr. Gustafson dated December 17th, 1948.

Now, prior to the time of that statement——

A. I believe one of the advisers was Mr. Searles, the President of Numont Mining Company; another adviser was Mr. Donald McLaughlin of Home Stake Mining Company. About eight or nine people.

Q. I am asking directly, to pinpoint it, did any of the companies involved in this litigation——

A. None of the advisers were directly on the Advisory Board of the Raw Materials Commission, no.

Q. Well, when you say "directly" on it, do you have some reservation in mind?

A. The Raw Material Division of the Atomic Energy Commission Advisory Board was appointed about that time and neither Mr. Priestley nor Mr. Remmers were on that Board.

Q. Now then, in relation——

The Court: The opinions—these statements that you have made, your idea as to the future develop-

(Testimony of Blair Burwell.)

ment with respect to uranium, and also the statement of Mr. Priestley and Mr. Van Fleet—— [565]

Mr. Alioto: Remmers.

The Court: ——Mr. Remmers—were those your individual opinions or was it something that had been worked out by the corporate bodies themselves?

A. These were the opinions that were worked out by the corporate body of United States Vanadium Corporation, the Union Carbide and Carbon Corporation, a year, year and a half preceding the time when Mr. Remmers and Mr. Priestley had any direct connection in the company.

To explain that, during the time that these policies were developed, your Honor, that I discussed in Grand Junction, Mr. Rafferty was chairman of the Board of United States Vanadium Corporation. He was also a vice-president, senior vice-president of the Carbide Company.

Mr. Van Fleet was the president of the United States Vanadium Corporation. Now, I was the vice-president.

The policies that had to do with the process and the policies that had to do with the planning of vanadium production in its relationship to uranium production for the future were corporate policies that were determined and agreed upon by the three people I have just named.

Now, subsequent to this particular time the following things unfortunately happened:

Mr. Van Fleet had an operation for cancer, was

(Testimony of Blair Burwell.)

ill; Mr. Rafferty had a heart attack, and later he died; Mr. [566] Priestley replaced Mr. Van Fleet as president of the company; and Mr. Remmers entered the company as a vice-president; and the entire corporate policy changed in the space of a year.

Therefore, when I was speaking in Grand Junction, or when I was speaking previously, I was speaking with the previous policy of the Carbide Company which had been considered by this group I just told you.

The Court: Well now, when you suggested that you should buy these additional claims that had possibility of uranium production, that was your idea, or was that the policy of the company as had been determined?

A. That was the recommendation that I made to the policy group that I belonged, and which we had agreed that if the atomic bomb succeeded and that the atomic program—the atomic energy was apparently on its way, that there was the corporate opportunity to acquire these additional properties and proceed to take advantage of our knowledge and know-how and research in this field.

The Court: Do you regard that as an exercise of good business judgment?

A. Why, surely so, your Honor. Surely so. As long as the exercise of good business judgment did not impair the national security.

Now, there is a fine point.

(Testimony of Blair Burwell.)

The Court: Getting to the other point, at the [567] time you made this recommendation, was it made as an exercise of business judgment of your companies in the development of uranium and vanadium production, or was it made to prevent somebody else from buying it?

A. No, in this time, your Honor, we had forgotten all about this business of preventing anybody else from buying. All of the questions of preventing somebody else from buying, insofar as Mr. Rafferty, Mr. Van Fleet and myself went, and insofar as the Carbide Corporation went at that time was all supposed to be forgotten.

In other words, we looked at this thing now as good business for the future because Carbide at that time was planning, and I have here in this case the discussions of the nuclear division of Union Carbide and Carbon Corporation where that great Corporation could take the leadership in this atomic field, but there when you had the question of public trust, a good public servant and a great corporation, why, it was a great corporate opportunity, and I was ambitious, as any half-young mining engineer would be at that time, so it was good business, your Honor, from another standpoint entirely disassociated from what happened prior to that time.

But on the other hand, the core was this, that other people, who had no part or no sympathy or particularly no understanding — or, just say that they maybe didn't know—had moved into the corporation policy-forming committee after [568] 1944.

(Testimony of Blair Burwell.)

There the great conflict, the warring conflict of the vanadium industry came up.

There is the story behind this atomic energy program.

The Court: Well, at this time——

A. It's hard to define——

The Court: ——were there a great many, what you might call, promoters, or those that were previously inexperienced in mining vanadium or uranium, were there a great many of those *speaking* and actually securing claims on this territory?

A. Yes, your Honor. We had used the term "promoters" which was a code word for people who were acquiring properties for espionage purposes.

The Court: Yes?

A. We termed—there's another term, "Promoters," which we didn't regard—you can't regard as promoters because as this field opened up and roads were built and as a result of the war effort and the Manhattan District needs, this field became a terrifically important field and it expanded greatly.

Now, there are hundreds and hundreds of little miners who had a few claims and a little cedar log shack up on some ridge that became—suddenly had an opportunity to do something, and, therefore, hundreds and thousands of mining claims were acquired in the adjacent—by these small [569] miners.

Now, those were the people, your Honor, that were mobilized as a part of the obtaining of additional vanadium and then for uranium by the

(Testimony of Blair Burwell.)

United States Vanadium Corporation, Union Carbide Company, by Mr. Van Fleet and myself — as what we thought our job was for the war.

Now, when we did that, we forgot all about this question: We'll keep them out of the vanadium business—and don't let them have the plant.

So you have to understand that there were three distinct shifts of corporate policy, and I am speaking for one going out and another one coming in, which we disagreed——

The Court: Yes.

A. Now, if this was just honest disagreement about money and honest disagreement about economics, whether it was good business, and the new people came in, the new president said: Mr. Van Fleet, you're chairman of the board; get out—and it was the good of the company for dollars—why, we couldn't have had anything to say about that at all, and I wouldn't be here.

But when we felt that that change of policy imperiled the objectives that Carbide had unselfishly composed, then there was a point that would sound a little bit far-fetched and idealistic unless you had lived this thing such as I have. Then the warring interests of the vanadium industry took over, [570] but the——

The Court: Anyway, these discussions now, the recommendations that you made, you were doing that from the standpoint of the development of your own corporation and the exercise of good business judgment?

(Testimony of Blair Burwell.)

A. At this time the corporate opportunity had shifted——

The Court: The time of the——

A. It had gotten too big to try to fool around with controlling by a small mill here and there. "Let's all get together and let's everybody do the best, because it's big enough for everybody now."

Q. (By Mr. Alioto): Now, then, you indicated there was a change in that policy in 1944?

A. I did.

Q. And you said that certain other men gained control of the corporation, in answer to his Honor's question. Which men did you refer to?

A. Mr. W. J. Priestley, who had previously been president, I believe, of Electro Metallurgical Company, became president of the United States Vanadium Corporation.

Q. Yes. Anybody else come in at that time?

A. Now, this is after '44?

Q. Yes, I understand that, but you say the policy started to shift in '44.

A. Yes. Mr. Remmers, who isn't on that chart, was [571] vice-president of Electro Metallurgical Sales Corporation, became vice-president of United States Vanadium Corporation, along with me—there were two vice-presidents—in fact, there were three. [571-A]

Q. (By Mr. Alioto): Yes. Did Mr. Haggerson assume any different position at that time?

A. He, I believe, became president of the Union

(Testimony of Blair Burwell.)

Carbide & Carbon Corporation. I am not sure about that.

Q. Did these three men change the policy of the corporation, as his Honor has inquired?

A. I just testified to that to the judge.

Q. What was the policy after 1944?

Mr. Archer: I object, your Honor. I think we should have some conversations here.

Mr. Holland: He has already stated that.

Mr. Alioto: No, he has not. He has stated the policy up to 1944. Now these new men took over.

The Court: Answer the question.

A. Well, the policy after 1944 was to return to the same restrictive agreements on vanadium.

Q. (By Mr. Alioto): With whom?

A. With the Vanadium Corporation of America.

Mr. Archer: I move to strike that, your Honor. That is purely a conclusion of the witness.

The Witness: That was the quarrel we had.

Q. (By the Court): That was the discussion?

A. That was the quarrel between these officials of Carbide.

The Court: The objection will be sustained. I think before you can bind a corporation there must be some corporate act. The mere statement of an individual would not be conclusive evidence as to what the corporation did. Objection sustained and exception allowed.

Q. (By Mr. Alioto): In connection with this subject matter, were the discussions with Mr.

(Testimony of Blair Burwell.)

Priestley, with Mr. Remmers and Mr. Haggerson, about the policy of the corporation after 1944?

A. That was the return, that we were going to make, the policy that was to obtain, to hold the vanadium business between the two companies, the Vanadium Corporation of America and the United States Vanadium Corporation.

Q. And who said that? In substance, who said that?

A. Well, Mr. Priestley, for one, as I recounted in this discussion with Mr. Rafferty in his office.

Mr. Archer: I move to strike the witness' answers, then, because he has stated he has already given his answer. The rest is just a conclusion.

The Court: Sustained. I think this is repetitious.

Mr. Alioto: Let me wind up this subject in this way: [573]

Q. (By Mr. Alioto): What objection, if any, did you and Mr. Van Fleet make to Mr. Priestley, Mr. Remmers, Mr. Haggerson, or anybody else, about this restrictive policy?

Mr. Holland: I think that has already been testified to, your Honor.

The Court: Yes, I think he has covered that.

Mr. Alioto: I thought so. If your Honor please, I thought so, except I thought your Honor's question had left the matter——

Q. (By the Court): This was merely a discussion between you men, is that it?

A. As officers of different groups of the company.

(Testimony of Blair Burwell.)

Q. Just a discussion?

A. Always policies are discussions, your Honor. I mean, they are not agreements. You are not sitting down and writing them down as a matter of corporate directors' meetings.

Q. (By Mr. Alioto): What, to your knowledge, did the company do thereafter, after 1944? What did it do? What were the facts?

A. Again, the corporation proceeded to divert its sales of vanadium to the Vanadium Corporation of America. That is what I testified to in regard to the ferro-chrome silicon. That is what I testified, that we couldn't move our vanadium [574] at times when we had plenty of vanadium. This was going on all the time. This had started again. When the government purchasing had stopped and we were laying off our people, although we had a policy change, the sales department would not sell the vanadium.

Mr. Holland: If the Court please, I ask that this be stricken, because the witness has just testified that it is a matter to which he has already testified.

The Court: I think it is repetitious.

Mr. Alioto: If it is repetitious it should not hurt, if your Honor please.

Mr. Holland: We could go on forever.

The Court: It is not material; it is not competent. The objection is sustained.

Q. (By Mr. Alioto): Now, you were asked a great number of questions by both Mr. Holland and Mr. Archer about the government programs and

(Testimony of Blair Burwell.)

your participation in the government programs, and in answer to a question of Mr. Holland's you stated that you had prepared a report for Senator Milligan. I hand you a copy of a document marked "American Uranium Resources, by Blair Burwell, in July of 1949," and ask you if that is a copy of the report that you prepared for Senator Milligan?

A. That is.

Mr. Alioto: At the completion of counsel's [575] cross-examination we will offer this report in evidence.

Mr. Holland: Is that a speech Mr. Burwell made?

Mr. Alioto: No, this is not a speech; it is a report he prepared for Senator Milligan, with specific references not only to uranium, but to the vanadium industry.

Mr. Holland: What is the date of the report?

Mr. Alioto: July, 1949, which covers the approximate years about which Mr. Holland was interrogating the witness, and on the same subject matter, but also refers to the policy of the Union Carbide Company in the 1947-1948 period.

Mr. Holland: Does it add anything to what he has already said on the stand, or is it just a repetition of it?

Mr. Alioto: I think it adds a good deal.

Mr. Holland: I have not read the report, but I object to it as being repetitious. It is just the same stuff we have been listening to for the last week.

(Testimony of Blair Burwell.)

The Court: The objection is sustained. Exception allowed.

Let us get along. I think this witness has covered every feature that possibly could be covered.

Mr. Alioto: In connection with that matter would your Honor be good enough to read certain sections of the report?

The Court: This is a report to Senator Milligan?

Mr. Alioto: Yes, by an official of Carbide, [576] relating to Carbide policy, although he was not an official at this time. He relates the Carbide policy at the time that he was an official.

Mr. Holland: He has already related that, your Honor.

The Court: Objection sustained.

Mr. Alioto: May we have this document, then, marked for identification, if your Honor please, so the record will be clear at this point what is being excluded?

(The report referred to was thereupon marked Plaintiffs' Exhibit No. 60 for identification.)

Mr. Alioto: I take it the record sufficiently shows the document we have been discussing, and which was excluded, is Plaintiffs' 60 for identification.

The Court: Very well.

Q. (By Mr. Alioto): Mr. Burwell, there was considerable discussion with counsel and with the Court yesterday as to the interplay of various governmental regulations during the war, and I want

(Testimony of Blair Burwell.)

to be sure that those dates are clear. Let us start in 1938. You gave testimony about matters occurring in 1938. It is perfectly clear that there were no government or war regulations involved in 1938 at all, isn't it? A. That is right.

Q. Now we will take 1939. [577]

A. None.

Q. It is perfectly clear that there were none involved during that period of time.

We will take 1940. It is a fact, isn't it, that in 1940 there was an embargo on exports, in July of 1940?

Mr. Archer: I will stipulate to that.

Mr. Alioto: July of 1940, just an embargo on exports.

Mr. Holland: Why don't you take the stand, Mr. Alioto.

The Court: The embargo was made by the government?

Mr. Alioto: Yes.

Q. (By Mr. Alioto): Except for the embargo on exports——

A. There were some exceptions to the embargo at that time. Exports were allowed, I believe, subject to the government's approval.

Q. They were certainly allowed to England, for example? A. That is right.

Q. And England was a very big market in 1940 for vanadium, was it not?

Mr. Archer: I object to that question as lead-

(Testimony of Blair Burwell.)

ing. There is no basis for the statement that this man ever sold any vanadium in England. [578]

Q. (By Mr. Alioto): What is the situation with respect to England as an export market in 1940?

A. We were shipping vanadium to England in 1940.

Q. Except for this embargo in July of 1940 was there any other government regulation that affected the vanadium industry? A. There was not.

Q. Now then, there was an allocation order on December 20, 1941, was there not?

Mr. Holland: Won't Mr. Alioto let the witness testify? He has been doing all the testifying himself.

Mr. Alioto: These are matters of record.

The Court: Let us get along.

A. Yes, that is my best recollection.

Q. (By Mr. Alioto): From 1941 up to 12/20/41 there was no further regulation, is that correct?

A. That is right.

Q. Then you had an allocation go into effect——

A. That is right.

Q. ——on December 20, 1941?

A. That is right.

Mr. Alioto: Will counsel stipulate that that allocation was removed on December 30, 1943—the allocation [579] system?

Mr. Holland: We are just trying to make a chart here without using the witness.

Isn't it a fact that in August, 1941, there was a priority order?

(Testimony of Blair Burwell.)

Mr. Alioto: There was a priority order?

Mr. Holland: Yes, everything was put on priority. I mean, vanadium was put on priority in August, 1941.

Mr. Alioto: All right, let us put "August, 1941," there. The order itself was dated December 20, 1941.

Mr. Holland: No, that is another one.

Mr. Alioto: Can we agree, Mr. Holland and Mr. Archer, that the allocation system was removed on December 30, 1943?

Mr. Archer: Certainly not all allocations, because they were not all removed then.

Mr. Alioto: Well, the basic order on allocations.

Mr. Holland: Why don't you just put it in evidence?

Mr. Alioto: Do you have it?

Mr. Archer: No, I don't have it.

Mr. Alioto: If we can get it we will put it in evidence, but so we can understand some of the questions that will follow, will you agree that the allocations were removed on December 30, 1943?

Mr. Archer: There was another one at that date.

Mr. Alioto: December 30, 1943.

Q. (By Mr. Alioto): Now, you have already testified——

Mr. Archer: I think we ought to put in the price controls.

Mr. Alioto: Yes, we will get to the price controls. We will get them all in.

Q. (By Mr. Alioto): So far as Metals Reserve

(Testimony of Blair Burwell.)

program was concerned, you have already testified the decision was made in October and November, 1943, to cancel out certain of the Nisley contracts.

A. That is correct.

Q. So far as price control is concerned, price ceilings, the maximum price that should be charged went into effect, did it not, on April 28, 1942?

It is not very artistic writing, but we can agree they went into effect at that time.

Mr. Holland: There was a prior situation in 1941 under which there were voluntary price controls,——

Mr. Alioto: So far as the law is concerned——

Mr. Holland: ——by agreement with the government. You are getting into a pretty complicated subject here. Those dates are not quite as fixed as they appear to be.

Mr. Alioto: Can we agree that the maximum price [581] control order was effective April 28, 1942?

Mr. Holland: Yes. Why don't you get all these orders and put them into evidence?

Mr. Alioto: I have no objection to that. I have no objection to that at all.

Mr. Holland: I haven't got any of them. I am not sure you are absolutely accurate on that.

Mr. Alioto: Let us see the evidence we had yesterday, so it will be plain on its face.

Where are the requests for orders that I read last night that were turned down?

Mr. Holland: When you speak of price controls

(Testimony of Blair Burwell.)

you mean on both ferro-chrome and oxide, is that correct?

Mr. Alioto: Yes, the maximum ceiling prices, so-called. We will get to that in a moment.

The Court: Do you think the witness will testify to that?

Mr. Alioto: Here is the point I was making:

Q. (By Mr. Alioto): Do you recall yesterday I read certain requests of the plaintiff to the defendant, Electro Metallurgical Company, and the request of the vanadium corporation, dated November, 1943, when the plaintiff asked for 10,000 to 15,000 pounds of vanadium oxide per month? State whether or not there was any government regulation which forbade those companies from [582] complying with that request if they wanted to.

A. Not that I knew of.

Q. During the period of time when you were operating under Metals Reserve—I think there was considerable testimony on that—during that period of time you operated one plant for Metals Reserve. That was the Durango plant. That is correct, is it not? A. That is correct.

Q. But you also operated your own plant at Uravan for the regular customers that you had prior to that time, didn't you? A. Uravan and Rifle.

Q. At Uravan and Rifle. And those plants were not being operated for Metals Reserve, were they?

A. Oh, no.

Q. By reference to Plaintiffs' Exhibit No. 18 can you tell us what production, what private pro-

(Testimony of Blair Burwell.)

duction you had during the period from 1941 to 1945? A. Where?

Q. Private production. That would be Uravan and Rifle. 1941 to 1945.

A. In so far as Rifle went—I can put them both together so it won't take too much time.

In 1941 private production at Rifle and Uravan was 2,376,000 pounds.

1942, 3,510,000. [583]

1943 was 3,301,900 and some pounds.

1944 the Uravan plant closed, but there was still 2,554,000, coming largely from Rifle.

In 1945 there was 1,813,000 coming from Rifle, and none from Uravan.

Q. As against that, what was the production for Metals Reserve at Durango?

A. The production for Metals Reserve in Durango in 1941 was none, in 1941.

186,000 pounds—I just give the even thousands —in 1942.

852,000 in 1943.

300,000 in 1944.

365,000 in 1945.

Q. It is clear, then, that your private production was far greater than your Metals Reserve production was? A. That is right.

Q. It is also true, is it not, that the Vanadium Corporation of America produced at Naturita, as well as the Monticello plant?

A. I think that is on the same sheet, isn't it?

Q. Yes.

(Testimony of Blair Burwell.)

I would like to read this to the jury, if your Honor please, at this point.

Vanadium Corporation of America, Metals Reserve, at [584] Monticello—and I will read the Naturita plant—I will read them together.

For 1941, 400,000 at Naturita; none for Metals Reserve at Monticello.

For 1942 the private production was 439,500; and their Metals Reserve production was 235,000.

1943 the private production was 752,000 pounds; the Metals Reserve production was 817,000.

1944 the private production at Naturita of the Vanadium Corporation of America was 786,000; the Metals Reserve production was 150,000.

In 1945 the Naturita production was 505,000; the Metals Reserve was 730,000 pounds of vanadium.

Mr. Archer: I think you ought to read the public production there under the government contracts which existed from 1943 to 1945.

Mr. Alioto: I will be very happy to, Mr. Archer. You are talking about, now,——

Mr. Archer: Ask Mr. Burwell. He prepared the chart.

Mr. Alioto: I can read it as well as Mr. Burwell.

The Witness: I beg to differ. I did not prepare the chart.

Mr. Archer: Who prepared it, Mr. Burwell?

The Witness: Union Carbide & Carbon, U. S. [585] Vanadium people, the engineers under my direction. These were statistics from the companies' records, and I didn't prepare them personally.

(Testimony of Blair Burwell.)

Mr. Alioto: What is, specifically, the column you want me to read to the jury, Mr. Archer? I will be glad to do it.

Mr. Archer: The 2,000,000 pounds column. I believe Mr. Burwell testified yesterday they produced 1,900,000 pounds under the sludge plant contract with the Army, and I think if you look in Column 7, that is where they are continuing up to the year 1945.

Mr. Alioto: In Column 7 the production that Mr. Archer would like me to call your attention to, and which I am happy to do, is entitled "Plant A, Grand Junction, U.S.V. Contract Account, Pounds V_2O_5." This is the so-called sludge contract he refers to.

As against Uravan and others in 1940 there is nothing.

In 1941 there is nothing.

In 1942 there is nothing.

In 1943 there is 185,620 pounds.

In 1944 there is 820,606 pounds.

In 1945 there is 916,095 pounds.

Q. (By Mr. Alioto): Yesterday, at the end of the session, Mr. Holland asked you, Mr. Burwell, whether or not you were now a [586] competitor of V.C.A. or United States Vanadium Corporation.

A. I was so honored.

Q. You recall that line of inquiry, in any event.

Now then, approximately during what period of time did you go into the vanadium industry after you left Union Carbide? A. 1952.

Q. 1952? A. I think that is the date.

(Testimony of Blair Burwell.)

Q. (By The Court): When did you leave the defendant companies?

A. In 1948, finally. '47 was my resignation. I finally left in the spring of '48. '52 is when I first entered into the vanadium production for——

Q. (By Mr. Alioto): Now, this document that you prepared for Senator Millikin, which is now marked Plaintiffs' Exhibit 60 for identification, was prepared, was it not, long before you went into the vanadium industry in any form on your own?

A. That's right.

Mr. Archer: I object to the question as leading.

The Court: Yes, it is very leading and suggestive. You can ask him the question. Let him testify.

Mr. Alioto: I thought it was just a matter of time, if your Honor please. [587]

The Court: Well,——

Q. (By Mr. Alioto): What was the time that you prepared the document for Senator Millikin?

A. July 8, 1948.

Q. July of 1948?

A. That's right. 1949.

Q. '49. When was the time that you went into this competitive vanadium industry that Mr. Holland honors you with?

A. Approximately '52.

Q. All right. So that at the time you wrote that report for Senator Millikin you weren't in any vanadium industry, were you? A. No.

Mr. Alioto: If your Honor please, we will offer it in evidence, now, on a different theory—as a prior

(Testimony of Blair Burwell.)

consistent statement. There has been an attempt here to indicate that his testimony is colored by the fact that he is a so-called competitor. Now, this——

The Court: You are, or were not connected with the company at the time that was prepared?

The Witness: In no way or form, your Honor.

The Court: Objection sustained.

Mr. Alioto: Well, I am offering it only as a prior consistent statement in view of the alleged impeachment—— [588]

The Court: Objection sustained. Exception allowed.

Mr. Alioto: So the record may be clear, the document I was offering in that connection was Plaintiffs' Exhibit 60 for identification.

Q. (By Mr. Alioto): Now, you were further asked yesterday whether or not you had certain business connections with Mr. Leir. State whether or not in July of 1949 you even knew Mr. Leir.

A. I had never met Mr. Leir until a year and a half ago.

Mr. Alioto: Now, if your Honor please, with respect to the attempted impeachment by showing some relationship between the witness and Mr. Leir, I now offer Plaintiffs' Exhibit 60 for identification on the ground it is a prior consistent statement in line with his testimony here before any even acquaintance with the plaintiffs' president arose.

The Court: Is that the same one you offered?

(Testimony of Blair Burwell.)

Mr. Alioto: It is the same document, on that different theory, to show a prior consistent——

The Court: Objection is sustained. Exception allowed.

Mr. Alioto: Now then, in order to complete the record on this matter of impeachment by showing interest, we would like to have marked for identification a document entitled "Memorandum on Vanadium and the Operation of the [589] United States Vanadium Corporation."

The Clerk: Plaintiffs' 61 marked for identification.

(The memorandum referred to was marked Plaintiffs' Exhibit No. 61 for identification.)

Q. (By Mr. Alioto): Mr. Burwell, I show you a copy of a document that has now been marked for identification 61. Would you be good enough to look at that document, Mr. Burwell, and then state whether you are the author of it?

A. That's correct.

Q. Can you tell us when it was that you composed that document?

January 4, 1956.

Q. And does that document purport to set forth facts in the vanadium industry as you know them through your associations with these defendants?

A. They do, as I knew them.

Mr. Holland: Your Honor, this witness may have written a book on the subject. I think we ought to shut this off somewhere. I object to it on the grounds——

(Testimony of Blair Burwell.)

Mr. Alioto: I haven't offered anything, yet, if your Honor please.

Mr. Holland: Oh, pardon me.

Mr. Alioto: I haven't completed the foundation [590] for this document. I am trying to make a record. I anticipate it may be excluded, and for that reason I want to be sure this record is here. We have a little tyrant here we have to operate with, as you know (indicating court reporter).

Q. (By Mr. Alioto): Now then, at the time you prepared this document, January 1st of 1956, did you even know Mr. Leir?

A. No, never met him.

Mr. Alioto: We will offer this document in evidence, if your Honor please, for the specific purpose of overcoming any inference of interest which Mr. Holland may have elicited by reason of bringing out the fact that he even knew the plaintiff, Mr. Leir.

The Court: Objection sustained.

Mr. Alioto: Thank you.

I think that makes the record on that, and we will move along, if your Honor please.

Q. (By Mr. Alioto): Now, in connection with the evidence on activities during the war, Mr. Burwell, particularly with respect to your testimony given on examination by Mr. Holland, Mr. Archer, and certain questions of the Court as to activities—as to certain government involvements during the war, we, at this time, as a matter of chronological presentation, if your Honor please, and while this

(Testimony of Blair Burwell.)

witness is here, offer into evidence as [591] against the Vanadium Corporation of America a letter dated March 11, 1940, from the Apex Smelting Company to the Vanadium Corporation of America requesting a supply of vanadium oxide, and the answer of the Vanadium Corporation of America dated April 8, 1940.

Mr. Holland: This witness had nothing to do with this, your Honor. We are going to have the Apex people here.

Mr. Alioto: Yes, but this witness has a lot to do——

Mr. Holland: He is offering it out of order, and——

Mr. Alioto: May I——

Mr. Holland: ——and Mr. Leir would be the proper witness to introduce it.

Mr. Alioto: May I state the purpose for offering this?

The Court: What does this witness know about that?

Mr. Alioto: This, if your Honor please, covers a certain period of time when this witness says certain policies were in effect. I want to offer this——

Mr. Holland: This has nothing to do with the Carbide——

Mr. Alioto: I want to offer this, if your Honor please, and ask the witness whether or not any war regulations, or anything else, about which both counsel inquired extensively, [592] affected the dis-

(Testimony of Blair Burwell.)

position of this mill. I think I know the answer, but at the same time I think I am entitled to show it through this witness, as they had introduced the subject matter. It will be very short. I can do it in exactly five minutes if I am permitted.

Mr. Holland: I don't think it is proper. We object.

Mr. Alioto: I would like to make——

The Court: The objection will be sustained. You will have an opportunity to offer them.

Q. (By Mr. Alioto): Mr. Burwell, you plan to leave for your home——

Q. (By the Court): You had nothing to do with this?

A. The Apex matter?

Mr. Alioto: No, the witness didn't have anything to do with it, if your Honor please, but there has been an attempt here——

Mr. Holland: He is trying to anticipate our attempt.

The Court: The objection will be sustained.

Mr. Alioto: I want to make a statement as to the reason for it. If the Court does not want to hear it, we will go on to another matter. [593]

Q. (By Mr. Alioto): Now, Mr. Burwell, you gave certain testimony here, both in response to the questions of counsel and the Court, with respect to government controls of various types in the period during the year 1942.

In connection with that testimony, if your Honor please, we at this time offer an inter-office corre-

(Testimony of Blair Burwell.)

spondence of the Vanadium Corporation of America, being a letter from Gustav Laub to Mr. Edward S. Christiansen, its vice-president.

Another letter of Gustav Laub to E. D. Bransome, its president.

Another inter-office memorandum, dated during this '42 period, from Mr. Gustav Laub to Edward S. Christiansen.

And finally, an inter-office memorandum from Mr. Sterling to Mr. Kett.

All of these are very short, and I anticipate can be put in in about a minute and a half, and we would like to put them in at this point in connection specifically with the cross-examination of Mr. Archer as to certain war involvements during this period in '42.

Mr. Holland: This same consideration——

Q. (By the Court): Did you have anything to do with these letters?

Mr. Alioto: I will say to the Court that the witness did not, if your Honor please, but it is in connection [594] with the testimony as to what was going on in '42, and I think the jury should hear this chronologically, and they are very short, Judge.

Mr. Holland: He is anticipating matters. It is the same type of documents, exactly. It has nothing to do with the Apex Smelting and the Vanadium Corporation, about which this witness had nothing to do.

The Court: I think there is a proper way for

(Testimony of Blair Burwell.)

you to introduce that. I doubt if it is proper at this time.

Objection will be sustained. Exception allowed.

Mr. Alioto: All right.

So the record will be clear as to the documents we have been speaking of, if your Honor please, may we have these documents marked for identification?

(The four documents referred to were marked Plaintiffs' Exhibit No. 62 for identification.)

Mr. Alioto: I might say in that connection——

Let me ask the witness a question.

Q. (By Mr. Alioto): I take it you propose, after your testimony is concluded here, to return to Grand Junction, Mr. Burwell?

A. It is very necessary that I do so, to take care of my own——

Q. (By Mr. Holland): I take it you could come back if it was necessary, [595] couldn't you, Mr. Burwell?

A. Well, that is possible. I am called to Washington, Mr. Holland, to testify as to an important bill the Senate Committee of Mines and Mining, and it is very important that I be there.

The Court: This is a matter—he had nothing to do with this. How are you identifying those letters?

Mr. Alioto: For this reason, if your Honor please: These letters, as far as authenticity and genuineness are concerned, they are already stipu-

(Testimony of Blair Burwell.)

lated to as the result of pre-trial proceedings, so there is no problem of identification. The reason I want to get them in at this time, if your Honor please, is because certain industry and governmental conditions existed at this time, of which this witness has given a great deal of testimony. Now then, if we bring them in at a time when this witness is not on the stand, and then the defense counsel attempt to insinuate that they were—that there were governmental policy or other industry reasons for the things that are evidenced by these documents, I am not going to have the witness available to bring those facts out. Whereas, if I can put them in now, and they involve a period of time about which counsel and the Court inquired——

The Court: Hasn't this witness testified to that very thing?

Mr. Alioto: Yes. But, if your Honor please, I [596] anticipate this kind of a practical courtroom situation——

The Court: Objection sustained. Let's get along with something else.

Mr. Alioto: All right.

Now, just to further identify the record on this matter——

The Court: If this witness is not—if he is leaving, I don't know how you can continue with your lawsuit. I think he is the only one, so far.

Mr. Alioto: Yes, we expect to conclude with him today, if your Honor please. It is very un-

(Testimony of Blair Burwell.)

usual that we get a former vice-president and director of a company to testify in this type of case.

May we have that marked for identification?

The Clerk: Plaintiffs' Exhibit 63 marked for identification.

(The letter referred to was thereupon marked Plaintiffs' Exhibit No. 63 for identification.)

Mr. Alioto: Plaintiffs' 63, if your Honor please, are the documents offered just before Plaintiffs' 62, which the Court ruled we could not offer at this time.

Q. (By Mr. Alioto): Now, Mr. Burwell, Mr. Archer inquired of you with respect to certain production of the Anaconda Copper Company yesterday, and I think you told him that you did have a [597] conference with certain officials of the Anaconda Copper Company.

A. That's correct.

Q. If you can, could you fix the approximate time when this conversation took place?

A. Approximately six months prior to the shipments, and there is a record of the documents there, and I wouldn't try to give that date offhand.

Q. All right. Now, the purchase document previously admitted into evidence indicates that there was a shipment from Anaconda in 1941—May of 1941. Do you think it may have been about six months prior to that time?

A. Yes, it was, about—maybe it was a year

(Testimony of Blair Burwell.)

prior to that time, because it preceded that shipment.

Q. (By the Court): That involved your purchase of vanadium from the Anaconda people?

A. That's right.

Q. Do you know of any reason why you couldn't buy it?

A. We were trying to buy it, your Honor.

Q. Did you regard it as a good business proposition for your company to buy that?

A. We had a good business reason to buy it, yes.

Q. (By Mr. Alioto): What was the business reason? [598]

A. To keep it out of the hands of competitors.

Q. Now then—and that was pursuant to the policy of your company? A. Absolutely.

Q. And you were acting under instructions?

A. Absolutely.

Q. Now then, in your testimony, the questions of Mr. Archer—from the questions of Mr. Archer——

The Court: Just a minute. Right there.

Q. (By the Court): Now, at that time the Anaconda group could have sold it to somebody else if they wanted to, couldn't they?

Mr. Alioto: I have a document that might develop that fact, if your Honor please.

The Court: Let him answer.

A. They might have sold it to the Vanadium Corporation of America.

Q. (By the Court): Well, could they have sold it to anybody else?

(Testimony of Blair Burwell.)

A. Nobody else was making ferro-vanadium; nobody else was buying.

Q. Was there any market for it then, other than yourself and the Vanadium Corporation of America?

A. Very little, your Honor. There was only the two.

The other thing would be that if they couldn't sell [599] the vanadium oxide to the two people who had the market—I mean the final product—there was an intermediate product—you have to understand, it wasn't a commercial—something you could go out and sell on the street corner. Therefore——

Q. Well, do you know of anybody else that could have bought it, as a business proposition, except the two companies you mentioned?

A. Not at that time, no.

Mr. Holland: Could I ask one question?

Mr. Alioto: If your Honor please, may I continue along that line that your Honor mentioned?

Q. (By Mr. Alioto): Wasn't the Apex Smelting Company trying to buy vanadium oxide?

Mr. Archer: I object to the question as leading, your Honor. He already testified he didn't know about Apex.

Q. (By Mr. Alioto): Is that correct, that you didn't know about Apex?

A. I didn't know about Apex at that time.

Mr. Alioto: Well, at this time, in connection with the questions just asked, I would like to offer

(Testimony of Blair Burwell.)

into evidence a request of Apex to Vanadium Corporation of America dated March 11, 1940, for vanadium oxide,——

Mr. Holland: Same objection.

Mr. Alioto: ——which was just at the time your Honor is speaking of. [600]

The Court: From whom?

Mr. Alioto: From Apex to the Vanadium Corporation of America, requesting vanadium oxide. That will establish whether somebody else was trying to get vanadium oxide.

The Court: Well, you might show that to the proper witness. What does this witness know about it?

Mr. Holland: He is trying to impeach his own witness.

Mr. Alioto: I am not trying to impeach my own witness. The Court just asked the witness whether anybody else——

The Court: The Court has ruled. The Court has ruled. Let's go.

Mr. Alioto: All right.

Now then——

Mr. Holland: The witness said "No."

Q. (By Mr. Alioto): Now then, with respect to the Anaconda matter, you testified, I believe, that you had a conference in which you told them not to make fused black—fused black oxide, but to make red cake instead, is that correct?

Mr. Archer: I object to that. I don't think that was his testimony. [601]

(Testimony of Blair Burwell.)

Q. (By Mr. Alioto): What was your testimony about this conference with the Anaconda officials, Mr. Burwell?

A. I will tell you. Let's get it accurate.

Q. Fine.

A. My conference had to do with the kind of material and the method of preparation. It was largely technical. And in so much as the fusing of the material would require an additional expenditure, which they were loathe to do, I suggested that they go ahead and make the red cake, which would still require a fusion operation, and that they deliver the red cake to our plant for fusion, which would make it marketable.

Q. (By the Court): Now, when you gave them that recommendation did you do it as an engineer who is supposed to know about those matters, or the officer of some company that was interested in buying it?

A. I was both an engineer and executive, your Honor. I walked in both places.

Q. You couldn't buy it very well unless it was as you suggested?

A. No; we could buy it in any form. We could buy it as ore, if we wanted to buy it. But in this particular case the red cake—they were making red cake, were considering putting it in—making fused oxide, and they were held up [602] from the expenditure of $200,000 to make a fused—for oxide, and called me into conference about it, and, of course, I recommended, as a good business man,

(Testimony of Blair Burwell.)

and also for economic reasons that had to do with my company, and as an engineer, because these things were professional engineering management, here——

Q. You recommended, then, that they manufacture the red cake, as you call it, because you could use that?

A. I recommended that they only manufacture their product part way toward the finished product and we would finish it the rest of the way for the market.

Q. (By Mr. Alioto): Then in May of 1940 did you need to buy red cake?

A. No, we never needed to buy red cake.

Q. So, specifically, as his Honor asked you the question, could you use red cake in May of 1940?

A. No.

Q. But you bought it anyway, didn't you?

A. I testified to that. We did.

Mr. Alioto: We will offer at this time, if your Honor please, the contract between the Anaconda Copper Company and the Union Carbide Company relating to the purchase of the material the witness has just mentioned.

Mr. Archer: What is the date?

Mr. Alioto: The first contract is May 15, 1940, [603] and then there is a letter contract dated December 1, 1942, which takes the entire production for the period beginning January 1, '41, and ending December 31, 1946.

Mr. Archer: No objection.

(Testimony of Blair Burwell.)

Mr. Alioto: We will offer this in evidence, if your Honor, please.

The Court: Admitted.

The Clerk: Plaintiffs' Exhibit 64 admitted and filed in evidence.

(The letter-contracts referred to was marked Plaintiffs' Exhibit No. 64 in evidence.)

[See Book of Exhibits.]

Mr. Alioto: I would just like to call the pertinent provisions of that contract to the attention of the jury.

This agreement is dated May 15, 1940, between the Anaconda Copper Mining Company and the United States Vanadium Corporation, and it is signed, on behalf of the United States Vanadium Corporation, by Mr. Van Fleet and by Mr. Keller on behalf of the Anaconda Copper Company. The agreement provides for the sale of vanadium pentoxide in the form of red cake precipitate. And then the specifications, and then the "Quantity" (reading):

"The entire production of said material of seller's plant at Anaconda, Montana, for a period of two years beginning January 1, 1941, and ending December 31, 1942. Buyer shall have no obligation to purchase in [604] excess of 200,000 pounds in each calendar year, but shall have an option to purchase any part or all of seller's production in excess of 200,000 pounds in each calendar year."

The price of 70 cents per pound of contained vanadium pentoxide.

(Testimony of Blair Burwell.)

Then the mode of delivery is provided by letter-agreement dated December 1, 1942, wherein Mr. Van Fleet writes to Mr. Keller of the Anaconda Copper Company and says (reading):

"Dear Sir:

"We desire to confirm the arrangement made with your Mr. F. O. Case, as follows:

"The agreement between us dated the 15th day of May, 1940, relating to the sale by you and the purchase by us of vanadium pentoxide in the form of red cake precipitate, is hereby amended by striking out the first sentence of paragraph captioned 'Quantity,' and by substituting for said sentence the following words: 'the entire production of said material of seller's plant at Anaconda, Montana, for a period of six years beginning January 1, 1941, and ending December 31, 1946.'"

Q. (By Mr. Alioto): Now then, the vanadium oxide, or the red cake produced [605] by the Anaconda Copper Company was produced as a by-product, was it not, of their phosphates for fertilizer? A. That's right.

Q. Who was it in your company that requested you to get that production into Union Carbide?

Mr. Archer: I object to the question, your Honor. I think the contract shows it was signed by Mr. Van Fleet, not by Mr. Burwell.

Mr. Alioto: He negotiated it. He already testified to that.

Mr. Archer: I think he has testified that he had

(Testimony of Blair Burwell.)

a metallurgical discussion with respect to the process, not that he negotiated the contract.

The Court: I think your exhibit speaks for itself. It shows what the contract was.

Mr. Alioto: Well, all right, if your Honor please.

Q. (By Mr. Alioto): Now, further, Mr. Burwell,——

I was going on to another subject of Mr. Archer's cross-examination, the last one, if your Honor please, and will conclude shortly.

The Court: We will take a short recess.

(Short recess.) [606]

Q. (By Mr. Alioto): Mr. Burwell, yesterday you were interrogated by Mr. Archer on a telegram relating to Durango. It reads as follows:

This is Exhibit 37. It is pretty short; your telegram to Mr. Haldane in 1944:

"Brock Advises That Brinker With Sitton and Other Promoters Are Reported to Be Planning to Take the Durango Plant in Case We Do Not Recapture It. Stop This is Rumor Only But Suggest you advise Mr. Rafferty Regards Blair Burwell."

Now, Brinker and Sitton were well known producers in that area, were they not?

A. Yes, of good reputation.

Q. Very substantial producers?

A. That is right.

Q. Men of means who knew the Colorado Plateau and had had a lot of experience on the Colorado Plateau? A. That is right.

Q. You did not regard them as promoters in

(Testimony of Blair Burwell.)

the code sense of the word in which you used it?

A. Of course not.

Q. You did not regard Continental Ore and Mr. Leir in the code sense of promoters, did you?

A. No.

Q. Mr. Archer interrogated you about the [607] economics of the Plateau with respect to whether you needed a big plant or little plant, and I believe you said that it was the character of the ore rather than the size of the plant that determined the economics of a feasible operation on the Plateau, is that right?

A. That was the main controlling factors. The plant also had something to do with it, but that was one of the main factors.

Q. I want specifically to call your attention to the Gateway area, where there was a mill operated by Nisley and Wilson, as the record already shows, and from which Mr. Leir was obtaining part of his supplies. What was the nature of the ore body that was directly tributary to the Gateway mill of Nisley and Wilson?

A. There were probably, I would say, 800 or a thousand ore bodies tributary to the Nisley-Wilson mill insofar as we would call it ore body. I am talking as a mining engineer. They occurred on these high mesas on each side, and the ore bodies outcropped on the edges of the mesa, and on the top of the mesa was high country. The ore bodies eventually were found to continue underneath the higher cover, and so there are hundreds and hun-

(Testimony of Blair Burwell.)

dreds of separate ore bodies that run in one side here and came out four miles away on the other side, and accurately there are a thousand ore bodies, all of which become important, so that a good deal—it is this way, [608] Mr. Alioto—the ore bodies that were immediately accessible on the edges of the hill, like this, were the key to the ore bodies that lay further within. So, precisely, there were thousands of ore bodies.

Q. When you say as a matter of opinion, and in view of your experience on the Colorado Plateau, that, say, a 20-ton a day mill capacity, a mill of 20-tons-a-day capacity was a good, feasible operation in the light of the ore bodies as they existed, particularly prior to the time that you got at the Gateway mines?

Mr. Archer: I object to the question as leading, prior to the time that they got it. Nisley and Wilson did not operate until they finished mining.

Mr. Alioto: That is not true.

The Court: Let the witness testify. Ask him the question directly.

Q. (By Mr. Alioto): What is your opinion as an expert on the Colorado Plateau as to the economic feasibility of the operation of a 20-ton-a-day mill at Gateway in light of the ore bodies existing in that area?

A. If you had three per cent vanadium ore and it was less than one-half per cent lime, you could run a 10 to 20 ton mill, and knew your business and knew how to do it—you could maintain a 10

(Testimony of Blair Burwell.)

to 20 ton mill a day and make money. If you had 1½% vanadium ore and it was 3% lime, you could not run a 20 ton mill. [609]

Now, there was both 3% ore, 2% ore, 1% ore and a half per cent ore available in thousands of their ore bodies around that area.

Q. (By the Court): The size of the mill depended upon the character of the ore?

A. The character of the ore.

Q. (By Mr. Alioto): Was there a sufficient quantity of ore in the Gateway area that would have permitted a feasible and economic operation of that mill?

Mr. Holland: At what time, Mr. Alioto?

Mr. Alioto: 1941.

The Witness: As of 1941, as of the period that you are asking me about, and directly concerned with the ownership of lands that existed at that time, I appraised the ore reserves of the Gateway area for the Department of Justice in the Ute Indian land case, and I determined and so reported as a settlement of that multimillion dollar case there was a hundred and sixty some odd thousand tons of ore containing five million, nine hundred and some thousand pounds of vanadium oxide in this portion immediately tributary to the Gateway Alloys Mill. That was this period of time, because the Ute Indian land case involved the ownership at this particular time.

Q. Now, you testified prior to this time that under a leasing arrangement with Gateway Alloys,

(Testimony of Blair Burwell.)

your company removed certain ore from this particular area, is that correct? [610]

A. I think that is correct.

Q. Do you recall the approximate quantity of ore that you removed from that particular area?

A. I think I already testified to that, Mr. Alioto.

Q. Do you recall the general nature of that ore? Was it a good, high-grade ore?

A. It was the highest-grade ore we could get our hands on.

Q. Was it easily accessible?

A. It was laying on top of the ground.

Q. On the assumption that the United States Vanadium Corporation had not taken that ore out during that period of time, what is your opinion as to whether or not that mill with that ore in place would have been an economical and feasible operation?

A. Of course, it surely could because you can read it here in regard to the reports, that after we took this ore away and moved it to Uravan that there was not 20 tons of ore a day available until more ore was found at a higher expense. Therefore, the first outcrop of easy ore had been removed. It is like you eat the first layer of grass in a pasture. You have to grow more grass.

Q. What was the economic effect of removing that first and easily accessible ore from this Gateway area so far as the Gateway mill was concerned?

A. I testified to that. [611]

Q. All right. The record will speak for itself.

(Testimony of Blair Burwell.)

Finally, Mr. Burwell—and I know you have been on a long time and I am happy to say finally, as I am sure you are and so is everybody else—you were interrogated at some length by Mr. Holland, and I think I'm using his exact words here, as to whether you always considered you were a bit a competitor of V.C.A. so far as you were concerned, and I think you said that you did. Did you consider them a bit of a competitor in 1933 when you sold them vanadium oxide and bailed them out of their Peruvian default and deficiencies?

Mr. Holland: I presume, since that is prior to 1938, counsel is trying to open the whole picture again.

The Court: Sustained.

Mr. Alioto: Counsel's question was always. He didn't limit it to 1938. He said "always."

Mr. Holland: When I said "always," I naturally meant within the limits of this case, Mr. Alioto.

Mr. Alioto: That is not what "always" means to me.

If that is the understanding of it, that raises a little different question.

The Court: This case may continue always, but I do not want it to.

Mr. Holland: You wouldn't trip me up on one word, would you?

Q. (By Mr. Alioto): Finally, counsel interrogated you [612] at some length about a situation with respect to a plant at Naturita being closed

(Testimony of Blair Burwell.)

from 1932 to 1938. Would you state the reasons why that plant was closed from 1933 to 1938?

Mr. Archer: I object to that.

The Court: Sustained.

Mr. Alioto: I simply wanted to make a record, if your Honor please.

Q. At the time you left the Union Carbide organization, Mr. Burwell, did they offer you some kind of a consulting contract with certain provisions? A. They did.

Mr. Archer: I object to this, your Honor.

The Court: How is that material?

Mr. Alioto: Because one of the provisions of the contract was that they would give him this consulting position with reimbursement if he promised not to say anything, and I think that is material.

The Court: That is an improper statement to make in the presence of the jury and you should not make that statement. If you want to ask a question, you may ask him a question.

Mr. Alioto: I have the contract itself.

The Court: Let the contract speak for itself. I do not see how that is material.

Mr. Alioto: February 2, 1948, if your Honor please, and we already had a good deal of testimony concerning that period. [613] This complaint is up to July 15, 1949.

Q. I will show you, Mr. Burwell, a copy of a contract executed by W. E. Remmers, Executive Vice-President, United States Vanadium Corpora-

(Testimony of Blair Burwell.)

tion, but not executed by you, under date of February 2, 1948, marked "Personal and Confidential."

Would you be good enough to look at that contract and see if that is a document submitted to you by the Union Carbide Company or one of its affiliates?

A. That is correct.

Mr. Alioto: We will offer it into evidence, if your Honor please. First, we will ask that it be marked for identification.

(Whereupon, the contract referred to was thereupon marked Plaintiff's Exhibit 65 for identification.)

Q. (By the Court): What is the date?

A. 1948.

Mr. Alioto: February, 1948.

The Court: That is after you left the company?

Mr. Holland: You are offering it in evidence only against Union Carbide.

The Witness: Just as I left the company.

Mr. Archer: Have you offered it yet?

Mr. Alioto: No, we are going to have it marked, first, so that we can identify it in this record.

This document has now been identified as [614] Plaintiff's Exhibit 65 for identification. At this time, if your Honor please, we make an offer that it be introduced in the record in this case as evidence on behalf of the plaintiff.

Mr. Archer: I object on the ground it is incompetent, irrelevant and immaterial. The witness has testified he resigned on December 11, 1947,

(Testimony of Blair Burwell.)

which was prior to the date of this. The document shows it was not executed, and if your Honor recalls my examination of Mr. Burwell, I carefully avoided the reasons for his leaving the company and I do not think they are relevant to this case, and if we go into that I do not think Mr. Burwell will like it, I do not think I will like it, and I do not think anybody else will like it.

Mr. Alioto: I do not think counsel should make that statement.

The Court: Objection sustained. Exception allowed.

Q. (By Mr. Alioto): There is just one more question. I anticipate there may be an objection on this, but I would just like to make the record on it.

Mr. Holland: Do you invite us to object?

Mr. Alioto: I do not have to invite you folks to object. You do it spontaneously.

Q. I hand you a series of documents, Mr. Burwell. Would you be good enough to state whether these documents that have previously been offered in evidence and rejected are part of the documents that Mr. Van Fleet handed you that he had taken [615] from the files of the Union Carbide Company? A. Yes.

Q. And he handed you these sometime in 1947 or 1948? A. That is right.

Mr. Alioto: I understand, if your Honor please, that there is some question about the identification number of these exhibits at the moment. So there

(Testimony of Blair Burwell.)

won't be any question as to what we are talking about on the record, these documents are as follows:

A letter from Mr. Van Fleet to Mr. Burwell, dated June 6, 1934, subject, "Paradox Estimates."

(The document referred to was thereupon marked for identification as Plaintiff's Exhibit 67-A.)

A letter of July 26, 1934, from Mr. Blair Burwell, the witness, to Mr. Van Fleet, called "Comparative Estimate on Cost of Erecting and Operating Plants at Uravan and the Site of the V.C.A."

(The document referred to above was thereupon marked for identification as Plaintiff's Exhibit 67-B.)

A document dated July 23, 1934, from Mr. Priestley to Mr. Gormely, copy to Mr. Haggerson and Mr. Price.

(The document referred to above was thereupon marked for identification as Plaintiff's Exhibit 67-C.)

A document dated July 23, 1934, a copy of the same one.

(Whereupon, a copy of the letter dated July 23, 1934, referred to above, was marked for identification as Plaintiff's Exhibit 67-D.)

A document dated August 10, 1934, entitled "Vanadium Situation." It is written by Mr. Van Fleet to Mr. Haggerson.

(The document referred to above was thereupon marked for identification as Plaintiff's Exhibit 67-E.)

(Testimony of Blair Burwell.)

A copy of the first document. One of them has certain initials on them.

A document dated April 5, 1934 to Mr. F. P. Gormely.

(The document referred to above was thereupon marked for identification as Plaintiff's Exhibit 67-F.)

When we get that identification number straightened out, I would like the record to show the specific identification number of the documents as they have previously been offered.

(The Clerk marked the above exhibits Plaintiff's Exhibit 67 for identification and they were given the sub-letters by the Reporter subsequently.)

Mr. Holland: These are being offered only against Carbide, is that correct?

Mr. Archer: I object, your Honor.

The Court: Are you offering them in evidence?

Mr. Alioto: I will offer them in evidence at this point, your Honor, again in connection with the answer of the witness that these are documents handed to him in 1947.

The Court: Objection sustained.

Mr. Alioto: We have no further questions at this time, if your Honor please. [617]

Mr. Archer: Your Honor, two subjects came up, either through the examination of Mr. Holland or Mr. Alioto that I did not go into on my cross-examination.

One was this request from the plaintiff, Conti-

(Testimony of Blair Burwell.)

nental Ore, to purchase in 1943, in November, 1943, and the other was this Atomic Energy Program. I won't waste any time on that, but the first question:

Recross-Examination

Q. (By Mr. Archer): In 1943, Mr. Burwell, I believe you have testified that, in November, 1943, you had a substantial quantity of vanadium oxide on hand and that you were terminating the Government program, is that correct?

A. That is correct.

Q. By terminating the Government program, you mean the Metals Reserve Company program?

A. Yes, not our own operation.

Q. You do not mean that you were terminating the sludge contracts with them in that district, do you? A. No.

Q. They had just started between May and November, 1943?

A. Yes. We called that the Secret Contract Account.

Q. So that operation was just beginning in November, 1943? A. That is right.

Q. And your special secret contract to acquire all the [618] vanadium and uranium-bearing resources had just commenced operation in the early part of 1943, hadn't they?

A. Well, that is a matter of record, Mr. Archer.

Q. That is right.

In Plaintiff's Exhibit 3 in evidence—first, Plain-

(Testimony of Blair Burwell.)

tiff's Exhibit 1 in evidence—it shows the United States Vanadium Corporation produced in 1943 a total of 3,059,000 pounds of vanadium oxide. It also shows that in 1943——

Q. (By the Court): Just a moment. What is vanadium oxide?

A. It continually gets mixed up in this conversation, and I am getting confused, but I will tell you how I view it.

There is no such thing as pure vanadium oxide. We have red cake, which is a sodium-vanadium-oxygen combination. We have fused oxide, which is a fused product of the red cake. We do not have vanadium oxide. I mean, that is technically incorrect; so if you do not want to confuse me, you can speak of red cake or fused vanadium oxide and then I can answer.

Q. The exhibit that shows 1943, 3,059,000 pounds of fused vanadium oxide. Now, that is the product from which ferro-vanadium is made, is it not, Mr. Burwell? A. That is correct.

Q. Plaintiff's Exhibit 3 shows that Union Carbide sold, in 1943, 1,500,000 pounds of ferro-vanadium. A. In 1943. [619]

Q. In 1943. So using your rough kitchen economics or kitchen mathematics that you referred to yesterday, you would divide the vanadium oxide by two to see whether you produced enough vanadium oxide in that year to meet your ferro-vanadium requirements, didn't you?

A. Roughly.

(Testimony of Blair Burwell.)

Q. And when you divide 3,059,000 by two, you get roughly a million and a half?

A. A million—three million and a half.

Q. 3,059,000 really?

A. Over a million and a half pounds. Are you referring to that exhibit?

Q. Yes, here are the exhibits.

A. Let me see our own exhibit.

Q. These are the plaintiff's exhibits.

Mr. Alioto: Just a moment. They are answers supplied by the Union Carbide.

Mr. Archer: You will put them in evidence.

Mr. Alioto: There is no question about that, but they are answers supplied by you folks.

The Witness: Are you talking about 1943?

Mr. Archer: 1943.

The Witness: That is right.

Q. So you produced in 1943——

A. That is right. [620]

Q. You sold more ferro-vanadium in 1943 than you produced vanadium pentoxide, fused black oxide to meet your requirements?

A. But the sales of ferro-vanadium, Mr. Archer——

Q. Is that true or false?

A No, that is not true.

Q. You mean these figures are wrong?

A. They don't cover—if you are trying to impeach my testimony——

Q. No, I am just trying to refresh your recollection.

(Testimony of Blair Burwell.)

Mr. Alioto: Mr. Archer has cut-off the witness three times in the last thirty seconds, your Honor.

The Court: Just a minute. I think it is proper cross-examination.

Mr. Alioto: To cut-off a witness? All right, if your Honor please.

The Court: Go ahead, Mr. Witness.

The Witness: Let us take 1943——

The Court: Just a minute. Let us get down to the earth where the jury and the Court can understand it.

Q. You produced this much—what was the name of that?

Mr. Archer: Fused vanadium oxide.

Q. Something, about three and a half million?

A. That is right.

Q. And you produced vanadium how much?

Mr. Archer: Well, it is sales, actually, of [621] ferro-vanadium of 1,500,000.

The Witness: That is correct, approximately three million pounds. If you take the direct relationship, and if you consider that that vanadium oxide went directly into sales directly at that time, but usually there is a lag of six months, so the production of 1942 goes into the sales of 1943, and it takes approximately anywhere from three to six months to reconcile the sales of ferro-vanadium with the production of ferro-vanadium because there is always three to six months' lag between the year's production of vanadium in the mines and

(Testimony of Blair Burwell.)

the production of vanadium or the sales of ferro-vanadium.

Therefore, what I said at the end of 1943 is entirely correct. At the end of 1943, we had a surplus of vanadium at that particular time. If you go to the next year, 1944, and look at your same figures——

Q. All right. In 1944 the production of fused vanadium oxide, including Durango, is two million two? A. That is right.

Q. Sales of ferro-vanadium, 932,000, just under one-half the production, isn't it?

A. Well, you are reading from another sheet. "Union Carbide and Carbon Corporation, Total Tonnage of All Varieties of Vanadium Sold in the United States, Ferro-Vanadium, Vanadium Oxide." In 1943 there was 1,932,000 pounds of ferro-vanadium sold, and that is correct—if this is correct. I can't identify the sheet. [622]

Q. These are in evidence, subject to correction, whatever the figures show. It shows that you were selling just in ferro-vanadium just about all the vanadium, fused black oxide that you were producing, doesn't it?

A. On account of the lag of production, I can't testify as to your figures, because you have two separate figures. In 1943——

Q. Let me say this, Mr. Burwell, I will have these figures checked. I have the inventory figures here. I will have it checked and if there is any

(Testimony of Blair Burwell.)

change, I will correct it for the record; is that satisfactory?

A. I can't on the spur of the moment, on the stand here, check technical figures. I am sure the figures of production are correct.

Q. Speaking of November, 1943, when you stated you had fused vanadium oxide, you were not the only—when you speak of "you," you mean Union Carbide had fused vanadium oxide on hand?

A. Well, Electro Metallurgical Company.

Q. Yes. I mean the conglomerate group.

A. Yes. Well, what stocks they had accumulated. The ferro-vanadium might have gone back over prior years. They may have been selling ferro-vanadium that went back three years, four years. I have known ferro-vanadium, ferro-silicon and [623] other vanadium that went for years unsold in the warehouses before they finally sell it. These things don't relate—ferro-vanadium don't relate to the production of fused oxide that particular year.

Q. In November, 1943, Metals Reserve Company had a lot of fused vanadium oxide, too, didn't they?

A. I don't know what the Metals Reserve figures are. All I know is at the time I testified we had so much vanadium on hand that we were writing those terminal checks to our miners because we couldn't produce any more vanadium. That is my testimony, and I still stay with it. On figures of production, when you get into technical questions of statistics and ask me to give you an answer,

(Testimony of Blair Burwell.)

I will be glad to do that, Mr. Archer, but then let us get some time to study it. [624]

Q. (By Mr. Archer): I am referring to November 30, 1943. You remember the exhibit we produced yesterday, which was Defendant U's Exhibit R, I believe, which is the November 30, 1943, report for Metals Reserve showing the production from Nisley & Wilson's Gateway vanadium mill for Metals Reserve, showing a total of 69,280 pounds of vanadium oxide sacked as of November 30, 1943, is that not correct?

A. That's correct. Now, are you asking me if that amount of pack was in the hands of Metals Reserve at that time?

Q. Well, it was either on hand or going to Metals Reserve.

A. Not necessarily, Mr. Archer. This is the year it—it might have been shipped—it might have been used three, four, five months before.

Q. You don't know where it went?

A. Well, this is the total year's production.

Q. Up to November 30.

A. And you can't take November 30th and take the whole year and 11 months behind that and say this is what they have got on hand at that time. This is what is produced in 11 months. And during that 11 months maybe all of that, or two-thirds of that, or 25 percent of it, had been shipped out. Maybe it was in steel by this time.

Q. Do you know where it went?

A. Of course not, I don't know where those

(Testimony of Blair Burwell.)

things went. [625] I wasn't responsible for that kind of a figure.

Q. Now,——

A. I sure know what I had on hand at that time.

Q. Now, you testified, did you not, that you had heard that Union did not want to sell vanadium to Mr. Leir because they wanted to keep him out of the vanadium business?

A. That's right.

Q. Now, who told you this, Mr. Burwell?

A. Oh, I heard that from Mr. Van Fleet, I heard that from—I heard that in a dozen conferences. I don't recall exactly which one — in the building, 30 East 42nd Street, New York City.

Q. Sort of a rumor?

A. It was my business to be in those meetings. They weren't formal meetings. I heard it from Mr. Van Fleet, I heard the reference to Mr. Leir—I had never met Mr. Leir—I knew nothing of his business excepting it came up second-handed—I heard from Mr. Jacobi.

Q. (By the Court): Did any of these corporations, now, that you were connected with, make an order, a formal order on policy to that effect, that you know of?

A. No, your Honor. No smart lawyer would let a corporation make a formal order in writing of that kind of thing. One of our instructions was never to write anything down like that. [626]

Q. (By Mr. Archer): Mr. Burwell, you were

(Testimony of Blair Burwell.)

familiar with the fact, were you not, that Metals Reserve Company, United States Vanadium Corporation, acting as agent for Metals Reserve Company, had been selling vanadium oxide to the plaintiff in this action for as much as one year prior to November, 1943?

A. You're telling me. I don't know about it.

Q. Didn't you know that?

A. No, I didn't.

Q. Who was Mr. Moynihan? A. Who?

Q. C. J. Moynihan, Jr.

A. I don't know. There's a Monahan who was one of our clerks.

Q. In the accounting division?

A. Could have been.

Q. Who was W. M. Smart?

A. Oh, Bill Smart was in the accounting department.

Q. W. G. Haldane?

A. Already identified.

Q. J. V. Hynes? A. Another accountant.

Q. T. W. Brock?

A. Superintendent at Durango. [627]

Q. I show you, Mr. Burwell, a letter dated November 14, 1942, United States Vanadium Corporation, C. J. Moynihan, Jr., to Mr. Smart, Mr. Haldane, and Mr. Hynes, to which is attached a copy of a letter dated November 14, 1942, from T. W. Brock to Continental Ore Company, to which is attached a telegram from J. Temple Bridgman,

(Testimony of Blair Burwell.)

Executive Vice President, Metals Reserve Company, to United States Vanadium Corporation.

Mr. Alioto: May I see it?

Mr. Archer: I will show it to you.

Q. (By Mr. Archer): Can you identify those signatures?

Mr. Alioto: We will agree to it. We won't have to waste time on that.

This is a government allocation?

Mr. Archer: Certainly; War Production Board allocated all of it.

Mr. Alioto: Not for private sales.

Mr. Archer: Offer it as the next exhibit in order, the letter just referred to.

Mr. Alioto: We have no objection to that spot sale.

The Clerk: Defendant Union Exhibit 2-G admitted and filed in evidence.

(The letter referred to was thereupon marked Defendant U Exhibit 2-G in evidence.)

Mr. Archer: This is a telegram from G. Temple Bridgman, Executive Vice President, Metals Reserve Company, to United States Vanadium Corporation (reading):

"War Production Board Has Allocated Four Thousand Pounds V2O5 contained in concentrates to Continental Ore Company New York. Accordinly You Are Requested to Arrange for Shipment of Sufficient Concentrates to Fill Such Allocation at the Price of $1.10 Per Pound Contained V2O5

(Testimony of Blair Burwell.)

Delivered FOB Railroad Car Continental Ore Company Plant Upon Payment by Certified Checks Payable to United States Vanadium Corporation Agent for Metals Reserve Company. Your Weights Sampling and Analysis to Be Final and Basis of Settlement.

"G. Temple Bridgman."

Mr. Alioto: Can you fix the date of that communication, Mr. Archer?

Mr. Archer: It has no date on it.

Mr. Alioto: Can't you fix it by reference to the letter?

Mr. Archer: November, '42, I am sure.

Mr. Alioto: '42?

Mr. Archer: '42.

Letter, November 14, 1942, T. W. Brock, Superintendent, to the Continental Ore Company (reading): [629]

"Gentlemen:

"We are enclosing a copy of a telegram just received from Mr. G. Temple Bridgman, Executive Vice President, Metals Reserve Company, Washington, D. C.

"This is to advise you that we have ready for shipment 4,509.5 net pounds of 88.7 percent V_2O_5 vanadium concentrates containing 4,000 pounds V_2O_5, and are awaiting receipt of your certified check in the amount of $4,400 for its release.

"Yours very truly,

"T. W. Brock

"Superintendent."

(Testimony of Blair Burwell.)

Letter from C. J. Moynihan, Jr., of the Government Projects Acting Control Division, November 14, 1942 (reading):

"Dear Mr. Smart:

"We are enclosing a copy of a telegram just received from Mr. G. Temple Bridgman, as well as a copy of a letter to Continental Ore Company in connection with this wire.

"As our present average cost of fused product at this location is $1.48 per pound V_2O_5, we shall appreciate advice from you as to how the amount above the $1.10 authorized by the wire is to be handled.

"In this instance it will amount to .38 per pound [630] V_2O_5 plus the freight to New York, New York.

"Your very truly."

Q. (By Mr. Archer): Mr. Burwell, I hand you a copy of a letter——

Mr. Alioto: May I see it?

Mr. Archer: It is from Mr. Leir to the United States Vanadium Corporation.

Mr. Alioto: No objection.

Mr. Archer: Dated December 31, 1942.

Offer this as defendants' exhibit next in order.

The Clerk: Defendant U's Exhibit 2-H admitted and filed in evidence.

(The letter referred to was thereupon marked Defendant U Exhibit 2-H in evidence.)

(Testimony of Blair Burwell.)

Mr. Alioto: Are you going to read that, Mr. Archer?

Mr. Archer: Yes.

The letter is dated December 31, 1942, from Continental Ore Company, Henry J. Leir, to U. S. Vanadium Corp., Agent, Metals Reserve Company, Durango, Colorado, Attention Mr. T. W. Brock, Superintendent (reading):

"Gentlemen:

"Re: Vanadium Concentrates.

"We wish to refer to your shipments to us of the above material, and should like to draw your attention to the weights of these shipments. [631]

"We found in the two shipments the following shortages:

"First shipment of 27 sacks: Your net weight, 4,561 pounds; our net weight 4,542 pounds; shortage 19 pounds.

"Second shipment, 48 sacks: Your net weight 8,141.40 pounds; our net weight 8,053 pounds; shortage 88.40 pounds.

"So that the total shortage on these two shipments is 107.40 pounds.

"We should very much appreciate your checking the weights on future shipments carefully, in order to avoid such shortages.

"Thank you for your cooperation.

"Continental Ore Company,

"Henry J. Leir."

Q. (By Mr. Archer): Now, Mr. Burwell, in November of 1943, when you heard that the Union

(Testimony of Blair Burwell.)

Carbide had refused to sell vanadium to Mr. Leir, did anyone tell you that Electro Met Sales Corporation had sold vanadium oxide to Mr. Leir in the spring of 1943? A. Nobody did.

Q. You weren't familiar at all with the Electro Met Sales Organization, were you?

A. I wouldn't say so. [632]

Q. Well, where were the offices of Electro Met Sales? A. 30 East 42nd Street.

Q. Where were their district offices?

A. One at Pittsburgh,——

Q. Who were——

A. ——one in San Francisco. They had one—they had a number in New York.

Q. Who ran the San Francisco office?

A. Oh, I don't recall who ran it. It's a matter of record, Mr. Archer.

Q. But you did hear this story—you do remember hearing the story about refusing to sell vanadium oxide to the plaintiffs, I take it.

A. Oh, yes, I heard that.

Q. You are sure of that.

When was the last time you heard that story—the last time?

A. The last time?

Q. The last time.

A. Well, I left the corporation in '47, and obviously I wouldn't have heard it after that time.

Q. Well, did you hear it before that time, between '43 and that time?

A. I think I testified I did.

(Testimony of Blair Burwell.)

Q. Did anybody tell you that in December of 1946 the [633] Electro Metallurgical Sales Corporation had entered into a contract to sell Mr. Leir all his domestic manufacturing requirements of vanadium oxide?

A. What date are you talking about, Mr. Archer?

Q. December of 1946.

A. December of '46?

Q. Yes. A. No.

Q. This was before you left the company?

A. No.

Q. I show you a contract and ask you if you can identify the signatures on that contract.

Mr. Alioto: You don't have to waste time with signatures, Mr. Archer. Just let me see it.

Mr. Archer: Offer it as defendants' exhibit next in order.

Mr. Alioto: We have no objection to this document.

Mr. Archer: Offer this as defendants' exhibit next in order, a contract dated December 10, 1946, between Electro Metallurgical Sales Corporation and the Continental—it is a contract between Electro Metallurgical Sales Corporation and the plaintiff, Continental Ore Company, signed by Henry J. Leir and Herbert M. Rich, in which Electro Metallurgical Sales Corporation agrees to sell and Continental Ore Company of New York, New York, agrees to buy "buyer's domestic [634] manufacturing requirements of vanadium oxide (fused)."

(Testimony of Blair Burwell.)

The Clerk: Defendant Union's Exhibit 2-1 [634] admitted and filed in evidence.

(The contract referred to was thereupon marked Defendant U Exhibit 2-I in evidence.)

[See Book of Exhibits.]

Q. (By Mr. Archer): Mr. Burwell, is it still your testimony that it was the policy of Electro Metallurgical not to sell vanadium oxide to the plaintiff in this case?

A. At the time I spoke to you I testified it was the policy as I heard it.

Q. You mean in November, 1943?

A. That is right.

Q. And that only, only that one month can you testify to? A. I said at that time.

Q. That's right.

Now, Mr. Burwell, you have testified in regard to the dispute you had, apparently, with some of the people in the uranium industry and with Mr. Gustafson of the Atomic Energy Commission as to the proper way of developing the atomic resources.

A. It wasn't a dispute with Mr. Gustafson personally.

Q. No. But you disagreed with his policy?

A. I disagreed with the policy that was announced by Mr. Gustafson who spoke, I presume, for the Atomic Energy Commission. [635]

Q. Now, at that time wasn't the dispute this question, Mr. Burwell: simply whether the Atomic Energy Commission was going to exploit foreign uranium resources, keeping the United States ura-

(Testimony of Blair Burwell.)

nium resources in this country for future needs, or whether they were going to allow the Colorado Plateau to be exploited?

A. It wasn't so announced in their—no, to answer your question, it was not.

Q. Now, my second question, Mr. Burwell: You have referred to this advisory committee to the Division of Raw Materials which was headed by Mr. Gustafson—— A. No.

Q. Isn't that right? A. No.

Q. It wasn't headed by him, but of which he was a member? A. Go ahead.

Q. Now, wasn't the advisory committee members Donald McLaughlin of the Homestake Mining Company—he was one member? A. I testified.

Q. That's right. G. Temple Bridgman, whom we already talked about, and who was head of the Metals Reserve Company, was another member, isn't that right?

A. Well, I testified, as I recall, two or three. [636] It is certainly a matter of record, Mr. Archer. You can refer to the record.

Q. Well, Everett de Gaullier of the McNaughton Company in Dallas?

A. Yes, I believe he was on it.

Q. And Antone Gray of Endicott Copper Company? A. He was on it.

Q. Wilbur Judson of the Texas Gulf Sulphur Company? A. I don't recall.

Q. Robert McConnell of the McConnell Foundation? A. I don't recall.

(Testimony of Blair Burwell.)

Q. Fred Searles, Jr., of the Newmont Mining Company? A. I do recall.

Q. Clyde Williams, of the Bethel Memorial Institute? A. I don't recall his name.

Q. Now, do you know whether these people agreed with Mr. Gustafson's policy or not?

A. I wouldn't know. All I know is the policy that Mr. Gustafson announced.

Q. Referring to your testimony this morning and the red cake, the intermediate vanadium oxide which you procured from the Anaconda Copper Company, was the man you talked to at Anaconda F. O. Case? A. Who?

Q. F. O. Case—C-a-s-e? [637]

A. No.

Q. You said——

A. I did talk to Mr. Case in New York in other conferences. I imagine altogether I was in 20 or 30 conferences at various times, Mr. Archer, in regard to the purchase of this material. Mr. Case —I was in a meeting with Mr. Case in New York. I recall it now that you brought it up.

Q. Do you recall whether the Anaconda Copper Company first approached you for the sale of this product, or whether you first went to them?

A. I don't recall the manner of approach, no.

Q. As a matter of fact, when you got this red cake from the Anaconda Copper Company you used it, didn't you? A. We fused it.

Q. You fused it in the Rifle plant, is that right?

A. That's right. We didn't necessarily use it.

(Testimony of Blair Burwell.)

Q. What was done with it? Is it still there?

A. Well, this started—what was the date of the Anaconda contact?

Q. The contract is May of 1940, I believe, and the first shipment, according to the exhibit, was in 1941. The Rifle plant, you recall, opened in '41.

A. All right (examining document).

Mr. Alioto: If your Honor please, I don't know —may this chart go into evidence that he is looking at? [638]

Mr. Archer: I don't think it is—I don't know anything more about it than you do.

Mr. Alioto: Well, I am just wondering whether it shouldn't go into evidence; if it is a U. S. Vanadium Corporation document and he is looking at it, I think it should go into evidence.

The Witness: I have been troubled by some of these statistics that you have been throwing at me, and here's some of the answers, if you will be patient when examining.

In 1940 we had the difference between 1,000,000 pounds of V_2O_5, 500 pounds of V. that was sold by Electro Metallurgical Company, and 2,400,000 pounds, approximately, that we had either produced or purchased from Anaconda, or—in other words, we had accumulated in that year, as well as the other two years, close to 4,000,000 pounds of vanadium oxide that wasn't sold, or wasn't used. and the vanadium oxide that was purchased in 1940 would undoubtedly be included in our surplus stocks, and there is an unsold surplus of V_2O_5 pro-

(Testimony of Blair Burwell.)

duced in oxide, over the vanadium that was sold in ferro-vanadium and accumulated over '38, '39, and '40, of over double our production, and here's the statistics.

Q. (By Mr. Archer): Then it was——

A. This is prepared by——

Q. Then it was sold in '41 and '42, wasn't it?

A. It was sold when the war came along.

Q. Well, haven't you already testified, Mr. Burwell, it was your practice to produce vanadium oxide in one year and carry it over and put it into ferro-vanadium the next year and sell it?

A. It happened that way. It wasn't our liking to do it, because always when we produced vanadium in excess of our sales we had a problem on our bankers and our accountants, who worried as to whether to lay crews off——

Q. Did you like it in 1943?

A. We never liked it.

Q. All right. Now, Mr. Burwell, I have only one more question. A. Good.

Q. You and I both know who the other promoters were, don't we? A. Yes, I think so.

Q. Do you know whether or not they had any connection with the Continental Ore Company?

A. Oh, no, no.

Mr. Archer: I have no further questions.

Further Redirect Examination

Q. (By Mr. Alioto): One other thing: The fact of the matter is that you did close down your

(Testimony of Blair Burwell.)

Uravan plant in the beginning of 1944, didn't you?

A. That's right. [640]

Q. And you laid off those miners?

A. Due to surplus vanadium, yes, sir. We had a warehouse full of vanadium.

Q. You were looking at a document there. Identify that document for us, would you, please? Where did it come from?

A. This is a graph—this was prepared under my direction by one of our engineers, Mr. Charles Yetter, after going carefully over the Electro Met Sales, our western production, and all the figures that had to do with our sales and production of vanadium as pertained to our mines out West, and it was prepared at my direction so that we could study and know what our sales problem was to keep the mines running, and this is a document that was prepared for that purpose.

Q. (By the Court): When was it prepared?

A. This was prepared—I think the date of this, your Honor, was about 1944-46—May, 1946, by Mr. Charles W. Yetter, one of our mining engineers.

Mr. Archer: May I ask one question on voir dire?

The Court: Yes.

Q. (By Mr. Archer): Mr. Burwell, this was prepared in connection with the government case in which you were indicted, to show production at [641] that time, and it ends with the period of the government indictment, and was prepared about

(Testimony of Blair Burwell.)

the time it came out, and that was the purpose of its preparation, wasn't it? A. No.

Mr. Alioto: I will stipulate to that and offer it on that stipulation.

Mr. Archer: Well, Mr. Burwell says "No."

Mr. Alioto: I am prepared to say "Yes." I will take that stipulation and say that is a sufficient foundation for its introduction; that it was prepared by them.

We will offer it in evidence, if your Honor please.

Mr. Archer: I object, your Honor. The man who prepared it is no longer with our company. I don't know whether it is correct. All the production figures for the years '38 to '49 Mr. Alioto has from our company and our accountants, and this will add nothing; it goes far earlier than 1938.

Mr. Alioto: I will offer that portion, then, from 1938 on, so there will be no question about it.

The Court: Objection sustained. It is cumulative.

Mr. Alioto: I don't know whether it is cumulative, if your Honor please, because there are certain figures here of world production, total U. S. imports, and I submit that it puts it in rather graphic form, and would be rather helpful to the jury, if your Honor please. I would like it——

The Court: Objection sustained. [642]

Mr. Alioto: All right, if your Honor please.

The Court: Exception allowed.

Mr. Alioto: May we have it marked for identification?

(Testimony of Blair Burwell.)

The Clerk: Plaintiffs' 66 marked for identification.

(The graph referred to was thereupon marked Plaintiffs' Exhibit No. 66 for identification.)

Mr. Alioto: And may the record show that the objection was sustained to the Exhibit 66 marked for identification, if your Honor please?

We have no further questions.

The Court: Anything further?

Mr. Holland: No.

Mr. Alioto: May the witness be excused, if your Honor please?

The Court: Very well.

I don't know whether we can get along without you.

The Witness: Thank you, your Honor, for putting up with me for four days on this stand here, and I know it has been as hard on me as it has been on everybody else, and I——

The Court: Adjourn until Monday morning, ten o'clock.

(Whereupon an adjournment was taken until Monday, June 9, 1958, at 10:00 o'clock a.m.)

Monday, June 9, 1958, 10:00 o'clock a.m.

The Clerk: Continental Ore Company, et al, versus Union Carbide Company, et al, further trial.

Mr. Holland: Ready.

Mr. Alioto: Ready.

If your Honor please, I am informed that there is a bit of confusion in the record relating to certain exhibits which were offered and excluded by the Court. Those are exhibits that we believed had been marked earlier but that the identification mark had been somehow misplaced. It now appears that they were not marked, and in order that they may be now identified in the record, I would respectfully request that they be marked Plaintiff's Exhibits 67-A, B, C, D, E and F. This is a series of correspondence between the top managing officials of the United States Vanadium Company, 67-A being correspondence between Mr. Van Fleet and Mr. Burwell dated June 6, 1934——

The Court: Well, it doesn't matter—the order will be made. You will be permitted to have them identified.

Mr. Alioto: All right, if your Honor please. I would suggest, then, that these documents be marked 67-A to -F and that they be preserved in the order and that the record will reflect that these are documents that were offered last Friday in connection with the statement that there appeared to have been some question about whether or not the identification [645] number was on those documents.

(Plaintiff's Exhibits 67-A, -B, -C, -D and -F were marked for identification.)

Mr. Alioto: Now, if your Honor please, in order to complete the record with respect to the certain testimony given by the witness Burwell, we would like to offer at this time, as against United States

Vanadium Corporation, certain inter-office correspondence dated September 1, 1938, from Mr. J. R. Van Fleet to Mr. W. G. Haldane, who was the superintendent of United States Vanadium Corporation plant in Uravan, and copy of that letter was also sent to Mr. Burwell.

The Court: What is the date of the letter?

Mr. Alioto: The date of the letter is September 1, 1938. We will offer it in evidence.

The Clerk: Plaintiff's Exhibit 68 admitted and filed into evidence.

(Letter, 9/1/38, Van Fleet to Haldane, received in evidence as Plaintiff's Exhibit 68.)

[See Book of Exhibits.]

Mr. Alioto: There is a short paragraph of this letter I would like to call to the attention of the jury. First, to set the background for it, this is a letter from Mr. Van Fleet to Mr. Haldane and to Mr. Burwell dated September 1, 1938. The subject: Sludge, Vanadium. It is an airmail letter marked "Confidential". [646]

"Dear King:

"You will recall, or at least I recall talking with Blair, about the possibility of preparing a vanadium product containing silica, alumina and iron, which could be very cheaply done. I had in mind somewhere around 25c to 30c per pound for the contained V_2O_5. A vanadium product such as this could be reduced directly in the electric furnace with the proper fluxing, resulting in the desired alloy. Fused V_2O_5 can also be used with the proper additions of quartzite, alumina, et cetera, but for

the present, at least, we will not be able to use fused oxide because we cannot charge the regular price for vanadium in the alloy. It is considered that this condition will not last over a great period of time, and that we ultimately can use the fused oxide and charge the regular price for vanadium in the alloy."

Then the last paragraph reads as follows:

"Confidentially, the reason why we must use some product other than fused oxide in this alloy to start with is that we cannot sell vanadium for less than the market price, unless we can show that we do not use fused oxide and that we are using an impure by-product which cannot be used in any other way. For several years I have been trying to have the sales price of [647] vanadium considerably reduced, and this would be an entering wedge. It has always been my opinion that if we were able to reduce the sales price of vanadium, it would encourage its use.

"Very truly yours,

"J. R. Van Fleet."

We offer at this time, and we can call it to the attention of the jury and the Court later, interoffice correspondence from Mr. Kett of Vanadium Corporation of America to Mr. E. D. Bransome, its president, dated June 26, 1941, relating to a conference between Mr. Van Fleet and the writer, Mr. Kett.

Mr. Archer: Are these all V.C.A.?

Mr. Alioto: Yes.

Mr. Archer: V.C.A. exhibits?

Mr. Alioto: That's correct.

Mr. Archer: Offering them against V.C.A.?

Mr. Alioto: Yes.

Counsel has no objection and we will offer the document into evidence, if your Honor please.

The Court: Admitted.

The Clerk: Plaintiff's Exhibit 69 admitted and filed into evidence.

(Inter-office correspondence June 26, 1941, from Kett to Bransome received as Plaintiff's Exhibit 69.)

[See Book of Exhibits.]

Mr. Alioto: We offer as our next exhibit in order [648] a copy already having been exhibited to counsel, a copy of an inter-office correspondence between F. F. Kett, the general manager of the mining division of Vanadium Corporation of America, to Mr. E. D. Bransome, its president.

The Clerk: Plaintiff's Exhibit 70 admitted and filed into evidence.

(Inter-office memo 8/31/41, Kett to Bransome received in evidence as Plaintiff's Exhibit 70.)

[See Book of Exhibits.]

Mr. Alioto: The next document is dated June 13, 1940, between Mr. Robert Sterling of the Vanadium Corporation of America to Mr. Frederick F. Kett of the Vanadium Corporation of America.

The Clerk: Plaintiff's Exhibit 71 admitted and filed into evidence.

(Inter-office memo 6/13/40, Sterling to Kett, received as Plaintiff's Exhibit 71.)

[See Book of Exhibits.]

Mr. Alioto: We now offer into evidence document of the United States Vanadium Corporation. This is inter-office correspondence dated December 27, 1941, between Mr. J. E. Weston to Mr. King Haldane relating to the Lyen Ore, so-called. We will offer that into evidence.

The Clerk: Plaintiff's Exhibit 72 admitted and filed into evidence.

(Inter-office memo 12/27/41, Weston to Haldane, received as Plaintiff's Exhibit 72.)

[See Book of Exhibits.]

Mr. Alioto: Finally, we offer into evidence, if your Honor please, a document dated May 10, 1944, written by Mr. Priestley of the Union Carbide group of corporations to Mr. DuDot of the sales corporation in Pittsburgh, to Mr. Remmers, Mr. Lewis and Mr. Portmann, marked "Confidential." It is a document relating—without characterizing it, I will offer it into evidence.

Mr. Archer: What is the date of that?

Mr. Alioto: 1944.

The Clerk: Plaintiff's Exhibit 73 admitted and filed into evidence.

(Letter 5/10/44, Priestley to DuDot, Remmers, Lewis and Portmann, received in evidence and marked Plaintiff's Exhibit 73.)

[See Book of Exhibits.]

Mr. Alioto: This is a rather short letter and I

would like to read a short paragraph from it, from Mr. Priestley.

"There are several reasons for our having made this decision. We are selling ferro-tungsten and tungsten metal powder far in excess of our own supplies of tungsten ore, and to meet this demand, we are purchasing large amounts of ore from Metals Reserve. We are fearful that the trend in supplying ores with combined reducing agents will lead to direct reduction of other metals such as vanadium, columbium, and chromium. As a matter of fact, we have recently [650] refused to supply vanadium oxide and columbite with combined reducing agents on the ground that we are primarily in the ferro-alloy business and are not interested in the sale of ores, especially when we can make use of our large smelting facilities. You can readily understand that we do not want to promote any practice in steel making that would be in competition with our own ferro-alloy business, which we would be doing if we encouraged the reduction of metals from ores by steel makers.

"We may have to sacrifice some business which would go to the people who sell ore in any event, but we will not be breaking down our own business which is smelting ores into ferro-alloys. It will be our task to convince our customers that the most practical and economical way to make steel is to use ferro-alloys.

"I have written you at length on this subject so you will understand the reason for making this policy."

The letter is to Mr. Remmers—the letter is to Mr. DuDot from Mr. Priestley, marked "Confidential".

Mr. Nisley, will you be good enough to take the stand, sir? [651]

FRANK NISLEY,

called as a witness by and on behalf of the plaintiffs, having been duly sworn to tell the truth, the whole truth and nothing but the truth, testified as follows:

Direct Examination

Q. (By Mr. Alioto): Mr. Nisley, will you be good enough to state your full name for this record?

A. My name is Frank Nisley, Jr.

Q. Where do you reside, Mr. Nisley?

A. In Grand Junction, Colorado.

Q. Were you one of the partners in the company Nisley and Wilson that operated at Gateway?

A. I was.

Q. I think we have the map before you so we can fix this location again. Would you be good enough to point to the approximate location of the mill that you operated at Gateway?

A. Yes, the mill is at the junction of West Creek with the Dolores River at Gateway.

Q. Mr. Nisley, before we get down to questions relating specifically to the mill operated by you at Gateway, I want to go a little bit into your background of the vanadium industry and what ex-

(Testimony of Frank Nisley.)

perience you have had. Were you, first of all, ever connected with a vanadium mill at Rifle?

A. Yes, I was. [652]

Q. Will you be good enough to point out the approximate location on that map, if you can do it, of that vanadium mill at Rifle?

A. It is not shown on this map. The mill is about 11 miles northeast of Rifle.

Q. It would be in the area beyond the map?

A. That is right.

Q. Were you and your father engaged in some kind of operation there?

A. My father owned an interest in the Garfield Vanadium Corporation. That corporation owned a large group of claims adjoining the claims of the United States Vanadium Corporation. The company was organized about 1927, about the time the United States Vanadium Corporation began their operation there.

Q. What year was it that you did some work at the Rifle Vanadium Company mill?

A. We began in 1938. My father was very interested in trying to find a way of putting that property into operation and he had investigated all the then known milling processes, trying to find some process that could be applied to the property there.

Q. Did you personally work on some kind of process that could be applied to a small mill property?

A. I did. We found that the process that was

(Testimony of Frank Nisley.)

the most [653] commonly used in those days was known as the salt roast process. The process itself was not too complicated, the only complicated thing being the roasting requirements.

Q. Would you be good enough to tell us in non-technical language, Mr. Nisley, what this salt-roast process consisted of?

A. The salt-roast process consisted of reducing the crude ore to sand-grain size, and then mixing this product with ordinary salt, just like table salt, and roasting that material, forming a sodium vanadate. The salt broke down and the sodium and vanadium combined to form a soluble material, dropping it into water, then draining off the water. The vanadium went into solution and was later precipitated by the addition of a slight amount of sulphuric acid, and it came out in the form of the red cake that has already been introduced.

Q. Yes, we have identified the red cake in one of these bottles.

Did that process being used at the time require rather expensive equipment?

A. Most of the plants at that time were using what is known as the Skinner roaster; my father was told by the people who made it that it was not economical to use it in a plant of a size less than about 50 tons per day.

So our problem was to find some type of roaster that we could apply on a smaller scale than that.

Q. Did you do something about that problem, Mr. Nisley? A. I did.

(Testimony of Frank Nisley.)

Q. What is it you did?

A. In 1938, during the time I was in college, I spent quite a little time making a study of it, and in 1939 I dropped out of college and spent all my time in attempting to work out a roasting plant that would do this. We came across a roaster that had been used in the lead and copper industry known as a sintering hearth.

The only problem we had with that was, in the way it was being used in the industry, it was a reducing roast and we needed an oxidizing roast. It took quite a lot of experimental work to convert the roaster to one that we could use.

The sintering hearth is nothing more nor less than—it works like a coal stove with the exception that instead of drawing the air up through the grates, the air is drawn down through the grates. We built a little experimental laboratory model. It was a foot square and consisted of a metal box with grates in the bottom and a duct underneath which was hooked to an exhaust fan. The mixture of crude ore with salt, sawdust and coal was placed on the grates and the coal and sawdust burned in the ore by drawing the air down through it. The roaster was very inexpensive. It was built very cheaply.

Q. Did you in August 1939 make some connection with a mill we have already heard about in this case called the [655] Mesa Vanadium Company?

A. We did. At the time we got through with

(Testimony of Frank Nisley.)

the laboratory experiments, we decided to try to carry the experiments on on a little bigger scale, and at the time we didn't have any equipment at Rifle at all. My father was able, together with some other Grand Junction businessmen, to buy a plant that was located at Slick Rock.

Q. Will you be good enough to point out that Slick Rock location for us? We have already had some testimony about that.

A. Yes. It is right at this point where Disappointment Creek meets the Dolores River.

Q. You are showing us that portion of the map marked Slick Rock. What did you do in connection with that Slick Rock mill?

A. Well, the mill had quite a little equipment that we were going to need in our process, so we moved it down there and began to install a larger roaster unit than we had been using in the laboratory experiments. We carried this out and carried the experimental work out to where we thought it was satisfactory, and Mr. Tellum was called in by the Mesa Vanadium Company.

Q. Who was Mr. Tellum?

A. Mr. Tellum was an independent engineer residing in Denver who had had considerable experience in the vanadium [656] industry. He had been formerly employed by the Vanadium Corporation of America in Peru to try to—in the capacity of working out a method of concentrating their ores there. He was called to the plant and spent several days making an investigation of it, ending up in

(Testimony of Frank Nisley.)

a report to the company, which report said that in his opinion the process was satisfactory and he recommended the type of equipment then that should be put in, what we already had, in order to put it in operation.

Q. You then did put that in operation?

A. The Mesa Vanadium people were offered an agreement by Mr. Simpson and Mr. Claybaugh, who were contractors and experienced mill people that they would put in the necessary equipment and operate the plant for an interest in it, and this offer was accepted.

Q. After that did the United States Vanadium Corporation figure in this operation in any manner? A. They did.

Q. What happened?

A. The first product that was made there was shipped to the United States Vanadium Corporation.

Q. (By The Court): Was shipped out?

A. Yes. A few days after that a meeting was called by Mr. Claybaugh of Mesa Vanadium Company and I was asked to attend and he explained at that meeting that—— [657]

Mr. Archer: Your Honor, I think this is getting into the realm of hearsay and I object to it.

The Court: Yes.

Q. (By Mr. Alioto): Regardless of what may have been said at that meeting, Mr. Nisley, what happened after that meeting, so far as any par-

(Testimony of Frank Nisley.)

ticipation of United States Vanadium Corporation was concerned?

A. The United States Vanadium Corporation made an offer to the Mesa Vanadium Company to take over the plant. They would do some more experimental work there, and in the meantime use it for a stockpiling plant. They would pay them, I believe it was, five cents a pound royalty on all ores that were stockpiled.

Q. Did they take over the plant?

A. They did.

Q. What happened after that?

A. I never operated after that.

Q. Where did you go after that?

A. I went to Rifle. During the time I had been working at Mesa Vanadium Plant, Rifle Vanadium Corporation had installed this milling equipment there. At that time there was a market for any vanadium ore that would run in excess of five percent V_2O_5 and they were trying to mechanically concentrate the ore there. It had not proven a success, and so I went there to install the rest of the equipment along with the equipment in [658] the plant already there.

Q. In other words, you installed the type of equipment that had been used down at Mesa?

A. That is right.

Q. What happened there?

A. Well, we got into production in the spring of 1940, just prior to the Embargo Act, and we were being offered $1.35 a pound for material then.

(Testimony of Frank Nisley.)

Q. In what market?

A. Well, it was foreign market.

Q. What was the price in the local market at that time?

A. Well, about 65 to 70 cents a pound. The Embargo Act went into effect just prior to our first shipment, and so we lost our market for the product then.

Q. Then did you have some connection with a company called the Loma Vanadium Mill?

A. Yes. To tie these together, at the time we lost our market, we applied for a local market and finally found one through Mr. Balsley, who was buying for the Vitro Chemical Company. He bought our product at 70 cents a pound and so we closed the Rifle plant down because we couldn't operate at that price, and looked for another outlet for our material. It was during that search that we got in touch with Continental Ore Company.

Q. And Mr. Henry J. Leir, the president of that company? [659]

A. Mr. Leir came to Rifle.

Q. Without going into any conversations you may have had with Mr. Leir, did you make some kind of arrangement with Mr. Leir at that time?

A. He agreed to buy our product at, I believe it was, a dollar a pound for the fused vanadic oxide.

Q. Was that higher than the price on the local market at that time? A. Yes.

Q. Approximately how much higher?

(Testimony of Frank Nisley.)

A. I would say about 20 cents a pound higher.

Q. What did you do with this arrangement under Mr. Leir? Just state the facts with respect to that.

A. As I previously stated, we were closed down at the time, and Mr. William Morrison had become interested in the area around Yellow Cat, and he had decided——

Q. Can you point out on the map where the Yellow Cat area is?

A. Yes. It is in this district below Thompson, right in through here.

Q. It is in the district that is called Thompson on the map, the northernmost part of the map, is that it? A. That is right.

Q. Did you have some connection with that company?

A. Mr. Morrison—of course, at that time the ore in [660] the Yellow Cat district was being mined for the high grade—for high grade ores. There was no market for mill ores. The high grade ore was being purchased by Mr. Balsley.

Q. For Vitro?

A. For Vitro Chemical Company.

Q. Vitro was a ceramic company, is that right?

A. That is right. Mr. Morrison was mining ore there and he decided he would build a mill to furnish a market for the mill grade ores.

Q. Was the United States Vanadium Company buying——

The Court: Who was Mr. Morrison?

(Testimony of Frank Nisley.)

A. Mr. Morrison was an independent operator, your Honor.

Q. (By Mr. Alioto): Now, was the United States Vanadium Corporation buying any mill grade ore in the Yellow Cat district at that time?

A. Not at the time Mr. Morrison started his operations.

Q. Then Mr. Morrison built a mill, did he?

A. He did. He contacted Mr. Tellum in Denver and Mr. Tellum recommended to him that he use a process that we had been using at Rifle, and that he, Mr. Tellum, suggested further that he contact—

Mr. Archer: Your Honor, I object to the conversation with a man in Denver.

Q. (By Mr. Alioto): Without going into the conversation, as a result of that conversation, was there a contact [661] made between you and Mr. Morrison?

A. Mr. Morrison contacted me and asked me if we would do the experimental work on some of his ore to see if the process was amenable to treatment of this ore, which we did.

Q. Did you do that work? A. I did.

Q. And did you come to a conclusion about whether the process was feasible for that ore?

A. I did.

Q. What was that conclusion?

A. Mr. Morrison decided to install the equipment and asked me if I would go to Loma with him and help him get started.

Q. Did you install that equipment at Loma?

(Testimony of Frank Nisley.)

A. We did.

Q. At the time you installed that equipment at Loma, was the United States Vanadium Corporation buying ore in the Yellow Cat district?

A. Not at the time we started.

Q. Then did you start to produce vanadium oxide in that mill? A. We did.

Q. Did you make any arrangement with the plaintiff, the Continental Ore Company at that time?

A. Well, I had after the contact with Mr. Leir —he wrote [662] us confirming his offer and I put Mr. Morrison in contact with Mr. Leir.

Q. Was an arrangement made to sell that ore to Mr. Leir and the Continental Ore Company?

A. There was.

Q. Then what happened?

A. The plant was reducing vanadic oxide.

Q. What capacity was the plant?

A. About 10 tons a day.

Q. Ten tones of ore per day?

A. Of ore per day.

Q. Then what happened?

A. Well, in making a report to Mr. Morrison, there were some mechanical things in the mill that I felt should be changed, and I made a report telling him his recoveries could be increased considerably by certain changes.

Q. At the time of that report was United States Vanadium Corporation buying in the area?

A. The United States Vanadium had established

(Testimony of Frank Nisley.)

an ore-buying station at Thompson and they were beginning to purchase ore in the area.

Q. Where was the closest mill of the United States Vanadium Corporation from that ore-buying station at Thompson?

A. Well, it was at Uravan.

Q. Down in the area of Uravan, and the ore station was established at Thompson? [663]

A. That is right.

Q. And the Loma mill was right next to the ore bodies, was it?

A. No. The mill was approximately just outside of Uravan.

Q. Were those ore bodies tributary to the mill?

A. They were.

Q. And what happened after the United States Vanadium Corporation started buying there?

A. Mr. Morrison told me that he——

Mr. Archer: I object to any conversation.

Q. (By Mr. Alioto): Regardless of what he told you, just tell us what happened. Did Mr. Morrison continue that operation?

A. No, Mr. Morrison sold the operation.

Q. To whom? A. To Mr. Ackerman.

Q. Did he continue it?

A. Well, I left Mr. Morrison just prior to the sale to Mr. Ackerman.

Q. Do you know whether the mill was in operation? When did you leave?

A. I left in December of 1940.

(Testimony of Frank Nisley.)

Q. Do you know whether that mill was in operation seven or eight months later? [664]

A. It was not. We bought the equipment from the mill about eight months later.

Q. The mill itself had closed down and you bought the equipment, is that it?

A. That is right.

Q. Getting down to your partnership arrangement with the Gateway Alloys, did there come a time in 1941 when you formed a partnership for the purpose of operating the mill at Gateway?

A. There did.

Q. Who were your partners in that arrangement, Mr. Nisley? A. Mr. Hayes Wilson.

Q. What was his background?

A. Mr. Wilson had been associated with us in the plant at Rifle.

Q. Did you make some kind of arrangement to operate a mill there?

A. Yes. During the time I was employed at Loma, Mr. Brown, who was the manager of the Gateway Alloy Company, had spent a lot of time watching this plant in operation, and he approached me as to whether I would be interested in going to Gateway and installing roasting equipment there.

Q. Did you agree to do that? A. Yes.

Q. Did you then form this partnership with Mr. Wilson? A. That is right. [665]

Q. Did you then install the equipment in the mill?

A. Yes, Mr. Wilson and I made a contract with

(Testimony of Frank Nisley.)

the Gateway Alloys Company and installed the roasting equipment in the plant. [665-A]

Q. Would you give us some description of that mill, Mr. Nisley, with respect to its capacity and its general physical attributes?

A. Well, the mill was—the crushing equipment and accrued ore—I mean, the ore equipment was capable of processing probably 30 to 50 tons a day. The only limiting factor there was the roasting equipment. And it was a well-built, little plant.

Q. Did you install any roasting equipment in it? A. Yes.

Q. Now, then, approximately when was it that you began operations in Gateway?

A. We began installing equipment, I believe, in April of 1941, and due to road conditions there we were unable to actually start operations until, I believe it was, around May 20 of that year.

Q. May 20 of 1941? A. That's right.

Q. Before we get into your operations, Mr. Nisley, would you be good enough to state the facts, for the record, respecting the ore bodies that were tributary to that mill?

A. At the time Mr. Wilson and I made the investigation for the plant, it was our conclusion that there were large ore bodies tributary to the plant, within a distance of 18 to 20 miles in all directions. Gateway gets its name from the fact that a lot of these canyons from these plateaus lead right into Gateway, and it's just a natural spot for a mill because of that condition. And, of course,

(Testimony of Frank Nisley.)

there was a good water supply there, which was unusual. It was closer to Grand Junction than any other mills were at the time. There were large bodies of high-grade ore being mined there previous to that time.

Q. Now, we already have some testimony from Mr. Burwell about that area, Mr. Nisley, so there is no sense in repeating it. But let me ask you whether you were aware at the time that you started operating here that the United States Vanadium Corporation was mining the Gateway ore deposit?

A. Mr. Brown had told us, at the time we asked whether he would be interested in going down there, that he had leased the mines of the Gateway Alloys to the United States Vanadium Corporation until July 1 of that year, 1941.

Q. All right, you started operation about May of 1941, is that it? A. That's right.

Q. Then did you have an opportunity to observe the mining being done there by the United States Vanadium Company?

A. We did. We went over and looked over the mines while we were at Gateway.

Q. What were they doing there?

A. Well, the property had been previously mined for high-grade ores, and the lower-grade mill ores had been placed on [667] dumps there by the miners. There was a lot of that type of ore there. And, of course, the United States Vanadium was picking up that ore and hauling it to the

(Testimony of Frank Nisley.)

Uravan—they were stripping the easily accessible ore inside the mines and taking it——

Q. You say they were hauling that ore to Uravan. Would you be good enough to tell us how far Uravan was, approximately, from that ore deposit, the Uravan mill of United States Vanadium Corporation, that is?

A. Well, from the Gateway Alloy property there is a couple of deep canyons that had to be crossed——

Q. Just trace it out on that map, if you will, sir.

The Court: Just answer the question, how far was it?

A. It was about, I think, 35-40 miles the way the road——

Q. (By Mr. Alioto): Over what kind of territory? A. Very rough terrain.

Q. And how far was your Gateway mill from that deposit? A. About 18 miles.

Q. Then did you have some kind of arrangement with the plaintiff company at the time you started your operations at the Nisley and Wilson plant at Gateway?

The Court: Pardon me just a moment. I didn't get the name of this witness.

Mr. Alioto: Frank Nisley.

The Court: How do you spell it? [668]

Mr. Alioto: N-I-S-L-E-Y.

The Court: N-I-S-L-E-Y?

(Testimony of Frank Nisley.)

Mr. Alioto: Correct. Frank Nisley. His partner's name was Hayes Wilson.

The Court: All right.

Q. (By Mr. Alioto): Now, the question is at the time you started in at the Nisley and Wilson plant, did you have some kind of an understanding with the Continental Ore Company or were you selling your materials elsewhere?

A. Well, Continental Ore had, of course, been buying—had offered to buy the product, I think, at a dollar a pound.

The Court: I didn't get you.

A. I said the Continental Ore Company at that time had offered to buy the product at a dollar a pound. Mr. Brown, who was the President of Gateway Alloys, had contacted United States Vanadium, and they made the same offer, that they would buy it from us at a dollar a pound for the fused vanadic oxide. Mr. Brown, however, removed the fusing plant from the mill, so we started out—we were making only the red cake, and United States Vanadium offered to buy that, I believe, at 90c a pound, the red cake.

Q. (By Mr. Alioto): Did you make a deal to sell that to United States Vanadium?

A. We did.

Q. What happened? [669]

A. We got into production of the red cake along about the latter part of May, and we operated during the first part of June, and Mr. Brown con-

(Testimony of Frank Nisley.)

tacted United States Vanadium and told them that we had——

Mr. Archer: I object to what Mr. Brown told him.

The Court: Who is Mr. Brown?

A. Mr. Brown, your Honor, was the President of Gateway Alloys Company.

The Court: Not one of the defendants or in any way connected with any of the defendants?

A. No, sir.

The Court: The objection will be sustained.

Q. (By Mr. Alioto): Was he working for U.S.V. at this time, Mr. Nisley?

A. He wasn't at this time.

Q. Now, without telling us or getting into any conversation that Brown may have had with U.S.V., did you in fact agree to sell your red cake material to U.S.V.?

A. As a result of Mr. Brown's trip, an engineer from U.S.V. came to our plant.

Q. What did he do?

A. He sampled the material and weighed out everything that we had made up to that time.

Q. Do you remember his name?

A. Sandy Sterns. [670]

Q. He was employed by U.S.V.?

A. He was employed by U.S.V.

Q. And what happened when he sampled that material?

A. A few days later we got a report from the United States Vanadium telling us the material

(Testimony of Frank Nisley.)

was satisfactory and we could deliver it at any time.

Q. Did you deliver it? A. We did.

Q. What happened?

A. The day I delivered it, they were unable to weigh it and sample it, and they asked that we leave it and come back in a couple of days.

Q. Did you come back in a couple of days?

A. I did.

Q. And what happened?

A. They had already fused it out; the material was gone. A few days later we got their report of the weights and assays, and these were very much shorter than the weights and assays that had been given us by our own chemist at Gateway.

Q. What happened then?

A. Well, we objected to the settlement but there wasn't anything done about it.

Q. As the result of that experience did you come to any conclusion about marketing?

A. Yes. We decided to close the plant down and to hunt [671] another source, another outlet.

Q. Did you find another outlet?

A. Yes, we did.

Q. Who was that outlet; what was that outlet that you found?

A. We contacted Continental Ore Company and they agreed to take the product then at a price, I believe, of $1.03½ a pound.

Q. They agreed to take the total output?

A. That's right.

(Testimony of Frank Nisley.)

Q. Then what did you do?

A. We installed a fusing plant then so that we could ship the material and they would buy it.

Q. About when did you complete the fusing plant?

A. The latter part of September of that year; we got into operation again about the 1st of October.

Q. Now, the fusing plant was a plant that converted the red cake into fused oxide, is that it?

A. That's right.

Q. As of that time, in September of 1941, had the United States Vanadium Corporation completed its mining on the Gateway properties under that lease? A. It had.

Q. Did you have a chance to observe that mine after they got through with it?

A. Well, the properties were stripped of all the available [672] ore that was easily accessible.

Q. Did you see that? A. I did.

Q. Did you walk on the property and look at it at that time? A. I did.

Q. Is that what you observed?

A. That's right.

Q. Then did you start producing for the plaintiff company, the Continental Ore Company?

A. We did.

Q. About when? A. In October of '41.

Q. Now, at this juncture, do you have with you, Mr. Nisley, the amount that you produced privately up until the time that you made the Gov-

(Testimony of Frank Nisley.)

ernment contract that we will come to in a moment?

A. Yes, I do.

Q. Would you be good enough to read into the record what your production of vanadium oxide was for that period?

A. During that period, we produced for the account of Apex Smelting Company-Continental Ore Company 33,115 pounds of vanadic oxide. That is the net V_2O_5. And we produced for the account of Vanadium Corporation of America 10,618 pounds of fused vanadic oxide.

Q. Your total production was approximately 43,000 pounds? [673]

A. Plus the amount that we shipped to the United States Vanadium Corporation—I can't recall exactly what that was—in the neighborhood of 5,000 pounds.

Q. Now the amount that you shipped to U.S.V. was in the form of red cake? A. Red cake.

Q. Is that it? A. That's right.

Q. And the amount that you shipped to Continental Ore Company and 10,000 to the Vanadium Corporation of America was in the form of oxide?

A. That's right.

The Court: What is the form of oxide?

A. It is the red cake melted, your Honor. It consists merely of melting the cake into what we call fused vanadic oxide.

Q. (By Mr. Alioto): I show you a bottle of material. Would you be good enough to state wheth-

(Testimony of Frank Nisley.)

er that is the fused vanadic oxide of the type that you produced? A. It is.

(Counsel referring to Plaintiff's Exhibit 31 for identification.)

Q. When you started to operate at Gateway, in the fashion in which you have described, what was your source for getting the ore?

A. The Gateway Alloys mines, as I previously testified, had [674] been pretty well stripped, and it was taking quite a little time to get those mines back into operation, and we were also buying from independent mines in the area. We—as I previously stated—we got started in October, and the winter months there are quite rough to move ore over the roads, and we had a rather intermittent operation from October until March 20th, the following year, at which time we were forced to close down entirely for a period of two months, until the roads opened up again.

Q. From whom were you buying; what is the nature of the companies or the miners from which you were buying that ore in that period?

A. We were dealing with approximately 20 or 30 independent miners, as well as with Gateway Alloys. They were trying to get their mines back into operation.

Q. Were these miners who had been in the area a long time or had they started up recently?

A. No. The only market they had for their ore prior to that time was for high-grade and we, of

(Testimony of Frank Nisley.)

course, opened up a market to them for the mill-type ore.

Q. About how many of those miners were you buying from?

A. I would judge between 20 and 30, small miners.

Q. When you say you closed the mill down in March of 1942, did you reopen it shortly thereafter?

A. Yes. We opened it about the 20th of May, the same year. [675]

Q. And did you continue to buy from the independent miners at that point?

A. We did, until along in June. I was weighing a load of ore one day—our scalehouse was very close to the main highway that led from Gateway to Uravan—and I was weighing a load of ore there and Mr. Burwell stopped and called——

Q. Who stopped?

A. Mr. Burwell of the United States Vanadium.

Q. Did you know who he was at that time?

A. Yes, I did.

Q. What happened?

A. He called this independent miner over from the scales to the road and talked with him for a little while. And when he came back, he told me that Mr. Burwell——

Mr. Archer: I object to what the miner told him.

Q. (By Mr. Alioto): Regardless of what the miner told you—don't tell us that because that is

(Testimony of Frank Nisley.)

hearsay—he went over and talked to Mr. Burwell.

Now, he had his ore, you say, on your scales?

A. That's right.

Q. And he came back, and what did he do? Tell us what he did. Don't tell us what he said. Tell us what he did.

A. He told me that he had been over——

The Court: Don't——

Mr. Alioto: Don't tell us what he told you; just tell us what he did. Did he leave the ore there with you and sell it to you?

A. He did that load.

Q. And then what happened after that?

A. He told me that if we couldn't——

Mr. Archer: I object to what he told him, if your Honor please.

Q. (By Mr. Alioto): Regardless of what he told you, did you thereafter buy from that miner?

A. No, that miner left us.

Q. Where did he sell thereafter?

A. To the United States Vanadium.

Q. Now, approximately where was he located on that map?

A. At that time, he was mining in the John Brown area.

Q. And how close was he to your mill?

A. About 12 miles.

Q. And how far was he from the Uravan mill?

A. Around 40 miles.

Q. Were there other miners who did the same thing at or about that time, in June, 1942?

(Testimony of Frank Nisley.)

A. Yes. We began to lose a number of our small miners.

Q. Lose them to whom?

A. To U. S. Vanadium.

Q. Now, at that time, do you know whether or not the United States Vanadium Company was acting as an agent for Metals Reserve? [677]

A. I found out later that they were.

Q. Do you recall approximately how many miners were taken away from you in that fashion?

The Court: Now, was this during the war period?

Mr. Alioto: This was during the period of time when United States Vanadium was acting for Metals Reserve, if your Honor please, in June of 1942, which is the date that the witness has fixed.

Q. Approximately how many miners then stopped delivering to your mill at Gateway and started delivering down to Uravan at the United States Vanadium mill?

A. Well, all that had been delivering to us except the Gateway Alloy Company.

Q. In other words, you lost every one of them?

A. We lost every one of them.

Q. Now, then, as a result of having lost—now, we don't want any conversation with any third parties, Mr. Nisley. There would be a temptation to go into them here in the natural course, but there is a rule against that.

As a result of having lost all those miners, what happened to your production in the mill?

(Testimony of Frank Nisley.)

A. We were cut back to only being supplied by the Gateway Alloy Company. As I previously stated, their mines had been stripped and they were not producing very heavily.

Q. So what happened? [678]

A. We had an intermittent operation. We had to just mill ores that came in. Later we were forced to close down entirely.

Q. About when did you close down entirely, approximately?

A. Well, the final shutdown, I think it was about October.

Q. Of '42? A. '42.

Q. Now on or about October of '42 did you have a meeting with Mr. Blair Burwell?

A. We did.

Q. Did you understand at the time that in addition to running the United States Vanadium Company he was supposed to be the agent for Metals Reserve?

A. During this time, we had gotten in touch with the War Production Board and the Metals Reserve Company in Washington and found—they referred us back to Mr. Burwell.

Q. Did you get any help from the Continental Ore Company in connection with this matter?

A. Yes. We notified them that our output would be cut considerably and asked their help in trying to help us obtain some relief.

Q. Did they do something for you?

A. They did.

(Testimony of Frank Nisley.)

Q. What did they do?

A. They made contact also with the War Production Board, with Metals Reserve Company.

Q. Now, as a result of this, did you have a meeting with Mr. Blair Burwell?

A. We did.

Q. Do you recall where that meeting was held?

A. In Grand Junction.

Q. Do you recall who was present?

A. Myself, my partner, Mr. Wilson—I believe John Hill and Mr. Burwell.

Q. Now, John Hill was another employee of the United States Vanadium Company, wasn't he?

A. He was.

Q. You knew at this time, of course, that they were supposed to be agents for Metals Reserve as well as running the United States Vanadium Company, didn't you? A. We did.

Q. Now tell us, as best you remember, the substance of the conversation that took place in that office.

Mr. Holland: This is not being offered against the Vanadium Company?

Mr. Alioto: No, it is not. Not at the moment.

A. We had found out during this time, by letters to the War Production Board and answers from them, that the United States Vanadium was offering a subsidy of 10c a pound to miners.

The Court: I didn't get your answer.

A. We had found during the course of our investigation [680] with the War Production Board

(Testimony of Frank Nisley.)

and Metals Reserve Company in Washington that the United States Vanadium Corporation was paying a subsidy of 10c a pound to the miners for the ore.

Q. (By Mr. Alioto): The miners in your area?

A. The miners in our area.

Q. Yes.

A. And we were trying to negotiate the same sort of an agreement whereby we would be allowed to pay the subsidy through the Metals Reserve Company to the miners.

Q. You negotiated this agreement with Mr. Burwell?

A. We were trying to negotiate this agreement with Mr. Burwell.

Q. What did Mr. Burwell say to you about that?

A. Mr. Burwell told us that the only kind of an agreement that he would recommend was one whereby we would be furnished the ore by Metals Reserve and turn the material back to the United States Vanadium.

Q. Turn your vanadium oxide over to United States Vanadium? A. That's right.

Q. Did you say anything in this conference about the Continental Ore Company or your desires in the matter?

A. We did. We told them that we would rather continue operating as an independent than to go under this type of arrangement.

Q. What did he say to that? [681]

(Testimony of Frank Nisley.)

A. He said he wouldn't recommend anything but this sort of an arrangement.

Q. Did he specify what that arrangement would contemplate, did he call it a toll arrangement or toll agreement?

A. Yes. He told us that if we would get in touch with Mr. DeWitt Smith of Metals Reserve Company in Washington and offer to mill this ore on a toll agreement whereby they pay so much a pound for milling it, he would recommend and follow it through.

Q. Tell us of the toll agreement so that we will understand it.

A. Well, the agreement he suggested was that the ore be stockpiled at our plant, be purchased by the Metals Reserve Company for the account of Metals Reserve Company through the United States Vanadium Corporation; that they would deliver the ore to our plant; it would remain in their possession, remain their property during the time it was being processed through our plant, and that the product would be returned to them.

Q. What product, the vanadium oxide?

A. The vanadium oxide.

Q. Returned where? Specifically, where was it physically going to be returned?

A. To the United States Vanadium Corporation.

Q. This was in October of 1942?

A. October the 2nd, as I recall, 1942. [682]

(Testimony of Frank Nisley.)

Q. Did you and your partners then agree to make a toll arrangement?

A. There wasn't anything else to do. We finally agreed to do this.

The Court: You were being paid, then, so much for milling it?

A. We were paid so much a pound for milling it, your Honor.

The Court: All right.

Q. (By Mr. Alioto): Now, then, the conference took place in October. About when was it that you finally got your toll agreement?

A. The signed toll agreement was finally delivered to us about February the 3rd or 4th, the following year. [683]

Mr. Alioto: Will you please mark this for identification?

(The document referred to was thereupon marked Plaintiff's Exhibit 74 for identification.)

Q. (By Mr. Alioto): Mr. Nisley, I show you a document which has been marked Plaintiff's Exhibit 74 for identification. Will you be good enough to examine the document and state whether that is the toll agreement that was signed as you indicated? A. It is.

Q. During that period from October of 1942 when you were negotiating this with Mr. Blair Burwell and Mr. John Hill, did the plant operate from October to January? A. No, sir.

Q. It closed down entirely?

(Testimony of Frank Nisley.)

A. It closed down entirely.

Q. After you received this agreement, you began operation under the toll agreement?

A. We began operation about the latter part of March, the first of April.

Q. Do you have with you the figures of your production under that government toll agreement?

A. Yes, I do.

Q. Will you be good enough to read them into the record, please, Mr. Nisley? [684]

A. During this period in black oxide we delivered to United States Vanadium Corporation about 88,729 pounds of fused vanadic oxide. In addition to that, of course, there was clean-up material and other materials.

Q. Prior to receiving the toll agreement, which is 74 for identification, Mr. Nisley, had there been any other recommendation by any government personnel, somebody employed directly by the government, about what should be done with that mill?

A. Yes, when we first contacted—we first made contact with Oscar Chapman, the Secretary of the Interior, and he told us——

Mr. Archer: I object to that.

Q. (By Mr. Alioto): Regardless of what he told you, did somebody come out from the government to investigate the matter?

A. Mr. Whittaker.

Q. Orville Whittaker?

A. Orville Whittaker.

(Testimony of Frank Nisley.)

Q. Will you be good enough to identify Mr. Whittaker for the record as to just what he was?

A. Mr. Whittaker had been employed by the Metal Reserves Company as an umpire in these matters.

The Court: Just a moment. We will take a recess.

(Recess.)

Q. (By Mr. Alioto): Mr. Nisley, there are a few things I want to clarify before we take up your testimony at the point where we left it. First of all, you testified that in order to convert the red cake into the black or the fused oxide, you installed some fusion equipment. A. We did.

Q. What was the price of that fusion equipment to do that job?

A. Approximately a thousand dollars.

Q. Approximately a thousand dollars and that did the job? A. That did the job.

The Court: How much?

The Witness: $1,000.

Q. (By Mr. Alioto): Mr. Nisley, you testified about certain miners who stopped delivering to you in about June of 1942. For how long a period of time had you been buying from those miners? For how long had they been your customers?

A. We began to buy from them in April of 1941 and we continued until about June, 1942.

The Court: When they ceased supplying you, they sold theirs to an agency of the government, was that it?

(Testimony of Frank Nisley.)

The Witness: Yes, in 1942.

Q. (By Mr. Alioto): In other words, they sold it to Metals Reserve Company through the United States Vanadium? A. That is right. [686]

Q. Which was the agent for the Metals Reserve?

A. That is right.

Q. You continued under the government program for approximately how long a period of time?

A. Until December 31, 1942.

Q. During the time that you were operating under the government program, did you have occasion to talk to Mr. Burwell? A. I did.

Q. Did you have occasion to tell him where you wanted your material sent, even after it was sent down to Uravan?

A. It was being delivered to Grand Junction.

Q. Grand Junction?

A. At the time we entered into the toll agreement, we asked that our product be sent to Continental Ore. We wanted to continue that relationship so we would have a post-war outlet for our material.

Q. Did you tell Mr. Burwell that?

A. We did.

Q. Do you know whether or not during the period of your production the Continental Ore Company received all the black oxide that was processed in your plant? Do you know anything about that? A. No, I do not.

Q. Approximately when was it that you received notification from anybody connected with

(Testimony of Frank Nisley.)

the United States Vanadium Company [687] that your contract would be terminated?

A. In November, 1943, we received a letter from John Hill stating that this was not firm yet but he felt that our contract would not be renewed after December 31st of that year.

Q. When were you officially notified that your contract would not be renewed?

A. A few days later we received a letter stating it would not be renewed, and that was prior to December 1, 1943.

Q. Prior to December 1, 1943?

A. That is right.

Q. Why did the government contract terminate?

A. The government—or the Metals Reserve quit supplying ore to us on December 31, 1943, and we went ahead and milled whatever was on hand and cleaned the plant up early in 1944 and closed it down.

Q. At the time Metals Reserve terminated your contract, did they also terminate the contract they had with V.C.A., the Vanadium Corporation of America?

A. No, they did not. We protested that we were shut down first. They shut us down before any of the other plants were shut down.

Q. Did you protest to Mr. Burwell?

A. We protested to the Metals Reserve in Washington.

Q. Did you ever talk to Mr. Burwell and Mr. Hill about that?

(Testimony of Frank Nisley.)

A. Yes, we told them we objected to it. [688]

Q. Did you know at that time who made the recommendation to Metals Reserve about closing down your plant? A. No.

Q. In any event, the plant closed down shortly after January 1, 1944, did it? A. Yes.

Q. At that time did you take up any contact with the Continental Ore Company?

A. We did.

Q. Did you come to some understanding with them as to what they would do?

A. They told us they would buy all the material that we could produce.

Q. All the material that you produced?

A. That is right.

Q. Did you go back into business privately after January 1, 1944?

A. No, we did not.

Q. Why not?

The Court: Just a moment. What is your question again?

Mr. Alioto: Did he go back into business on a private basis after the termination of the contract with the government and the witness answered "no".

Q. Why not, Mr. Nisley? [689]

A. We seriously considered it, and if the United States Vanadium had not stripped the mines of Gateway Alloys, there would have been no problem. We would have had plenty of ore supplied to

(Testimony of Frank Nisley.)

do it, but the mines were still under contract to Metal Reserves Company.

The Court: I can't hear you. You will have to speak up.

The Witness: I say, the mines were still under contract to Metal Reserves Company. In view of the things we had been up against, we felt we could not buck anymore and we closed down.

Q. (By Mr. Alioto): After you closed the plant down, what did you do?

A. I went into the service.

Q. And you remained how long?

A. Until February of 1945 or 1946.

Q. Do you still own that plant today? Incidentally, what business are you in in Grand Junction?

A. I am a real estate broker in Grand Junction.

Q. Is it part of your work as a real estate broker to cover the area in the Colorado Plateau?

A. It is. I am licensed under the laws of California and also bonded and licensed in Utah and Wyoming.

Q. Prior to the time that you made this government contract under which you started operation in the beginning of 1943, I [690] believe you testified you sold all of your oxide, all of your production to the Continental Ore Company except for 10,000 pounds. A. That is right.

Q. And that 10,000 pounds you sold to V.C.A.?

A. That is right.

(Testimony of Frank Nisley.)

Q. Do you recall the circumstances under which you sold that 10,000 pounds to V.C.A.?

The Court: Hasn't he just stated that?

Mr. Alioto: No, I am asking if he recalls the circumstances under which he sold the 10,000 pounds to V.C.A., if your Honor please. I won't repeat anything.

A. We had been shipping to Apex Smelting Company, and I believe they had a fire in their plant and were unable to take the product at that time, and so we sold it to the Vanadium Corporation, who met the price that we had been paid by the Apex people.

Q. The Apex Company was producing ferro-vanadium from your oxide for the Continental Ore Company, was it not?

A. That is my understanding, yes.

Q. Who was it who told you to ship your oxide to the Apex Smelting Company throughout this period?

A. We had made that arrangement ourselves.

Q. You had made that arrangement with whom?

A. With Continental Ore Company. [691]

Q. With Continental Ore Company to ship to Apex? A. That is right.

Q. Approximately when was it that you sold this 10,000 pounds to the Vanadium Corporation of America?

A. I believe it was in February of 1942.

Q. In February of 1942? A. Yes.

(Testimony of Frank Nisley.)

Q. Did the Vanadium Corporation of America at that time agree to take any more of your oxide?

A. They said they would take all we could produce at $1.10 a pound.

Q. Do you know whether or not the Vanadium Corporation of America was in touch with Apex Company during that period of time?

A. I don't know.

Mr. Alioto: We will offer at this time, if your Honor please, in connection with the continuity of this testimony about the sale of the 10,000 pounds a series of inter-office memoranda relating to the subject matter from the vice-president of the Vanadium Corporation of America to its president, to its mining engineer, Mr. Gustav Laub, the sales manager, to Mr. E. D. Bransome, of Vanadium Corporation of America; an inter-office memorandum from Mr. Gus Christiansen to Mr. Laub of Vanadium Corporation of America relating to Nisley & Wilson's supplies to the Apex Smelting Company. [692]

Mr. Holland: Your Honor, we object on the same grounds we did when Mr. Burwell was on the stand. This is offered out of order. The witness has stated he does not know anything about the relations between V.C.A. and Apex, and this is a matter between V.C.A. and Apex and should properly come up in Mr. Leir's testimony.

Mr. Alioto: This relates to the issue that the witness is talking about, if your Honor please.

Mr. Holland: I do not think it does.

(Testimony of Frank Nisley.)

The Court: Do you know anything about the matter contained in these memoranda?

The Witness: Nothing, your Honor, except we did sell product to the Vanadium Corporation of America at this time.

Mr. Alioto: I want to show, if your Honor please, the reason why the Vanadium Corporation bought this product at the same time. We are talking about the same supply. The letters mention Mr. Nisley.

The Court: I know, but you will have to properly identifiy this correspondence.

Mr. Alioto: There is no problem of identification. That has been done in pre-trial. It is directly related.

The Court: Very well, let it be admitted.

Mr. Archer: I object——

Mr. Alioto: It is not being offered against you, Mr. Archer, at the moment.

(The document referred to was received in evidence as Plaintiff's Exhibit 62.)

[See Book of Exhibits.]

Mr. Alioto: First is an inter-office memorandum from Mr. Edward S. Christiansen, the vice-president of the ~~Vanadium Corporation of America,~~ to Gustav Laub called Special Report. Mr. Laub is the vice-president also.

Under date of February 20, 1942——

Q. When was it you say you sold this 10,000 pounds to Vanadium Corporation?

A. It was February 21, 1942.

(Testimony of Frank Nisley.)

Mr. Alioto: On February 20, 1942, Mr. Laub wrote as follows:

"Mr. Christiansen, Vice-President of the above company, whom I have known slightly for some time, called on me stating that they have decided to go out of the Vanadium business and that they had certain equipment and some small stock of Oxide on hand that they would like to dispose of if we were interested.

"He did not have an actual list of the equipment nor of the raw materials they have on hand but from the figures he had, it looked as though they have close to 50,000 pounds of Vanadium Pentoxide containing between 78/87% V_2O_5 and about 40,000 to 50,000 pounds of Magnesite. [694]

"I told him that we might be interested in the Vanadium Oxide and possibly the Magnesite and some of the equipment which included jaw crushers and miscellaneous equipment. He promised to obtain from their Chicago office an actual complete list of the equipment they have to offer as well as the quantities and grades of Vanadium Oxide and Magnesite and to deliver these to me the early part of next week. I told him that I would then refer this to the proper parties of our company and that we would probably be interested in the Vanadium Oxide and the Magnesite if their prices were right. He stated that they would be reasonable in their prices and did not expect to make a profit.

"Mr. Christiansen further stated that they had been contemplating going out of the Vanadium

(Testimony of Frank Nisley.)

business for some time and their definite decision was reached for two reasons. First, that they had a fire in this department of their plant and secondly, that the sales contract which they had with Mr. Leir, President of the Continental Ore Corporation, had not worked out very well. Mr. Leir was getting a fifty percent cut on the profits. Mr. Christiansen also stated that they had some agreements with the Shattuck Chemical Company and Nisley & Smith for deliveries of Vanadium Oxide and that he would also look into this and advise us of the status thereof."

That is G. L. Laub—"GL:ESW".

Then a further report dated March 14, 1942, from the same Mr. Gustav Laub to Mr. E. D. Bransome:

"Subject: Apex Smelting Company, Chicago, Illinois," and up at the top is the pencilled handwriting "Continental Ore Corp."

Mr. Laub writes to Mr. Bransome, the president, as follows:

"Inasmuch as the following information has been conveyed verbally, this memorandum therefore is for our records.

"With reference to the writer's memorandum of February 20th advising that Mr. Christiansen, Vice-President of the above company, had informed us that they were going out of the Vanadium business and had offered us their stocks of Vanadium raw materials, equipment, etc., as I had not heard further from Mr. Christiansen in this regard I had

(Testimony of Frank Nisley.)

Larry Johnson casually contact him by phone and tell him that I had not received the information that he promised to send.

"As a result, Mr. Christiansen phoned the writer and stated that in going into the matter further they had run into some legal difficulties. Mr. Leir, President of the Continental Ore Corporation, with whom Apex has an agreement to furnish their entire production [696] of Vanadium, he acting as sales agent, objected strenuously to their breaching their contract and upon referring the matter to their counsel, Apex were advised that Mr. Leir had a strong case against them and to make the most satisfactory arrangement with Mr. Leir that they could.

"This resulted, Mr. Christiansen advised, in Mr. Leir putting a proposition up to them in that they would produce Vanadium at full capacity for a period of three months after which time he would take over their equipment and raw materials contracts and produce the material himself.

"Mr. Christiansen therefore advised that they felt they would be obligated to produce at maximum capacity for a period of three months and had decided to proceed on this basis but that they had not come to a definite conclusion about turning over the equipment and raw materials contracts after that time. The contract with Mr. Leir, he said, extended over the balance of the calendar year.

"In the event that the second part of Mr. Leir's proposition does not go through, Mr. Christiansen

(Testimony of Frank Nisley.)

stated that they still proposed to offer us such raw materials as they have available as well as plant equipment. [697]

"The above information, at your suggestion, was conveyed by phone to Mr. E. K. Jenckes, Assistant Chief, Vanadium Branch, War Production Board."

Then there is a memorandum entitled "Special Report," Gustav Laub, April 14, 1942:

"With reference to the writer's previous report of February 20th, Mr. Christiansen of the above company called again yesterday stating that they had now gotten their Vanadium situation straightened out and that they had definitely concluded to dismantle their Vanadium plant at once and go out of the Vanadium business permanently. The equipment from their plant is now for sale. He doubted whether there would be much of the equipment that might interest us but said that the list of same would be sent to us promptly.

"Mr. Christiansen stated that they had finally been able to come to an agreement with Mr. Leir of the Continental Ore Corporation, with whom they had a 14 year contract, to cancel the same. By doing so it was necessary for them, he said, to produce only enough Ferro Vanadium to complete two open orders which Mr. Leir had on his books and to continue producing Vanex (a mixture of Oxide and Aluminum which they have been supplying) up through June, after which time they would be completely out of the Vanadium picture. Mr. Christiansen further stated that their contract

(Testimony of Frank Nisley.)

and dealings with Mr. Leir had not proven at all satisfactory to them and that they regretted ever having gone into the business.

"He further stated that he would furnish us with the names of all of their suppliers of Ores and Oxide; the principal ones apparently being Shattuck Chemical Company, and Nisley & Wilson. He appeared to be most anxious that we obtain these raw materials rather than the possibility of Mr. Leir's getting them and continuing in the Vanadium business.

"We had an interesting discussion concerning low copper grained aluminum which they produce and release with necessary priority approval and I therefore turned him over to our Purchasing Department with regard to this item." [699]

One other interoffice memorandum from Mr. Sterling to Mr. Kett, dated April 22, 1942, in which, among other subject matters, he says:

"Apex Smelting Company—It is nice to know that we won't have to worry about them after July 1st."

Q. Mr. Nisley, just final questions now.

On the assumption that the Gateway Mines had not been stripped by U. S. V., as you and Mr. Burwell have testified to, on that assumption, how much vanadium oxide could you have produced from June of 1941 on through to 1949?

A. Well, the mill, as I previously testified, was only—it was limited largely by the amount of roasting equipment — which we could easily have in-

(Testimony of Frank Nisley.)

creased, and I see no reason why it couldn't have been a plant capable of producing 800-1,000 pounds of vanadium oxide a day during that period.

Q. And during all of the time that you were in business, was your arrangement with Mr. Leir that he would take your total output?

A. It was.

Q. Were you satisfied with your relations with Mr. Leir? A. Very.

Mr. Alioto: We have no other questions.

Mr. Archer: Did you put that toll agreement in evidence? [700]

Mr. Alioto: No, Mr. Archer, but I have no objection to putting it in.

Mr. Archer: Would you mind?

Mr. Alioto: We had it marked for identification.

Mr. Archer: I believe that's right. Exhibit 74.

Mr. Alioto: 74.

We will offer it into evidence, if your Honor please.

The Court: Admit it.

The Clerk: Plaintiffs' Exhibit 74, heretofore marked for identification, now is admitted and filed into evidence.

(Toll agreement was received in evidence and marked Plaintiffs' Exhibit No. 74.)

[See Book of Exhibits.]

Cross-Examination

Q. (By Mr. Archer): Mr. Nisley, I believe you stated in your testimony that at the time of the

(Testimony of Frank Nisley.)

meeting with Mr. Burwell, in October of 1942, it was your understanding that United States Vanadium was paying a ten-cent subsidy to miners, is that what you testified? A. It was.

Q. Now, by a ten-cent subsidy, do you mean that they were paying ten cents more per pound to the miners than you were paying?

A. It was our understanding through correspondence with [701] the War Production Board and Metals Reserve that they were buying this ore for the accounts of Metals Reserve and the Government was picking up the tab on ten cents a pound.

Q. Well, who was buying, Metals Reserve was buying?

A. United States Vanadium was buying as agents for Metals Reserve.

Q. Well, as agents for Metals Reserve, that is.

Now, how much were you paying for your ore per pound for two per cent ore, prior to June of 1942?

A. Approximately 21 cents a pound.

Q. And then in June of 1942 or thereabouts. United States Vanadium as agent for Metals Reserve came in and started paying 32 cents or 31 cents a pound for ore, did they not?

A. Yes. We didn't know, to begin with, that they were agents for Metals Reserve at the time it started.

Q. Well, that made you rather disturbed at the

(Testimony of Frank Nisley.)

beginning, when you didn't know that they were agents for Metals Reserve, didn't it?

A. It did.

Q. Did you feel any better about it when you found that they were agents for the Government?

A. It was still a problem.

Q. That is true.

The Court: Still what?

A. It was still a problem. [702]

Mr. Archer: Now, then, the contract, this toll agreement which has been put in evidence, was made with United States Vanadium as agents for Metals Reserve, wasn't it?

Mr. Alioto: The contract speaks for itself, Mr. Archer.

Mr. Archer: Well, there is no question about that, is there?

Mr. Alioto: I don't think there is.

Mr. Archer: Well, this is just foundation.

Q. If you want to take a look at it, Mr. Nisley.

A. It was.

Q. And the contract itself stated that you had to deliver the oxide to Metals Reserve, did it not?

A. I believe it stated we were to deliver the oxide to United States Vanadium Corporation as agents for Metals Reserve.

Q. At the Grand Junction warehouse for Metals Reserve? A. (No response.)

Q. That is where it went, didn't it?

A. Well, it was a United States Vanadium warehouse.

(Testimony of Frank Nisley.)

Q. Yes, as agents for Metals Reserve.

A. That part I don't know. I don't know what —it was the United States Vanadium warehouse.

Q. Did you know that the disposition of the vanadium oxide you produced was determined by the War Production Board?

A. Would you repeat that, please? [703]

Q. Did you know that the disposition, that is to say, who got the vanadium oxide that you produced under the toll agreement, was determined by the War Production Board?

A. Yes, we did. In fact, we wrote to Continental Ore, after Mr. Burwell made the suggestion that we enter into the toll agreement, and asked that they received this material through the War Production Board. Previous to that time our material had been allocated to them. They were obtaining allocations on all our material prior to the toll agreement.

Q. That's right. And so one of your objections to entering into the toll agreement was that your oxide would no longer—might no longer go to the plaintiffs in this action?

A. Our main concern was that we were losing an independent outlet.

Q. That's right.

A. By the separation of—I mean, by the arrangement of going under the toll agreement. We didn't want to enter into a toll agreement. We would much rather have stayed as an independent operator.

(Testimony of Frank Nisley.)

Q. Well, that is just what I am getting at. So, prior to the time you entered into the toll agreement, weren't you in touch with the War Production Board, and particularly the Regional Director in Denver, to find out whether or not, if you entered into the toll agreement, the War Production Board would allocate your oxide to the plaintiffs?

A. Yes, we were. At the time Mr. Whitaker made the investigation of the plant, I discussed the matter with him at the end of his visit, and it was our understanding that the recommendation was going to be made that we be allowed to continue receiving ore and that the Metals Reserve would pick up the tab on the difference between the price we were paying and what the Metals Reserve Company was paying. That was the basis upon which we were trying to negotiate the agreement with it.

Q. I am talking now about the allocation. Wasn't it also one of your objectives prior to entering into the toll agreement, to make sure that the War Production Board would allocate your allocation to the plaintiffs, to Continental Ore Company or to Apex Smelting Company?

A. That's right.

Q. And before you signed this toll agreement in February of 1943—dated as of the 26th day of January, 1943—weren't you assured by the War Production Board that your production would be allocated to the plaintiffs?

A. The first material that we produced was al-

(Testimony of Frank Nisley.)

located prior to the time we got into operation under the toll agreement.

Q. I am talking about—didn't you get an assurance from the War Production Board that when you started to operate under the toll agreement, your production would still be allocated to the plaintiffs? [705]

A. Yes, to start with I would say that was true.

Q. Under the——

A. They didn't assure us that—— Well, the first material was allocated to them, yes.

Q. Under the toll agreement?

A. Under the toll agreement, that's right.

Q. Do you know whether they ever took that material? A. No, I do not.

Q. Mr. Nisley, didn't you pack that first material in some steel containers which had been furnished you by the Continental Ore Company?

A. That's right, we did.

Q. And in 1944, after the toll agreement had been terminated, wasn't there discussion at that time between yourself and John Hill and Mr. Yetters at the Metals Reserve and the plaintiffs, as to who was going to pay for the steel containers in which this first batch of oxide had been placed and which were still in the Grand Junction warehouse?

A. There was some discussion concerning the drums. I can't relate just what it was.

Q. Well, then, if you put your first production into these steel drums under the toll agreement which commenced in the early part of 1942 and if

(Testimony of Frank Nisley.)

the steel drums were still in the warehouse in 1944, your production could hardly have been shipped to the plaintiffs, could it? [706]

A. That's right.

Q. Now, I believe you testified, Mr. Nisley, that you had been associated with the Rifle mill, the Loma mill, and the Mesa mill?

A. That's right.

Q. So that in 1941 you were one of the most experienced independent operators on the Plateau, probably next to Shattuck—North Continent and Shattuck, wouldn't you say?

A. We had considerable experience in the vanadium business.

Q. So in 1941, when you started your operations, you were making red cake, were you not?

A. We were.

Q. For Gateway Alloys?

A. (Witness nods head.)

Q. And you at that time, I believe you testified, approached United States Vanadium in order to get an outlet for this red cake, is that correct?

A. I didn't testify to that, no.

Q. You didn't—or Mr. Brown?

A. Mr. Brown made the contact, not myself.

Q. But at any event, as a result of this contact in 1941 with United States Vanadium, you had an unfortunate experience, didn't you?

A. We did.

Q. And that discouraged you from selling your

(Testimony of Frank Nisley.)

output to United States Vanadium, didn't it? [707]

A. It certainly did.

Q. And made you look elsewhere for an output?

A. That's correct.

Q. It certainly gave you no indication that United States Vanadium was trying to capture your output, did it?

A. Well, Mr. Archer, to answer that, I would have to go into a little background there. At the time they had the Gateway Alloys Mines under lease, they were stripping those mines, they were taking all the available ore from them. It was going to leave us in a position where we wouldn't have an ore supply, other than what we could pick up locally. If they could take our material the same as they did at the Mesa plant, and put us in a position where we couldn't operate, we were out of business, and by taking this material at a much lower—actually amounted to a lower price per pound, if you want to figure it that way—we weren't paid for the material that we took down there, according to our records.

Q. That's right.

A. So it put us in a position where we had to shut down for a period of time.

Q. You didn't have an outlet, did you?

A. We had to develop another outlet.

Q. You had to look for another outlet?

A. That's correct. [708]

Q. Now, you talk about stripping these mines.

(Testimony of Frank Nisley.)

Mr. Brown had leased these mines to United States Vanadium Corporation, hadn't he?

A. That's right.

Q. And he had shut down in the spring of 1940 at the time that the export control went in, had he not? A. He had.

Q. During all this period of time the Gateway claims, you are talking about, were actually opened by the Molybdenum Corporation of America, were they not?

A. It is my understanding that the Gateway Alloys had a purchase contract from the Molybdenum Corporation.

Q. That's right. And Mr. Brown and Mr. Bowman were required to make payments periodically under that contract? A. Yes.

Q. So that in 1940, when they shut down their operations, when the export controls went in, they had no means of making a payment under that contract, did they? A. That's right.

Q. And it was at that time that the United States Vanadium Corporation came in and mined the claims, for about a year, until the time you commenced operation?

A. It was more than a mining operation. They actually stripped the mines out. They took all the available ore that was in sight, and it wasn't run on a mining—what you would [709] call a mining operation.

Q. Well, did they violate the terms of the lease?

(Testimony of Frank Nisley.)

A. I don't know what the terms of the lease were.

Q. So you don't know whether or not they violated the terms?

A. We looked at the mines and we objected to Mr. Brown, told him that it looked to us like there wouldn't be any ore available at the time he got them back.

Q. Now, I believe you testified as to operations, how you could have operated your plant from 1941 to 1949, and of your knowledge of this general area.

At the time you ceased operations, in 1944, had there been any vanadium operations on Beaver Mesa?

A. It wasn't known as Beaver Mesa at that time. We had been buying ore from the Carnotite Mine, which was located close to the Beaver Mesa Plateau.

Q. Would you point out how close the Beaver Mesa is to the Gateway mill?

A. Well, the Beaver Mesa is just to the west of the Gateway mill. It lies pretty nearly on the Colorado-Utah line.

The Court: How far?

A. Approximately 12 or 14 miles from Gateway.

Q. (By Mr. Archer): Between 1944 and 1949, do you have any knowledge of how many thousands of tons of vanadium-bearing ore had been taken out of Beaver Mesa? [710]

A. Between '44 and '49, no.

(Testimony of Frank Nisley.)

Q. Do you know what independent operators were on Beaver Mesa?

A. I went into the service——

Q. In '44?

A. In '44. I was gone during that time.

Q. All right. You have testified heretofore as to what your operations would have been from 1941 to 1949. You got back from the service in 1945—what was it, January '45 or December '45?

A. No, I believe it was about February of '46 when I returned.

Q. February '46. I think that's right. And then you purchased this mill from Robert Hall?

A. At a later date, yes.

Q. What I am talking about, you testified as to what your operations would have been from this period '41 through '49. So after you returned from the service, were you familiar with these Beaver Mesa operations?

A. Yes, to a certain extent I was.

Q. Who were the operators up there, Mr. Nisley?

A. Well, it is my recollection at the time that Beaver Mesa wasn't developed yet, '47-'49.

Q. I believe that's correct. Was it developed prior to '49? [711]

A. No, I think it was after that.

Q. After '49? A. That's right.

Q. In regard to your testimony pertaining to the Loma mill which was operated by Mr. Morrison and Mr. Ackerman, you knew at the time that you

(Testimony of Frank Nisley.)

were working there, did you not, that Mr. Morrison owned two mines himself in Eastern Utah producing vanadium ore averaging 7 per cent, didn't you?

A. At the time I went to work for him, he was mining some ores of his own. However, that ore ran out in his own property.

Q. Well, he also—pardon me, did you finish?

A. Yes.

Q. He also owned about 60 claims in the same area, didn't he? A. Undeveloped claims.

Q. And he never did develop them, did he?

A. No, he didn't.

Q. Subsequently, do you recall a lawsuit between Mr. Ackerman and Mr. Morrison over the recovery in that mill?

A. I had heard of it, but I was not involved in it.

Q. Were you involved in any lawsuit in which the Loma mill was also involved?

A. No, I can't recall that I was.

Q. Do you recall a time when Mr. Leir, the plaintiff here, requested you to make a deposition, or to give a statement [712] in regard to the Loma mill, the operations there? A. Yes.

Q. Do you have a copy of the statement you made?

A. No. As I recall it, it related to the fact that Mr. Morrison had been late in one of his shipments of his fused material to Mr. Leir and caused some difficulty.

Q. At that time didn't you state that Mr. Morri-

(Testimony of Frank Nisley.)

son's difficulty—didn't you state that there were several conditions which hindered the production of the oxide and which could not be helped? One was the difficulty in obtaining the equipment which Mr. Morrison needed. Another was the difficulty in getting the equipment which he obtained and which was guaranteed to do the work—guaranteed to do the work to actually producing. Isn't that the statement that you made at that time?

A. I think that's correct.

Q. Didn' you also make the statement that "One must remember that the process used by Mr. Morrison was a new one and the equipment had to be fitted in to do the work, and even under the maker's guarantee, some of it had to be changed"?

A. That's correct. Mr. Morrison had installed a crushing plant that was new to the industry, and he was experiencing considerable trouble with that crushing plant.

It had nothing to do with the chemical recoveries or the process as far as roasting the ore was concerned. [713]

Q. Well, didn't you subsequently hear that the reason Mr. Ackerman, to whom Mr. Morrison sold the mill—that the reason Mr. Ackerman sued Mr. Morrison was because Mr. Morrison had represented recoveries to be about 70 per cent and Mr. Ackerman found out that the recovery was only about 45 per cent.

Mr. Alioto: I submit, if your Honor please, that

(Testimony of Frank Nisley.)

a lawsuit in which the witness didn't participate is not relevant cross-examination.

Mr. Archer: I am asking him if he heard.

Mr. Alioto: Even if he did hear, it wouldn't be material, as to what two other people were arguing about.

The Court: Overruled. It goes to his experience.

A. No. [714] In order to explain that a little further, as I previously stated, the chemical recoveries shown in the plant was in excess, I believe, of 70 percent. However, there were certain things that needed to be done there in order to maintain that recovery. For instance, under the leaching tank of Mr. Morrison had been installed concrete sumps, and this material, after it got into the sumps, was leaking out of the tanks and going into the ground, and he was having trouble, as I previously stated also, in crushing this ore. But they were all things that could very easily have been corrected, and in this report I gave to Mr. Morrison I brought these facts out. That is what prompted him to tell me that, that along with the situation that U. S. Vanadium had established in buying ore in direct competition to him in an area where it had not been established prior to that time, made it difficult for him to carry on. He was not financed to fight that sort of situation.

Q. Referring to the period when you commenced operating the Gateway Alloys in 1941, your first year of operation, I believe you testified you

(Testimony of Frank Nisley.)

established there favorable relations with a group of independent miners who supplied you with ore.

A. Yes.

Q. So in your first year of operation you had no difficulty in getting ore, is that correct?

A. That is not correct. In the spring, after we installed the equipment, as I previously said, the road [715] conditions in the area were bad. In fact, the roads washed out to both Uravan and to Grand Junction, and so we were isolated at Gateway for a time. Ore could not be moved in. We could not even move supplies to the mills. So it kept us from operating until about the last of May, the first of June, and then we had this experience with the United States Vanadium Corporation that shut us down from July to October in order to establish a new market and put in our fusing plant.

In October, again, when we got started, we were again in a winter cycle and road conditions from October on until February of the next year were pretty—we had a pretty intermittent operation. Some days the miners could deliver ore, some days they could not. So we didn't get as much ore as we could have milled during that period by quite a bit.

Q. What I am getting at is the first date, or the first time, without getting the particular dates, when you experienced difficulty in getting ore outside of due to weather conditions, but to due to the activities of U. S. V. was in June of 1942 when they com-

(Testimony of Frank Nisley.)

menced buying from Metals Reserve, is that correct?

A. No, we had operated prior to that. After the roads cleared up we had a period from about May 20th until the U.S.V. policy had finally taken our miners away from us, during which we did receive considerable ore. In fact, I think during that period we had a supply—during that period we purchased 100, [716] 200, 300—in the neighborhood of 330 tons of ore during that period before we were affected directly by the United States Vanadium ore-purchasing program.

I might say further during that time we had experienced a loss, of course, in the mills during the period we operated the prior year until—that was during the time the United States Vanadium, we made the sale to them—during the following year period the mill showed a profit in the operation, even with these intermittent operations during these winter months.

Q. What I am getting at is did you ship more oxide prior to the beginning of the Metals Reserve program, or did you ship more oxide after the beginning of the Metals Reserve program, discounting the toll agreement?

A. You mean to—the material that was produced under the Metals Reserve program?

Q. I was discounting what you produced under the toll agreement, just considering your own private operations. Did you ship more oxide prior

(Testimony of Frank Nisley.)

to the time that Metals Reserve starting buying, or after the time Metals Reserve started buying ore?

A. It will take a little time to determine that.

Q. Do you have your record there?

A. Yes.

Q. Your first shipment of fused black was on November 13, [717] 1941? A. That is correct.

Q. 6,543 pounds? A. That is right.

Q. Your second was on December 19, 1941, 5,074 pounds? A. That is right.

Q. And the next shipment was on May 23, 1942, of 2,857 pounds?

A. You are talking here of the material that we had shipped to Continental and Apex.

Q. The material that you shipped to Continental and Apex.

A. During this time, on February 1, 1942, we had shipped 12,000—10,618 pounds of V_2O_5 to the Vanadium Corporation of America.

Q. February 21st—that is 12,223 to V.C.A.?

A. That was all black, yes.

Q. Then in May, 1942, 2,857 pounds?

A. That is right.

Q. Then on June 20, 1942, 5,040 pounds?

A. That is right.

Q. June 25, 2,357 pounds?

A. That is right.

Q. July 31, 6,294 pounds?

A. That is right.

Q. August 13, 2,470 pounds? [718]

A. That is right.

(Testimony of Frank Nisley.)

Q. August 29th, 3,964 pounds?

A. That is right.

Q. September 21st, 6,040 pounds?

A. That is right.

Q. October 21st, 4,458 pounds?

A. That is right.

Q. December 1, 4,723 pounds. And then 735 pounds—where did that go? Is that in December?

A. I imagine it was.

Q. It is pretty clear that you continued shipping vanadium oxide to Continental or the Apex Smelting Company, then, after the Metals Reserve program came in, isn't that true?

A. Yes, we did.

The Court: We will recess at this time until two o'clock.

(Whereupon a recess was taken until 2:00 o'clock p.m.) [719]

Monday, June 9, 1958—2:00 P.M.

FRANK NISLEY

called as a witness by and on behalf of the plaintiffs; having been previously duly sworn, resumed the stand and testified further as follows:

Cross Examination—(Continued)

Q. (By Mr. Archer): Mr. Nisley, I have here letters in May and June of 1941 from Mr. Leir to you and you to Mr. Leir regarding your commencement of your production for him. I wonder if you

(Testimony of Frank Nisley.)

would identify those letters. I notice your letter, it's a little weak—if you would look at the second page there is a more legible copy (handing witness).

A. (Witness examining) Yes, sir.

Mr. Archer: As Defendant's Exhibit next in order I offer a letter from Mr. Leir to Frank Nisley, Jr., dated May 28, 1941, and Mr. Nisley's reply dated June 13, 1941, as one exhibit.

Mr. Alioto: No objection.

The Clerk: Defendant Union's Exhibit 2-J admitted and filed in evidence.

(Letter May 28, 1941, Leir to Nisley; Letter June 13, 1941, Nisley to Leir, received in evidence and marked Defendant Union's Exhibit No. 2-J.) [720]

Mr. Archer: Mr. Leir's letter to Frank Nisley, dated May 28, 1941, reads as follows:

"I have just returned from Chicago and found your kind letter of May 23, for which I think you.

"I saw the Apex people there and had an opportunity to discuss with them, in a general way, the question of the price of vanadic acid.

"We may be willing to give you a price of $1.00 per pound f.o.b. Grand Junction, provided you ship a good fused acid with at least 85 per cent V_2O_5.

"Apex is prepared to give you such a price in order to cooperate with you in the start of your new enterprise.

"Please let me have your reaction to the above, and don't be too secretive with us, because sooner

(Testimony of Frank Nisley.)

or later you will undoubtedly find us very valuable customers."

Q. Mr. Nisley, when it states in here "fused acid," that is the same as fused black oxide?

A. That's correct.

Mr. Archer: Mr. Nisley's reply, dated June 13, reads as follows:

"Dear Mr. Leir: I received your letter of the 28th of May and have noted contents carefully.

"I am going to approach the matter in a little [721] way from before. If we can steadily produce an average of 9,000 pounds of fused vanadic acid per month of a grade better than 85 per cent with low impurities, what price would you be in a position to offer? By this statement, I mean that we would be in a position to deliver that amount due to the fact that we have the ore available and are able to make more than that amount per day at the present time.

"We have been able to see your position where no steady flow of the material can be guaranteed over any period of time, but comes in very irregular, and of a lower quality due to the conditions of the ore for treatment, being from different locality. For that reason a lower price seems to have to prevail.

"If you can offer something substantial and it is better than we have at present, we might be interested. We are in a very excellent field for ore and are having very satisfactory results with our processing and milling.

(Testimony of Frank Nisley.)

"Let us know your reaction to the above and if you are interested in having a steady supply available, please let us hear from you. I believe we can show you results which have not been obtained elsewhere to our knowledge, and will do our best to cooperate with you in any way we can." [722]

Q. I show you now, Mr. Nisley, a letter to Apex Smelting Company, dated December 23, 1941, signed by you, and ask you whether you can identify that letter (handing witness).

A. (Witness examining) Yes.

Mr. Archer: Offer this as Defendant's Exhibit next in order.

Mr. Alioto: No objection.

The Clerk: Defendant U's Exhibit 2-K admitted and filed in evidence.

(Letter dated December 23, 1941, Nisley to Apex Smelting Company, received in evidence and marked Defendant Union's Exhibit 2-K.)

Mr. Archer: This is a letter dated December 23, 1941, from Mr. Nisley to Apex Smelting Company, attention Mr. Lippa.

"Dear Sir:

"A few days ago we received notice that vanadium has been put under a priority rating and that we will need, it seems, a priority rating from you in order to fulfill our needs. We wonder if you you would furnish us with such priority rating?

"We shipped to you on the 19th 26 sacks of fused acid and expect to ship again about the first week of January, if not sooner."

(Testimony of Frank Nisley.)

Q. I now show you a telegram, Mr. Nisley, to Apex Smelting [723] Company, from you, dated January 27, 1942, and ask you whether you can identify that (handing witness).

A. (Witness examining) Yes.

Mr. Archer: Offer this as Defendants' next in order.

Mr. Alioto: No objection.

The Court: Defendant Union's Exhibit 2-L admitted and filed in evidence.

(Telegram, January 27, 1942, Nisley and Wilson to Apex Smelting Company, received in evidence and marked Defendant Union's Exhibit 2-L.)

Mr. Archer: Telegram dated January 27, 1942, from Nisley and Wilson to Apex Smelting Company:

"Can you receive shipment? We have no further word concerning parties who can receive shipments and we desire to move cakes as quickly as possible."

Q. To what did this telegram refer, Mr. Nisley, if you can recall?

A. It referred to the allocation orders that were required by the government for us to sell our material.

Q. Were you able to get the allocation orders to the Apex Smelting Company?

A. Well, I don't recall whether we were able to get one at that time. Later all the shipments from then on we received those allocation orders. [724]

(Testimony of Frank Nisley.)

Q. Well, isn't it a fact that prior to the time you received the allocation order to the Apex Smelting Company you received an allocation to sell to Vanadium Corporation of America and that was the sale that you made to the Vanadium Corporation of America?

A. I don't recall whether we received an allocation prior to that. We contacted them about selling this material to them and they said they could take it, that they had the allocation order.

Q. They had the allocation order and Apex Smelting didn't, isn't that correct?

A. Well, they could obtain it. I don't think that they had it, but that they could obtain it.

Q. Well, they did obtain it before you sold them, didn't they? A. Yes.

Q. I believe, Mr. Nisley, in your direct examination you testified that at a meeting with Mr. Burwell and Mr. Hill in October of 1942 you were told that Metals Reserve could not buy ore and sell it to you or subsidize a payment to the miners for you and then let you process it and dispose of it as you desired; isn't that the substance of your conversation with Mr. Burwell?

A. Well, Mr. Burwell told us that he wouldn't approve of it. The arrangement that he would approve was one where [725] we would receive the ore from Metals Reserve and return the cake back to them after processing and be paid a toll for the processing.

Q. Who was Orville Whitaker?

(Testimony of Frank Nisley.)

A. He was an independent engineer. He was hired, my understanding was, by Metals Reserve Company to umpire these disputes between mills.

Q. And he was not an employee of the United States Vanadium Company, was he?

A. Not to my understanding.

Q. Well, did Mr. Whitaker tell you the same thing that Mr. Burwell told you?

A. Mr. Whitaker first told me that he would recommend that that be done. At the meeting that was held in Mr. Whitaker's office between Mr. Burwell and Mr. Whitaker, myself and Mr. Gardner, at that time we arrived at the other arrangement. But Mr. Burwell had already suggested that we send this letter to DeWitt Smith, that it was the only thing he would follow through on, and we had no choice but to do that.

Q. Well, didn't Mr. Whitaker, as well, as Mr. Burwell, tell you that Metals Reserve cannot sell ore to anyone and that Metals Reserve was only able to buy ore and pay the milling cost to get the finished product?

A. Mr. Whitaker didn't tell us that. In fact, he recommended to the contrary. But at that meeting we had already [726] sent the telegram to Mr. DeWitt Smith and the matter wasn't discussed. It was just assumed that that was the way we were going to proceed, and it is the way we did.

Q. I show you a telegram dated October 9, 1942, from yourself to Continental Ore Corporation, and

(Testimony of Frank Nisley.)

ask you whether you can identify it (handing witness).

A. (Witness examining) Yes.

Mr. Archer: I will offer this as Defendant's Exhibit next in order.

Mr. Alioto: No objection.

The Clerk: Defendant Union's Exhibit 2-M admitted and filed in evidence.

(Telegram October 9, 1942, Nisley and Wilson to Continental Ore received in evidence and marked Defendant Union's Exhibit 2-M.)

Mr. Archer: Telegram dated October 9, 1942 to the Continental Ores Corporation from Frank Nisley, Jr., and Wilson:

"In Conference Whitaker Burwell Denver This Afternoon Was Told By Both Metals Reserve Cannot Sell Ore to Anyone Are Only Able to Buy Ore Pay Milling Costs Get Finished Product In Return Suggest You Contact DeWitt Smith Find Out If Product Will Go to Your Plant We are Told Metals Reserve Washington and WPB Will Decide Where Vanadium Acid Goes Sending Full Information Airmail." [727]

The Court: Who signed the telegram?

Mr. Archer: Mr. Nisley, your Honor.

Q. I show you now a telegram from Nisley and Wilson to Continental Ores Corporation dated October 16, 1942, and ask you whether you can identify that (handing witness).

A. (Witness examining) Yes.

Mr. Alioto: No objection.

(Testimony of Frank Nisley.)

Mr. Archer: Offer this as Defendant's Exhibit next in order.

The Clerk: Defendant Union Exhibit 2-N admitted and filed in evidence.

(Telegram October 16, 1942, Nisley and Wilson to Continental Ores received in evidence and marked Defendant Union's Exhibit 2-N.)

Mr. Archer: This is dated October 16, 1942 from Nisley and Wilson to Continental Ores Corporation.

"In Reference Your Letter We Have Been Attempting to Get Our Material Allocated to You. Local Metals Reserve Officials State Entire Problem of Allocation Up to WPB and Metals Reserve, Washington. Our Operating Data Together With Mr. Whitaker's and Mr. Burwell's Recommendations Airmailed to Washington Tuesday October 13. We Will Wire Mr. Hatch and DeWitt Smith Tomorrow Asking Them to Allocate Our Material to You. We Will Do Everything We Can to Help. Letter Being Sent Airmail. We Will Ship About 5,000 Pounds End [728] This Week. Please Call On Us If We Can Help The Situation In Any Way."

Q. Who was Mr. Hatch, Mr. Nisley?

A. Franklin Hatch was with the War Production Board in Washington.

Q. And Mr. DeWitt Smith?

A. Was with Metals Reserve Company in Washington.

The Court: Was there any way now that you

(Testimony of Frank Nisley.)

could sell this product to the plaintiff Continental Ore without the approval of the Washington authorities?

A. No, your Honor. The material had to be allocated to them, but they had been receiving those regularly up to that time. Our material had been —we had been able to continue shipping to them.

Q. (By The Court): Well, if there was any change in the manner of shipping, was that because of orders of the Washington Authority?

A. The War Production Board, your Honor, had issued these allocation orders on these shipments, correct.

Q. And in this case did they issue an order?

A. I don't know. Our material—we had to deliver our materials to the United States Vanadium. Later on it was out of our hands. Prior to that time we had to have these allocation orders in our hands before we could ship to them, but after we made the toll agreement with United States Vanadium as agents for Metals Reserve, our material was delivered to their warehouse and they took care of the situation from there on.

Q. They paid you for the ore?

A. Yes, your Honor, they paid us a treatment charge for treating the ore.

Q. (By Mr. Archer): Mr. Nisley, I believe you stated in your direct testimony that the toll agreement was approved sometime in November. In other words, the Metals Reserve approved the principle of having a toll agreement but the final agree-

(Testimony of Frank Nisley.)

ment was not executed until the last of January or the first of February in 1943.

A. That is correct. They approved the substance of it in October or November. I remember that we had—had some provisions in the original toll agreement, and I think the [730] final toll agreement was signed or was stated by the United States Vanadium on January 26 and actually delivered to us about February 3rd or February 4th.

Q. What I was getting at is, actually a proposed form of toll agreement was sent to you directly from Washington around the end of November, 1942, and you and your attorney went over to see John Hill at the Metals Reserve office and you sat down, all three of you together, went over it and made the changes in it, didn't you?

A. That is correct.

Q. And then it had to go back through the mill again, through the lawyers and back to Washington. Then it came out again, and after you received it, even in the early part of January, you had to make another revision to it right away regarding analysis, and there is a specific indemnity or exculpatory provision. Do you recall that amendment that was added afterwards? A. Yes.

Q. I believe you testified that although this was signed in the early part of February, 1943, you did not get into actual operations until the end of March or the first of April, 1943; is that correct?

A. That is correct.

(Testimony of Frank Nisley.)

Q. Prior to getting into operation, you more or less did some fixing up of your plant, did you not?

A. Well, there were several things. The Metals Reserve or U. S. Vanadium as agents for Metals Reserve, required that we completely clean up all the ore that we had in the plant, that we clean out our fusing furnace, which was quite a task. We had to remove brick, take the vanadium out of it and replace them with new brick. We had to clean out our tanks, process everything we had, and get rid of the material that was ours. So we had a clean plant to start with. It took quite a little time to do that, and also we did install some additional equipment.

Q. And you obtained a $5,000 loan from the Reconstruction Finance Corporation, did you not?

A. That is correct.

Q. And that loan was not made until after the toll agreement was approved, was it?

A. No, we had been dealing with them but they would not talk to us about final arrangements until after the toll agreement had been actually signed.

Q. After you had cleaned up the plant and put in this, or made these changes or additions in equipment, was your plant in better condition than it had been in the fall of 1942? A. Yes.

Q. I show you now two telegrams, one dated November 27, 1942, from yourself to Continental Ore, and a reply dated November 28th from Continental Ore to you, and ask you whether [732] you can identify those telegrams. A. Yes.

(Testimony of Frank Nisley.)

Mr. Archer: I offer those telegrams as one exhibit, as defendants' exhibit next in order.

Mr. Alioto: No objection.

(The telegrams referred to were thereupon received in evidence as Defendant U's Exhibit 2-O.)

Mr. Archer: The first is dated November 27, 1942, from Mr. Nisley to Continental Ore Company:

"Notice From Telegram Term 'Ground Acid' Material For Shipment Is Crushed As Small In Size As Past Shipment Ore Two. Please Wire Us Immediately If This Size Is Not Acceptable. Otherwise Material Will Be Shipped Tomrrow. Metals Reserve Wired Us Our Contract Passed Final Approval and Placed In Mail November 25. Local Metals Reserve to Commence Supply Ore Immediately Under Terms of Contract."

November 28, 1942, from Continental Ore Company to Nisley and Wilson Vanadium Mill:

"Fused Acid Crushed As Recent Shipments Satisfactory. Please Ship Promptly."

Q. Mr. Nisley, was the Continental Ore Company satisfied with your output, the material which you produced at the Nisley and Wilson mill?

A. Yes. There were some matters coming up at that time. [733] We made fused vanadic acid. As the final step it ran out of the fusing furnace as a liquid, and we caught it in gobs and we had to crush that material, and they were raising the question that the size that we were shipping, the size of the finished cake might be a little large, and we

(Testimony of Frank Nisley.)

had only a small crusher and we had shut it down so that it would crush as fine as we could. However, by doing that it cut the capacity of the crusher down. It was quite a task to make it. Some of the other plants at that time had put in what is called a flaking machine, which is merely a way of making this finished product in very fine flakes, and we had not installed such equipment yet because of the cost of it. However, later during our Metals Reserve operation we found a way to do this with a very cheap machine. We actually built one, put it in operation, and started delivering some kind of flake product to the Metals Reserve Company. It is more desirable than the crushed vanadium apparently.

The Court: What was your question?

Mr. Archer: I was just asking him whether this product was acceptable and I think the witness has answered it.

The Court: Very well.

Q. (By Mr. Archer): I now show you a copy of letter from Mr. Leir to Nisley & Wilson dated April 3, 1943, and ask you whether you can identify that.

A. Yes. This refers to the same matter that was under [734] discussion at the time.

Mr. Archer: I offer this letter dated April 3, 1943, from Mr. Leir to Nisley & Wilson as defendants' exhibit next in order.

Mr. Alioto: No objection.

(Testimony of Frank Nisley.)

(The letter referred to was thereupon received in evidence as Defendant U's Exhibit 2-P.)

Mr. Archer: Mr. Leir writes a letter to Mr. Nisley dated April 3, 1943, "Re: Vanadium Concentrates."

Q. By "Vanadium Concentrates" we are still referring to the fused black oxide, are we not?

A. That is correct.

Mr. Archer: (Reading.)

"You probably have received a copy of the allocation in our favor for 10,000 lbs of contained metallic vanadium (17,843 lbs. contained V_2O_5) in concentrates which was granted to us by the War Production Board out of your production.

"We presume that you will receive instructions from the Metals Reserve Company through the U. S. Vanadium Corp. to ship your entire production to us to the extent of 10,000 lbs. of V contained and we hope that you will be able to step up your production to reach this figure in the near future because this first [735] allocation will be duplicated regularly from now on.

"We have changed our production somewhat and now need the concentrates in the form of ground materials, maximum 10 mesh and minimum 80 mesh.

"That means that the material should not contain grains above 10 mesh and should not be finer than 80 mesh. It would, of course, be of great help to us if you could grind this material to conform

(Testimony of Frank Nisley.)

to these specifications. If you do not have any such grinding equipment at present, please look around and try to obtain this simple machinery at the earliest possible moment. In the meantime, grind the concentrates as finely as possible.

"Of course, for these shipments to us you will use the drums we sent you.

"We are glad that our combined efforts finally were successful in diverting your production to us which will certainly prove to be very important after the present emergency has passed."

Q. I now show you a letter dated May 25, 1943, from yourself to Continental Ore Company, an original, and ask you whether you can identify it.

A. Yes.

Mr. Archer: As defendants' exhibit next in order I offer a letter dated May 25, 1943, from Frank Nisley, Jr., [736] to Continental Ore Company.

Mr. Alioto: No objection.

(The document referred to was thereupon received in evidence as Defendant U's Exhibit 2-Q.)

Mr. Archer: This is from Frank Nisley, Jr., to Continental Ore Company, dated May 25, 1943:

"Dear Sir:

"We are writing you concerning fused acid which we have delivered to the Metals Reserve Company in Grand Junction. Mr. Hill of the M.R.C.——"

Q. "M.R.C." refers to Metals Reserve Company?

A. Metals Reserve Company, yes.

Mr. Archer: (Reading.) "Mr. Hill of the M.R.C.

(Testimony of Frank Nisley.)

told us that they were to furnish you with acid from our production and that we could start putting the fused product in your containers as far as he was concerned as per your instructions.

"We have delivered to the M.R.C. warehouse in Grand Junction to date 10,005.5 pounds of fused acid net. 7518.7 pounds of this amount, less samples, has been delivered to them in your drums. We are now fusing out the last 15 days red and have on hand only enough drums to about finish out this run."

Q. What does "red" refer to?

A. That refers to the red cake. Our fusing plant was [737] much larger than our capacity of output on red cake and we started up and ran out of mash and shut it down.

Q. Mr. Nisley, to get back to the toll agreement, the agreement which is in evidence is dated as of the 26th day of January, 1943. The term of it reads:

"This agreement shall commence on the day when sufficient ore to commence milling operations shall be delivered by the agent to lessees——"

The lessees referred to you?

A. Yes, sir.

Q. "——and shall continue for a period of 90 days from that day or until this agreement is cancelled, but in no event beyond July 28, 1943, unless a subsequent agreement is entered into between the parties."

Was a subsequent agreement entered into?

A. Yes, it was.

(Testimony of Frank Nisley.)

Q. On what date did that terminate?

A. I don't recall. As I remember it, it ran until we were notified 30 days in advance of cancellation. I don't remember a set date on it.

Q. You do not remember whether it was subject to cancellation or whether it terminated on the first day of January, 1944?

A. I am not positive. It could have terminated on January 1st.

Q. Before going to that, in order to have your agreement [738] extended, do you recall that you had to make a report as to certain of your costs of operation up to date to the Metals Reserve after you had operated a few months?

A. Yes, we had to make reports to the Metals Reserve monthly.

Q. Do you recall Paige Edwards? A. I do.

Q. What was Paige Edwards doing at that time?

A. Paige Edwards was working under, I believe, the direct supervision of Orville Whitaker for Metals Reserve.

Q. I now hand you a letter dated July 9, 1943, from yourself, signed Frank Nisley, Jr., to Mr. Paige Edwards, to which is attached a copy of a letter dated July 8, 1943, signed by yourself to John Hill, to which is attached a sheet entitled "Cost," and ask you whether you can identify that—a table of costs, I should say. A. Yes. [739]

Q. Do you recall submitting this to Metals Reserve? A. Yes.

Q. And it was on the basis of this that your toll

(Testimony of Frank Nisley.)

agreement was extended, is that correct, or subsequent to this your toll agreement——

A. Anyway, the toll agreement was extended, yes.

Mr. Archer: As Defendant's Exhibit next in order, I offer a letter dated July 9, 1943, from Nisley and Wilson to Paige Edwards, together with enclosures.

Mr. Alioto: No objection.

The Clerk: Defendant Union's Exhibit 2-R admitted and filed in evidence.

(Whereupon, letter dated 7/9/43, Nisley to Page Edwards, with enclosures, copy of letter 7/8/43, Nisley to John Hill, and statement of costs, was received in evidence and marked Defendant Union's Exhibit 2-R.)

[See Book of Exhibits.]

Mr. Archer: (Reading):

"Dear Mr. Edwards:

"Enclosed please find copies of letters sent to John Hill regarding continuation of the Toll Agreement. We have asked for an extension of the present arrangement."

First, letter July 8, 1943, from Frank Nisley, Jr., to John Hill:

"Dear Mr. Hill: [740]

"We are submitting a report of our costs per pound of V_2O_5 produced during the month of June which we think is a representative cost of our operation. These costs very clearly compare with the

(Testimony of Frank Nisley.)

costs which we presented to Mr. Burwell and Mr. Whitaker at the time the Toll Agreement was drawn up.

"Although we have not been able to reach our capacity due to explanation shown in letter enclosed, we are satisfied to continue under the same terms and conditions as specified in the Toll Agreement dated January 26, 1943, which we are now operating under. We feel that the extension of the Toll Agreement should continue the operation for as long as the Metals Reserve Company is purchasing ores in the Gateway District.

"We would appreciate your immediate attention to this matter."

Then your statement of costs, which you state to be representative, shows costs of 80.52 cents per pound, V_2O_5, do they not, Mr. Nisley? (Handing to witness.)

A. (Witness examining): Yes. At the time we started under the metal reserve operation, of course we had put in some equipment and we found that in addition to the roasting equipment that we had to install another complete set of leaching lines [741] to the tanks, to our leaching equipment. We were being held up in getting out leaching through, and we had to buy pipe and valves and things in order to complete this installation. We had explained to Mr. Burwell and Mr. Whitaker at our meeting in Denver that the more ore we put through the plant —in other words—the larger the capacity, the lower would be our costs on production.

(Testimony of Frank Nisley.)

Q. Your costs in June were 80c a pound, approximately, weren't they?

A. Apparently so, from that letter. I think that's correct.

Q. Now, Mr. Nisley, this was just the plant costs and does not include the cost of the ore, does it? Do you want to take a look at it?

A. No, that's correct. That's plant costs, management, profit and so on.

Mr. Alioto: The letter makes reference to an enclosed letter. Do you have it?

Mr. Archer: That would be the next exhibit.

Mr. Alioto: Very well.

Mr. Archer: And now, do you know what recovery you were getting at about this time from your plant, your operation?

A. Well, to explain that, I will have to go back into the method that the Metals Reserve used to determine recoveries. Now the plant itself, our own chemists and our own staff, [742] figured the recovery based upon the head or the ore that we received from Metals Reserve against the tailing that we were taking out at the end, at the end of the process, and the difference representing the material, the vanadium, we were taking out of the ore would be recoverable vanadium. The Metals Reserve Company or, rather, John Hill of the United States Vanadium Corporation had us clean out the plant entirely and start from scratch. And we had to, of course, fill up our ore bins, fill up our roasters, fill up our leaching tanks, fill up our solution tanks.

We had quite a loss in the fusing furnace. This

(Testimony of Frank Nisley.)

material, as you melt it, first runs into the brick and fills the brick in your fusing furnace. When that is once filled, then the material begins to flow out of your furnace. That material is tied up all during the time you are operating until you clean it out. So we had quite an inventory there in the plant itself.

As a matter of fact, the first month that we operated they called us in and Mr. Hill said, "We are going to have to shut your plant down because the amount of ore that was delivered to the plant and the amount of fused vanadic acid that you delivered back to us does not jibe. You do not have 70% recovery."

And I showed him that — he knew this himself, being an engineer—that it was impossible for a person to accept ore and deliver back 70% of the material when we had to fill the [743] melt circuit.

He said it didn't make any difference, we had to shut the plant down.

Paige Edwards happened to be there that day, and Paige Edwards was called into the conference, and Paige asked Mr. Hill, he said, "Exactly how did you handle it at Durango?"

And Mr. Hill said, "At Durango we filled the circuit up completely, first, then we started figuring recoveries from that point on."

Mr. Edwards said, "Then why don't you treat these fellows exactly the same way?" And so Mr. Hill then appointed Charles Yetters to go down to the plant and make a check of these inventories that were carried in the plant continuously. And

(Testimony of Frank Nisley.)

from there on, these inventories were made.

However, the recoveries that you are talking about, actually when they talk recovery they were talking fused oxide against the vanadium in the heads to start with.

At the time we closed down, in January or December 31 of '43, actually in January we delivered to Metals Reserve some eight or ten thousand pounds of material that we had tied up in the plant during that period, which added to that recovery. If it would have been counted, the recovery would have been much higher than these figures actually show that they're talking about.

Q. I don't think these figures show recovery here. I was [744] asking you whether you recalled what your recovery was.

A. Yes, the recovery was running between, as I recall, 70 and 75%, according to our records.

Q. I believe you stated, Mr. Nisley, that your production, according to that sheet, are about 80c per pound V_2O_5, isn't that what that statement shows?

A. Yes, that was about the price Metals Reserve Company was paying us.

Q. Now, when you talk about an 80% or 70%, 75% recovery, what you mean by that — don't you mean that you don't get all the vanadium out of the ore, that you buy the ore for so much a pound, a certain percentage in it, but it goes through your plant and some of it is lost in the process, in other words?

A. That's correct.

(Testimony of Frank Nisley.)

Q. So you get only 75% or 70 to 75%.

Well, now, I believe you testified that prior to June of 1942 you were paying 21c a pound for ore, isn't that correct? A. That's correct.

Q. Now, at 70% recovery, that would mean the ore was costing you really 31c, wouldn't it?

A. Approximately.

Q. So your costs on 21c ore—this is 21c ore—we have to divide it by seven-tenths because we only have about 70% recovery. So your costs on that basis were about $1.11 a pound, isn't that correct?

A. Well, what period are you talking about?

Q. I'm talking about—I am just saying, assuming you got ore—this is your 80c figure in June of 1943, and assuming that you were operating independently and paying 21c for ore, your costs would have been $1.11, wouldn't they?

A. You are trying to get two things entirely different. If you assume what you are talking about, that is correct.

Q. That is what I say, you are operating under a toll agreement, it didn't make any difference to you what the ore cost, did it, because Metals Reserve was buying it and you were processing it and they would take the output. So the only figure we have then is the 80c figure from actual operation. These prices here are assumed prices.

A. That's correct.

Q. That's right. But assuming that price for ore, your output would have cost $1.11 a pound.

Now, assuming that your production costs stayed the same, you will recall that when the toll agree-

(Testimony of Frank Nisley.)

ment was terminated the price of ore had gone up to 31c, had it not?

A. At the time our toll agreement was cancelled, Metals Reserve Company was still buying the ore.

Q. And you said that they were paying a 10c subsidy, did you not?

A. They were paying different miners different prices.

Q. I thought you said a 10c subsidy. [746]

A. Originally that was true, but subsequent to that they made different deals with different miners, and they paid each miner different prices.

Q. Was it above 21c?

A. Well, I wasn't familiar with that because we weren't buying ore at that time.

Q. Well, let me put it this way: Could you have paid 31c for ore and sold your oxide at the ceiling price of $1.10, assuming your production costs at 80c a pound?

A. Well, this 80c figure you're talking about, Mr. Archer, was made in June at the very onset of our operation under the toll agreement. Later, our plant was producing a good deal more vanadium and our costs were considerably reduced in the later operation over what it was the first few months.

Q. But at the 80c costs, you could not buy ore at 31c and sell in a market at which the ceiling price was $1.10, could you?

A. I think we could. It would have reduced our profit. You must remember that the 80c contained the profit that we were making at the time. So it

(Testimony of Frank Nisley.)

would only have been a matter of one cent—yes, we could have operated.

Q. You mean at the 21c figure or the 31c?

A. The 31c figure.

Q. Well, what would have been your costs if you had been buying ore at 31c with the 70% recovery, what would that give you? That would give you about 44c ore cost, wouldn't it? [747]

A. Well, if the recovery stayed at 70%, that would be true.

Q. Well, you want to make it 80%? It's going to be about 3.9—39c, isn't it? So 39c ore cost with the production costs of 80c, you're $1.19, aren't you?

A. That's correct.

Q. Well, as a matter of fact, the difficulty out on the Colorado Plateau was that the ceiling price for vanadium oxide under contract sales had been set at $1.10 since 1939 and wasn't increased until well after the war, while the price of ore went way beyond the 1939 level?

A. I don't believe that is correct, Mr. Archer. To my knowledge, the ceiling price of vanadium wasn't set at $1.10. That was the established market price.

Q. Oh, you think you could have sold — after price controls went in, you think you could have sold vanadium oxide at over $1.10 on a contract basis to Mr. Leir?

A. After the ceiling prices went in, of course that would be set at $1.10.

Q. That is what I mean.

(Testimony of Frank Nisley.)

A. That wasn't true in 1939.

Q. That's right. It had, of course, in 1939—the market price, that is what I'm getting at—the market price was $1.10, or whatever it was in '39, but, in any event, starting with at least by the time you started operating at Gateway, soon after that price controls went in and the price was set at $1.10 for oxide, and that continued throughout the war. [748]

Meanwhile, in '42 the price of ore jumped 40c a pound, isn't that correct?

A. Metals Reserve Company—the United States Vanadium people were buying the ore at the increased price, that is true.

Q. Metals Reserve Company or United States Vanadium?

A. United States Vanadium Corporation.

Q. As agent for Metals Reserve?

A. For Metals Reserve.

Q. I now show you letter referred to in the last exhibit, being letter dated July 8, 1943, from Frank Nisley, Jr., to John Hill, and ask you whether you can identify that. (Handing to witness.)

A. (Witness examining): I certainly can. This refers to situations we were having in the mill. It enters into this picture here a little bit. I would like to say that these costs that we were—that were being shown here — we enlarged the plant, we of course had to hire a few more men; we decided we needed housing for those men, and that is what this letter refers to, the fact that we had applied to the

(Testimony of Frank Nisley.)

Government for housing which they were building at Naturita and Uravan.

And some of these costs that are reflected in this picture come out of that. We, for instance, just for an example, the war housing people said that they would put in housing for us if we would furnish water supply and do certain things that they required, and those things were done and those things are [749] reflected in this cost here, again, which after they were once done our costs would be dropped back down. [749-A]

We actually put in an order for that housing.

Q. Isn't that typical though of an operation out on the field and what you have to do?

A. That is typical, but that cost does not continue after you get your housing. Then you are set and your costs drop down. It is an additional cost that has to be reflected in your costs at the time it is put in.

Mr. Archer: As Defendant's Exhibit next in order I offer a letter dated July 8th, 1943, from Frank Nisley, Jr., to John Hill.

Mr. Alioto: No objection.

(Letter July 8, 1943, Nisley to Hill, was thereupon received in evidence and marked Defendant Union's Exhibit 2-S.)

Mr. Archer: This is dated July 8th, 1943. This is a part of the last group of letters which I read from Frank Nisley to John Hill:

(Reading)

(Testimony of Frank Nisley.)

"Dear Mr. Hill: On November 25th, 1942 we received a telegram that the Toll Agreement had been approved. We realized at that time that we must have some housing facilities in order to operate at a twenty ton capacity. We immediately applied for houses through the National Housing program.

"During the past three months we have not been [750] able to hold a full crew at the mill due to the housing situation. Because we have not been able to keep a full crew, we have been unable to get our tonnage near the twenty ton daily capacity which is our mill capacity. Although we have reached the twenty ton mark some days we were not able to hold it at that figure due to lack of labor. Many men applying for work would not stay here because of the fact that there are no available houses or places to stay.

"We have just received the following letter from Mr. Picton of the National Housing Agency:

"'Mr. Harry C. Gardner

St. Regis Hotel

Grand Junction, Colorado

'Dear Mr. Gardner:'"

Q. Who was Mr. Harry C. Gardner?

A. Mr. Gardner had taken over the assets or the plant at Gateway and he was—we might consider him a partner in this operation.

Q. A partner of yours?

A. Yes. He owned the plant and our contract, our lease contract was from him.

Mr. Archer: (Resuming reading)

(Testimony of Frank Nisley.)

"'We have just received notice from Washington that new public construction for 23 families [751] and 6 single persons has been approved for Gateway, Colorado.

'Sincerely yours,

'John M. Picton

'Senior Housing Representative.'

"This program will take care of our labor situation. As soon as we can obtain a full crew with housing facilities for them and their families, we can reach the mill capacity without trouble."

Q. Now, Mr. Nisley, you were in the courtroom the other day, were you not, when Mr. Burwell testified? A. I was.

Q. You were here for most of his testimony, weren't you? A. Yes.

Q. And I believe you already testified that you were supplying your vanadium oxide to the Apex Smelting Company, which was making ferro-vanadium out of it, is that correct?

A. That is correct.

Q. Did you hear Mr. Burwell testify that in calculating the costs of ferro-vanadium, because there are two pounds of oxide that go into each pound of ferro-vanadium, you more or less double the oxide cost and add a process cost of around 50 cents, what he called his kitchen arithmetic?

A. I heard that.

Q. Let us take out your 21-cent ore price figure, 20 per [752] cent recovery, and your June costs of 80 cents. If you double your oxide cost you come to

(Testimony of Frank Nisley.)

$2.22, which is, the first part of it being kitchen arithmetic, and a 50-cent cost for conversion to ferro-vanadium, gives you $2.72 cost, does it not?

A. That is correct.

Q. Do you recall that Mr. Burwell testified that in his opinion the price of ferro-vanadium should have been reduced from the $2.70, $2.80 and $2.90 to $2.25? A. Yes.

Q. If the price of ferro-vanadium had been $2.25, so that the persons to whom you were selling it would have had a $2.25 market, could they have bought your oxide at $1.11 and operated at a profit, assuming Mr. Burwell's assumptions?

A. I believe Mr. Burwell also testified that the cost of the vanadium produced at other plants—not Gateway but Durango, was also above $1.10 a pound to Metals Reserve Company?

Q. You are exactly right.

A. So I can see no difference between our operation and that of Durango, Uravan or any place else.

Q. You are exactly right, so you could not buy at that price and sell and meet a market price of $2.25, could you?

Mr. Alioto: That is argumentative, if your Honor please, with a witness who is not in the ferro-vanadium business. It assumes a 50-cent cost of doing business. [753]

The Court: I think it is a proper question. Overruled.

A. Mr. Archer, from a practical standpoint, Metals Reserve Company was not selling it to these

(Testimony of Frank Nisley.)

concerns at $2.20 a pound or — you said a minute ago the selling price was $1.10 as far as Metals Reserve Company was concerned.

Q. That is correct.

A. So that anybody to whom the material was allocated during that period would pay the $1.10, isn't that right?

Q. That is correct.

A. So I don't see where it has any bearing on this question.

Q. What I am getting at is: Assuming that your suppliers, if you were operating in a private market, selling at $1.11——

A. They couldn't obtain the material except through the War Production Board and the Metals Reserve Company. They had to buy it through them. We couldn't sell it to them, even prior to this, unless the War Production Board allowed us to do so.

Q. You couldn't sell it unless the War Production Board allocated it after December 1, 1941, could you?

A. I don't remember just when they——

Q. That was the telegram I just showed you.

A. Whatever that time was, that is true.

Q. My point is, though, assuming the market price of [754] the ferro-vanadium had been at Mr. Burwell's figure of $2.25, and assuming Mr. Burwell's kitchen arithmetic is correct, could a person have bought your product at either the $1.10 or

(Testimony of Frank Nisley.)

$1.11 figure there on the board and manufactured and sold ferro-vanadium at $2.25?

Mr. Alioto: Your Honor, this witness is not in the ferro-vanadium field. He is not competent to answer that.

The Court: Overruled. If you have an opinion I think you can so state.

The Witness: My opinion is, your Honor, if you can't buy the material from any source other than the Metals Reserve Company and the War Production Board, and the price was $1.10 a pound, it is irrelevant. It doesn't make any difference what these costs are here. If I was in the market buying it, I could buy it at $1.10 a pound, regardless of what the cost was at the time.

Q. (By Mr. Archer): What you are really saying, is it not, Mr. Nisley, is that during this period there just was not a free market because of the governmental controls? A. That is true.

Q. (By the Court): About how much time did that cover? From 1941 to 1944?

Mr. Archer: I think Mr. Nisley has testified that he finished on December 31st, 1943.

Q. (By the Court): During that period of time, then, [755] there wasn't what you would call a free market?

A. Your Honor, we were producing after Metals Reserve Company started purchasing ore. However, our ore supply is tied only to the Gateway Alloy Company that owned these mines, and we were sell-

(Testimony of Frank Nisley.)

ing our product at that time to the Continental Ore Company.

Q. What I am getting at is, there could not be a sale of this material during this war period except with the consent of the War Production Board or the governmental agencies?

A. That is true, your Honor. The War Production Board had to allocate that material to some purchaser.

Mr. Archer: Does your Honor want to take a recess?

The Court: Yes. We will take a ten-minute recess.

(Recess.) [756]

Mr. Archer: Your Honor, I wanted to read one paragraph from the original amendment to the toll agreement which was signed by Mr. Van Fleet as Vice-President, United States Vanadium Corporation, as agent for Metals Reserve Company, Frank Nisley and Hays C. Wilson, a partnership, doing business as Nisley and Wilson, by Mr. Nisley and Hays C. Wilson. Article 16—an additional Article 16 was added, as follows:

"In making this agreement, United States Vanadium Corporation is acting solely in its capacity as agent for Metals Reserve Company and no liability or responsibility shall attach to United States Vanadium Corporation in its individual capacity by reason of executing this agreement, or by reason of any matter or thing arising hereunder."

Q. Now, Mr. Nisley, I have here a copy of the

(Testimony of Frank Nisley.)

supplemental agreement which was entered into as of July 6, 1943, signed by Mr. Wilson and again by Mr. Van Fleet, and ask you to identify that (handing witness).

A. (Witness examining): That is the supplemental agreement.

Mr. Archer: Offer the agreement dated July 6, 1943, supplemental agreement, as Defendant's Exhibit next in order.

Mr. Alioto: No objection.

The Clerk: Defendant Union's Exhibit 2-T admitted and filed in evidence. [757]

(Supplemental agreement July 6, 1943, received in evidence and marked Defendant Union's Exhibit 2-T.)

Mr. Archer: Paragraph I states:

"Extension of term. Subject to the condition that on or before July 28, 1943, lessee shall submit to agent written evidence satisfactory to agent's counsel that H. I. Gardner has, prior to July 28, 1943, exercised his option to purchase the mill site occupied by the Gateway plant referred to in said toll agreement, and has thereby or otherwise acquired valid, legal and equitable title to said mill site, the term of said toll agreement is hereby extended from July 1, 1943 to 12:00 o'clock noon, January 1, 1944."

Q. Now, Mr. Gardner did exercise his option to purchase the mill site? A. He did.

Q. And it was extended to January 1, 1944, pursuant to this agreement? A. That's correct.

Q. I show you now a letter dated December 13,

(Testimony of Frank Nisley.)

1943, from yourself to Mr. Leir (handing witness) and ask you whether you can identify it.

A. (Witness examining): That is a letter we wrote to Mr. Leir. [758]

Mr. Archer: Offer as Defendant's Exhibit next in order letter dated December 13, 1943 from Frank Nisley, Jr., to Henry Leir.

Mr. Alioto: We have no objection.

The Clerk: Defendant Union's Exhibit 2-U admitted and filed into evidence.

(Letter dated December 13, 1943, from Frank Nisley, Jr. to Henry Leir, received in evidence and marked Defendant Union's Exhibit 2-U.) [See Book of Exhibits.]

Q. (By Mr. Archer): This was just prior to the end of the toll agreement, was it not?

A. That's correct.

Mr. Archer: (Reading)

"Dear Mr. Leir:

"We have been informed by the United States Vanadium Corporation, as agents for Metals Reserve Company, that the present contract with them will not be renewed after the expiration date of January 1, 1944. The M.R.C."——

that refers to Metals Reserve Company, doesn't it?

A. That's right.

Mr. Archer: (Reading)

"The M.R.C. have about 3500 tons of raw ore stockpiled at our plant. We do not know yet what will be done with it. The trend in this section is for Metals

(Testimony of Frank Nisley.)

[759] Reserve Company to relinquish ore-buying contracts and drop out of the ore-buying business. Control of production is to be returned to individual companies. The most serious problem which will arise out of the change of control, as far as the production of vanadium is concerned, is the buying of vanadium inventories. The M.R.C. have raised the price of ore to such a high level that it will make the cost of the finished product 20 cents over the old price of $1.10. It will not be possible, at the present time, at least, to buy the crude ore at the prices existing before the M.R.C. began buying ore. The M.R.C. raised the raw ore price from the old level of 21 cents to 31 cents per pound of contained V_2O_5. The hauling price was also raised on the ore. The raises will amount to about 20 cents per pound of recovered vanadium pentoxide. This raise can be readjusted in time, but at present labor is scarce and also costs more per ton of ore produced. The raise in ore price is the only serious problem which we see in the way of production.

"We would appreciate any information which you may be able to give us concerning a market for the vanadium after the first of the year, and also the price. We would like to formulate plans as soon [760] as possible for the change in operation.

"We appreciate very much your past cooperation and sincerely hope that plans can be made for an operation which will be of mutual benefit."

Q. Now, in December of 1943 you did not have

(Testimony of Frank Nisley.)

in your plant at Gateway an acid-leaching process for producing uranium oxide, did you?

A. No, we didn't. Well — let me modify that a little bit. In our process we used a mild leach. We didn't use as strong an acid leach as you're probably referring to there, in other words, one that would completely take out the uranium that was in the ore.

Q. Well, your plant wasn't equipped to produce uranium oxide, was it?

A. Only in what we recovered in sludge, that is correct.

Q. Those are the sludges, I believe, which Mr. Burwell testified were processed at Durango for the Army?

A. No, we made a small concentration of sludge but we didn't do it on the scale——

Q. Didn't those sludges belong to M.R.C.?

A. They did.

Q. And didn't M.R.C. ship those down to Durango for processing at the Army plant?

A. I presume that those were picked up with the tailings. We drained the sludges out in the tailing pile, keeping them [761] separate from the regular tailings.

Q. Didn't Mr. Leir suggest to you at this time that you put in the machinery for a process which was necessary for processing uranium oxide?

A. I believe he did. I know we did investigate the possibility of doing that. We, in fact, were given permission to look through the plant at Uravan, and we later made a study of that through a company

(Testimony of Frank Nisley.)

at Salt Lake City as to what it would take to put that sort of a thing in. But in talking with Mr. Burwell he told us that since we were under this toll agreement that that—he was at that time running the Army research program, the Army research program——

Q. You mean the Manhattan Project?

A. It was part of the Manhattan Project, yes. He told us that since the material belonged to the Metals Reserve Company and that our toll agreement was going to be up right away, that it wouldn't be feasible for us to put that in, for those tailings.

Q. I now show you a telegram dated April 4, 1944, from yourself to Continental Ore Company, and ask you whether you can identify it (handing witness).

A. (Witness examining): I believe that is a copy of a wire that we sent to Continental Ore Company.

Mr. Archer: As Defendant's Exhibit next in order, I offer the telegram dated April 4, 1944, from Frank Nisley, Jr., [762] to Continental Ore Company.

Mr. Alioto: No objection.

The Clerk: Defendant Union's Exhibit 2-V admitted and filed into evidence.

(Telegram April 4, 1944, Nisley to Continental Ore Company received in evidence and marked Defendant Union's Exhibit 2-V.)

(Testimony of Frank Nisley.)

Q. (By Mr. Archer): This was after the termination of the toll agreement and just actually prior to the time you went in the Navy?

A. I believe that's correct.

Mr. Archer: (Reading)

Telegram from Frank Nisley, Jr., to H. J. Leir, Continental Ore Company:

"Refer Our Letter March 24 Concerning Outlet For 300,000 Pounds Vanadium at Rate 600 Pounds Per Day. If You Cannot Handle Above Amount at Present, Please Wire Us Amount You Could Handle."

Q. I now show you, Mr. Nisley, Mr. Leir's reply dated April 4, 1944, to you, and ask you whether you can identify that (handing witness).

A. (Witness examining): Yes.

Mr. Archer: Offer as Defendant's Exhibit next in order telegram from Continental Ore Company to Frank Nisley, Jr., dated April 4, 1944. [763]

The Clerk: Defendant Union's Exhibit 2-W admitted and filed into evidence.

(Telegram April 4, 1944, Continental Ore Company to Frank Nisley, Jr., received in evidence and marked Defendant Union's Exhibit 2-W.)

Mr. Archer: (Reading) Mr. Frank Nisley, Jr.

"Re Tel. Will Give You All Possible Cooperation and Wire You in Few Days What Monthly Quantities Can Take From You. Incidentally Since Future Operations Will Be Under New Name, Sug-

(Testimony of Frank Nisley.)

gest you Settle Old Account Mr. Pleasants. Regards."

Q. What did the "* * * old account Mr. Pleasants" refer to?

A. We had been trying to negotiate for the purchase of the stockpile at Gateway and we had hired Mr. Pleasants to represent us in Washington in these negotiations.

Q. You mean he was negotiating with M.R.C.?

A. He had been negotiating, I believe, with M.R.C., and also in regards to—we were also—. This goes back quite a little way. We had started in, at the time the toll agreement was to expire, we were objecting to the fact that they were shutting our plant down without shutting the other plants down, which they told us they intended to do. I believe you read Mr. Hill's — some correspondence from him a short time ago in which he had told us that all the plants would be shut down, that the mining contracts would be relinquished and we [764] would be allowed to go back into an independent situation again.

Well, that wasn't carried out that way. We were shut down but the other plants were not shut down; they were still operating and they were still buying ore in the area. So we were sitting there with a plant without — we couldn't buy ore from other sources. We had been contesting that, also.

Q. And you sent Mr. Pleasants to Washington to see Mr. Hatch of the War Production Board, and to see Senator Johnson, isn't that correct?

(Testimony of Frank Nisley.)

A. I think that's correct. [764-A]

Q. So he had been unsuccessful?

A. That is correct.

Q. I now show you a copy of a letter dated April 14, 1944, from Henry J. Leir to yourself and ask you whether you can identify that.

The Court: Did you read the last exhibit?

Mr. Archer: I guess I did. That was Mr. Leir's reply to this. I will read it again while Mr. Nisley is looking at that. This is Exhibit U-2-W

(The exhibit was re-read.)

The Witness: I believe that is a copy of the letter.

Mr. Archer: These came from Mr. Leir's files, so I don't have the originals.

Mr. Alioto: No objection.

Mr. Archer: As defendants' exhibit next in order I offer a letter dated April 14, 1944, from Henry J. Leir to Frank Nisley, Jr.

(The letter referred to was thereupon received in evidence as Defendant U's Exhibit 2-X.)

Mr. Archer: (Reading.)

"Dear Mr. Nisley: Re: Vanadium.

"We wish to refer to your letter of March 24th and your wire of April 4th regarding resumption of your operations." [765]

Q. That is the April 4th telegram regarding 300,000 pounds of vanadium, is that correct?

A. I believe that is correct.

(Testimony of Frank Nisley.)

Mr. Archer: "While we cannot give you a definite answer today, we hope to do so sometime next week when we will wire you.

Very truly yours,

Continental Ore Company."

Q. I now show you a letter dated May 15, 1944, from yourself to Henry John Leir and ask you whether you can identify that. A. Yes.

Mr. Alioto: We have no objection.

Mr. Archer: As Defendants' exhibit next in order I offer a letter dated May 15, 1944, from Frank Nisley to Mr. Henry John Leir.

(The letter referred to was then received in evidence and marked Defendant U's Exhibit 2-Y.)

[See Book of Exhibits.]

Mr. Archer: (Reading) "Dear Mr. Leir:

"Since I have been called to service in the Navy and leave day after tomorrow, I thought it best to write you a note regarding the status of the mill."

Mr. Alioto: What is the date on that?

Mr. Archer: May 15, 1944. This is following the telegram. [766]

"For the time being Mr. Wilson, Mr. Gardner and myself have decided to leave the mill intact pending future developments. Mr. Wilson intends to go to other work. Mr. Gardner therefore will look after the plant."

Q. He is the one you referred to as being a sort of partner? A. That is right.

(Testimony of Frank Nisley.)

Mr. Archer: "Should anything of interest develop, I would suggest that you contact Mr. Gardner at Glenwood Springs. As you know, Mr. Gardner is doing other work and has kept the chemist, who was with us since the mill started and who is familiar with the plant operation, with him. The plant could be operated again should the occasion demand on fairly short notice.

"There is one other matter which should be straightened out. As you know, we had some drums on hand which belong to you. At the time we started production under the M.R.C. program, you will remember that you had an order for our production through the M.R.C. We wrote you concerning the matter and your Company wrote us that we could use the drums to ship the material in. Later, however, the program was changed. However, our material was stored in your drums. Since you did not take the material, the drums were stored in the warehouse in Grand Junction. A few days ago [767] the M.R.C. shipped the material from Grand Junction. I informed Mr. Hill again that the drums were your property. He asked me that we find out the price on the drums and they would pay for them if it would be all right instead of returning them as the cake is to be stored and, therefore, will not be removed from them except by special demand."

The rest concerns the disposition of those terms.

Q. Now, I show you a letter from Mr. Gardner dated July 12, 1944, in longhand. Attached to it is

(Testimony of Frank Nisley.)

a copy which may be more legible. Maybe you can read it. It is longhand. Are you familiar with it?

A. That is, I believe, Mr. Gardner's signature, yes.

Mr. Alioto: We have no objection.

Mr. Archer: As defendants' exhibit next in order I offer a letter dated July 12, 1944, from Mr. Gardner to Continental Ore.

(Whereupon the letter referred to was received in evidence as Defendant U's Exhibit 2-Z.)

Mr. Archer: (Reading) "Continental Ore Company.

"Dear Sirs:

"I have been unable to get anyone interested in starting the mill at Gateway. Will lease mill for 3c per pound produced, if you can find anyone interested. It could be put in operation in 30 days. It could [768] produce about 15,000 pounds per month."

The Court: At the time this letter was written, was Mr. Gardner the owner of the mill?

The Witness: He was, your Honor. He was the owner of the old equipment. Mr. Wilson and myself owned the equipment we had installed there, which was still in the plant.

Mr. Archer: As defendants' exhibit next in order I offer a letter from Mr. Wolf of the Continental Ore Company to Mr. Gardner replying to the letter dated July 24, 1944.

(Testimony of Frank Nisley.)

Mr. Alioto: No objection.

(The document referred to was received in evidence as Defendant U's Exhibit 3-A.)

Mr. Archer: (Reading) "Mr. H. I. Gardner, July 24, 1944.

"Re: Vanadium Mill at Gateway.

"Dear Mr. Gardner:

"We have your letter of July 12th advising that you have been unable to get anyone interested in resuming mill operations at Gateway and that you would be ready to lease the mill at a price of 3c per pound produced. Of course, it is difficult for us to do anything from New York regarding the resumption of operations, but we will keep it in mind should an opportunity present itself. Please do the same at your end, because we feel it is a pity to let the mill [769] stand idle. In any case, we can use the material and would like to see the mill reopened at an early date."

Q. I now show you a letter dated July 14, 1944, from Nisley & Wilson, Vanadium Mill, to Continental Ore Company. It is signed by Mr. Wilson, apparently by Mrs. Wilson.

A. That is apparently a letter signed by Mr. Wilson.

Mr. Archer: As defendants' exhibit next in order I offer a letter dated July 14, 1944, from Nisley & Wilson to Continental Ore.

Mr. Alioto: Do you have the letters referred to

(Testimony of Frank Nisley.)

therein, July 5th and the telegram? Were they attached, Mr. Archer?

Mr. Archer: I think they are in evidence. I don't have them here at any rate.

Mr. Alioto: No, it says, "Telegram regarding the possible time required to open the Gateway mill under a regular contract."

Mr. Archer: These are, of course, from your files so I don't know what you are referring to.

The Court: Go ahead.

(Whereupon the letter referred to was received in evidence as Defendant U's Exhibit 3-B.)

Mr. Archer: Maybe it wasn't in the file. These are from Mr. Leir's files. July 14, 1944, Nisley & Wilson to Continental Ore Company, re: Vanadium Mill, H. I. Gardner. [770]

"Dear Mr. Wolf:

"I have today written Mr. H. I. Gardner asking him to give you a letter of July 5th and a telegram of an earlier date regarding the possible time required to reopen the Gateway Mill under a regular contract and to give this as early as possible attention. I am away from Gateway at present, but can be contacted at Grand Junction in care of the Virginia Hotel or at my home address at Rifle, Colorado. I will be very glad to cooperate with you in any transaction which might lead to the re-opening of the Gateway mill immediately or in the near future.

(Testimony of Frank Nisley.)

"The Metals Reserve stockpile is untouched as yet, and a considerable number of miners are still in the district awaiting a place to sell the mill ore. If you should see any possible way for us to operate, for new parties to take over our lease or any other arrangement, I would be more than glad to hear from you or Mr. Leir on the subject."

The Court: Signed by whom?

Mr. Archer: Signed by A. C. Wilson, who is Mr. Nisley's partner.

Q. As the last exhibit, Mr. Nisley, I show you a longhand letter from yourself to Mr. Leir from down at the Navy Material School and I have attached to it a typewritten copy. It may [771] be a little faster to read than the other, and I ask you if you can identify that. A. Yes.

Q. While Mr. Alioto is looking at that, Mr. Nisley, do you know whether the Continental Ore Company ever contracted for the 300,000 pounds annual production of the Nisley & Wilson mill in 1944?

A. I don't presume they did. What we refer to, we estimated that the stockpile at Gateway contained approximately that much V_2O_5.

The Court: If you could have bought the stockpile at a reasonable rate and had a purchaser for the output, would you have re-opened the mill?

The Witness: Your Honor, there were more things involved than that. In the first place, this matter of uranium was involved, and we knew that we would have to go into uranium production in

(Testimony of Frank Nisley.)

order to be successful in producing that ore. In fact, one of the reasons they gave for shutting our plant down at first was because we didn't have a uranium reduction plant at the time at Gateway. So, it is hard to say, in view of other things that affected that.

Mr. Archer: As defendants' exhibit next in order, I offer Mr. Nisley's letter to Mr. Leir.

(The letter referred to was then received in evidence and marked Defendant U's Exhibit 3-C.) [772]

[See Book of Exhibits.]

Mr. Archer: (Reading.)

"Frank Nisley, Jr., to Mr. Leir, from the United States Navy Electrical Engineering and Radio Materiel, University of Houston, Houston, Texas."

Q. Is that right?

A. Electronics Engineering.

Mr. Archer: I was in R.T., too.

"Frank Nisley, Jr., to Mr. Leir, October 8, 1944.

"Last week Mr. Wilson wrote me regarding the Gateway plant. As you may know, Mr. Gardner isn't interested in operating it himself. He is interested in contracting and that keeps him busy."

Q. Mr. Nisley, did that refer to the fact that the government withdrew from location some one million acres of potential vanadium and uranium-bearing ore land in the Colorado Plateau?

A. I presume it did.

Mr. Archer: I have no further questions. [773]

(Testimony of Frank Nisley.)

Cross Examination

Q. (By Mr. Holland): Mr. Nisley, you had very little contact with Vanadium Corporation in connection with your operations in the Nisley and Wilson mill, is that correct?

A. That's correct. About the only contact we had with the Vanadium Corporation was at the time we sold a few stockpiles to them.

Q. As a matter of fact, the Vanadium Corporation rather did you a favor on that occasion, didn't they?

A. No—at least it got rid of our material. We sold it.

Q. I mean, you had received word from Apex Smelting not to ship any material until further notice, isn't that correct? A. That's right.

Q. And you had this material on hand?

A. That's correct.

Q. And you had also borrowed some money against it in order to operate, hadn't you?

A. Yes, we were borrowing from the bank against it.

Q. And you approached Vanadium Corporation and asked them to take it off your hands so that you could square-up with the banks, isn't that correct? A. That's correct.

Q. And as far as you are concerned, your relations with Vanadium Corporation were very satisfactory, isn't that correct? [774]

A. As far as the sales were concerned, it was.

(Testimony of Frank Nisley.)

Q. You had no other relations with them, isn't that correct?

A. That's about the only relationship.

Mr. Holland: That is all.

Redirect Examination

Q. (By Mr. Alioto): Mr. Nisley, at the time that you negotiated with the Vanadium Corporation of America in connection with this 10,000 pounds of material, did they inform you that they were meeting with the Vice-President of the Apex Smelting Company? A. No, sir.

Q. Did they inform you that they were getting information about your supplies to Apex from the Vice-President of the Apex Smelting Company?

A. No.

Q. At that time, didn't they in fact offer to buy all of your production?

A. They did. They said they would take our production at $1.10.

Q. From then on in? A. That's right.

Q. But you didn't have any information about this background of dealings between Mr. Christianson of the Apex Company and Mr. Laub of the Vanadium Corporation of America at that time, did you? [775] A. I did not.

Q. Now, Mr. Nisley, direct your attention to that period of time just after or toward the termination of your toll agreement with the Metals Reserve Company and the conditions in the industry as they existed in that period of time.

(Testimony of Frank Nisley.)

To begin with, you had some meetings with Mr. Burwell, objecting to the closing down of the Nisley-Wilson plant, didn't you? A. We did.

Q. And didn't you also have some correspondence with the Government complaining about the treatment you had received at the hands of Mr. Burwell and Mr. Hill, the so-called agents of the Metals Reserve? A. We did.

Q. Do you have that correspondence with you now, Mr. Nisley? A. No, I do not.

Q. Well, do you have, in the courtroom?

A. I don't believe I do.

Q. Well, do you recall what was the complaint you made to the Government about the activities of United States Vanadium Corporation?

Mr. Archer: I object to that, your Honor. I think the record shows he was a competitor of ours at the time, and what he said back then certainly can't bind the defendants.

Mr. Alioto: No, but the conditions of the industry [776] at the time. These folks are making a point why that mill wasn't reopened, and I think any complaint he made to the Government relating to the treatment received is relevant on that point. Mr. Archer opened it up.

The Court: Overruled—the objection will be sustained. This is a matter between him and the Government?

Mr. Alioto: With him and the Government and U.S.V. was supposed to be the agent for M.R.C. at the time.

(Testimony of Frank Nisley.)

The Court: To whom did you address this letter? To whom was it written, the Government or the agent? Whom did you write it to?

A. I think we contacted the agent direct and wrote the letters directly to the Metals Reserve Company in Washington.

The Court: I don't think it is material, but I will overrule the objection and let you put it in. I don't think it is material at all.

Mr. Alioto: Well, let me ask, first of all, did you have any direct conversations with Mr. Burwell about the closing down at the plant?

A. We did. We talked to him concerning closing our plant ahead of the other plants, and we didn't feel that we should be shut down ahead of the other plants that were operating under the Metals Reserve program and, in fact, we discussed——

Mr. Archer: Your Honor, I object unless he lays the foundation for this conversation as to time and place and [777] if it concerns Mr. Burwell, I think Mr. Burwell should have been asked about that.

The Court: I think you went into that fully on his direct examination, stating the conversations with Mr. Burwell, and with Mr. Whitaker——

Mr. Alioto: I think that was a conversation in an earlier period, if your Honor please, and not in this later period. The reason I'm inquiring about it now——

The Court: Well, at the time that you had this conversation with Mr. Burwell, he was representing an agency of the Government?

(Testimony of Frank Nisley.)

A. Yes, your Honor.

The Court: Objection will be sustained. I don't think it is competent.

Mr. Alioto: Well, on the matter of the agency of the Government, Mr. Nisley, let me take you back to that conversation with Mr. Hill in October of 1942. Do you remember that conversation?

A. I do.

Q. Did you at that time make any objection to being put under an arrangement where you couldn't handle your own vanadium oxide supplies?

Mr. Archer: I object.

A. We did.

Mr. Archer: I object to the question as leading.

The Court: The question is leading and suggestive. Let him testify.

Mr. Alioto: I think he has already testified on this point fully, if your Honor please, but I will have him say it again.

Q. Do you recall a conversation you had in October of 1942? A. I do. We had received——

Q. Who was present at that conversation?

A. Myself, Mr. Wilson, Mr. Hill and later on Mr. Burwell.

Q. All right. Now, tell us what was said in the matter of private production at the time.

A. We had received a telegram from the Metals Reserve Company and, I believe, also from War Production Board, stating that the United States Vanadium Corporation had been instructed to get us under way. And we were accusing—we had gone

(Testimony of Frank Nisley.)

into Grand Junction to see Mr. Hill, Mr. Burwell regarding this telegram. They denied that they had any knowledge of it, that they hadn't been informed of any agreement to put us back into operation, and we were accusing them of not following out the Metals Reserve orders.

Mr. Hill stated at that time to us that—he got sort of angry and he stated—he said, "My salary is paid by United States Vanadium Corporation, not by the Metals Reserve Company."

Q. And how long did it take, then, to get that contract to you, from the meeting in October until you started working [779] under the Government program?

A. As I previously testified, the contract was finally dated January 26 and actually delivered to us about the 3rd or 4th of February.

The Court: I think you've been all over that on direct examination, haven't we?

Mr. Alioto: No. I think that concludes this phase of it now, if your Honor please, after this controversy with Mr. Hill, which he didn't mention in his direct examination.

Q. Now if we could take you back to this later period, Mr. Nisley. Did the partnership of Nisley and Wilson delegate Mr. Gardner to speak to Mr. Burwell about not closing this plant down?

A. We did. Mr. Gardner contacted Mr. Burwell——

Q. What happened?

A. Mr. Gardner told me that——

(Testimony of Frank Nisley.)

The Court: Now——

Mr. Archer: I object to that, your Honor.

Mr. Alioto: Just don't tell us what Mr. Gardner said.

Mr. Gardner at that time was a contractor, was he not? A. He was.

Q. And he wasn't active in the operation of the business? A. No, not directly.

Q. He was a rather substantial man in this contracting [780] business, wasn't he?

A. Yes, he was.

Q. Now, you sent him to Mr. Burwell for the purpose of trying to have him keep that plant open during this period of time? A. That's correct.

Q. Now without telling us the conversation that Mr. Gardner had with Mr. Burwell, as a result of that conversation did you get any help from Mr. Burwell about that matter? A. We did not.

Q. Now, then, when your plant was closed down, what were they doing down at Durango?

A. Durango was still operating.

Q. How long thereafter did Durango operate?

A. I can't answer that. I don't know how long it operated.

Q. When your plant was closed down, what were they doing at the Vanadium Corporation of America plant?

A. They were still operating.

Q. And how long after that did that continue to operate? A. I can't answer that.

Q. Now during the period of time when you

(Testimony of Frank Nisley.)

were making these inquiries of Continental Ore, about which we have had some correspondence here, and after your plant had been closed down by Metals Reserve, what was the situation with respect to the Gateway Alloy Mines located tributary to the Gateway mill, [781] had that been released by the Metals Reserve yet?

A. It was. Our contract terminated the 1st of January, and the ore was still being stockpiled at Metals Reserve stockpile at Gateway.

Q. In other words, after your Gateway mill was closed down or at the time your mill was closed down, did you have access to the ore deposits at the Gateway mines? A. We did not.

Q. For how long a period after January 1st did the United States Vanadium Corporation, acting as agent for Metals Reserve, continue to control those deposits?

A. Well, I don't know the exact time, but several months after we were closed down.

Q. In connection with those deposits, after you were closed down, what were they doing with the ore that was mined from those deposits, the Gateway deposits?

A. Well, it was being stockpiled at the Gateway mill.

Q. For how long a period of time did they continue stockpiling those ores there?

A. Well, I can't answer that. It was for several months after we were closed down they continued to come in.

(Testimony of Frank Nisley.)

Q. At or about the time you were writing to Mr. Leir about plans for the future, after your plant had closed down, did you make any attempt to negotiate for the stockpile of ores that were right there at your Gateway mill? [782]

A. We did.

Q. Were you able to get them?

A. We were not.

Q. What ultimately happened to that stockpile that was located at the Gateway mill, Mr. Nisley?

A. I believe it was moved to Durango.

Q. Now in connection with Durango, you were given some figures on the blackboard here as to what your costs of production may have been at the time. I think you testified there was some document that indicated cost of production of 80c?

A. That's correct.

Q. And you were asked whether you heard Mr. Burwell give certain testimony with respect to that?

A. That's correct.

Q. Now, do you recall whether or not the Durango mill had a higher cost of production—that is, the Durango mill built and managed by United States Vanadium Corporation, had a higher cost of production than the Gateway mill that you were operating?

Mr. Archer: I object to that as without foundation.

The Court: Sustained. It is immaterial.

Mr. Alioto: Except, if your Honor please, that——

(Testimony of Frank Nisley.)

The Court: No, that wouldn't have anything to do with it. There may have been different conditions or circumstances there that would have controlled the price of production.

Mr. Alioto: Well, I don't understand how it was [783] relevant here, if your Honor please.

The Court: Objection sustained. Exception allowed.

Q. (By Mr. Alioto): Did Mr. Burwell tell you at any time that they were going to close down your mill because your cost of production was out of line?

Mr. Archer: Well, I object to that as leading.

The Court: Objection sustained.

Mr. Alioto: I submit, if your Hoonr please, that the subject is relevant.

The Court: Exception allowed.

Mr. Alioto: On the ground that it is leading? Is that the objection? I don't want to go into the subject if your Honor has just shut off the subject. But I thought the objection was sustained——

The Court: I don't think it is material to go into the subject, but the objection was sustained because the question was leading and suggestive.

Mr. Alioto: All right.

Then, let me rephrase that question.

Q. Did you have any discussion with Mr. Burwell about the cost of production of the Gateway plant at or about the time that it was closed down?

A. Not to my knowledge. The only discussion we had was—the only objection they gave to us

(Testimony of Frank Nisley.)

was that we didn't have an acid-producing plant to process the tailings at that time. [784]

Q. In other words, is it correct to say that at no time did anybody object, so far as the Gateway plant was concerned, on account of any so-called cost of production?

A. There was no objection to the cost of production.

Q. Now, then, I want to inquire about what your partners were doing at or about the time that the plant was closed down. Had Mr. Gardner ever been active in the operation of the mill itself?

A. No.

Q. What was Mr. Gardner's actual business? You said "contractor," but what was the nature of his business at the time?

The Court: How's that material?

Mr. Alioto: Well, if your Honor please——

The Court: You're taking a lot of time on this case and the Court has been very generous in permitting you to offer a great deal of testimony here, much of which has nothing to do with the issues in this case. We want to try this case; we want to finish it at least this summer.

Mr. Alioto: I think we will wind up in about ten minutes, and I suggest it will be tried a lot faster than most other antitrust cases have been tried. I think we are going to wind up in about a day and a half. I think that's a pretty good record on this type of case.

The Court. Go ahead. [785] * * * * *

Tuesday, June 10, 1958—10:00 O'Clock A.M.

FRANK NISLEY

called as a witness by the plaintiff, being previously sworn, resumed the stand and testified further as follows:

The Clerk: Continental Ore et al vs. Union Carbide et al, further trial.

Redirect Examination—(Continued)

Q. (By Mr. Alioto): Mr. Nisley, there are two matters I want to cover rather hurriedly. Yesterday afternoon late you were interrogated by Mr. Archer about an exchange of correspondence between you and Mr. Henry Leir of the Continental Ore Company with respect to the conditions insofar as the Gateway plant was concerned after the termination of the Metals Reserve program at the Gateway plant. You have that examination in mind, do you, Mr. Nisley? A. Yes.

Q. Now, the letters read to you by Mr. Archer, were they the only letters exchanged by you and Mr. Leir after January 1st of 1944? A. No.

Q. There were other letters in which you purport to set out the conditions in the industry, were there not? A. That's correct.

Q. I show you, Mr. Nisley, an original telegram from [788] Nisley & Wilson to Continental Ore Company dated January 13, 1946, and ask you to look at that and then state whether or not that is a telegram that you sent to the Continenal Ore

(Testimony of Frank Nisley.)

Company on or about the date that the telegram bears.

A. Yes, January 13, 1944.

Q. Now, then, there was a letter read yesterday afternoon about an offer of 300,000 pounds of vanadium oxide, I believe. Do you recall that, Mr. Nisley? A. Yes.

Q. That referred to a stockpile that was there at the Gateway plant, did it not?

A. That's correct.

Q. And you didn't own that stockpile at the time, did you? A. No.

Q. Now, then, state whether or not the telegram that you just identified relates to the subject matter of that same stockpile and the same 300,000 pounds of oxide.

A. It does.

Mr. Alioto: We will offer it in evidence, if your Honor please, as part of the exchange of correspondence which counsel for the defendant admitted yesterday.

(Counsel examining offered documents.)

The Court: This accumulation of ore that you referred to, who was the owner of that at that time?

The Witness: Your Honor, it was owned by the [789] Metals Reserve Company.

The Court: That is the Government?

The Witness: Yes.

Mr. Archer: Your Honor, I object to the telegram on the grounds that in the latter part of it there are allegations of what we are doing, which

(Testimony of Frank Nisley.)

are thoroughly hearsay, thoroughly his conclusion, and certainly could not bind the defendant in this lawsuit.

Mr. Alioto: The problem is, if your Honor please, Mr. Archer has put in some correspondence and has left this one out.

The Court: The objection is overruled. Exception allowed.

(Mr. Holland examining offered document.)

The Court: (To jury.) You understand, this is the correspondence between this witness and the plaintiff and it is not binding upon the defendants in any manner.

Mr. Alioto: We are offering it, if your Honor please, to complete the exchange of letters and to show what this witness told Continental about the industry at the time. That is the purpose for which it is offered, in the light of the 300,000-pound offer we heard about.

Mr. Holland: Inasmuch as there is no mention of the vanadium company in the telegram, I assume it is only offered against Union Carbide, is that correct? [790]

Mr. Alioto: It is offered as part of the cross-examination of Mr. Archer yesterday, for whatever purpose that is in the record I am not prepared to say at this time, it is offered on that basis, to show what information this plaintiff received.

The Clerk: Plaintiff's Exhibit 75 admitted and filed into evidence.

(Testimony of Frank Nisley.)

(Telegram 1/13/44, Nisley & Wilson to Continental Ore, received as Plaintiff's Exhibit 75.)

Mr. Alioto: This is dated January 13, 1944, and it is addressed to Continental Ore Company from Grand Junction by Nisley & Wilson. It makes reference to another telegram to a man named Hatch.

Q. Would you be good enough to identify Mr. Hatch before I read this?

A. Mr. Hatch was connected with the War Production Board.

Q. That is the same Mr. Hatch you talked about in your examination by Mr. Archer yesterday afternoon? A. That's correct.

The Court: He was connected with what?

The Witness: The War Production Board.

Mr. Alioto: The War Production Board, if your Honor please.

(Reading.) "Continental Ore Company, 500 Fifth Avenue, New York. [791]

"We Cannot Purchase Ore 32 Cents Vanadium Contained and Sell For $1.10. Am Sending Copy of Telegram to Hatch. Quote Reurtel. You State 52 Cents Is Content Basis and Transfer Cost Is 20 Cents. Granted. But When Ore Is Milled a Percentage of Values Are Lost In Tailings. Add The Cost of These Values to 20 Cents and We Still Wish to Know Difference Between It and Our Offer of 26 Cents. Cost of 32 Cents Content Basis Makes Our Recovered Vanadium Cost 46 Cents Per

(Testimony of Frank Nisley.)

Pound Which We Cannot Stand. Durango Would Have a Similar Loss * * *"

Q. What is "Durango"—you mean the plant at Durango? A. The plant at Durango.

Mr. Alioto: (Reading.) "Durango Would Have a Similar Loss and a Raise In Costs Therefrom Whether Figured As Additional Ore Cost As We Do For Additional Milling Cost As You Are Apparently Doing. Concerning Tailings Army Has Plant Uravan Recovering Values Tailings Much Closer to Gateway. We Have Tried to Get Rid of 1500 Tons Our Old Tailings Carrying Higher Vanadium Uranium Contents Than MRC or Uravans. We Cannot Sell Them So Far At Even One Dollar Per Ton. We Question Value of Tailings At Present Under Such Circumstances We Know Exists. We See No Curtailment Program Taking Place Other Than Shutting Down Our [792] Plant With a New MRC Operation At Rifle, Continued Operation All Other MRC Plants, Continuation of Ore Purchases and Ore Contracts. It Seems to Us Definitely and Clearly USV As Agents Are Using WPB Control to Completely Monopolize The Vanadium Industry. As Agents They Have Our Ore Supply Under Contract; As Agents They Know Our Present Operating Costs and We Cannot Operate At An Ore Cost of 46 Cents; As Agents USV Used Curtailment Program to Stop Our Operation Ahead of Any Other Plants Including MRC Plants. We Received No Directive From Either WPB or MRC. We Were Forced Out of Private Produc-

(Testimony of Frank Nisley.)

tion Into MRC Program If We Wished to Continue Business, The Theory Being That The MRC Program Was Necessary For The War Production Effort. Now The Agents Are Continuing Their Program of Completely Monopolizing The Industry With The Aid of The WPB and MRC Regulations. If This Is Not The Case Why Should We Be The First and Only Plant to Be Shut Down; Why Should We Be The Only Plant Penalized By The MRC and WPB Program. If There Is No Further Justification For Producing Vanadium In Excess of Requirements, Why Are Not Government Plants Closed First Instead of Private Owned Plants and Especially Why Isn't The Purchase of Ore Stopped. We Realize That We Are Small Producers Not Appreciably [793] Affecting Vanadium Production As a Whole, Yet Our Little Business Is Going Part of The America We Are Fighting For. If The USV Is Going to Take Advantage of These War Conditions Together With MRC and WPB Aid to Completely Monopolize The Industry and Force All Others to Discontinue Business, It Makes Us Wonder Just What Our Boys Are Fighting For.

"Nisley & Wilson Vanadium Mill."

Q. Now, in connection with these negotiations referred to here and the 300,000 pounds of vanadium you spoke of, did you ever buy that from the MRC?

A. No.

Q. Metals Reserve. And you were never able to

(Testimony of Frank Nisley.)

buy at the cost that you thought you could sell and market it for? A. No.

Q. You tried to? A. Yes, we did.

The Court: Now, your controversy that you referred to in this telegram was entirely between you and the Government agents, was it?

The Witness: Well, your Honor, in an attempt to answer that, no. It goes back prior to the time that we went in the Metals Reserve Program.

The Court: Now, they owned this ore—the Government owned this ore, and you were trying to buy it, they [794] wouldn't sell it to you; is that it?

The Witness: At this time——

The Court: Yes.

The Witness: ——we had been trying to buy the ore, negotiating for it.

The Court: And the Government wouldn't sell it to you?

The Witness: Not at that time, no.

The Court: All right.

Q. (By Mr. Alioto): But this was the 300,000 pounds of ore you offered Mr. Leir and Continental; this was it, wasn't it? A. That's right.

Q. And you never had it? A. No.

The Court: That was the substance of your telegram to Mr. Leir, was explaining to him why you couldn't fill his order?

The Witness: Yes. This telegram, your Honor, was to explain to him the conditions existing in the industry at the time.

The Court: All right, proceed.

(Testimony of Frank Nisley.)

Q. (By Mr. Alioto): Now, then, as of January 31 of 1944 you wrote another letter to Continental, that I would like to show you in a moment, after counsel has finished [795] reading it.

(Counsel examining.)

Q. (By Mr. Alioto): Counsel having read the document, I show you the letter, Mr. Nisley. Would you examine it and then state whether or not that is a letter written by you on or about the date it bears?

A. (Witness examining): It was.

Mr. Alioto: We will offer this into evidence as part of the exchange of correspondence put in by Mr. Archer yesterday.

Mr. Holland: I assume it is not offered against Vanadium Corporation.

Mr. Alioto: It is offered as part of the exchange of correspondence put in by Mr. Archer yesterday—whatever the record ist on that. I don't know.

Mr. Holland: As far as Vanadium Corporation is concerned, it objects to the letter as any evidence against it. There is no reference to Vanadium Corporation in any of this correspondence and no showing that Vanadium Corporation had anything to do with the subject matter.

The Court: The letter will speak for itself.

The Clerk: Plaintiff's Exhibit 76 admitted and filed in evidence.

(Letter 1/31/44, Nisley & Wilson to Leir, received in evidence as Plaintiff's Exhibit 76.)

(Testimony of Frank Nisley.)

Mr. Alioto: This letter is dated January 31, 1944—This is after your M.R.C. program had terminated?

A. That's correct.

Q. And this is after you had attempted to negotiate for what you call this 300,000 pounds of vanadium oxide, is that right? A. That's right.

Mr. Alioto: (Reading.)

"Dear Mr. Leir:

"As you know, Mr. Gardner, Mr. Wilson and myself are owners and operators of the Gateway plant. Mr. Gardner has the old plant, and Mr. Wilson and myself have added considerable new equipment and have been operating under a contract with Mr. Gardner.

"Since the curtailment of Vanadium production and the lessening need for it, I have been called to the service. This will affect our contract with Mr. Gardner. Since the plant cannot be operated at the present time, and it doesn't look as if it could for quite some time, we are going to have to sell either our interest in the plant or dismantle it. Since I must leave shortly, we are going to have to act quickly.

"We are all very sorry to have to discontinue, but we see no other way out at present. Mr. Gardner [797] has taken an active interest in the operation and has helped us in getting our problems straightened out. The local M.R.C. told us that the mill had made a very good extraction, in fact, better than some of the others under the M.R.C. The cake was

(Testimony of Frank Nisley.)

of good quality. We had a very satisfactory operation during December, especially.

"The big mill at Uravan was closed down last Saturday night and they are letting a number of their men go. Their other plants are still operating full-blast, however. We do not believe that they will ever let the price of the crude ore adjust where we could operate at $1.10 again, at least for quite some time.

"Concerning our bill with you, we will get things straightened out shortly and send you a check. We would like to have you also include the amount we owe you for this year so it can all be straightened out at once.

"We want you to know we sincerely appreciate all you have done for us in the past. We have never had business dealings with anyone who has treated us any finer than you and we really do appreciate your cooperation and help. We sincerely wish we could continue to do business with you.

Sincerely yours,

Frank Nisley." [798]

Q. Now, with respect to the two men who were left, Mr. Nisley, Mr. Hays Wilson was not a metallurgist, was he? A. He was not.

Q. And he couldn't run that plant on his own, could he, Mr. Nisley?

A. His capacity in the plant was looking after the mechanical equipment.

The Court: A little louder, please.

The Witness: I say, his position in the operation

(Testimony of Frank Nisley.)

was that of taking care of the mechanical equipment. [799]

Q. And this is information which you transmitted to Mr. Leir, isn't it?

A. That is correct.

Q. Just a very few questions about this so-called kitchen arithmetic that was gone into for some time yesterday.

This 80-cent cost so far as the Gateway plant was concerned was the cost as of June, 1943, was it not? A. That is correct.

Q. Now, that 80-cent cost included something more than just straight actual operations at the time, didn't it?

A. Yes. Under the amendment to the toll agreement, the United States Vanadium as agents for Metals Reserve were allowed to take 10 cents per pound out of this 80 cents to apply on the R.F.C. loan. We had to amortize that loan completely in a very short time.

Q. You put that amortization of that loan completely down as a cost of business?

A. That is correct.

Q. Not just the interest, but the whole thing?

A. That is correct.

Q. In June on this 80-cent basis, in June of 1943, was your production as much as it was, say, in December, 1943?

A. No, it was not. In June, 1943, we produced 8,792 pounds net V_2O_5. By December we had increased that to 10,6—roughly 10,700, an increase of

(Testimony of Frank Nisley.)

approximately a little over twelve per cent. [800]

Q. And obviously the increased production would affect the unit cost when it is put on a per pound basis? A. That is correct.

Mr. Alioto: We have no further questions.

Recross-Examination

Q. (By Mr. Archer): Mr. Nisley, when you submitted your estimate of costs in June of 1943 to the Metals Reserve Company, didn't you state at that time that you thought your 80-cent cost was a representative cost of your operation?

A. At that time, that is correct.

Q. You thought it was representative?

A. At that time.

Q. And wasn't the reason you submitted the cost so they could determine how much you would be paid for processing the ore?

A. That is correct.

Q. And you were paid this amount for every month from June through December, 1944, weren't you?

A. That is correct, there was a——

Q. I am wrong there. June through December, 1943.

A. 1943, that is correct. There was each month a report submitted to the Metals Reserve Company as to the cost.

Q. And that report, one of which is in evidence, correctly reflects your cost, doesn't it? [801]

(Testimony of Frank Nisley.)

A. Yes, including the ten cents per pound reflected there.

Q. Regarding this exchange of correspondence in January of 1944, I believe the first exhibit that Mr. Alioto put in was a telegram in January, 1944, and I show you now a copy of Mr. Leir's reply dated January 13th, 1944, and ask you whether you can identify that. A. Yes.

Mr. Alioto: No objection.

Mr. Archer: Defendant's Exhibit next in order I offer, to complete this correspondence, Mr. Leir's reply to Frank Nisley, dated January 13th, 1944.

(The document referred to was thereupon received in evidence and marked Defendant Union's Exhibit 3-D.)

Mr. Archer: This exhibit is dated January 13th, 1944, to Frank Nisley, re Vanadium Ore from Metals Reserve.

Q. That referred to that stockpile, did it not, Mr. Nisley, the vanadium ore for Metals Reserve?

A. I believe so, yes.

Mr. Archer: (Reading)

"We confirm our wire this morning as per copy enclosed. It seems that in a wire you sent to Mr. Hatch"——

Q. Mr. Hatch was of the War Production Board, was he not? [802]

A. That is correct.

Mr. Archer: (Reading)

(Testimony of Frank Nisley.)

"It seems that in a wire you sent to Mr. Hatch where you mention the price of 52 cents and the $8.00 freight differential, you and Metals Reserve computed your respective figures on different bases. Metals Reserve seems to talk about the price per pound of recovered V_2O_5, whereas you talk about the price per pound of V_2O_5 in the crude ore.

"Mr. Hatch incidentally pointed out that if the stockpile were milled at Durango instead of at your plant, values could be extracted from the tailings, which is not the case if you process this stockpile ore. This fact alone, Mr. Hatch claims, cancels out the freight difference. In other words, it would make it worthwhile for Metals Reserve to spend the $8.00 per ton for the freight. It seems obvious to us that although he did not want to mention it, Mr. Hatch referred to the recovery of the uranium. Uranium is quite in demand at the present time and we wonder whether you could not materially improve your position in this scheme by installing some equipment which would allow you to recover uranium concentrates containing, say, ten to twenty per cent U_3O_8." [803]

Q. U_3O_8 refers to uranium oxide, does it not?

A. That is right.

Mr. Archer: "This would do away with any disadvantage between you and Durango on that score. From your letter of January 9th, Sunday, it appears that Mr. Gustafson——"

Q. Now, who is Mr. Gustafson?

(Testimony of Frank Nisley.)

Mr. Alioto: What is the date of the letter, Mr. Archer?

Mr. Archer: January 13th, 1944.

A. Well, I can't recall. I believe that he was connected with Metals Reserve, but I am not positive of that.

Mr. Archer: I think that is right.

"From your letter of January 9th, Sunday, it appears that Mr. Gustafson first offered you two per cent ore from the stockpile at 32 cents, whereas you wanted to pay 26 cents for that grade. You say that later on Metals Reserve even increased the price from a 1.8 per cent ore at 32 cents.

"According to what Mr. Hatch said, it will be rather difficult to get Metals Reserve to agree to a price below 32 cents. We therefore wired you that it may be advisable to pay that price for a two per cent ore if at all possible, our idea being that you only buy a quantity sufficient for one month's [804] operation, so that even if the profit margin is very slim, you could maintain your organization and tide it over to the time when Metals Reserve retires from the market.

"Mr. Hatch mentioned confidentially that Metals Reserve will soon stop their buying operations. Prices will then automatically go back to normal, which should allow you to operate with a profit. This is also the reason why we recommended that you do not insist upon Metals Reserve giving you an option on the entire stockpile.

"If prices really decrease it may be easier for

(Testimony of Frank Nisley.)

you to negotiate with Metals Reserve in a few weeks time, if you have no option at a set price. It may then be possible for you to buy your monthly requirements on the basis of the price in the open market.

"We would appreciate your informing us what you are going to do so that if you so desire, we can obtain additional information for you through Mr. Pleasants, or try to hasten a decision in Washington.

"Unfortunately Mr. Pleasants had already left for Washington when your letter of January 9th arrived, so that he could not make use of your recommendation to Senator Johnson. We now hope to hear from you.

"Very truly yours,

"The Continental Ore Company, Henry J. Leir."

Q. Now, Mr. Pleasants, I believe you referred to in your testimony yesterday in regard to an account with him, that he was a lawyer that you and Continental Ore used to negotiate for this stockpile and other matters, isn't that correct?

A. That is correct.

Q. I now show you a copy of Mr. Leir's letter of January 9th, 1944 to you referring to the recent correspondence and wires on this subject, and ask you whether you can identify it.

Mr. Alioto: You do not have to identify it, Mr. Archer. We stipulate to its authenticity.

Mr. Archer: As Defendant's Exhibit next in order, I offer a letter dated January 9th, 1944,

(Testimony of Frank Nisley.)

from Mr. Leir to Frank J. Nisley, to which is attached a copy of the letter dated January 8th, 1944, from Mr. Pleasants to Continental Ore.

Mr. Alioto: We have no objection.

(The documents referred to were thereupon received in evidence and marked Defendant Union's Exhibit No. 3-E.)

Mr. Archer: This is a letter from Mr. Leir to Frank Nisley, your Honor, dated January 9th, 1944. This was still in the period when you were negotiating for the stockpile, is that not correct, Mr. Nisley?

The Witness: Yes, during the period, yes, sir.

Mr. Archer: (Reading) [806]

"Dear Mr. Nisley: Re Vanadium

"We refer to our recent correspondence and your wires. Mr. Pleasants went to Washington again on Monday, January 17th. Enclosed find original of his report, which unfortunately does not leave much hope of accomplishing anything through Senator Johnson or the W.P.B. It seems to us that your aim should be to have your 1943 toll agreement extended at least until M.R.C. stops buying ore at the subsidized price or preferably thirty to sixty days beyond that date. Please keep us informed.

"Very truly yours, Continental Ore Company, Henry J. Leir."

The enclosed letter is dated January 8th, 1944 from Mr. Pleasants to Continental Ore Company.

"Gentlemen:

"I refer further to the Nisley and Wilson matter. Hatch's position——"

(Testimony of Frank Nisley.)

Q. Hatch is the one from the War Production Board, is that not correct?

A. That is correct.

Mr. Archer: "Hatch's position is that the administration of the program on vanadium is entirely up to the Metals Reserve Company, and inasmuch as the W.P.B. is no longer interested in accumulating [807] a further stockpile of vanadium, the W.P.B. cannot authorize the production of any excessively priced vanadium. Hatch is not very friendly as he feels that it is merely an ordinary war loss which is being sustained by Nisley and Wilson due to the shift in war requirements.

"Senator Johnson was not at all helpful. He is very definitely opposed to any reduction in the price of ore to miners. He apparently did make an effort to procure a more favorable concession from M.R.C. on the stockpile material. He was entirely unsuccessful in doing this, as M.R.C. stood pat. I do not believe that they can anticipate any assistance from this quarter at all."

Q. In January 1944 you found out that you would not be able to buy the stockpile at your price, didn't you, Mr. Nisley?

A. The objection that we were referring to in relation to buying the stockpile was that United States Vanadium as agents for Metals Reserve had told them that our tailings would have to be transferred to Durango to be milled, and that was the reason—one of the reasons given for this ore price

(Testimony of Frank Nisley.)

to us. The United States Vanadium at that time were also agents for the Government, for the Army in the uranium program. They were operating a mill at Uravan, which was a much closer location to us, and this bears out the fact that we were complaining [808] because United States Vanadium, instead of giving us the chance of turning these tailings to Uravan, was requiring that they had to go to Durango, which was an excessive cost, which raised the cost of this ore to us, and Metals Reserve didn't know the difference. Some of this correspondence bears that out.

Q. At Durango they were processing not only your vanadium, but uranium?

A. They were also processing at Uravan for vanadium and uranium, both.

Q. Mr. Nisley, my question was: You found out in January, 1944, by this correspondence here, that Metals Reserve would not sell you the stockpile, didn't you?

A. That was the end result. We didn't get the stockpile.

Q. Mr. Nisley, the telegrams and the correspondence which I read to you yesterday offering the 300,000 pounds of vanadium was in March and April of 1944, were they not?

A. I believe that is correct.

Q. I understand from the Clerk that these exhibits are not available, but I will show you the copy——

(Testimony of Frank Nisley.)

Mr. Alioto: I will stipulate with you on that. What do you want to stipulate to?

Mr. Archer: That the telegram referring to the 300,000 pounds of uranium at the rate of 600 pounds per day is dated April 4th, 1944.

Mr. Alioto: Okay, we will stipulate to that. [809]

The Court: Well, now, at that time did you know that you would not be able to buy the stockpile?

A. At what time, your Honor?

Q. In April, 1944, when you made the offer to Continental Ore Company.

A. Your Honor, I believe that negotiations were opened up again for the possible purchase of the stockpile, but by that time our plant had been closed for some three or four months. We had lost our key men and we were in a different position than we were at the beginning of January when we were first negotiating for the pile.

Q. (By Mr. Archer): It is true, however, that Mr. Gardner had kept on the chemist which you had used in your plant after March of 1944, had he not? A. That is correct.

Q. It is also true that Mr. Gardner's offer to lease the plant to the Continental Ore Company at three cents per pound produced was in July 1944, was it not?

A. Well, I joined the service prior to that time, so I can't testify to what happened after I left.

Q. It is also true that in Mr. Gardner's letter of July 14th, 1944, to Continental Ore Company,

(Testimony of Frank Nisley.)

he states, "The Metals Reserve's stockpile is untouched as yet, and considerable number of the miners are still in the district awaiting a place to sell the mill ore. If you should see any possible [810] way for us to operate, for new parties to take over our lease or any other arrangement, I would be more than glad to hear from you or Mr. Leir on the subject."

Mr. Alioto: The witness said he wasn't here at this time, if your Honor please. I do not understand how he can be questioned about it.

The Court: Well, if he knew, if he had knowledge of that, he can answer.

Q. (By Mr. Archer): Did you have any knowledge on that?

A. I was in the service at the time.

Q. Mr. Nisley, didn't you testify yesterday that the Army bought the stockpile at Gateway after July of 1944?

A. I was told that, yes.

Q. You did not know that of your own knowledge, did you? A. I was told that.

Q. So you didn't know it of your own knowledge?

Mr. Alioto: He was told it.

Further Redirect Examination

Q. (By Mr. Alioto): Just one question, Mr. Nisley: Did you ever take up Mr. Leir's suggestion of trying to get a month to month arrangement

(Testimony of Frank Nisley.)

with the Army so that you would be in tune with the market price whenever it developed?

A. As I recall, we did, but we were unsuccessful. [811]

Mr. Alioto: Thank you. That is all.

Mr. Archer: No further questions.

(Witness excused.)

Mr. Alioto: At this time, if your Honor please, before calling Mr. Wolf to the stand, we offer as against the Electro Metallurgical Company a certain request for material from the Continental Ore Company in connection with its Apex contract. This is the letter dated June 14th, 1941, from Continental Ore to the defendant Electro Metallurgical Company, and a letter dated June 16th, 1941, from Continental Ore to Electro Metallurgical Company, and a reply of Electro Metallurgical Company dated July 31st, 1941.

Mr. Archer: Could I see them?

Mr. Alioto: Yes. We will offer them in evidence as plaintiffs' exhibit next in order. And we offer at this time a document previously marked as Plaintiffs' Exhibit 63 for identification, being an exchange of correspondence between the Apex Smelting Company and the Vanadium Corporation of America, dated March 11, 1940; April 8, 1940; April 20, 1940; and an inter-office memorandum from Mr. P. J. Gibbons to Mr. J. P. Gertler of Vanadium Corporation of America, dated February 14th, 1947.

Mr. Archer: I have no objection to the June 16th and July 31st. The only question I have on the June 14th—we do not have a copy of the original of this in our files. [812] If it was sent, I have no objection to it.

Mr. Alioto: It was sent. It was sent from our office. I understand counsel does not object. We offer the Electro Metallurgical letters in evidence.

The Court: It will be admitted.

(The documents referred to were thereupon received in evidence and marked Plaintiffs' Exhibit 77.)

Mr. Alioto: They are very short requests, if your Honor please, which I would like to read to the Jury, and then I shall call Mr. Wolf.

Under date of June 14th, 1941, Mr. Henry J. Leir, President of Continental Ore Corporation, writes to Mr. C. G. Roser of the Electro Metallurgical Company, 30 East 42nd Street, New York City:

"Dear Mr. Roser:

"Re: Vanadic Acid.

"Please let us have your offer of the above material for shipment to the Apex Smelting Company of Chicago."

On June 16, 1941, two days later, another letter to Mr. F. P. Gormely, General Manager of Electro Metallurgical Company, 30 East 42nd Street, New York City:

"Gentlemen:

"As you know, the Apex Smelting Company of

Chicago has been in the aluminum smelting [813] business for more than 20 years.

"Last year they entered into the production of certain ferro alloys by the alumino-thermic process, and have created good facilities for this particular manufacture which, if necessary, could be easily enlarged.

"Would you be interested in 'farming out' a certain quantity of vanadic acid, and allow us to convert it for your account into low carbon ferro vanadium?

"We shall be awaiting the pleasure of your reply to the above suggestion, and hold ourselves at your disposal for any personal discussion you might like to have on this subject."

The answer by Mr. Gormely, Vice-President and General Manager of Electro Metallurgical Company, under date of July 31st, 1941 is as follows:

"Mr. Henry J. Leir, President, Continental Ore Corporation, 500 Fifth Avenue, New York City.

"Dear Sir:

"Please pardon the delay in replying to your letter of June 16, asking if we would be interested in having you convert a certain quantity of vanadic acid for our account into low carbon ferro vanadium.

"I have reviewed this matter several times with [814] my associates and find that we are at the moment able to smelt all the vanadic acid which we have available. Should this situation change we will be glad to get in touch with you but see no

prospects at the moment that we would be interested in your proposal."

Mr. Holland: Mr. Alioto, these are two totally unrelated transactions. [814-A]

Mr. Alioto: We will offer them separately.

Mr. Holland: You are offering them?

Mr. Alioto: We will be very happy to, Mr. Holland.

We first offer the 1940 correspondence between Apex and Vanadium Corporation of America.

I understand there is no objection to that, Mr. Holland?

Mr. Holland: No objection.

The Clerk: Plaintiff's Exhibit 63 admitted in evidence—heretofore marked for identification, admitted and filed in evidence.

(Whereupon, Plaintiff's Exhibit 63 for identification was received in evidence.)

Mr. Alioto: We will offer separately letter dated February 14, 1947.

Mr. Holland: What is the date of that?

Mr. Alioto: February 14 of 1947. It is interoffice memorandum from Mr. Gibbons of the Vanadium Corporation of America.

Mr. Holland: Would you have any objection to offering the entire correspondence on that subject at the same time?

Mr. Alioto: I have no objection at all, Mr. Holland.

Would you be good enough to show me what you deem the entire correspondence?

(Discussion between counsel.) [815]

Mr. Alioto: We have no objection to submitting the entire correspondence.

The Clerk: Plaintiff's Exhibit 78 admitted and filed in evidence.

(Whereupon, inter-office memorandum dated 2/14/47, P. J. Gibbons to J. B. Girdler; letter dated 2/24/47, Girdler to Continental Ore Company; letter of Continental Ore Company by J. A. Mirel to Vanadium Corporation of America; letter dated March 13, 1947, Girdler to Continental Ore Company, was received in evidence and marked Plaintiff's Exhibit 78.)

Mr. Alioto: The first letter is dated March 11, 1940. It is from the Apex Smelting Company, by Mr. Al Lippa, to the Vanadium Corporation of America at 490 Lexington Avenue, New York, New York.

"Gentlemen:

"Please be good enough to let us have your very best price on quantity lots of vanadium pentoxide crushed to one-quarter inch and under. We desire this material for domestic consumption.

"Your immediate response will be very much appreciated."

That's March 11th, and on April 8, 1940, Mr. Lippa again writes to them and says:

"Vanadium Corporation of America
490 Lexington Avenue
New York, New York [816]

"Gentlemen:

"We enclose a copy of letter written to you on March 11, to which we do not seem to have received a reply.

"This, no doubt, has been overlooked, and we would appreciate hearing from you."

April 20, 1940, Mr. Gustav Laub, Assistant Vice-President, Vanadium Corporation of America, replies:

"Apex Smelting Company
Chicago, Illinois
Attention: Mr. L. Lippa

"Gentlemen:

"In response to your letter of April 8, enclosing copy of your letter of March 11th which apparently went astray, we would advise that our position is such that we have no material to offer you at present."

That's dated April 20, 1940.

(The above letters read from Plaintiff's Exhibit 63 in evidence.)

Mr. Alioto: February 14, 1947—this is in the postwar period—Mr. Gibbons on February 14, in an inter-office memorandum to Mr. Girdler, writes as follows, on the subject "Continental Ore Company Inquiry," to J. P. Girdler.

"With reference to letter from the Continental [817] Ore Company dated February 11, 1947, in

which they advise they would be interested in one minimum carload per month of vanadium pentoxide for delivery, commencing with April and through July, 1947, after study of existing commitments for this commodity and the sales estimates supplied to me by the sales department covering the current year, we find our entire production capacity will be taken up for the year 1947.

"However, it is possible that we may be able to supply a car during the period mentioned if we were called upon for it, but at this time we could not guarantee even that amount."

That is the inter-office correspondence.

Then the letter that goes from Girdler to Continental Ore Company on February 24, ten days later:

"Continental Ore Company

"Gentlemen:

"With reference to your letter of February 11, 1947, with respect to contracting for one carload per month of black vanadium oxide, fused, beginning in April and through July, 1947, i.e., four carloads, after reviewing our existing commitments for this commodity and estimated sales, we believe that we will be able to take care of these four carloads if [818] delivery is extended over a six months' period beginning with April, 1947.

"Our present contract price for fused black vanadium oxide is $1.10 per pound contained V_2O_5, f.o.b. Seller's Works, Bridgeville, Pennsylvania, with freight charges allowed to destination, unless such freight charges are in excess of the rate to

St. Louis, Missouri. In such case, free charges to St. Louis will be allowed.

"The above price will be in effect until March 31, 1947 and thereafter for each calendar quarter-year unless revised in writing by us at least 15 days prior to such quarter-year.

"This offer, which is subject to our usual contract terms, is subject to acceptance by execution of our formal contract on or before March 15, 1947, so would ask that you advise us promptly whether or not you are interested in having us submit our contract to cover the tonnage above-mentioned."

On March 7, 1947, Mr. Mirel of the Continental Ore Company—J. A. Mirel—replies to the Vanadium Corporation of America:

"Gentlemen:

"Receipt is acknowledged of your letter dated February 24 in which you submit us your proposal for four carloads of black vanadium oxide at the contract [819] price of $1.10 per pound contained V_2O_5, f.o.b., your works, Bridgeville, Pennsylvania, with freight charges allowed to destination, unless such freight charges are in excess of the rate to St. Louis, Missouri. In such case, freight charges to St. Louis will be allowed.

"We have submitted our proposal to our buyers and have been informed that our price is out of line with current market offerings. From what we have been able to ascertain in our subsequent discussions, the oxide would have to be made available to us around $1.00 to $1.05 in order to permit

doing the business. We would thank you to give consideration to a revision in your price to conform with the price indicated above, as we believe prospects appear favorable for doing the business at our indicated figure."

Mr. Alioto: And actually, Mr. Holland, there was another letter saying they wouldn't reduce the price, that's correct, is it not?

Well, we will have it at a later point.

Mr. Holland: Yes, here it is. You may have that (handing to counsel).

Mr. Alioto: No objection to having that admitted as an exhibit? [820]

Mr. Holland: Wait a minute, that's the wrong one.

Mr. Alioto: No, this isn't it.

Mr. Holland: That's it (handing to counsel).

Mr. Alioto: The final document, which we ask be physically attached to this, if your Honor please, is Mr. Girdler's letter to Mr. Mirel:

"With reference to your letter of March 7, relative to our offer to sell black vanadium oxide fused, we regret that you are not interested in our proposal for the sale of this material at $1.10 per pound contained V_2O_5, as quoted in our letter of February 24.

"We are not prepared at this time to consider making a reduction in our current price.

"Very truly yours,

"John B. Girdler,

"Assistant General Manager of Sales."

Mr. Wolf, would you be good enough to take the stand.

MARTIN WOLF

called as a witness on behalf of the plaintiff herein, being first duly sworn, was examined and testified as follows:

The Clerk: State your full name, your occupation and your address to the Court and jury.

A. Martin Wolf. I reside at 300 Central Park West, New York City. [821]

Direct Examination

Q. (By Mr. Alioto): Mr. Wolf, what is your present business or occupation?

A. I am Vice-President of the Continental Ore Corporation.

Q. Vice-President. For how long a period of time have you been the Vice-President of the Continental Ore Corporation?

A. About 20 years.

Q. What do your duties involve in connection with the Vice-Presidency of the Continental Ore Corporation?

A. The selling, the buying, shipping and selling of all the materials that we handle.

Q. What is the nature of the materials that the Continental Ore Corporation handles?

A. Ores, minerals and alloys.

Q. Would you be good enough to designate some of them, for the record, please?

A. Well, there is iron ore, pig iron, manganese ore, ferro-manganese, chrome ore, ferro-chrome, tungsten ores, ferro-tungsten. That's about it.

(Testimony of Martin Wolf.)

Q. You handle——

A. Those are the main ones. Fluorspar and all grades, actually.

Q. Now, what is the source of these materials, the iron ore, the manganese ore, the ferro-manganese, the ferro-chrome, the ferro-tungsten, and these various ores—just state them, generally?

A. Well, generally, they are both domestic and foreign materials.

Q. Would you be good enough to tell us about the general classification of customers that buy these ores, alloys and minerals from you?

A. They are mainly the steel companies.

Q. Would you be good enough to name the steel company customers of these ores, minerals, and alloys?

A. Well, it's actually the list of the American steel industry. It starts with U. S. Steel, Bethlehem Steel, Republic, Inland Steel, Jones & Laughlin, Weirton, Wheeling, Detroit Steel, Ford Motor, Columbia-Geneva, Sheffield Steel in Houston, Midland—it's the list of the steel industry, in fact.

Q. I think we have a pretty fair notion of the other things you have mentioned, but will you tell us what fluorspar is?

A. Fluorspar is a mineral that is used in the steel industry as a flux to eliminate the impurities in the steel.

Q. These samples I'm holding in my hand, are these samples of fluorspar? A. That's right.

(Testimony of Martin Wolf.)

Q. Would you be good enough to tell us where fluorspar is mined?

A. Fluorspar is mined in the western states, the southwestern states of the United States, in Mexico, Spain, Italy, Germany, other places. [823]

Q. What are the western states of the United States where fluorspar is mined?

Mr. Holland: May it please the Court, the evidence seems to be entirely on products other than vanadium. May I ask Mr. Alioto what the purpose is?

Mr. Alioto: We will get down to the purpose. We will get down to vanadium in just a moment. I want to develop——

The Court: Answer the question. Go ahead.

Mr. Alioto: What are the states where fluorspar is mined?

A. Colorado, Wyoming, Nevada, Utah, New Mexico, Arizona, Texas, Illinois and Kentucky.

Q. As far as the first five are concerned, are they substantially the same states as where vanadium ore is mined? A. That's right.

Q. Mr. Wolf, I want to inquire about your personal experience in the industry of ores, alloys and minerals. Would you be good enough to tell us when you first secured your employment, any employment, in that industry?

A. That was in 1930.

Q. How old were you at the time?

A. In 1930 I was 18.

Q. How old are you now?

(Testimony of Martin Wolf.)

A. I am 45.

Q. Where did you secure this employment?

A. Well, I started my apprenticeship in the firm my father was with, an ores and mineral firm in Germany, in Frankfurt, Germany.

Q. What was the nature of the business carried on by that firm?

A. Ores, minerals and metals.

Q. And what was the nature of the duties that you personally performed in connection with the activities of that firm?

A. Well, I learned how to buy, sell, ship and insure ores and minerals.

Q. Now, then, how long did you remain with that firm?

A. I remained with that firm in Germany until 1933, when Hitler came to power.

Q. Then what did you do?

A. Then I asked for a transfer to one of the foreign offices of the same firm, and I was transferred to France and then to Holland.

Q. With the same company?

A. Same company.

Q. What did you do in France and Holland for that same company?

A. Exactly the same thing.

Q. Then what was the next employment you had in this industry?

A. In 1937, I met Mr. Leir who was operating in Luxembourg, and I joined him. [825]

(Testimony of Martin Wolf.)

Q. What was the name of the company under which Mr. Leir operated in Luxembourg?

A. It was the S. A. des Minerais (spelling).

Q. What does S. A. stand for?

A. That means incorporated.

Q. And des Minerais, what does that title mean?

A. Corporation of minerals.

Q. Minerals? A. Yes.

Q. What were the duties that you actually discharged in your employment with the S. A. des Minerais in Luxembourg?

A. Well, at that time we had three main businesses, fluorspar, refractories and ferro alloys.

Q. What were the ferro alloys in which you dealt?

A. Ferro-tungsten, ferro-vanadium and ferro-titanium.

Q. What were the refractories in which you dealt?

A. Manganosite and manganosite bricks.

Q. Maybe you better tell us what refractory means, and I include myself in that.

A. We use refractories for furnace linings in the metal and steel industry to prevent the liquid metal charge from breaking out of the furnace. It's like an oven, a brick oven. They are more heat-resistant bricks than ordinary bricks.

Q. Now, so far as your ferro-vanadium was concerned, that [826] business in ferro-vanadium, did you have contracts for the production of ferro-vanadium at that time?

(Testimony of Martin Wolf.)

A. That's right. We had a joint venture contract with a large French company who had their own hydraulic electric power station in the French Alps and were equipped to produce ferro alloys.

Q. What was the name of that French company?

A. It was Fredet Kuhlmann (spelling).

Q. Is that hyphenated? A. I don't know.

Q. What was the nature of the business that you carried on in connection with ferro alloys, specifically, and even more specifically with ferro-vanadium?

A. We had a contract with the—they were actually doing the producing and we would procure the raw materials and would handle the sales, and the financing was done fifty-fifty.

Q. Do you recall what the source of your raw materials was?

A. We usually — for instance, it was South America, South Africa, Portugal, Burma—that was about it.

Q. Did you and Mr. Leir carry on the duties of procuring those raw materials for the French manufacturer? A. Interchangeably.

Q. All right. How long did you remain with the S. A. des Minerais as an associate of Mr. Leir?

A. Well, practically, it ended only when the war started. [827] I happened to be in France at the time, at the plant where we produced these ferro alloys, so I did not go back to Luxembourg, of course.

(Testimony of Martin Wolf.)

Q. You date the war as of September of 1939?

A. September, 1939.

Q. Then what did you do?

A. Well, I stayed at the plant to—we had to organize on a war footing, and after that was done I volunteered for the French Army.

Q. And you served in the French Army?

A. That's right.

Q. Until the fall of France?

A. Until June, 1940, when the army was more or less disbanded.

Q. Then what did you do; what experience did you have after that?

A. Well, I didn't have any experience; I caught the last ship to North Africa.

Q. And after that, sir?

A. After that I tried desperately to get out of North Africa and finally succeeded to get to Portugal on a fishing boat, and once in Portugal Mr. Leir got me out of there and I came here.

Q. Mr. Leir got you out of Portugal to come to America? A. That's right.

Q. When did you arrive here? [828]

A. In September, '40.

Q. Now, when did you actually go to work for the Continental Ore Company, in America, that is?

A. Well, let me put it this way. I had a transient visa only, and I wanted to regularize my position. So, after a few months here, I went to Cuba to wait for the issuance of an immigration visa.

(Testimony of Martin Wolf.)

Q. Was that immigration visa issued to you by the United States Government?

A. Yes, it was, the day after Pearl Harbor.

Q. When did you make your regular—when did you make your permanent entry, as it is sometimes called, into the United States?

A. The next ship was somewhere around December 16 of 1941, and I arrived here around December 22-23, 1941.

Q. When did you go to work for the Continental Ore Company? A. On January 2, 1942.

Q. Then what position did you occupy with the Continental Ore Company, beginning January of 1942? A. Call it general factotum.

Q. General factotum. What did you do, specifically?

A. Well, it was the same kind of occupation as I had before, trying to buy and sell materials, which were in our line.

Q. Now at that time, at the time you started working for the Continental Ore Company, it had some kind of a joint [829] operating arrangement with the Apex Smelting Company of Chicago, did it not? A. That is correct.

Mr. Alioto: Does your Honor want to take a recess at this time?

(Short recess taken.) [829-A]

Q. (By Mr. Alioto): At the recess, Mr. Wolf, we were speaking of the joint arrangement between the Continental Ore Company and the Apex Smelting Company. After you became employed

(Testimony of Martin Wolf.)

with the Continental Ore Company, did you visit the plant of the Apex Smelting Company?

A. Yes, several times.

Q. And, of course, you had been in the French plant, had you not, prior to that time?

A. Yes.

Q. You helped to get ready, in connection with this war situation, you testified? A. Right.

Q. Will you generally describe the manner or the method of manufacture at the Apex plant? Just tell us what you saw and what was being done there.

A. Well, the raw material, the vanadic oxide was, if necessary, put through a crusher and then was blended with the other ingredients, mainly aluminum shot—that means small pieces of aluminum --and then put into a crucible to be ignited then with a small charge of magnesium. The crucible was a very crude instrument, actually. It consisted of half rings of refractory material which were stacked on top of each other to form a pot, and the materials with the aluminum, as I said, were put in, and then, since magnesium ignites easier than aluminum, the little charge of magnesium [830] was ignited, and because of the heat that was generated, the aluminum throughout the charge started to ignite and cause the smelting of the entire charge. Then the slag and the alloy were drawn off separately from the crucible and then suitably crushed.

Q. Was this a method that the French firm had

(Testimony of Martin Wolf.)

employed in connection with your joint arrangement there?

A. Yes, except that the French plant also used electric furnaces. They used both methods, the aluminum thermic and the electro smelting.

Q. How did the product of the Apex method compare with the product of the French method or the French manufacture?

A. The quality?

Q. Yes.

A. Well, it was the same quality. It was made according to the same recipe, I should say.

Q. At the time you were at Apex, how many other manufacturers of vanadium were there in the country?

A. Two, Union Carbide and Vanadium Corporation of America.

Q. The two defendants here were the only other ones? A. That is right.

Q. Do you know from your experience in the industry what the vanadium content of the ferro-vanadium manufactured by the defendants was?

A. Yes, it was in the neighborhood of 45 to 55 per cent of metallic vanadium in alloy. [831]

Q. In the European manufacture, what was the vanadium content of the ferro-vanadium manufactured under your joint arrangement with Freddie Coleman?

A. Seventy to eighty percent.

Q. What was the vanadium content used in the Apex process? A. Seventy to eighty.

(Testimony of Martin Wolf.)

Q. In other words, you used the European formula? A. That is right.

Q. Incidentally, do you know what the vanadium content of the defendants' is today?

A. Well, they copied ours.

Q. Is it seventy to eighty now?

A. That is right.

Q. It has been for some time?

A. Yes, a number of years.

Q. What are the relative advantages of a ferro-vanadium with a 70 to 80 content as against a ferro-vanadium with a 45 to 55 content or a 35 to 50 content?

A. Well, that is actually our sales talk.

The Court: I can't hear you.

The Witness: That is actually what we show the customers to be the advantage.

Q. (By Mr. Alioto): Will you tell us what those advantages are? [832] Just state the facts with respect to those advantages.

A. The advantage was mainly that our ferro-vanadium content, with the same impurities quantity-wise as the ferro-vanadium made by our competitors which was much lower in grade, or rather, lower in vanadium, so that if you had, let us say, 10% impurities in theirs and in ours, since you only used half of ours to achieve the same result, you only added half of the impurities. That was the big advantage.

Then there were incidental advantages, such as you have to handle half of the material only and

(Testimony of Martin Wolf.)

you save freight, you save storage, and you generally have a purer material.

Q. About how long a period of time, if you recall, had the 70 to 80 V contained material been used in Europe?

A. I think there again we started it but I can't remember too sure on that.

Q. Do you know how long the American companies, these defendants, have been manufacturing vanadium of that higher content, ferro-vanadium of that higher content, just approximately?

A. It is a guess; probably eight or ten years.

The Court: When?

The Witness: About eight or ten years, I would guess that they have been making it.

The Court: Just a moment. How is that material? [833] This suit was filed in 1948, wasn't it?

Mr. Alioto: The suit was filed in July of 1949, if your Honor please.

The Court: I don't see how anything occurred since then would be material.

Mr. Alioto: Except to show that there was nothing wrong with the ferro-vanadium that they made. If it has been copied since, that would indicate it was pretty good ferro-vanadium.

Q. In any event, Mr. Wolf, your basic job in 1942 was to sell the Apex production, was it not?

A. One of them.

Q. Who were the customers that you approached in connection with the sale of the ferro-vanadium produced by Apex?

(Testimony of Martin Wolf.)

A. The users of ferro-alloys, which is the steel industry.

Q. I show you, Mr. Wolf, a copy of a document that has previously been supplied to counsel and ask you if you will be good enough to look at it, sir, then state whether or not that is a document reflecting the sales of ferro-vanadium and other vanadium products by date, quantity, quality, price and customer.

A. Yes, it is.

Q. And these were sales by the Continental Ore Company or the Apex Smelting Company?

A. That is right.

Mr. Alioto: We will offer that in evidence, if [834] your Honor please, as plaintiff's exhibit next in order.

Mr. Archer: Your Honor, may I ask a question on voir dire?

Q. Mr. Wolf, did you prepare this exhibit?

A. No.

Q. Do you know who prepared it?

A. Someone in the Continental Ore Company.

Q. Do you know that it is correct?

A. I am sure it must be correct because it must be taken from their books.

Q. So it is all your sales?

A. I beg your pardon?

Q. It is all your sales?

A. I don't know. I can't tell you that. I don't know what the period is exactly.

(Testimony of Martin Wolf.)

Q. I mean of your vanadium sales. Does that have all the vanadium sales?

Mr. Alioto: It is the sales up to a certain period of time, 1944.

Q. (By Mr. Archer): Does it have all the sales up to 1944?

Mr. Alioto: We are going to have a fuller documentation by the controller of the company on all of the sales, but then this reveals the customers and the dates of sales. That is the thing I am offering it for at this point. [835]

The Court: What are the dates included in this?

Mr. Alioto: The dates included in this compilation are 1940 to 1944.

Mr. Archer: My only question is whether this is supposed to be all the sales during that period of time or not.

Mr. Alioto: We are going to have, as I say, a fuller documentation. I do not know whether every single sale is included, if your Honor please. It is not offered for that. It is offered to show the dates on which specific sales were made, the customers to whom sold, and the prices at which sold.

Mr. Archer: I have no objection.

Mr. Alioto: We will offer it in evidence. We will have another statement on all the sales when the controller takes the stand or Mr. Leir takes the stand.

(The document referred to was thereupon received in evidence as Plaintiff's Exhibit 79.)

[See Book of Exhibits.]

(Testimony of Martin Wolf.)

Mr. Alioto: I just want generally to point out the nature of this document to the jury.

The Court: Just state what it covers.

Mr. Alioto: Yes. This covers the date of the sale, the quantity of the sale, the material, whether it is vanadic acid or ferro-vanadium. It covers the price of the sale, the amount of the sale and the customer involved. The customers are Allegheny Ludlum Steel Corporation, the Braeburn Alloy Steel Corporation—— [836]

Q. Will you identify that company?

A. They are tool steel makers.

Q. Where is Braeburn located?

A. Braeburn, Pennsylvania. It isn't too far away from Pittsburgh.

Q. There is Henry Disston & Sons, Incorporated.

A. They are near Philadelphia. They make saws and files.

Q. The Jessop Steel Company.

A. They make special steels.

Q. Latrobe Steel Company.

A. Tool steel near Pittsburgh.

Q. Allegheny Ludlum we have already mentioned. The Omaha Steel Works?

A. They are not in existence anymore.

Q. Republic Steel Corporation.

A. They make all kinds of steels, the third largest producer in the state.

Q. Simonds Saw and Steel Company. Do you identify that company? A. Yes.

(Testimony of Martin Wolf.)

Q. Where is it located? What is the nature of its business?

A. They make tools, small tools, workshop tools.

Q. Universal Cyclops Steel Corporation and Valley Steel Casting Company, Vulcan Crucible Steel Company. [837]

A. Pittsburgh, all around Pittsburgh.

Q. Mechanized Corporation, Acron Casting Company and Atlas Steels. Will you tell us where Atlas Steels is located?

A. Welland, Ontario, Canada.

Mr. Alioto: We will have reference to this document at a later stage, if your Honor please.

Q. Now, then, we had some testimony here, Mr. Wolf, in this courtroom about allocation systems that were in effect in 1941, 1942 and 1943. Would you just state the fact as to how those allocation systems worked in connection with customers such as these, for example?

A. Well, the customers had to get permission from the authorities after they had put in an order to receive the material. It is about the same as we had to receive permission to get our raw materials into Apex or into our Long Island shop. The system worked so that the user had to apply and show the necessity for his receiving the material, but the first thing was that the orders were placed first on a commercial basis and then the authorities would approve or disapprove shipment.

Q. How, mechanically, did that affect your busi-

(Testimony of Martin Wolf.)

ness about going out and soliciting customers, whether new or old? A. It did not.

Q. You simply went out and offered your materials?

A. If the customer did something that was considered [838] essential by the authorities, he would get the allocation.

Q. So far as you were concerned, you made no applications to sell ferro-vanadium, did you?

Mr. Archer: I object to the question as leading.

The Court: It is leading and suggestive.

Mr. Alioto: Just tell us the effect of this allocation system. State the facts so far as going out and getting customers.

A. I went out and sold these materials and it was up to the customers, then, to apply to the authorities to get permission to receive the materials. It did not in any way hinder us from making sales.

The Court: Just a moment. Let me understand that. You were not in the manufacturing business, were you?

The Witness: Yes, we were the agents for a manufacturer.

The Court: Were you acting in the nature of a broker or sales agent?

The Witness: We were also participants in the production and Apex. We had not only an arrangement whereby the profit was to be split between the French associates and ourselves, but we also had supplied Apex with the basic knowledge ac-

(Testimony of Martin Wolf.)

cording to which they produced. They were never in the business before.

The Court: You participated, then, in the manufacture? [839]

A. I would say yes.

Q. (By Mr. Alioto): Did you develop a customer in Canada known as the Atlas Steels Company?

A. Yes, we did.

Q. Did you personally contact that company over the period of years? A. Yes.

Q. When you were contacting these companies, did you sell them just vanadium alone?

A. No, we sold them, or we tried to sell them, whatever other materials we had to offer at the time, mainly fluorspar. To this particular customer we sold both vanadium and fluorspar.

Mr. Alioto: Before going into the Atlas Steel story, I would like to read to the jury the type of customer this was.

The Court: Well, it was a customer in Canada.

Mr. Alioto: Yes, if your Honor please. I am not sure how substantial a customer it was.

Mr. Archer: Your Honor, I object to this. I filed a memorandum on it and I believe the Canadian situation should not be a part of this lawsuit.

Mr. Alioto: We will come to that in a moment. Just let me read these accounts and I will show to you the Canadian situation concerned meetings in New York City, not Canada. [840]

The Court: Now, just a moment. On this Canadian proposition I think that might be discussed

(Testimony of Martin Wolf.)

outside the presence of the jury. You are offering evidence now——

Mr. Alioto: Just that we had the customers, that is all.

The Court: He had a customer up there?

Mr. Alioto: That is all at the moment.

The Court: Go ahead. We will come to that later.

Mr. Alioto: This customer on March 3, 1942, purchased Van-Ex, 2,000 pounds of Van-Ex at $2.40, $4,800.

March 13, 1942, 3,000 pounds of Van-Ex, the price always $2.40, $7,200.

March 27, 1942, $12,000.

April 17, 1942, $12,000.

May 16, 1942, $12,000.

May 21, 1942, $7,000.

June 4, 1942, $6,900.

June 17, 1942, $11,196.

July 3, 1942, $12,804.

July 11, 1942, $10,008.

August 17, 1942, $7,200.

August 23, 1942, $15,876.

September 17, 1942, $5,184.

September 26, 1942, $4,608. [841]

October 12, 1942, $7,200.

November 11, 1942, $5,184.

December 15, 1942, $5,472.

December 17, 1942, $6,336.

January 1, 1943, $576.

May 29, 1944, $3,240.

(Testimony of Martin Wolf.)

Q. Mr. Wolf, did there come a time when you no longer shipped to the Atlas Steel Company?

A. Yes.

Mr. Archer: Your Honor, I would like to renew my objection at this point.

Mr. Alioto: I have not said anything yet, if your Honor please.

The Court: Go ahead.

Q. (By Mr. Alioto): In connection with the matter of the Atlas Steel Company, I show you copy of a letter written to Mr. G. B. Walker of the Electro Metallurgical Company—that is this defendant, if your Honor please, not the Canadian company, this defendant—dated January 19, 1943. I show you this letter and ask you whether you can identify it as a letter sent to Mr. Walker on or about the date which the letter bears.

A. Yes.

Q. Did you help in the composition of that letter? A. Yes. [842]

Mr. Alioto: Are you familiar with the letter, counsel?

Mr. Archer: I will have to look at it.

Mr. Alioto: We are not offering this letter at the moment against Vanadium Corporation of America, only against the Union Carbide group of defendants.

Mr. Archer: Your Honor, I think that this is a matter to which you referred that we should discuss in chambers, and I object to the admission of the letter. The fact that he writes to somebody

(Testimony of Martin Wolf.)

at the Metallurgical Company in the United States does not change the situation as to what was occurring in Canada.

Mr. Alioto: No, but they answered from the United States and there was a conference held in New York in the United States about the matter.

The Court: Where was that held?

Mr. Alioto: Where was that held?

The Court: Where was the order made, in Canada or in the United States?

Mr. Alioto: The order was made in the United States for shipment to Canada.

The Court: Are you contending that the Canadian Government was a party to this?

Mr. Alioto: No, we are not, if your Honor please. We are making no charge that the Canadian Government is a party to anything. Under no circumstances are we making that charge. [843] The parties to this thing are the Electro Metallurgical Company of New York City. That is who the party is.

Mr. Holland: This brings up the matter to which your Honor referred which you said you thought should be discussed in chambers, and I suggest that we do that right now.

Mr. Alioto: We are proceeding to show certain actions by Electro Metallurgical Company and a conversation as to the reason for the action with a representative, not of any Canadian company or the Canadian Government, but a representative of

(Testimony of Martin Wolf.)

the Electro Metallurgical Company in New York, about which there has been abundant evidence.

The Court: Let me see the letter.

(The document referred to was handed to the Court.)

Mr. Alioto: That is the first in a series of correspondence on the matter. [844]

The Court: All right, you introduce it in evidence. Exception allowed.

Mr. Alioto: Thank you, if your Honor please. Ask that it be marked as Plaintiffs' Exhibit next in order.

The Clerk: Plaintiffs' Exhibit 80 admitted and filed in evidence.

(Reporter's Note: Exhibit 80 subsequently in these proceedings stricken from evidence and marked Exhibit 80 for identification.)

(Copy of letter from Henry J. Leir, Continental Ore Company, dated January 19, 1943, to Mr. G. B. Walker, Electro Metallurgical Co., New York City, received in evidence and marked Plaintiffs' Exhibit 80.)

Mr. Alioto: January 19, 1943; this is from Mr. Henry J. Leir, Continental Ore Company, to Mr. G. B. Walker, Electro Metallurgical Company, 30 East 42nd Street, New York City.

"Dear Sir:

"Re: Vanadium for Canada.

"You undoubtedly know that the new allocation system in Canada resulted in our being eliminated from the Canadian market during the month of

(Testimony of Martin Wolf.)

January. (Our customer, Atlas Steels Ltd., requested 4000 lbs. for shipment from us during January which you dropped from the list and replaced by ferro vanadium [845] from your and Vanadium Corporation's production.)

"Atlas Steels Ltd. has now applied for 5000 pounds of vanadium to be received during February and they insist that they want to receive our material.

"Our attorney in Ottawa, Mr. Redmond Code, contacted Mr. Bateman today in order to find out whether these 5000 pounds from Continental Ore Company are included in your list for February.

"Mr. Bateman was unable to give him this information and suggested to Mr. Code that we get in touch with you regarding this matter since your Welland firm is handling this matter under your direction.

"We wish to say that we have these 5000 pounds of V ready for immediate shipment and expect you to let us ship this material to Canada as requested by our customer.

"We will telephone you tomorrow morning in order to learn your reply.

"Thank you for your cooperation.

"Very truly yours, Continental Ore Company, Henry J. Leir."

Mr. Holland: I would like to move to strike that letter. In the letter there is obviously hearsay. It is what the man in Canada told Mr. Code in Canada, who told Mr. Wolf.

(Testimony of Martin Wolf.)

Now, how could that possibly be binding on us, your [846] Honor?

Mr. Alioto: We will develop it, if your Honor please.

The Court: The objection will be sustained. You can't cover the entire earth now on this proposition.

Mr. Alioto: How about New York City, if your Honor please? May we cover that?

The Court: Well, if it is in New York City, yes, but we can't put New York in Canada.

Mr. Alioto: Is your Honor striking this letter (Exhibit 80)?

The Court: The letter will be stricken. Exception allowed. It is not material, and the Jury will not give it consideration.

Mr. Alioto: You mean an attempt in the United States to prevent them from shipping from the United States, if your Honor please, is not material to a Sherman Act violation? I find that difficult to understand.

The Court: How could an individual in the United States control the Government of Canada?

Mr. Alioto: I will show you in just a minute how, Judge, if you will let me.

The Court: No.

Mr. Alioto: I will show you how.

The Court: I am not going to let you do that because Canada is a different nation. Now, I don't care what kind of a rule Canada put into effect; it may have been a very unfair rule; it may have

(Testimony of Martin Wolf.)

been to the disadvantage of this plaintiff. But if it is the rule of Canada, we have no jurisdiction of Canada.

Mr. Alioto: It isn't the rule of Canada, if your Honor please. I want to show it was the rule of this defendant in New York. In other words, it wasn't a statute, a Canadian statute, or a Canadian regulation that we are complaining about. What happened is that the Electro Metallurgical Company——

Mr. Archer: Your Honor, I think this should be in chambers. I think it has gone beyond that right now.

The Court: Very well. The Jury will be excused until 2:00 o'clock.

(Thereupon the Jury withdrew and the following proceedings were outside the presence of the Jury.)

Mr. Alioto: If your Honor please, I want first to indicate what facts will be developed through this witness and through correspondence. I want to emphasize preliminarily that the only correspondence we are going to be talking about is correspondence between this defendant, Electro Metallurgical Company, and this plaintiff, the Continental Ore Company. I am not concerned with any correspondence with Canadian people, Canadian ministers, or anybody else. I am concerned only with correspondence between this plaintiff and these defendants in [848] connection with the taking away of a very valuable customer.

Now, the customer we are speaking of is a customer in Canada, it is true, who receives shipments from the United States, produced in the United States, and shipped out of New York. That is all we are talking about. And I submit that obviously—

The Court: Now, who would control your Canadian company under your theory? Why don't you just go ahead and ship it?

Mr. Alioto: Well, I will explain why in just a moment, if your Honor please. Because the Electro Metallurgical Company of Canada was appointed as an agent by the Canadian Government, under a statute about which no question is being raised, and under an appointment about which no question is being raised, and was appointed as an agent to buy vanadium—that is what the agent was supposed to do.

Now, from there on in that agent moves into the position of a purchasing agent for the Canadian Government. There is no question about that government connection, no question at all about it. That agent has the right to buy vanadium. That agent determines, after conferences with this defendant in New York, and it is controlled by this defendant in New York, that agent, that——

The Court: Now you are assuming that an agent of the Government of Canada is controlled by somebody in the United States.

Mr. Alioto: I am not assuming. I am going to prove it.

The Court: Well, you are not going to be per-

mitted to prove it. Suppose it is wrong; suppose they did try to influence the sale of their goods.

Mr. Alioto: They didn't influence it——

The Court : But it was the act of the Canadian Government.

Mr. Alioto: My point is that they didn't influence it, if your Honor please; they didn't influence—they did it.

In other words, they made the determination——

The Court: I am not going to permit you to go into that because that would say that we controlled the Canadian Government.

Mr. Alioto: No.

The Court: That some individual down here controlled the Canadian Government.

Mr. Alioto: No, it doesn't say that at all, if your Honor please.

Let me invite your Honor's attention to a very recent case. It is the Fifth Circuit. I will get the citation in just a moment. Here was the charge. The charge was that a group of securities dealers went to the District Attorney down in Florida and got the District Attorney to indict another [850] securities dealer. So the District Attorney indicted him. Obviously the private persons couldn't have the indictment, it was the government, the government that indicted the securities dealer. He brought an anti-trust case in which he said that his competitors induced the District Attorney to indict him and ruin his business. Judge Hutchinson of the Fifth Circuit said that that stated a cause of action under the anti-trust laws.

Now, all we are alleging, just as in that case, and there are other cases——

The Court: You are alleging that one of these defendants, one of the agents of the defendants, influenced the representative in the Canadian Government to disregard your client and to permit the sale by someone else.

Mr. Alioto: Except that your Honor is missing one step, I think. That representative of the Canadian Government was the defendant. I don't think—I made that clear.

In other words, the Canadian Government appointed——

The Court: Are you making the agent of the Canadian Government, this Canadian representative, a defendant—is he a defendant in this case?

Mr. Alioto: The representative there was the Metallurgical Sales Corporation of Canada. He was named as a defendant in this case.

The Court: He is a defendant in this case? [851]

Mr. Alioto: That's right.

The Court: Did you have service on him?

Mr. Alioto: No, we didn't serve him.

The Court: Well, then, you will not regard him as a defendant in this case.

Mr. Alioto: Just a minute, if your Honor please. What I want to prove is that when inquiry was made there in Canada, they said: See the man in New York, Electro Metallurgical Company, which is a defendant in this case.

The Court: It doesn't matter what they did, so

long as it was the act of a representative of the Canadian Government.

Mr. Alioto: What about the District Attorney in the Florida case?

The Court: It doesn't matter; I don't care anything about that case.

Mr. Alioto: You don't care anything about that case?

The Court: No.

Mr. Alioto: What about the——

The Court: The Supreme Court doesn't have it yet, has it?

Mr. Alioto: Well, I thought that perhaps your Honor would care less for it if it got to the Supreme Court.

The Court: We still don't know what might happen [852] to it.

But suppose that they did induce the representative up there. The final act was the act of the Canadian Government. Now, we don't have any jurisdiction in Canada and we can't control—we can't say that what the Canadian Government did was right or wrong. We accept it as it is. Certainly I will not permit you to try to prove now that a representative of the Canadian Government was influenced by one of his associates, you might say, in the United States, to do what it did.

Mr. Alioto: By his boss in the United States, to cut off Continental.

Now, here's what I want to prove, if your Honor please. Your Honor is familiar with those lines of cases which say that in carrying out or putting

into operation an illegal plan that it may be that some of the steps in the plan are in themselves legal—in themselves legal.

Now, our basic point is——

The Court: Well, we'll say now that that would be your conspiracy.

Mr. Alioto: Yes.

The Court: But the overt act was committed in Canada.

Mr. Alioto: Oh, no. In New York City, is where the overt act was committed. And the crush on production was in New York City, not up in Canada. The prevention of the shipment [853] was in New York City.

The Court: Well, I am not going to permit you to go into that situation.

Mr. Alioto: Let me state further a further domestic involvement that I think perhaps will appeal to your Honor. When they were directed in Canada to go see the boys at 30 East 42nd Street, which is New York City, which is not under the Canadian Government, as I understand it, they went to them. They wrote them a letter, first of all, and said: We have been referred to you. What's the idea of stopping this shipment?

Then a man named Arrouet calls them up. Mr. Arrouet is a highly placed employee of that company, who spent a good deal of his time in Europe working out their relations with the European cartels. Now, he's a cartelist. He is cartel minded.

So, the upshot of the whole thing is that in June of 1943 this witness (Mr. Wolf) in a meeting in

New York City, which is not under the jurisdiction of the Canadian Government, as I understand it, had a conference with Mr. Arrouet about trying to straighten out this Canadian deal where they had lost this very valuable customer, as your Honor just heard. Your Honor just heard how valuable that customer was.

At this conference Mr. Arrouet tells Mr. Wolf: You people have no business in the vanadium business. You ought [854] to get out of the vanadium business. You have no place in it. And furthermore, if you don't quit fooling around with the Climax Molybdenum Company, we'll take care of them, too.

They were trying to get Climax Molybdenum to manufacture ferro vanadium for them.

Now, it just is incredible to me that that type of evidence can be excluded in a Sherman Act case, Judge.

The Court: Whom did Arrouet represent?

Mr. Alioto: The Electro Metallurgical Company, the principal defendant in this case, the principal defendant in this case, Judge. It is just incredible that you won't let us put that in.

The Court: That's his individual view, that is his opinion about it.

Mr. Alioto: Well, how else can we get a corporate view except through an individual, if your Honor please? If there is——

The Court: If you can find out what the corporate action was.

Mr. Alioto: If there is anything clearer—perhaps we don't like some of these Supreme Court

decisions—if there is anything clearer in the books, it is the fact that you don't have to spread a conspiracy on your minutes, that you don't have to put it there, Judge; that's just as clear as anything can be, and I would be amazed if any [855] conspirator put on the corporate minutes that "I have just told the Continental Ore Company that they can't go into business"—I would be amazed at that, if your Honor please, and I think your Honor would be amazed at it, too.

The Court: But the effect of your contention is that the Canadian Government, through its representative, was influenced to do what it did by one of these defendants.

Mr. Alioto: The crux of my contention is—it comes down to this, that this defendant as an agent for the Canadian Government, used that agency for the purpose of restraining trade and participating in a conspiracy to eliminate the Continental Ore Company from the Canadian market.

The Court: Notwithstanding, it was acting under the orders of the Canadian Government.

Mr. Alioto: It wasn't acting under the orders of the Canadian Government. That's the whole point. It was purchasing under an agency.

Now, let me give this example, if your Honor please. Let's assume that a policeman is authorized by the State of California to carry a gun in order to protect the peace, the public peace. He uses that gun for the purpose of participating in a conspiracy to commit murder. Would the fact of his agency insulate him from the charge that he had partici-

pated in that conspiracy? That's all we had here.

The Court: The representative now is getting into this situation in Canada. He was made the purchasing agent by the Canadian Government.

Mr. Alioto: Yes.

The Court: Now, he acted. Now, your contention that his action was influenced by the defendant in the United States——

Mr. Alioto: I am saying that the motive and intent of his action was to carry out a conspiracy to restrain the trade of this plaintiff.

Now, if that is done——

The Court: It would be in the nature of this court reviewing an act of the Canadian Government.

Mr. Alioto: No.

The Court: We are not going into that.

Mr. Alioto: Let me ask, if your Honor will let me go into that conversation with Mr. Arrouet, where he says that these people don't belong in the business, they've got to get out of it, and that's why they are not going to ship to Canada, may I get that in?

The Court: No.

Mr. Alioto: It would be just incredible that I couldn't put that in.

The Court: No, I can't allow you to put that in.

Mr. Alioto: You will not?

The Court: No. [857]

Mr. Alioto: Okay. Well, I guess it is clear what the Court is determined to do here under the circumstances.

The Court: Well, I want to keep out of Canada, that's it.

Mr. Alioto: Now, then, that conversation in New York—I will stay out of Canada and go right to New York, 30 East 42nd Street, where these people lived, Judge, that is where I am going to go. Now I want to know what your Honor's view is so that I won't waste any further time on it; in this conversation, Mr. Arrouet, who was an important employee of this company, tells them that they ought to get out of the vanadium business, they have no business in it.

He further tells them that he is going to make trouble for Climax Molybdenum if they try to deal with Climax Molybdenum to make ferro vanadium for them. I think it is in the same category as the evidence of Vanadium Corporation carrying on their little by-play with Apex Smelting that we already had.

Now, I submit——

The Court: I will permit you to make—you can make your offer of proof now, you can make your record on this, but the Court is very definite in his judgment that we should stay out of Canada and that is an act of the Canadian Government and certainly isn't binding on any of the defendants.

Mr. Alioto: Your Honor understands that the Climax Molybdenum Company is not in Canada?

The Court: I am not talking about that now. I am talking about this Canadian transaction.

Mr. Alioto: Well, this is involved in the Cana-

dian transaction, as part of the conversation that takes place with Mr. Arrouet, Judge.

The Court: The Court ruled.

Mr. Alioto: All right. If your Honor please, just let me make a record on it while we are here, we have time before noon. I will make a detailed record on it, if I may.

The Court has already stricken, as I understand, Exhibit 80, which is a letter to somebody in New York—somebody else in New York.

We offer at this time, and your Honor please, follow-up correspondence to that, which is a letter dated January 29, 1943, from Mr. Henry J. Leir to Mr. M. D. Arrouet of the Electro Metallurgical Company, 30 East 42nd Street, New York City. It is from a man in New York to another man in New York on the subject matter of shipping vanadium from the United States of America to Canada, and on the other subject matter suppressing that shipment of vanadium from the United States of America to Canada.

We will offer that to prove that this defendant at this point was engaged in restraining the plaintiff's vanadium trade, as well as its United States trade. [859]

Does your Honor want to rule on that now?

The Court: Go ahead and make your offer.

Mr. Alioto: Do you want me to complete the offer?

We next offer in evidence a letter dated February 10, 1943, from the Electro Metallurgical Company of Canada, Limited, to the Continental

Ore Company, which states, among other things, that it is acting as the result of a reference made to it by the Electro Metallurgical Company of New York City, this defendant in the action. This is dated February 10, 1943, if your Honor please. We will offer this in evidence as our next exhibit in order.

We will offer as our next exhibit after that a letter dated February 11, 1943, from Henry J. Leir, Continental Ore Company, to the Electro Metallurgical Company of Canada, Limited, Welland, Ontario, Canada, addressed to its vice-president, Mr. C. S. Bravin.

We offer next into evidence a letter from C. S. Bravin of the Electro Metallurgical Company of Canada, Limited, to Henry J. Leir, in reference to the same matter.

Now, Mr. Archer, at this point, so there won't be any question about it, I take it, it will be stipulated that the Electro Metallurgical Sales Company of Canada was in 1943 a wholly owned subsidiary of the Union Carbide and Carbon Corporation.

Mr. Archer: That's correct, as agent for the Metals Control of Canada.

Mr. Alioto: Thank you, Mr. Archer.

Mr. Archer: I think you have the names there wrong.

Mr. Alioto: Well, here's the name, right on the letterhead, the last one I gave you. It is the Electro Metallurgical Company of Canada, Limited, of Welland, Ontario, and it is stipulated, I take it, that

throughout the period of the year of 1943 this company was a wholly owned subsidiary of the Union Carbide and Carbon Corporation. [861]

Mr. Archer: Yes. One other thing with regard to this offer. I think it should be noted that Electro Metallurgical Sales of New York was never served in this action, either.

Mr. Alioto: The next is a letter, if your Honor please, dated February 17, 1943, from Mr. C. S. Bravin of the Electro Metallurgical Company of Canada, to the Continental Ore Company.

(The document referred to was thereupon marked Plaintiffs' Exhibit No. 84 for identification.)

Mr. Alioto: This is a telegram from Continental Ore Company to C. S. Bravin, Electro Metallurgical Company of Canada, dated February 18, 1943.

(The telegram referred to was thereupon marked Plaintiffs' Exhibit No. 85 for identification.)

Mr. Alioto: The next is a letter dated February 23, 1943, from C. S. Bravin of the Electro Metallurgical Company of Canada to the Continental Ore Company.

(The letter referred to was thereupon marked Plaintiffs' Exhibit No. 86 for identification.)

Mr. Alioto: The next is a telegram dated March 1st, from Continental Ore Company to C. S. Bravin.

(The telegram was thereupon marked Plaintiffs' Exhibit No. 87 for identification.)

Mr. Alioto: The next is a letter of March 3rd,

1943, from Henry J. Leir to Electro Metallurgical Company [862] of Canada, Ltd.

(The document referred to was marked Plaintiffs' Exhibit No. 88 for identification.)

Mr. Alioto: The next is a letter from Continental Ore Company to Electro Metallurgical Company of Canada, dated March the 10th, 1943.

(The document referred to was marked Plaintiffs' Exhibit No. 89 for identification.)

Mr. Alioto: The next is a telegram from Continental Ore Company to Mr. C. S. Bravin, Vice-President, Electro Metallurgical Company of Canada.

(The document referred to was marked Plaintiffs' Exhibit No. 90 for identification.)

Mr. Alioto: The next is a telegram from Electro Metallurgical Company, Bravin, to Continental Ore Corporation.

The next is a letter from Continental Ore Company to Office of the Metals Controller, Department of Munitions and Supply, dated April 26, 1943.

(The document referred to was marked Plaintiffs' Exhibit No. 91 for identification.)

(The document referred to was marked Plaintiffs' Exhibit No. 92 for identification.)

Mr. Alioto: The next is a letter from Mr. C. B. Dawson for G. C. Bateman, Metals Controller, to Continental Ore Company, dated April 29th, 1943.

(The document referred to was marked Plaintiffs' Exhibit No. 93 for identification.)

The next is a letter from Continental Ore Com-

pany to Electro Metallurgical Company of Canada, Ltd., dated May 4, 1943.

(Whereupon the document referred to was marked Plaintiff's Exhibit 94 for identification.)

The next is a letter from Continental Ore Company to Electro Metallurgical Company of Canada, Ltd., dated May 17, 1943.

(Whereupon the document referred to was marked Plaintiff's Exhibit 95 for identification.)

The next is a letter from Continental Ore Company to Electro Metallurgical Company of Canada, Ltd., dated May 20, 1943.

(Whereupon the document referred to was marked Plaintiff's Exhibit 96 for identification.)

The next is a letter from Electro Metallurgical Company of Canada, Ltd., to Continental Ore Company, dated June 1, 1943, to the attention of Mr. M. Wolf.

(Whereupon the document referred to was marked Plaintiff's Exhibit 97 for identification.)

The next is a telegram from Continental Ore Company to Mr. W. Lathrop, Metallurgical Engineer, Electro Metallurgical Company of Canada, Ltd., dated June 1, 1943.

(Whereupon the document referred to was marked Plaintiff's Exhibit 98 for identification.) [864]

The next is a letter dated June 29, 1943, between

the Continental Ore Company and Electro Metallurgical Sales Company of Canada.

(Whereupon the document referred to was marked Plaintiff's Exhibit 99 for identification.)

The next is a letter dated July 5, 1943, between Mr. C. S. Brovin, Vice-President of Electro Metallurgical Company of Canada, Ltd., to Continental Ore Company.

(Whereupon the document referred to was marked Plaintiff's Exhibit 100 for identification.)

The next is a letter from Continental Ore Company, Henry J. Leir, to Electro Metallurgical Company of Canada, Ltd., Attention, Mr. C. S. Brovin, Vice-President, on the subject of Van-Ex for Atlas Sales Limited.

(Whereupon the document referred to was marked Plaintiff's Exhibit 101 for identification.)

The next is an original letter from Mr. Brovin dated August 2, 1943, Mr. Brovin being the Vice-President of Electro Metallurgical Company of Canada, Ltd., to Continental Ore Company.

(Whereupon the document referred to was marked Plaintiff's Exhibit 102 for identification.)

The Court: Pardon me just one moment. The defendants actually served in this case were the Union Carbide & Carbon Company and the Vanadium Corporation of America. [865] Was the Electro Metallurgical Company served?

Mr. Alioto: No, if your Honor please. During a period of time right around the lawsuit, the Electro Metallurgical Sales Company was merged into the Union Carbide. I think that was in 1948 or 1949. The Electro Metallurgical Company became a division of Union Carbide.

The Court: I understand.

Mr. Aloto: It was never served.

The Court: But it was never served.

Mr. Alioto: No.

Mr. Archer: The two defendants who were served were the Union Carbide & Carbon Corporation, which is now known as the Union Carbide Corporation, and United States Vanadium Corporation, which was Mr. Burwell's company.

The Court: The United States Vanadium Corporation was served?

Mr. Archer: Yes, your Honor.

The Court: And then the Vanadium Company of America.

Mr. Holland: That is right.

Mr. Alioto: Mr. Archer, can we agree that the Electro Metallurgical Company and the Electro Metallurgical Sales Company were merged or were taken into the Union Carbide & Carbon Corporation?

Mr. Archer: I do not know what the fact is. I [866] think it is in our answer.

Mr. Alioto: That is part of the admissions here, if your Honor please, that these companies were merged.

Mr. Archer: I think it was merged after the lawsuit, though, wasn't it?

Mr. Alioto: I do not know when it was merged. In March of 1949, these companies were merged into the Union Carbide & Carbon Corporation.

Mr. Archer: I think there was actually a dissolution.

Mr. Alioto: All right, it was dissolved.

The Court: You mean the Electro Metallurgical Company was dissolved?

Mr. Archer: Yes, your Honor.

Mr. Alioto: What is the date, Mr. Archer? March of 1949?

Mr. Archer: I will have to look at my notes. I don't carry that in my head.

Mr. Alioto: Will you be good enough to do that? I will be here for a little while. Does your Honor want to excuse the jury? It is past 12:00 o'clock, I notice. Oh, I understand they have already been excused. While you are getting that, Mr. Archer, I will go ahead.

We offer next, if your Honor please, a letter dated September 23, 1943, from the Continental Ore Company to the [867] Electro Metallurgical Company of Canada, Ltd.

(Whereupon the document referred to was marked Plaintiff's Exhibit 103 for identification.)

A letter dated October 4, 1943, from Mr. Brovin, the vice-president of Electro Metallurgical Company of Canada, to Mr. Henry J. Leir, the president of the Continental Ore Company.

(Whereupon the document referred to was marked Plaintiff's Exhibit 104 for identification.)

Next a letter from Mr. Henry J. Leir to the Electro Metallurgical Company of Canada dated October 5, 1943.

(Whereupon the letter referred to was marked Plaintiff's Exhibit 105 for identification.)

We offer next under date of October 27, 1943, a letter from the Continental Ore Company to the Electro Metallurgical Company of Canada, Ltd.

(Whereupon the letter referred to was marked Plaintiff's Exhibit 106 for identification.)

Next is a letter dated October 30, 1943, from the Electro Metallurgical Company of Canada, Ltd., to the Continental Ore Company, 500 Fifth Avenue, New York City.

(Whereupon the letter referred to was marked Plaintiff's Exhibit 107 for identification.)

We offer finally a letter dated February 2, 1944, from Mr. Henry J. Leir to the Electro Metallurgical Company of Canada, and by way of a carbon copy to Mr. George B. Walker [868] of the Electro Metallurgical Company, 30 East 42nd Street, New York, New York.

(Whereupon the document referred to was marked Plaintiff's Exhibit 108 for identification.)

Now, if your Honor please, we offer through this

witness to prove the following facts, that at the end of 1942 and 1943 the Electro Metallurgical Company of Canada, which had been appointed as the purchasing agent by an agency of the Canadian Government, that is, the purchasing agent for vanadium, determined that it would not permit any further shipments from the Continental Ore Company into the Canadian market. In that connection we offer to prove that he was acting under instructions from the officials of Union Carbide or its affiliates in order to eliminate the plaintiff from the Canadian market.

The Court: Just a moment.

Mr. Alioto: Yes, Judge.

The Court: You are going to prove by him now. What does he know about it?

Mr. Alioto: He had a conference with Mr. Arrouet and he made it very plain what the situation was.

The Court: Mr. Arrouet was not connected with the Union Carbide, was he?

Mr. Alioto: Oh, yes, he was, Judge. I thought I had made that rather clear. He had been a confidential [869] agent for them in connection with their dealings on the Continent with the European cartel, a very important man in the organization.

The Court: He was not an officer of the corporation, was he?

Mr. Alioto: No, he was not an officer of the corporation, and he has not been made an officer of the corporation since this lawsuit was filed. He is a man, however, who commands a very high

salary, and he was a man who was entrusted—we shall further prove in this connection that Mr. Arrouet was a man who was entrusted by the Carbide organization with carrying on relations in collaboration with Mr. Sneath of the Carbide organization and with the European-Canadian cartel, and that he was a confidential agent in that he personally carried with him throughout Europe certain stock of the corporation evidencing ownership in various European plants. We tentatively offer to prove in any event that it was the Carbide officials and employees which directed their wholly-owned and controlled subsidiary organization, the Electro Metallurgical Company of Canada, Ltd., to eliminate the plaintiff from the Canadian market, to take away his Canadian customers, and to supply those customers between the Vanadium Corporation of America and the Union Carbide.

We offer to prove in this connection that it was the intent and purpose of the Carbide officials and employees [870] to use the Canadian agency for the purpose of restraining the plaintiff's trade, and specifically for the purpose of carrying out the conspiracy to restrain and to monopolize the vanadium industry in the United States and Canada. He is one of the means in connection with that monopolization and restrain to eliminate the Continental Ore Company from the business. [871]

Mr. Alioto: Mr. Arrouet said further that the plaintiff, the Continental Ore Company, had no business in the vanadium business. Mr. Arrouet said further to the plaintiff that they had better

stay away from Climax and not try to make any arrangements with Climax, and they were then entering negotiation with them, as the offer of this evidence will tend to show.

Mr. Arrouet told them to stay away from Climax, and, if Climax got into the business, that Union Carbide would undertake a reprisal against the Climax Molybdenum Company.

He said, in that connection, that Union Carbide had available at its plant in California, its tungsten operation in California, quantities of molybdeum that they would use against the Climax Molybdenum Company if that company entered into negotiations with the plaintiff to manufacture ferro-vanadium for the account of the plaintiff or under a joint operating arrangement with the plaintiff.

At that juncture this witness, we offer to prove, that this witness said, in substance or effect, "Does it mean, then, Mr. Arrouet, that the picture of the world is something like this: God told Electromet to make vanadium, tungsten, ferro-manganese, and God told Vanadium Corporation to make ferro-vanadium and that nobody else would be allowed into these fields?" To which the employee of Electromet Company and the Union Carbide affiliate answered: "That was [872] just about it." And "That's the way it was going to be."

We further offer to prove at this time that Mr. Arrouet then made an offer which involved giving the plaintiff a little business in the Canadian market if he promised to stay out of it thereafter.

That is the offer of proof, if your Honor please.

We offer to make that proof through the witness now on the stand.

The Court: Just a moment. Now, the Electro Metallurgical Company and the Electro Metallurgical Company of Canada were never served in this case, is that right?

Mr. Archer: That's correct, your Honor.

The Court: Now, when was the Electro Metallurgical Company dissolved?

Mr. Archer: The Electro Metallurgical Company was liquidated and its assets transferred to the Union Carbide & Carbon Corporation on November 30, 1948, and it was dissolved formally on January 5, 1949.

Mr. Alioto: Before the complaint was filed.

Mr. Archer: Just a minute. Electro Metallurgical Sales Corporation was merged with Union Carbide & Carbon Corporation March 14, 1949, and the Electro Metallurgical Company of Canada neither does business, maintains an office, nor can be found in San Francisco.

Mr. Alioto: What is the corporate status of the Electro Metallurgical Company of Canada, Mr. Archer? [873]

Mr. Archer: It is a wholly-owned subsidiary and it is a Canadian corporation.

Mr. Alioto: Wholly-owned subsidiary of what company?

Mr. Archer: Well, I don't know whether it is Electro Metallurgical Company——

Mr. Alioto: Ask Mr. Lyon on that.

Mr. Archer: He says, "I am not sure." I can

find that out for your Honor. It was never served in this action and I believe it is still in existence. Certainly it existed, it was in existence——

The Court: Now, the offer of proof is denied for the reason that this is a transaction wholly in the hands of the Canadian Government and that whether or not this plaintiff was permitted to sell his material to a customer in Canada was a matter wholly within the control of the Canadian Government.

Exception is allowed.

Mr. Alioto: May I supplement the offer, if your Honor please? We offer to prove at this point that the Canadian Government was totally oblivious to the purpose for which its agent, the Electro Metallurgical Company of Canada, made its decision not to deal with the plaintiff and to eliminate the plaintiff from the Canadian business.

The Court: I don't know how you can prove that. [874] That will be denied also.

Mr. Alioto: Now, your Honor, the Arrouet conversation covered matters in the United States as well as in Canada.

The Court: Yes, I understand.

Mr. Alioto: And your Honor is excluding the Arrouet conversation as well—

The Court: I am putting that letter out.

Mr. Alioto: No, the Arrouet matter is a conversation. It is a conversation, not a letter, if your Honor please.

Mr. Holland: If the Court please, I think Mr. Alioto is trying to tie in some conversations to the

Canadian situation, and as I understand your Honor's ruling, it applies only to the extent that these conversations involved Canada. I think there may be other considerations if there were conversations that involved business in the United States only.

Mr. Alioto: I appreciate Mr. Holland associating with me in this argument.

Mr. Holland: Well, I don't mean that.

Mr. Alioto: I am more than happy to have it, Joe.

Mr. Holland: I think it should be kept separate, the Canadian——

Mr. Alioto: How can you separate it?

The Court: You are offering this letter in support of your contention that the Canadian Government, through its [875] representative, was influenced by an agent for the defendant corporation to do what it did. My ruling goes to this point, that we cannot review a decision by the Canadian Government; it is not within the jurisdiction of this Court. It is not within the jurisdiction of the United States; it is a separate nation.

Now, as to any conversations that dealt with other matters, there might be portions of the conversation that would be competent in your general case, but not so far as applied to Canada.

Mr. Alioto: Well, my offer to prove is just as I have stated it, if your Honor please. He held the conversation with Mr. Arrouet to find out if he could break this log jam in connection with shipments to Canada and during that conversation Mr.

Arrouet said, in substance or effect, that we have no business in the vanadium business anywhere, in the United States or Canada. In other words, he covered both territories. I don't know how you can separate the situation.

The Court: We will see about that later. It might be that part of that would be competent, but all that had to do with Canada—all in connection with the Canadian deal, that is what the Court is ruling on now, that that is separate and distinct.

Mr. Alioto: Climax had, of course, nothing to do with the Canadian transaction except that it might be a supplier [876] for Canada. It might be a supplier for Canada. But, specifically, we offer to prove as well, if your Honor please, that the agency was used for the purpose of furthering the monopolization and the conspiracy to eliminate the plaintiff from the business. That's basically what our offer of proof comes down to.

The Court: Same ruling.

Mr. Alioto: All right. Now, I understand, without infringing upon the Court's ruling, I may inquire about this Arrouet conversation which admittedly came up in connection with the Canadian matters?

The Court: Well, you can't refer to the Canadian part of it, if you do. I don't know how you can——

Mr. Alioto: We will do the best we can. We will do the best we can. It's pretty hard to cut conversations, but we will do the best we can.

The Court: Any reference made to the Cana-

dian proposition. That's a matter of the Canadian Government.

Mr. Alioto: One final document we offer in evidence, if your Honor please; we offer it as a memorandum made by this witness on June 11, 1943, recording his conversation with Mr. Arrouet, which had taken place very shortly before June 11, 1943.

Mr. Holland: May I see it?

Mr. Alioto: Yes. [877]

So the record may be clear, if your Honor please, I would like each of the letters submitted to be marked for identification, there being no way of tying them in otherwise.

The Court: Very well.

Mr. Alioto: Thank you very much.

The Clerk: Plaintiff's Exhibits 80 through 109 marked for identification.

(Thereupon marked for identification, Exhibit 80 (heretofore marked), copy of letter January 19, 1943, Henry J. Leir to C. B. Walker, Electro Metallurgical Company, New York City; as Plaintiff's 81 for identification copy of letter from Leir to M. D. Arrouet, New York; Plaintiff's 82 for identification, letter 2/10/43, Electro Metallurgical Co. of Canada to Continental Ore.) [878]

(Whereupon, copy of letter dated 2/11/43, Continental Ore Company, Henry J. Leir, to Electro Metallurgical Company of Canada, Ltd., was marked as Plaintiff's Exhibit 83 for identification.)

(Whereupon, copy of letter dated 2/17/43,

Electro Metallurgical Company of Canada, Ltd., to Continental Ore Company, was marked as Plaintiff's Exhibit 84 for identification.)

(Whereupon, copy of telegram, Continental Ore Company to Electro Metallurgical Company of Canada, Ltd., was marked as Plaintiff's Exhibit 85 for identification.)

(Whereupon, copy of letter dated 2/23/43, Electro Metallurgical Company of Canada, Ltd., to Continental Ore Company, was marked Plaintiff's Exhibit 86 for identification.)

(Whereupon, copy of telegram dated 3/1/43, Continental Ore Company to Electro Metallurgical Company of Canada, Ltd., was marked Plaintiff's Exhibit 87 for identification.)

(Whereupon, copy of letter dated 3/3/43, Continental Ore Company to Electro Metallurgical Company of Canada, Ltd., was marked as Plaintiff's Exhibit 88 for identification.)

(Whereupon, copy of letter dated 3/10/43, Continental Ore Company to Electro Metallurgical Company of Canada, Ltd., was marked as Plaintiff's Exhibit 89 for identification.)

(Whereupon, copy of wire dated 3/19/43, Continental Ore Company to Electro Metallurgical Company of Canada, Ltd., was marked as Plaintiff's Exhibit 90 for identification.)

(Whereupon, telegram from Electro Metallurgical Company of Canada, Ltd., to Continental Ore Corporation, was marked as Plaintiff's Exhibit 91 for identification.) [879]

(Whereupon, copy of letter dated 4/26/43,

Continental Ore Company to Office of Metals Comptroller, Ottawa, Ontario, Canada, was marked as Plaintiff's Exhibit 92 for identification.)

(Whereupon, letter dated 4/29/43, Office of Metals Comptroller, Department of Munitions & Supply, Ottawa, Canada, to Continental Ore Corporation, was marked Plaintiff's Exhibit 93 for identification.)

(Whereupon, copy of letter dated 5/4/43, Continental Ore Company to Electro Metallurgical Company of Canada, Ltd., was marked Plaintiff's Exhibit 94 for identification.)

(Whereupon, copy of letter dated 5/17/43, Continental Ore Company to Electro Metallurgical Company of Canada, Ltd., was marked Plaintiff's Exhibit 95 for identification.)

(Whereupon, copy of letter dated 5/20/43, Continental Ore Company to Electro Metallurgical Company of Canada, Ltd., was marked Plaintiff's Exhibit 96 for identification.)

(Whereupon, letter dated 6/1/43, Electro Metallurgical Company of Canada, Ltd., to Continental Ore Company, was marked Plaintiff's Exhibit 97 for identification.)

(Whereupon, copy of telegram dated 6/1/43, Continental Ore Company to Electro Metallurgical Company of Canada, Ltd., was marked Plaintiff's Exhibit 98 for identification.)

(Whereupon, copy of letter from Continental Ore Company to Electro Metallurgical Company of Canada, Ltd., dated 6/29/43, was

marked Plaintiff's Exhibit 99 for identification.) [880]

(Whereupon, letter from Electro Metallurgical Company of Canada, Ltd., to Continental Ore Company, dated 7/5/43, was marked Plaintiff's Exhibit 100 for identification.)

(Whereupon, copy of letter from Continental Ore Company to Electro Metallurgical Company of Canada, Ltd., dated 7/30/43, was marked Plaintiff's Exhibit 101 for identification.)

(Whereupon, letter from Electro Metallurgical Company of Canada, Ltd., to Continental Ore Company, dated 8/2/43, was marked Plaintiff's Exhibit 102 for identification.)

(Whereupon, copy of letter from Continental Ore to Electro Metallurgical Company of Canada, Ltd., dated 9/23/43, was marked Plaintiff's Exhibit 103 for identification.)

(Whereupon, copy of letter from Electro Metallurgical Company of Canada, Ltd., to Continental Ore Company, dated 10/4/43, was marked Plaintiff's Exhibit 104 for identification.)

(Whereupon, copy of letter from Continental Ore to Electro Metallurgical Company of Canada, Ltd., dated 10/5/43, was marked Plaintiff's Exhibit 105 for identification.)

(Whereupon, copy of letter from Continental Ore to Electro Metallurgical Company of Canada, Ltd., dated 10/27/43, was marked Plaintiff's Exhibit 106 for identification.)

(Whereupon, copy of letter from Electro Metallurgical Company of Canada, Ltd., to Continental Ore Company, dated 10/30/43, was marked Plaintiff's Exhibit 107 for identification.) [881]

(Whereupon, copy of letter from Continental Ore to Electro Metallurgical Company of Canada, Ltd., dated 2/2/44, was marked Plaintiff's Exhibit 108 for identification.)

(Whereupon, memorandum of Mr. Wolf, dated 6/11/43, was marked Plaintiff's Exhibit 109 for identification.)

Mr. Alioto: Now, if your Honor please, in addition to the decision of Judge Hutchinson of the Fifth Circuit, there are a number of other decisions holding that Governmental power may be used or Governmental agency may be used for the purpose of furthering monopoly or conspiracy to restrain.

I take it that your Honor does not want me to present those cases in an argument in connection with this offer?

The Court: Let the appellate court look at those.

Mr. Archer: In connection with this last exhibit, Mr. Arrouet didn't write this. Mr. Wolf wrote it.

Mr. Alioto: I pointed out that the witness made a memorandum of his conversation with Mr. Arrouet and recorded that conversation at or about the time it was had with Mr. Arrouet.

Mr. Holland: You just add that to your other offer of proof, is that it?

Mr. Alioto: I offered the memorandum, yes, as part of the documents.

Mr. Holland: I mean, it has already been ruled upon?

Mr. Alioto: Yes, the Court has ruled after that document was offered. The last document, the Court has ruled, is excluded as well.

The Court: That goes into the Canadian matter.

Mr. Alioto: Yes.

Now, I understand—I don't want the Court to ever think I am being disrespectful or discourteous. I am going to inquire—I like tough-minded judges myself, your Honor—I like tough-minded people—but I am going to inquire this afternoon about the Arrouet conversation and as it relates to anything in America.

Now, I don't know how the witness can give part of the conversation without giving the setting for it, but we will do the best we can, Judge.

The Court: That's the trouble, you know; there's too much setting.

Mr. Alioto: Well, this is a very simple one——

The Court: ——letting all these other things in. You might ask him if he had a conversation with Mr. Arrouet, and he would be permitted to state what that conversation was, except as it referred to Canada.

Mr. Alioto: Well, it might be very much, if your Honor please, like having a discussion on Hamlet without mentioning the Prince of Denmark. We'll do the best we can, Judge.

The Court: We will recess until 2:00 o'clock.

(Recess until 2:00 o'clock p.m.)

June 10, 1958, 2:00 o'clock p.m.

(The Jury resumed their places in the box, the witness, Mr. Wolf, resumed the stand, and the following occurred in the presence of all parties:)

MARTIN WOLF,

a witness called by and on behalf of the Plaintiffs, having been previously duly sworn, resumed the stand and testified further as follows:

Direct Examination—(Continued)

Q. (By Mr. Alioto): This morning we were speaking of the type of ferro-vanadium manufactured by the Apex Smelting Company under its joint venture with Continental Ore, and the content, particularly of that ferro-vanadium as compared to what the other two manufacturers in the industry were doing.

Now, then, you had a product called Van-Ex, did you not? A. Yes.

Q. Would you be good enough to state generally what that product consisted of?

A. Van-Ex is mainly a vanadium oxide, and it is an exothermic vanadium oxide, meaning that it has certain properties which make it self-reducing. Self-reducing, in turn, means that you reduce the oxide to a metal in the process of [884] adding it to the steel where you want it ultimately to be.

Q. Was that product marketed by the Continental Ore Company during the time that you were with the Continental Ore Company?

A. It was.

VOLUME III.

(Pages 841 to 1240, inclusive)

Appeal from the United States District Court
for the Northern District of California.
Southern Division

(Testimony of Martin Wolf.)

Q. And to what general class of customers was that product marketed?

A. Again to the steel industry.

Q. Was that same product or products substantially like that one distributed by the two other manufacturers of ferro-vanadium?

A. No, it was entirely different.

Q. Do you know whether anybody in the country distributed that type of product, that is, vanadium oxide, mixed with other elements, to the steel industry?

A. I believe some steel companies used some vanadium oxide to a very minor extent, instead of ferro-vanadium.

Q. Was the Electro Metallurgical Company selling this type of product to the steel companies?

A. I wouldn't know out of my own knowledge.

Q. How about the Vanadium Corporation of America? A. The same answer.

Q. Did you have some experiments in Europe in connection with using the oxide directly in the steel bath in place of ferro-vanadium? [885]

A. Yes, we developed this actually in Europe on the theory that you avoid a heat loss.

Q. Just explain that a little bit in layman's terms, if you can, Mr. Wolf.

A. Well, in producing the ferro alloy, whether you do it in an electric furnace or by aluminum thermic methods, you use a melt. You melt the oxide down into the ferro alloy. Then when the liquid mass has cooled it becomes a stable product

(Testimony of Martin Wolf.)

and you crush it and you send it out in lumps to the customers, who in turn throw it into their steel bath. This ferro alloy is cooled and tends to cool the steel bath. The theory that we developed in France was that you could as well produce the ferro alloy by mixing all the ingredients together and introducing these ingredients like a finished cake mix into the steel, with the result that the ferro alloy is formed right when it hits the heat of the steel furnace, and then when the ferro alloy is in liquid form, at that moment it is incorporated into the steel so that there by no loss of heat.

Q. (By the Court): Was this method of producing Van-Ex a secret method?

A. Well, we considered that the exact composition of it, yes, was secret.

Q. (By Mr. Alioto): Did you offer Van-Ex or this vanadium oxide mix to the steel trade as a substitute for ferro-vanadium? [886]

A. Yes.

Q. At what price did you offer Van-Ex to the steel trade?

A. At that time we sold it mostly at $2.40 a pound of metallic vanadium contained in the mix.

Q. What was the price of the ferro-vanadium at the same time?

A. The ferro-vanadium, depending on the grade, at that time cost between $2.70 and $2.90 a pound of vanadium contained.

Q. And Van-Ex was sold at least 30 cents cheaper per pound?

(Testimony of Martin Wolf.)

A. Right, per pound of contained vanadium.

Q. The record this morning indicated that you sold substantial quantities of this to the Atlas Steel Company, for example. A. Right.

Q. And you sold all other companies, I take it?

A. Yes.

Q. Where was this Van-Ex mixed by your company?

A. We had a little shop in Long Island.

Q. A little warehouse of some type?

A. It was a warehouse with a mixer, a storeroom for the cans. We offered another service in this connection and that was that we filled the cans with the quantity of mix which corresponded to a certain stated amount of vanadium in the mix, so that it did not have to be weighed by the user.

To illustrate this, if you ship a ton of ferrovanadium, our material ranged from 70 to 80 percent of vanadium, so a customer who wanted to incorporate a certain quantity of vanadium into his steel, had to figure out, based on the contents of the vanadium, how much tonnage would have to go into this particular steel batch.

In our case we filled the cans and labeled them—I am not sure now whether it was 5 or 15 pounds of contained vanadium—so that the operator only had to count the cans. If he wanted, say, 45 pounds for a steel bath, he took 3 or 9 cans and threw them in. There was no loss in dust, no loss in handling.

Q. This mixing plant you had on Long Island was not a major operation, was it? A. No.

(Testimony of Martin Wolf.)

Q. It was a very small operation employing two or three men?

A. Right. We had one man who was there steady, and he took on, as far as I remember, workers whenever they needed them.

Q. Basically, what you took was the black vanadium oxide which you purchased wherever you could purchase it? A. Right.

Q. And then you put in a mixer. What were the ingredients, without giving the percentages involved? [888]

A. There are lots of things you can use to make this product exo-thermic. In fact, it is exo-thermic as such, but adding things, such as aluminum or ferro-silicon, you obtain a favorable result in the sense that the mixer itself creates the heat, whereas otherwise it would take it from the steel.

Q. So that basically it was vanadium oxide with these mixers? A. That is right.

Q. And how would you characterize this mixer of aluminum, silicon or fluorspar? What did they actually contribute?

A. Fluorspar is something else. Fluorspar acted only as a flux, and I do not know whether we used it in the end.

Q. And the silicon and aluminum, what function did they serve in the mix?

A. Just to provide heat.

Q. Otherwise the heat would be borrowed from what?

A. From the steel itself, from the steel bath.

(Testimony of Martin Wolf.)

Q. I take it that you manufactured substantial quantities of Van-Ex in these sales of Van-Ex?

A. As much as we could get raw materials.

Q. As you are aware, a certain subject matter was excluded from consideration this morning. I want to inquire about a conversation you had with a representative of the Union Carbide organization, but I want you to limit that conversation as best [889] you understand the limitation so as not to bring in the subject matter that was excluded by the Court this morning.

Do you know a man named D. A. Arrouet?

A. M. D. Arrouet.

Q. M. D. Arrouet?

A. Yes, I do.

Q. Do you know such a man?

A. Yes, I do.

Q. Did there come a time in June, 1943, when you visited and talked with Mr. Arrouet?

A. That is correct.

Q. As best you remember, where did that conversation take place?

A. In his own office at 30 East 42nd Street, New York City.

Q. Who was present?

A. Mr. Arrouet and myself.

Q. What is the address—30 East 42nd Street in New York. Who was there?

A. Union Carbide and their various divisions.

Q. Without indicating the circumstances that brought about the meeting itself, will you be good

(Testimony of Martin Wolf.)

enough to tell us the substance of what was said?

Mr. Archer: Pardon me. May I interpose an objection? I object to this conversation, your Honor, as being incompetent, irrelevant and immaterial, and particularly no [890] foundation laid. Your Honor will recall that Mr. Burwell testified for a week here about the vanadium business and the people that were connected with it, and I had no objection on these grounds as to conversations from men like Mr. O'Shea, Mr. Haggerson, Mr. Rafferty, Mr. Van Fleet, and even at times with Mr. Burwell, but I do not think the capacity of Mr. Arrouet to make any statements in regard to the vanadium business has been established and I do not believe that this witness can establish it, because any statement that Mr. Arrouet might have made as to his own authority would be clearly inadmissible, because a statement of an employee is only admissible after his authority has been established by testimony in court and not out of court.

Mr. Alioto: If your Honor please, let me try to meet that objection.

Mr. Archer: Pardon me. One other thing. And I thi k it is clear Mr. Arrouet was not an officer of any of the defendant corporations.

Mr. Alioto: Let me try to meet that objection in part. I think the objection is met by the documents we offered this morning, but without using those documents, let me ask the witness this question:

Q. There came a time in January, 1943, when

(Testimony of Martin Wolf.)

you filed some kind of complaint, regardless of the nature of the complaint now. We do not want that characterized. [891] A. That is right.

Q. You filed a complaint with Electro Metallurgical Company of New York? A. Right.

Q. And you had been directed to file that complaint there? A. That is right.

Q. After you filed the complaint, who was it in the Electro Metallurgical Company in New York that contacted you on the basis of the letter that you filed, the complaint that you filed?

A. I was not the man that we filed it with. It was Mr. Arrouet.

Q. Okay. Now, did this discussion that you had with Mr. Arrouet follow along in sequence from the time that you filed this complaint that we won't discuss? A. Yes.

Q. And did you on this occasion with Mr. Arrouet discuss the subject matter of that complaint about which he had called you?

A. I did.

Q. Now, will you tell us what was said?

Mr. Archer: I would like to renew my objection, your Honor.

Q. (By the Court): Do you know if Mr. Arrouet is an officer of the corporation? [892]

A. I didn't know what his exact position was. I knew he had no title, but he had a very big office.

The Court: The objection will be sustained. The statement of a mere employee would not be binding

(Testimony of Martin Wolf.)

upon a corporation unless it is shown he had authority to act.

Mr. Alioto: I think we can establish his authority by these letters, if your Honor please, without reference to the subject matter.

Q. I show you a letter marked Exhibit 80 for identification. Is this a letter composed by you in part?

A. By the Continental Ore Company and I had a hand in drafting it.

Q. In its composition? A. Right.

Q. You sent that letter to Mr. G. B. Walker of Electro Metallurgical Company?

A. Right.

Q. At 30 East 42nd Street, New York?

A. Correct.

Q. Why did you send that letter to Mr. Walker?

A. We were told to send it to him.

Q. So you sent him a letter in which you embodied some kind of a complaint, is that correct?

A. In fact, I never met Mr. Walker. I didn't know until we were told that this is the man to write to. [893]

Q. After you wrote to Mr. Walker of the Metallurgical Company setting forth a certain subject matter which we won't discuss, did you get a response from the Electro Metallurgical Company concerning the subject matter of the complaint which you embodied in 80 for identification?

A. That is right.

Q. From whom did you get that response?

(Testimony of Martin Wolf.)

A. Mr. Arronet.

Q. Will you be good enough to identify Exhibit 81-D. Is that a letter written by your company?

A. That is right.

Q. To whom is it written?

A. To Mr. Arronet.

Mr. Alioto: If your Honor please, in the light of the objection we will offer 80 and 81-D into evidence, the authority of Mr. Arronet to discuss the subject with the witness.

The Court: The difficulty in this situation is that these matters were concerning something which has been excluded. That was the subject matter. What you seek to show by this witness here is a kind of side remark. Objection sustained. Exception allowed.

Q. (By Mr. Alioto): Do you know some of the things that Mr. Arronet did while he was with the Union Carbide? A. Yes. [894]

The Court: Of your own knowledge?

The Witness: Yes, I do.

Q. (By Mr. Alioto): What did he do?

A. He was involved in certain purchasing operations, as far as I learned, in the beginning when I met him, and especially those which were not routine. They had a purchasing department that handled all the routine requests from their plants as far as supplies are concerned, but anything that went a little bit above the exact function of purchasing, you could almost call it raw material pro-

(Testimony of Martin Wolf.)

curement in a vaster sent, was channeled through Mr. Arrouet.

Q. Did that involve ore purchasing, as well?

A. Ore purchasing, yes.

Q. At the time that you went into Mr. Arrouet's office, did he tell you that he had no authority to discuss the subject matter of the letter that you had written to him?

Mr. Archer: I object to that question.

The Court: Yes, sustained. Leading.

Q. (By Mr. Alioto): How was it that you found yourself in Mr. Arrouet's office? Did you fall in by accident some day?

A. No, he called us up in answer to a letter written to them, and so it was natural to make an appointment and talk with him, because we were just half a block away from him.

Q. When you were called in for an appointment, did you [895] tell him the subject matter that you wished to discuss?

A. Naturally.

Q. Then when you were with him what was said?

Mr. Archer: I renew my objection, your Honor.

The Court: Sustained. It is clear from the offer you have made here that the sole subject of the conversation at that time was about a matter which has been excluded from this case, and now the letter which you offer or the statement, rather, indicates that some general remarks were made about other matters.

(Testimony of Martin Wolf.)

Mr. Alioto: We submit it was about the very matter in issue at the time, if your Honor please.

The Court: Objection sustained. Exception allowed.

Mr. Alioto: Then may it be understood at this point that as of this moment, in view of the further testimony given by this witness, I have renewed the offer of proof made before noon time with respect to what this witness would testify was said by Mr. Arrouet?

The Court: Very well.

Mr. Alioto: And do I understand that that offer of proof is now rejected?

The Court: Yes, sir.

Mr. Alioto: After objection.

The Court: The objection to that will be sustained. Exception allowed. [896]

Mr. Alioto: Thank you, if your Honor please.

Mr. Holland: We do not disavow. [896-A]

Q. Now, Mr. Wolf, you testified that basically you were concerned with the sales of the Continental Ore Company? A. That is right.

Q. Did you personally make your contact with the customers or was that done through third parties or agents?

A. No, it was almost exclusively done directly by telephone, visit and correspondence by myself.

Q. Now, beginning in 1942, when you were the Vice-President of the Continental Ore Company, did you personally contact the steel companies, for example? A. Yes.

(Testimony of Martin Wolf.)

Q. And what were some of the things that you sold to the steel companies or offered for sale?

A. Well, all the materials that I had named before, as far as they were applicable to their particular requirements.

Q. Now on the basis of the experience you have had in Europe, as you have already described it, and on the basis of the experience that you had in this country with the Continental Ore Company, and on the assumption that the Continental Ore Company had a regular source of supply for vanadium oxide from the time that you came with the company down to July 15 of 1949, can you make an estimate for us of how much of the vanadium business or how much ferro-vanadium or vanadium oxide could have been sold by your company in the light of all of those experiences and in the light of those facts? [897]

Mr. Holland: I object, your Honor. I think that is a highly speculative question.

The Court: Yes. Sustained. It is speculative.

Mr. Alioto: May I indicate to the Court—your Honor is familiar with the Flintkote case in this circuit which came down?

The Court: Yes. Objection sustained.

Mr. Alioto: However, your Honor does have in mind the Flintkote case?

The Court: Yes.

Mr. Alioto: Your Honor does not believe that question is covered by the Flintkote case?

The Court: No, it isn't.

(Testimony of Martin Wolf.)

Mr. Alioto: All right.

I want to make some inquiries about this thing that you call fluorspar, up to this point.

Q. State the things in common which fluorspar has with vanadium?

A. They have nothing in common as materials.

Q. Yes.

A. They have in common the use in the steel industry in the sense that they are both required by the steel industry, and we sold the two products—in fact, more than the two products—along with our entire line of materials. We sold fluorspar to the same people as we sold vanadium. [898]

Q. In the ordinary course of business, were they sold together?

A. Well, of course when we had a customer listening to us, we tried to find out what his requirements were on all the materials that we handled. We did not make a telephone call or a visit just to discuss one product; they were always discussed together.

The Court: Now, Mr. Wolf, this vanadium oxide, that is used in the manufacture of ferro-vanadium, isn't it?

A. Yes, and as a direct addition to steel.

The Court: Now, did you manufacture ferro-vanadium?

A. Through the medium of Apex. I would say yes, your Honor.

The Court: Now, the people then that had vanadium oxide, if they needed that in the manufacture

(Testimony of Martin Wolf.)

of ferro-vanadium, they would use it for that purpose, wouldn't they?

A. Yes, they would.

The Court: Proceed.

Q. (By Mr. Alioto): Would they use vanadium oxide solely for the manufacture of ferro-vanadium? Did you use it solely for that purpose?

A. Oh, yes—also used it as an ingredient in our Van-Ex, which, incidentally, later was copied again by the defendants, by Union Carbide, to a certain extent.

Q. Now in connection with fluorspar—we will come back to the Apex situation in a moment—what is fluorspar, basically, is it an ore? [899]

A. It is a mineral.

Q. It is a mineral. All right. Is it mined?

A. It is mined, yes.

Q. Is it mined in Colorado and Utah?

A. Yes. I said that before. Yes.

Q. In Wyoming? A. Right.

Q. After mining, is it concentrated?

A. Some is, some is not.

Q. Would you be good enough to state (indicating rock)—— A. That is not.

Q. This is not concentrated, it is simply mined in this fashion (indicating)? A. Yes.

Q. And some of it is concentrated after mining?

A. The low-grade is concentrated.

Q. And some of the vanadium ores are concentrated after mining, too, are they?

A. I would say almost all of them.

(Testimony of Martin Wolf.)

Q. And these are sold to the same customers?

A. Yes, same class of customers.

Q. What is your opinion as to whether or not the sales of fluorspar by the Continental Ore Company afford a reliable guide as to what your vanadium sales might have been, in the [900] absence of any restrictions?

A. Yes, I would say they were——

Mr. Holland: I object——

The Court: Wait a minute. Read that question.

(Question read back by Reporter.)

The Court: Objection sustained. Exception allowed.

Q. (By Mr. Alioto): Basically, the business of the Continental Ore Company was minerals, ores, alloys, that's correct, isn't it? A. Yes.

Q. Do you have with you, so that you can read into this record, the volume of fluorspar sales made by the Continental Ore Company? A. Yes.

Q. In the period of time that you became associated with the Continental Ore Company down to July 15 of 1949? A. Yes, I can.

Q. Would you be good enough to tell us what that volume of sales is?

Mr. Holland: I object, your Honor. I think it is absolutely immaterial in this case.

The Court: Objection sustained. It is immaterial. It has nothing to do with this lawsuit.

Mr. Alioto: Your Honor, we earlier called your Honor's attention to the case of Welch Grapefruit.

The Court: Yes. [901]

(Testimony of Martin Wolf.)

Mr. Alioto: Your Honor is familiar with that case?

The Court: Yes.

Mr. Alioto: In which the increase in the related grocery products was held to be an index of what the situation might have been otherwise.

The Court: The Court has ruled.

Mr. Alioto: In other words, your Honor——

The Court: Exception allowed.

Mr. Alioto: All right.

The Court: Go to something else.

Mr. Alioto: I take it there is no point in bringing that case before your Honor further, your Honor is familiar.

The Court: I am.

Mr. Alioto: All right.

Q. Now you stated you were familiar with the Apex plant; you saw the Apex plant?

A. Yes, that's correct.

Q. You are also familiar with the French plant under which you have had experience in Europe?

A. Correct.

Q. What was the approximate capacity of the Apex plant?

A. I would say that it could make about 30,000 pounds of metallic vanadium contained in ferro-vanadium per month.

Q. That was a monthly capacity of Apex plant?

A. I would guess that, yes. [902]

Q. Now, on the assumption that the Apex plant had no restrictions of any type in securing a regu-

(Testimony of Martin Wolf.)

lar source of supply of vanadium oxide, what amount of ferro-vanadium do you believe could have been manufactured under that contract?

Mr. Holland: I object to the question, your Honor.

The Court: Objection sustained. Exception allowed. He stated the capacity.

Mr. Alioto: Yes. That's only one phase of it. Then the question of sales come in.

Q. Were the market conditions such between 1942 to 1949 that your sales organization could have sold the total output of the Apex plant operating at capacity?

A. I would say not right in the beginning but afterwards, yes.

Q. Well, starting from the time you were connected in January of 1942.

A. I would assume so, yes.

Q. Now, you say you would assume so——

Mr. Holland: I object and ask that the answer be stricken. The witness has testified he is just assuming so.

The Court: Yes. Objection is sustained.

Q. (By Mr. Alioto): What is your opinion as to whether or not your sales organization could have sold the total capacity of Apex from the time you became associated with Continental Ore down to 1949? [903]

A. I believe we could have sold it if we had not had the interruption because of shortage of raw materials.

(Testimony of Martin Wolf.)

Q. Then, what do you base that belief on that you could have sold this material?

A. Because we had been doing fairly well in everything else.

Mr. Holland: I object, your Honor, and ask that the answer be stricken. What they had been doing in something else involves many other factors.

The Court: Yes. Sustained.

Q. (By Mr. Alioto): What other basis is there for——

The Court: The statement will be stricken and the jury will not consider it.

Q. (By Mr. Alioto): What other basis do you have for the opinion that you have expressed that you could have sold the total Apex production?

A. Well, one, that Union Carbide later on made the same grade of material that we had introduced in this country, so they paid us a compliment of imitating us, and the same applies to these annex.

Mr. Archer: I object to that because his opinion is clearly based upon events after the filing of this lawsuit.

The Court: Sustained.

Mr. Archer: Move to strike.

The Court: Exception allowed, the jury will disregard the answer. [904]

Q. (By Mr. Alioto): Now, then, what other basis do you have for saying that the sales organization of Continental Ore Company under your supervision could have sold the total production of Apex?

(Testimony of Martin Wolf.)

A. I think the only criterion left is that we had demands from the customers that we couldn't fill.

Mr. Holland: No period is stated here, your Honor, as to when this applied.

Mr. Alioto: In 1942 to 1949.

A. There were periods, of course, where business was slow, where I would assume we would not have sold all of that, but since even in its low periods we had increased our sales all over the years, sometimes against the trend, I would assume that we would have done very well in the vanadium field, too.

Mr. Holland: I ask that the answer be stricken. He is talking about other products, other than vanadium.

The Court: Sustained. The jury will disregard the answer.

Q. (By Mr. Alioto): Now, you said that the Continental Ore Company made sales against the trend? A. Right.

Q. During some period of that period from January 1, 1942 to July 15 of 1949. Would you be good enough to state what you mean by that? [905]

Mr. Holland: I object, your Honor. The trend that he is referring to is sales in other products.

The Court: Well, he may state whether or not that is what he meant.

Q. (By Mr. Alioto): What did you mean by "making sales against the trend"?

A. Well, when I looked at the figures as to the total sales of certain products and our participa-

(Testimony of Martin Wolf.)

tion in this business, we found that while the total sales had dropped, our individual sales had increased.

The Court: Sales of what?

A. Of various ores, fluorspar, for instance.

The Court: Objection sustained. The jury will disregard the answer.

Q. (By Mr. Alioto): Approximately when was it that you begin selling Van-Ex to the trade?

A. It was about the time that—I believe it was in 1942, the start, I believe. That was the time when Apex was only operating intermittently.

Q. Now, in the light of the industry conditions as you knew them from your own experience, from January 1, 1942 to 1949, do you have an estimate of how much Van-Ex you could have sold for shipments from the United States during that period, 1940 to 1949, if during that entire period you would have had a regular and dependable source of supply? [906]

Mr. Archer: I object to that, your Honor, as calling for a conclusion of the witness and no foundation laid, as I understand the question.

The Court: Objection will be sustained. It is purely speculative.

Q. (By Mr. Alioto): You sold Van-Ex during the period after January 1, 1942, didn't you?

A. We did, indeed.

Q. You knew the customers who required Van-Ex? A. Right.

Q. And you kept a contact with those customers

(Testimony of Martin Wolf.)

from 1942 to 1949, did you not? A. Yes.

Q. And they were basically the same manufacturers? A. Yes.

Q. Were they not? A. Yes.

Q. Now, on the basis of your contact with those customers of Van-Ex, do you have an estimate, on the basis of all of your experience in the industry and the marketing phase of this industry, do you have an opinion as to what quantities of Van-Ex could have been sold by the Continental Ore Company during the period of time from 1942 to 1949, on the assumption it had a dependable source of supply?

Mr. Holland: I object, your Honor. [907]

The Court: Objection sustained. Exception allowed. Purely speculative.

Q. (By Mr. Alioto): On the assumption that the Loma mill had not been taken out of business in 1939, on the assumption that the Mesa vanadium mill had not been taken out of business in 1940, and on the assumption that the Rifle mill did not go out of business around 1940, on the assumption that there were independent suppliers of vanadium oxide who sold to the Continental Ore Company off the Colorado Plateau in the period beginning 1940 to 1949, making those assumptions, how much vanadium oxide you could purchase from those sources could you have resold in the period January 1, 1942 to July 15, 1949?

Mr. Archer: I object, your Honor. Part of the question clearly calls for what happened two years

(Testimony of Martin Wolf.)

before Mr. Wolf went to work for the plaintiff and it is obviously a conclusion.

The Court: Objection is sustained.

Mr. Alioto: On the assumption——

The Court: Too highly speculative.

Mr. Alioto: Let me cover this ground of the objection made by counsel.

Q. On the assumption that the Mesa Vanadium Company was producing in January 1, 1942 and the Loma Vanadium Company was producing in January 1, 1942 and the Gateway Deposit, close to Gateway, had not been mined out so far as its highly accessible [908] ore and high-content ore was concerned, and that that was in existence in January 1 of 1942, and that there was a source of independent vanadium oxide in January 1 of 1942 from which you could have produced to capacity at Apex, how much ferro-vanadium do you believe you could have sold in the period from January 1, 1942 to July 15 of 1949, making those assumptions?

Mr. Holland: I object, your Honor. That is the most speculative question yet.

The Court: Yes. Objection sustained.

Mr. Alioto: I want to come back and complete the record so far as the fluorspar situation is concerned, if your Honor please.

Q. Now, we already have in evidence the fact that you personally supervised certain sales of ferro-vanadium and Van-Ex during the period from 1942 to 1944. A. Correct.

(Testimony of Martin Wolf.)

Q. On the basis of that experience, the basis of having sold that product, and the basis of the conditions as they existed at the time, including all the Government restrictions that existed at the time, do you have an opinion as to how much more ferro-vanadium you could have sold in that period of time if it had been available to you?

Mr. Holland: I object, your Honor.

The Court: Objection sustained.

Q. (By Mr. Alioto): On the basis of the [909] experience you actually had selling your ferro-vanadium and Van-Ex in the period January 1, 1942 through to the end of 1944, on the basis of that actual experience, on the basis of your knowledge of the industry at the time, and of your experience and of your knowledge of the general business conditions at the time, do you have an opinion as to how much more ferro-vanadium or Van-Ex the Continental Ore Company would have sold in the period from 1944 to 1949?

Mr. Holland: I object, your Honor.

The Court: Objection sustained.

Q. (By Mr. Alioto): What is the actual increase in the sales of fluorspar by the Continental Ore Company in the period beginning 1940 to 1949?

Mr. Holland: Object, your Honor. Immaterial.

The Court: Objection sustained.

Q. (By Mr. Alioto): What is the actual increase in the sales of minerals, ores and alloys—the actual increase in shipments made by the Con-

(Testimony of Martin Wolf.)

tinental Ore Company for the period from January 1 of 1940 down through July 15 of 1949?

Mr. Holland: Same objection.

The Court: Objection sustained.

Q. (By Mr. Alioto): What is the actual increase——

The Court: Now, just a minute. You have an idea of the ruling of the Court on this?

Mr. Alioto: Yes, I admittedly do. I have had [910] an idea, of course, for some time, if your Honor please. I am making a record on it. In other words, that is my only purpose.

The Court: I don't want you ignoring the order of the Court.

Mr. Alioto: I don't propose to. I think your Honor knows what I am doing here. I assume the Court would have followed its ruling. I am doing it only for the purpose of making a record because I have been in this situation before where some judge up above says, well, you didn't ask the question below; we didn't know what you had in mind. And I am doing it for that purpose, and I will do it very hurriedly from here on in, if your Honor please.

The Court: Very well.

Mr. Holland: May we have an objection to all this line of testimony so we won't need to interrupt with objections?

Mr. Alioto: You have interrupted all this time. It won't hurt me; it won't bother me.

(Testimony of Martin Wolf.)

Mr. Holland: Then if you don't mind, I will go right ahead.

The Court: Go ahead, you can make your objection.

Q. (By Mr. Alioto): Can you give us the actual growth of the Continental Ore Company in connection with the distribution of minerals handled by it and sold to the steel industry for the period of time January 1, 1940 to 1949?

Mr. Holland: Object, your Honor. [911]

The Court: Objection sustained.

Mr. Alioto: All right.

Q. Can you state for the record or state for the record, rather, Mr. Wolf, the actual growth of the Continental Ore Company for the period January 1, 1940 to July 15, 1949, in connection with the alloys sold, ferro alloys, generally sold to the steel industry?

Mr. Holland: Object, your Honor.

The Court: Objection sustained.

Q. (By Mr. Alioto): And, finally, and this will complete the record, I think, if your Honor please, so it will be abundantly clear as to what we have in mind— I am only doing it because I perceive this is what the Court told us to do in the Flintkote case, Judge, or I wouldn't be doing it.

State for the record, if you would, please, the actual increase in the business of the Continental Ore Company to the steel industry in connection with minerals sold the period of time from January 1, 1940 to July 15, 1949?

(Testimony of Martin Wolf.)

Mr. Holland: Object, your Honor.

The Court: Objection sustained. Exception allowed. They are different kinds. [912]

Mr. Alioto: There were different kinds of products in the Welch Grapefruit case. The Welch case was affirmed in the Flintkote case in this Circuit. It was cited with approval by the Court of Appeals of this Circuit. It is on that basis that we are making it.

Mr. Holland: We do not believe those cases are applicable.

Mr. Alioto: Just for the record at this point, in view of your Honor's comment about the procedure here, the cases upon which we are relying in these courts are, among others, first of all, Judge Sutherland's opinion in the Storey Parson's decision, which we have already called to your Honor's attention in 282 U.S. 555, a very able opinion of Mr. Justice Sutherland of the Supreme Court, which came out in 1920. It certainly is no recent case. It is no recent departure from established principles.

More recently there was the case in this Circuit of Flintkote versus Lysfgard, 246 Fed 2d 648, and Frey against Welch Grapefruit Company, 240 Fed 114, cited with approval in the Flintkote decision in this Circuit. We perceive this type of information is justified by those cases.

Incidentally, from your Honor's Circuit there is the case of Cinema Amusement Company versus Loew's in the Tenth Circuit. I believe the Tenth

(Testimony of Martin Wolf.)

Circuit covers Oklahoma. It is 210 Fed 2d 86, in which proof of damages was predicated upon the [913] showing of a comparable motion picture house. Your Honor is familiar with those cases.

The Court: Very familiar with them.

Mr. Alioto: I call your Honor's attention to the fact that we believe the case in your circuit in that connection would justify this type of proof.

Q. Now, Mr. Wolf, I will cover this ground just as rapidly as possible. What in general, Mr. Wolf, was the state of the vanadium industry in the period from 1942 to 1949, the business factors entering that industry during that period of time?

A. Well, the business was very tightly held by two companies——

The Court: A little louder, please.

The Witness: This business was tightly controlled by the two companies who are parties in this suit.

Mr. Holland: I object, your Honor. I do not think that is responsive to the question.

The Court: Objection sustained.

The Witness: There were two producers and no one else, and the two producers were Union Carbide and Vanadium Corporation of America.

Q. (By Mr. Alioto): Did those two producers sell at uniform prices? A. Yes. [914]

Q. Do you know how long that price remained uniform in the period around January 1, 1942?

A. To the best of my knowledge it is still uniform.

(Testimony of Martin Wolf.)

Q. Do you know how long prior to January 1, 1942, that price had remained uniform?

A. Only from records. I think it was way back, ten or twelve years.

Q. Do you know whether or not there was an increase in the cost of doing business in the period 1939 through 1949?

Mr. Archer: I object to the period prior to the time Mr. Wolf came to this country.

Mr. Alioto: He was in business prior to that time in Europe. The cost of doing business, whether there was an increase in the cost of doing business——

Mr. Archer: In Europe?

Mr. Alioto: I want to consider that as against the fact there was no price change in the period of ten or twelve years.

The Court: I am trying to find out what your question was.

Mr. Alioto: My question is whether there was an increase in the cost of doing business in the vanadium industry from the period 1939 through 1949.

The Court: You may answer the question.

The Witness: Yes, I believe there was. [915]

Mr. Alioto: It was a rather considerable increase, wasn't it?

A. Yes.

Q. Did that increase in the cost of doing business do anything to vanadium prices, the price of ferro-vanadium, or did that remain the same?

(Testimony of Martin Wolf.)

A. I think it stayed the same.

The Court: Well, now, would you regard it good business if one of the defendants who was producing vanadium oxide and he needed vanadium oxide to manufacture the ferro-vanadium, would you regard it as good business to sell that if he needed it in his business.

A. Not necessarily, no.

Q. (By Mr. Alioto): At the same time, if there was an abundance of supply of vanadium oxide available, do you believe that you should have been given an opportunity to buy it?

A. Very definitely so.

Q. Do you believe that you should have been given an opportunity to buy the ferro-vanadium, for example, produced by the Anaconda Copper Company — the vanadium oxide produced by the Anaconda Copper Company?

Mr. Holland: There is no showing here that they were not given such an opportunity, your Honor.

Mr. Alioto: It was a six-year contract, an [916] exclusive dealing contract. That is a pretty good showing.

Mr. Holland: I think we ought to call it red cake when we refer to it.

Mr. Alioto: I think the record on that has been made, if your Honor please.

The Court: It is your complaint here now, the principal complaint, that these defendants that

(Testimony of Martin Wolf.)

manufactured vanadium oxide would not sell to you when you needed it, you say.

The Witness: That is right, your Honor.

The Court: And they did use the vanadium oxide in the manufacture of the ferro-vanadium for steel.

The Witness: That is correct; that they used themselves.

Q. (By Mr. Alioto): Do you know whether or not these defendants together either produced or controlled almost 95% of all the vanadium oxide produced in the United States of America.

A. Yes.

Q. During the period from 1938 to 1945?

A. Well, I think it becomes clear in the government publications, if you just total them up.

Q. And there were just two companies with this control? A. That is correct.

Mr. Alioto: We have no further questions of this witness, if your Honor please.

Cross-Examination

Q. (By Mr. Archer): Mr. Wolf, how many times did you go to Chicago in the year 1942 when you commenced working for the Continental Ore Company?

A. I would say two or three times.

Q. When was the first time that you went to Chicago?

A. Fairly soon after my arrival. I can't pinpoint it. Possibly six or eight weeks after.

(Testimony of Martin Wolf.)

Q. Two months; that would be March of 1942.

A. That could be.

Q. When did the Apex Smelting Company quit making ferro-vanadium in its plant in Chicago?

A. I think it was in June, 1943, wasn't it? I think it was June, 1943. I am not sure.

Q. June, 1942, wasn't it?

A. You probably have the record. June, 1942.

Q. Actually, they made the Van-Ex about the last three months of the contract, didn't they?

A. That is correct.

Q. So that they had quit making ferro-vanadium prior to the time that they made the Van-Ex, is that correct? A. Yes.

Q. How many heats did you see run in that furnace at [918] Apex Smelting Company in Chicago?

A. I probably saw the heats run only the first or second time, but I know how these heats look. This is not the first time I have seen it.

Q. I know that. I realize you had seen it before. Don't misunderstand. I am just trying to limit the question to what you saw at Apex. So you say you saw them run one or two heats at Apex?

A. No, I would say I saw them run maybe three or four heats each day I was there, because these heats would run fairly rapidly.

Q. How many days were you there when they were running heats?

A. Probably two days each time that I was there, but I didn't go—let me say this—I didn't go

(Testimony of Martin Wolf.)

and look at something I knew perfectly well. I went to Apex mainly to discuss commercial matters with their management.

Q. Didn't you go thoroughly into the process they were using there?

A. That had been done by Mr. Leir before.

Q. So then you have no personal knowledge of the process they were using?

A. Oh, I do, because this is what we started out in France with.

Q. I know, but I am asking you what you personally [919] observed at the Apex plant in Chicago.

A. Let me put it this way: I know very well from my own knowledge that they were using our French process.

Q. I know, you say that, but do you know that from your discussions with Mr. Leir?

A. No.

Q. Or do you know that from what you observed?

A. From looking at what they did.

Q. On these occasions when you were in Chicago?

A. That is right, that is right.

Q. Actually, they had started their process sometime before you had gone to work for the Continental Ore Company, isn't that correct?

A. That is correct.

Q. And you were not present, then, at the time they were given the information as to how they

(Testimony of Martin Wolf.)

should run their heats and the amount of aluminum and the amount of this or the amount of that that should be used, is that correct?

A. That is correct.

Q. Actually, isn't your statement that they were using the same process based upon your assumptions as to what you had done in France and what you assumed they did over here?

A. It looked so much alike that I couldn't doubt that they—that they had invented another process which looked identical but was different. [920]

Q. Do you know what the impurities were, if any, or the ratio of impurities in the product of the Apex Milling Company?

A. It was a regular material that was produced in this country, except we had a very low carbon content because we didn't use the electric furnace. We guaranteed the carbon content, which was another advantage in the use of the ferro-vanadium that we produced there.

Q. Isn't one of the problems in using the aluminum thermic method getting aluminum with a low copper content? A. That is correct.

Q. And didn't you have some trouble in this country at Apex getting aluminum that had the low copper content?

A. From time to time these problems came up.

Q. You have testified that the Continental Ore Company sold vanadium products, Van-Ex and ferro-vanadium; they also attempted to sell a third vanadium product, did they not?

(Testimony of Martin Wolf.)

A. That was the vanadium silicide you are referring to?

Q. Vanadium silicide, and this they never sold prior to the time the complaint was filed, did they?

A. I believe that is correct.

Q. A few sample lots, but I mean the substantial bulk was never sold?

A. That was something new, vanadium silicide, at the time. [921]

Q. And it did not go over so well?

A. In fact, it was more of a by-product than an end product as far as we were concerned.

Q. In regard to the percentage used of ferro-vanadium in the period 1942 to, let us say, 1946, there was a problem, was there not, with the Apex product: it was 70% ferro-vanadium, or thereabouts, due to the fact that the military specifications during this time still specified what you might call the "old" or the "American" percentages which were made by the defendant companies; isn't that correct?

A. I didn't come up against that.

Q. You never came up against that?

A. I don't believe so. Maybe just a matter of tradition.

Q. I believe you have testified that there was some kind of arrangement that Continental Ore Company had with Apex Smelting Company when you commenced work for Continental Ore Company in January of 1942?

A. That is right.

(Testimony of Martin Wolf.)

Q. Was that arrangement in writing?

A. It was a written contract, yes.

Q. Do you have a copy of that?

A. Not on me.

Mr. Archer: Do you have one, counsel?

Mr. Alioto: Yes, I certainly do. I will be very happy to have it put in at this point. [922]

Mr. Archer: Do you object to it going in?

Mr. Holland: No, I don't object to it going in. I thought inasmuch as Mr. Leir negotiated the contract, perhaps it would require him.

Mr. Archer: Let it go.

Mr. Alioto: It is right here.

The Court: Did you negotiate the contract?

The Witness: No.

The Court: I think it would be better, if Mr. Leir is going to testify, to let it go in through him.

Mr. Alioto: So there won't be any question about it, here it is.

Mr. Archer: Why don't you keep it all together?

Mr. Alioto: Here it is all together.

Mr. Holland: I have a copy.

Mr. Alioto: I suggest that it go in. We have no objection to it going in.

Mr. Archer: Well, if Mr. Leir negotiated it, we will go into it then.

Mr. Alioto: O.K.

Q. (By Mr. Archer): I believe you testified, Mr. Wolf, that you also participated in obtaining the raw material, that is, the vanadium oxide for Continental Ore operations?

(Testimony of Martin Wolf.)

A. To an extent, yes.

Q. In the period 1942 to 1946, what company was the [923] largest supplier of vanadium oxide to Continental Ore, to Apex Smelting Company, or to the other companies with which they were connected?

A. I don't know the exact figures but I would say it was probably the Shattuck Chemical Company.

Q. What was that?

A. Shattuck Chemical Company.

Mr. Alioto: North Continental or the Shattuck Chemical Company?

The Witness: Yes.

Q. (By Mr. Archer): What was the next largest?

A. I think then came either Nisley or Blanding. We could look up the records.

Q. I was just asking for your best recollection. What do you think was the third largest? Either Nisley or Blanding, so what would be the fourth?

A. Did we have a fourth?

Q. Can you remember buying any vanadium oxide from anybody else?

A. We had negotiations with quite a few producers in the Colorado Plateau.

Q. Did you have any with Metals Reserve Company? A. We had with Metals Reserve.

Q. Did you buy any from them?

A. Yes, we did. [924]

Q. Anybody else?

(Testimony of Martin Wolf.)

A. Yes. Electromet.

Q. Did you buy any ferro-vanadium from anybody during the period 1942 to 1946, other than from Climax and Apex?

A. We might have bought a small lot of ferro-vanadium at one time. I don't know whether we bought it directly or through a broker.

Q. Did you buy anything from Electromet?

A. I believe we did. It may have been for export.

Q. Do you recall during the period 1942 to 1946 negotiating to buy vanadium flue ash? Do you know what vanadium flue ash is?

A. Yes, yes, from a man in Castleton, I believe, New York.

Q. Johnson-Whitney?

A. Johnson-Whitney, yes. They collected it from stacks of steamships that were burning oil, which contained a slight percentage of vanadium. I believe that was it.

Q. Later on you had a contract with the Imperial Paper and Color Corporation?

A. Yes.

Q. They processed bichromate ores, did they not?

A. No, they processed chrome ores. They made bichromate out of that.

Q. As a by-product of that they had vanadium oxide, did they not? [925]

A. That is correct, off-grade mostly.

(Testimony of Martin Wolf.)

Q. They sold it to the steel companies, didn't they? A. Yes.

Q. Allegheny Ludlum Steel Company?

A. Yes, but it was off-grade.

Q. One of those customers that you mentioned here? A. But it was mostly below grade.

Q. During the time that Continental Ore had a contract with the Imperial Paper and Color Corporation, they had an apparatus up there for making what we call fused oxide, taking the raw material such as the proceeds from the chrome ore process and turning it into the fused black oxide, and their equipment up there could also do the same for vanadium flue ashes, couldn't it?

A. I don't recall that.

The Court: We will take a ten-minute recess.

(Recess.)

Q. (By Mr. Archer): Mr. Wolf, do you recall that in addition to the Castleton Manufacturing Company, the Brandeis Goldsmith Company also offered vanadium-bearing flue dust from Peruvian sources? A. I have no recollection.

Q. I show you a memorandum of yours dated January 29, 1945, together with a copy of a letter from you to Imperial Paper & Color Corporation dated March 3, 1945, and ask you whether [926] you can identify those (handing to witness).

A. (Witness examining): Yes, sir.

Mr. Alioto: No objection.

Mr. Archer: As defendants' exhibit next in order I offer a memorandum of Mr. Wolf dated January

(Testimony of Martin Wolf.)

29, 1945; and a letter dated March 3, 1945, from Mr. Wolf to Imperial Paper & Color Corporation.

The Clerk: Defendant Union Exhibit 3-F admitted and filed into evidence.

(Whereupon the memorandum and letter referred to were received in evidence as Defendant U's Ex. 3-F.)

Mr. Archer: The memorandum states, Mr. Wolf —it is entitled "Brandeis Goldsmith" — I think that's a mistake, isn't it? Do you know the company? A. Yes, I know them.

Q. Is that right?

(Reading.) "Mr. Green of Brandeis Goldsmith called on the 27th.

"Samples of vanadium ash are on their way. They have four tons ready at the present time, which show 15.72 V_2O_5, 2.47 Ni."

Those are the percentage figures, are they not, Mr. Wolf? A. That's right.

Mr. Archer: (Reading.) "15.72% V_2O_5. [927] He said that of course they would like to have payment for the nickel, but he realizes that it might be detrimental to our process.

"I told him that this was something that would have to be worked out. Maybe we can return the nickel to them in some form or other.

"They expect to have 30 tons per month of similar material, which we could have, if we can agree on price. He wanted to know whether this is too

(Testimony of Martin Wolf.)

much for us, but I told him that it is not and that we are very much interested in the material."

Mr. Wolf's letter to the Imperial Paper & Color Corporation——

Q. This was the company with whom you had a contract to make ferro-vanadium, was it not, Mr. Wolf? A. That's right.

Mr. Archer: (Reading.) "Dated March 3, 1945, Mr. A. F. Brown, Re: Peruvian Vanadium Ashes."

"Dear Mr. Brown:

"We have your letter of the 27th and wish to say that the producer of these ashes is very reliable and has the equipment available to make at least 30 tons a month, because they produced that much previously.

"They have not been in operation for a couple of years because of scarcity of labor, but with the shift [928] in the program of Metals Reserve's foreign purchases, they can start out again and make these vanadium ashes.

"A member of our organization will soon make a tour of the South American countries, and he will personally contact these producers. We will be able to give you some more definite news at that time. This trip is scheduled for early April, at which time we suppose you will give us a complete picture regarding the sample we sent you."

Q. Do you recall whether you ever purchased any of these vanadium ashes from Peru?

A. I don't believe so. I think there was an objec-

(Testimony of Martin Wolf.)

tion because of the nickel; it presented some problem, technical problem, I believe.

Q. Do you recall when you came here in 1942 and through the period 1949 that there was a source of vanadium in the lead vanadate ores?

A. That is right.

Q. Do you recall that the Metals Reserve Company purchased a large amount of the African lead vanadate ores from the so-called Otavi Mine?

A. That's right.

Q. I show you now a letter dated January 26, 1944, to the Imperial Paper Company regarding lead vanadate and flue dust and ask you if you can recognize that. [929] A. Yes, sir.

Mr. Archer: As defendants' exhibit next in order I offer a letter from the witness to Imperial Paper & Color Corporation dated January 26, 1944.

The Clerk: Defendant Union's Exhibit 3-G admitted and filed in evidence.

(Letter 1/26/44, Wolf to Imperial Paper admitted in evidence as Defendant U's Exhibit 3-G.)

Mr. Archer: January 26, 1944, was just after Continental Ore had made its agreement with the Imperial Paper & Color Corporation, was it not?

A. I believe that's correct.

Q. Do you recall that that agreement also provided, among other things, that you might provide flue dust for the Imperial Paper operation?

A. I don't recall that.

Mr. Archer: This letter is addressed to Impe-

(Testimony of Martin Wolf.)

rial Paper Company from Continental Ore Company, attention Mr. A. F. Brown, "Lead Vanadate."

"Gentlemen:

"My trip to Washington last week was delayed since I could not make all the appointments I wanted to; and therefore I had to postpone it until yesterday."

Mr. Alioto: Excuse me, Mr. Archer, if you don't want to read the entire thing, we have no objection about that. [930] Just read any portion you want to, so we will get on with this thing.

Mr. Archer: (Reading.)

"I saw the competent gentlemen in Metals Reserve and WPB and they confirmed that the sample of 25 pounds of the South African lead vanadate has been ordered shipped and is most probably in transit.

"I further learned that about 900 tons of this material will arrive early in February, and in this connection we would very much like to discuss an idea with you which we believe would be of great importance.

"We wonder whether you intend to be in New York one of these days, or early in February, so that we may discuss this matter in detail."

And then "Flue Dust."

"Mr. Johnson was in our office yesterday and offered us a lot of 8 to 9 tons of flue dust of 13.11% V_2O_5 content."

(Testimony of Martin Wolf.)

Q. Mr. Johnson had this plant up at Castleton, New York? A. Yes.

Mr. Archer: (Reading.)

"This would correspond to about 2200 lbs. of V_2O_5 contained, and it is our opinion that we should buy this lot for you at the price of 45c per pound of V_2O_5 so that you can start your tests on an industrial [931] scale without further delay.

"We will shortly send you a description of the process for treating lead vanadate and you will find that the kiln you have and which Mr. Leir saw when you showed him your equipment, can most likely be used for the treatment of lead vanadate and flue dust, interchangeably. This, of course, would make things very simple for you."

Q. You also recall that there were domestic sources of vanadium in not only the lead vanadate ores, but in what we call the copper ores or the cuprodescloizite ores. A. Yes.

Q. I show you a letter dated October 9, 1944, from Mr. Wolf to Imperial Paper & Color Corporation, and invite your attention to the handwriting on the side (handing to witness).

A. (Witness examining): May I make a comment on these?

Q. Sure.

A. I don't know what other correspondence you are going to show me for identification, but most of the ores we had were for individual lots where there was very little chance of continuing supply and then there were some, like these particular complex

(Testimony of Martin Wolf.)

ores, where there was a problem of treatment, and it is always difficult for a manufacturer such as Imperial Paper to gear their production of a finished product to different kinds of raw materials that come in at different [932] times. The ideal for any plant is to have a steady flow of raw materials of the same kind, and all these various lots that were offered to us just did not correspond to this ideal solution.

Now, of course we cannot ask for ideal solutions, but I would say that these ores always posed a technical problem which we had not in our hand to solve and that is why we did not buy most of these ores.

Q. Well, the processing of all ores is a technical problem, isn't it?

A. Right, but if you start with a raw material which is fairly uniform from day to day, you can build up a production; but you cannot use one time cuprodescloizite ore and the next time a lead vanadate and the third time something else and put it all in the same plant. It doesn't go.

Q. Well, the flue dust, though, is very easily processed.

A. It is very easily processed but there you have a very irregular source because it depends on where this flue dust is taken out of the ships, and you just can't have a source which is on the high seas and hope it comes into port one of these days.

Q. Well, the Castleton plant operated fairly regularly up to about——

A. But they had to bid on the flue dust with

(Testimony of Martin Wolf.)

their steamship companies. They had to bid on it. There was no [933] guarantee that they would get this material every time. There might be someone else in Europe who might have bought it.

Q. Well, what about the flue dust that was offered to you from Brandeis Goldsmith, they had just opened up a new source near the end of the war. A. That was vanadium ashes.

Q. Vanadium ashes. A. From Peru.

Q. From Peru.

A. We were a little scared of that, although we don't appear to be in our letter to Imperial, because we wanted to encourage Imperial to do this. But we were a little scared because it was well known that Vanadium Corporation quit producing in Peru and I don't quite know why we, who were much smaller, should start in Peru and consider this a steady source of supply when Vanadium Corporation did not continue their production but, rather, relied on the Colorado Plateau, to be supplied by Electromet.

Q. When did Electromet Corporation quit in Peru? A. I think in '33 or so.

Q. And they haven't produced from Peru since about '33?

A. I don't know their business that exactly, but I believe that is correct.

Q. Well, to pinpoint it, when you came to this country in '42, which is, I suppose—— [934]

A. There wasn't any.

(Testimony of Martin Wolf.)

Q. They weren't producing from Peru, the Peruvian mine? A. Not to my knowledge.

Q. From '42 to '49.

A. Not to my knowledge.

Q. What does this "Navarro Mine" refer to (Exhibit 3-H).

A. This is a source of the ore.

Q. Is that in the United States or Mexico?

A. I believe this is the United States.

Mr. Archer: As defendants' exhibit next in order I offer a letter from the witness to Imperial Paper & Color Corporation dated October 9, 1944.

The Clerk: Defendant U's Exhibit 3-H admitted and filed in evidence.

(Letter, 10/9/44, Continental to Imperial paper received in evidence as Defendant U's Exhibit 3-H.)

Mr. Archer: This is to Mr. A. F. Brown.

"We are sending you, by Railway Express, a box containing two bags, one of cuprodescloizite, one of lead vanadate.

"We would suggest that you examine this material closely and let us know whether you could use this raw material for the production of V_2O_5, because it can be had in considerable quantities."

Q. Do you recall that there was another processer of chrome ores in the United States besides the Imperial Paper & Color Corporation who was producing vanadium oxide as a by-product?

A. Natural Products Refining.

Q. And I show you a copy of a letter to Impe-

(Testimony of Martin Wolf.)

rial Paper regarding the Natural Products Refining Company and ask you if you can identify it.

A. (Witness examining): Yes.

Mr. Archer: I have about four letters on this in addition to that one—if you want to look at these—I think they are all the same.

A. (Witness examining): What was the date on that one?

Q. This is August 7, 1944. I think these follow all along.

A. (Witness examining): Yes, sir.

Mr. Archer: As defendants' exhibit next in order I offer letters from the witness to Imperial Paper & Color Corporation, dated August 7, 1944, November 14, 1944, March 28, 1945, April 23, 1945, and August 11, 1948.

Mr. Alioto: No objection.

The Clerk: Defendant U's Exhibit 3-I admitted and filed in evidence.

(Whereupon the letters referred to were received in evidence as Defendant U's Exhibit 3-I.) [936]

Mr. Archer: The first is dated August 7, 1944, from the witness to Imperial Paper & Color Corporation "Re: Red Cake, Natural Products Refining."

"They" refers to Natural Products Refining——

"They have accumulated about 5,000 pounds of red cake containing about 70% V_2O_5, and are producing this red cake at the rate of about 100 pounds per day.

(Testimony of Martin Wolf.)

"They leached part of the material in stock and brought the V_2O_5 content up to 85%

"They have no fusion furnace and we believe that in view of this fact we may be able to obtain this red cake at 85c per pound V_2O_5 contained.

"The freight to Glens Falls would be less than 1c (as a matter of fact 7/10 of 1c). Although this would not be a big business, there would still be some profit, if you were to take this red cake and fuse it along with your own. The fact that you would use your furnace more intensively might also add a little to this profit. However, the main reason why I believe it a good idea to take this production up is to eliminate it from the market. In accordance with our telephone conversation this morning, we will await word from you sometime this week as to whether you will allow us to go ahead and try to buy this material for you at 85c per pound of V_2O_5." [937]

Q. Then you subsequently bought several shipments, as indicated in the correspondence here, isn't that correct, Mr. Wolf, from Natural Products and sent it up to Imperial's plant?

A. We wanted to get it in our hands rather than in others.

Q. I understand. I notice in the last one it refers to Webb Harrison. Webb Harrison was one of the sales agents for the Natural Products Refining Company?

A. I believe so. That is correct.

Q. Actually, there came a time when the Impe-

(Testimony of Martin Wolf.)

rial Paper & Color Corporation refused to buy anymore from the Natural Products Refining Company, didn't they? Do you recall that?

A. I don't recall it.

Q. Don't you recall they got into a patent fight?

A. Oh, yes, I think—yes, I think that was it.

Q. I now show you a series of correspondence from Imperial Paper & Color Corporation to Mr. Wolf, dated December 1, 1947; another letter dated December 29, 1947 from Imperial Paper & Color Corporation to Mr. Wolf; and Mr. Wolf's reply dated December 31, 1947—and ask you whether you can identify those.

A. (Witness examining): Yes, sir. [938]

Mr. Archer: As Defendants' Exhibit next in order I offer the three letters just shown the witness.

Mr. Alioto: No objection.

(The letters referred to were thereupon received in evidence and marked Defendant Union's Exhibit 3-J.)

Mr. Archer: This is dated December 1st, 1947, from Imperial Paper Company to Mr. Wolf:

"You will remember about ten days ago we told you that we had on hand some Vanadium Oxide that analyzed about 15% metallic iron and 75.7% V_2O_5. You asked us to send you a sample representing this material, and we are forwarding to you today about one pound of this fused Vanadium Oxide X-521, representing approximately 2600 pounds, which is batch U-15074. It is our under-

(Testimony of Martin Wolf.)

standing that you will submit this to one of your clients, and if you can obtain an order on it, we will invoice it to you at $1.10 per pound, it being our understanding that you will offer it to your customer at the present market of $1.20 per pound."

December 29th, again from the Imperial Paper to Mr. Wolf:

"About a month ago you will recall we sent you a sample of Fused Vanadium Oxide, representing 2600 [939] pounds, which we had on hand and which we wished to dispose of.

"We would like to get some action on this matter, and are writing to ascertain if sufficient time has elapsed for you to get a reaction from your prospective customer, and if so whether or not the reply is favorable. The point is that we are not trying to high pressure you, but we do want to get some action on this material, and if your customer is not interested, then we have several other leads we wish to pursue."

A letter from Mr. Wolf to Mr. A. F. Brown, General Manager, Pigment Color Division, Imperial Paper and Color Corporation. Re: Fused Vanadium Oxide:

"Our customers are not too keen on the change-over from Ferro-vanadium to fused Vanadium Oxide although they had used the oxide during the war.

"They have not definitely declined either but during this holiday period we cannot do very much

(Testimony of Martin Wolf.)

useful pushing and we feel that if you have any other leads, we suggest you go ahead.

"If our customer should decide eventually to use this material, we will just have to take our chances on its availability."

Q. Now, when you refer here to the fused vanadium oxide [940] that they had used during the war, do you refer to Van-Ex?

A. Not necessarily.

Q. Did you sell just plain vanadium oxide during the war?

A. As I mentioned before, some of the companies used plain vanadium oxide if they could get it to throw into their furnaces, not regarding or not caring too much in that war period whether they had a good recovery out of it, or whether it was economical or not. This material is standard material. It was not V_2O_5. Perhaps you would permit me to make another comment.

Q. Go ahead.

A. Again I want to bring out the continuity that we had that was missing in this business so far as we were concerned. Our business is not different from any other business, whether it is a store, a workshop, or anything else. If you are closed down part of the time, you won't have any customers.

So we had a sporadic supply. Once we had it, once we didn't. So it was very difficult for us to sell whenever it happened that we had some material available for sale, and that is partly the answer to this, besides the fact that this is offgrade material.

(Testimony of Martin Wolf.)

Q. But it was the material which was used by Allegheny Ludlum Steel Corporation, was it not?

A. I don't know where it went ultimately.

Q. Weren't you told by Imperial that they were supplying [941] Allegheny Ludlum with their fused vanadium oxide? A. I don't know.

Q. I will show you a letter dated April 9, 1945 to Imperial from Mr. Wolf, and ask you if you can identify it? A. Yes.

Q. Does that refresh your recollection?

A. It does, but mayn't I also ask that you read the letter?

Mr. Archer: All right.

Mr. Alioto: We have no objection to it.

(The document referred to was thereupon received in evidence and marked Defendant Union's Exhibit 3-K.)

Mr. Archer: This is dated April 9, 1945 from Imperial to Mr. Wolf:

"Replying to your letter of April 6th regarding a ton of V in the form of Fused Vanadium Oxide, we are sorry to tell you that we do not have any of this material on hand at the present time. We have been producing small quantities, but we made a shipment to Allegheny Ludlum a few days ago, and it will be six to eight weeks before we have any more available, because our labor situation is so tight, that processing of anything which we can defer is being handled on that basis at the present time, as we are shorter of men now than we have been at any time since the war started." [942]

(Testimony of Martin Wolf.)

A. So here you can see again it was an on and off proposition. You couldn't even get one ton of material from them.

Q. Let us talk about the Otavi ores which Metals Reserve had on hand. How many tons of those were there that were offered to you in 1944?

A. The letter that you had shown to me before indicated that they were expecting 900 tons to come in.

Q. I show you a memorandum entitled "Trip to Washington, Tuesday, January 25, 1944," and ask you whether you can identify that?

A. Yes, sir.

Mr. Alioto: No objection.

Mr. Archer: I offer this as defendant's exhibit next in order.

(The document referred to was thereupon received in evidence and marked Defendant Union's Exhibit 3-L.)

Q. Mr. Wolf, this is a memorandum of a trip you made to Washington on January 25th, 1944, about the time the Imperial Paper contract was made between Continental and Imperial Paper, is that right? A. Correct.

Q. "I saw Mr. Mirel—" Who was Mr. Mirel?

A. Mr. Mirel at the time was, I believe, an official of [943] the RFC.

Q. "* * * and Mr. E. L. Murphy (Room No. 1077) (Metals Reserve—Executive 3111—Extension 861), as well as Mr. Simon Strauss (Room 1240) Vice-President of Metals Reserve.

(Testimony of Martin Wolf.)

"There are about 700 to 800 tons of the Otavi lead vanadates in this country stored at Bridgeville. A small part has been shipped to the Cannonsburg plant of the Vitro Mfg. Co. who are treating this material.

"They expect another boat with about 900 tons, to arrive on February 9.

"They do not know yet where to store these 900 tons. It depends upon where the boat will arrive.

"I did not mention Imperial Paper, but told them that we might need this material at Langeloth but more likely in Upstate New York.

"Mr. Strauss said that they again have a cheap storage space at Bethlehem and if the boat arrives at Baltimore, they would probably store it at Bethlehem, otherwise they may decide in favor of Bridgeville since they do not have to pay any charge there except in and out handling.

"He confirmed that Vanadium Corporation of America has no option on this material nor has anybody else for that matter. [944]

"Mr. Strauss mentioned without consulting his papers that the price for this lead vanadate is 40c per pound of V_2O_5 contained basis Ledoux analysis. The lead is being returned to Metals Reserve in the form of a sludge containing about 40% Pb.

"Mr. Mirel, however, was astonished at that price because he looked up the contract with Vitro and found that they only paid 25c per lb.

"Mr. Strauss agreed to send us the 25 lb. sample but he has to get approval from the WPB for it.

(Testimony of Martin Wolf.)

He had sent a corresponding request to Mr. Hatch. Upon calling Mr. Hatch, I found out that Mr. Metzger handles it and upon calling Mr. Metzger, it appears that he has not yet received this request but he will approve it the moment it reaches his desk.

"Metals Reserve will bill us for these 25 lbs. and maybe at that time they will find out whether the price is now 40c instead of the 25c Vitro is paying.

"If not, that is, if they invoice us 40c we can always go back and tell them that Vitro is paying the lower price.

"Mr. Strauss regretted that we could not make up our minds in time before the February boat arrives, so that he could ship it to us right away if we [945] wanted it.

"The material they have in stock averages 11.2% V_2O_5."

Q. So at that time they had 700 tons to 800 tons in stock? A. Right.

Q. And 900 tons coming. That is 1600 tons, and this ore averaged about 10 per cent roughly V_2O_5. That would have supported a considerable operation, wouldn't it, Mr. Wolf?

A. That would have been 160 tons of V_2O_5 or roughly 80 tons V, which is much too small to build a plant to treat this particular material, especially since there was a dispute as to the price that would have been charged, because they got it at 25 cents and we were offered 40.

Q. That was by Metals Reserve?

A. That is correct.

(Testimony of Martin Wolf.)

Q. You knew that there was other ore available where that came from, didn't you?

A. If it would come here. It might have gone to Europe, because the Europeans were starved for vanadium from time to time because it was so tightly held here.

Q. Didn't you represent to the Imperial Paper and Color Corporation that this would be a safe basis for operation, this lead vanadate ore from South Africa?

A. They felt that at the time. [946]

Q. Didn't you feel that?

A. Well, let me finish this.

Q. Go ahead.

A. Imperial Paper had, of course, questioned us very thoroughly as to the sources of raw material before they entered into that contract with us, and in view of our experience, of our being eliminated from the Plateau by the two companies, the defendants in this case, they felt very insecure about going into this business because they felt we had no raw material source.

Q. Is this what you told them, that you had been eliminated from the Plateau?

A. More than told them. We demonstrated it.

Q. You mean the Continental Ore had been eliminated from the Plateau?

A. Continental Ore, Apex and everybody else who was involved in any phase of vanadium except the two companies, Union Carbide and Vanadium

(Testimony of Martin Wolf.)

Corporation, because they were the only ones left over.

Q. Did you own any mines on the Plateau?

A. No.

Q. Did you buy any ore on the Plateau?

A. We did.

Q. Ore?

A. No, not ore; concentrates. [947]

Q. You mean it was these other people who had mines and who bought ore on the Plateau that you are referring to? A. That is correct.

Q. I show you a letter dated January 29th, 1944 from yourself to Imperial Paper and ask you whether you can identify it? A. Yes.

Mr. Archer: I offer this as Defendant's Exhibit next in order.

Mr. Alioto: No objection.

(The document referred to was thereupon received in evidence and marked Defendant Union's 3-M.)

Q. By the way, you referred to the Otavi ores, that they might be sold in Europe. Prior to the war, these had been the source of the vanadium industry in Germany, were they not?

A. That is correct. They were German owned before the First World War.

Q. But then it was a substantial source of vanadium?

A. I do not believe it was a substantial source of vanadium for this country.

Q. For this country?

(Testimony of Martin Wolf.)

A. I don't believe so, no. I don't think these came, in peace time, that these came here. I think this was preclusive buying on the part of the American authorities not to let them [948] fall into the hands of the enemy, so there was no guarantee that they would continue unless commercial arrangements could be made.

Q. The time we are talking about is January 1944; they had about 1600 tons here in this country?

A. That is correct.

Q. This is dated January 29, 1944, from Mr. Wolf to Imperial Paper and Color Corporation. This was at the time of your contract with Imperial Paper, was it not? A. 1944?

Q. January 29th. It was just signed, wasn't it?

A. Yes.

Mr. Archer: (Reading.)

"Re: Lead Vanadium from South Africa.

"We have your letter of January 21 and wish to say that the figures on Page 635 of the Minerals Yearbook, 1940, Revision of 1939, refer to metric tons of metallic vanadium (V) contained.

"Therefore, total shipments from Southwest Africa, listed as being 514 metric tons V contained, correspond to 1,132,856 pounds of V contained, which is roughly 95,000 pounds of metallic V per month.

"The Otavi material alone at the present rate of production amounts to:

"200 tons per month of 9% V_2O_5 average, equaling 36,000 lbs. V_2O_5 or 20,000 lbs. of V per month.

(Testimony of Martin Wolf.)

"There are other sources in South Africa, as well as in Northern Rhodesia, so that this origin alone should be a safe basis for operations.

"This does not take into account any flue dust to be obtained locally here, nor any other vanadium-bearing materials from South America, particularly Peru and from Central America, particularly Mexico."

Q. Now, in the year 1944 Imperial experimented with the lead vanadate and they perfected a process for recovering vanadium pentoxide from the lead vanadate ores, didn't they?

A. You probably can show it to me. I don't recall it.

Q. A letter dated December 4th, the end of the year, from yourself to Mr. A. F. Brown.

A. Yes, sir. It doesn't say that they have perfected a process. That seems to be an assumption.

Q. That was your assumption?

A. I would assume so from the context there. I think they were working at it and they had made progress.

Mr. Archer: I will read the letter. I offer this as Defendants' Exhibit next in order.

Mr. Alioto: No objection.

(The document referred to was thereupon received in evidence and marked Defendant Union's Exhibit 3-N.)

Q. (By Mr. Archer): This is December 4, 1944, [950] approximately one year after your trip to Washington, correct, Mr. Wolf? A. Yes.

Q. It is to Mr. A. F. Brown. You have labeled

(Testimony of Martin Wolf.)

it "Confidential." Is there any particular significance in that?

A. From the context I just read it would appear that it was a suggested letter that we wanted to exhibit to keep the matter open, so since it was not a spontaneous letter but was supposed to be a spontaneous letter, we wrote "Confidential" on it.

Q. It is as follows: "Re: Metals Reserve's Stock of Lead Vanadate.

"Dear Mr. Brown:

"A friend of ours at Metals Reserve suggested that since we cannot make further purchases of the Otavi lead vanadate at the present time, we should write something to them in order to keep this matter open in their files. You know that we are urging them not to sell it to any other parties, but to keep it until you are ready to proceed.

"Such a letter, therefore, should point out that your process for recovering vanadium pentoxide has been perfected and that you are eager to go ahead. However, things have been held up because of the present manpower shortage, and as soon as there is a [951] change in the present labor situation, you intend to proceed with the vanadium production on a substantial scale.

"Of course, this letter should not mention anything about Metals Reserve, but should just be a spontaneous letter to us."

So you would not have shown Metals Reserve a letter from Imperial Paper which stated that Imperial Paper had perfected their process for re-

(Testimony of Martin Wolf.)

covering vanadium pentoxide if the statement were not true, would you, Mr. Wolf?

A. No, certainly not. There are stages in developing a process. They probably at that time had developed a process in the laboratory and not even a pilot plant or a regular plant, so before you go to the point of producing you still have to make sure that whatever you have developed in the laboratory is really going to be an economical process.

Q. That is what you mean when you state:

"Such a letter, therefore, should point out that your process for recovering vanadium pentoxide has been perfected and that you are eager to go ahead."

A. They were eager to go ahead but they didn't.

Q. Now, I show you a letter dated April 18, 1945, regarding some of the South American sources and, again, this Otavi lead vanadate material, to Imperial Paper and Color Corporation, and ask you whether you can identify that?

A. (Witness examining) Yes, sir.

Mr. Alioto: No objection.

Mr. Archer: Offer letter dated April 18, 1945, from the witness to Mr. Brown of Imperial Paper and Color Corporation.

The Clerk: Defendant U's Exhibit 3-O admitted and filed in evidence.

(Whereupon, a copy of letter from Continental Ore Company to A. F. Brown, Imperial Paper and Color Corporation, dated April 18,

(Testimony of Martin Wolf.)

1945, was received in evidence and marked Defendant Union's Exhibit 3-O.)

Q. (By Mr. Archer): This was approximately a year and three months after you made your contract with Imperial Paper, isn't that correct?

A. April, '45? [953]

Q. April, '45.

A. Yes. We still had not sufficient raw material, as you can see.

Mr. Archer: (Reading.)

"Dear Mr. Brown:

"We have your letter of April 13th, and perfectly understand your point of view, both with regard to the difficulty of determining the value of this material, as well as to the principle of offering a price to the producer rather than have him submit a quotation.

"However, we are dealing with South America and things are a little different there.

"As you know, the mine stopped producing this material some time ago, and what they want to know is what price we could pay, so that they can estimate whether they can profitably resume this production. Of course, they could just as well find out what their present labor and mining costs are and tell us what minimum price they require. However, in South America people take things very easy, and in general we found that we can do business with them only if we follow their methods. We have done so and our experiences in South America to date have been very pleasant. [954]

(Testimony of Martin Wolf.)

"Regarding the general question of raw material, we believe that the Otavi lead vanadate can be supplied in considerable quantities after the war regularly. Still, it would be advisable to look for two or three additional sources of raw material, as a a general policy of not relying on one source. If you agree with this view, then we believe that a quantity of 30 tons per month of these ashes would be quite an advantage, or to put it differently, three more sources supplying 30 tons each would be a sufficient basis on which to operate a plant.

"Therefore, we feel that if at all possible, you should try to find out the value of these vanadium ashes, so that we can give instructions to our man, when he reaches Peru, to conduct some preliminary negotiations with these people."

Q. Now, do you recall, Mr. Wolf, that after the war your Paris office did, in fact, obtain substantial shipments of the lead vanadate ores?

A. No. But I hope you can refresh my memory.

Q. This is a letter from a Mr. Mirel of the Continental Ore Company to Mr. A. J. Strod, Vitro Manufacturing Company, February 1, 1947.

A. (Witness examining) Well, these were individual lots, I take it. [955]

Q. Well, do you know?

A. It looks like it. It says, "* * * 50,000 pounds Lead Vanadate Ore containing 19% * * *" Twenty per cent would be 10,000 pounds, and that was all—plus 100 tons——

Q. Was that all you had in your——

(Testimony of Martin Wolf.)

A. It says here that this is—it doesn't say anything about continuing supplies, and you see in the other letter that you just read that we were always concerned about continuing supplies. We had to go very far afield, in South America and to South Africa, while there was an abundance of raw materials right here in the plateau which we couldn't touch. This is the whole point of this correspondence.

Q. Well, there were 600——

Mr. Alioto: I have seen it, Mr. Archer, and we have no objection to putting it in.

Mr. Archer: Offer this as Defendant's exhibit next in order.

The Clerk: Defendant U's Exhibit 3-P admitted and filed in evidence.

(Whereupon, copy of letter from Continental Ore Company to A. J. Strod, Vitro Mfg. Company, dated February 1, 1947, was received in evidence and marked Defendant Union's Exhibit 3-P.)

Mr. Archer: The 300 tons of Lead Vanadate Ore that the Metals Reserve imported during the war was right here in this country, wasn't it? [956]

A. We were very much in favor of the Imperial taking them, but it was their money which would have been involved in building a plant, and we had no guarantee that after the war the supply would continue.

Q. But Vitro had processed part of those ores prior to that time?

(Testimony of Martin Wolf.)

A. Vitro had a different setup entirely. Vitro handled on a smaller scale a great number of complex ores, and they had equipment in their plant whereby, perhaps, by combining certain pieces of equipment they could make arrangements to refine certain ores which we could not do without buying the equipment. It is a different story entirely, and it is in much smaller quantities that Vitro would get it, different than the equipment we would have needed to support irregular operation into the future.

Q. Well, when you speak of "we," you don't mean Continental Ore Company?

A. When I speak of "we," I speak of us and our associates, in this particular case Imperial Paper.

Q. You had no machinery yourself to process it?

A. That's right. That's exactly what I'm saying, yes.

Q. Yes. This letter is dated February 1, 1947, to Mr. Strod, by Joel A. Mirel:

"Re: Lead Vanadate Ore

"Dear Mr. Strod: [957]

"Our Paris office informs us that they are in a position to furnish about 50,000 pounds Lead Vanadate Ore containing about 19.20% V_2O_5 and about 71.65% Lead, and also 100 tons containing about 13.21% V_2O_5 and about 65% Lead. We would thank you to let us have your best proposals for the

(Testimony of Martin Wolf.)

above, together with your general terms and conditions of purchase.

"We thank you for your prompt consideration of this matter."

Q. Was this the same Mirel we talked about a few minutes ago, who was——

A. That's right.

Q. What was he, in the War Production Board?

A. No, he was with RFC—Reconstruction Finance, I think.

Q. And then he finally went with the Continental Ore Company? A. That's right. [958]

* * * * *

Wednesday, June 11, 1958, 10:00 O'Clock A.M.

(The witness Martin Wolf thereupon resumed the witness stand.)

Cross Examination—(Resumed)

Q. (By Mr. Archer): Mr. Wolf, yesterday in your direct examination you were asked about the prices of these various vanadium products, you recall? A. I do.

Q. And you referred to the price of your Van-Ex in terms of vanadium? A. Correct.

(Counsel reproducing tabulation on blackboard.)

Q. Now, the "prices in terms of vanadium." The first you have is the ferro-vanadium. That is the alloy itself? A. Correct.

Q. It is the vanadium with the iron. And I be-

(Testimony of Martin Wolf.)

lieve you testified that that was in the $2.70 to $2.90 range for the period? A. Correct.

Q. And that's per pound "V" or vanadium?

A. That is right.

Q. The next was Van-Ex, which is V_2O_5 plus—plus your ingredients in that. That is what I indicate by the "plus"? [960] A. That's right.

Q. Now, this is the symbol, V_2O_5, for the vanadium oxide in the Van-Ex? A. Correct.

Q. It has this oxide in it which is removed when you get the ferro-vanadium? A. Yes.

Q. So you would call that in chemistry, I believe, FeV—showing no oxygen? A. No.

Q. No.

A. No. There is no chemical symbol for it, actually.

Q. All right. There's probably no chemical symbol, but there would be no oxygen in it?

A. That is correct.

Q. And the price in terms of "V" was, I believe you said, $2.40? A. Right.

Q. Now, one of the other products is what is called fused black oxide, which again is just a plain V_2O_5, is that correct? A. That is correct.

Q. The price of this is generally quoted in terms of vanadium oxide, is it not, at $1.10?

A. It is.

Q. But you can also quote it in terms of "V," if you wanted to? [961]

A. Well, wait a minute. As far as the relation-

(Testimony of Martin Wolf.)

ship between Union Carbide and Vanadium Corporation is concerned, it was quoted at 80c.

Q. Well, I'm talking about the $1.10 price.

Mr. Alioto: We will object to that——

Q. (By Mr. Archer): Do you know of your own knowledge what the price was between Union Carbide and Vanadium Corporation?

A. We heard that, yes.

Q. Do you know of your own knowledge?

A. I heard of it of my own knowledge.

Q. You heard it but you don't know?

A. Yes.

Q. So it is just something that you heard?

A. When you speak of price for fused vanadium oxide at $1.10, this was not a price applicable all over to all the customers.

Q. Well, sometimes you even bought vanadium oxide at $1.10, didn't you?

A. At $1.00, $1.10, $1.15.

Q. $1.03?

A. I just object to the statement "that this is the price."

Q. Oh, I see. Well, let's assume, then, $1.10. I just want to convert it into pounds "V."

A. All right. [962]

Mr. Alioto: If your Honor please, it assumes $1.10 when the record shows that the price charged to the Vanadium Corporation of America was 80c.

The Witness: That is what I meant.

Mr. Alioto: That's the whole point. That is a matter of record in this evidence.

(Testimony of Martin Wolf.)

Mr. Archer: Certainly not since Mr. Wolf came to the United States.

The Court: Proceed with the cross examination.

Q. (By Mr. Archer): So assuming for my question here that it is $1.10—— A. Assuming, yes.

Q. ——per pound V_2O_5, you could convert that to quote it in terms "V" by—well, you divide by .56 or—— A. Or multiply by 178.

Q. Or multiply by 178. So it would be 178—well, it would be by 11—— A. Yes.

Q. ——it would be $1.96? A. Probably.

Q. You want to check that?

A. I will (making calculations). $1.958—$1.96.

Q. So that we know we are talking about the $1.10 price, I will put "@."

A. Right (designating on blackboard). [963]

Q. So that your Van-Ex was selling from 30c to 50c below the ferro-vanadium price?

A. That is correct.

Q. But vanadium oxide at $1.10 was selling 44c below your price of Van-Ex? A. Correct.

Q. Now, you can also quote these prices in terms of V_2O_5 or vanadium oxide but, of course, you couldn't quote the ferro-vanadium in that price, could you?

A. Well, you could, but it would be purely theoretical.

Q. You would have to really eliminate——

A. It would be artificial.

Q. It would be artificial. But now if you wanted to convert your $2.40 per pound Van-Ex price to

(Testimony of Martin Wolf.)

terms V_2O_5, how would you do that if you wanted to quote it—instead of per pound "V" in pound vanadium oxide? A. You would divide by 178.

Q. You would divide $2.40—let's see if I have that—you get $1.34? A. Perhaps.

Q. I multiplied by 56——

A. You say $1.34?

Q. Yes. A. Well, you've come close, yes.

Q. $1.35 or $1.33, which would be closer? [964]

A. $1.34.

Q. Actually, when you sold Van-Ex, you quoted it in terms of "V" at $2.40 per pound?

A. Yes.

Q. Which is equivalent to $1.34 per pound V_2O_5? A. That is right.

Q. Now with regard to the actual smelting of ferro-vanadium, with which you were familiar, in the Fredet Kuhlmann plant in France, the actual smelting was done in their plant by their employees, was it not? A. That is correct.

Q. And under the Apex Smelting Company contract, the smelting was done in the Apex plant by Apex employees? A. That is correct.

Q. And the smelting at the Climax plant was done by their employees at their plant?

A. Right.

Q. Now, there were no officers or employees of the Continental Ore Company which had any training or practical experience in metallurgy except the people hired from time to time for a particular problem as consultants, isn't that correct?

(Testimony of Martin Wolf.)

A. Absolutely correct. That is the way we operate. We hire technicians, we hire attorneys, we hire any particular specialist we need.

Q. We were referring yesterday, when we adjourned, to [965] sources of vanadium oxide, and I believe you testified that North Continent Mines was one of your suppliers. I show you a letter dated July 14, 1942, from yourself to North Continent Mines, Mr. Hendricks, referring to a conversation you had with him. This copy isn't too good, but it's the best I have. (Handing to witness.)

A. (Witness examining) Yes, sir.

Q. You had a conversation with Mr. Hendricks regarding the purchase of the output of the North Continent Mines or Shattuck Chemical Company; as a result of that conversation, you made a contract as described in this letter, is that correct?

A. Obviously. I have no recollection on it. This letter confirms it.

Mr. Alioto: We have no objection to the letter.

Mr. Archer: I offer this letter as defendant's exhibit next in order.

The Clerk: Defendant U's 3-Q.

The Court: Let it be admitted.

(Whereupon, letter dated 7/14/42, from Wolf to North Continent Mines, was received in evidence and marked Defendant U's Exhibit 3-Q.)

[See Book of Exhibits.]

Mr. Archer: It is dated July 14, 1942.

(Testimony of Martin Wolf.)

This was at about the time the Apex Smelting Company shut down its operations. A. Yes.

Mr. Archer: It is from Mr. Wolf, Continental Ore Corporation, to North Continent Mines, Attention: Mr. Hendricks. I will skip the first paragraph.

"We informed you that since the Apex Smelting Company is at present unable to carry on their ferro department because of urgent Government commitments, we have made arrangements to continue this business in a plant located on Long Island, near New York City.

"We understand the necessary changes in your plant will be completed shortly, so that you will be in a position to deliver the regular vanadic acid 85%, instead of iron vanadate, as you do now.

"In this connection, we informed you of our present price schedule for regular vanadic acid, which is as follows:

"Monthly Deliveries:

"Less than 3,000 lbs. . . . $1.10 per lb. V_2O_5 f.o.b. producers shipping pt.

"Between 3,000 & 10,000 lbs. . . . $1.125.

"Between 10,000 and 20,000 lbs. . . . $1.15.

"The moment you start shipments of vanadic acid, the prices mentioned above will, of course, also be applied to your deliveries.

"During the interim, we agreed to pay you for [967] your iron vanadate the minimum price provided in the above schedule, that is $1.10 f.o.b. your shipping point."

(Testimony of Martin Wolf.)

"The address of our plant is as follows:"

And you list, then, the Long Island plant address, "Notify the Continental Ore Corporation, 500 Fifth Avenue, New York."

You then state "We are enclosing photostatic copy of our general license to process vanadium which, of course, will be supplemented each month by the allocation from the War Production Board as heretofore."

Q. Now, to what did this general license to process vanadium refer?

A. Well, anybody who had any kind of process, processing installation, and was in the business of providing any raw materials for the industry or semi-finished products for the industry, had to have a license to receive strategic materials, which we had—we had one for Apex, Apex had one for their operation, and when we started the operation at the Long Island shop we got one for this locality.

Q. You remember I asked you about this before. Have you been able to find that?

A. Find what?

Q. That copy of that license. You don't know where it is now? [968]

A. Are you requesting it?

Q. You remember I was asking about these various things.

A. Well, I thought you wanted to make a list of what you wanted. We never got it.

Q. Well, I think——

Mr. Alioto, do you have a copy of the license?

(Testimony of Martin Wolf.)

The Witness: I definitely know we haven't looked for it.

Mr. Alioto: Nortl Continent should have it.

Mr. Archer: Well, yes, a photostatic copy was enclosed, but I was just wondering if he still had the original.

The Witness: We probably do.

Mr. Archer: The point is, it says "Regarding allocation for August, we noted that you will have between 10,000 and 12,000 pounds V_2O_5 available next month, and we therefore are applying to the WPB (which is the War Production Board) for 12,000 pounds V_2O_5 from you during August."

Now, do you recall that subsequent to that, Mr. olf, that the Continental Ore Company was informed by Mr.—that you were informed by Mr. Hendricks that they stopped operations because of the labor shortage? A. I don't recall. [969]

Q. (By Mr. Archer): I will show you a copy of a letter from Mr. Hendricks to Mr. Leir dated May 11, 1943, in which he referred to a phone conversation with Mr. Wolf.

A. That may be so.

Q. I ask you whether that refreshes your recollection? A. Yes, it does, probably. Yes, sir.

Mr. Alioto: We have no objection.

Mr. Archer: I offer a letter dated May 11, 1943, from Mr. Hendricks to Mr. Leir as defendants' exhibit next in order.

The Court: It may be admitted.

(Testimony of Martin Wolf.)

(The letter referred to was marked Defendant U Exhibit 3-R in evidence.)

Mr. Alioto: That refers to a letter enclosed.

Mr. Archer: I will take a look and see.

Mr. Alioto: Mr. Archer, I have the enclosure here. We can put that in. May 5, 1943, Wade, Curran and Company.

Mr. Archer: As the next exhibit do you want to put this in?

Mr. Alioto: It is part of that correspondence.

Mr. Archer: Then this refers to a prior one.

The next exhibit will be a letter dated May 5, 1943, from Mr. Leir to Wade, Curran and Company.

This is not the copy of the letter referred to. That [970] is apparently a letter to Continental.

(The letter referred to was thereupon marked Defendant U Exhibit 3-S in evidence.)

Mr. Archer: This letter states:

"We have for acknowledgment and thanks your letter of May 5,"——

Mr. Alioto: Any way you want to do it, Mr. Archer.

The Court: What is the date of the letter?

Mr. Archer: May 5, 1943.

The first letter is a letter from Mr. Leir to Wade, Curran and Company:

"We received your letter of April 30th for which we wish to thank you.

"We are interested to learn that you have large

(Testimony of Martin Wolf.)

quantities of carnotite at your disposal, but we, ourselves, do not use these ores.

"We therefore would suggest that you contact Mr. W. P. Hendricks, North Continent Mines, 231 South LaSalle Street, Chicago, Illinois, and offer your material.

"The North Continent Mines are supplying us with vanadium concentrates which we use in the manufacture of high-grade ferro-vanadium. We would, of course, be glad if you could come to terms with them, because we are always eager to increase the quantities our [971] sources of supply can put at our disposal.

"You may know that we are the only outsider in the ferro-vanadium field, which is a market otherwise completely controlled by the U. S. Vanadium Corporation and the Vanadium Corporation of America.

"You can therefore understand that we are always interested in obtaining sources of supply for the vanadium concentrates we need and increasing the supplies these independent sources can make available to us.

"Regarding the uranium content, you should not count too heavily on this. The use of the uranium is an extremely restricted one and we have not yet heard that any uranium alloy is being used in shells. However, since the ore is so rich in vanadium, you should be able to obtain a good return."

A copy of this was apparently sent to Mr. Baehr

(Testimony of Martin Wolf.)

of the North Continent organization, because he refers to that letter in his reply.

In Mr. Hendricks' letter to Mr. Leir dated May 11, 1943, he states:

"We have for acknowledgment and thanks your letter of May 5th, together with copies of letter to you from Wade, Curran and Company, Farmington, New Mexico, and your reply to them regarding [972] carnotite concentrates which they offer for sale. We are quite familiar with the situation as we have every reason to believe that some of this ore came from claims on which we believe we hold title. This, however, was disputed by the gentleman whom they mention as recently having died, and the matter is now in the hands of the attorneys."

Now about the conversation:

"In the writer's phone conversation with Mr. Wolf on April 12th, he told you that owing to labor shortage that the operations of our mill had stopped. We first lost our chemist, and then five of the key men and we have not since been able to replace any of these men. We are sorry to have to tell you that the mill has not been operated since then and at the present we cannot hazard any guess as to when operations will be resumed.

"We have retained all of the men and are using them in mining and development work, and we are continuing to mine ore which is being sold as raw ore to the Metals Reserve Corporation."

Q. (By Mr. Archer): Subsequent to that, Mr. Wolf, did you learn that the Securities and Ex-

(Testimony of Martin Wolf.)

change Commission had ordered the holding company of the North Continental Utilities, North Continent, [973] and Shattuck Chemical Company, to divest themselves of those assets?

A. I heard something about it, yes.

Q. I will show you a copy of a newspaper article taken from your file.

A. Do you happen to know the date of this?

Q. It says November 17th, and it is 1943, as a matter of fact. A. Yes, sir.

Mr. Archer: Unless somebody wants this in evidence—the orders are all published orders—I won't put it in evidence.

Q. (By Mr. Archer): Subsequent to that time, Mr. Wolf, did you talk to Mr. Hendricks about his plans, what they were going to do with the mill and the mine? A. I probably did.

Q. I will show you a memorandum of a conversation you had with him on December 8, 1943, and ask you whether you can identify that?

A. Yes, sir.

Mr. Alioto: We have no objection to that, your Honor, at all.

Mr. Archer: I offer it as defendants' exhibit next in order. [974]

The Court: It will be admitted.

(The memorandum referred to was thereupon marked Defendant U Exhibit 3-T in evidence.)

Mr. Archer: This is a memorandum dated De-

(Testimony of Martin Wolf.)

cember 8, 1943, by Mr. Wolf, regarding North Continent Mines, Metals Reserve, Vanadium:

"Called Mr. Hendricks, who apologized for not having answered our letter of November 20th because he was out of town.

"At present there is no change contemplated with regard to their operations of North Continent Mines.

"They are selling their vanadium ore to Metals Reserve via Vanadium Corporation of America. They realize more for the ore than they would if they made vanadic acid."

Vanadic acid is the vanadium oxide, or fused black oxide.

"Incidentally, they have no men to operate the mill even if they wanted.

"He asked us if we are still in the market for vanadic acid and I told him that we are. I told him further that the price is $1.10 unchanged, and he remarked that he is much better off if he sells the ore.

"He does not know how much longer his contract [975] with Metals Reserve runs.

"He promised to let us know whenever conditions change particularly with regard to a possible reorganization of the entire concern in case it would affect North Continent Mines proper."

Q. (By Mr. Archer): Subsequently, Mr. Wolf, were you involved at all with the negotiations of Continental Ore to acquire the assets of North Continent Mines? A. To what?

(Testimony of Martin Wolf.)

Q. To acquire the assets of North Continent Mines.

A. I don't think we ever had such intention.

Q. Do you remember a proposition that you made to them along with the Imperial Paper and Color Corporation?

A. I don't recall it now. Maybe you can help me.

Q. I think it was Mr. Leir who wrote this. I just wondered whether you had anything to do with them.

A. I may have known of it at the time, but I don't recollect now. If you have anything about it I will be glad to identify it.

Q. I do not have anything from you on it.

After the war the Vitro Manufacturing Company continued to manufacture vanadium oxide, did they not? A. Yes, they did.

Q. And they offered it to you from time to time.

I show you a memorandum dated August 4, 1948. I do not know whether you wrote it, but it refers to a conversation. Before I ask you about this memorandum dated August 4, 1948, Mr. Wolf, in the previous exhibit dated December 8, 1943, where you state that they are selling their vanadium ore to Metals Reserve via Vanadium Corporation of America, referring to North Continent Mines, do you know whether that was Vanadium Corporation of America or United States Vanadium Company?

A. Oh, there could be a mistake there. I assume it was United States Vanadium.

(Testimony of Martin Wolf.)

Q. The United States Vanadium was the agent for Metals Reserve?

A. Yes. I think there is a mistake in the memo. That could be.

Mr. Archer: As defendants' exhibit next in order I offer a memorandum referring to a conversation of Mr. Wolf dated August 4, 1948.

(The memorandum referred to was thereupon marked Defendant U Exhibit 3-U in evidence.)

Mr. Archer: "Mr. Wolf spoke to Mr. A. J. Strod of Vitro Manufacturing Company, Pittsburgh, Pennsylvania, who offered him, subject to being unsold, the following:

"48,000 pounds of fused vanadium pentoxide 88.1 [977] percent at $1.05 per pound of contained V_2O_5 f.a.s. New York, and also:

"24,000 pounds of air-dried vanadium pentoxide 84.86 percent at $1.00 per pound of contained V_2O_5 f.a.s. New York.

"48,000 pounds of fused material are ready packed in containers containing 400 pounds net."

Q. (By Mr. Archer): Do you recall whether the Continental Ore Corporation purchased any of this vanadium oxide, Mr. Wolf?

A. I am sure we did not, because we had no use for spot lots, and that is all we ever got.

Q. I believe you testified yesterday, Mr. Wolf, that one of your suppliers was Nisley & Wilson.

A. That is correct.

Q. As part of your functions with the Conti-

(Testimony of Martin Wolf.)

nental Ore Company you frequently went to Washington to see about allocations, and so forth, from various suppliers, including Nisley & Wilson?

A. That is right.

Q. I show you now a memorandum dated October 12, 1942, by yourself regarding a visit apparently to Metals Reserve, and ask you whether you can identify that. A. Yes, sir.

Mr. Alioto: Yes, Mr. Archer. [978]

Mr. Archer: This is dated October 12, 1942, Metals Reserve-Mr. Banks.

Q. Who is Mr. Banks? Do you recall him?

A. He was an officiat, I suppose, of Metals Reserve at the time.

Q. "W.P.B.-Stimmel." Who is Stimmel?

A. Stimmel was with the War Production Board.

Q. "Re: Nisley & Wilson."

Mr. Alioto: Do you mean to offer that in evidence?

Mr. Archer: I am sorry.

I offer this as defendants' exhibit next in order.

Mr. Alioto: No objection.

(The memorandum referred to was thereupon marked Defendant U Exhibit 3-V in evidence.)

Mr. Archer: "Re: Nisley & Wilson.

"Mr. DeWitt Smith was not expected back in his office. Mr. Banks said that as far as he knows we do not need any contract if we are consumers of vanadic acid, which is up to the W.P.B. to decide.

(Testimony of Martin Wolf.)

"We would have to make a request for allocation through the W.P.B. and draw on the Metals Reserve.

"Mr. Stimmel was out of town. His secretary confirmed the above information."

This is dated October 12, 1942. [979]

Q. (By Mr. Archer): Now, subsequently in the fall of 1942 you attempted to obtain an allocation from Nisley & Wilson through the Metals Reserve, did you not? I show you two letters, one dated November 6, 1942, to Metals Reserve, and a reply dated November 10, 1942. A. Yes, sir.

Mr. Archer: I offer these two letters as defendants' exhibits next in order.

Mr. Alioto: No objection.

(The two letters referred to were thereupon marked Defendant U Exhibit 3-W in evidence.)

Mr. Archer: November 6, 1942, Metals Reserve Company, Washington, D. C.:

"Attention: Mr. DeWitt Smith.

"Gentlemen:

"Re: Vanadium Pentoxide.

"We refer to the allocation of the W.P.B. dated October 27, allocating to us 4,000 pounds of metallic vanadium contained in vanadium pentoxide for November.

"We should appreciate hearing from you as to when shipment of this material will be made.

"Very truly yours,

"Continental Ore Company." [980]

(Testimony of Martin Wolf.)

"Metals Reserve Company,

"Washington, D. C. "November 10, 1942

"Continental Ore Company,

"500 Fifth Avenue,

"New York, N. Y.

"Gentlemen:

"This will acknowledge your letter of November 6, referring to the allocation of the War Production Board dated October 27, allocating to you 4,000 pounds of metallic vanadium contained in vanadium pentoxide for November. This allocation was made from the Nisley & Wilson mill on which we have no present contract.

"We have taken this matter up with the War Production Board and will ascertain their wishes."

Q. (By Mr. Archer): Subsequently, Mr. Wolf, you obtained this material which you had requested from Nisley & Wilson from the Durango mill of Metals Reserve, did you not?

A. I believe that was it.

Q. And that Durango mill was the one which was operated by the United States Vanadium Corporation as agent for Metals Reserve?

A. Yes. [981]

Q. Later on, however, after the contract was made between Metals Reserve Company and Nisley & Wilson you were allocated their production, were you not? I show you, first, a letter from United States Vanadium Corporation, by G. Donald Emigh dated May 4, 1943, to Continental Ore Company, Attention Mr. Wolf.

(Testimony of Martin Wolf.)

While you are looking at that I will show you a letter dated April 21, 1943, from G. Temple Bridgman of the Metals Reserve to Continental Ore Company and ask you if you can identify that one, too.

A. Yes, sir.

Mr. Archer: I offer these two exhibits as one exhibit, as defendants' exhibit next in order.

Mr. Alioto: No objection.

(The two letters referred to were thereupon marked Defendant U Exhibit 3-X in evidence.)

Mr. Archer: The first is from Mr. Emigh, United States Vanadium Corporation, to Continental Ore Company.

You recall Mr. Emigh, Mr. Wolf?

The Witness: No.

Mr. Archer: "Attention: Mr. Wolf.

"Gentlemen:

"Enclosed is a copy of our letter asking Ledoux and Company——"

Q. What was Ledoux and Company?

A. It was a laboratory.

The Court: What?

A. A laboratory.

Mr. Archer: Laboratory.

A. Assay sampler.

Mr. Archer: They sampled the vanadium oxide to determine whether it was up to grade?

A. That's right.

Mr. Archer: (Reading.)

"Enclosed is a copy of our letter asking Ledoux and Company to analyze shipments of fused vana-

(Testimony of Martin Wolf.)

dium oxide from the Nisley-Wilson plant, Gateway, Colorado, on their arrival at Langeloth."

Q. At Langeloth, Pennsylvania, was the Climax Molybdenum Company? A. That is correct.

Q. And at this time you had the contract with them for the production of ferro-vanadium, did you not? A. That's correct.

Mr. Archer: (Reading.)

"We are asking our Colorado office to mail you both at New York and at Langeloth copies of the bills of lading on the date shipments are made.

"Will you please advise Ledoux and Company on arrival of product at Langeloth so they can arrange to weigh, sample and analyze shipments."

The next is dated April 21, 1943, from Metals Reserve Company to Continental Ore Company:

"Re: Contract No. MR C-1 S-471 Vanadium.

"Gentlemen:

"There is enclosed executed counterpart of the captioned contract dated April 20, 1943, covering the sale to you by this company of 17,834 pounds of fused vanadium oxide (equivalent to 10,000 pounds of vanadium) produced at Gateway, Colorado.

"It is noted that you have changed the destination from Chicago, Illinois, to Langeloth, Pennsylvania. Accordingly, the contract is hereby modified by substituting for the point of destination Chicago, Illinois, the destination Langeloth."

Q. Does that refresh your recollection, Mr. Wolf,

(Testimony of Martin Wolf.)

that you [984] were allocated the production from the Gateway mill by Metals Reserve?

A. No, because this specifies one lot.

Q. One lot?

A. I have no recollection that all the production of the Gateway mill was allocated.

Q. What I am getting at: Don't you recall the previous memorandum which I read in evidence here of your first meeting with the War Production Board, the M.R.C. in Washington, in which they said that a contract would not be necessary?

A. That was their opinion. But apparently we got a contract later. As you can see, we got an actual contract from Metals Reserve.

Q. Did you go through with that contract and purchase the vanadium oxide?

A. Yes. This one lot.

Q. Are you sure?

A. Yes. There was another question later, as you may remember, where we wanted to buy more material from Metals Reserve and we were told they don't have any.

Q. I show you now a memorandum dated June 3, 1943, by Martin Wolf, referring to a telephone call with Mr. Emigh. I ask you whether you can identify that.

A. (Witness examining) Yes, sir.

Q. Do you recall now this conversation with Mr. Emigh? [985]

A. Well, this did not refer to the allocation to us of the entire production of it.

(Testimony of Martin Wolf.)

Q. You referred to the contract of 17,000 to which I just referred?

A. That is right. Oh, excuse me. This does not refer to it. This refers to subsequent deliveries.

Mr. Alioto: We have no objection.

Mr. Archer: As Defendants' Exhibit next in order, I offer a memorandum dated June 3, 1943.

(Memorandum dated June 3, 1943, Martin Wolf, received in evidence and marked Defendant Union's Exhibit 3-Y.)

Mr. Archer: This is dated June 3, 1943, a memorandum by the witness entitled "Union Carbide, Vanadium Corporation, Nisley and Wilson, Metals Reserve, Stimmel and Hatch.

"Mr. G. Donald Emigh telephoned. He just came back from Colorado.

"After having sent us the wire regarding the impossibility of Nisley and Wilson's making flakes, he again discussed the matter with their technical man and Nisley and Wilson, but they could not find a solution. The fact is that their furnace is only a couple of inches above the ground, and in order to make flakes, the material must be poured downwards, which with this setup cannot be done.

"He mentioned that Nisley and Wilson had produced [986] 5,000 pounds of V_2O_5, which are already packed in our drums, and that they have 4,000 pounds of V_2O_5 in the circuit. The material is very nice, according to Mr. Emigh, showing 86 per cent V_2O_5.

(Testimony of Martin Wolf.)

"It is in the form of small lumps, one-third to one-half inch, and that is all they can make.

"The Union Carbide plant at Durango, too, only makes lumps of one-half inch.

"The only plants of Union Carbide which make flakes are the Uravan and Rifle plants.

"I told them that the only alternative for us would be to order grinding equipment, but that the present output could not be used because we would have to wait some time to get it.

"He suggested that in this case we should write to Metals Reserve and explain the situation so that this stuff can be moved.

"It really looked like he wanted us to accept this material because he mentioned again and again that they have no difficulties with those small lumps, and he mentioned that with a little more reserve we should be in a position to use it, too."

Q. Now, on June 3, 1943, didn't you have some grinding equipment, Mr. Wolf, at your Long Island plant?

A. We may have had some equipment, but apparently it wasn't fit to use this material.

Q. I believe it was your testimony that this conversation [987] with Mr. Emigh referred to a subsequent contract.

A. I believe that follows that letter.

Q. The memorandum is dated June 3, 1943. The original letter is April 21, 1943, and it shows Contract No. MR C-1 S-471, correct?

A. That is what it says, yes.

(Testimony of Martin Wolf.)

Q. Your conversation with Mr. Emigh is June 3, 1943, a month and a half afterwards?

A. Yes.

Q. But you say that that did not refer to MR C-1 S-471 contract?

A. I don't have any particular recollection about it. I can only deduce this from these letters.

Q. Well, what I want to know is, did you purchase from Metals Reserve under the MR C-1 S-471 contract, this April contract for 17,000 pounds from Nisley and Wilson?

A. Let's put it the other way around. I know that we got 17,000 pounds of vanadium oxide delivered by Metals Reserve to the Langeloth plant. Whether it was under this contract or some other contract, I would not know now.

Q. That was the previous Durango shipment that we mentioned, wasn't it?

A. You got me there.

Q. Well, as a matter of fact, you cancelled the contract with the Metals Reserve, didn't you? I show you a letter—— [988] A. Let me see it.

Q. ——to Metals Reserve dated July 8, 1943, and their reply, July 15, 1943, referring to Contract No. MR C-1 S-471.

A. That seems to be it.

Mr. Archer: Offer these letters as Defendant's Exhibit next in order.

Mr. Alioto: No objection.

Mr. Archer: Is that your handwriting on the exhibit? A. Yes, it is.

(Testimony of Martin Wolf.)

(Copy of letter, Continental Ore to Metals Reserve, dated July 8, 1943; letter Metals Reserve to Continental Ore dated July 15, 1943, received in evidence and marked Defendant U's Exhibit 3-Z.)

Mr. Archer: Letter dated July 8, 1943, from Mr. Wolf to the Metals Reserve Company, Attention Mr. G. Temple Bridgman, Executive Vice-President.

"Gentlemen:

"Re: Vanadic acid Contract No. MR C-1 S-471.

"We refer to the above contract and wish to say that inasmuch as the production from Nisley and Wilson cannot be put into the form of flakes, we are, at present, unable to use their output.

"We arrived at this conclusion after having tried various ways of utilizing it, but we would need some [989] new equipment for this purpose which is not readily available at the present time.

"This situation may change in the near future, but in the meantime we do not want to tie up these 10,000 pounds of V contained in the form of vanadic acid. We would therefore suggest that the above contract be cancelled and the material be put to use.

"May we have your reaction."

Q. Would you read your handwriting there? I don't know, it's a little dim and I don't know whether you can read it (handing witness).

A. (Witness examining) "Mr. E. L. Murphy

(Testimony of Martin Wolf.)

called and asked us to write this letter, which would be better than a cancellation at this point."

Mr. Alioto: Is that "at this point" or "on their part"? Look at it again.

A. (Witness examining) "On their part." You can read my handwriting better than I can.

Q. (By Mr. Archer): Who was Mr. Murphy?

A. I wouldn't know now, but he must be someone at Metals Reserve.

Q. Following that is a letter dated July 15, 1943, from Metals Reserve, G. Temple Bridgman, Executive Vice-President, to Continental Ore Company.

"This will acknowledge receipt of your letter [990] of July 8, 1943, wherein you state that inasmuch as the production from Nisley and Wilson cannot be put into the form of flakes, that you are unable to use the material covered by the captioned Contract of April 20, 1943.

"Pursuant to your request, the aforesaid Contract covering the sale to you of 17,843 pounds of vanadium pentoxide is hereby cancelled."

Now, Mr. Wolf, you stated in your letter to Metals Reserve that one of your reasons for cancellation "* * * We would need some new equipment for this purpose which is not readily available."

How much money did the Continental Ore Company have invested in actual fixed assets, equipment for processing vanadium oxide at the Long Island plant?

A. Oh, it was very little. A few thousand dollars, I would say.

(Testimony of Martin Wolf.)

Q. A few thousand dollars?

A. That is right.

Q. And how much would it have cost you to get a machine to process this?

A. Well, it's not a question of the cost of the machine. It's the question of the availability. We were in the war time at the time and there was a shortage of machinery and equipment and manpower, as we have seen before in this North [991] Continent business, and so it wasn't easy to pick up a piece of equipment like that.

Q. Well, all these things made operations very difficult during the war, didn't they?

A. Yes. But it was a matter of time, apparently, to get it through.

Q. Well, now, as a matter of fact, prior to 1943 you had been very happy with Nisley and Wilson's product, hadn't you? A. That is right.

Q. And you had made an agreement to take all their production prior to that time, hadn't you?

A. That is right.

Q. I show you a letter dated August 3, 1942, from yourself to Nisley and Wilson, and ask you if that is the agreement which you made with them.

A. (Witness examining) Yes, sir.

Mr. Alioto: This is before the Metals Reserve period?

Mr. Archer: That's right.

Mr. Alioto: And before the——

Mr. Archer: Actually, it is not before the Metals

(Testimony of Martin Wolf.)

Reserve period. Metals Reserve started in May, '42. This is dated May of 1942.

Mr. Alioto: The contract——

Mr. Archer: We have our contracts in May 1942. [992] It was before the Nisley-Wilson contract. It is dated August 3, 1942.

Mr. Archer: I offer this as Defendant's Exhibit next in order.

(Letter August 3, 1942, from Wolf to Nisley and Wilson received in evidence and marked Defendant U's Exhibit 4-A.)

[See Book of Exhibits.]

Mr. Archer: This is from Mr. Wolf to Nisley and Wilson, dated August 3, 1942:

"We are pleased to inform you that we have received copy of the allocation (the original of which you will receive) issued by the WPB, authorizing you to ship to us 4,500 lbs. V which is equivalent to about 9,500 pounds of vanadic acid."

Then I skip a paragraph regarding the shipping instructions.

"Because of urgent government work in the aluminum and magnesium field at the Apex Smelting Co. plant in Chicago, we have shifted our ferro-alloys production to our Long Island plant for the duration of the war. We would therefore appreciate your making all future shipments to——"

Then you have the addresses of the Long Island plant——.

Q. Actually, you never made any ferro alloys at the Long Island plant? [993] A. No.

(Testimony of Martin Wolf.)

Q. You referred there to your Van-Ex.

A. Yes.

The Court: What did you manufacture at your Long Island plant? A. Van-Ex.

Q. (By Mr. Archer): Going back to the period about which we talked yesterday, in January 1944, when you had your contract with the Imperial Paper and Color Corporation, you recall yesterday we referred to the stock of Otavi ore, which Metals Reserve had? A. Yes.

Q. Which was the raw ore which had to be processed before it was vanadium oxide?

A. Yes, correct.

Q. And you said this would be very difficult to do, did you not? A. "This", meaning what?

Q. To process the Otavi ore.

A. Not necessarily. It depended on a steady supply. You can process almost anything, depending upon cost, of course, but it is a matter of having a steady supply.

Q. Well, Metals Reserve also at this time had straight vanadium oxide, did they not?

A. Yes. [994]

Q. I show you a memorandum you made of your trip to Washington on January 25, 1944, and ask you whether you can identify that?

A. (Witness examining.)

Mr. Alioto: No objection.

Mr. Archer: Offer this memorandum dated January 25, 1944, as Defendant's Exhibit next in order.

(Testimony of Martin Wolf.)

(Memorandum of Wolf dated January 25, 1944, received in evidence and marked Defendant U's Exhibit 4-B.)

Mr. Archer:

"Re: Vanadic Acid.

"Metals Reserve."

This is by the witness.

"Mr. Murphy at Metals Reserve handles vanadium more or less together with Mr.——"

Is it Mirel?

A. This is Mirel, I believe so. I am not quite sure, though.

Q. How do you spell Mirel? Is that——

A. M-i-r-e-l.

Q. Is that the gentleman who presently works for you?

A. No. No. We hired him later but he is not with us anymore.

Q. You hired this man later?

A. Mr. Mirel, I think it was—yes.

Q. Did you hire him later, you say? [995]

A. Yes.

Q. He wasn't working with you at that time?

A. Oh, no. No.

Mr. Archer: (Reading.)

"They do not have any ground material at their disposal.

"The only thing they have is 50,000 lbs. of V_2O_5 contained in flakes at Grand Junction (this seems to be Nisley & Wilson's material) and at Durango they have a quantity in large lumps or blocks. Mr.

(Testimony of Martin Wolf.)

Murphy does not know how much of these blocks is available.

"He confirmed that all Metals Reserve plants will close down on February 29 so that Metals Reserve will not have any vanadic acid available after that date from new production. The 50,000 pounds at Grand Junction and the material in blocks seem to be the only vanadic acid on which we still can lay our hands if we act promptly.

"If we intend to make ferro, Nisley and Wilson's flakes should be satisfactory without grinding.

"With regard to the blocks or lumps however we would have to grind them in any case and there is no reason in the world why Union Carbide should accommodate us." [996]

The Witness: Very right.

Q. (By Mr. Archer): Now, you learned then subsequent to your cancellation of the Nisley and Wilson contract or the contract with Metals Reserve from Nisley and Wilson mill that Nisley and Wilson had installed a flaking device, hadn't you?

A. Obviously from the letter.

Q. Did you purchase any from Nisley and Wilson after they installed the flaking device?

A. What was the date of this memorandum?

Q. This is January 25, 1944.

A. I doubt that very much. Weren't they closed down about that time?

Q. They were closed down by January 25, 1944. Yes.

A. Yes. Well, we never knew before that they

(Testimony of Martin Wolf.)

had any flaking equipment installed because their production apparently went to the Metals Reserve.

Q. Weren't you informed in the fall of 1943 that Nisley and Wilson had installed their flaking equipment and didn't they send you a sample or send Mr. Leir a sample?

A. It is possible. But at that time wouldn't they still have their contract?

Q. They had their contract with Metals Reserve.

A. So we couldn't even get it.

Q. You had just cancelled the contract with Metals Reserve for their production, hadn't you?

A. At the time they didn't have the flake material.

Q. Well, why do you say you couldn't have gotten a contract from Metals Reserve after they had the flake material?

A. Because at one time we bought material from Metals Reserve—we thought we had bought it and Metals Reserve said they don't have any more; we were told to go to Union Carbide to buy the material. That was a famous case, when Metals Reserve billed us at $1.10 and Union Carbide then billed us at $1.15—out of friendship, I suppose.

Q. And that was in April of 1943?

A. The dates, you perhaps can refresh my memory on.

Q. Well, was it the early part of '43? Because it went down to Climax, didn't it?

A. I think that was the—that went to Climax.

Q. Well, what I am getting at, is that this con-

(Testimony of Martin Wolf.)

tract you cancelled with Metals Reserve—you cancelled the contract in June of 1943? A. Yes.

Q. Because Nisley and Wilson wasn't making flakes? A. Correct.

Q. Subsequently they installed flaking equipment, and my question, now, is: Why didn't you go to Metals Reserve and try to get their production after they had installed flaking equipment?

A. I think this is something that I would have to look up. [998] I don't know when we knew that they made flakes and what the situation was with the availability of Metals Reserve, but at one time Metals Reserve told us that they had allocated the production of Nisley and Wilson to Union Carbide and to Vanadium Corporation. I don't know which was first.

Q. Didn't they tell you that they had allocated the Durango production and that Nisley and Wilson was not in operation yet—wasn't this in April, 1943? A. I will have to look that up.

The Court: At this time we will take a ten-minute recess.

(Short recess taken.) [999]

Q. (By Mr. Archer): Mr. Wolf, do you recall that you cancelled the contract with Metals Reserve for the 17,000 pounds of V_2O_5 from Nisley and Wilson in June, 1943, is that correct?

A. Because of the form in which the material was at that time, right.

Q. And because you could not procure the material and grind it? A. That is right.

(Testimony of Martin Wolf.)

Q. I asked you whether you attempted to get that material from Metals Reserve subsequent to the time that Nisley and Wilson installed a flaking device, and I believe you testified that Metals Reserve had at one time refused to send you some vanadium oxide, is that correct?

A. That is right.

Q. But that occurred prior to June 1943, didn't it? A. Probably.

Q. I show you two letters dated March 5, 1943, one from Metals Reserve Company to Mr. Leir, and one from the War Production Board to yourself. I think you will probably want to read them.

A. Yes, sir.

Mr. Archer: I offer these two exhibits as Defendant's Exhibit next in order.

Mr. Alioto: No objection. [1000]

(The documents above referred to were thereupon received in evidence and marked Defendant U's Exhibit 4-C.)

Mr. Archer: The first is from the Metals Reserve Company to Mr. Leir, dated March 5, 1943, from DeWitt C. Schieck, Assistant Vice President:

"Dear Mr. Leir:

"Receipt is acknowledged of your letter of March 1, 1943, regarding an allocation by the War Production Board of 20,000 pounds of contained vanadium in vanadium concentrates. You request information regarding when you may expect delivery.

"We regret to inform you that although we have received the allocation, because of previous commit-

(Testimony of Martin Wolf.)

ments we have no available material with which to fill your order, and do not anticipate having any in the near future. We have discussed the matter with the War Production Board, and you will probably receive a communication from that Agency."

March 5th, 1943, that same date, from the War Production Board, S. C. Stimmel, Ferro-Alloys Branch, to Mr. Martin Wolf.

"Dear Mr. Wolf:

"We have been notified by Metals Reserve Company that the total production of the Durango Plant has already been contracted for, and consequently, there [1001] will be no available material for allocation from that plant.

"On your last visit to Washington, we warned you of the possibility of this, and while we have made an allocation from Metals Reserve to Continental Ore, you will understand from the above that this allocation cannot be filled."

Q. Now, the 20,000 pounds of contained vanadium which you referred to in this letter was the contained vanadium or vanadium oxide which was set forth in a contract with Climax, was it not?

A. Yes, I believe it was.

Q. And Nisley and Wilson had not commenced operations under the toll agreement at the time these letters were written in March of 1943, had they? A. I don't believe they had.

Q. Consequently that put you in a very difficult position for getting your vanadium oxide from Climax, didn't it? A. Yes.

(Testimony of Martin Wolf.)

Q. And consequently Mr. Leir wrote to the Electro Metallurgical Company, didn't he? You probably want to see this. Some of this correspondence is with you, some with Mr. Leir. You probably want to read it. A. Yes.

Mr. Archer: As Defendant's Exhibit next in order [1002] I offer a letter dated April 9th, 1943, from Mr. Leir to the Electro Metallurgical Company.

Mr. Alioto: We have no objection.

(The document referred to was thereupon received in evidence and marked Defendant U's Exhibit 4-D.)

Mr. Archer: Continental Ore Company, Henry J. Leir, to Electro Metallurgical Company, April 9th, 1943.

"Gentlemen:

"Re: Vanadium Pentoxide.

"We refer to the allocation made out by the WPB under date of April 7 in our favor in the amount of 10,000 lbs. of metallic V contained (17,843 lbs. contained V_2O_5) in Vanadium Concentrates.

"We would very much appreciate your kindly informing us when this material is expected to be ready for shipment so that we may give you our shipping instructions.

"Thank you for your kind attention."

The Court: Who wrote that letter?

Mr. Archer: The plaintiff, your Honor, Mr. Leir, to the Electro Metallurgical Company.

(Testimony of Martin Wolf.)

Q. Now, there was no secret about the fact, was there, [1003] Mr. Wolf, that this material was going to the Climax Molybdenum Company for your account, was it? A. No secret.

Q. I will show you the letter from Mr. Leir.

Mr. Alioto: You do not have the reply to that letter you just read?

Mr. Archer: I do not think there is any.

Q. I will show you a letter dated April 14th, 1943 from Mr. Leir to Electro Metallurgical Sales Corporation. A. Yes, sir.

Mr. Archer: Mr. Leir to the Electro Metallurgical Sales Corporation, attention Mr. T. F. O'Heir.

"Gentlemen:

"Re: 10,000 pounds of V contained in vanadium concentrates.

"We refer to our telephone conversation of this afternoon and duly noted that the above quantity which was allocated to us by the WPB will be ready for shipment within a few days.

"Please ship this material to Continental Ore Company, c/o Climax Molybdenum Company, Langeloth, Pennsylvania.

"Since this material originates in Columdiana, Ohio, we kindly ask you to ship by truck, which insures the speediest delivery." [1004]

"Our insurance policy——"

That is irrelevant, insurance.

I offer it in evidence. I am sorry. I should have offered it before I read it, your Honor. I apologize.

(Testimony of Martin Wolf.)

(The document referred to was thereupon received in evidence and marked Defendant U's Exhibit 4-E.)

Q. (By Mr. Archer): Do you recall that in this month of April, 1943, Mr. Wolf, you had conversations with Mr. O'Heir of Electromet, and with Mr. Donald R. Harrison, Works Manager, about the shipping and grinding of this product?

A. Most probably.

Q. I will show you a memorandum of your conversation. A. Thank you.

Q. There is a letter of the same date to Mr. Harrison from yourself which I will show you.

A. Well, you see, we had a real problem about the grinding. We asked him to grind it for us.

Q. Did they grind it for you?

A. I don't think the first shipment. Apparently it says the first shipment had to go out as is, a quarter-inch size, and we asked them to grind the next one to about ten mesh. I don't know whether that was done or not, but I mean it was always a question of grinding, as you can see.

Q. Wasn't it a question of price, too? [1005]

A. Yes, a little later. We were unsuspecting at that time.

Q. So far as your relationships with Electromet, they had been very satisfactory, hadn't they?

A. No, polite. They were not satisfactory.

Mr. Archer: I will offer these as Defendant's Exhibit next in order.

Mr. Aliotc: No objection.

(Testimony of Martin Wolf.)

Mr. Archer: One exhibit, I think.

(The documents referred to were thereupon received in evidence and marked Defendant U's Exhibit 4-F.) [1006]

Mr. Archer: (Reading) This is April 29, 1943, memorandum by Mr. Wolf:

"Spoke to Mr. O'Heir of Electro Met. He believes that they are shipping today 5,700 pounds of "V" contained by truck from Columbiana to Langeloth."

Langeloth was where your Climax Company was?

A. Right.

Mr. Archer: (Reading)

"The balance should also go out today from their plant from Alloy (West Virginia).

"They had some trouble and could not get out the entire quantity as they had intended earlier this month.

"I then spoke to Mr. Donald R. Harrison, Works Manager. He believes that the material is about one-quarter inch in size. They have grinding facilities but these are taxed to capacity at the present time. However, he would look into this matter and see whether they could grind our material in the future to 10 mesh."

Then Mr. Wolf's letter to Mr. Donald R. Harrison of the same date: "Re Vanadium Pentoxide.

"We refer to our telephone conversation of [1007] this morning and wonder whether, for future shipments to us, you would be in a position to grind the vanadium concentrates to about 10 mesh size with not too many fines (below 80 mesh).

(Testimony of Martin Wolf.)

"We would very much appreciate your looking into this matter and letting us have your news at your earliest convenience.

"Thank you for your cooperation.

"Very truly yours,

"Continental Ore Company, Martin Wolf, Manager."

Q. I now show you the shipping instructions, bill of lading and the invoice on this shipment, Mr. Wolf, and ask you to identify it.

A. (Witness examining.)

The Court: These shipments that you referred to were from the metallurgical company?

Mr. Archer: Yes, your Honor.

A. (Witness examining offered document.) Yes, sir.

Mr. Alioto: This is the same 10,000 pounds?

Mr. Archer: Well, it's 17,000 pounds vanadium oxide, 10,000 V.

Mr. Alioto: No objection.

Mr. Archer: Offer this as Defendant's exhibit next in order.

(Bill of Lading and Invoice from Electro Metallurgical Company to Continental Ore Company, Climax, Langeloth, Pa., April 30, 1943, marked Defendant-U Exhibit 4-G in evidence.) [1008]

Mr. Alioto: The first is the invoice from Electro Metallurgical Sales Corporation to the Continental Ore Corporation, dated April 30, 1943, care of Climax Molybdenum Company. It shows a total of

(Testimony of Martin Wolf.)

17,898 pounds of contained vanadium oxide, price $1.15. Total amount $20,583.39.

The bill of lading shows a shipment to the same destination.

Q. Now, this 17,898 pounds was approximately the same amount which you had under contract with Metals Reserve Company for Nisley and Wilson at the same time? A. That is right.

Q. And you had it under contract for Metals Reserve at a price of $1.10, did you not?

A. That is correct.

Q. And that is the contract which you cancelled?

A. That is right.

Q. Now, when you received this invoice that showed the price at $1.15 you immediately protested it, did you not? A. And how.

Q. I show you your letter, from Mr. Wilson to Electro Metallurgical Sales Corporation, dated May 4, 1943, and ask you to identify it.

A. (Witness examining): Well, this was not after the invoice reached us. This was after the shipping invoice [1009] reached us. This was after we had the shipping invoice.

Q. You didn't know the price at the time you wrote this letter? A. No, I'm sure not.

Mr. Archer: I offer this letter from Mr. Wolf to Electro Metallurgical Sales Corporation dated May 4, 1943 as defendants' exhibit next in order.

Mr. Alioto: No objection.

(Letter of May 4, 1943 from Continental Ore Company to Electro Metallurgical Sales Corp.

(Testimony of Martin Wolf.)

received in evidence and marked Defendant-U Exhibit 4-H.)

[See Book of Exhibits.]

Q. (By Mr. Archer): In April 1943, Mr. Wolf, didn't you think that $1.15 was a fair price for a shipment as large as 17,000 of vanadium oxide?

A. No.

Q. Hadn't you agreed in June of 1942 to buy North Continent's output in shipments larger than 10,000 at $1.15? A. Yes.

Q. But by April 1943 you changed your mind?

A. I will tell you why.

Q. Because of the Metals Reserve selling at $1.10? A. For two reasons.

Q. What are the reasons?

A. The first one was that this was supposed to replace our contract with Metals Reserve, which was made at $1.10. [1010] So when the allocation from the War Production Board was shifted to Electro Met, we had a right to expect that it would be at no higher price than the price at which we could have bought from Metals Reserve.

Secondly, during that period, between 1942 and 1943, we had encountered great difficulties with one of our most valued customers in shipping material to him. In fact, Electro Met stopped us from continuing working with that customer. So our entire position had become very precarious and that was about the time when we also had difficulties or felt that difficulties would be arising in connection with our Climax contract. You will recall that I had

(Testimony of Martin Wolf.)

some conversations with Mr. Arrouet of Electro Met in connection with Climax a little later which referred to all these happenings. I am not supposed to talk about those.

Mr. Archer: Well, I move to strike so much of the witness' answer that refers to that, your Honor.

Mr. Alioto: We will object, if your Honor please. He is answering the question asked by counsel as to why he took one position in '43 as against one in '42.

The Court: Well, he stated that he changed his mind. He thought he had a right to have it under the original contract.

Proceed.

Q. (By Mr. Archer): Mr. Wolf, you hadn't had a contract [1011] with Electro Met Sales prior to the time of this purchase, had you?

A. No, we did not.

Q. Now, the protest actually wasn't made by you, was it, on the question of price?

A. By someone in our organization, I am sure.

Q. It was made by Mr. Leir, wasn't it?

A. That could be.

Q. I show you Mr. Leir's letter dated May 11, 1943.

A. (Witness examining): Yes, sir.

Mr. Alioto: We have no objection.

Mr. Archer: Offer this as defendant's exhibit next in order.

(Letter of May 11, 1943 to Electro Metallurgical Sales Corporation from Continental Ore

(Testimony of Martin Wolf.)

Company, received in evidence and marked Defendant-U Exhibit 4-I.)

Mr. Archer: Letter May 11, 1943, Electro Metallurgical Sales Corporation from Mr. Leir—"Re: Your Invoice No. 24892, April 30.

"We refer to your above invoice covering shipment of vanadium oxide and to our telephone conversation of last week.

"Please arrange to send us a new invoice made out on the basis of $1.10 per pound or send us your credit memorandum for the difference [1012] of five cents per pound so that we can settle this invoice.

"Thank you for your kind attention to the above.

"Continental Ore Company."

I now will show you the reply to that dated May 18, 1943, from Mr. Remmers to Continental Ore (handing witness).

A. (Witness examining.)

Mr. Alioto: Is that Mr. Remmers of Continental Ore?

Mr. Archer: No.

Mr. Alioto: From Mr. Remmers to Continental Ore?

Mr. Archer: From Mr. Remmers of Electro Met to Continental Ore. I'm sorry.

I offer this as defendant's exhibit next in order.

Mr. Alioto: We have no objection.

(Letter of May 18, 1943 from Electro Metallurgical Sales Corporation to Continental Ore

(Testimony of Martin Wolf.)

Company, received in evidence and marked Defendant-U Exhibit 4-J.)

Mr. Archer: This is from Mr. Remmers of Electro Metallurgical Sales Corporation to Continental Ore Company, dated May 18, 1943.

"This replies to your letter of May 11 on the subject of the above invoice covering a shipment of vanadium oxide.

"The price of $1.15 per pound of contained [1013] vanadium oxide is our regular price to anyone for spot purchases of vanadium pentoxide in quantities of 500 pounds or more.

"We trust that this will answer your question concerning the price included in the above-mentioned invoice and that it will be passed for payment as rendered."

Then on May 19, following that letter, you wrote two letters to the Electro Metallurgical Sales Corporation, did you not, Mr. Wolf—I will show them to you (indicating).

A. (Witness examining): Yes.

Mr. Archer: Offer these as defendant's exhibit next in order.

(Letter of May 18, 1943, Continental Ore to Electro Metallurgical Sales Corporation; letter May 19, 1943, from Continental Ore Company to Mr. H. M. Rich, Electro Metallurgical Sales Corporation—received in evidence and marked Defendant-U Exhibit 4-K.)

Mr. Archer: The first is dated May 19, 1943,

(Testimony of Martin Wolf.)

from Mr. Wolf to Electro Metallurgical Sales Corporation, attention Mr. W. E. Remmers.

"Re: Invoice No. 24892, April 30, 1943.

"We received your letter of May 18 and wish to say that the WPB, Washington, made out the allocation for 10,000 of the contained vanadium [1014] pentoxide in your name only because there was no material available at the Durango Plant of the Metals Reserve from where we had received material previously.

"All our material from Metals Reserve was invoiced at $1.10 per pound of V_2O_5 contained, delivered our plant, and we had no reason to expect that we would be charged any other price.

"Furthermore, these allocations will be continued either from Durango or from you and we believe that under these circumstances you will charge us the same price that we had agreed to pay Metals Reserve since this was our definite understanding with them.

"May we hear from you."

On the same date you write to Mr. Rich — Mr. Wolf writes to Mr. Rich:

"Re: 10,000 pounds of 'V' contained in vanadium pentoxide—May allocation.

"We refer to our telephone conversation of May 17 and are pleased to give you below the following order in conformity with the allocation received from the WPB, Washington:

"Merchandise, Vanadium pentoxide-minimum 85% containing no detrimental [1015] impurities.

(Testimony of Martin Wolf.)

Size, In small flakes.

Quantity, 10,000 lbs. of V contained in Vanadium Pentoxide.

Price, *$1.10 per lb. of V_2O_5 contained, delivered Langeloth, Pa.

Shipment, Upon our release, probably around the end of May.

Terms, Net cash 30 days.

"We will give you our release in time for you to prepare this shipment.

"Thank you for your kind attention."

Mr. Alioto: (*) Counsel, I think you inadvertently said "$1.00 per pound."

Mr. Archer: "$1.10."

Mr. Alioto: Thank you. $1.10.

Mr. Archer: "$1.10 per pound of V_2O_5 contained, delivered Langeloth, Pennsylvania."

Then Mr. Remmers' reply to you by date of May 20, 1943 (handing to witness).

Mr. Alioto: Counsel, you don't have to identify them unless you want to.

Mr. Archer: Well, I will read them so that Mr. Wolf knows what is in them.

I offer this letter dated May 20, 1943, from Mr. [1016] Remmers to the Continental Ore Company as defendant's exhibit next in order.

Mr. Alioto: No objection.

(Letter of May 20, 1943 from Mr. Remmers, Electro Metallurgical Sales Corporation to Continental Ore Company received in evidence and marked Defendant-U Exhibit 4-L.)

(Testimony of Martin Wolf.)

Mr. Archer: Letter to Continental Ore Company, attention Mr. Wolf, from Mr. Remmers, Electro Metallurgical Sales Corporation:

"This refers to your letter of May 19 on the subject of Invoice No. 24892 dated April 30, 1943.

"The price of $1.15 specified on the invoice is that which applies to all spot sales of vanadium oxide in quantities of 500 pounds or more made to anyone. This price has been established for a number of years and we do not believe that we would be justified in making any special concession in the nature of a price reduction for such material.

"We trust that with this explanation you will authorize payment of the invoice as rendered.

"Very truly yours,

"Electro Metallurgical Sales Company." [1017]

Mr. Archer: Then Mr. Wolf's reply is dated May 21, 1943, and I offer it in evidence.

Mr. Alioto: Do you want to show that to the witness so he can read it and have it in mind? I have no objection to it, your Honor—the third paragraph.

The Court: Do you have considerable material of this sort?

Mr. Archer: Yes, I do, your Honor.

The Court: Was all of this between the plaintiff and the governmental agency?

Mr. Archer: This part here is between the plaintiff and the Electro Metallurgical Sales Corporation, your Honor.

Mr. Alioto: This is private.

(Testimony of Martin Wolf.)

The Witness: Yes, sir.

Mr. Archer: I offer a letter dated May 21, 1943, as defendants' exhibit next in order.

Mr. Alioto: No objection.

(The letter referred to was thereupon marked Defendant U Exhibit 4-M in evidence.)

Mr. Archer: From Mr. Wolf to Metallurgical Sales Corporation, Attention Mr. Walter E. Remmers:

"Re: Invoice #24892/April 30, 1943

"Gentlemen:

"We received your letter of May 20 and can only [1018] repeat what we told you in ours of May 19 regarding the price which we expected to pay in view of our previous dealings with Metals Reserve.

"We never did receive a contract from you and therefore had no reason to assume that your price would be any different from that which we paid for the previous material shipped through you from Metal Reserve's stocks.

"However, we believe that we can overcome this difficulty in price resulting from the difference between spot and contract sales. We are perfectly willing to sign a contract with you for our requirements until the end of the year. At present, these requirements are estimated to amount to about 10,000 lbs. of V contained in pentoxide per month.

"This contract, at the usual price of $1.10 per lb. of V contained delivered, could then be considered as applying to the lot shipped in April.

(Testimony of Martin Wolf.)

"We hope that you can cooperate with us along these lines and look forward to hearing from you."

The Court: Just at this point, this testimony, a great deal of it, has to do with technical terms, and so on. I would like to ask this witness:

Q. (By the Court): From May, 1942, to February 29, 1944, can you name any [1019] specific act on the part of either one of these defendants, the principal defendants in this case, that had anything to do with the Nisley contract, or mill, other than what has been carried on between you and the governmental agency?

A. I don't quite get the question, your Honor.

Q. Can you name any specific act on the part of either one of these defendants during this period of time which affected your contract with Nisley & Wilson?

A. We had no contract with Nisley & Wilson at that time.

Q. What?

A. We had no contract with Nisley & Wilson at that time.

Q. Well, your dealings with Nisley & Wilson.

A. Well, nothing as far as I recall now, at this moment, beyond the fact that Nisley & Wilson had insisted on shipping their output to us, but were not able to do so.

The Court: You may proceed.

Mr. Archer: Thank you, your Honor.

Q. (By Mr. Archer): I now show you Mr.

(Testimony of Martin Wolf.)

Rich's reply to your letter dated May 25, 1943, regarding the request for another 10,000 pounds.

A. Yes, sir.

Mr. Archer: I offer this as defendants' exhibit next in order. [1020]

(The letter referred to was thereupon marked Defendant U Exhibit 4-N in evidence.)

Mr. Alioto: No objection.

Mr. Archer: Letter dated May 25, 1943, from Electro Metallurgical Sales Corporation to Continental Ore Company, Attention Mr. M. Wolf:

"Gentlemen:

"We acknowledge receipt of your letter of May 19 which constitutes an order covering 10,000 lbs. of vanadium contained in Vanadium Pentoxide in accordance with the allocation made to you by the War Production Board for May shipment.

"We note that the price shown on your order is $1.10 per pound of V_2O_5 contained in the compound. Until such time as the question of price has been decided, we will be unable to accept your order at this price since the regular market price of this material is $1.15 per pound of V_2O_5 contained in the compound.

"We will hold your order in our files until such time as the question of price has been determined and until an official release is obtained from you. In the meantime, we wish to thank you for having favored us with this business."

Q. (By Mr. Archer): You will recall, Mr. Wolf, that on May 21, 1943, you proposed to Mr. Remmers

(Testimony of Martin Wolf.)

that a contract be made so that the [1021] contract price of $1.10, instead of the price of $1.15, would apply? A. That is correct.

Q. Do you recall that? A. Yes.

Q. Before you received a reply from Mr. Remmers, Mr. Leir wrote the following letter to Metallurgical Sales Corporation on May 26, 1943, didn't he? A. That is right.

Mr. Archer: I offer this as defendants' exhibit next in order.

Mr. Alioto: We have no objection.

(The letter referred to was thereupon marked Defendant U Exhibit 4-O in evidence.)

Mr. Archer: May 26, 1943, from Continental Ore Company, Mr. Leir, to Electro Metallurgical Corporation:

"Gentlemen:

"Re: Your invoice #24892 dated April 30, 1943, Fused Vanadium Oxide.

"Please be informed that we have instructed The New York Trust Company to send you their check in the amount of $19,688.40 against your above-named invoice.

"Please note that this amount represents [1022] 17898.6 lbs. V_2O_5 at $1.10 whereas your invoice is based on a rate of $1.15.

"We are in correspondence with Mr. W. E. Remmers regarding this difference."

Q. (By Mr. Archer): I now show you a letter dated May 27, 1943, from yourself to the Electro

(Testimony of Martin Wolf.)

Metallurgical Sales Corporation, Attention Mr. Remmers on the same subject.

The Court: Was this Electro Metallurgical Sales Company acting as an agent of the Federal Government?

Mr. Archer: Not at this time, your Honor.

Mr. Alioto: Not in connection with the request for the requirements contract, either.

Mr. Archer: Not at this time.

Mr. Alioto: Even though Metals Reserve was in effect during this period of time.

A. Yes, sir.

Mr. Archer: I offer this as defendants' exhibit next in order.

(The letter referred to was thereupon marked Defendant U Exhibit 4-P in evidence.)

Mr. Archer: Letter dated May 27, 1943, from Mr. Wolf, Manager, to Electro Metallurgical Sales Corporation, Attention Mr. W. E. Remmers:

"Re: Fused Vanadium Oxide [1023]

"Gentlemen:

"We refer to our previous correspondence regarding the price of the lot you shipped to us against WPB's April allocation.

"If it is difficult for you to apply the price of $1.10 because no contract has been signed by either party, we feel that the only thing to do is to put at your disposal a like amount of fused vanadium oxide so that the entire transaction can be written off. In other words, we would replace the material shipped to us. This can be done by putting at your disposal a like amount out of the production of

(Testimony of Martin Wolf.)

Nisley & Wilson for which we hold a contract with Metals Reserve at $1.10 and which has been allocated to us.

"May we hear from you?"

Q. (By Mr. Archer): Mr. Wolf, I now show you—and I believe this is the last letter in this correspondence—a letter dated June 1, 1943, from Mr. Remmers to yourself. A. Yes, sir.

Mr. Alioto: No objection.

Mr. Archer: I offer this as defendants' exhibit next in order. [1024]

(The letter referred to was thereupon marked Defendant U Exhibit 4-Q in evidence.)

Mr. Archer: This is dated June 1, 1943, W. E. Remmers to Continental Ore Company, Attention of Mr. M. Wolf:

"Gentlemen:

"We have your letter of May 27th as well as one written on May 26th by Mr. Henry J. Leir."——

Mr. Alioto: The letter——

Mr. Archer: The letter of May 27th was the replacement.

Mr. Alioto: There was the requirements contract, but it was not answered.

Mr. Archer: This answers it (continuing reading):

"Although you propose to make a replacing shipment of fused vanadium oxide, Mr. Leir has advised us by way of our Long Island City Accounting Office that you are remitting on the basis of $1.10 per pound contained. In order to close the file on this subject, we are accepting your check

(Testimony of Martin Wolf.)

representing payment for 17,898.6 pounds of vanadium oxide at $1.10 per pound as payment in full.

"We wish to point out, however, that this adjustment in price is for the purpose of closing our present discussion and in no way establishes any precedent so far as future business is concerned. As we have indicated in our earlier correspondence, the established price on spot sales in the [1025] quantities under discussion is $1.15 per pound.

"We are issuing a credit memorandum to adjust the original invoice from $1.15 to $1.10 per pound."

This is dated June 1, 1943.

Mr. Alioto: Excuse me, counsel. In view of your statement, so the record will be clear, you will agree now that this is not in response to the letter relating to the requirements contract?

Mr. Archer: I certainly won't. It says "in order to close and terminate our present discussion."

Mr. Alioto: Counsel, it says:

"We have your letter of May 27th * * *"

You say that refers to the requirements contract?

Mr. Archer: That refers to the other.

Mr. Alioto: O. K.

Q. (By Mr. Archer): Mr. Wolf, the question I want to ask you, Mr. Remmers' letter was on June 1, 1943, and in effect it terminated this $1.10-$1.15 dispute by accepting payment at $1.10?

A. Yes.

Q. Subsequent to that date you cancelled your contract for seventeen thousand odd pounds of vanadium oxide from Nisley & Wilson at the price of $1.10, did you not?

(Testimony of Martin Wolf.)

A. Yes, for the reason the material not being in a mechanical condition as we wanted it. But Mr. Remmers was very [1026] lucky at the time, because if we had known they were selling the same material to Vanadium Corporation at 80 cents, we would not have been satisfied with $1.10.

Q. Mr. Wolf, do you know of your own knowledge that any——

Mr. Holland: I move to strike that, your Honor. The evidence shows that sale at 80 cents was made four years earlier.

Mr. Alioto: It was still during the actionable period involved here.

The Court: The objection is sustained. The jury will disregard the statement.

Mr. Archer: I am about to go to another subject.

The Court: We will recess at this time. [1027]

(Whereupon a recess was taken until 2:00 o'clock p.m.)

June 11, 1958 — 2:00 o'clock P.M.

MARTIN WOLF

a witness called by and on behalf of the plaintiffs, resumed the stand, having been previously duly sworn, and testified further as follows:

Cross Examination—(Continued)

Q. (By Mr. Archer): Mr. Wolf, I believe when we left off at noon we had come to June 1943, at the time of the cancellation of the Metals Reserve con-

(Testimony of Martin Wolf.)

tract for 17,000 pounds of Nisley and Wilson production, do you recall that? A. I do.

Q. Prior to that time we had talked about the period January 1944 when you had the Imperial Paper contract? A. That is right.

Q. You recall that you made a trip to Washington—I'm trying to summarize the exhibit because I think they are being copied—you had made a trip to Washington and they had about 50,000 pounds of the Nisley and Wilson—50,000 pounds of flakes which you presumed came from Nisley and Wilson? A. When was that?

Q. In January of 1944. A. Yes.

Q. Do you recall how much you purchased from Metals Reserve in 1944 of that supply? [1028]

A. I don't know exactly, but I think we bought —at some time we bought 5,000 pounds of that.

Q. I show you a letter dated August 4—it's really a copy of a letter—dated August 4, 1944, from Mr. Murphy to you, with, I believe, a note at the bottom, and then a letter from Metals Reserve to Continental Ore dated September 20, 1944, and then the contract dated September 26, 1944.

A. (Witness examining) Yes, sir.

Q. Is that Mr. Leir's note on the bottom of the letter, the first letter there? A. Yes.

Mr. Alioto: We have no objection, if your Honor please.

Mr. Archer: Offer these as defendant's Exhibit next in order.

(Testimony of Martin Wolf.)

(Copy of letter Metals Reserve Co. to Continental Ore Co., August 4, 1944; letter Metals Reserve Co. to Continental Ore Co., September 20, 1944; contract dated September 26, 1944, Metals Reserve Co. and Continental Ore Company—received in evidence and marked Defendant U's Exhibit 4-R.)

[See Book of Exhibits.]

Mr. Archer: Letter dated August 4, 1944, from Metals Reserve Company to Mr. Wolf.

"Dear Mr. Wolf:

"Please refer to your letter of July 25, 1944, inquiring about vanadium pentoxide.

"Our stockpile of fused vanadium oxide at East [1029] St. Louis consists of three analyses of V_2O_5; viz. 85.22 per cent—35.06 per cent—87 per cent—all in the form of flakes, and if any of this material is of interest to you, we shall be pleased to receive your offer for the given quantity.

"For your information, we no longer have the material in Colorado which was at one time of interest to you."

And the note at the bottom, apparently to Mr. Wolf, says:

"Let us discuss this on the phone. Should we not buy say"——

is that .5 tons?

A. No, 5 tons.

Mr. Archer: (Reading.)

"——5 tons for the purpose of filling our several

(Testimony of Martin Wolf.)

trial orders. I have a feeling that we could buy this material at $1.00 f.o.b. East St. Louis. How can we find out how much of it is in stock?"

And then the contract is for approximately 4,353 pounds of vanadium pentoxide at the price of $1.10 per pound to be delivered to the Long Island plant.

Q. Now, did you have some discussion with the Metals Reserve about this shipment, Mr. Wolf?

A. I don't recall. [1030]

Q. I show you copies of two letters from yourself, one dated October 26, and one dated October 31, 1944, to Metals Reserve Company, and ask you can identify those? A. (Examining) Yes, sir.

Mr. Archer: I offer these as Defendant's Exhibit next in order.

Mr. Alioto: No objection.

(Copy of letter October 26, 1944, Continental Ore Co. to Metals Reserve Co.; copy of letter October 31, 1944, Continental Ore Co. to Metals Reserve Co.—received in evidence and marked Defendant U's Exhibit 4-S.)

Mr. Archer: The first is dated October 26, 1944, from Mr. Wolf to Metals Reserve Company, Mr. M. E. Miller, Traffic Manager:

"Re: Fused vanadium oxide, Contract MR C-1 S-1477.

"Gentlemen:

"We have your letter of October 23 and your invoice of the same date.

"We are very sorry that we must raise an objection to this invoice because of the fact that there

(Testimony of Martin Wolf.)

is such a marked discrepancy between your Ledoux analysis and our Ledoux analysis."

Q. Ledoux is the company that analyzes for vanadium oxide, is that correct?

A. That analyzed this lot, yes. [1031]

Mr. Archer: (Reading.)

"We believe that we know the explanation for this discrepancy. If you will check into Ledoux' certificate of May 10, you will note that it concerns 500 bags, composed of five different lots (batches 295 to 299).

"The 44 bags we received were part of batch 299.

"It is customary and would have been the proper procedure to sample and analyze each lot separately.

"With regard to the provisions of the contract to which you refer, may we say that this contract covers 'approximately 5,049 pounds', and we assumed that the sampling and analysis, as well as determination of moisture, to which the contract refers, concerned solely these 'approximately 5,049 pounds' which you sold us. We could not assume that you intended to apply the findings arrived at on the basis of 500 bags (57,500 pounds) to a lot of 44 bags (5,136 pounds) which is what this contract calls for.

"We believe that if you will consider the above mentioned facts, you will see the merits of our point of view. We shall be pleased to receive your invoice based on the Ledoux certificate which we enclosed in our letter of October 20th. It is logical

(Testimony of Martin Wolf.)

that this certificate reflects the quality of the [1032] merchandise we actually received since it is not concerned with the 500 bags, which you have in your warehouse, but with the 44 bags you actually shipped to us."

Then Mr. Wolf's letter, dated October 31, 1944, to Metals Reserve Company, on the same subject matter.

The Court: Just a moment. Who signed the other letter?

Mr. Archer: Mr. Wolf.

"We have your letter of October 30th but are very sorry that we cannot view this matter the same way you do.

"It even appears to us that our letter of October 26 has not received the attention we believe it merits.

"We have been in this business for 25 years and know what the customs are. We can just repeat what we said on October 26th, namely, that your Ledoux certificate for 500 bags cannot possibly be considered final for 44 bags, or 8.8 per cent of the quantity referred to in your Ledoux certificate. Furthermore, your certificate covers five batches and our lot is just part of one batch.

"We can also only repeat that the contract between us deals with about 5,000 pounds only and when we accepted settlement on your sampling and analysis [1033] certificates, it was logical to assume that you had a certificate showing the analysis of

(Testimony of Martin Wolf.)

the particular lot sold to us, and not of a much larger lot which is none of our concern.

"We believe that if you will look into this matter, you will agree with our point of view."

Q. Now, Mr. Wolf, both of these letters directed to Mr. Miller, Traffic Manager, and to Metals Reserve Company, 811 Vermont Avenue, Northwest, Washington, 25, D. C., they were not concerned at all with the United States Vanadium Corporation in its activities as agent, were they?

A. No.

Q. Now, in November 1944, you were informed, were you not, of what the stocks of Metals Reserve were? You previously testified to the lead vanadates which are in this letter.

I show you a letter from yourself to the Imperial Paper and Color Corporation (handing witness).

A. (Witness examining.) [1034]

A. Yes, sir.

Q. Is that your handwriting on the side?

A. Yes, it is.

Mr. Archer: I offer this as defendants' exhibit next in order.

Mr. Alioto: No objection.

The Clerk: Defendant U's 4-T.

(The letter referred to was thereupon marked Defendant U Exhibit 4-T in evidence.)

[See Book of Exhibits.]

Mr. Archer: From Mr. Wolf to Imperial Paper and Color Corporation, dated November 1, 1944,

(Testimony of Martin Wolf.)

Attention Mr. A. F. Brown, general manager. Re: Metals Reserve Vanadium Stocks.

Q. (By Mr. Archer): This was during the period of your Imperial Paper contract, was it not, Mr. Wolf? A. That's right.

Mr. Archer: (Reading): "Gentlemen:

"We refer to your recent visit here when you wanted to get an idea as to the quantities of vanadium at present held by Metals Reserve Company or other government agencies. Unfortunately these figures are not readily available, but as far as we can ascertain, the stocks at the beginning of this year were approximately as follows:

"Ferro-vanadium, about 500,000 pounds V in the [1035] form of 40 percent ferro-vanadium;

"Vanadium pentoxide, about 1,500,000 pounds V in the form of 85 percent V_2O_5;

"Lead vanadate, about 160,000 pounds V contained."

Q. (By Mr. Archer): That's—we have already discussed the lead vanadate. These are those Otapi orders, the two shipments. A. Yes.

Mr. Archer (continuing reading): "We heard, however, that these stocks were recently reduced by the reason of the fact that the Vanadium Corporation of America, in order to fill some export orders for ferro-vanadium, bought 250,000 pounds of V contained in vanadium pentoxide from Metals Reserve. So that at the time present stocks of vanadium pentoxide should be reduced to about 1,250,000 pounds, if not lower. These figures are

(Testimony of Martin Wolf.)

arrived at on the basis of various scattered information, and as soon as more precise data are available, we will, of course, let you know."

Q. (By Mr. Archer): Mr. Wolf, this vanadium pentoxide referred to as 1,500,000 pounds V, or after the sale to V.C.A., 1,250,000 pounds V, that's generally not the way vanadium pentoxide is referred to, is it?

A. Well, it was probably the figure that we got from the Metals Reserve. [1036]

Q. Yes, but I mean, as we stated here, we generally refer to vanadium pentoxide in pounds V_2O_5?

A. Yes, but this is probably a matter of bookkeeping with the government.

Q. And it would be roughly twice that in pounds V_2O_5? A. Yes.

Q. Now, subsequent to November, 1944, did the Metals Reserve Company ever refuse to sell you vanadium oxide?

A. I don't know whether we asked them.

Q. You were in the courtroom the other day, were you not, Mr. Wolf, when——

The Court: Just a moment.

Q. (By the Court): Now, do you mean by that that if you had asked them they wouldn't have sold you?

A. I don't know; I don't know. The point, however, is that, No. 1, in the summer of '43, and all through '43, the defendants here had caused us some trouble with some customers to whom we sold the material, and further, Mr. Archer has read into

(Testimony of Martin Wolf.)

the record quite a few letters of mine to Imperial Paper where I had been trying to induce Imperial Paper to actively start in the production of ferro-manganese by offering them various raw materials. Among other things, these flue dusts and lead vanadates—— [1037]

Q. (By Mr. Archer): You said "ferro-manganese."

A. I am awfully sorry. Ferro-vanadium.

We have not yet heard the answers that came back from Imperial Paper and which show very clearly that the concern of Imperial Paper was with a steady supply of vanadium raw materials, so that they could justify the investment in going into it. I recall a particular letter from Mr. Brown, general manager of Imperial Paper, where he says that in view of the fact that there are only two people in this business who control the raw material, he feels not justified in putting out the investment until and unless we had a steady source of raw material. I think this ought to go in the record, too.

Q. (By the Court): Well, the question here is, Did you offer to buy? And if they refused to sell you any of this material on that.

A. I have no recollection as to whether we offered to buy any of this particular material. I am just trying to express the thought that at that time we had difficulties in selling to our customers; we were cut off from some of our customers. And we also had difficulties in convincing Imperial Paper,

(Testimony of Martin Wolf.)

with whom we had made a contract for the production of ferro-vanadium, to really go into the business, because of the tight control exercised by these defendants over the raw materials. [1038]

Q. Well, I don't know what you mean by that. The question is, did you offer to buy, or did they refuse to sell?

A. Well, we would have to look into the record to find out whether we offered to buy.

Q. But you didn't buy?

A. I do not believe that we bought any substantial quantities after that from Metals Reserve.

Mr. Archer: I believe that's right. I think that's what the records show.

Q. (By Mr. Archer): Mr. Wolf, now, prior to November—I was referring to Mr. Nisley, who testified here yesterday, and I believe you said you were present in the courtroom during his testimony? A. Yes.

Q. And there was the period of May and June of 1944 after he had gone into the service and Mr. Gardner had taken over the mill, and there was correspondence which is already in evidence. Do you recall that Mr. Gardner called you personally on this matter?

A. I believe that was brought out yesterday.

Q. Well, here's your memorandum dated May 22, 1944, on the subject. Do you recognize that?

A. Yes; yes, sir.

Mr. Alioto: All right.

(Testimony of Martin Wolf.)

Mr. Archer: Offer this as defendants' exhibit next in order. [1039]

Mr. Alioto: We have no objection, if your Honor please.

The Clerk: Defendant U's 4-U.

(The memorandum referred to was thereupon marked Defendant U Exhibit 4-U in evidence.)

Mr. Alioto: The mill was closed down at this time, was it not?

Mr. Archer: I think the record shows what Mr. Gardner was doing.

Mr. Alioto: I think it does.

Mr. Archer: "May 22, 1944.

"Nisley & Wilson.

"Memorandum by Mr. Wolf.

"Mr. Gardner called on May 17th. He has an opportunity now to make some leases for vanadium mines and he wanted to know whether he could contract for some vanadic acid.

"I told him that our present requirements are all taken care of, but that we expect to make some more contracts for the finished ferro, which might allow us to contract for an additional 10,000 pounds of V contained per month in the near future.

"I repeated that at the present time we could not help them out but would get in touch with him as soon as we needed additional material." [1040]

Q. (By Mr. Archer): Going to the year 1945 and the Imperial Paper and Color Corporation, Mr. Wolf, do you recall that Mr. Brown, in May, came down to New York to discuss with you and

(Testimony of Martin Wolf.)

Mr. Wolf the source of—and Mr. Leir, the source of vanadium oxide?

A. He may possibly have done that.

Q. Do you recall that it was decided at that time to attempt to purchase some from the Electro Metallurgical Company?

A. 1945? I couldn't say offhand.

Q. I show you a letter dated May 15, 1945, from yourself to Imperial Paper and Color Corporation.

A. Yes, sir.

Mr. Archer: I offer this as defendants' exhibit next in order.

Mr. Alioto: No objection.

The Clerk: Defendants' U 4-V.

(The letter referred to was thereupon marked Defendant U Exhibit 4-V in evidence.)

Mr. Archer: This is from Mr. Wolf to Imperial Paper and Color Corporation, Mr. A. F. Brown, General Manager:

"Re: Fused Vanadium Pentoxide for trial.

"Gentlemen:

"We have your letter of May 11th and believe that your idea of trying out ferro-vanadium on the basis [1041] of purchased V_2O_5 is a good one. Therefore we have bought for your account 200 pounds of fused vanadic oxide.

"As you will notice, the price is $1.15 because of the fact that it is a small quantity and a spot lot. The price in regular quantities is $1.10.

"The material is Electro Met's usual quality. Of course, it may vary slightly, but we found that the

(Testimony of Martin Wolf.)

analysis did not vary much whenever we bought from them.

"We selected the material in the form of flakes because crushed material contains too many fines, and thereby causes a loss during processing. Therefore we always found flakes much more advantageous, and believe that you will have the same experience.

"We will forward the material to you as soon as we receive it."

Q. (By Mr. Archer): I now show you your notice dated May 22, 1945, together with the bill of lading from Electro Metallurgical to Continental Ore, addressed to yourself, and ask you whether you can identify it. A. Yes, sir.

Q. I notice the bill of lading there says, "2 bags ore, NOIBN."

A. "N-O-I-B-N," yes.

Q. That means "Not otherwise"—— [1042]

A. "Not otherwise identified by name." That is a rate order expression.

Q. For the freight?

A. There is no particular tariff.

Mr. Alioto: No objection.

Mr. Archer: Offer this as defendants' exhibit next in order.

The Clerk: Defendant U's 4-W.

(The letter referred to was thereupon marked Defendant U Exhibit 4-W in evidence.)

Mr. Archer: Letter dated May 22, 1945, from Mr. Wolf to Imperial Paper and Color Corpora-

(Testimony of Martin Wolf.)

tion, Attention Mr. A. F. Brown, General Manager:

"Re: 200 pounds fused vanadium oxide.

"Please be informed that we received a shipping advice from Electro Metallurgical Sales Corporation. Two bags are now in transit. They weigh gross 234 pounds, tare 4, net 230, with a content of 86.40 percent V_2O_5. We shall forward the bags to you as soon as we receive them."

And here is the bill of lading from Electro Metallurgical Sales Corporation to Continental Ore Corporation, Attention Mr. Wolf.

Q. (By Mr. Archer): Now, Mr. Wolf, when was the next time you attempted to [1043] get vanadium oxide from Electro Met?

A. I can't tell.

Q. Did you try to get it from Electro Met?

A. I wouldn't know that now. The record will show that. I would have to look in my records.

Q. You have no recollection of trying to get vanadium oxide again from Electro Met?

A. You probably have some.

Q. Well, Mr. Wolf, haven't you testified here that one of your complaints is that you can't get vanadium oxide from the defendants?

A. That's right.

Mr. Alioto: During a certain period.

The Witness: That's right.

Q. (By Mr. Archer): Now, prior to 1949?

A. '49, yes, that's correct.

Q. Well, I show you now a contract dated Jan-

(Testimony of Martin Wolf.)

uary 29, 1946, four months after the war is over, between the Continental Ore Company and the Electro Metallurgical Sales Corporation, and ask you if you can identify it. A. Yes, sir.

Mr. Archer: Offer this as defendants' exhibit next in order.

Mr. Alioto: No objection. [1044]

The Clerk: Defendant U's 4-X.

(The contract referred to was thereupon marked Defendant U Exhibit 4-X in evidence.)

[See Book of Exhibits.]

Mr. Alioto: May I have that date again, Mr. Archer, please?

Mr. Archer: January 29, 1946.

Mr. Alioto: Thank you.

Mr. Archer: This is a contract signed by Mr. Wolf and Mr. Vogt, to the Electro Metallurgical Sales Corporation, dated January 29, 1946 (reading):

"Electro Metallurgical Sales Corporation agrees to sell and Continental Ore Company of New York, New York, agrees to buy, buyer's domestic manufacturing requirements of the following material: Vanadium pentoxide; price; any quantity; Eastern zone; $1.10; requirements estimated to be approximately 1,000 pounds per month. Prices are per pound of vanadium pentoxide contained in the compound."

Q. (By Mr. Archer): Do you recall now, Mr. Wolf, that you requested this contract?

A. Yes, for a special purpose.

(Testimony of Martin Wolf.)

Q. What was the special purpose?

A. Well, by that time Electro Met had cut us off from some of our customers—— [1045]

The Court: Now, just a moment. I don't want to interfere at all, but just answer the question.

The Witness: I am answering the question, your Honor.

The Court: I understand, but you are stating conclusions here which would be objectionable.

The Witness: All right.

A. (Continuing) We had at that time lost as partners in this field Apex Smelting, who had previously manufactured ferro-vanadium in conjunction with us as our partners.

We had likewise lost Climax Corporation, who had done the same thing for us, and did not continue because of interference by the defendants with Climax.

We had also lost by that time the active interest of Imperial Paper and Chemical, because of the fact that the raw materials supply was so precarious. When the war ended I figured that there will be a need for vanadium in the export market, and in order to assure for ourselves a price of $1.16 instead of $1.15 on spot purchases, I suggested that we might be able to get a contract from Electro Met, especially since in the meantime the Department of Justice had started to investigate the setup in the vanadium field, and we felt that Electro Met could not possibly refuse to give us such a contract. The contract was intended as a

(Testimony of Martin Wolf.)

basis for exports of vanadium oxide—the request. When the contract came back it [1046] was limited to our domestic manufacturing requirements, which at that time were not in existence any more. So this contract was actually of really no use to us any more, because we had been effectively eliminated from the market domestically, and we couldn't use this contract for export shipments. So we kept this contract in our files and kept renewing it because it had one slight advantage: it had the advantage of our being notified two weeks before it got into the newspapers that any price changes, because the contract provides for notification of their customers with a two-weeks' notice of any change in price. And that was the only use that I believe we ever made of this contract, and that was the intent of this contract.

Q. (By Mr. Archer): Mr. Wolf, haven't you just testified that one of your complaints here is that up to 1949 the defendants had refused to sell you vanadium oxide?

A. The defendants have not—no, have not refused.

Q. Didn't you just testify to that?

A. Excuse me. The defendant—I don't think, first, that it is very good practice to base an investment and a business on raw material procured from your competitors after your competitors have tried by all means possible to eliminate you from the market. So what we are trying—what we were trying to do is get vanadium oxide

(Testimony of Martin Wolf.)

and vanadium raw materials [1047] from other sources which, however, the defendants have consistently cut off from us.

Q. Then you are not complaining that the defendants refused to sell you vanadium oxide from January 21, 1946, on, are you?

A. I wouldn't put it this way, Mr. Archer. I will just say that at that time it was difficult to compete——

The Court: No. Answer the question, will you?

Q. (By the Court): The question is, Did they refuse to sell you this material during this period?

A. They did not refuse a contract for a thousand pounds a month for our manufacturing requirements domestically. [1048]

Q. (By Mr. Archer): Now, was it your position that you requested this for foreign sales?

A. I had in mind foreign sales, yes, sir.

Q. Did they ever refuse to sell you oxide for foreign sales under it?

A. I don't know whether we asked them because this contract, written by them, obviously had the limitation of the domestic manufacturing requirements.

Q. Did you protest when it was sent to you in that form?

A. No, I don't think so. I thought—we were at that time—at that time we were anticipating that perhaps this industry would be opened up by government action which had been instituted at that time, the same as the aluminum industry was

(Testimony of Martin Wolf.)

opened before anybody else could get into it besides the Aluminum Company of America.

Q. This was your contention in the law suit——

A. That is right. That is right.

Q. So you are sort of arguing your case right now? A. Correct.

Mr. Alioto: That is objected to, if your Honor please, as argumentative.

The Court: Well, it is argumentative entirely. And the witness, if you will just answer the questions.

A. Yes, your Honor.

Q. (By Mr. Archer): Now, as a matter of fact, Mr. Wolf, [1049] you inserted the 1,000 pounds a month in the requirement, didn't you? A. Yes.

Q. I now show you your letter from Mr. Wolf to Electro Metallurgical Sales Corporation, dated January 21, 1946.

Mr. Alioto: You don't have to identify it, Mr. Archer. We have no objection.

Mr. Archer: What's that?

Mr. Alioto: We have no objection regarding that.

Mr. Archer: I offer that as defendant's exhibit next in order.

Mr. Alioto: No objection.

(Letter of January 21, 1946, from Mr. Wolf, Continental Ore to Electro Metallurgical Sales, received in evidence as Defendant-U Exhibit 4-Y.)

Mr. Archer: It is from Mr. Wolf to Electro

(Testimony of Martin Wolf.)

Metallurgical Sales Corporation, January 21, 1946, attention Mr. Voght:

"Re: Vanadic Acid.

"Gentlemen; we refer to our recent telephone conversation when we suggested that you kindly let us have your usual contract form for our yearly requirements of vanatic acid.

"We would like to enter into such an agreement with you and hope to hear from you shortly."

I offer as defendant's exhibit next in order letter dated January 29, 1946 from Electro Metallurgical Sales Corporation to Continental Ore, together with copy of enclosure, which is another form of the same contract.

(Letter of January 29, 1946 from Electro Metallurgical Sales Corporation to Continental Ore, enclosure contract, received in evidence as Defendant-U Exhibit 4-Z.)

[See Book of Exhibits.]

Mr. Archer: This is dated January 29, 1946, from Mr. Voght, Secretary, Electro Metallurgical Sales Corporation, to Continental Ore Company, attention Mr. Martin Wolf, Manager.

"Gentlemen:

"In compliance with your request we are enclosing herewith our standard form of agreement covering your requirements of vanadium pentoxide.

"We have left blank the quantity you estimate that you may require so that you may fill in the amount estimated to be your approximate monthly requirements.

(Testimony of Martin Wolf.)

"If you will please sign both copies of the agreement and return them to us we shall be glad to return an approved copy for your files."

Q. And you are the one that put in the 1,000 pounds a month, are you not?

A. I said that before, yes, sir. [1051]

Q. (By Mr. Archer): As defendant's exhibit next in order I offer Mr. Wolf's reply, dated January 30, 1946, to Electro Metallurgical Sales Corporation.

Mr. Alioto: We have no objection.

(Letter of January 30, 1946, Continental Ore to Electro Metallurgical Sales Corporation was received in evidence as Defendant-U Exhibit 5-A.)

Mr. Archer: Letter from Mr. Wolf to Electro Metallurgical Sales Corporation, attention Mr. Vogt, Secretary, "Re: Vanadium Pentoxide.

"We received your letter of January 29 and take pleasure in returning duly signed two copies of your contract.

"Kindly return one copy with your approval for our files.

"Thank you for your cooperation.

"Very truly yours,

"Continental Ore Company, Martin Wolf."

Mr. Archer: And as defendant's exhibit next in evidence I offer Mr. Vogt's reply to the Continental Ore Company dated January 31, 1946.

Mr. Alioto: No objection.

(Testimony of Martin Wolf.)

(Letter of January 31, 1946, Electro Metallurgical Sales to Continental Ore Company was received in evidence and marked Defendant-U Exhibit 5-B.) [1052]

Mr. Archer: January 31, 1946, from Mr. Vogt to Continental Ore Company, attention Mr. Martin Wolf, Manager:

"Gentlemen:

"We are returning duly approved original copy of the agreement between us for vanadium pentoxide, this to be retained by you for your files.

"We appreciate the placing of this business with us and you have our assurance that any requirements placed with us will always have our prompt and careful attention."

Q. Mr. Wolf, I believe you testified in your direct examination in regard to certain Government regulations. I show you what is General Preference Order Priority Order M23-a on vanadium. It is copied from the American Metal Market of December 23, 1941. The order is dated December 20, 1941, which we obtained from your files, and ask you if that is one of the orders you referred to?

A. Well, I would have to read the whole order in order to confirm that. If you want me to, I will.

Q. Well, it is correct.

Mr. Alioto: Subject to correction, we have no objection to it being introduced.

Mr. Archer: Offer this as defendant's exhibit next in order. [1053]

(General Preference Order M23-a on Vana-

(Testimony of Martin Wolf.)

dium was received in evidence and marked Defendant-U Exhibit 5-C.)

Mr. Archer: The controlling part of this—— Well, I will read the preface. This is dated December 20, 1941, signed by D. M. Nelson, Director of Priorities, Office of Production Management:

"Whereas the National Defense requirements have created a shortage of vanadium as hereinafter defined for defense, for private account, and for export, and it is necessary in the public interest and to promote the defense of the United States to supplement by further measures the action heretofore taken to conserve the supply and direct the disposition hereof:

"Now, Therefore, It Is Hereby Ordered That:—" There are several definitions and then it states:

"Restrictions on Deliveries, Allocations. Hereafter no person shall make or accept delivery of Vanadium unless specifically authorized by the Director of Priorities. The Director will from time to time allocate the supply of vanadium and specifically direct the manner and quantities in which deliveries to particular persons or for particular uses shall be made or withheld. The Director may also, in his discretion, require any [1054] person seeking to replace a purchase order for Vanadium to place the same with one or more particular suppliers. Such allocations and directions will be made primarily to insure satisfaction of all defense requirements of the United States, both direct and indirect, and they may be made in the discretion

(Testimony of Martin Wolf.)

of the Director of Priorities without regard to any preference ratings assigned to any particular contract or purchase orders. The Director of Priorities may also take into consideration the possible dislocation of labor and the necessity of keeping a plant in operation so that it may be able to fulfill defense orders and essential civilian needs."

The rest refers to reports and violations.

The Court: What is the date of that order?

Mr. Archer: December 20, 1941.

Mr. Alioto: Do you have the termination date, Mr. Archer?

Mr. Archer: No, I don't.

Mr. Alioto: Can we agree it was December of '43?

Mr. Archer: Well, it was modified on that date. It wasn't terminated. The power was still in the Director until the war ended. [1055]

Q. Now, Mr. Wolf, you have also testified, I believe, as to price controls, have you not?

Mr. Alioto: No, I don't think so.

A. No, I don't think so.

Mr. Alioto: If you want to offer the Price Regulation, we have no objection.

Q. (By Mr. Archer): Were they part of the Government Regulations that existed after you arrived in this country? A. That's right.

Q. When you first got here they had what was called the General Price Control which fixed prices as of March, 1942, or some such date, isn't that correct?

(Testimony of Martin Wolf.)

A. When I first arrived here—I believe that is true. [1056]

Q. And then subsequently they issued an order specifically setting the prices for vanadium products, and the order is dated November 2, 1943.

Mr. Alioto: Mr. Archer, we have no objection to putting the order in.

Mr. Archer: Offer that as Defendant's Exhibit next in order.

(General price control, Office of Price Administration, November 2, 1943, received in evidence and marked Defendant U's Exhibit 5-D.)

[See Book of Exhibits.]

Mr. Archer: I will read the preface and a few of the prices. This is from the Office of the Price Administration—I guess most of us are familiar with price controls—dated November 2, 1943:

"In the judgment of the Price Administrator, it is necessary and proper to establish maximum prices for sales of tungsten, molybdenum, vanadium, cobalt, and certain other alloys and metals by a specific maximum price regulation. The Price Administrator has ascertained and given due consideration to the prices of tungsten, molybdenum, vanadium, cobalt and certain other alloys and metals covered by this regulation prevailing between October 1 and October 15, 1941, and has made adjustments for such relevant factors as he has determined and deemed to be of general applicability. [1057] So far as practicable, the Price Adminis-

(Testimony of Martin Wolf.)

trator has advised and consulted with representative members of the industry which will be affected by this regulation. In the judgment of the Price Administrator the maximum prices established by this regulation are and will be generally fair and equitable and will effectuate the purposes of the Emergency Price Control Act of 1942 as amended. A statement of the consideration involved in the issuance of this regulation is issued simultaneously herewith, and has been filed with the Division of the Federal Register. Such specification and standards as used in this regulation were prior to such use in general use in the trade or industry affected."

Q. Now, the maximum base prices for ferrovanadium are the prices $2.70, $2.80, $2.90, to which we have referred and which are on the board.

The vanadium pentoxide prices, maximum base contract price, any quantity, $1.10.

Maximum base spot price, 500 pounds and over, $1.15.

Less than 500 pounds to 10 pounds, $1.20.

Under 10 pounds, $1.25.

Now, Mr. Wolf, you testified in your direct examination Van-Ex, which you sold in the period '42, '43 or thereabouts. [1058]

A. That's right.

Q. You were familiar with its composition, were you not? A. Yes.

Q. And when was the last time—well, I will withdraw that.

(Testimony of Martin Wolf.)

Where was Van-Ex made?

A. Well, it was made, first, at Apex and then in our Long Island shop.

Q. When you say made by Apex, it was made by the Apex employees for your account, I take it?

A. That is right.

Q. And then you made it in your own shop at Long Island? A. That is right.

Q. Was it made any place else?

A. No, I don't believe so.

Q. Well, when did you close the Long Island plant?

A. I couldn't tell you any more than that.

Q. Could you tell me the year?

A. No, I don't know the year.

Q. '44? '45?

A. I believe it was '44.

Q. Well, it certainly wasn't—it wasn't open in '46, was it?

A. No. No, it was not open in '46. '44-'45.

Q. So then you had no facilities for making Van Ex after you closed the Long Island plant, did you? [1059] A. No.

Q. Van-Ex had something in it besides fused black oxide, didn't it? A. Yes.

Q. You wouldn't have sold it as just pure fused black oxide at the $2.40 price during this period, would you? A. No.

Q. There are two reasons why: Because you told the steel companies there was something special in it, and the other reason was that it would

(Testimony of Martin Wolf.)

be above the maximum prices for pure vanadium oxide?

A. Well, that is partly correct. There was a packaging factor that came in, too.

Q. You might add a little bit for packaging?

A. That is right.

Q. Prior to 1949 and after you became connected with the Continental Ore Company, did you ever sell as Van-Ex a product which was only fused black oxide?

A. Not if our instructions were followed, to add the usual ingredients.

Q. Whose instructions, yours?

A. Ours—our instructions.

Q. You manufactured it last at the Long Island plant, didn't you? A. That's right. [1060]

Q. So that was your own employees there?

A. That is correct.

Q. Did you ever instruct anybody besides your own employees at your Long Island plant or the Apex Smelting Company to add something to fused black oxide to make Van-Ex?

A. Yes. I remember correspondence with Apex as to the best additions to be used, such as fluorspar, aluminum, ferro-silicon, things like that.

Q. I mean other than Apex and your own employees at the Long Island plant. A. No.

Q. So nobody else made Van-Ex?

A. Not to our knowledge. They couldn't. This was a trade-mark.

Q. Mr. Wolf, I show you an invoice of the

(Testimony of Martin Wolf.)

Continental Ore Company dated May 24, 1946, to the Sulzer Brothers, Limited, in Winterthur, Switzerland, for 10 drums, 204.5 pounds, Van-Ex, containing 100 pounds metallic vanadium at $2.40 per pound, f.o.b. New York, and ask you whether you can identify that.

A. (Witness examining) It looks like an invoice of ours.

Mr. Archer: I offer this as Defendant's exhibit next in order.

Mr. Alioto: No objection.

(Invoice, Continental Ore Co., May 24, 1946, to Sulzer Bros. Ltd., Switzerland, received in evidence and marked Defendant U's Exhibit 5-E.) [1061]

[See Book of Exhibits.]

Mr. Archer: This invoice is dated May 24, 1946, Invoice on the Continental Ore Company, 500 Fifth Avenue, New York, to Sulzer Brothers, Limited, in Switzerland. Ten drums 204.5 pounds Van-Ex containing 100 pounds metallic vanadium at $2.40 per pound f.o.b. New York.

Q. Now, Mr. Wolf, did you have anything to do with this shipment?

A. What do you mean by that?

Q. Did you arrange for the purchase of Van-Ex or the making of the Van-Ex?

A. We may have—for all I know, we may have had it in stock. I didn't mix it myself.

Q. Do you recall the transaction at all?

A. No.

(Testimony of Martin Wolf.)

Q. Mr. Wolf, was there in that shipment of Van-Ex anything other than fused black oxide?

A. There should be, yes.

Q. Was there?

A. I haven't analyzed it. How would I know. I am sure there must be.

Q. I show you now, Mr. Wolf, a letter from you to the Electro Metallurgical Sales Corporation, dated March 21, 1946, attention Mr. W. E. Vogt, and ask you whether you can identify that letter?

A. (Witness examining) Yes, sir. [1062]

(Counsel examining.)

Q. (By Mr. Archer): While your counsel is looking at that, I will show you the bill of lading.

A. (Witness examining) Yes, sir.

Q. Would you identify this handwriting? It is either Mr. O'Heir's or Mr. Vogt's, but the handwriting on this letter is not yours, is it, Mr. Wolf?

A. I didn't look at it.

Q. Well, it is obviously not. It is the original, so you wouldn't have had it in your hands. You can take a look at it. It changes "cans" to "drums" and so forth.

A. (Witness examining) No, it is not mine.

Mr. Archer: I offer this as Defendant's exhibit next in order.

Mr. Alioto: No objection.

(Letter Continental Ore Co. to Electro Metallurgical Sales Corp., March 21, 1946, received in evidence and marked Defendant U's Exhibit 5-F.)

[See Book of Exhibits.]

(Testimony of Martin Wolf.)

Mr. Archer: Next offer the bill of lading as Defendant's exhibit next in order.

(Bill of lading, Electro Metallurgical Company, to Continental Ore Company, April 24, 1946, "10 drums ore" received in evidence and marked Defendant U's Exhibit 5-G.)

Mr. Archer: Letter dated March 21, 1946, from Mr. Wolf to the Electro Metallurgical Sales Corporation—— [1063] This was after you had the requirements contract, was it not, Mr. Wolf?

A. That was in January. Yes.

Mr. Archer: (Reading)

"Re: Vanadium Pentoxide.

"As a trial lot we would very much appreciate receiving from you 100 pounds of metallic V contained in V_2O_5 packed in steel cans, each containing exactly 10 pounds metallic V in the form of V_2O_5.

"Some time ago you advised us that for such special packing you would ask a premium of $0.065 per pound of V_2O_5 (for quantities below 2000 pounds) which would have to be added to the contract price of $1.10 per pound of V_2O_5.

"We would very much like to have these 10 cans placed in a box, and will give you shipping instructions as soon as you can tell us when the material is expected to be ready.

"As mentioned before, this is a trial lot, and if it works out as we hope it will, we can follow this up with larger and regular orders.

(Testimony of Martin Wolf.)

"Looking forward to hearing from you at your early convenience,

"Very truly yours, Continental Ore Company, Martin Wolf." [1064]

The bill of lading is dated April 24, 1946, from the Electro Metallurgical Company to Continental Ore Company, "10 drums ore N.O.I.B.N."

Q. That is same destination, isn't that correct?

A. Correct.

Mr. Archer: (Reading)

"224 pounds."

Q. Now, the fact of the matter is, Mr. Wolf, that in 1946 you sold a shipment of Van-Ex which was nothing other than Electromet's oxide, is that correct?

A. I can't affirm that now.

Q. Well, can't you tell from reading the letter?

A. Well, this is a very small lot and I don't know where it could have been mixed, if it was mixed. I don't know. I couldn't tell.

Q. Who packed it?

A. Someone in the organization. At that time I didn't pack things any more.

Q. Well, didn't Electro Met Sales Corporation pack it for you?

A. I don't know whether it went in the original drums. I can't tell you.

(Discussion between counsel.)

Q. (By Mr. Archer): Well, Mr. Wolf, look at the "10 drums ore N.O.I.B.N." from the bill of lading from the Electro [1065] Metallurgical Com-

(Testimony of Martin Wolf.)

pany and the weight of that, and look at your 10 drums shipment on your invoice to Switzerland.

A. Mr. Archer, I don't have to look at this. We were in the habit of re-packing shipments because it is usual in our trade that you don't ship in the original drums, because usually the original drums show where the material comes from, and I would not give my customer, Sulzer in Switzerland, the pleasure of going back directly to Electro Met and ordering the material directly. So I am fairly sure it was repacked.

Q. Well, did you make the Van-Ex in Long Island?

Mr. Alioto: There is a weight differential, isn't there, here, Mr. Archer?

Mr. Archer: Will you let me please complete my examination?

Q. Did you pack it?

A. For 200—for 10 little drums, 200 pounds, I don't need a shop to repack. I can do that in the office.

Q. Oh, so you made Van-Ex at other places besides Apex and Long Island?

A. We did not make it in the sense of fabricating, but we may have sent out a trial lot with the idea that if it goes over we will open the shop again.

Q. Well, do you recall——

A. I am convinced, Mr. Archer, that these original drums did not go over to Switzerland, simply for the reason of the marking. [1066]

(Testimony of Martin Wolf.)

Q. Well, you could put new labels on them without opening the drums.

A. They are usually stenciled on and we can't get them off. You have to scratch the tin off.

Q. Mr. Wolf, you did then make Van-Ex at places other than Apex and Long Island?

A. I will go so far as to say that maybe for a trial lot, yes.

Q. Now, do you recall this specifically?

A. No.

Q. Right now? A. No.

Q. You have no recollection?

A. I just know from general practice that we never shipped out anything in original containers if we can possibly help it because we don't give away our sources of raw materials.

Mr. Alioto: Counsel, as a matter of fairness, would you have any objection to reading to the Jury the weights in each one of those, the weight here and the weight on the invoice? On your invoice?

Mr. Archer: The weight on our invoice is 224 pounds.

Mr. Alioto: Yes.

Mr. Archer: The weight on the invoice [1067] from the Continental Ore Company is lighter, 204.5 pounds, indicating something was taken out.

Mr. Alioto: Or that it had been repacked.

A. That's right.

Mr. Alioto: That is what it indicates.

Mr. Archer: When was the last contract you

(Testimony of Martin Wolf.)

made with Electro Metallurgical Sales Corporation for the purchase of vanadium oxide, Mr. Wolf? Prior to the commencement of this action? Mr. Leir's contract of December '46 is already in evidence.

A. I couldn't tell you that.

Q. (By Mr. Archer): Well, I show you the contract dated September 10, 1948, between Electro Met and yourself.

A. (Witness examining.) Yes, sir.

Mr. Archer: I offer that as Defendant's Exhibit next in order.

Mr. Alioto: We have no objection to that.

(Contract between Electro Metallurgical Sales Corp. and Continental Ore Co. September 10, 1948, received in evidence and marked Defendant U's Exhibit 5-H.)

[See Book of Exhibits.]

Mr. Archer: The last exhibit is a contract dated September 10, 1948, between the plaintiff and Electro Metallurgical Sales Corporation, in which Electro Met agrees to sell and Continental agrees to buy the "buyer's domestic manufacturing requirements of vanadium oxide." [1068]

Q. Oh, one other thing, you will notice, Mr. Wolf, that although your contract in January of 1946 referred to "domestic manufacturing requirements," that this purchase in March of '46 was in fact a purchase of vanadium oxide for shipment overseas, was it not? A. Yes.

(Testimony of Martin Wolf.)

Q. It was neither domestic nor was it manufacturing, was it?

A. That is right. But I don't know when we bought this 200 pounds whether we referred to that contract or whether this was a separate transaction, I don't know.

Q. Well, you notice $1.10 per pound?

A. I really don't know. I don't know. It could be.

Q. It was the contract price, at any rate?

A. Yes.

Q. And even though this did go overseas, subsequent to that time the Electro Metallurgical Sales Corporation continued to enter into your requirements contracts with you, did they not?

Mr. Alioto: Object to the question because it assumes something not in evidence, namely, that exactly the same material went overseas. These documents show on their face there were different weights; therefore, it must have been a different container.

Mr. Archer: Are you contending that the oxide that they sold to Switzerland was not purchased from Electro Metallurgical Sales Corporation?

Mr. Alioto: I am not contending that at all. You are contending it was the same container that they got from Electro Metallurgical Sales that went to Switzerland. The evidence is to the contrary.

The Court: Well, the papers speak for themselves.

Mr. Alioto: I would respectfully submit, if your

(Testimony of Martin Wolf.)

Honor please, that those documents ought to be stricken because there is a variation in the weight and therefore they become entirely immaterial. There is no tie-up.

Mr. Archer: You get your general ledger in here and——

Mr. Alioto: You can get the general ledger in, we gave it to you.

The Court: Overruled. Let's get along.

Q. (By Mr. Archer): Now, my question was, Mr. Wolf, whether although the shipment of vanadium oxide that you purchased from Electro Metallurgical Sales Corporation went overseas, that nevertheless Electro Metallurgical Sales Corporation continued to enter into the requirements contracts up to the time of this suit.

Mr. Alioto: We will object to the question on the ground that it assumes the same container from Electro Metallurgical went overseas, and that is not the evidence, Judge.

The Court: Overruled. Let's get along. [1070]

Q. (By Mr. Archer): Do you have an answer to that?

A. Well, I said before, it was extremely kind of them.

The Court: Read the question.

(Pending question read back by the reporter.)

The Court: You can answer that yes or no.

A. "Yes," I will answer that.

Mr. Archer: I have no further questions.

(Testimony of Martin Wolf.)

Mr. Holland: Does the Court prefer to take the recess before I start?

(Short recess taken.) [1071]

Cross-Examination

Q. (By Mr. Holland): Mr. Wolf, I believe you stated when Mr. Archer was cross-examining you that you didn't buy some flue dust from Peru because Vanadium Corporation had shut down its plant in Peru and was not operating during this period, is that correct? A. That's right.

Q. Do you not know as a matter of fact that the Vanadium Corporation operated its mines and plant in Peru continuously from 1938 to 1949?

A. There was a period I think early in '30 when they shut down because the high-grade——

Q. I am talking about the period of '38 to '49.

A. Then they shipped not ore, but I think concentrates.

Q. But they did operate in Peru from '38 to '49, is that correct? A. That's right.

Q. Now, you have testified about Van-Ex and what it was. Just what was it, Mr. Wolf?

A. It was a vanadium oxide with certain ingredients that we put in it.

Q. I believe you said silicon and fluorspar?

A. Ferro-silicate.

Q. Pardon me? A. Ferro-silicon. [1072]

Q. And fluorspar?

A. And fluorspar—and/or.

Q. And what?

(Testimony of Martin Wolf.)

A. And/or fluorspar. I think we left out the fluorspar later. It is the same material that Electro Met makes now. They are making a——

Q. Regardless of that, I am trying to find out what you were making.

A. All right. It was copied.

Q. Now, you came with Continental on January 2, 1942, is that correct?

A. Yes. I was in their office before.

Q. And you were in their office before the——

A. That's right.

Q. When was that?

A. Well, I came here first in September of '40, and I went to Cuba in June, '41, so in between that time I was mostly in the office of Continental, in and out, on certain problems.

Q. And then from June, '41, to January, '42, you were not in the office, is that correct?

A. No, that's correct.

Q. Were you familiar, when you first came to work at Continental, with the fact that Van-Ex had started, or had been under consideration just shortly before you came for the [1073] first time?

A. I don't recall that.

Q. Pardon me?

A. I don't recall that.

Q. Do you recall whether or not you were selling Van-Ex at the time you came with Continental?

A. I think we started very shortly thereafter, or I started very shortly thereafter, yes.

Q. Started shipping? A. That's right.

(Testimony of Martin Wolf.)

Q. Then the first shipment was subsequent to that time?

A. I don't know whether it was the first.

Q. Were you familiar with the various experiments that were made in an attempt to arrive at a correct formula for Van-Ex?

A. At Apex?

Q. At Apex, with your——

A. Not particularly.

Q. ——collaboration? A. No.

Mr. Holland: Do you want this to be identified?

Mr. Alioto: You won't have to identify any letter if you will tell me it's authentic, Mr. Holland.

Mr. Holland: It is a copy from Mr. Leir's files, Continental Ore. [1074]

Mr. Alioto: Yes. We will stipulate to it and you won't have to have any trouble. We have no objection to it going in.

Mr. Holland: Offer it as our first exhibit, V. We would be another defendant.

The Clerk: V-1—Defendants' V-1.

(The letter referred to was thereupon marked Defendant V Exhibit 1-A in evidence.)

[See Book of Exhibits.]

Mr. Alioto: May we have the date of that letter?

Mr. Holland: Yes. It's a letter from Continental Ore Corporation's Mr. Leir to Apex Smelting, Attention Mr. (name obscured by courtroom noise), dated November 5, 1941, reading as follows:——

(Testimony of Martin Wolf.)

Mr. Alioto: Excuse me. Of course, it is clear at that time the witness was not here?

Mr. Holland: He came shortly after, and I would be very glad to introduce these through Mr. Leir if you prefer.

Mr. Alioto: I have no preference. You do it any way you want, Mr. Holland.

Mr. Holland (reading): "Following our conversation of last Saturday, we have already contacted several of our customers in regard to exothermic vanadium."

Q. (By Mr. Holland): Now, by "exothermic vanadium," Mr. Leir was referring to Van-Ex, was he not? [1075]

A. I would assume so, yes.

Mr. Holland (continuing reading): "——and we want to tell you the reaction is absolutely favorable. 1, we expect to have a very satisfactory price for this new vanadium compound, as we call it. 2, we will easily sell whatever quantities we can produce. We see from the correspondence——"

well, I will skip the part that doesn't refer to Van-Ex (continuing reading):

"We see from your correspondence with Blanding that Mr. Molenski is going to visit you around November 10th."

Q. (By Mr. Holland): Mr. Molenski was one of the principals of the Blanding Mines, is that correct? A. That's right.

Mr. Holland (continuing reading): "He is probably on his way to the East, and we must do every-

(Testimony of Martin Wolf.)

thing to prevent him from dealing with other parties. We think you should offer him $1.05 delivered Chicago until further notice, and tell him that if his material proves to be reliable in quality, and particularly if he could increase the quantities, you will consider going up to $1.10. As a matter of fact, our calculation for the exothermic vanadium is [1076] already based up on the $1.10 price delivered Chicago. As you can see from the following figures, $1.10 per pound V_2O_5 times 178——"

Q. (By Mr. Holland): That is the factor to convert it to V, is that right?

A. That's right.

Mr. Holland (continuing reading): "——1.958 dollars per ton V, plus 4.2 cents, equals $2.00, plus 10 cents for aluminum, equals $2.10. The prices we offer depend upon the customer, between $2.30 and $2.35, and we felt pretty certain we could get them. Therefore you can see for yourself that we should go up to $1.10 if necessary in order to secure the material for ourselves, and as much material as possible."

The Court: Who wrote the letter?

Mr. Holland: This was written by Mr. Leir of Continental Ore.

Mr. Alioto: Not the witness.

Mr. Holland: Not the witness.

Mr. Alioto: Who wasn't here.

The Court: Who?

Mr. Holland: Mr. Leir.

The Court: To whom was it written?

(Testimony of Martin Wolf.)

Mr. Holland: It is written to the Apex Smelting [1077] Company.

The Court: Oh.

Q. (By Mr. Holland): Mr. Wolf, it would appear from this letter, would it not, that originally it had been intended to put aluminum into the——

A. That's right.

Mr. Alioto: I submit, if your Honor please, it is not proper to inquire from a witness what appears in a letter he didn't write, when he wasn't even in the country.

The Court: If he knows.

Mr. Alioto: He is asking him to comment upon what appears in a letter. I think that's——

Mr. Holland: I next offer in evidence a letter from Mr. Leir to Apex Smelting, dated November 25, 1941.

Mr. Alioto: No objection.

The Clerk: Defendants' V 2-A.

(The letter referred to was thereupon marked Defendant V Exhibit 1-B in evidence.)

Mr. Holland (reading): "We have your letter of November 18th, to which we can now answer, as we have just received the samples.

"Our opinion is that the finer the vanadium is ground, the better the reaction will be in the steel furnace.

"The difference between a quarter-inch and an eighth-inch is certainly [1078] not important, but you should notify all your suppliers to ship from

(Testimony of Martin Wolf.)

now on only material ground down to one-eighth-inch.

"Any material you have in stock which is a quarter-inch should, of course, be used as is without any grinding. However, we have something else in mind in this connection.

"Don't you think it would be a good idea to add a little bit of powdered fluorspar, for two reasons:

"One, you would make the whole mixture a little more complex for the one who analyzes it and wants to imitate it; two, we are convinced that some fluorspar will have an excellent effect with regard to the better fluxing of Van-Ex."

I now offer in evidence letter of November 27th from Mr. Leir to Apex, I guess.

Mr. Alioto: If your Honor please, I just wonder whether this shouldn't be put in through Mr. Leir. For one thing, this witness wasn't here at this period of time, and it is delaying the witness completing his examination. I have no objection to it going in at some time, but it seems to me it ought to go in through the witness who can understand it and explain it.

The Court: Unless you can agree, you gentlemen, that it should go in now, I think perhaps it should await Mr. Leir. [1079]

Mr. Holland: I think that is correct, your Honor. I understood Mr. Alioto to say he didn't care.

Mr. Alioto: I wouldn't care for the first one, and wouldn't care. But this witness is trying to

(Testimony of Martin Wolf.)

make an engagement in Paris day after tomorrow, and that's the only reason I am making this objection.

Mr. Holland: All right, in that case I will omit all of the balance of these letters, with the understanding that I can examine Mr. Leir on them.

Mr. Alioto: Mr. Leir will be a witness, and he will be here. There won't be any question about that.

Mr. Holland: Except one letter which was written by Mr. Wolf, dated February 26, 1942.

Mr. Alioto: We have no objection to that document.

The Clerk: Defendants' V 1-C.

(The letter referred to was thereupon marked Defendant V Exhibit 1-C in evidence.)

Mr. Holland: Would you like to see the letter before I read it, Mr. Wolf?

The Witness: No.

Mr. Holland: Dated February 26, 1942, addressed to Apex Smelting Company, written by Martin Wolf (reading):

"We have received your telegram regarding the 5,000 pounds of V contained in Van-Ex, and have also received from Mr. Jenks a copy of the telegram he [1080] sent you. In all papers please mention the general license number and call the material vanadium oxide. Make out your invoice in triplicate on your usual form. Please make out an export declaration, also in triplicate. It is our

(Testimony of Martin Wolf.)

opinion that you should ship not only 2,000 pounds V contained, but the entire 5,000 pounds of V contained, since there is no risk in their adding pure vanadium pentoxide."

Q. (By Mr. Holland): Now, this letter refers to a shipment of Van-Ex, does it not, Mr. Wolf?

A. Apparently, from that letter. Thank you. Well, this is a shipment to the Atlas Steel in Canada, right?

Q. Correct. Is it a shipment of Van-Ex? That was the question. A. Obviously, yes.

Q. Thank you.

A. Can you hold that a minute?

Q. I am sorry.

Mr. Alioto: You are aware of the Canadian shipment?

Mr. Holland: I didn't bring that out. I am trying to find out what Van-Ex is.

Mr. Alioto: Did you offer the whole letter in evidence? [1081]

The Witness: No, let's not go into this other matter.

Mr. Alioto: I am suggesting, if your Honor please, that if it is gone into here, it would be very prejudicial for us not to go into it on our side to show what they did.

The Court: No, we are not going into it at all. That's settled.

Mr. Alioto: This letter is in evidence, if your Honor please.

(Testimony of Martin Wolf.)

The Court: I understand it is. But this other word was injected by the witness.

Mr. Alioto: Oh, no, it is right on the letter; it is right on the letter.

Mr. Holland: I am offering the letter simply for the purpose of the statements contained in it regarding Van-Ex.

Mr. Alioto: Well, the point I wanted to make is, we will take it up at a later time, of course,——

The Court: No, it is settled, so far as that's concerned.

Mr. Alioto: Very well, if your Honor please.

The Court: You may have an exception, but that's as far as you may go.

Mr. Alioto: I am not objecting here; I am simply pointing out I think it opens it up.

The Court: No. [1082]

Mr. Holland: "It is our opinion"—this is the only part of the letter I am offering:

"It is our opinion that you should ship not only 2,000 pounds of V contained, but the entire quantity of 5,000 pounds V contained, since there is no risk in their adding pure vanadium pentoxide. This is being done in a considerable number of steel mills and nothing can be wrong with it."

Q. (By Mr. Holland): Now, Mr. Wolf, I ask you if that was not a direction of yours to the Atlas to make a shipment of Van-Ex containing nothing but pure vanadium pentoxide?

A. Not necessarily, because basically whatever there is in, if there is any fluorspar in, or any

(Testimony of Martin Wolf.)

aluminum, it cannot possibly do any harm, because it goes into the slag.

Q. What did you mean when you said:

"It is our opinion that you should ship not only 2,000 pounds of V contained, but the entire quantity of 5,000 pounds V contained, since there is no risk in their adding pure vanadium pentoxide."

A. Well, I would guess that 99 percent is pure vanadium oxide.

Q. Well, you were referring to pure vanadium oxide when you used those words, were you not?

A. Substantially, yes, because that was substantially [1083] Van-Ex.

Q. And weren't you telling Apex that inasmuch as there wasn't time for preparing shipment of Van-Ex, they were simply to ship the pure oxide?

A. No, excuse me, Mr. Holland. The vanadium oxide is not 100 percent vanadium oxide, anyway; it is only 85 percent. So there are other ingredients in it, anyway. So——

Q. I understand that, but it wasn't a direction to Apex to ship the vanadium pentoxide as it was in the form of vanadium pentoxide?

A. It was not a direction, because we did not change—this was an implication, you might call it, but it was definitely no instruction, because they had previously discussed what should go into this Van-Ex.

Q. Well, I will go into that with Mr. Leir, because those are contained in his letters. But your

(Testimony of Martin Wolf.)

testimony is that this was not a direction on your part to ship your vanadium?

A. I don't take it as such direction, no.

Q. Although it says that, is that correct?

A. It seems to say that, yes.

Mr. Alioto: I think it speaks for itself, if your Honor please.

Mr. Holland: That's all.

Mr. Alioto: I would like for the record to understand the status of this last exhibit. Is it offered in its [1084] entirety?

Mr. Holland: I offered it in evidence for the portion I read, only, together with the statement of who wrote it and to whom it was written.

Mr. Alioto: Well, how about the statement as to where it was to be sent?

Mr. Holland: That I did not offer. I don't see what difference it makes where it was sent.

Mr. Alioto: Well, there was a lot of activity about stopping this activity. I think it makes that difference. That was—I will make a record on this, if your Honor please, because I think this is, again, totally unfair, to permit one side of the story to get in, carrying the implication that it does, in view of the——

The Court: You understand the ruling of the Court on that point.

Mr. Alioto: Yes, I do, if your Honor please. I simply want to make a short record, in 20 seconds.

In view of the admission into evidence of that exhibit, which is denominated Defendants' V 3-C,

(Testimony of Martin Wolf.)

we would respectfully again renew our offer to show what happened to the Canadian shipment, which is one of those directly involved here.

The Court: Objection sustained.

Mr. Alioto: I take it there had been an objection to the offer? [1085]

Mr. Holland: I am objecting to the offer of the balance of the letter.

Mr. Alioto: All right. Then the objection is sustained.

Mr. Holland: And shall I prepare simply the portions that are offered and submit it in lieu of this exhibit? I will do that. I will leave it with you.

The Court: Very well.

Mr. Alioto: We are objecting to that procedure, of course. We can't control it, but we object to taking a sentence out and not indicating where the shipment went.

The Court: It's immaterial where it went, absolutely.

Mr. Alioto: Not for the purpose Mr. Holland is using it, Judge. I know the ruling; I know the Court's ruling.

The Court: The Court has ruled on that point.

Redirect Examination

Q. (By Mr. Alioto): Now, Mr. Wolf, you were with Continental Ore Company in November of 1943, were you not? A. That's correct.

Q. And you were with them at the time that the request was made in November to both Electro

(Testimony of Martin Wolf.)

Metallurgical Sales Corporation and the Vanadium Corporation of America to supply you with regular monthly supplies of vanadium oxide? [1086]

A. That's correct.

Q. Now, what was the situation in November of 1943 with respect to contractual arrangements with any proposed manufacture of ferro-vanadium? Did you have any at that time?

A. In November of '43?

Q. Yes.

A. We had a contract with Imperial Paper.

Q. Well, I think your dates may be a little awry, but to establish those definite dates on matters on which both——

Mr. Archer: That's January, 1944, whatever the date is. We can develop that.

A. We had negotiations at that time which we were sure would lead to a contract with Imperial Paper, so we were trying to,——

Q. (By Mr. Alioto): All right. The contract was actually made in January of 1944, is that correct?

A. Yes. But we were trying to get a basis of raw materials for our negotiations for the forthcoming contract.

Mr. Alioto: At this time, if your Honor please, we offer into evidence that agreement between Imperial Paper and Color Company and the Continental Ore Company.

Mr. Archer: Could I see it?

Mr. Alioto: Yes, you certainly may.

(Testimony of Martin Wolf.)

It is dated January 4th of 1944. We offer it as plaintiffs' exhibit next in order.

The Clerk: Plaintiffs' No. 110.

(The letter-contract referred to was marked Plaintiffs' Exhibit No. 110 in evidence.)

[See Book of Exhibits.]

Mr. Alioto: We also offer into evidence the complete contract mentioned in the interrogation of Mr. Archer, letter-contract dated February 10, 1943, between Climax Molybdenum Company of Pennsylvania and the Continental Ore Company.

Mr. Archer: I don't have any objection to these going in. In fact, I think they should, for the record. But you are not going to ask Mr. Wolf about the negotiations?

Mr. Alioto: No, don't intend to. Just want to show what the situation was at various times when demands were made for oxide, and what it was at other times. I understand there is no objection to this contract in evidence, if your Honor please.

The Court: It may be admitted.

The Clerk: Plaintiffs' 111.

(The letter-contract referred to was marked Plaintiffs' Exhibit No. 111 in evidence.)

Mr. Alioto: I would like just to read the general terms for the members of the jury.

Plaintiffs' 110. Agreement between Imperial Paper and Color Corporation and the Continental Ore Company (reading):

"Whereas Imperial is or may be engaged in the manufacture of vanadium products as a principal

(Testimony of Martin Wolf.)

and desires to arrange for the cooperation of the Ore Company as the selling agent; and whereas Ore Company is willing to accept such undertaking.

"Now, therefore, in consideration of the premises and the mutual covenants contained herein, the parties agree as follows:

"The Ore Company agrees to cooperate with Imperial in connection with the manufacture of vanadium products including but not limited to vanadium oxide and ferro-vanadium; and to put at its disposal all technical and engineering information and data in the possession of the Ore Company, and to consult with Imperial with reference to the availability of raw material, the metallurgical or chemical processes to be employed, and as to the extent of the market for the finished product. The Ore Company further agrees that it will report to Imperial all changes in market conditions and the development of new sources of supply for raw materials, et cetera, both in the domestic and foreign markets."

And there is an appointment of Continental as the exclusive sales agents. I will read it; it's short (reading):

"Imperial hereby appoints the Ore Company as its [1089] exclusive sales agent for all products mentioned above and produced by it during the term of this contract, and authorizes the Ore Company to sell the entire output of these materials, subject to the then existing governmental regulations at the market price as fixed by Imperial. If

(Testimony of Martin Wolf.)

the Ore Company shall procure an order of a customer whose credit standing is not satisfactory to Imperial, Imperial shall give notice that it does not approve the credit and Imperial shall not be obligated to accept and ship any such order unless the Ore Company shall guarantee the payment for any material shipped upon such order. All sales will be made in the name of Imperial and will be invoiced by Imperial direct to the various customers to whom shipment is made. Copies of all orders and important correspondence passing between the Ore Company and the customers will be supplied promptly to Imperial."

There are other terms, but Paragraph 5 sets out the term of this contract (reading):

"It is agreed that the term of this contract shall commence on the 31st day of December, 1943, and continue for a period of five years thereafter."

Mr. Archer: What was the date? Oh, December?

Mr. Alioto: Yes, December 31, 1943, for a period of five years thereafter, would bring it up to December 31 of 1948, or January 1 of '49.

Then the contract with the Climax Molybdenum Company is dated February 10, 1943, and is in letter form, the form of a letter, from the vice-president of Climax Molybdenum Company of Pennsylvania to Mr. Henry J. Leir, president of the Continental Ore Company (reading):

"Subject: Ferro-vanadium.

"In reply to your letter of February 8th, we herewith submit to you in duplicate the following

(Testimony of Martin Wolf.)

contract offer with the understanding that your acceptance at the place designated therefor at the bottom hereof shall constitute a mutual binding agreement between us, our successors and assigns.

"1. You will ship to us at Langeloth, Pennsylvania, freight prepaid, 20,000 pounds of contained V in V_2O_5 concentrates, to which you now have title.

"2. You will ship to us adequate low copper aluminum to make it possible for us to produce ferro-vanadium from the vanadium oxide.

"3. We shall convert the vanadium oxide into ferro-vanadium, using our own labor, equipment, and supervision. We shall pack and deliver to you f.o.b. Langeloth, Pennsylvania, into suitable fiber containers, all of the ferro-vanadium produced as a result [1091] of this operation. You will pay us the following amount: (a) 20 cents for each pound of vanadium contained in the ferro-vanadium returned to you; (b) cost of fluxing materials necessary, such as lime and fluorspar; (c) cost of containers and labor for packing such ferro-vanadium; (d) it is understood that we shall pursue this matter with all diligence but do not guarantee any specific delivery date nor a minimum percentage recovery. The usual force majeur clause will apply to this agreement. We expect to complete this practice during the month of March of 1943. Kindly return to us a duplicate of this contract after you have executed the same."

Q. (By Mr. Alioto): Now then, during the

(Testimony of Martin Wolf.)

examination of Mr. Archer, reference was made to a contract dispute between you and Electro Metallurgical as to whether the price should be $1.10 or $1.15. Do you recall that?

A. That's right.

Q. And there was also reference made to the fact that you at that time offered to make a requirement contract, in 1943, with the Electro Metallurgical Company.

A. That's right.

Q. And that was the requirement contract to cover the [1092] rest of the year? A. Yes.

Q. Do you recall for which of these contracts you made that demand for the requirement contract? A. Which of these——?

Q. For which of either the Imperial or the Climax contract?

A. That was in June? No.

Q. June of '43?

A. June of '43? That would have been probably for Climax, I would say.

Q. Now then, you never did get the requirement contract? A. No.

Q. In 1943, did you? A. No.

Mr. Alioto: At this time, to show the condition of supply at that period of time, if your Honor please, we offer into evidence the letter to Mr. W. G. Haldane, the assistant general superintendent of United States Vanadium Corporation, dated November 10 of 1943.

(Testimony of Martin Wolf.)

Mr. Archer: This doesn't have anything to do with this witness.

Mr. Alioto: I think it does. If there was evidence offered, if your Honor please, as to a refusal to enter into a requirement contract in 1943, and there was a great [1093] deal of evidence about the contracts they did give us in '46 after these contracts were not in existence—the Imperial Paper and Climax contracts.

The Court: What is this that you are offering?

Mr. Alioto: This shows the supply situation——

The Court: No. What is it?

Mr. Alioto: It is a letter from Mr. Franklin Hatch of the War Production Board to this defendant, United States Vanadium Corporation, and sets out the situation as of that time. Would your Honor like to read the letter? I think it shows exactly where the information as to the supply situation comes from, too.

Mr. Archer: Well, I object to it on the same ground that you objected to the Van-Ex letter of Mr. Leir going in through this witness. This wasn't a letter to or from this witness.

Mr. Alioto: Neither were your letters. A number of letters were read that were not to or from this witness.

I think it ties this whole thing together so the jurors can see it all in one piece. [1094]

The Court: How would this witness be interested in this letter?

Mr. Alioto: This witness was interrogated about

(Testimony of Martin Wolf.)

that transaction where he asked for a requirements contract at or about the same time. This simply shows the supply situation at that time, and I think we would like to have it at this point for that reason.

The Court: Let it be admitted. Exception allowed. I think it is wholly immaterial, cumulative.

(Letter War Production Board, Washington, D.C., by E. Franklin Hatch, to Mr. W. G. Haldane, U. S. Vanadium Corporation, November 10, 1943, received in evidence and marked Plaintiffs' Exhibit 113.)

Mr. Alioto: This letter dated November 10, 1943——

Q. You will recall that the request of the Vanadium Corporation and Electro Met was also in November, 1943, as shown by Exhibit 40.

This is from the War Production Board to Mr. W. G. Haldane, Assistant General Superintendent of the United States Vanadium Corporation in New York.

"Dear Mr. Haldane:

"This is to acknowledge your letter of October 29th requesting that the restrictions placed upon vanadium immediately be removed in accordance with the expressions of opinion at the Vanadium Industry Advisory Committee [1095] Meeting held on October 25, 1943.

"I should also like to reiterate the understanding reached at the meeting that in view of present supply-demand situation in vanadium all requests

(Testimony of Martin Wolf.)

implied or otherwise, to maintain maximum production have been withdrawn insofar as vanadium, itself, is concerned.

"The Ferro-Alloys Branch of the Steel Division has started the procedure to remove vanadium from allocation as requested by the Vanadium Industry Advisory Committee. We are unable to advise you what disposition will be made of this matter, but hope that favorable action will be taken in the near future. With respect to the further recommendations by the Committee, these have been referred to the proper authorities for consideration."

Q. Now, with respect to the Imperial matter, Mr. Wolf, Mr. Archer read to you some correspondence between yourselves and the Imperial Paper Company, but not all of it. In connection with that part of the examination, we offer a letter from Mr. Brown, the General Manager of the Imperial Paper and Color Corporation, to the witness, dated December 5, 1944. This letter comes between the correspondence read by Mr. Archer. Mr. Archer had some in before and some in after.

Mr. Archer: Could I see the exhibit? [1096]

Mr. Alioto: Yes, Mr. Archer.

(Colloquy between counsel, outside the hearing of the reporter.)

Mr. Alioto: There are certain markings on the exhibit which, of course, will be taken off at the proper time.

Mr. Archer: I think the letter ought to go in.

(Testimony of Martin Wolf.)

Mr. Alioto: Fine. There is no objection to it then.

(Letter December 5, 1944, Imperial Paper and Color Corp. to Continental Ore Company, received in evidence and marked Plaintiffs' Exhibit 114.)

Mr. Alioto: This letter is dated December 5, 1944, between Mr. Brown, who is the General Manager of the Imperial Paper and Color Corporation, and the Continental Ore Company, 500 Fifth Avenue, New York.

"Gentlemen:

"Replying to your letter of December 4th, we are writing to advise you that we are not willing to write a letter such as you suggest at this time, because it might be construed as a representation that would involve an obligation that we do not care to assume. It is true that with the manpower situation as it is, we could not proceed with the Vanadium project, aside from all other considerations, but it is also true that if the manpower situation were easier, we would have to have more confirmation than we have [1097] been able so far to obtain that there are, and always will be, ample sources of vanadium-bearing material, so that if we invested capital in a plant, we would not sooner or later find ourselves with equipment idle, because of being unable to secure necessary raw materials.

"We now have some leads out to see what we can determine as to the probable operation of the Otavi mines after the cessation of hostilities in

(Testimony of Martin Wolf.)

Europe. Mr. Leir on his proposed trip to Mexico ought to be able to establish whether there is a new source of vanadium-bearing ore available in that country, and if so, in what quantities and in what concentrations.

"As we see this situation at the present time, one of the principal hazards in entering into the manufacture of V_2O_5 is the possibility that you may not be able to get sufficient raw material. Certainly the two major producers at this time have protected themselves against such a contingency by controlling primary sources of raw material. We would not be willing at the outset at least to make an investment of the size necessary to do this, but nevertheless we must be sure that there are sources from which we can always obtain vanadium-bearing materials at a [1098] price which will enable us to manufacture and compete with those who control their own supplies."

Mr. Alioto: And letter to the same effect, if your Honor please, which we don't have to read at this time but which we offer, to complete the correspondence put in by Mr. Archer, letters of April 9, 1945, April 13, 1945, and May 11, 1945. We ask that these be marked as one exhibit, if your Honor please.

The Court: Very well.

Mr. Alioto: We don't ask that they be read at this time, but they show the reasons, what the reasons were that were assigned for not going into it.

(Testimony of Martin Wolf.)

(Letters from Imperial Paper and Color Corporation to Continental Ore Company, dated April 9, 1945, April 13, 1945, and May 11, 1945, received in evidence and marked Plaintiffs' Exhibit 115.)

[See Book of Exhibits.]

Q. (By Mr. Alioto): Mr. Wolf, you were interrogated by Mr. Archer about the price dispute that you had with Electro Met and he read from your letter of May 21, 1943 to Electro Met. I want to call your attention to his paragraph:

"However, we believe that we can overcome this difficulty in price resulting from the difference between spot and contract sales. We are perfectly willing to sign a contract with you for our requirements until the end of the year. At present these requirements are estimated to amount to about 10,000 pounds of V contained in pentoxide per month."

Now, at any time after May 21, 1943, and the beginning of 1946—in other words, in that period from May 21, 1943 to the beginning of 1946—did you ever receive a requirements contract or an offer of a requirements contract from Electro Metallurgical Company? A. We did not.

Q. I think we can finish in just a moment, as far as I am concerned, Mr. Wolf. Mr. Archer inquired about whether or not you purchased certain supplies or tried to purchase certain supplies of vanadium products from the United States Government. I show you a copy of a document dated

(Testimony of Martin Wolf.)

February 19, 1943. Would you be good enough first to state whether or not you prepared that document? A. Yes, I did.

Q. You want to read it, please?

A. (Witness examining.)

Q. Did you make an inquiry of the United States Government in 1943 with respect to any plans the government had for stockpiling of vanadium products? A. Yes, we did.

Q. What did you find out about whether or not the government had made provisions for stockpiling certain products?

A. That's right. They made provisions for stockpiling [1100] ferro-vanadium at one time.

Q. And do you recall the quantity that was to be included in the stockpile?

A. 400,000 pounds, I believe.

(Discussion between counsel.)

Mr. Alioto: Counsel informs me he has no objection to the memorandum of this conversation with the government being placed into evidence, so we will offer it at this time, if your Honor please, rather than taking up a lot more time in establishing it. I think it sets it out concisely.

(Memorandum, Wolf, February 19, 1943, received in evidence and marked Plaintiffs' Exhibit 116.)

Mr. Alioto: Now, finally, your Honor, just to preserve our record again and not for any other purpose, there has been extensive interrogation here about costs, what vanadium oxide costs, ferro-

(Testimony of Martin Wolf.)

vanadium costs, and the relationship of vanadium oxide to ferro-vanadium, or, at least, Van-Ex to ferro-vanadium.

These defendants made a very exhaustive study of that whole matter, if your Honor please, and made some rather important conclusions with respect to that, and they made the studies in what has been offered previously as Plaintiffs' Exhibit 47.

Plaintiffs' 47 called "Special Report on Vanadium" made by the Union Carbide Research Organization, has a rather [1101] elaborate study on this matter of costs and also the relationship of vanadium oxide to ferro-vanadium in relation to costs and also the advisability of using vanadium oxide rather than ferro-vanadium, and the reasons for not using it directly in a steel mixture. We submit that because of the somewhat extensive cross-examination of Mr. Archer, and less extensive on the part of Mr. Holland, on Van-Ex, what it was, and what efficacy vanadium oxide had in connection with steel mixture, that in that connection we offer into evidence, as our Plaintiff's Exhibit next in order, what has been previously marked 47 for identification, "Special Report on Vanadium," which sets out these various factors.

Mr. Archer: I must renew my objection. This document is dated in 1935, your Honor. You recall I didn't contend with Mr. Wolf that his Van-Ex wasn't effective. I even said we made some of it.

The Court: Objection sustained.

(Testimony of Martin Wolf.)

Q. (By Mr. Alioto): Just one last question. Mr. Wolf, as of February 20, 1942, were you personally aware of any negotiations that were going on between representatives of the Vanadium Corporation of America and the representatives of the Apex Smelting Company?

A. No, I was not.

Mr. Alioto: We have no further questions.

Recross-Examination

Q. (By Mr. Archer): I have two, at least, on these agreements. You recall, Mr. Wolf, in that Imperial Paper agreement I asked you during your examination whether you recalled if it said anything about the supply of flue dust. I will just read the paragraph 6, page 3:

"Imperial covenants and agrees that all conditions being equal that Imperial will give to the ore company (that is Continental Ore) the first opportunity of supplying Imperial's total requirements for vanadium-bearing raw material, including flue dust, vanadium ores, or concentrates."

Now, in regard to this Climax contract dated February 10, 1943, you have already testified that 10,000 pounds — it obligates you — withdraw that question.

The Climax contract dated February 10, 1943, obligates you to furnish 20,000 pounds of contained V in a V_2O_5 concentrate, to Climax; you recall that, don't you? A. Yes.

(Testimony of Martin Wolf.)

Q. 10,000 pounds of that came from Electro Met? A. Yes.

Q. And you also got from other sources the remaining 10,000 pounds, didn't you?

A. Yes.

Q. So that you were able to comply with the terms of that [1103] contract?

A. That is right.

Q. Now, in regard to the period in November, 1943, were you aware at that time of this letter that was just read, from Mr. Jenks, I believe it was, to Mr. Haldane? A. No.

Q. Were you aware at that time that about three months prior thereto the United States Vanadium Corporation had undertaken for the account of the United States Army the production of over two million pounds of vanadium oxide together with an unspecified amount of uranium oxide at its plants in the Colorado Plateau? A. No.

Recross-Examination

Q. (By Mr. Holland): I have got one question. Mr. Wolf, as long as Mr. Alioto has brought up this refusal, qualified refusal of Vanadium Corporation to sell oxide in November of 1943, and reading you Plaintiff's Exhibit 41, which is Mr. Laub's answer to the inquiry, he says:

"In response to your inquiry of November 16th requesting quotation on ten to fifteen thousand pounds monthly of V_2O_5 contained in vanadic acid, we regret very much that due to our present com-

(Testimony of Martin Wolf.)

mitment we are not in a position to take on the additional tonnage at the present time."

Have you any knowledge as to what the "then commitments" of the Vanadium Corporation were or what the supply situation was at that time of that particular company? A. No.

Q. You have no knowledge on that subject, is that correct? A. No.

Q. The letter further says:

"Perhaps if you were still interested at a later date and our situation changes we will be glad to look at the matter further at that time."

I want to ask you if you ever thereafter, in response to this invitation from the Vanadium Corporation, inquired at a later time whether or not you could secure this contract.

A. I don't recall that we did.

Mr. Holland: That is all.

Further Redirect Examination

Q. (By Mr. Alioto): Mr. Wolf, in the light of Mr. Archer's examination on the Climax contract and the purported help that they gave you by selling you 10,000 pounds of it, did you ever have a conversation with any employee of Electro Metallurgical Company relating to the Climax contract or your Climax negotiations?

A. Yes, very definitely so.

Q. And what was the name of that employee of the Electro Metallurgical Company with whom you had this conversation?

(Testimony of Martin Wolf.)

A. That was Mr. Arrouet in June of 1943.

Mr. Alioto: Now, I know your Honor has previously excluded this conversation, but Mr. Archer has indicated that they gave him a lot of help with Climax.

Q. Who was present at that conversation, Mr. Wolf? A. Mr. Arrouet and myself.

Q. Would you be good enough to state what was said?

Mr. Archer: I object, your Honor.

The Court: Objection sustained. I have ruled on that several times.

Mr. Alioto: We have no further questions.

May the witness be excused, if your Honor please?

The Court: Yes. Any reason why this witness cannot be excused?

Mr. Archer: No, your Honor.

Mr. Holland: No, your Honor.

The Court: Very well. I hope you settle things over in Paris.

The Witness: Thank you, your Honor.

(Witness excused.)

The Court: Recess the court until ten o'clock tomorrow morning.

(Thereupon an adjournment was taken until 10:00 o'clock a.m., Thursday, June 12th, 1958.)

Thursday, June 12, 1958, 10:00 o'clock a.m.

Mr. Alioto: If your Honor please, the record should show at this point that the plaintiff has been previously sworn. The plaintiff calls Mr. Henry J. Leir.

HENRY J. LEIR

one of the plaintiffs, called as a witness in his own behalf, having been previously duly sworn, resumed the stand and testified further as follows:

Direct Examination

Q. (By Mr. Alioto): Mr. Leir, you have been previously sworn in this action.

A. Yes, sir.

Q. Would you be good enough to tell us, Mr. Leir, where you presently reside?

A. I reside at 150 Central Park West in the City of New York.

Q. What is your present business or occupation?

A. I am president of Continental Ore Corporation and partner in Continental Ore Company.

Q. Would you be good enough to tell us where the main office of the Continental Ore Corporation is located?

A. At 500 Fifth Avenue in the City of New York.

Q. And what space do you occupy there? [1108]

A. We occupy two floors.

Q. What is your annual rental there?

A. Over $60,000.

Q. Do you have offices other than in New York City?

A. We have offices in 18 other places.

Q. Would you be good enough to mention the principal places?

Q. (By the Court): In how many other places?

A. Eighteen.

(Testimony of Henry J. Leir.)

Q. Eighty? A. Eighteen.

Mr. Alioto: Eighteen, if your Honor please.

Q. (By Mr. Alioto): Do you have a little trouble with the English language, Mr. Leir?

A. Yes.

Q. Your mother language was German?

A. I was born in Germany.

Q. You also speak French?

A. I also speak French.

Q. Will you do the best you can in English? As a matter of fact I came off Fisherman's Wharf, and we have a little trouble with it down there, too. You stay with it, Mr. Leir.

Now, Mr. Leir, with respect to these other offices, where are they located?

A. To start with the United States, we have an office in Los Angeles; we have offices in England, Luxembourg, France, Germany, Switzerland, Italy, Austria, Spain, Mexico, Rio de Janeiro, Korea, Japan, South Africa, Southern Rhodesia, New Delhi, India.

Q. Approximately how many employees do you have in all of your offices, including your New York office,—full-time employees?

A. All told, about 190 people.

Q. A hundred and ninety? A. Yes.

Q. Of that 190, how many are located in New York? A. About 75.

Q. Mr. Leir, would you be good enough to tell us the principal business of the organization which you have?

(Testimony of Henry J. Leir.)

A. We are engaged in the business of minerals, ores and alloys.

Q. During an earlier period of time reference has been made to a Continental Ore Corporation and the two other plaintiffs in this action, who are Mrs. Leir and Lona Schloss. Would you be good enough to tell us who composed the partners in the Continental Ore Company? Who were they?

A. Mrs. Leir, my wife, Mrs. Schloss, my mother-in-law, and myself. [1110]

Q. Your mother-in-law is still living, is she?

A. Yes.

Q. How old is she?

A. Eighty-two years old.

Q. And your wife is still living?

A. Yes.

Q. Now then, prior to the period of the partnership there was a corporation from 1939 to 1942, is that correct, Mr. Leir? A. Yes.

Q. And who were the stockholders in that corporation? A. The family.

Q. In other words, yourself, your wife and your mother-in-law, is that correct? A. Yes.

Q. And that corporation was dissolved in April of 1942?

A. I think it was dissolved in—if I remember correctly, it was dissolved in October of 1942.

Q. And what happened to the assets of that corporation?

A. They were entirely transferred to the company.

(Testimony of Henry J. Leir.)

Q. The partnership? A. Yes.

Q. And at the time of the transfer, the partners in the partnership were yourself, your wife and your mother-in-law?

A. Myself, my wife and my mother-in-law.

Q. And has the composition of the partnership continued the same right down to date?

A. It is the same, with the exception that a few years ago we took in a cousin of my wife as an additional partner.

Q. What is his name?

A. Louis J. Lipton.

Q. Mr. Leir, would you be good enough to tell us how long you personally had been engaged in the business of minerals, ores and alloys?

A. I started at an early age; I started in 1916, at the age of 16.

Q. Where were you born, Mr. Leir?

A. I was born in Germany.

Q. How many children in the family?

A. We were six. I was the eldest.

Q. Did your father die when you were young?

A. My father died when I was 11 years old.

Q. Did you go to work at 16, then?

A. I went to work at 16.

Q. Where?

A. In my home town at Beuthen, in Silesia, which is similar to, I would say, Pittsburgh, Pennsylvania.

Q. Is it a steel area—iron?

A. It is a steel area, yes.

(Testimony of Henry J. Leir.)

Q. What was the name of the company for which you went [1112] to work?

A. The name of the company for which I worked at the time was Weissenberg.

Q. What was the nature of the business carried on by that company?

A. We were engaged in the business of minerals, ores, refractories and coal.

Q. What period of time did you work for that company?

A. I stayed with them until the end of 1918.

Q. You started working in 1916 when you were 16 years of age? A. Yes.

Q. Could you tell us specifically what it was that you did with that company — your personal duties?

A. During those three years while I was with them I was, what was known in German language, an apprentice. I learned the business from each and every angle.

Q. Was that a merchant company?

A. It was a merchant company and a manufacturing concern, because we manufactured magnesite bricks for the steel furnaces.

Q. Now then, after your apprenticeship with that company did you join another firm?

A. In the beginning of 1919 I joined another firm known as Wolf-Netter. [1113]

Q. Where was that firm located?

A. This firm was located in Mannheim, Germany.

(Testimony of Henry J. Leir.)

Q. What was the nature of the business of Wolf-Netter?

A. It was a business similar to the business I had been in, but on a much larger scale. As a matter of fact, Wolf-Netter was considered one of the largest firms in Germany. It was a family concern, and we were engaged in the business of minerals, ores, alloys—and they were also in the manufacturing business.

Q. Could you name some of the minerals, ores and alloys in which that company was engaged?

A. It was, again, magnesite, which had become a specialty of mine, fluorspar, ferro-silicate, pig iron, aluminum. As a matter of fact, Wolf-Netter made, at a certain time, together with the State-owned aluminum works, a big portion of the production in aluminum foil, and I still remember that the first aluminum foil used in this country by Hershey Chocolate came from Germany—came from us.

Q. Who were the principal customers of Wolf-Netter — what classification of persons were the principal customers of the Wolf-Netter Company while you were there?

A. Steel mills, foundries, metal works and chemical factories.

Q. What, specifically, did you do with the Wolf-Netter Company while you were there? [1114]

A. I did purchasing and selling.

Q. Purchasing and selling of what?

A. Purchasing and selling.

(Testimony of Henry J. Leir.)

Q. Purchasing and selling of what, Mr. Leir?

A. Purchasing and selling, in the beginning, of magnesite and fluorspar; later, pig iron and ferro-alloys.

Q. For how long a period of time did you stay with the Wolf-Netter organization?

A. I stayed with them 13 years, until '31.

Q. At that time you were 31 years of age, too?

A. Yes.

Q. What was the next job you had in any industry relating to minerals, ores and alloys?

A. In '31 I became general manager of a firm known as Magnesite G.M.B.H. — which means "Limited"—in Bonn, Germany, and this firm was in the production end of magnesite refractories.

Q. (By the Court): What is that?

A. It was in the production of magnesite refractories, your Honor.

Q. (By Mr. Alioto): The firm was in the production of magnesite refractories? A. Yes.

Q. Now, was this firm an affiliate of the Wolf-Netter organization?

The Court: Pardon me just a moment.

Q. (By the Court): Now, explain that term so the jury will understand it, as well as the Court.

A. Yes.

Q. Magnesite.

A. Magnesite is a mineral which, after a certain treatment, is being pressed under tremendous pressure into bricks, and these bricks, in turn, go into the steel furnaces as lining of the steel fur-

(Testimony of Henry J. Leir.)

naces. The same production exists right here outside of San Francisco by Henry J. Kaiser. He makes exactly the type of product known as magnesite bricks.

Q. (By Mr. Alioto): Was the firm of which you were general manger from 1931 to 1933 an associate or an affiliate of the Wolf-Netter organization?

A. To the extent of 50 percent. It was owned 50 percent by the firm of Wolf-Netter, in which I had been for 13 years, and 50 percent by a large refractory group in Germany.

Q. Was this a production company as well as a sales company? A. Which one?

Q. The firm of which you were general manager, Magnesite [1116] G.M.B.H.

A. It was both; it was manufacturing and selling.

Q. In your duties as general manager did you have anything to do with the production end of the business? A. Oh, yes.

Q. Were you general manger for all phases of the business?

A. I was general manager.

Q. How long a period of time did you continue as general manager of that business?

A. Up to May, 1933.

Q. Who were the principal customers, the principal class of customers, served by that business?

A. The principal customers were, again, the steel mills.

(Testimony of Henry J. Leir.)

Q. What happened in 1933, Mr. Leir?

In 1933 the Mrs. and I decided to leave Germany and to settle in Luxembourg.

Q. Did you establish your own business there at that time?

A. I established my own business there, on August 10 or 11, 1933. The business is still in existence.

Q. And what was the name of that business which you established in Luxembourg in 1933?

A. The exact name—it is a French name, because the official language in Luxembourg is French—the exact name is S. A. des Minerais—which means "Ore Corporation." [1117]

Q. Ore Corporation?

A. Ore Corporation.

Q. Would you be good enough to spell that name for the shorthand reporter, please?

A. S. A. d-e-s M-i-n-e-r-a-i-s.

Q. How old were you when you owned your own company? A. Thirty-three.

Q. Was this a corporation?

A. It was a corporation.

Q. And who were the owners of that corporation when you organized it?

A. Again, the family.

Q. You include yourself and your wife and your mother-in-law?

A. My mother-in-law, yes, and at that time, my father-in-law.

(Testimony of Henry J. Leir.)

Q. What was the business of S. A. de Minerais? What business did it engage in?

A. The business was, again, in the line of ores, minerals, refractories, alloys.

Q. I am not sure that we all understand what "refractories" means. Would you tell us, generally?

A. By "refractory," I refer to this type of bricks I just had explained, namely, bricks not for building purposes, but for the steel furnaces. [1118]

Q. Tell us some of the products you dealt in in your corporation in Luxembourg.

A. Well, we dealt, for instance, in tungsten ore and tungsten, and ferro-tungsten,——

Q. (By the Court): Was it a manufacturing institution, or sales?

A. It started as a selling organization, your Honor, but at the same time we were instrumental in creating new industries.

Mr. Alioto: We will cover that phase in just a moment, Mr. Leir, as to your manufacturing joint ventures.

Q. (By Mr. Alioto): Did you deal in magnesite?

A. We dealt in magnesite, and we produced it in combination with a rather large outfit in Belgium known as Union Chimique Belge — U-n-i-o-n C-h-i-m-i-q-u-e B-e-l-g-e.

Q. What was the nature of the arrangement you had with the Belgian company on the manufacture of magnesite bricks?

A. I convinced them that Belgium and Luxem-

(Testimony of Henry J. Leir.)

bourg should have a production of magnesite bricks of its own, and they created the necessary installation. We bought the raw material; we gave them the necessary technical help to produce a good product, and we would then sell it.

Q. What was the arrangement on the share of profits or losses? [1119]

A. We had a rather high commission on the sale of the product. If I remember correctly, it was an unusually high commission—about six percent.

Q. And you sold that product throughout Europe?

A. We sold it not only in Belgium and Luxembourg, but throughout Europe.

Q. Did your company also deal in fluorspar?

A. We also dealt in fluorspar, yes.

Q. In tin?

A. We had a participation, a financial participation, in a little tin smelter in the Port of Ghent, Belgium, where we would, from low-grade Bolivian tin ores, make an unusually high electrolytic tin.

Q. While you were in Luxembourg did you deal with any American products from Western United States?

A. I remember we were importing from the United States a mineral known as bentonite, which came from Wyoming.

Q. Did you ship anything to the United States from Luxembourg?

A. I don't remember that we shipped anything at that time from Luxembourg.

(Testimony of Henry J. Leir.)

Q. How about fluorspar?

A. We were in negotiations with regard to fluorspar. I am not quite sure whether we shipped any fluorspar at that time from Luxembourg.

Q. Incidentally, tell me, first, whether or not in 1933 this company dealt specifically with ferro-vanadium.

A. In about 1935 or 1936 we started to go into the manufacture of ferro-vanadium, ferro-tungsten, and ferro-molybdenum, in connection with the French industrial outfit.

Q. What is the name of that French industrial outfit? A. Fredet-Kuhlmann.

Q. What was the arrangement between your company and the Fredet-Kuhlmann Company?

A. It was a joint venture on the basis of fifty-fifty.

Q. Well, just tell us something about how it worked. What did you do and what did they do?

A. We put up the necessary finances to buy the raw material. They put up the technical installation. And we would carry on the business as partners—as equal partners.

Q. You bought the raw materials and they bought the equipment? A. Yes.

Q. Now then, did you produce ferro-vanadium under that arrangement with the Fredet-Kuhlmann Company?

A. We did. We produced ferro-vanadium, we produced ferro-tungsten, and we produced ferro-titanium, for instance.

(Testimony of Henry J. Leir.)

Q. With respect to your ferro-vanadium, was it the same kind of ferro-vanadium that was being produced in the United States at that time? [1121]

A. No, it was a higher type of ferro-vanadium, I would call it.

Q. What was the difference in the type of ferro-vanadium produced by the French firm and the type of ferro-vanadium produced in the United States?

A. The French—I would call it "our" firm—had 70 to 80 percent vanadium content, whereas the usual type of material at that time in existence on the American market had only 35 to 50 percent.

Q. Which of the partners in that joint venture fixed that formula for the ferro-vanadium? Whose idea was it? [1122]

Q. Whose idea was it?

A. I think we arrived at this idea in joint discussion with them.

Q. Who were the principal customers for ferro-vanadium in connection with that joint venture?

A. Only the steel mills.

Q. And who sold that ferro-vanadium output of the Fredet-Kuhlmann des Minerais joint venture?

A. It was sold by our office in Luxemburg.

Q. What was the marketing territory in which you sold?

A. We sold it mostly in France.

Q. To the steel mills?

A. To the steel mills in France, yes.

Q. Did you also while you were operating the

(Testimony of Henry J. Leir.)

Luxemburg Company enter into any arrangement for magnasite, brick and fluorspar with any German companies?

A. Well, this was—I would call it independently of the operation of the Luxemburg firm. I had entered into an arrangement in the beginning of 1933 with two very large German industrial firms. We formed a joint company which was owned thirty-seven and a half percent by the Krupp steel interests——

Q. That was the largest steel company in Germany, was it?

A. One of the largest; thirty-seven and a half percent by one of the largest chemical outfits in Germany known as [1123] The Refinery in Frankfurt, and twenty-five percent by myself.

Q. Approximately when was this company formed?

A. This company was formed in about April 1933.

Q. 1933? A. Yes.

Q. What business did that company carry on?

A. The business of producing—let me correct—the business of selling the production of magnesite in Austria and the production of fluorspar in Germany.

Q. What participation did you have in the actual operation of that business?

A. As I just said, I had twenty-five percent interest in it.

(Testimony of Henry J. Leir.)

Q. Aside from your interest, what did you do there?

A. I gave my technical and commercial advice as to the running of the company.

Q. What part did you have in forming this company? Whose idea was it? Krupp's, the other party, or yourself?

A. Honestly I think it was my own idea.

Q. In other words, you started negotiations to form the company in any event? A. Yes.

Q. And the company was formed?

A. Yes.

The Court: Was this a manufacturing company or a [1124] selling company?

A. It was a selling company, your Honor.

Q. (By Mr. Alioto): This company sold the output of a mine in Austria, did you say?

A. Yes.

Q. Did you have anything to do with getting that mine in Austria for the company?

A. Yes, I had obtained it. The mine was in bankruptcy and I convinced the Krupp steel mill at that time to buy the mine, the mine and mill, and they did it, and were very happy about it.

Q. And then the company formed was to sell the output of that mine, among other things, is that correct?

A. Yes, after certain modifications of the technical installation in which I certainly was very helpful.

Q. During that period from 1933 to 1938, while

(Testimony of Henry J. Leir.)

you were in Luxemburg, do you think you have told us generally what duties you carried on in connection with your companies?

A. Well, I was the general manager and the main stockholder of the company.

Q. As general manager did you have anything to do with the purchase of raw materials?

A. Of course, yes.

Q. Where were you buying your raw materials at the time?

A. At the time we would buy, for instance, tungsten ore [1125] from South America, from Asia, from Portugal. We would buy tin ore from Bolivia, and we would buy magnesite from Austria.

Q. There came a time in 1939 when the German armies overran Luxemburg, is that correct?

A. In 1940.

Q. What happened to your company there, Mr. Leir?

A. The company was liquidated by the occupation force.

Q. Just taken over by the German army?

A. Taken over or liquidated, yes.

Q. Before we get to your first trip to America, tell us whether or not the Fredet-Kuhlmann is still producing ferro-vanadium?

A. The Fredet-Kuhlmann Company is still in existence, still producing ferro-vanadium and other alloys.

Q. When did you first come to America, Mr. Leir? A. In January, 1938.

(Testimony of Henry J. Leir.)

Q. What was the occasion of your coming? What were the circumstances of your coming to America?

A. I still remember the circumstances. We had a long-distance call from the City of New York from General Chemical Company, which is a division, as you might know, of Allied Chemical, Allied Chemical in the City of New York, and they suggested to me to come over to discuss with them the question of a regular supply of fluorspar, one of the essential raw materials for them. [1126]

Q. And you were invited to come over by them at that time?

A. I was invited. I made the trip, however, at my own expense.

Q. You came to America for that purpose originally? A. Yes, sir.

Q. When was that, Mr. Leir?

A. It was in January 1938.

Q. How long did you stay in America for that period of time?

A. I stayed at that time about two or three weeks.

Q. I take it you came at that time on a business visa? A. It was a business visa, yes.

Q. Did you then make a determination to return to America on the basis of a visa for permanent residence?

A. Well, I had seen Philadelphia, Pittsburgh, Washington, at that time, not only New York, and came to the conclusion that if the Missus would

(Testimony of Henry J. Leir.)

agree, that we shall transfer our residence to America, which we did.

Q. Pursuant to that you came to America under a visa for permanent residence in what month, Mr. Leir? A. In April, 1938.

Q. At the time you came to America you were, of course, a German national? A. Yes. [1127]

Q. By virtue of your birth in Germany?

A. Yes.

Q. At that time your full German name was Heinrich Hans Leipziger, and Heinrich Hans is Henry John, is it not? A. Yes.

Q. And that was Anglicized shortly after you came to America to Henry John Leir?

A. Yes.

Q. When did you first file your declaration to become an American citizen?

A. A few weeks after my arrival in the United States.

Q. When was your American citizenship granted to you, Mr. Leir?

A. On August 10th, 1944, still during the war.

Q. The war was still on when you received your American citizenship? A. Yes.

Q. Getting down to the business of vanadium, when you arrived in America, had you formulated a plan as to what you were going to do here?

A. Yes, I had.

Q. Pursuant to that plan did you have any discussions with the Apex Smelting Company?

A. I had met on the boat coming to America

(Testimony of Henry J. Leir.)

in April, 1938, a gentleman, a very well known metallurgist, with whom I had [1128] discussed the idea of going into the ferro-alloy business in general, including ferro-vanadium.

Q. Yes?

A. And when I told him our process, or when I talked to him about our process that we used in France, his reaction was that I should go and see the Apex Smelting Company in Chicago, because Apex Smelting Company in Chicago were makers of aluminum, and aluminum was a part of our process.

Q. Did you have negotiations with the Apex Smelting Company?

A. Shortly after my arrival.

Q. Did you personally participate in those negotiations?

A. Oh, yes, I carried them on personally.

Q. With whom did you negotiate?

A. With Mr. Singer, President of Apex Smelting, with Mr. Starmann, Vice-President of Apex Smelting Company, and with Mr. Lippa, Secretary of Apex Smelting.

Q. As a result of that negotiation, Mr. Leir, did you then enter into a contract with the Apex Smelting Company? A. Yes, we did.

Q. Was that contract thereafter modified from time to time?

A. There were certain amendments.

Q. Originally who were the parties to the contract?

(Testimony of Henry J. Leir.)

A. If I remember correctly, the first partner in this [1129] contract was a French outfit. Maybe the Luxembourg outfit; I wouldn't remember.

Q. This contract has the following named associate: Societe D'Electro-Chimie de Brignoud?

A. Yes.

Q. Identify that organization for us.

A. They were our French partners with whom at the time we carried on the business of making ferro-vanadium and other alloys in France on the basis of fifty-fifty.

Q. Is this the same company as Fredet-Kuhlmann? A. The same company.

Q. In other words, the formal nature of the organization was as already stated?

A. It was exactly the same.

Q. With whom you had the ferro-vanadium joint venture, was it?

A. Exactly the same company.

Mr. Alioto: I think this is best shown by the documents and letters, if your Honor please, which we will offer into evidence at this time. We will offer this in evidence, if your Honor please, as Plaintiffs' Exhibit next in order.

Mr. Holland: No objection.

(The document referred to was thereupon received in evidence and marked Plaintiffs' Exhibit No. 117.) [1130]

[See Book of Exhibits.]

Mr. Alioto: The original contract, ladies and gentlemen, is dated July 1, 1938, and it is between

(Testimony of Henry J. Leir.)

the Apex Smelting Company, an Illinois corporation, and — I will do my best on this — Societe D'Electro-Chimie de Brignoud.

A. Yes.

Q. (By Mr. Alioto): A corporation of France hereinafter referred to as the Society.

The Court: July, you say?

Mr. Alioto: July 1st, 1938, if your Honor please.

(Reading)

"Whereas, the Company is in the business of producing aluminum and zinc base and other non-ferrous alloys; and

"Whereas, the Society represents that it owns and controls certain secret processes for the production of a complete line of ferro-alloys made by alumino-thermit process, including, without limiting the foregoing, ferro titanium, ferro tungsten, ferro vanadium, ferro chromium, chromium metal, manganese metal and welding powders, for the production of alumino-thermit stainless steel, and other alloying elements used in the manufacture of steel and iron (hereinafter referred to as the 'Secret Processes'), but not including aluminum, zinc and copper magnesium and other products manufactured by the Company in the past; and

"Whereas, the Company desires to acquire the Secret Processes and to create and operate a separate department to employ the same;

"Now, Therefore, in consideration of the premises and the mutual agreements herein contained, it is covenanted and agreed as follows:

(Testimony of Henry J. Leir.)

"1. The Society hereby sells, transfers and assigns the Secret Processes, all uses thereof, all inventions and discoveries included therein, all patents that may issue thereon, and all of its right, title and interest therein, throughout the United States and the territories thereof and the Dominion of Canada, to the Company and agrees to disclose the same to such person or persons as the Company may in writing designate. The Society further agrees to disclose to such person or persons as the Company may in writing designate and to transfer and assign to the Company all of its right, title and interest, throughout the United States and the territories thereof and the Dominion of Canada, in and to any and all improvements on the Secret Processes, or any one or more of them, and in and to any and all inventions, discoveries, processes and formulae useful or adaptable to the production of thermit process [1132] metals, or alumino-thermit stainless steel, or other steel alloying elements (other than the products heretofore manufactured by the Company) which, during the period of this agreement, the Society may make, discover or conceive. The Society further agrees, without charge to the Company but at the Company's expense, to execute, acknowledge and deliver all such further instruments, including applications for United States and Canadian patents and assignments of patents, and such assignments or authorizations of applications for patents, as may be necessary to obtain patents for such in-

(Testimony of Henry J. Leir.)

ventions in the United States and Canada, and any and all reissues and extensions thereof, and to transfer title thereto and to vest the entire right, title and interest in any and all inventions, improvements, applications and patents, as aforesaid, in the Company. The Society further agrees to assist to the fullest extent of its ability, but not at its expense, the prosecution or defense of all interferences or court proceedings involving said inventions, as may reasonably be requested or demanded by the Company.

"2. If, within 120 days after a full disclosure of the Secret Processes to the Company in manner aforesaid, the Company shall be advised by [1133] competent patent counsel (who may be counsel for the Company) that the Secret Processes, or any one or more of them, infringe or interfere with any claim included in outstanding Letters Patent of the United States, then the Company shall have the right, at its election, to terminate and cancel this agreement by notice in writing given to the Society within thirty days after the receipt of such advice. In the event of any cancellation pursuant hereto, the Company shall forthwith re-assign and re-transfer to the Society all of its right, title and interest in and to the Secret Processes, and thereupon this agreement shall be of no further force or effect.

"3. If this agreement be not cancelled as hereinbefore provided, then the Company agrees to establish and equip, in such manner as it deems

(Testimony of Henry J. Leir.)

proper, a separate department of its business to be known as the Thermit Department. The Thermit Department shall be devoted exclusively to the production and sale of a complete line of thermit process metals, alumino-thermit stainless steel and other non-ferrous metals for steel and iron alloying (but not including products heretofore manufactured by the Company) and to trading in minerals and ores necessary to the aforesaid production. The Company further agrees to operate the [1134] Thermit Department throughout the term of this agreement; provided, however, that if any person, firm or corporation shall claim that the Secret Processes, or any one or more of them, infringe or interfere with any United States or Canadian patent or patent application or any prior invention, then the Company may, in whole or in part, suspend the operation of the Thermit Department until the validity or invalidity of such claims shall be determined or established by a court of competent jurisdiction.

"4. The Company hereby agrees to pay to the Society a royalty equal to fifty per centum (50%) of the net receipts, if any, as hereinafter defined, received by the Company from its operation of the Thermit Department during the term of this agreement. All royalties hereunder shall be paid in annual installments within 45 days after the close of each calendar year. All payments to the Society hereunder shall be made in lawful money of the United States, shall be remitted to it by Chi-

(Testimony of Henry J. Leir.)

cago or New York draft, and shall be subject to all applicable laws of the United States or the State of Illinois relating to the withholding of taxes at the source.

"5. The term 'net receipts' as used herein shall, for all purposes of this agreement but (for no other [1135] purpose), mean the amount which shall be ascertained by deducting from the gross revenues and income of the Thermit Department during each calendar year, the following:

"(a) All direct charges against the Thermit Department for such calendar year, including, without limiting the foregoing, (1) the cost of raw materials and fluxes, (2) the cost of direct labor, (3) the cost of fuel and power, (4) the cost of compensation insurance, (5) the cost of packing material, (6), the cost of publicity advertising products of the Thermit Department exclusively, (7) the cost of freight and drayage, (8) the salary or compensation of the Production Consultant of the Thermit Department, (9) rental on the space occupied by the Thermit Department at the rate of thirty cents (30c) per square foot, (10) depreciation on equipment at the rate of seven and sixty-nine hundredths per centum (7.69%), per year, (11) losses in the collection of accounts receivable, (12) inventory losses, and (13) all direct taxes such as sales, manufacturer's license and social security taxes. All aluminum metal required by the Thermit Department, shall be furnished by the Company and charged to the Thermit Department at its cost

(Testimony of Henry J. Leir.)

to the Company plus one-half cent (1/2c) per pound. [1136]

"(b) An amount equal to that proportion of the indirect expenses of the Company for such calendar year which the sales of the Thermit Department bear to the total expenses shall include sales expense, administration expense, such manufacturing expenses as are not included in the direct charges, income and property taxes and such other taxes as are not included in the direct charges.

"(c) All net losses of the Thermit Department for prior calendar years which have not been charged against the net receipts of the Thermit Department in subsequent years."

And it says that a certified public accountant shall determine the accounts at the end of the year.

"6. The Company shall keep true and accurate records and accounts * * *"

"7. The Society hereby agrees that it will not, directly or indirectly, engage in the business of producing or selling thermit process metals or alumino-thermit stainless steel or other non-ferrous metals employed in alloying steel or iron within the United States or any territory thereof or within the Dominion of Canada, during the term of this agreement, nor will it permit any corporation or association affiliated with it so to do. The Company agrees that [1137] it will not, directly or indirectly, engage in the business of producing or selling thermit process metals or alumino-thermit stainless steel or other non-ferrous metals employed in

(Testimony of Henry J. Leir.)

alloying steel or iron (but not including products heretofore manufactured by the Company) within the United States or any territory thereof or within the Dominion of Canada, during the term of this agreement, except by means of the Thermit Department, nor will it permit any corporation or association affiliated with it so to do. [1138]

"8. The Society agrees that it will, at all times during the installation and completion of all equipment required in the Thermit Department and until satisfactory production has been obtained in the Thermit Department furnish to the Company the services of a skilled technician, without cost to the Company other than the payment of his necessary travelling expenses.

"9. The Society agrees that it will not do or omit, or suffer to be done or omitted, any act or thing whereby the Secret Processes, or any one or more of them, may become known to any unauthorized person."

Then it provides for notice. And then, Paragraph 11 provides as follows:

"11. The term of this agreement shall commence at the date hereof and continue until (a) the expiration of fourteen (14) years from the date hereof, (b) the operation of the Thermit Department for two (2) successive calendar years without an average annual net profit of at least Seventy-five Hundred Dollars ($7500), or (c) the issuance by a court of competent jurisdiction of an injunction restraining the Company from using any one or

(Testimony of Henry J. Leir.)

more of the Secret Processes by reason of patent infringement, whichever shall happen the earliest.

"12. This agreement shall be binding upon and inure to the benefit of the respective heirs, legal representatives, successors and assigns of the parties hereto, and shall be construed in accordance with the laws of the State of Illinois."

It is signed by the parties hereto and is signed by the Apex Smelting Company, by W. A. Singer, its President, the Secretary, Louis Lippa, and by the Societe d'Electro-Chimie de Brignoud by M. Spitzer, whose title is "L'Administrateur Directeur General."

Q. What does that mean? A. President.

Q. It means President? A. President.

The Court: Now, about "Society" you refer to your company, and when you use the word "Company," that is the Apex?

A. No, your Honor.

Mr. Alioto: In the contract, "Company" refers to Apex, "Society" refers to the French company, the Societe d'Electro-Chimie de Brignoud, which is the Fredet-Kuhlmann organization.

Q. Now, then, on your side, your Luxemburg company and the French company split fifty-fifty, that is correct, isn't it? A. Yes. [1140]

Q. So that the ultimate interests were 25 per cent Luxemburg, 25 per cent Fredet-Kuhlmann, 50 per cent Apex? A. Yes.

Q. I think that is made clear by the Apex agreement, which I needn't read, except that thereafter

(Testimony of Henry J. Leir.)

there was an agreement which appointed the Continental Ore Company as the exclusive sales agent for the products of the Thermit Department of Apex throughout the United States, with certain exceptions. It states that Indiana, Illinois, Wisconsin and California were reserved to Apex. That is correct, is it not? A. Yes.

Mr. Archer: What was the date of that?

Mr. Alioto: This is dated May of 1941.

Q. And your company did in fact—that is, the Continental Ore Company, did in fact act as the exclusive sales agents for the Apex production until the termination of the contract?

The Court: The date of that contract was?

Mr. Alioto: The date of this contract is May, 1941, under which the Continental Ore Company is appointed as the exclusive sales agent at a commission of two and a half per cent.

The Court: That contract is between whom?

Mr. Alioto: That contract is between the Apex Smelting Company and the Continental Ore Corporation.

Q. I had just asked you, your company distributed the products of Apex Smelting Company, the ferro-vanadium, during the term of the contract?

A. Yes. The only point I wanted to correct was that it was the Continental Ore Corporation at that time, not the Continental Ore Company.

Q. I think I have indicated that in this question.

A. Yes.

Q. Now, then, also in July of 1938 there was a

(Testimony of Henry J. Leir.)

contract by which the French Company set over one-half of its interest in the contract to the Luxemburg corporation, Mr. Leir, as already testified, and by which the Luxemburg corporation transferred its interest to Mr. Leir as the trustee to the Continental Ore Corporation.

Mr. Holland: What is the date of that?

Mr. Alioto: This instrument is dated December 17, 1940, and refers to the contract of July 1st, 1939, which I have previously read.

Now then——

The Court: There is one question. When you speak of the Thermo Department (sic), what do you mean by the Thermo Department (sic)?

A. The Alloys Department.

The Court: Alloy?

A. The Alloy Department which was created, your Honor, to make ferro-vanadium, ferro-tungsten, and other ferro alloys for the steel mills.

The Court: Well, did it include making [1142] ferro-vanadium?

A. Yes, of course, your Honor.

The Court: Well, now, was that manufactured by the company before your contract was entered?

A. Never.

The Court: They never made any ferro-vanadium?

A. The Apex Smelting Company never made any ferro-vanadium prior to our coming to this country.

The Court: All right.

(Testimony of Henry J. Leir.)

Q. (By Mr. Alioto): In other words, this joint venture created this ferro-vanadium production in the United States?

A. It created a new—call it department—I call it the new business for them.

Q. Now, at that time——

The Court: That is what it included when you referred to the Thermal Department (sic)?

A. Yes.

Mr. Alioto: I think that is Thermit Department.

The Court: What?

Mr. Alioto: Thermit Department,—T-h-e-r-m-i-t.

The Court: Is that English or French?

Mr. Alioto: Well, I was going to say it is English. All right.

Q. I am going to ask you, Mr. Leir, you speak French, if [1143] you will be good enough to tell me what Thermit is, what the technical meaning of Thermit is.

A. If you ask me, the word Thermit comes from the old Greek and means heat, and nothing else but heat. And you have the same term—if you speak today, for instance, of the thermal meter, it is the same word, a meter to measure the heat.

Q. (By Mr. Alioto): Or a thermal pot to keep coffee hot at ball games, but doesn't?

A. That's right.

The Court: They have heat in France, too, don't they?

A. Yes. Too much heat.

Q. (By Mr. Alioto): Now, then, earlier, at the

(Testimony of Henry J. Leir.)

time of the original arrangement, you personally, for putting this together, were to receive a bonus of ten per cent?

A. Yes. I gave it up, later.

Q. And then there came a time, in September 4 of 1940, before any ferro-vanadium was actually sold, when you gave that up?

A. I gave it up, yes.

Q. And that's part of the correspondence that we have here, if your Honor please, and is set forth very exactly in that correspondence.

Now, pursuant, Mr. Leir, to this contract——

The Court: One question—— [1145]

Mr. Alioto: I'm sorry, your Honor.

The Court: When did you first begin the manufacture of ferro-vanadium?

A. In 1940, your Honor.

The Court: What time?

A. It was in the latter part of 1940.

The Court: Would you say around November, December?

A. I would say, rather, in August or September.

Mr. Alioto: If your Honor please, there is in evidence a statement of sale which shows the exact date of the first sale and we will introduce other documents with respect to the date of the first purchase.

Q. Now, Mr. Leir, pursuant to this contract, did you in fact disclose to the Apex Company the methods and processes for making ferro-vanadium?

A. We did, and, as a matter of fact, the vice-

(Testimony of Henry J. Leir.)

president of Apex Smelting Company, Mr. Starmann, was sent to France to stay there for a while and to study on the premises the actual process of the French producing company.

Q. Now, then, the Apex Company did in fact install equipment to carry out the actual process of the French company?

A. They created the necessary equipment for installation to produce these alloys in the department.

Q. Would you be good enough to state, Mr. Leir, whether or [1145] not the ferro-vanadium produced was of a higher vanadium content than was customary in the country at the time?

A. I think I stated it already before. Our ferro-vanadium had a content of 80 to 90 per cent vanadium as compared with 35 to 56 per cent of the two American manufacturers. It was a higher grade ferro-vanadium, no doubt.

Q. And Apex manufactured in accordance with that higher grade formula, did it not?

A. Apex manufactured it.

Q. Did you undertake to do anything with respect to securing a source of supply of the raw material? A. I did.

Q. What was the raw material involved here, Mr. Leir?

A. The raw material involved in the production of ferro-vanadium is vanadic acid or sometimes called vanadium oxide or sometimes called fused

(Testimony of Henry J. Leir.)

oxide, and we did the necessary—we made the necessary steps to procure it for Apex Smelting.

Q. Just tell us some of the things that you did, Mr. Leir, in connection with getting a supply of vanadium oxide for the Apex Smelting Company to operate under this joint venture.

A. Prior to my coming into this country, I had already known quite a number of addresses in Colorado and Utah of producers of vanadium ore and vanadium oxide, but in addition we obtained further addresses from the Bureau of Mines in Washington, and we contacted all these producers —potential [1146] producers, in the months that followed, with the idea to obtain supplies from them for the intended production of ferro-vanadium in Chicago.

Q. From 1938 to about 1941 how many trips did you personally make out to the Colorado Plateau?

A. I made a number of trips. I wouldn't venture today to say how many trips I made, but I became very familiar with the whole region.

Q. Did you make at least six or seven trips out there? A. At least.

Q. You talked to vanadium producers and vanadium mill owners, did you?

A. I talked, I think, to most of them.

Q. What was the purpose in going out to the Colorado Plateau?

A. Well, the purpose was to create a regular supply of the vanadium raw material for our production in Chicago.

(Testimony of Henry J. Leir.)

Q. As a result of those contacts out on the Colorado Plateau, did you, in fact, make arrangements for the sale of vanadium oxide from those producers to Apex?

A. Yes. As a matter of fact, we made quite a few.

Q. I show you, Mr. Leir, some business records of the Apex Company and the Continental Ore Company under this contract. Would you be good enough to look at them and state whether those records set forth the Apex purchases of V_2O_5 by [1147] date and by seller for the period of time shown on those records?

A. (Witness examining) I would say this is a list of such purchases of raw material from the Colorado Plateau.

Mr. Alioto: We will offer these in evidence, if your Honor please. I believe counsel have already seen copies of this.

(Discussion between counsel.)

Mr. Alioto: After counsel has had an opportunity to inspect them, I will offer them in evidence as Plaintiffs' Exhibit next in order.

The Court: While counsel are looking at that, we will take a recess.

(Short recess taken.) [1148]

Mr. Alioto: If your Honor please, at the recess we had offered in evidence the two documents which counsel have now inspected. We ask that they be marked together as plaintiffs' exhibit next in order.

Mr. Holland: No objection, your Honor.

(Testimony of Henry J. Leir.)

The Court: It may be admitted.

(The two documents referred to were marked Plaintiffs' Exhibit No. 118 in evidence.)

[See Book of Exhibits.]

Mr. Alioto: This document, ladies and gentlemen, shows the source of supply of the Apex Smelting Company, one of the sources being the North Continent Mines, Incorporated, and being dated 1940-1941, the first purchases in 1940 being November 13, 1940, November 28, and December 10, purchases of approximately $29,000.

In 1941 they purchased from that company $133,000 of vanadium oxide.

The Court: What company was that?

Mr. Alioto: The North Continent Mines, Incorporated, in Colorado. There has been some testimony about that, as your Honor knows.

In 1942 they made purchases on January 24th of 11,200 pounds. The price was $9,200.

On March 12th they bought 12,198 pounds, the price being $12,908.

March 28th they bought 8,600 pounds. The price was $9,100. [1149]

April 26, 1942, bought 11,282 pounds, and the price was $12,185.

May 23rd they bought 5,634 and paid approximately $6,000.

May 30th they bought 6,100 pounds and paid $6,000.

June 18th they bought 5,300 pounds and paid $5,700.

(Testimony of Henry J. Leir.)

June 24th they bought 6,000 pounds, approximately, and paid $6,700.

Then shipments to Continental Ore were thereafter made, after the termination of the Apex contract on July 30th and August 24th, and for a period in 1943—that was from North Continent. The other suppliers during that period were Ackerman.

Q. (By Mr. Alioto): Now, Ackerman ran the Loma mill that we have some testimony about?

A. Yes, previously owned by Morrison.

Q. Yes. And there came a time when that was closed down and you couldn't further buy from that company? A. Yes.

Q. Blanding, purchases from Monticello—that is, from the J. J. Harris Company, F. H. Sitton, Dove Creek, and they were purchases from William G. Morrison. Morrison ran the Loma mill before Ackerman, is that correct? [1150]

A. Yes.

Q. Purchases from Nisley & Wilson are shown on this list. Purchase from Shattuck.

The Court: What dates were those purchases?

Mr. Alioto: The Ackerman purchase was on June 13, 1941, and on May 10, 1941. The net weights were 4,200 pounds, approximately, to 3,800 pounds.

From Blanding, those purchases started on January 11, 1941, and went through August—the opposite direction—it started August 2, 1940, and went up until January 11, 1941.

(Testimony of Henry J. Leir.)

At Monticello they started in April, 1941, and went to September, 1941.

From Morrison they started in March of 1941 to April, 1941.

From Nisley & Wilson they started in 1941.

The Shattuck purchases started on February 28, 1940, and they come up to June 24, 1942.

And in each case we have the pounds set forth, the vanadium content, the unit price, and then the total price.

Q. (By Mr. Alioto): Mr. Leir, did you personally make the contact and the arrangement for the sale with Ackerman? A. I think I did.

Q. Did you personally contact the Blanding company and carry on extensive correspondence with that company? [1151]

A. Yes, I did.

Q. Did you personally contact the Independent mill at Monticello? A. Yes, I did.

Q. And Mr. Morrison? A. I did.

Q. And, of course, you personally had the contact with Nisley? A. Yes, of course.

Q. And did you personally contact the Shattuck company? A. I did.

Q. At that time you made arrangements—you and Apex made arrangements to seek a regular supply from the Vanadium Corporation of America, did you not, on or about March of 1940?

A. I knew about it.

The Court: I didn't get your question.

Mr. Alioto: In March, I asked him whether they

(Testimony of Henry J. Leir.)

made an attempt to get a supply from the Vanadium Corporation of America. He said he knew about it. But I would like to call the jury's attention to Plaintiffs' Exhibit 63, which is a letter from Mr. Lippa of Apex Smelting Company.

Q. (By Mr. Alioto): He is one of the men with whom you negotiated, Mr. Leir? [1152]

A. One of the officials and main principals of the Apex Smelting.

Mr. Alioto: He wrote Vanadium Corporation of America on March 11, 1940:

"Please be good enough to let us have your very best price on quantity lots of vanadium pentoxide crushed to one-quarter inch and under. We desire this material for domestic consumption. Your immediate response will be very much appreciated."

There was no answer to that letter of March 11th.

He wrote again on March 8, 1940, saying:

"We enclose copy of a letter written to you on March 11th, to which we did not seem to have received a reply. This no doubt has been overlooked and we would appreciate hearing from you."

That is answered on April 20, 1940, by Mr. Gustav Laub of the Vanadium Corporation of America, in which he states, on April 20, 1940:

"Dear Mr. Lippa:

"In response to your letter of April 8th enclosing copy of your letter of March 11th, which apparently went astray, would advise that our position is such that we have no material to offer you at present."

(Testimony of Henry J. Leir.)

The Court: That had already been introduced.

Mr. Alioto: Yes, if your Honor please. I simply [1153] wanted to call attention to the other effort that was made while they were getting the independent supply.

Q. (By Mr. Alioto): Mr. Leir, during the period of the Apex contract were you able to get a regular supply of vanadium oxide, a steady, regular supply?

A. We couldn't get a regular supply.

Q. Did there come a time when you had conversations with the Apex Company about terminating the agreement?

A. As a matter of fact, this time came in about the beginning of 1942.

Q. Do you recall you had some discussions with the officials of Apex prior to the termination?

A. Yes, of course.

Q. Do you recall the officials of Apex with whom you had these discussions?

A. These discussions were always with Mr. Lippa; sometimes with Mr. Singer.

Q. Did your organization attempt to encourage them to go on producing?

A. We certainly did.

Q. However, there came a time when you decided to terminate the contract with them?

A. Yes.

Q. Prior to that termination did you know of [1154] any negotiations between the Vanadium

(Testimony of Henry J. Leir.)

Corporation of America and the Apex Smelting Company?

A. We were never aware of it.

Q. (By the Court): What is that?

A. We were never aware of it. We never knew that.

Q. (By Mr. Alioto): Specifically, were you aware of the negotiations that were read into evidence in this case?

A. No, certainly not.

Q. I show you a copy of a termination document on the Apex Smelting contract and ask you if those are the signatures of Mr. Starman and Mr. Lippa?

A. Those are the signatures of Mr. Starman and Mr. Lippa.

Q. Prior to the termination of the contract between the Continental Ore Company and the Apex Smelting Company did you make any arrangements with Apex Smelting to continue manufacturing Van-Ex?

A. We made a temporary arrangement with them, because we didn't want to allow them to stop from one day to the other. So we worked out a temporary arrangement.

Q. What was the nature of the arrangement you made with them, Mr. Leir?

A. That they would run the department at full capacity for three months, and probably also make some Van-Ex during that period. [1155]

Q. During the time that the Apex Smelting

(Testimony of Henry J. Leir.)

Company was producing ferro-vanadium under the arrangement did you have an occasion to have a meeting in Washington? A. Yes.

Q. Do you recall the approximate date of that meeting?

A. The date of that meeting was June 19, 1941.

Q. Do you recall where that meeting was held?

A. The meeting was held in Washington, in offices which became, later, War Production Board, or which at that time were already War Production Board.

Q. Do you recall who was present at that meeting from the vanadium industry?

A. I recall that Mr. Bransome, president of Vanadium Corporation, was present.

Q. Do you recall any discussion at that meeting relating to the vanadium situation, and specifically vanadium supplies? A. Yes, I do.

Q. Will you tell us what was said at that time?

Mr. Holland: Let us establish who was at this meeting, when it was, and where it was.

Q. (By Mr. Alioto): Do you remember anybody else that was present?

He has already said when it was and where it was.

Who else was present besides yourself and Mr. Bransome? [1156]

A. There were quite a number of people. I would say at least 15 men.

The Court: The date of this?

Mr. Alioto: June 19, 1941, the witness has said.

(Testimony of Henry J. Leir.)

The Witness: There were at least 15 men from the industry. There were representatives, as I said, not only of the Vanadium Corporation of America, but also the Climax Molybdenum Corporation, the Miami Copper Company, as producers of molybdenum, and a number of other gentlemen. I gave, the day after, or two days after, the list of all the gentlemen which were present to Apex Smelting Company in a letter which must be in the record.

Q. (By Mr. Alioto): I show you a document dated June 20, 1941, to Apex Smelting Company, and signed by yourself. Is that the document to which you refer? A. This is the letter.

Q. By reference to that document, would that refresh your memory as to everybody who was at that meeting?

A. No. As you can see from this letter, I had mentioned only the companies represented.

Q. By looking at those companies represented can you tell us who was there? Do you remember any of the men who were there other than Mr. Bransome?

A. Climax Molybdenum Company, to start with the first [1157] one, was represented by Carl Lobe, Jr., vice-president at that time.

The Molybdenum Corporation of America was represented by its president, Mr. Hersch.

Kennicott I don't remember.

Miami Copper, I have just stated, was represented by Mr. Singer.

(Testimony of Henry J. Leir.)

Electro Met, I wouldn't remember today who was representing Electro Met.

Vanadium Corporation, I stated it was represented by its president, Mr. Bransome.

Apex Smelting Company was represented by myself.

Bethlehem Steel, I don't remember.

Mr. Rees there, you will find the name of the gentleman who represented United States Steel Corporation.

Alleghanyludlum, I don't remember.

Republic Steel, I don't remember.

Q. Was there a discussion at that meeting about vanadium supplies?

A. Yes, it was the purpose of the meeting to discuss the situation in the vanadium industry at that time.

Q. At that time how many producers of ferrovanadium were there in the country?

A. Three producers.

Q. Electro Met, V.C.A., and Apex? [1158]

A. Electro Met, V.C.A., and Apex Smelting Company in Chicago.

Q. Apex had been producing for about nine months at this point?

A. I would say for at least eight or nine months.

Q. Was anything said about vanadium supplies at the meeting by you and by Mr. Bransome?

A. I don't remember—let me put it this way—the attitude of the two big——

Mr. Holland: I object to his testifying as to

(Testimony of Henry J. Leir.)

attitude. I think Mr. Leir should confine himself to the conversation.

The Court: Just state what was said.

Q. (By Mr. Alioto): Give us the substance of what was said, Mr. Leir, and that will show the attitude.

A. It was pointed out——

Mr. Holland: I think he should state——

The Court: No; state who said what.

Q. (By Mr. Alioto): Not give the exact language, Mr. Leir, but in substance, what did Mr. Bransome say and what did you say and what did any government representative say?

A. I heard during the meeting the opinion by the representatives of Vanadium and Union Carbide, according to which—— [1159]

Q. (By the Court): No. Who made the statements?

A. The representatives of the two vanadium producers.

Q. Who were they?

Q. (By Mr. Alioto): You have identified Mr. Bransome as one of them. A. As one.

Q. What was said.

Q. (By the Court): What did he say? What did Mr. Bransome say?

Q. (By Mr. Alioto): What was the substance with respect to supplies?

A. He did not foresee any scarcity of vanadium.

Q. What did you say at that time?

A. I was concerned with the overall situation

(Testimony of Henry J. Leir.)

and made specific recommendations to Washington at that time about how to forestall any possible scarcity of vanadium. I was convinced that the country did not have enough vanadium at that time.

Q. (By the Court): You are speaking now about Apex?

A. No, your Honor. I was convinced that the country——

Q. Oh, the country.

A. ——that the country would very soon enter a critical period—by which I mean, a critical period in which there [1160] would not be enough vanadium. And I made specific recommendations at that time, and a few days later in writing to Mr. Whiteside, who was the chairman of the committee, also what, in my opinion, should be done with regard to vanadium.

Q. (By Mr. Alioto): Was anything said at that meeting about the independent producers of vanadium oxide? A. Yes, of course.

Q. What was said about them?

Q. (By the Court): Who said it? State who said what, now.

A. I pointed out that there are several independent producers of vanadium oxide. I pointed out that there were five mills, two in Utah, one in Blanding, one in Monticello; three in Colorado, one in Loma, one in Gateway, one in Mount Rosa; making at that time 51,000 pounds—making, or having a capacity of making, 51,000 pounds of V_2O_5; and it was my recommendation to help them to increase

(Testimony of Henry J. Leir.)

their production in time in order not to be caught by a national emergency. [1161]

The Court: No, V_2O_5, is that the same as vanadium oxide?

A. It is the main ingredient, the main ingredient of vanadium oxide.

Q. (By Mr. Alioto): What did Mr. Bransome say about that suggestion?

A. Mr. Bransome didn't share my views.

The Court: What did he say? Just what he said.

A. I cannot tell you exactly his words but the opinion — Mr. Holland will probably object to the opinion.

Mr. Alioto: Just tell us what he said.

Mr. Holland: Did he say anything at the meeting at all?

The Court: Just state what was said by anyone present at the meeting.

Q. (By Mr. Alioto): What did Mr. Bransome say, the substance of what he said about your proposal to increase production at the independent mills?

A. Mr. Alioto, even if I lose the case I will not say anything which I don't remember exactly.

Q. You don't have to remember exactly. What is the substance of it?

A. I remember very distinctly that the Chairman of the Committee, Mr. Whiteside, asked me after the meeting to repeat in writing what I had said during the meeting and to make [1162] any suggestions which I would have in connection with

(Testimony of Henry J. Leir.)

the vanadium situation of the country. Which I did.

The Court: Who is Mr. Whiteside?

A. A. D. Whiteside was at that time Chairman of some raw production committee—I don't remember the exact name. The names change too often in Washington for these government agencies.

Q. (By Mr. Alioto): But he was a Government Official, in any event?

A. He was Chairman of the Committee.

Q. All right. Did you then make a written report pursuant to Mr. Whiteside's suggestion?

A. Mr. Whiteside requested me to do it, and I did it a few days later.

Q. Now, I show you a document dated June 23, 1941 and ask you if that is the written report you made on that meeting? A. This is the report.

Mr. Alioto: We will offer it in evidence, if your Honor please.

The Court: Well now, at that time, at the time of this meeting, was the production and sale of this material, this vanadium material, was that in the hands of the Government?

A. No, not at all. Not at all. The allocation by Government action came only much later, namely, in December of [1163] '41.

Q. (By Mr. Alioto): And this was in June of '41?

A. This was in June '41, and the allocation, which came in December '41, exactly confirmed my concern at the time of that meeting.

Mr. Holland: If the Court please, I object to

(Testimony of Henry J. Leir.)

the admission of this memorandum. This is about an 8-page document giving Mr. Leir's opinions on this case, among other things.

Mr. Archer: It wasn't written to any of the defendants, your Honor.

The Court: The objection will be sustained.

Q. (By Mr. Alioto): Mr. Leir, in any event, were you having difficulty getting enough of the raw material to supply the Apex contract at this time?

A. My difficulties, or Apex difficulties, if you want to put it this way, to obtain a regular source of supply for raw material had already started, yes.

Q. Were you ever able under the Apex contract, up until the time of its termination, to get a regular dependable source of supply of vanadium oxide?

A. I was not.

Q. What reasons were assigned by Apex for wanting to get out of the contract?

A. One of the reasons was the inability to obtain such a [1164] regular supply.

The Court: Well now, your contention there was that you couldn't get a regular supply. At the time of this meeting were you getting material?

A. Not sufficiently, your Honor.

The Court: But you got some?

A. I got some, yes.

Q. (By Mr. Alioto): In any event, after that reason had been assigned, the Apex contract was terminated? A. Yes.

The Court: At what time was it terminated?

(Testimony of Henry J. Leir.)

A. In 1942.

The Court: That was after the Government control began?

A. Yes, your Honor.

Q. (By Mr. Alioto): Now, Mr. Leir, we put a contract in evidence—two contracts in evidence, the Climax contract and the Imperial Paper Contract. Both of those contracts were negotiated by you, were they not? A. By myself, yes.

Q. Both the Climax contract and the Imperial contract? A. Yes.

Q. Did you attempt under the contract to get a source of supply for Imperial?

A. We did. [1165]

Q. Were you ever able to?

A. No, we could not.

The Court: Well, the allocation of these supplies was entirely in the hands of the Government, was it not?

A. Only for a certain period of time, your Honor.

The Court: But from '41 until February of '44 it was in the hands of the Government?

A. After December '41.

The Court: December '41?

A. To the end of '43.

The Court: In December, that was the month when the Pearl Harbor disaster took place?

A. Yes.

The Court: December '41.

A. Yes, your Honor.

(Testimony of Henry J. Leir.)

Q. (By Mr. Alioto): Now, during this period of so-called Government control you attempted to buy materials from Electro Met privately, did you not? A. We did.

Q. As you heard the evidence yesterday, where you asked for a requirements contract in the middle of 1943 when you had that price dispute?

A. Yes.

Q. And that was—— [1166]

A. We did it twice in 1943. We did it once in June and again in November.

Q. Yes. And you were seeking a private contract for the supply? A. Yes.

The Court: Well, if the control of it was in the hands of the Government how could an individual make a contract?

A. Your Honor, I was recognized at that time as a legitimate concern doing business in the United States and there was no question about getting the allocation. I had a good reputation at the time.

The Court: Did you get the allocation, that's the point?

A. If they would have given me the material, I would have obtained the allocation, there is no doubt about it.

Q. (By Mr. Alioto): Well, did you in fact get allocations when you were able to buy the material?

A Whenever we got the material from the supplier, we got the necessary allocation, which, as far as we are concerned, was only a mere formality.

Q. In other words, to make this plain, Mr. Leir,

(Testimony of Henry J. Leir.)

even though there was a Government allocation on, how did it work out mechanically, did you negotiate privately for a supply?

A. You would first negotiate with your supplier the terms [1167] of the contract, the quantity, the quality, the price, and after you had reached an agreement with your supplier you would go to the Government; the Government would put the stamp on it. But there was never any time when the Government would refuse to us, Continental Ore Company or to Apex, any such allocation, as it was called.

Q. And the Government did not refuse you any allocations after you had made a private deal for the materials you did in fact buy? A. Never.

Q. Including some materials you bought from these defendants, in small lots?

A. Absolutely.

Q. Now, for example, in June of 1943 when you had a price discussion in connection with the $1.10 as against the $1.15, that was a private deal you negotiated with the defendants, was it not?

A. As far as I remember, yes.

The Court: But even then you couldn't have gotten the material until there was an allocation?

A. Your Honor, if you would please repeat the question?

The Court: Even if you made an agreement with them for a supply of material, you could not have gotten it until there was an allocation by the Government?

(Testimony of Henry J. Leir.)

A. Absolutely, yes. [1168]

The Court: Yes.

A. But the allocation was not in doubt as far as we were concerned.

The Court: Yes.

Q. (By Mr. Alioto): Did any of these defendants refuse to deal with you in June of 1943 or November of 1943 on the ground that you could not get allocations?

A. It was never brought out.

Q. Now then, there came a time when Imperial Paper decided that it would not go into the ferrovanadium production, did it not?

A. Yes. I think it was late in 1944.

Q. What reasons were assigned by Imperial for not going into it?

Mr. Archer: I object to this, your Honor as being hearsay.

Mr. Alioto: If your Honor please, there is the case of Loew's v. Lawlor.

The Court: Objection sustained.

Mr. Alioto: Thank you, if your Honor please.

Q. I think, Mr. Leir, we will get some figures in as to what was actually done. The Continental Ore Corporation was organized in 1939, was it not?

A. On June 16th, if I remember correctly, 1939.

Q. Had you had prepared from your books and records at [1169] my request, Mr. Leir, a balance sheet of the Continental Ore Company as of the end of 1939 and '40, together with a statement of sales, profits, losses, cost of doing business?

(Testimony of Henry J. Leir.)

A. I have given the necessary instructions.

Q. I show you a document that was prepared. Was that prepared pursuant to your instructions under your direction? A. Yes, it was.

Q. Are the figures there, to the best of your knowledge, true and correct? A. Yes.

(Discussion among counsel.)

Mr. Holland: I don't believe this firm's balance sheet is material evidence in this case, your Honor, unless it is confined to the vanadium business. This is a balance sheet on his various businesses with his 18 offices all over the world.

Mr. Alioto: Not in 1939, it wasn't.

Mr. Holland: Whatever he had in 1939.

Mr. Alioto: There has been some testimony here as to how much money they had in the business.

The Court: The point is here, he has stated—This witness has testified that he was engaged in the sale of many alloys, different kinds. What his business in those alloys is certainly isn't the same as the sale of vanadium. [1170]

Mr. Alioto: No, if your Honor please, but among other things the balance sheet and the statement and the profits and losses would show the cost of doing business of the plaintiff's company.

The Court: No. You can't go that far. See, this was merely one part of the business.

Mr. Alioto: Let me make an offer on this, if your Honor please, so that we might have a record on it. We will offer the balance sheet and the statement of profits and losses for the Continental Ore

(Testimony of Henry J. Leir.)

Company, December 31, 1939, December 31, 1940, and we perceived that this is the type of evidence which we are specifically enjoined under the Flintkote case to have in the record at the peril of not having a complete record. Judge Barnes in that case, incidentally, if your Honor please, objected to the fact that the plaintiff in the case didn't have this kind of evidence in the record.

The Court: And the Court has read a number of the authorities which you have cited in your brief, your requested instructions.

Mr. Alioto: May I call specifically to your Honor's attention the Flintkote matter on this phase?

The Court: No.

Mr. Alioto: It is just a very short reference, if your Honor please.

The Court: I don't care to hear the authority here. [1171]

Mr. Alioto: All right. I might say for the record that the case I was going to call your Honor's attention to in this case was Flintkote against Lysfjord at 246 Fed 2d, 368 and specifically at Page 393, where, as we read this, we are specifically told to put this type of evidence in.

The Court: Well, you certainly can't say now that here's a man engaged in a number of businesses what his profits were or what his business was as to all of them. How could that apply to his particular sale of just vanadium? That is just one of the things that he sells.

Mr. Alioto: Because among other things, if your

(Testimony of Henry J. Leir.)

Honor please, there have been certain allegations around here that they didn't have any real investment in their business of selling alloys and metals. Now we would like to show the net worth of these companies and the increase in net worth.

The Court: Make your offer.

Mr. Alioto: And show how much was—. I have already offered the first document——

Mr. Holland: We won't object to your putting in evidence how much he invested in the Vanadium business, Mr. Alioto.

Mr. Alioto: When you have an organization selling alloys——

The Court: If you can limit your offer now to [1172] his investment as it affects vanadium the Court will permit you to enter it, but not as to all of it.

Mr. Alioto: The problem there, if your Honor please is this, if a wholesale grocery is selling 3,000 items, what is his investment in Dutch Cleanser? How do you get to that, Judge?

The Court: You couldn't claim that Dutch Cleanser was responsible for the entire cost of operation.

Mr. Alioto: That's right. But how would you do it?

The Court: Well, that's a matter for you.

Mr. Alioto: Well, I think we can do it by a combination of two documents, if your Honor please. I would like to offer the general balance sheet and then offer specifically the vanadium sales and from those two I think the Court and the jury

(Testimony of Henry J. Leir.)

can make an inference as to what went into this matter.

Now, I will offer both of those, so there won't be any question about it. In any event, this document I am offering the 1939-1940 balance sheet.

The Court: The objection will be sustained.

Mr. Alioto: I offer at this time the balance sheet of the Continental Ore Corporation for December 31, 1941.

Mr. Holland: Objection.

The Court: Objection sustained. [1173]

Mr. Alioto: I offer next the Continental Ore Company balance sheet and statement of income showing the cost of doing business for the year 1942 and '43.

Mr. Holland: Same objection, if your Honor please.

The Court: Objection sustained.

Mr. Alioto: That document also shows its capital investment, of the partners in the company.

We offer, too, the balance sheet prepared by certified public accounts in the normal course of business for the year 1944, balance sheet and statement of sales and profits.

Mr. Holland: Same objection.

The Court: Objection sustained.

Mr. Alioto: We offer next the balance sheet and the statement of income and profits disclosing the cost of doing business the year 1945.

Mr. Holland: Same objection.

The Court: Objection sustained.

(Testimony of Henry J. Leir.)

Mr. Alioto: For the year 1946.

Mr. Holland: Same objection.

The Court: Objection sustained.

Mr. Alioto: Well, let me complete it, for the year 1947, '48 and '49.

Mr. Holland: Same objection.

The Court: Objection sustained. [1174]

The reason that the Court sustains the objection is that these are not limited to the matters that are involved in this law suit. They are too general.

Q. (By Mr. Alioto): Mr. Leir, at my request did you instruct the controller of your organization to take from the books and records of Continental Ore Company, from the actual billings of that company, a statement of the sales of vanadium-pentoxide, ferro-vanadium, Van-Ex, Vanadium Silicide, made by the Continental Ore Company?

A. I did.

Q. I hand you a document, sir, and ask you if that is the document which was prepared pursuant to your instructions in this matter.

A. It is the document, yes. It is not a complete document, however. I mean——

Q. It doesn't show the Apex?

A. It doesn't show the Apex.

Q. Now I show you another document and ask you whether had prepared from the books and records of your company, the Continental Ore Corporation and Continental Ore Company, a statement of the sales of vanadium by year and by type, to-

(Testimony of Henry J. Leir.)

gether with the prices paid, including not only Continental Ore billings but the Apex billings as well?

A. Yes. This is the complete statement.

Mr. Alioto: We will offer these two documents in [1175] evidence, if your Honor please, in connection with the business done by the plaintiff's companies.

Mr. Archer: I have never seen them.

Mr. Alioto: You have never seen them but you were invited to have your accountants confer, and you turned it down.

Mr. Archer: We won't go into that.

Mr. Alioto: Don't say you have never seen it before.

Mr. Archer: Well, I haven't seen it before.

Mr. Alioto: You were invited to.

The Court: Let's not have any argument.

(Discussion among counsel.)

Mr. Holland: No objection, your Honor.

Mr. Archer: The only thing I ask, it says "Analysis of C.O.P." That means——

Mr. Alioto: Continental Ore. In other words, wherever "C.O.C." appears on the document, that means the Continental Ore Company.

A. Continental Ore Company.

Mr. Archer: How do you distinguish which are Apex and which aren't Apex?

Mr. Alioto: You will see, Apex, first of all, has been put in separately in another document, and there is a line down here showing what the Apex

(Testimony of Henry J. Leir.)

total is—for example, [1176] if you subtract $310,000 from $694,000, you will have it.

Mr. Archer: It is not by year?

Mr. Alioto: No, not by year.

Mr. Archer: We have no objection, your Honor.

The Court: Very well, it will be admitted.

(Two-page document "Continental Ore Corporation and Continental Ore Company—Sales of Vanadium" was received in evidence and marked Plaintiff's Exhibit No. 119.)

[See Book of Exhibits.]

Mr. Alioto: I would like generally to inform the jury of what these documents contain, if your Honor please.

The Court: Very well.

Mr. Alioto: First of all, they set up the years June 13, 1939 to December 31, 1939, and then they go down to 1940, right through 1949.

In the first column you have "Vanadiumpentoxide" the pounds and amount; the second column is "Ferro-vanadium", the pounds and the amount; and the next column is the "Van-Ex" the pounds and the amount; the next column is "Vanadium-Silicide" the pounds and the amount; and finally a total of all of these.

And this shows, ladies and gentlemen, from June 13, 1939 to December 31, 1939, there were approximately 48,000 pounds of Vanadiumpentoxide sold; the sales price was $59,000. There was nothing else sold that year.

(Testimony of Henry J. Leir.)

In 1940, they sold 38,000 pounds of Vanadium pentoxide [1177] for sales price of $51,000;

And they sold 15,648 pounds of ferro-vanadium for a sales price of $45,000.

The total that year was 53,000 pounds in the total amount of $96,000.

In 1941 the pentoxide sales were 8,495 pounds for $193,000. Or a total in that year of $203,000 sold.

In 1942 there were no sales of vanadium-pentoxide. The sales of ferro-vanadium were 27,000 pounds for $78,000. Van-Ex sales 71,000 pounds for $171,000, or a total of $249,000 sold during that year.

The next year, 1943, $53,000 sold, and then $14,000, and $17,000, and then in 1946 $240.

Of the total billings of the $694,000 sold of vanadium products, $310,000 were billed out of Apex. The difference between $310,000 and $694,000 was billed out of the Continental Ore Company.

Mr. Archer: There are no sales in '48 and '49?

Mr. Alioto: Not from any invoices we have, no, sir.

Q. Now, Mr. Leir, did you prepare from the books and records of the Continental Ore Corporation and the Continental Ore Company a statement of yearly sales, costs and profits on vanadium?

A. (Examining): I have had this prepared.

Q. The document I am handing you, is that the document that you had made up?

A. That's the one.

Q. To the best of your knowledge, are all the

(Testimony of Henry J. Leir.)

figures there true and correct and reflect the books and records? A. Yes.

Mr. Archer: May I see it?

(Discussion between counsel.) [1179]

Mr. Archer: May I ask a few questions on voir dire?

The Court: Very well.

Mr. Archer: This is a statement of yearly sales, costs and profits in respect to vanadium.

Q. Mr. Leir, did you prepare this statement?

A. Not myself.

Q. Do you know from what books it was prepared?

A. From the books of the corporation and the company.

Q. The general ledgers and the journals?

A. All the books.

Q. The invoices I would take it, then?

A. Of course.

Q. What I want to get for the record is just exactly what books were used. Do you know of any books besides your general ledgers, your purchase journals and your invoices?

A. I have given orders, strict orders, to prepare an extremely accurate statement as to the matter involved, and I am convinced that my orders were executed to the letter.

Q. Your Controller actually prepared it, the head of your Bookkeeping Department?

A. Yes. We had a sufficiently large bookkeeping department, numbering 75 people, which I em-

(Testimony of Henry J. Leir.)

ploy in New York right now, and there is a sufficient number of bookkeepers and accountants steadily who know what it means to present in court a statement of that kind. [1180]

Q. What I am getting at, for instance, you know you purchased $75,000 worth of ferro-vanadium from Electro Met in 1948?

A. 1948, for Switzerland, yes.

Q. Then it does not have foreign sales on here. In other words, it does not show any 1948 sales here, and I was wondering why that sale was not there.

A. If that is missing, you have a good point. There might be some items missing, but there are certainly no items on it which do not belong in it.

Mr. Archer: Your Honor, if there are some items missing, maybe it ought to go in subject to correction.

Mr. Alioto: I have no objection to doing that.

The Witness: Yes, let it go in subject to correction.

Mr. Alioto: In transcribing this much work, there may be an error in picking one sale up, Mr. Archer. I have no objection to it going in subject to correction.

Mr. Archer: It is suppposed to include foreign sales as well as domestic?

Mr. Alioto: That is correct.

Mr. Archer: There is obviously an omission of 75,000 pounds of ferro-vanadium in 1948 sold to Switzerland.

(Testimony of Henry J. Leir.)

Mr. Alioto: It could very well be, Mr. Archer.

Mr. Holland: Is the Controller who prepared this [1181] exhibit going to take the stand?

Mr. Alioto: The problem is, the man who prepared this exhibit has been in the hospital for the last two weeks, if your Honor please.

Mr. Archer: We did not put him there, did we?

Mr. Alioto: I don't know.

Mr. Archer: You are not blaming that on us?

Mr. Alioto: In any event, he is in the hospital. I think the books and records on which this is based——

The Court: Let it be admitted subject to correction.

Mr. Alioto: Yes. I think we should have had a conference before the trial started on this, as a matter of fact.

(The statement referred to was thereupon received in evidence and marked Plaintiffs' Exhibit 120.)

[See Book of Exhibits.]

Mr. Alioto: The books and records themselves upon which these were based were all made available to counsel for the defendant, if your Honor please.

Mr. Archer: That is correct, your Honor.

Mr. Alioto: And I will work out any suggestion that Mr. Archer has so there won't be any problem about it.

In any event, this document shows with respect to sales, total sales of $383,000. It shows the cost

(Testimony of Henry J. Leir.)

of those sales of $343,000. It shows a gross profit of $40,000 for [1182] the years 1939 through 1946. It shows the Apex billing separately, and it also shows the percentage of gross profit of the sales.

In 1939 that percentage of gross profit was 9.8; in 1940 it was 13.3; in 1941 it was 2.5; in 1942 it was 12.1; in 1943 it was 10.5 per cent. There was a loss on the transaction in 1944 on $14,000 worth of sales. In 1945 it shows 2.6 per cent of gross profit. In 1946, 11.4 per cent on one transaction.

The Court: At this time we will adjourn until 2:00 o'clock.

(Thereupon a recess was had until 2:00 o'clock P.M.) [1183]

Thursday, June 12, 1958—2:00 O'Clock P.M.

HENRY J. LEIR

one of the plaintiffs, a witness in his own behalf, on the stand at the time of recess, having been previously duly sworn, resumed the stand and testified further as follows:

Direct Examination —(Resumed)

Mr. Alioto: If your Honor please, this morning when we had offered the balance sheets and the profit and loss statements of the Continental Ore Company and the Continental Ore Corporation from July of 1939 through 1949, I do not believe that the documents were at that time marked, so I think there would be a problem of identification for the record.

(Testimony of Henry J. Leir.)

I would appreciate, therefore, if your Honor would be good enough to have the clerk mark them all as one exhibit.

The Court: Let them be marked for identification.

(The statements referred to were marked Plaintiffs' Exhibit No. 121 for identification.)

Mr. Alioto: If your Honor please, this morning the witness described certain arrangements that were made with Apex in connection with the termination of that contract, for them to go on manufacturing for a period of time, and those arrangements are not the subject of a formal contract, but are set forth in an exchange of correspondence. We offer the contract at this time as plaintiffs' next in order in connection [1184] with the Apex transaction.

Mr. Holland: There would be no objection. I think there is further correspondence. No objection to introducing that portion of it.

Mr. Archer: No objection.

The Court: Admitted.

(The exchange of correspondence referred to was marked Plaintiffs' Exhibit No. 122 in evidence.)

[See Book of Exhibits.]

Mr. Alioto: Just to complete the matter on worth, may I inquire of the witness:

Q. (By Mr. Alioto): ——whether or not, Mr. Leir, you have directed your controller to tabulate the increase in the net worth of the Continental

(Testimony of Henry J. Leir.)

Ore Corporation—the Continental Ore Company for the period from June 13, 1939, through 1949?

A. I did.

Q. And is this the tabulation which I hold in my hand, the tabulation made under your direction?

A. Yes.

Q. And does it actually reflect, to the best of your knowledge, the books and records of the corporation with respect to the net worth of this corporation and of this partnership during the period of time from June of '39 to '49? A. It does.

Mr. Alioto: We will offer this in evidence, if [1185] your Honor please. It is a tabulation of the annual statements that have already been offered, but it shows the picture on one page.

Mr. Holland: To which we object for the same reason we objected to the annual statements.

The Court: Objection will be sustained.

Mr. Alioto: May it be marked for identification so that it will be clear what is being rejected at the present time?

The Court: Mark it for identification.

(The tabulation referred to was marked Plaintiffs' Exhibit No. 123 for identification.)

Q. (By Mr. Alioto): Now, Mr. Leir, in addition to the Continental Ore Company and the Continental Ore Corporation, you also have a corporation known as the Austro-American Aluminum Corporation, do you not? A. I do.

Q. And what, generally, does that corporation deal in? A. In alumina and aluminum.

(Testimony of Henry J. Leir.)

Q. And that corporation dealt in those products for the period 1942 to 1949?

A. And up to this date.

Q. But at least up through 1949? A. Yes.

Q. Now then, you have another corporation called the Borites Corporation, is that correct?

A. Yes.

Q. And that corporation was in existence and operated for the period at least from 1948 and 1949, is that correct? A. It is.

Q. And what are the products with which that corporation deals?

A. A mineral known as barytes.

Q. (By The Court): What?

A. Barytes—b-a-r-y-t-e-s.

Q. (By Mr. Alioto): What are the uses of barytes?

A. Barytes is a material which is—a mineral which is considered one of the heaviest minerals in existence, and it is being extensively used, for instance, in the drilling of oil wells.

Q. Now then, you also have another corporation called the Coal Export Corporation which operated in 1947, '48, '49, and thereafter?

A. I did.

Q. And what is the nature of that corporation? What does it do?

A. That corporation exports coal derivatives, coal tar [1187] products, for instance, from the United States to all parts of the world.

(Testimony of Henry J. Leir.)

Q. You also have a corporation that deals in phosphates? A. Yes.

Q. Used for agricultural purposes?

A. For agricultural purposes, yes.

Q. Those are fertilizers used in agriculture?

A. Yes.

Q. And what type of phosphate is it?

A. It is the so-called phosphate rock from Florida, of which we export rather tremendous quantities every year regularly to various parts of the world.

Q. Now then, you also have a corporation known as Magnolithe Corporation, do you not?

A. Yes.

Q. And that operated in 1948 and 1949?

A. Yes.

Q. And what was the nature of that corporation, Mr. Leir?

A. That corporation was interested in the introduction of magnesia products—for sugar mills, for instance.

Q. Then, again, all of these corporations, in one form or another, are related to minerals, ores, alloys or chemicals; that is correct, is it not?

A. Yes.

Q. Now then, in the period after—— [1188]

Q. (By The Court): Identify for me, in what way are they interested in Continental Ore?

A. All these corporations form one group known today in the United States as the Continental Ore group, and the Continental Ore group is a family

(Testimony of Henry J. Leir.)

enterprise of which the main shareholders are Mrs. Leir, my mother-in-law, and myself.

Q. You mean that the owners, then, of the stock of the Continental Ore Company—the Continental Ore Company is the owner of the stock in all of these subsidiary companies?

A. Yes. The ownership is identical.

Q. But they are engaged in the various enterprises that you have testified to?

A. In the various enterprises, yes.

Q. (By Mr. Alioto): They operate out of the same offices in New York and the same offices throughout the world? A. Entirely, yes.

Q. And all of these corporations I have mentioned are owned by you, your wife, and your mother-in-law, and your wife's cousin?

A. Yes.

Q. Is that correct? A. Yes.

Q. Now then, after 1949 you had a corporation known as [1189] the International Ore and Fertilizer Corporation?

A. It is still in existence today.

Mr. Holland: If your Honor please, I was going to object to the introduction of any figures in respect to any of these corporations, but I have no objection to his speaking about the corporations. But here you have got one that didn't even come into existence until after this suit.

Mr. Alioto: I haven't mentioned any figures, if your Honor please. I simply want to identfiy these corporations before offering the document.

(Testimony of Henry J. Leir.)

The Court: This last corporation is one that was formed after this suit was filed.

Mr. Alioto: This corporation was operating after 1949, that's correct, if your Honor please. But I am offering these in connection with showing the managerial skill of this plaintiff in the field of minerals, alloys and ores, and I would like to identify them and then offer the document. I anticipate, in view of the Court's prior rulings, that the document will be rejected, but I would like to identify it.

The Court: Very well. Let it be marked for identification.

Mr. Alioto: May we have it marked for identification?

(The tabulation referred to was marked Plaintiffs' Exhibit No. 124 for identification.)

Q. (By Mr. Alioto): Mr. Leir, I show you 124 for identification——

I take it those pages will be 124 for identification?

The Clerk: Yes.

Q. (By Mr. Alioto): I show you 124 for identification and ask you to look at the corporations listed under the heading "Fiscal Years"—I don't think that we have mentioned all of those—and generally state for the record whether those are part of the Continental Ore group and have been since 1949, and whether you and your wife and your mother-in-law are the owners of those corporations.

A. We are.

(Testimony of Henry J. Leir.)

Q. Now then, the Continental Lead and Zinc Corporation, what does that deal in?

A. In lead and zinc.

Q. And the Continental Aluminum Corporation, what does that deal in? A. In aluminum.

Q. And the Brazilian Iron Ore Importing Corporation, what does that deal in?

A. Brazilian iron ore.

Q. And the International Asphalt Corporation, what does that deal in?

A. In asphalt products. [1191]

Q. Now, all of these companies that I have mentioned have been managed by you, have they not, Mr. Leir, from 1939 right down to the present time?

A. Up to date.

Q. In connection with Plaintiffs' Exhibit 124, does that represent a tabulation made by you of the net worth growth of each of these companies from 1939 to 1949, on the first page of the exhibit, and then from 1950 down to date on the second page of the exhibit?

A. It was not made by myself, but I had it made.

Q. It was made under your direction?

A. Under my direction, yes.

Q. It was made by your controller?

A. Yes, by the controller of the corporation.

Q. And that's the gentleman who has been in the hospital—is at the present time? A. Yes.

Q. To the best of your knowledge do the figures actually represent the net worth growth of the corporations for the period of time mentiond?

(Testimony of Henry J. Leir.)

A. In the amount of five and a half million dollars.

Q. State whether or not in your opinion the net worth growth of these corporations, which are engaged generally in the business of minerals, ores and alloys, would afford a reliable guide as to what your growth would have been in the [1192] vanadium industry in the absence of any restrictions.

Mr. Holland: I object to the question.

The Court: The objection is sustained.

Mr. Alioto: We will now offer, if your Honor please, the document which has heretofore been marked as Plaintiffs' Exhibit 124 for identification.

The Court: Objection sustained.

Mr. Holland: And, if your Honor please, I should like to have the remark that Mr. Leir made giving the figures of his growth verbally be stricken from the record.

The Court: Motion will be sustained. The jury will disregard the statement. It has nothing to do whatever with the issue in this case.

Mr. Alioto: Now, I just want to complete the record, if your Honor please, with respect to another matter. I will do it very, very quickly.

Q. (By Mr. Alioto): Mr. Leir, approximately when was it you started dealing in the mineral fluorspar? A. We made it in Germany.

Q. When did you start dealing with that mineral in the United States? A. In 1939.

Q. In other words, from the time you organ-

(Testimony of Henry J. Leir.)

ized the Continental Ore Company down to the present time have you [1193] dealt in fluorspar?

A. On a rather large scale, yes.

Q. Do you believe, Mr. Leir, on the basis of your experience, both in Europe and in America, in fluorspar and vanadium, that the two products are comparable from the standpoint of commercial occurrence and commercial distribution?

Mr. Holland: I object, your Honor.

The Court: Objection sustained. Calls purely for an opinion of the witness.

Q. (By Mr. Alioto): Would you state the specific facts, Mr. Leir, with respect to the comparability of fluorspar in its commercial occurrence and vanadium in its commercial occurrence?

Mr. Holland: I object, your Honor.

The Court: Objection will be sustained.

Q. (By Mr. Alioto): And the final question, if your Honor please, would you state, Mr. Leir, the specific facts with respect to the comparability of fluorspar in connection with its commercial distribution and vanadium in connection with its distribution?

Mr. Holland: I object, your Honor.

The Court: Objection sustained.

Q. (By Mr. Alioto): And finally, would you state the facts with respect to the competitive business condition in the fluorspar industry [1194] as distinguished from the comparative business condition in the vanadium industry in the period from 1939 to 1949?

(Testimony of Henry J. Leir.)

Mr. Holland: Object, your Honor. No foundation.

The Court: The objection is sustained.

Mr. Alioto: Well, on the ground of no foundation, is that because of lack of experience in each of these industries?

Mr. Holland: If we went into these two industries we would have to ask a hundred questions to find out the comparability.

The Court: The objection is sustained because it is immaterial.

Mr. Alioto: On that—in other words, I understand that——

The Court: Calling for an opinion of this witness.

Q. (By Mr. Alioto): Now, Mr. Leir, have you prepared a tabulation showing the fluorspar sales made by your company from June 13, 1939, down through 1949, and thereafter to 1957, broken down with respect to private industry, and your government sales?

A. I gave instructions to that effect, yes.

Q. Was that study prepared as a result of your direction? A. It was.

Q. Does that study accurately reflect the figures of fluorspar distribution in your company in the applicable [1195] periods?

A. I believe it does.

Q. Did you also direct the controller to make a tabulation of the fluorspar distribution in your company for the applicable periods? A. Yes.

(Testimony of Henry J. Leir.)

Q. And are these two documents the studies directed to be made? A. Absolutely.

Mr. Alioto: We will ask that these documents first be marked for identification as one exhibit.

(The tabulations referred to were marked Plaintiffs' Exhibit No. 125 for identification.)

Mr. Alioto: We will offer these in evidence, if your Honor please.

Mr. Holland: To which we object, your Honor, on the same ground.

The Court: Objection sustained.

Q. (By Mr. Alioto): Then finally, Mr. Leir, did you have prepared a document under your direction setting forth a computation based on the sales of vanadium that would have been made by Continental if it had the same percentage of the vanadium industry as it had of the fluorspar industry in the years 1939 to 1949? A. Yes.

Q. Is the document that I hold in my hand the computation that you had prepared setting forth those facts? A. This is the document.

Q. Does that document accurately reflect the figures set out in the document?

A. To the best of my belief.

Mr. Alioto: We will ask that this document be marked for identification.

(The document referred to was thereupon marked Plaintiffs' Exhibit 126 for identification.)

Mr. Alioto: We will offer it in evidence.

(Testimony of Henry J. Leir.)

Mr. Holland: To which we object, your Honor, on the same grounds. [1197]

The Court: Sustained.

Mr. Alioto: It is sustained on the ground it is immaterial and irrelevant?

The Court: Immaterial, not relevant.

Mr. Alioto: I take it, so there won't be any problem about not going out to the hospital and getting him, there is no objection on the ground that the Controller is not in the court at the moment? He was here for the first two days.

Mr. Holland: The offer should be subject to correction. I mean, we would have the right to look them over.

Mr. Alioto: We understand that, but there is no objection being made because of the fact that the Controller is in the hospital?

Mr. Holland: No, we would not take advantage of that.

Mr. Alioto: Thank you very much.

Q. Mr. Leir, with respect to the next phase of this questioning, I would like to direct your attention to the matter of the volume of business that might have been done with the facilities that you had under contract in various periods of time. I would like to ask you, for the record, to state the facts with respect to the volumne of ferro-vanadium that would have been produced by the Apex Company if it had a steady, dependable source of vanadium oxide during the period beginning [1198] in

(Testimony of Henry J. Leir.)

1940 through July of 1949, and with respect to that question I would ask you to base your answer upon all of the following factors:

One, your own business experience; two, your experience, European and American, in dealing in alloys for the steel industry; three, your knowledge of the business conditions of the Apex Smelting Company, its equipment, its plant, its personnel; four, your knowledge of the comparative merits of ferro-vanadium containing 70 to 80 per cent vanadium content as against ferro-vanadium containing 40 to 55 per cent vanadium content; five, your knowledge of the business records of the Continental Ore Company; six, your knowledge of the business records of the defendant companies relating to the volume of business done in the years in question, which records have been placed in evidence in this case; seven, your knowledge of the state of the industry during the time in question as known to you by direct experience and as it has been placed in evidence here by Mr. Burwell and Mr. Nisley, and the documentary evidence which has been admitted; and eight, your knowledge of the chemical and steel industries during the same time in question:

Would you be good enough to answer that question in the light of all those factors?

Mr. Holland: To which we object, your Honor. Highly speculative. It is based upon facts which have not [1199] been proved and it is also based on a request to consider several factors which the Court has already ruled are immaterial in this case.

(Testimony of Henry J. Leir.)

The Court: Objection sustained. Exception allowed.

Q. (By Mr. Alioto): Would you be good enough, Mr. Leir, to state the facts with respect to the volume of ferro-vanadium that would have been produced by the Imperial Paper and Color Company under the contract made between your company and that corporation if that company had a steady, dependable source of supply of vanadium oxide during the period of the contract, and I would ask you to base that statement of estimated volume on the same factors as previously mentioned.

Mr. Holland: To which we make the same objection, your Honor.

The Court: Objection sustained. Exception allowed.

Q. (By Mr. Alioto): Mr. Leir, will you state the facts with respect to the volume of business which you, by your companies would have done in the vanadium industry expressed in terms of a percentage of the total business done by the defendants in this action, as you have learned those figures from the evidence in the case; and if you would state those facts for the period from July 1939 through July 1949 and state them on the assumption that you were able to secure a steady, dependable source of vanadium oxide during the period in question. [1200]

Mr. Holland: To which question we object on the same grounds.

(Testimony of Henry J. Leir.)

The Court: Objection sustained. Exception allowed.

Q. (By Mr. Alioto): State the facts, Mr. Leir, with respect to whether or not your companies could have sold the total output of ferro-vanadium produced by the Apex Company during the period from 1940 through 1949.

Mr. Holland: I object, your Honor.

The Court: Objection sustained.

Q. (By Mr. Alioto): State the facts, Mr. Leir, with respect to whether or not your company, you or your companies, could have sold the total output of the Imperial Paper and Color Company under the estimate of that production during the years in question, they being the years of the contract from 1944 through 1948.

Mr. Holland: To which we object, your Honor, on the same grounds.

The Court: Objection sustained.

Q. (By Mr. Alioto): Mr. Leir, during the period of time between 1939 and 1940, if you had had a greater volume of the vanadium business, would you have had to increase your office force or your overhead expenses in order to handle that business?

A. I do not believe so.

Q. In other words, your personnel during that period of [1201] time was sufficient to handle that business?

A. We were sufficiently equipped to do it.

Q. You do not believe you would have had to

(Testimony of Henry J. Leir.)

increase your overhead in order to handle additional vanadium business?

A. Overhead slightly, yes.

Q. Suppose you had approximately 10 per cent of the industry or 10 per cent of the amount of sales made by those two defendants: Would you have had to increase your overhead insofar as getting new men was concerned?

Mr. Holland: Objection, your Honor.

The Court: Objection sustained. Wholly immaterial and speculative.

Q. (By Mr. Alioto): Can you make an estimate of what additional vanadium business you would have had in the period 1938 to 1941 in the light of the business conditions as they existed during that period of time?

Mr. Holland: To which we object, your Honor.

The Court: Objection sustained.

Q. (By Mr. Alioto): And the same question with respect to the period 1941 to 1944.

Mr. Holland: Same objection.

The Court: Objection sustained.

Q. (By Mr. Alioto): And the same question for the period from 1944 through July of 1949.

Mr. Holland: Same objection. [1202]

The Court: Sustained; exception allowed.

Q. (By Mr. Alioto): Mr. Leir, was your European ferro-vanadium business profitable?

A. It was very profitable.

Mr. Holland: I object, your Honor. It has nothing to do with this case.

(Testimony of Henry J. Leir.)

The Court: Sustained. It is immaterial.

Q. (By Mr. Alioto): Mr. Leir, what is your opinion on the question as to whether or not you would have had an established position in the vanadium business at the end of 1941 on the assumption that you were not restricted and you had a dependable source of vanadium oxide for that period of time in connection with your joint operating arrangement for the production of ferro-vanadium between your company and the Apex Smelting Company?

Mr. Holland: To which we object, your Honor. It is not based upon any facts proved in this case and immaterial.

The Court: Objection sustained.

Q. (By Mr. Alioto): In the light of the business conditions existing after 1941, state the facts with respect to whether or not, if you had an established business, that business would have reacted generally the same as the general business development in this industry, the steel industry, and American business generally from 1941 to 1949.

Mr. Holland: Same objection. [1203]

The Court: The objection is sustained.

Q. (By Mr. Alioto): What was the capacity of the Apex plant in the period from 1940 through 1942 at the time the plant was dismantled?

A. 6100——

Mr. Holland: Mr. Wolf has already testified to that.

Mr. Alioto: This man is more intimately ac-

(Testimony of Henry J. Leir.)

quainted with that situation, I think, than Mr. Wolf.

Mr. Holland: It is cumulative.

The Court: It is already in the record, is it not?

Mr. Holland: It is already in the record.

Mr. Alioto: I do not know whether the testimony is going to be exactly the same. This man knew a little more about it.

The Court: Let him answer.

Q. (By Mr. Alioto): What was the capacity of Apex during this period?

A. 1600 pounds per day, 1600 pounds of vanadium per working day.

The Court: For how long? A. Per day.

Q. (By Mr. Alioto): How many working days do you figure in a month?

A. 25 working days; in other words, about 40,000 pounds [1204] of V-contained in ferro-vanadium a month.

Q. If there had been a steady, dependable source of vanadium oxide at the time, could that plant have operated to capacity?

Mr. Holland: I object, your Honor, on the ground it is highly speculative and not based upon any facts in evidence.

Mr. Alioto: Has your Honor ruled?

The Court: Did you finish your question?

Mr. Alioto: Yes, if your Honor please.

The Court: Objection sustained.

Q. (By Mr. Alioto): Tell us something about the Imperial Paper and Color Company, Mr. Leir.

(Testimony of Henry J. Leir.)

Was that a rather large company, a successful company?

A. Imperial Paper and Color Corporation?

Q. Yes.

A. It is a large outfit which has been in existence for a great number of years in Glens Falls, New York. They employ at least 800 people, and they are to the best of my knowledge a concern of at least 8 or 10 million dollars.

Q. Tell us something about the Climax Molybdenum Company and the size of that company and anything you know about whether it is a successful enterprise.

A. The Climax Molybdenum is the outstanding example of mining in this country. I think their net worth today before [1205] the merger with American Metal should be definitely in excess of 50 million dollars.

Mr. Alioto: I take it that your Honor is sufficiently apprised of the ground on which the plaintiff has asked these questions and the cases on which the plaintiff relies so that your Honor will not want an argument on the point at this time?

The Court: Yes.

Mr. Alioto: We have no further questions.

Cross Examination

Q. (By Mr. Holland): Mr. Leir, although I was not fortunate enough to be born in San Francisco, I will try to handle the English language as well as Mr. Alioto does.

(Testimony of Henry J. Leir.)

The contract with the Apex Smelting Company, which is in evidence, dated July 1, 1938, is that contract similar to the one that you had with Fredet-Kuhlmann in Europe? A. No.

Q. The one outstanding difference, Mr. Leir, I would imagine, is, as I understand it, in the Fredet-Kuhlmann contract that you had in Europe, you supplied 50 per cent of the financing for the operations, is that correct? A. Yes, sir.

Q. And in the case of Apex, you supplied none of the financing: Apex supplied it all, is that not correct? [1206]

A. Correct.

Q. At the time that contact was signed, or shortly thereafter, on July 14th, 1938, there was an agreement made with you by Apex or an offer made by Apex through Fredet-Kuhlmann to employ you as a consultant and for certain services?

A. I remember that, yes.

Mr. Holland: I should like this document marked Defendant's Exhibit next in order.

(The document referred to was thereupon marked Defendant V's Exhibit 1-D.)

Mr. Alioto: No objection.

Mr. Holland: We offer in evidence Defendant V's Exhibit 1-D.

The Court: It will be admitted.

(Defendant's V's Exhibit 1-D was thereupon received in evidence.)

[See Book of Exhibits.]

Mr. Holland: Defendant's Exhibit V-1-D is a

(Testimony of Henry J. Leir.)

letter dated July 14, 1938, from Apex Smelting to Societe d'Electro-Chimie de Brignoud, regarding the employment of Mr. Henry John Leir as production consultant in the thermit department.

Q. Now, under the terms of this agreement, which I believe you operated under until approximately September, 1940, is that correct, Mr. Leir?

A. Under the terms of this agreement?

Q. That is, under the terms of this letter you were entitled to 10 per cent of the net receipts of the thermit department of Apex? A. Yes.

Q. And that was superceded in September, 1940, at a time when you relinquished this, is that correct? A. I relinquished it, yes.

Q. During the time that you were working under this, part of your duties was to procure raw materials for Apex, is that correct? A. Yes.

Q. And for that you were to be paid 10 per cent of the net receipts of the thermit department of Apex during the time that was in effect?

A. I guess not only for the procurement of the raw material, but for general services in connection with the production.

Q. Yes, but I mean that was part of your duties that were compensated for? A. Yes.

Q. In accordance with those duties, Mr. Leir, on July 27th, 1940, did you contact Mr. Daniel Milenski of the Blanding Company regarding the purchase of vanadium pentoxide from Blanding Mines Company? [1207-A]

(Testimony of Henry J. Leir.)

A. I contacted at that time quite a number of parties on the so-called Colorado Plateau.

Q. I hand you a letter from Henry John Leir to Mr. Daniel Milenski dated July 27, 1940, and ask you if you can identify it.

A. Yes, I identify this letter.

Mr. Holland: I offer this letter as our exhibit next in order.

Mr. Alioto: We have no objection, Mr. Holland.

(The document referred to was thereupon received in evidence and marked Defendant V's Exhibit 1-E.)

[See Book of Exhibits.]

Mr. Holland: This is a letter in which Mr. Leir orders a thousand pounds to be shipped from the Blandings Mining Company to Apex Smelting, the date being July 27th, 1940, and after discussing various terms of purchase, it says, "Until further notice we will pay a price of $1.03 per pound of V_2O_5 f.o.b. Thompsons, less 3 per cent."

Q. Now, what was the 3 per cent that was deducted there, Mr. Leir?

A. I couldn't tell you today what it was.

Q. Was that supposed to be a commission going to yourself or Continental Ore?

A. I doubt it, I doubt it, I doubt it very much.

Q. I hand you a letter of August 10th, 1940, to Mr. [1208] Milenski and signed by yourself and ask you if you can identify that letter (handing document to witness). A. Yes, I can identify it.

Mr. Alioto: No objection.

(Testimony of Henry J. Leir.)

Mr. Holland: I offer it as our next exhibit in order.

(The document referred to was thereupon received in evidence and marked Defendant V's Exhibit 1-F.)

[See Book of Exhibits.]

Mr. Holland: This is a letter from Mr. Leir to Mr. Dan Milenski, Cortez, Colorado, dated August 10th, 1940:

"I was again in Chicago last Thursday, where I saw our friends, the Apex Smelting Company. They expect the arrival of the 1,000 pounds which you forwarded in the meantime.

"However, I do not quite understand why you mentioned to them the price of $1.03 less 3%, when you approached them directly. As a matter of fact these 3% represent our commission and you will admit that we cannot work for nothing."

Q. Does that refresh your recollection as to the fact that this 3 per cent was a commission?

A. According to the terms of this letter, this was a commission, of course, but let me look into the records and find out the reason for having claimed the amount of about [1209] $30 involved, or even less than that, because for a thousand pounds the amount of commission, as you call it, involved, is about $25. There must have been a special reason why I claimed this $25 rather for the company in New York than for Apex. [1209-A]

Q. Well, I am not asking why you claimed it.

(Testimony of Henry J. Leir.)

I am asking you whether you claimed a commission or didn't?

A. Well, we would have to look into the correspondence because I am convinced there is some reason, some good reason, for it.

Q. And why did you say that Blanding should not have approached Apex directly and told them about this price and the commission?

A. As I said, there must have been some good reason for it.

Q. You say:

"The Apex Smelting Company is a very valuable customer for you, as I already explained; they are the only independent producer of ferro-vanadium in the United States and there is no doubt that they can accept your entire output.

"There is no sense, therefore, to annoy them and to increase the price, now that you have quoted them at the figure of $1.03 less 3% corresponding to practically $1.00 f.o.b. Thompson.

"We therefore ask you to reserve us our commission of 3% on this price and to send us your statement every month for such commission due to us." [1210]

In other words, you are telling them, are you not, because they talked to Apex they have to reduce their price to $1.00 to Apex and then in addition to that they are to send you a commission, is that not, Mr. Leir? I am just asking you what the letter says.

A. The letter speaks for itself. If you will fol-

(Testimony of Henry J. Leir.)

low me before the day is over or perhaps tomorrow to give you an additional answer to——

Q. Well, you can make any explanation you wish, Mr. Leir. And I am sure your counsel will give you full opportunity to explain.

Mr. Alioto: You plan to read the reply, counsel?

Mr. Holland: Pardon?

Mr. Alioto: You plan to read the letter that goes with it?

Mr. Holland: Well, I had two that are prior in date to that from Blanding to put in.

Mr. Alioto: We will offer it then later.

Mr. Holland: I may offer it. I don't believe I had that letter. I will be glad to put it in.

Q. I hand you a letter dated August 16, 1940, from Dan Milenski to Continental Ore Corporation, attention Mr. Henry John Leir, and ask you if you recall receiving that letter?

A. (Witness examining) It looks like a letter written to us. [1211]

Mr. Alioto: Can we agree, Mr. Milenski was an attorney?

Mr. Holland: Mr. Milenski was one of the principals of Blanding Mines Company, wasn't he, as well as being an attorney?

A. Yes, and an attorney.

(Letter dated August 16, 1940 from D. Milenski to Continental Ore Corporation was marked for identification Defendant-V Exhibit 1-G.)

(Testimony of Henry J. Leir.)

Mr. Holland: Offer V 1-G in evidence. Any objection to this?

Mr. Alioto: No, none at all.

(V1-G marked for identification was received in evidence.)

[See Book of Exhibits.]

Mr. Holland: This is a letter from Dan Milenski to Continental Ore Company, attention Mr. Henry John Leir, dated August 16, 1940:

"Dear Mr. Leir:

"We are sorry that we perhaps went too far in our conversations with the Apex Smelting Company. However, at the time that we talked to them over the telephone we had not as yet heard from you, and we were quite desirous of shipping the product.

"We of course realize that you must have [1212] a commission for handling, and apparently I had misunderstood as to your relationship with the Apex Smelting Company. However, we will be glad to bill the Apex Smelting Company for $1.03 f.o.b. Thompson, and then deduct and pay to you directly your 3% if this is satisfactory. We certainly desire to follow your wishes in the matter and see that you collect your commission regularly."

I hand you a letter of August 19, 1940, from yourself to Blanding Mines Company, and ask you if that is your letter?

A. (Witness examining) Yes, sir.

Mr. Holland: Please mark this as Defendant's exhibit next in order.

(Testimony of Henry J. Leir.)

(Letter dated August 19, 1940, from Continental Ore to Blanding Mines Company, was received in evidence and marked Defendant's-V, 1-H.)

[See Book of Exhibits.]

Mr. Holland: This letter to Blanding from Leir says:

"We have carefully noted your letter of August 16 and it is up to you to decide whether you want to maintain the price you quoted to the Apex Smelting Company or whether you prefer to increase it.

"All we want is the commission of 3%, which [1213] is a very moderate one."

There is further in the letter.

And, finally, will you mark as our next exhibit the letter that Mr. Alioto requested I put in.

(Letter dated August 23, 1940 from Blandings Mine Company to Continental Ore, was received in evidence and marked Defendant's-V 1-I.)

Mr. Holland: This, I take it, is the final one of this particular correspondence.

It is from Dan Milenski to Continental Ore dated August 23, 1940, and is in reply to the letter that I just read.

"Dear Mr. Leir:

"I have your letter of August 19 and state that we certainly do desire to increase the selling price of V_2O_5 as much as possible, and we desire to deal with you and your company.

"However, as explained in our letters, we took

(Testimony of Henry J. Leir.)

the matter up with Apex direct for the reason that your letter mailed to us from Pocatello, Idaho did not reach us until about the 28th of July. It was my understanding, from my conversation with you, that the Apex Smelting Company was your associate. We certainly have not had any bad experiences with your firm; and we desire [1214] to maintain relations with you. We know that you are very reliable; and as explained in our letter, our communications with Apex were carried on for reason of misunderstanding."

Q. Mr. Milenski says it was his understanding from his conversation with you that the Apex Smelting Company was your associate. That was correct, was it not? A. Yes.

Mr. Holland: (Reading.)

"Consequently, we are going to follow your suggestion; and in the future we will communicate only with you. We are mailing our invoices direct to you. However, I assume that we should mail the bill of lading to Apex. I assume also that if all invoices are mailed to you, that upon receipt of them by you, that you will advance the 80 cents a pound."

And so forth. Do you want the rest of it read?

Mr. Alioto: Yes, if you will be good enough to finish reading it.

Mr. Holland: (Reading.)

"I believe you can readily see that when you suggested that we draw sight draft on Apex for 80 cents, that Apex would have undoubtedly expected

(Testimony of Henry J. Leir.)

the invoices to be attached before they [1215] would pay any sight draft.

"We do not care to have any misunderstanding, and assure you that we have dealt in the best of faith, and that we shall continue to do so in the future.

"Will you please answer by Air Mail giving in detail your instructions as to manner and method of shipments, or if it is satisfactory to ship in 5,000 pounds lots.

"As to your commission of 3%, we certainly have no objection to it, and feel that it is entirely in reason and in keeping with good business practice."

Q. In other words, Blanding initially did pay a 3% commission to your firm for sales made to Apex Smelting, is that correct?

A. According to this correspondence, yes.

Q. Now, Mr. Leir, Apex Smelting didn't commence its operations of its Thermit Department until the fall of 1940, is that correct, although the contract was dated July 1938?

A. Yes. I testified they started, to the best of my knowledge, in August or September 1940.

Q. And at that time they had a steady source of supply in the Shattuck Chemical Company, did they not?

A. A small supply from Shattuck. [1216]

Q. And they also had Blanding, that is correct, is that correct, at the time they started up?

A. I suppose so.

Q. Well, don't you know?

(Testimony of Henry J. Leir.)

We have just rec'd correspondence in August of 1940 in which a thousand pounds was sent to Apex from—— A. Well——

Q. ——from Blanding, which was the initial shipment. A. Yes.

Q. Now, that started the shipments from Blanding, did it not? A. Yes.

Q. To Apex? A. Yes.

Q. And I believe at that time you felt that the ferro-vanadium business, that is, your sales of ferro-vanadium would not open up until 1941, January 1st, is that correct?

A. Opened up in the fall of 1940, Mr. Holland.

Q. But you felt that they would become greater in '41 with the first of the year, is that correct?

A. I expected them to increase continuously, yes.

Q. Well, they started in 1940 then and they were to increase continuously. It was your policy, however, was it not, and that of Apex, not to lay in any substantial supply of raw material? [1217]

A. I think it was our policy to lay our hands on whatever quantities of raw material we would be able to obtain.

Q. And to keep it for ferro-vanadium production of the Thermit Department of Apex Smelting?

A. Or to ship it in other directions, pending the completion of the ferro department.

Q. I thought you said the ferro department was in operation and that your sales of ferro-vanadium

(Testimony of Henry J. Leir.)

commenced in the fall of 1940. That is the period I am talking about.

A. The shipment you just referred to was, in your own words, a shipment dated July.

Q. That was August. But what I am talking about is September, say, of 1940, or August.

A. Yes.

Q. It was at that time your policy to lay in a supply of raw material at Apex, or was it your policy to sell it as soon as you acquired it?

A. It depended a little bit upon the technicians at Apex. They didn't want to run the operation too intermittently, and I think it was their policy to wait and to accumulate some stocks.

Q. And was that your policy also, Mr. Leir?

A. My own policy?

Q. Yes, that is, Continental Ore's policy as the [1218] associate of Apex, did you believe that they should lay in a supply of raw material?

A. I am generally speaking for building up a supply.

Q. Why did you adopt an opposite policy at that time? A. What was the opposite policy?

Q. Well, I hand you a letter that you wrote Apex on August 20, 1940, "Re: Blanding," and ask if you can read it.

A. (Witness examining) I identify the letter.

Q. You identify the letter? A. Yes.

Mr. Alioto: Is it the same one I have?

Mr. Holland: Yes.

Mr. Alioto: No objection.

(Testimony of Henry J. Leir.)

Mr. Holland: Offer it in evidence as this defendant's next exhibit.

(Letter dated August 20, 1940, to Apex Smelting Co. from Continental Ore Corporation, Mr. Leir, received in evidence and marked Defendant V's Exhibit 1-J.)

[See Book of Exhibits.]

Mr. Holland: This is a letter dated August 20, 1940, to the Apex Smelting Company from Mr. Leir, Continental Ore Corporation by Mr. Leir, re Blanding.

The Court: To Mr. Leir?

Mr. Holland: No, it is from Mr. Leir to Apex.

"Re: Blanding.

"We have your letter of August 19th and will [1219] try to reach Mr. Lippa on the telephone in order to you our remarks as to the following points."

I am skipping the ones that are immaterial at the present time.

Mr. Alioto: Would you mind reading Paragraph 2, in the light of the previous question?

The Court: Why don't you read the whole letter?

Mr. Holland: (Reading.)

"As long as we are re-shipping this material, we would prefer that you do not let the Blanding Mines crush the material down to 1/8", according to your letter to them of August 19th. In other words, the material should remain lumpy as it has been in the past."

Number 7.

"7. Blanding intends to ship 20,000 lbs. during

(Testimony of Henry J. Leir.)

the next two months; we think it advisable to re-sell exactly these 20,000 lbs. to other parties because there is a production of about 10,000 lbs. every month from Rifle and two new productions which will open very shortly in Arizona and Los Angeles respectively.

Our sales of ferro vanadium will start on a larger scale only in September/October and will only reach the maximum from January on when the new contracts for 1941 will go into effect. [1220]

"Blanding is in a position to increase the production to, let us say, 20,000/25 lbs. every month within sixty days' notice.

"Rifle is in a position to increase the production in a similar way.

"Our idea is to completely buy up both of these productions for the Apex and we can do it all the better if, in the meantime, we are in a position to take every pound they produce.

"Needless to tell you that your requirements have first call on all vanadic acid we can secure in the market. However, we repeat that in order to eliminate any buyers in the next months and strengthen your position, it is now necessary to sell certain quantities. We think with the 20,000 lbs. sold according to the above suggestion, the situation will be decidedly in our favor, especially during the period when we will have to make arrangements with the various producers for our own 1941 requirements."

Q. Well, this letter demonstrates, does it not,

(Testimony of Henry J. Leir.)

Mr. Leir, that you adopted a policy of not laying in a sufficient supply of raw material?

Mr. Alioto: Submit, if your Honor please, it's argumentative and the letter speaks for itself.

It seems to me, it is just the opposite. He wanted to get all of these productions——

The Court: Well, you can answer the question.

Mr. Alioto: He is asking him to comment on the letter, as I understand it.

The Witness: Mr. Holland, I am very glad that you give me the opportunity to read this old letter and——

Mr. Holland: This is a old case.

A. Yes. Yes, we all know. We all know. Not by my fault. And I give you the explanation, and the explanation is extremely simple.

I can now see from this very letter which you show me that the quantities which we bought from Blanding before the start of the ferro production in Apex went, as I would call it, went out for resale. They came to Chicago. They were probably repacked, but were directed to other destinations. On those sales, which had nothing to do with the other production of Apex—my associates, as you call them, and as I call them—and I don't think I betray them—on those sales outside of the ferro production of Chicago, I had definitely a right to this small commission of three per cent, which is the case of a thousand pounds——

Q. We weren't talking about the commission.

A. All this is——

(Testimony of Henry J. Leir.)

Mr. Alioto: Let him finish. [1222]

A. Excuse me, please. You cannot just take one letter and——

The Court: The question here is why would you want to sell,——

A. I can now very clearly see from this letter that I was at that time overruled by Apex Smelting not to put in too big raw material stocks, and to—rather, to keep buying continuously on the Plateau whatever we could buy and to make the best use of it. But we were, from this letter, we were told that we could expect regular supplies, which never materialized.

The Court: The question here is—now, you stated this morning that this company ceased operations because it couldn't get a regular supply of material. Now, why, if you had an opportunity here in August or September to buy more than you actually needed, why would you want to sell it rather than to keep it for the protection of the operation of your mill?

A. The installation was not ready, your Honor, in July and August, the installation to produce ferrovanadium was not yet ready.

And, on the other hand, we wanted to buy whatever quantity of raw material was offered to us and we did it.

Q. (By Mr. Holland): But you made an error in business judgment in selling part of that instead of keeping it, didn't [1223] you, Mr. Leir?

A. Everybody makes an error in judgment.

(Testimony of Henry J. Leir.)

Q. I'm not blaming you, I'm just saying that you did. Didn't you? A. Yes, I did.

The Court: At this time we will take a recess.

(Short recess taken.) [1224]

The Witness: Mr. Holland, may I say something?

Q. (By Mr. Holland): I don't know what it is.

A. I told you, Mr. Holland, that before the day is over I would give you the explanation for the three percent commission which we had requested from Blanding. I have in the meantime checked my records and have found a letter written by myself to Apex Smelting explaining to them in great detail and in very clear language that I would put the three percent entirely at their disposal. In other words, I did not do anything behind the backs of my associates.

Q. That is correct, you put the three percent at their disposal. That was later, wasn't it, Mr. Leir?

A. It was August 27, 1940. It was in connection with this business.

The Court: Well, I don't think that is very material.

Q. (By Mr. Holland): Very well. I will be very glad to have the record show that you subsequently gave that three percent to Apex.

A. I wouldn't say subsequently, Mr. Holland. I would say immediately.

Q. Well, on August 27th, is that correct?

A. I think this is rather promptly.

Q. I thought you said that was the date. [1225]

(Testimony of Henry J. Leir.)

A. August 27th.

Q. On August 27th you gave the three percent to Apex, is that correct? A. Yes.

Mr. Alioto: Here is the letter about it.

The Court: Let us get along.

Mr. Alioto: It was prior to August 27, as a matter of fact. The letter, which is dated August 27, 1940, says:

"In our opinion the final settlement should be done through New York, because we wouldn't have any chance at all to cash the three percent which, we repeat, will be made available to you again."

So obviously he told him before that time.

The Court: Well, let us go to something else.

Q. (By Mr. Holland): Mr. Leir, prior to commencing business in this country you had been operating in Europe, is that correct?

A. Yes, Mr. Holland.

Q. And there they have the cartel system where the market was entirely controlled, is that correct?

A. Yes, Mr. Holland.

Q. On coming to this country it was your desire to have a controlled market on vanadium, was it not? A. Definitely not. [1226]

Q. Didn't you want to keep anyone else out of the business if you could? A. I don't think so.

Q. I hand you a letter dated December 16, 1940, from Henry J. Leir to Louis Lippa. Mr. Lippa was then secretary of Apex, is that correct?

A. Of Apex Smelting, yes.

Q. I ask you if you can identify the letter.

(Testimony of Henry J. Leir.)

A. Yes, I identify it.

Mr. Alioto: We have no objection.

Mr. Holland: I offer this as our exhibit next in order.

(The letter referred to was thereupon marked Defendant V Exhibit 1-K in evidence.)

[See Book of Exhibits.]

Mr. Holland: This is a long letter from Mr. Leir to Mr. Lippa, dated December 16, 1940, and I am going to read only one portion of it. Mr. Alioto can read any other portion he wishes (reading):

"I am writing this letter while Mr. Hirschland is out of town."

Q. (By Mr. Holland): Who is Mr. Hirschland?

A. Mr. Hirschland was at that time, I think, treasurer of Continental Ore Corporation.

Mr. Holland (continuing reading): "He is in [1227] Nicetown, near Philadelphia, today, on a trip for ferro-vanadium, and I would suggest that any reply to this letter be sent to my home; you will find the address above.

"As you probably know, he is the nephew of Dr. Franz Hirschland, president of the Metal and Thermite Corporation."——

Q. (By Mr. Holland): What was the Metal and Thermite Corporation?

A. Metal and Thermite is a substantial industrial outfit in the City of New York.

Q. And they had and were, during the period from 1930 on, been dealers in ferro-vanadium, is that correct?

(Testimony of Henry J. Leir.)

A. They had been, in my opinion, the very first producers of ferro-vanadium in this country, long before the First World War.

Q. And they were also selling ferro-vanadium during the period from 1938 on, is that correct?

A. I do not believe so. They stopped production. They stopped production.

Q. They had been producers and sellers of ferro-vanadium, however, is that correct?

A. Prior to the First World War, yes.

Mr. Holland (continuing reading): ——"the firm which introduced the Goldschmidt process into [1228] this country 30 years ago. He was brought up in England and acquired a B.A. degree in law at Cambridge.

"We have found it is relatively easy for Mr. Hirschland to establish contacts with the consumers of ferro-alloys because he can simply refer to his uncle's firm, who for years were the only ones who made ferro-alloys by the alumino-thermic process in this country.

"As our program called for activity in these ferro-alloys in the U. S., I found it advisable to take Mr. Hirschland into the firm. I can assure you that as long as he is in the Continental Ore Corporation, Metal and Thermite will not reopen its ferro department."

Mr. Alioto: Counsel, the entire letter is in evidence, however? There is some other material. But we won't interrupt your examination.

(Testimony of Henry J. Leir.)

Mr. Holland: Yes, there are many other matters in this.

The Witness: Have you finished with this letter?

Q. (By Mr. Holland): I have read the part that I want to read.

A. I mean, have you finished with this matter? Because this letter speaks against you. Metal and Thermite was a [1229] substantial producer of ferro-vanadium prior to the time of the First World War, and they went out of business, in my opinion, only because they couldn't get a regular supply of raw material. It applies to them exactly the same as what later applied to us.

Q. But you hired Mr. Hirschland to make sure that they would not come back into the business, didn't you? That is what you say. I don't want to argue the matter, but as you say, the letter speaks for itself.

I hand you a letter to Apex from Continental Ore Corporation dated November 6, 1940, and ask you if you can identify that. Pardon me. I do not believe I gave you the whole letter. I think that is the second page of the letter.

A. Yes. It is not quite clear to me whether this is a letter written by me, because my signature is missing.

Q. But it is written by Continental Ore Corporation; it is on their stationery, is it not?

A. It isn't quite clear whether this letter even went out, because my signature is missing.

(Testimony of Henry J. Leir.)

Mr. Alioto: There seems to be a problem about whether it was ever sent, if your Honor please.

Mr. Holland: I can identify it later in our case as having been sent.

The Court: What is the objection to it?

Mr. Alioto: There seems to be a problem as to [1230] whether it was ever sent, but we are not concerned about that.

If you want to put it in, Mr. Holland, go ahead.

(The letter referred to was thereupon marked Defendant V Exhibit 1-L in evidence.)

[See Book of Exhibits.]

Mr. Holland: This is a letter from Continental Ore to Apex, dated November 6, 1940. Subject, Phillips Bros., New York. I will read a paragraph from it (reading):

"Paragraph 5. Furthermore you know that they are on the best of terms with Shattuck. If our memory is correct, Shattuck produced some ferro-vanadium in previous years. For all these reasons we recommend that you give no information whatsoever to Phillips Bros. As soon as the war is over there will again be international arrangements in ferro-vanadium which existed heretofore, and we must avoid bringing new parties into the ferro-vanadium field."

Q. (By Mr. Holland): I hand you a letter of October 16, 1940, from yourself to Apex, and ask you if you can identify that.

A. That is my letter, yes.

(Testimony of Henry J. Leir.)

Mr. Holland: I offer this as our exhibit next in order.

(The letter referred to was thereupon marked Defendant V Exhibit 1-M in evidence.)

Mr. Holland: This is a letter from Mr. Leir to [1231] the Apex Smelting Company, dated October 16, 1940, and reads as follows (reading):

"What do you think about your writing to (a) Vanadium Corporation of America, 420 Lexington Avenue, New York, (b) Electro Metallurgical Sales Company, 30 East 42nd Street, New York, and asking them to make you an offer on fused vanadic acid in shipments of about 5,000 pounds per month. It may be well to tell them that you might be interested in making a contract for 1941. We think it probable they will not refuse to make an offer. Furthermore, this correspondence might lead to a discussion about a joint market policy."

Q. (By Mr. Holland): Now, what did you mean, Mr. Leir, when you said "this correspondence might lead to a discussion about a joint market policy"?

A. We had already, at that time, the idea of making a product which we later made under the name of Van-Ex, and generally speaking I think industry should cooperate for the purpose of giving an extension to the market. There is a number of industries in this country which have so-called research institutes for the purpose of increasing the application, in this case, of vanadium, and this is what I have in mind. [1232]

(Testimony of Henry J. Leir.)

Q. What did you mean by a joint market policy with Vanadium Corporation and Union Carbide?

A. Nothing special.

Q. As a matter of fact, you did not do anything about Van-Ex for over a year after that, did you? Didn't you start Van-Ex when Apex had a fire in their ferro-alloy department?

A. Yes, it was about a year later.

Q. Let me ask you a general question, Mr. Leir, first. It was true, was it not, that Apex Smelting was reluctant to buy materials ahead? Is that not correct? And by materials, I mean vanadium oxide.

A. At certain moments, particularly before the installation was ready to make ferro-vanadium, yes.

Q. And did you not on several occasions make arrangements to purchase vanadium oxide, or tentative arrangements, from suppliers who asked for a contract for a specified quantity over a period of time, and Apex would refuse to do it?

A. I am not entirely aware of this fact, but maybe you have some correspondence about it.

Q. (By the Court): What is the answer?

A. I am not entirely aware about this fact.

Mr. Alioto: Mr. Holland, a moment ago you read the letter of October 16th. The witness, the very next day, suggested not sending it. You have only that one part in. [1233]

Mr. Holland: I will put this in.

Mr. Alioto: Thank you. He asked him not to contact them.

Q. (By Mr. Holland): I will hand you a letter

(Testimony of Henry J. Leir.)

dated October 17th. It appears to be a copy of one of your letters to Apex. A. Yes.

Mr. Holland: I offer it in evidence as our exhibit next in order.

(The letter referred to was thereupon marked Defendant V Exhibit 1-N in evidence.)

[See Book of Exhibits.]

Mr. Holland: This is a letter written October 17, 1940, by Mr. Leir to Apex.

Q. (By Mr. Holland): Now, that is the day following the letter in which you suggested this joint market policy arrangement?

A. Yes, the day after.

Q. Apparently you thought better of it the next day, is that correct?

Mr. Alioto: Why don't you read the letter first, Mr. Holland?

Mr. Holland: I am just asking the question. I am going to read the letter (reading):

"Re: Vanadium Corporation of America.

"We confirm our wire of today as follows: [1234]

"'Before Writing Vanadium Corporation Please Await Our Today's Letter.'

"In thinking over what we wrote to you yesterday it seems to us it might perhaps be unwise to contact them, because they may make a photostatic copy of your inquiry and use it against you in contacting consumers, hinting at your dependence upon raw material. However, this is only a thought, and it is up to you to decide."

Q. (By Mr. Holland): I hand you three letters

(Testimony of Henry J. Leir.)

dated December 3rd, 5th, and 6th, being your correspondence with Apex, or a portion of it, in connection with Mr. Morrison and his mill.

Mr. Alioto: No objection.

Mr. Holland: I offer these letters as our next exhibits in order.

(The letters referred to were thereupon marked Defendant V Exhibit 1-O in evidence.)

Mr. Holland: First is a letter from Mr. Leir to Apex, re Mr. William G. Morrison (reading):

"We have your letter of December 2d; unfortunately, we cannot use it as it is, to further our negotiations with Mr. Morrison.

"The draft we sent you on November 26th does not obligate you and we suggest you send us a letter as [1235] near as possible to our draft.

"Your sending us such a letter does not tie you up with Morrison, nor does it of course, with us.

"The premium we included for better material is something that should induce Morrison to ship material as good as possible, and your saving in the recovery will easily outweigh the slight premium we offered him.

"Also the clause, 'that price will be adjusted every three months' should be included."

Then a letter of December 5th (reading):

"Mr. Morrison telephoned us this morning and wanted to know whether you have reached a decision regarding his output.

"Please be good enough to send us the letter we

(Testimony of Henry J. Leir.)

requested, so that we can continue our negotiations with him.

"Otherwise he will contact other parties and this could only be to your detriment."

Q. (By Mr. Holland): Now, the letter you wanted them to send was one in which Apex obligated itself to take certain quantities of his supply, is that not correct?

A. From Mr. Lippa, yes. [1236]

Mr. Holland: And the letter of December 6, 1940, from Mr. Lippa to Continental Ore (reading):

"We have your letters of December 3rd and 5th regarding Mr. Morrison.

"As you know from past experience, we are inclined to be quite conservative and we hesitate very much about giving you a letter regarding a definite commitment.

"It seems that we are under somewhat of a moral obligation to accept material from Blanding and we will be under a moral obligation to accept more from Shattock should they be in a position to ship at a lower price. If we had definite orders for all of the material and then if we had definite assurance that the Morrison people would be able to carry out a contract, it might possibly make it easier to give you a letter such as you ask, but it all seems to us that it is still rather indefinite. In other words, we would like to link actual sales with actual purchases, but so far we do not have sufficient assurance that we will have the sale.

(Testimony of Henry J. Leir.)

"We hope that this explains our position to you and if you have any further suggestions, we will be glad to have you advise us." [1237]

Q. (By Mr. Holland): In other words, Mr. Leir, the Apex was unwilling to give Mr. Morrison a definite contract for a definite quantity, is that correct? A. According to this letter.

Q. And then I believe Mr. Ackerman, who is an old friend of yours, took over the Morrison mill, is that correct? A. Yes.

Q. That was in the spring of 1941?

A. About that time.

Q. I hand you two letters dated March 13 and March 14, 1941, and ask you if you recognize those.

A. Yes.

Mr. Holland: Offer them as this defendant's next exhibit in order.

Mr. Alioto: No objection.

(The letters referred to were thereupon marked Defendant V Exhibit 1-P in evidence.)

Mr. Holland: The first is a letter of March 13, 1941, from Continental Ore to Apex Smelting (reading):

"re: William G. Morrison, Grand Junction

"Louis Ackermann

"We had an opportunity to speak to Mr. Ackermann over the telephone last night.

"He arrived in Grand Junction Friday, March 7th [1238] and has checked the operation of Morrison's mill. According to what he told us yesterday, he is ready to sign with Morrison, but want

(Testimony of Henry J. Leir.)

to have assurances regarding his output; besides, Morrison of course wants to have guarantees from Apex and us regarding the purchase price of the mill, guarantees which we are not willing to give and which we do not recommend that you give either. (This latter remark is for your personal use only.)

"Mr. Ackermann plans to be in Chicago on Monday next, March 17th, together with Mr. Morrison.

"Unfortunately, you will be tied up with the Convention, but we think that if it is at all possible, you should try to spare them a few minutes and make them understand that:

"Apex covers their requirements through Continental exclusively; and that we, in turn, also are the sales agents so that the most logical thing would be that Continental makes the contracts with Ackermann as supplier of vanadic acid.

"We are making his suggestion, of course, only in order to relieve you, but if you want to give them the contracts direct, naturally we agree.

"However, if you want us to sign a contract with Ackermann, it must be understood that you in turn will protect us in making an agreement according to which:

"Ackermann's output up to, let us say, 15,000 lbs. a month, will receive the preference for a certain number of years, all things being equal, and that you authorize us to buy the output until the end of the year at $1.00, f.o.b. Chicago."

(Testimony of Henry J. Leir.)

The reply from Apex, L. Lippa, to Continental Ore, dated March 14th (reading):

"With reference to Morrison, it is unfortunate that they had to pick Monday to be in Chicago as the writer is going to be exceedingly busy and probably will not be at his office at all that day.

"We feel that a lot of thought will have to be given this matter before we can make arrangements for 15,000 lbs. a month, which would be in addition to that for which we have already contracted with Shattuck. Therefore, a very carefully planned proposition would have to be worked out."

Q. (By Mr. Holland): Now, as a matter of fact, Apex never did give Mr. Ackermann a contract agreeing to take 15,000 pounds a month, did it?

A. I'm not quite sure about it. Ackermann was in Chicago and was sufficiently encouraged by Apex Smelting to take over the mill, because his purpose of going to Chicago and speaking to the Apex people was to be sure that he would eventually, when taking over the operation of Morrison, get rid of his production.

Q. But to answer my question, he was never given such a contract, as you suggested, by Apex, was he?

A. I couldn't tell you that.

Q. You don't remember?

A. I don't remember.

Q. Do you remember whether any contract was made with him? Do you remember whether you

(Testimony of Henry J. Leir.)

made a contract with Ackermann to take his production?

A. I suppose we—I suppose we made a contract with him.

Q. And you were asking Apex to guarantee that contract, were you not, in this letter?

A. Yes.

Q. Do you know whether you ever got such a guarantee, or whether they ever made such a contract with Ackermann?

A. I couldn't tell you.

Q. Now, in the fall of 1941 you had a chance to encourage an independent vanadium mill named National Vanadium, isn't that correct—a proposed mill? [1241] A. Whereabouts?

Q. In think it was in Moab.

I hand you the correspondence.

A. I remember, now, some correspondence about it, yes.

Mr. Alioto: We have no objection to these letters.

(The exchange of correspondence referred to was marked Defendant V Exhibit 1-Q in evidence.)

[See Book of Exhibits.]

Mr. Holland: This is some correspondence between National Vanadium, Continental Ore, and Apex.

The first is a letter from National Vanadium to Continental Ore (reading):

(Testimony of Henry J. Leir.)

"September 10, 1941

"Dear Mr. Leir:

"I thought you would be interested in knowing that the government engineers have completed their preliminary examination of our properties and have recommended a complete survey and assay development with proper maps.

"The men who were sent were Mr. Jackson, chief engineer of the Bureau of Mines, with two assistants, also Dr. Hewitt, chief of the geological survey, with two assistants. The work will begin at once and rushed as much as possible with crews from both departments doing the work.

"I have taken up with my directors the matters we discussed in your office and here are a few of the questions which they asked me.

"(1) Will they sign a bonded five-year contract for the entire output of our 100-ton mill?

"(2) Will they pay $1.00 per pound fused V_2O_5, 85% or better, f.o.b. Thompson, Utah, and increase this price in the relation to whatever increase there might be in the price of their ferro alloy?

"(3) When will they furnish funds to stockpile ore on at least a two months anticipation basis, before mill is started or after?

"I am quoting these questions for your information and might add that my directors are interested in your proposition. I have also recommended it to them as I told you I would do."

The Court: To whom is that letter?

Mr. Holland: This letter was from the National

(Testimony of Henry J. Leir.)

Vanadium Corporation, which was a corporation which was proposing to build a vanadium mill near Moab, Utah.

The Court: To whom?

Mr. Holland: To Continental Ore.

The Court: Continental Ore. Very well.

Mr. Holland: Then there is a letter from Continental Ore, Mr. Leir, to Apex Smelting, dated September 16, 1941 (reading): [1243]

"Please find herewith enclosed copies of correspondence with the above.

"Kindly send us a letter which we can forward to them.

"In any case, we should be cooperative, in order to obtain this output, which, on the basis of 100 tons crude ore per day, we estimate as follows:

"Average of the ore . . . 2.5 tons

"Less 20% loss in recovery 0.5 tons

"2.0 tons daily

"=60 tons per month

"=120,000 pounds of V_2O_5

"However, you will remember that they want to make only 80,000 pounds Z of V_2O_5 per month, which would enable us to make about 40,000 pounds of V, on which we should be able to make a profit of about $8,000.00 a month.

"We shall be awaiting your news."

Q. (By Mr. Holland): And then you wrote National Vanadium, on September 16, 1941 (reading):

"1. We are willing to sign a 5-year contract for

(Testimony of Henry J. Leir.)

your total output, and will put up a bond to insure payments.

"2. The price they pay, which we mentioned the other day in New York, is $1.00 per pound delivered Chicago.

"3. We think that it is only fair that Apex should have an opportunity to see proof that your process is a good one, before they invest money for the ore stock pile."

And then on September 17, 1941, Apex wrote Continental Ore (reading):

"We have your letter of September 16th which is in reference to advancing money to cover a supply of ore to the National Vanadium Corporation.

"Mr. Singer and I have very carefully thought this matter over, and we come to the conclusion that we have so frequently expressed to you, and that is to keep ourselves from becoming involved in anything outside of our own operations. We, of course, are always glad to finance our own operations, but we do not feel it advisable to finance raw materials in the plants of others, and therefore, we regret exceedingly that we must turn down this National Vanadium suggestion.

"So far as a contract with them is concerned, we feel it is entirely too dangerous to tie up for a five-year contract, in fact for any length of time. We would be glad to give them a contract based on [1245] the market for Ferro Vanadium and for a per cent of our production. In other words, if

(Testimony of Henry J. Leir.)

we sell 50,000 lbs. of Vanadium contained material a month, we would guarantee to purchase from them 60 or 70% of that amount. A contract such as this would be flexible and would take care of us so that if business dropped off entirely, we would have no obligations."

The rest is on another subject.

And then a letter from Mr. Leir to Apex (reading):

"We have your letter of September 17th, which, frankly, we do not understand.

"As we note from the last paragraph of Page 1, you are temporarily holding up the new construction because of the raw material situation.

"Therefore, one would think that you would be anxious to tie up this new vanadic acid production.

"We agree with you completely that this agreement should be made in a very cautious form, in order to avoid any speculation or risk.

"We can also understand that you do not want to help in the financing of a stockpile of the raw ore.

"But you should at least give us a free hand with regard to signing a contract for the vanadic acid, in order to encourage them to create this new mill.

"We therefore suggest that you let us sign a contract with them according to which we would give them:

"Preference on all your requirements of Vanadic Acid for a period of 5 years.

(Testimony of Henry J. Leir.)

"The price would be $1.00 per pound V_2O_5 delivered Chicago, and would be related to your present sales price of the finished product, going up and down accordingly.

"We do not believe such a contract (we have signed a similar one with regard to the Deadwood Tungsten, as you know) would constitute any risk for you. It would then be a question only of how to manage the output from: Shattuck, Blanding, and Gateway. We think you can rely upon us to create larger sales of ferro vanadium, in the same proportion in which we obtain raw material.

"You must admit that the building of a mill for 80,000 pounds of V_2O_5 per month represents many times the output of Shattuck and Blanding, and we think that we have reason to offer them some inducement to go ahead in their project.

"Please let us have your reaction to the above."

Now, as a matter of fact, Apex refused to give them a contract for a specified quantity of oxide, did they not? A. Obviously, yes.

Mr. Alioto: How about Continental, Mr. Holland?

Mr. Holland: Did Continental give them a contract?

Mr. Alioto: They certainly offered to. That letter is only five days later.

Mr. Holland: Here's a letter dated September 26th. Shall I put it in as part of the same exhibit?

Mr. Alioto: Any way you want.

Mr. Holland: Let's make it the next one in

(Testimony of Henry J. Leir.)

order.

Mr. Alioto: They obviously offered it to them.

(The letter referred to was thereupon marked Defendant V Exhibit 1-R in evidence.)

[See Book of Exhibits.]

Mr. Holland: This is a letter from Continental Ore Corporation to National Vanadium Corporation, dated September 26, 1941 (reading):

"With reference to our most recent correspondence, we had the opportunity to discuss the situation with the Apex Smelting Company yesterday.

"1. They agree to let us sign up with you for 70% of their requirements. This is all we could obtain. They are on very good terms with their present suppliers of vanadic acid, and you will understand that they do not want to endanger these relations.

"2. While we estimate that this 70% of their requirements will absorb the biggest part of your production, there might be a surplus, which we should like to sell for your account, on a commission basis, to the smaller consumers of vanadic acid in this country and abroad. We would charge you a commission of 2%. It is understood, of course, that shipments to Apex would be exempt from this commission.

"3. With regard to this point, we refer to Point 3 in our letter of September 16th. We do not doubt that as soon as you are in production and Apex is convinced that you can supply them with the

(Testimony of Henry J. Leir.)

proper grade, something can be arranged to help you financially.

"We hope that the above is sufficient for the present."

Q. (By Mr. Holland): But, in any event, you refused to give them financial help, and so did Apex, is that correct?

A. I think the letter mentions that we were willing to extend some financial help to them.

Mr. Alioto: You omitted the postscript, Mr. Holland. [1249]

Mr. Holland: I didn't see it. I am not trying to omit anything.

Mr. Alioto: I know.

Mr. Holland (reading): "P. S. You will have noted from your discussion with Apex that they are very conservative. It is our personal opinion that the consumption of Ferro Vanadium will go up so very much that eventually every pound of your production will go to Apex. However, you will appreciate their attitude to their present suppliers." [1250]

Q. (By Mr. Holland): You did not offer them financial help, however, is that correct, and Apex did not?

A. I think it was mentioned in this letter that we were ready to do it.

The Court: Did you read the entire letter?

Mr. Holland: I did, yes.

The Court: That is the best evidence.

Mr. Alioto: Did you read this paragraph: "If

(Testimony of Henry J. Leir.)

you come East please let us know so that we can get together and make a definite contract along the above lines."

Mr. Holland: I thought I did, didn't I?

Q. You say, "We do not doubt that as soon as you are in production and Apex is convinced that you can supply them." A. Yes.

Q. "With the proper grade, something can be arranged to help you financially." Is that right?

A. Exactly.

Q. But you did not offer them any financial help in building their mill, is that correct?

A. That is a play with words.

Q. That would be financial help after the mill was built and in production, is that correct?

A. When the mill was built and in production the miller still needs some help.

Q. In the Fall of 1940 didn't Blanding ask you for some [1251] financing to help increase the size of their mill and didn't you turn them down?

A. No. In other words, they asked for some help and there was correspondence between us and Apex, according to which correspondence we suggested to Apex to put at the disposal of Blanding $10,000, of which amount we would participate to the extent of $2,500, which was exactly our participation in the business at the time.

Q. And Apex refused to do it, is that correct?

A. I have no recollection, but I have a definite recollection that there is a letter in which I offered

(Testimony of Henry J. Leir.)

my willingness to participate in the financial aspect to Blanding.

Q. I will have that letter, Mr. Leir.

A. Yes.

Q. But you never did give any money to Blanding and neither did Apex, did they, for financing?

A. I suppose from your questions that it was in a letter.

Q. Don't you remember?

A. I don't know.

Q. You do not remember whether you ever financed Blanding or not?

A. Let me look into my correspondence.

Q. Will you do that and I will ask you that question tomorrow?

A. If you will, please. [1252]

Q. In the Fall of 1941, October to be exact, Apex had a fire in the thermic department, is that correct? A. Yes.

Q. I hand you a copy of a letter written to you from Apex on October 25, 1941, and ask you if you recognize that. A. Yes.

(The letter referred to was thereupon received in evidence and marked Defendant Exhibit D 1-S.)

Mr. Holland: I offer this exhibit in evidence.

Mr. Alioto: No objection.

Mr. Holland: This is dated October 25, 1941, as written to Mr. Leir by Apex Smelting Company by William R. Bayer.

Q. Who is Mr. Bayer?

(Testimony of Henry J. Leir.)

A. The accountant of Apex Smelting Company.

Q. At the time? A. At the time, yes.

Q. And he wrote this letter, is that correct?

A. Yes.

Mr. Holland (reading):

"Dear Mr. Leir:

"We are writing this letter at the suggestion of Mr. Singer who has just returned from Washington and who is so busy analyzing the new situations in our business which are arising every hour that he could not take the time to dictate this letter.

"We had a fire in our ferro alloy department Thursday which will prevent operations in that department for approximately a month. The fire occurred when water leaking from a defective roof resulted in an explosion due to moisture in a crucible. Damage occurred to the complete stock of ferro material including the Deadwood Tungsten ore which is now wet and will have to be dried.

"As our aluminum department is so vital a part of the defense program, and as new problems on which decisions must be made are coming up practically all of the time, we have decided that we must concentrate all of our efforts and available space in this department, and must discontinue anything that would interfere with its operation.

"We received a telegram from you this morning notifying us of shipment of an additional lot of tungsten ore. We will handle this lot, but ask you to notify the Gilt Edge Mines that we cannot take delivery of any more tungsten ore as our other

(Testimony of Henry J. Leir.)

work necessitates the discontinuance of all ore trading and tungsten activities.

"As we stated above, we cannot possibly resume operations in the ferro alloy department for at least a month. We have unfilled orders on hand from Latrobe and Braeburn calling for a total of 6444 lbs. of vanadium contained. We have in our inventory sufficient ferro vanadium and vanadic acid to cover these orders, and in addition have received notice of a shipment from Nisley and Wilson.

"In addition to the above orders we today received from you an order for 5,000 lbs. of vanadium contained from Latrobe. We would suggest that you write to them telling them that a fire occurred in our ferro alloy department which necessitates the shutting down of operations for at least a month and asking them if they could place that order with and obtain the material from another producer.

"We have made an analysis of the results of operations in the ferro alloy department for the year to date and find that the profit resulting is so small in comparison with the effort and space devoted to this department that under the present situation we feel that we cannot afford to continue its operations.

"Of course we would no like to injure the position which you have gained with any of the vanadium customers, and if you feel that you would be materially affected by our discontinuance of operations other than the fulfilling of the above

(Testimony of Henry J. Leir.)

listed orders, we could possibly continue operations until the end of this year.

"We also believe that we should immediately notify all of our shippers of raw materials to discontinue making shipments to us until further notice.

"As you know Shattuck has been shipping 12,000 to 18,000 lbs. of ore to us——"

Q. By "ore" they mean oxide, do they not?

A. Vanadium oxide, yes.

Mr. Holland (reading): "——to us every couple of weeks, and we believe that we should call them Monday morning and advise that we cannot take any more deliveries. We would appreciate your sending us a telegram, or phoning us, Monday, in reference to Shattuck.

"If you feel that you should discuss this matter any further with Mr. Singer, you can either call him by phone or come to Chicago, but in either case please make arrangements in advance as Mr. Singer has been and will be out of town two or three days of each week.

"Awaiting your reply, we are [1256]

"Very truly yours,

"Apex Smelting Co."

Q. As a result of this letter you went to Chicago, did you not, Mr. Leir?

A. I think I went to Chicago.

Q. And you had a talk with the Apex people?

A. Yes.

(Testimony of Henry J. Leir.)

Q. And you were able to persuade them to continue, is that correct? A. Yes.

Q. And wasn't it at that point that Van-Ex was born?

A. The idea of making Van-Ex had been in our heads long before.

Q. I won't say conceived in your brain, but I mean the idea of actually making it and selling it.

A. Actually making it, yes.

Q. It was at that time that the experimentation commenced as to what was the best way to proceed?

A. To he best of my recollection it started at that time.

Mr. Holland: If the Court please, this is another subject, if your Honor wishes to recess.

The Court: We will recess at this time until 9:30 tomorrow morning.

(Thereupon an adjournment was taken until 9:30 o'clock a.m., Friday, June 13th, 1958.)

Friday, June 13, 1958, 9:30 o'clock a.m.

HENRY J. LEIR

one of the plaintiffs, a witness in his own behalf, on the stand at the time of adjournment, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-Examination—(Resumed)

Q. (By Mr. Holland): Mr. Leir, at the time court closed yesterday I believe we had just dis-

(Testimony of Henry J. Leir.)

cussed the fact that you commenced the experimentation in connection with the production of Van-Ex immediately after the Apex Smelting Company thermite department had a fire, is that correct?

A. Immediately before, or immediately after—in any case, before the end of 1941.

Q. Previously introduced in evidence is a letter from you of November 5, 1941, which I would like to read—a letter from you to the Apex Smelting Company (reading):

"Thank you for having sent us copies of your correspondence with Blanding. Following our conversation of last Saturday we have already contacted several of our customers with regard to exo-thermic vanadium, and we want to tell you that the reaction is absolutely favorable.

"1. We expect to have a very satisfactory price for this new vanadium compound as we call it.

"2. We will easily sell whatever quantities we can produce.

"We see from your correspondence with Blanding that Mr. Milenski is going to visit you around November 10th. He is probably on his way to the East, and we must do everything to prevent him from dealing with other parties.

"We think you should offer him $1.05, delivered Chicago 'until further notice', and tell him that if his material proves to be reliable in quality, and particularly if he could increase the quantities, you will consider going up to $1.10.

"As a matter of fact, our calculation for the exo-

(Testimony of Henry J. Leir.)

thermic vanadium is already based upon the $1.10 price, delivered Chicago, as you can see from the following figures:

" $1.10 per pound V_2O_5 @ 178
—$1.958 per lb. V
0.042 Canning

$2.000
.10 Aluminum

$2.10

"The prices we offered, dependent upon the customer, were between $2.30 and $2.35, and we feel pretty certain that we can get them.

"Therefore, you can see for yourself that we should go up to $1.10 if necessary in order to secure the material for ourselves, and as much material as possible."

I won't read the last two paragraphs, which are not on this particular subject, unless you want them.

Mr. Alioto: No.

Q. (By Mr. Holland): Mr. Leir, were your mathematics in connection with the cost of Van-Ex as contained in this prediction approximately correct? A. Yes.

Q. At $1.10 for oxide?

A. $1.10 for oxide, yes.

Q. In other words, you figured with 10 cents worth of aluminum, it would cost you about $2.10 to make it?

A. With 10 cents of aluminum.

(Testimony of Henry J. Leir.)

Q. Ten cents worth of aluminum would make a cost of about $2.10 to make it?

A. All told, yes.

Q. And you planned to sell it for $2.35?

A. Yes; even $2.40.

Q. $2.40? A. Yes. [1261]

Q. On the 25th of November, 1941, which is marked Exhibit V 1-B, you wrote a letter to Apex saying (reading):

"We have your letter of November 18th, to which we can now answer, as we have just received the samples."

This opened the question as to whether the material should be ground one-quarter inch or one-eighth inch?

A. Yes.

Q. You said one-eighth inch was better than to use the one-quarter inch they had already had?

A. There was some discussion.

Q. That grinding was to be done by the mill, wasn't it? Apex was to receive that material already ground, is that correct?

A. If possible, yes.

Q. And then you said (reading):

"Don't you think it would be a good idea to add a little powdered fluorspar for two reasons: (1) you would make the whole mixture a little more complicated for the one who analyzes it and who wants to imitate it,——"

In other words, you wanted to use it primarily

(Testimony of Henry J. Leir.)

to conceal from a possible competitor what the product contained, is that correct? A. No.

Q. What do you mean by "(1)" there, then?

A. There were two reasons at that time.

Q. Yes. I mean, what is your first reason? I will read the second one later.

A. Not to show immediately the composition of what I would call a special material, exactly the same way Union Carbide is doing it today—exactly the same way.

Mr. Holland: That is immaterial, Mr. Leir, and we are not going to have to go into proof of what Union Carbide is doing today.

Mr. Alioto: I submit that is argumentative, if your Honor please.

Mr. Holland: I ask the witness to confine himself to the period.

The Court: Answer the question, please.

Q. (By Mr. Holland): (reading) "(2) we are convinced that some fluorspar will have an excellent effect with regard to the better fluxing of Van-Ex." A. Exactly.

Q. In other words, you wanted to use it for two purposes: First, to conceal what was in it; and second, as a flux, is that correct? A. Yes.

Q. Then on November 27th, two days later, you wrote an [1263] office memorandum, and you also wrote a letter to Apex on the same date, of which I would like to read a portion.

Mr. Alioto: No objection. You do not have to identify it.

(Testimony of Henry J. Leir.)

Mr. Holland: I offer the letters in evidence as the exhibit next in order.

(The letters referred to were thereupon marked Defendant V Exhibit 1-T in evidence.)

[See Book of Exhibits.]

Mr. Holland: Then about November 25th, Mr. Leir, it was tentatively planned by you to add some aluminum and some fluorspar in order to make Van-Ex, and to have the material ground preferably to one-eighth inch by the mill before shipment to Apex, is that correct?

The Witness: I suppose so.

Q. (By Mr. Holland): On November 27th you wrote an office memorandum in which you said (reading):

"Yesterday I saw Mr. Lenz, a chemist of the Climax Molybdenum Corporation, and gathered from him the following:——"

and I am reading only the part that refers to Van-Ex (reading):

"9. Lenz assured me that mixtures of vanadium with aluminum would lead, necessarily, to explosions, and warned me of the danger involved."

So at that time you were warned by Mr. Lenz, who I [1264] take it is an expert in the field, to look out for explosions if you added aluminum, is that correct? A. Yes.

Q. And on the same day you wrote a letter to Apex in which you said (reading):

"With regard to the amount of aluminum to be

(Testimony of Henry J. Leir.)

used, we are just now making some new investigations. We will know more in a few days. We think it very likely that we will suggest that you keep the amount of aluminum lower than you anticipated in order to avoid any danger of explosions in the steel furnaces. Therefore, until you have new information from us, please do not prepare any mixtures for Van-Ex."

A. I remember this correspondence. [1265]

Q. On the 3rd of December you wrote a letter to Apex——

Mr. Alioto: We have no objection, counsel.

The Court: What year?

Mr. Holland: This is 1941, December 3. Offer it in evidence as the exhibit next in order.

(Letter, Continental Ore to Apex, 12/3/41, received in evidence as Defendant Z Exhibit 1-U.)

[See Book of Exhibits.]

Mr. Holland: Mr. Alioto, there is quite a lot of correspondence on Van-Ex, and I have picked out just what I thought would tell a connected story, but if you want to put in any of the rest of it——

Mr. Alioto: We have some additional that we will put in after you are through, counsel.

Mr. Holland: On December 3, 1941, you wrote a letter to Apex:

"The man from whom we expect to receive some more information with regard to the correct amount of aluminum is, unfortunately, out of town and we will be able to see him only on Monday. In any

(Testimony of Henry J. Leir.)

case, we confirm our letter of November 27 and would ask you not to prepare any mixtures before we enlighten you a little more about the proper quantity of aluminum.

"Another question is, if you would have an opportunity in Chicago to approach a steel mill and place a few cans in their steel furnace, by preference an electric furnace, with varying amounts of aluminum in order to make a practical test, before actually shipping the material to the steel mills."

Did you want Apex to try out various mixtures with aluminum to see if they would explode in a steel furnace or what?

A. May I tell you my opinion? May I tell you how I read this letter? That we were extremely careful before placing any new material into the market. We wanted to make sufficient tests to be absolutely sure that the receiving steel mill would be happy with the material.

Q. Well, suppose Apex had put it in one of these steel mills and it had exploded. I don't quite get what you are driving at here with Apex.

A. The letter speaks very clearly of the few cans, and if you would have put, let us say, two or three cans into the steel furnace, this wouldn't have brought a tremendous explosion or dangerous explosion.

Q. Just a little explosion?

A. If you put it that way, a little explosion. But of no consequence at all for the steel furnace.

(Testimony of Henry J. Leir.)

Q. But as a result or eventually you decided not to use aluminum in Van-Ex, is that correct?

A. It was decided at that time not to use aluminum. We found a better way. [1267]

Mr. Holland: Offer letter February 23, 1942, from Mr. Lippa to Continental Ore Corporation, Attention: Mr. Leir, in evidence as our next exhibit.

Mr. Alioto: We have no objection to the letter.

(Letter, 2/23/42, Lippa to Continental, received in evidence as Defendant's V 1-V.)

Mr. Holland: Now, shortly subsequent to the time of the last letter, you and Apex had come to a parting of the ways, had you not, and had agreed on a period during which Apex was to make Van-Ex for you at cost?

A. You mean shortly after this correspondence?

Q. Yes. A. Yes.

Q. And on February 23 Mr. Lippa wrote you a letter——

The Court: What year?

Mr. Holland: This is 1942.

"We have your letter of February 21st from which we note that you have advised Braeburn——"

Now, Braeburn was one of the steel mills to whom you sold? A. One of our customers.

Q. Where was Braeburn located?

A. In Pennsylvania.

Mr. Holland (reading): "——that this material is ready. We regret that this material is not ready, and as stated, we have not received approval.

(Testimony of Henry J. Leir.)

"If Braeburn would like to have some Ferro Vanadium in place of this, and if we are able to produce it before the Department is closed down, we will be very pleased to ship it to them, if Washington will approve it.

"We wish to advise that we had ordered some steel drums, but when we found that Van-Ex was changed to a different business than that which we were discussing, we cancelled the order, as there is no use in having cans for anything we are not going to produce."

What did Mr. Lippa mean by Van-Ex being changed to a different business than that which we were discussing?

A. I couldn't tell you.

Mr. Holland: On March 27——

Mr. Alioto: Mr. Leir answered that letter the very next day.

Mr. Holland: Let's see it.

Mr. Alioto: And expressed some surprise——

(Exchange of documents between counsel.)

Mr. Holland: I don't think this is an answer at all.

Mr. Alioto: "We received your letter of February 23." That is the letter you just read.

Mr. Holland: Would you like me to put this in? I will be glad to.

Mr. Alioto: Thanks. [1269]

Mr. Holland: As our next exhibit, letter February 24, 1942, from Continental Ore, Mr. Leir, to Apex.

(Testimony of Henry J. Leir.)

(Letter, 2/24/42, Continental Ore to Apex, received in evidence as Defendants' V, 1-W.

Mr. Holland: "We received your letter of February 23rd, from which we learned for the first time:

"(a) That you decided not to ship Van-Ex.

"(b) That you apparently intend to ignore our letter of February 16th.

"We wish to draw your attention to the fact that we have entered into definite contracts with both Atlas Steels and Braeburn for the delivery of Van-Ex.

"Regarding the cans, we cannot see why you cancelled the order without letting us know, but the lack of steel cans is no reason for not shipping this material. It is as well to pack the Van-Ex in cardboard containers which are available everywhere for immediate delivery.

"In view of the fact that the shipment of Van-Ex would result in a considerable profit for the Ferro Department, we are positive that Atlas Steels and Braeburn should receive the quantities they ordered without any further delay.

"If, however, you want to forego this profit and ship the quantities ordered in the form of Ferro Vanadium, we agree to that, but it must be understood that the quantities are to be shipped under any circumstances, without fail."

Q. Now, there was more profit in Van-Ex than there was in Ferro Vanadium, is that correct?

A. A little more profit, yes.

(Testimony of Henry J. Leir.)

Mr. Holland: (Reading.)

"We wonder whether you have considered the effect——" This has to do with the termination. I plan to use this letter on the termination evidence.

Mr. Alioto: I would appreciate it if you would read the whole letter because it is in response to the other.

Mr. Holland: The rest of it has nothing to do with Van-Ex.

"We wonder whether you have considered the effect of discontinuing your Ferro Department upon Mr. Nelson and Mr. Jenckes of the War Production Board——"

The Witness: Pardon me. Mr. Nelson and——

Mr. Holland: Mr. Nelson and Mr. Jenckes of the War Production Board.

The Witness: Yes.

Mr. Holland: (Continuing reading) "—— to whom we applied for an improvement in the raw material supply for the Apex Smelting Company.

"You implied in your letter of February 23rd that [1271] the Ferro Vanadium Department will be closed down in the near future. We most emphatically do not agree with this unilateral decision.

"Since you did not answer our letter of February 16th, but seem to act as though it were never written, we must inform you that in this case we will have to take steps to safeguard our interest, and that of our customers.

(Testimony of Henry J. Leir.)

"As a matter of fact, the orders we have obtained are the products of considerable effort on our part, and their non-fulfillment would jeopardize our carefully built up relations with our customers, and would result in damaging not only your reputation, but ours as well. This would mean a very great material loss for us.

"We sincerely regret having to write to you in this way. You are, however, forcing our hand, since the treatment you are giving us is hardly ethical, and you leave us no other choice."

Q. In other words, at that time you were in a dispute with Apex as to whether they could cancel the contract or not, is that not correct?

A. Yes, but I learned now during the trial that during that very time your people were behind my back in contact with my associates. [1272]

Q. Well, that is a conclusion on your part.

A. Oh, no.

Q. I don't think the letters bear that interpretation at all.

A. It is evident—the evidence you brought——

Mr. Alioto: The letter speaks for itself. It is in evidence and it speaks for itself, Judge.

Mr. Holland: It does speak for itself.

Mr. Alioto: I think we can go——

The Court: The letter speaks for itself.

Mr. Holland: I agree with that, and, of course, we expect to go into that later.

Q. But my question was whether you at this time were in dispute with Apex as to whether they could cancel their contract.

(Testimony of Henry J. Leir.)

A. Yes, Mr. Holland, I was in dispute with my associates.

Q. And that was finally settled and I believe you previously testified by their operating for a period their vanadium department and making Van-Ex for a period at cost to you. A. Yes.

Q. Now, on March 28, 1942, you received a letter from George H. Starmann, Jr. of Apex.

Mr. Alioto: We have no objection to the letter itself, except that it is Mr. Starmann's opinion.

Mr. Holland: Well, I guess all these letters are the writers' opinions. [1273]

Mr. Alioto: That particular writer isn't here. That's the difference.

(Letter, 3/27/42, Starmann to Continental, received in evidence as Defendant's V, 1-X.)

Mr. Holland: On March 27, 1942, you received a letter from Mr. George H. Starmann, Jr. Who is he?

A. A young man; no official of Apex Smelting.

The Court: What?

The Witnes: A young man; no official — no officer of Apex Smelting.

Mr. Holland: Directed to Continental Ore Corporation, your attention: "Re: Vanadic Acid from Shattuck."

"We have checked the shipments of Shattuck Ore for the past year and find that the average SiO_2 content has been 1.1%. Understand, however, that this content has varied from .5% up to as high as 1.8%.

(Testimony of Henry J. Leir.)

"Although we have never made a determination for the Carbon content in the Shattuck Ore, we are of the opinion that there is none present since from the very method by which this Acid is prepared it seems that there should be no Carbon present.

"In our first shipment of Van-Ex we used 2% Fluorspar but since then we have been shipping just the plain Ore."

Q. Now, by that he means just the plain oxide?

A. The plain oxide, yes.

Q. "We found out that this small addition of Fluorspar could not be noticed."

A. "Did not"?

Q. "Could not be noticed." Would you like to see the letter?

A. Yes. No, I don't. Thank you.

Q. Well, now, Mr. Leir, it is pretty plain, isn't it, that these early shipments of Van-Ex from Apex, with the exception of the first one, that just straight vanadium oxide was shipped, isn't that correct?

A. At certain times straight vanadium oxide was shipped, that is correct.

Q. And what price was charged for shipments of straight vanadium oxide?

A. $2.00—between $2.30 and $2.40 per pound of vanadium contained.

Q. Now, Mr. Leir, I read yesterday a letter in which Mr. Bayer of Apex notified you of the fire in the Thermic Department. A. Yes.

(Testimony of Henry J. Leir.)

Q. And stated at that time that they would like to cease operating under the contract.

A. Yes.

Q. They later agreed to go on after your trip to Chicago about November 1st, at which time this Van-Ex business started, [1275] is that correct?

A. Yes.

The Court: Just a moment. I understand they were willing to go on until the end of the year.

Mr. Holland: That is what that letter said.

The Court: The end of it.

Mr. Holland: As a matter of fact, they went later than the end of the year. They operated the thermic department until April 1, 1942.

A. About that.

Q. And produced Van-Ex for you at cost until July 1, 1942. A. About that.

Q. Is that not correct? A. Yes.

Q. I have here a note from you to Apex which contains a reference to a wire you had received from Apex. Your note is dated January 27, 1942, which I would like to put in evidence.

Mr. Alioto: No objection.

(Memorandum, Continental to Apex, 1/27/42, received in evidence as Defendant V's Exhibit 1-Y.)

[See Book of Exhibits.]

Mr. Holland: On January 27, 1942, you wrote to Mr. Lippa, as follows:

"We received your telegram, reading as follows:

"In view of continued losses in our ferro depart-

(Testimony of Henry J. Leir.)

ment and the increasing difficulty in securing men to work [1276] in that department due to its hazardous nature we are compelled to advise you that we are forced to discontinue this department. Will do our utmost to fill present orders subject to approval from Washington."

Now, that was acknowledged by Mr. E. D. Leir in your absence. A. Yes.

Q. You recall receiving that wire?

A. I received such a wire, yes.

Q. And that was the first notice you had from Apex after January of 1942 that they wished to terminate the contract; is that correct?

A. The first notice came already by this letter from Mr. Bayer.

Q. Yes. I say, the first notice after that—in other words, they had agreed to go on producing; you had talked them into continuing with the contract, had you not, and then this—is this your first notice after that that they intended to terminate?

A. There might have been some other messages from Chicago to us in the meantime.

Q. At least by January 27, at the latest, they notified you they wished to suspend operations under the contract, is that correct?

A. We received this wire; there is no doubt about it.

Mr. Holland: Offer as defendants' exhibit next in order wire February 13, 1942.

Mr. Alioto: No objection.

(Testimony of Henry J. Leir.)

(Copy of wire, 2/13/42, Apex to Continental Ore, received in evidence as Defendant V's 1-Z.)

Mr. Holland: On the 13th of February, 1942, you received a wire from Apex reading as follows: "Cannot see our way to continue production Ferro Department beyond March 10th. We are stopping all shipment of ore."

Q. Do you recall receiving that wire?

A. Yes.

Q. And, as a matter of fact, Mr. Leir, Apex at that time, or the next day, 14th, did notify the shippers of ore to stop shipping their ore, is that not correct?

A. I am not quite convinced. We objected at that time to such a drastic measure, and there must be some correspondence in the record to the effect that we didn't approve of their action.

Q. Why, I am sure you didn't approve of it, but did they not at that time notify the shippers, Apex notify the shippers, to stop shipping their ore? A. I couldn't tell you this.

Q. You don't remember that? A. No.

The Court: At that time, now, Apex was able to [1278] get ore? A. Yes.

Q. (By Mr. Holland): On February 16, Mr. Leir, which would be three days after the last exhibit, you wrote a letter to Apex, which I would like to read from at some length.

Mr. Alioto: Why don't you read the whole thing?

(Testimony of Henry J. Leir.)

Mr. Holland: You want me to read the whole letter? O.K.

(Letter, Continental Ore to Apex, 2/16 42, received in evidence as Defendant V's Exhibit 2-A.)

Mr. Holland: This is a letter from Mr. Leir to Apex dated February 16, 1942, and this is the letter in which you set forth the Apex reasons for wanting to terminate and argued that their reasons were not sound, is that correct? A. Yes.

Q. (Reading.) "It appears that the main reason for your wanting to get rid of the ferro business is your need for space for other essential war production."

Now, that was the production of aluminum, is that correct? A. Yes, Mr. Holland.

Q. Which was the main business of the Apex Smelting?

A. Which was their main business.

Q. They are re-melters of aluminum, is that correct? A. Yes, Mr. Holland. [1279]

Mr. Holland: (Reading) "However, it seems that you are completely overlooking the fact that ferro vanadium is another very essential war item and that your position in this field has been fully recognized, as you can see from the letter of Mr. Evan K. Jeuckes, Assistant Chief, Vanadium Branch, War Production Board, Washington, D. C., dated February 11. This letter to you and a similar letter to us under the same date, refer-

(Testimony of Henry J. Leir.)

ence 40-EKJ1540-R, are the direct result of our intervention with Mr. Donald M. Nelson who referred the matter to Mr. Jenekes for proper attention.

"When Mr. Wolf visited you on January 28 you mentioned that your relations with Mr. Jenekes' office were not at all satisfactory, which also appeared from his remark over the phone that you should hire someone who knows the vanadium business. All this is now different and we dare say that this intervention through Mr. Nelson has obviously changed Mr. Jenekes' attitude. Our Demarche ended with a major success for Apex Smelting and therefore for us too.

"This changed attitude will facilitate our obtaining part of the new output from the new big vanadium plant in Monticello, Utah, and we even foresee that Mr. Jenekes will automatically make such allocations to you."

In other words, at the same time this letter was [1280] written, why, you had made satisfactory arrangements with the War Production Board for securing vanadium oxide, is that correct?

A. Yes, Mr. Holland.

Q. (Reading) "Whereas there are about 28 or 30 large remelters of aluminum in the country, you will find only:

3 producers of Ferro Vanadium
2 producers of Manganese Metal
4 producers of Ferro Tungsten

including Apex."

(Testimony of Henry J. Leir.)

Q. Now, under your contract with Apex, they were supposed to make ferro alloys other than ferro vanadium, were they not? A. Yes.

Q. Did they ever make any?

A. It is possible they made some titanium, ferro tungsten—I am not quite sure.

Q. In very minor amounts, is that correct?

A. Very minor amounts, yes. [1281]

Mr. Holland: (reading) "Also, Chicago has a much better strategic position than any other plant making the above materials, in either the Pittsburgh district or Niagara Falls.

"You mentioned that you have labor trouble. The fact exists, however, that two other firms are producing the same material. You know yourself that the fumes during the smelting can easily be taken off by a proper fan, and the construction of the long promised baghouse will also help in this respect. The dust from the grinding and mixing operation can be eliminated by performing this operation in a closed apparatus; this should be done not only for health reasons, but also to reduce losses of material. Besides, it is very easy to arrange to have Nisley & Wilson and Blanding ship you only ground material, as Shattuck does.

"As for the deficit in the Ferro department, I really thought that you would not bring up this point again, because I considered it completely settled in our last discussion in Chicago on November 1st and 2nd."

(Testimony of Henry J. Leir.)

Q. (By Mr. Holland): That is when you convinced them that they should go on?

A. That they should continue, yes. [1282]

Q. (Continuing reading) "The points which disprove this argument are the following:

"A. The Ferro department which (according to the contract) should allow the production of a complete line of thermit process metals, has never had the necessary equipment. As late as February 28, 1941, when I was in Chicago, you showed me the grinding equipment for the aluminum, which, however, was not completed even at that time.

"B. A good part of the losses resulted from the use of the aluminum-tin foil scrap."

That was because they had to use primary aluminum to make a satisfactory product, was it not?

A. They had to use a better grade of aluminum than scrap aluminum, yes.

Q. And a better grade of aluminum than they made, isn't that right, they being re-melters?

A. They had better grades of aluminum.

Q. Didn't they have trouble with their own aluminum in the production of ferro-vanadium?

A. I don't think that was correct.

Q. (Continuing reading) "C. Must we remind you that your own attitude seriously handicapped the development of the Ferro department? There was a time when you did not let us buy vanadic acid for [1283] fear of not selling the Ferro Vanadium; and you did not want to let us sell the Ferro

(Testimony of Henry J. Leir.)

Vanadium for fear of not acquiring the necessary raw material.

"D. We told you that we are on the best of terms with Latrobe Electric Steel, and we recommended in March, 1941, that we increase the price of the contract for Ferro Vanadium. However, (see your letter of March 17th), you did not approve. Result: lower earnings.

"You have promised us a 'new' plant for quite some time. You showed us plans (flow sheets) and mentioned that the new plant would definitely result in a lower production cost. We spoke about this new plant in Chicago on:

"February 28, 1941

"March 27 and 29, 1941

"May 26/27, 1941

"August 23/24, 1941

"September 24/25, 1941.

"In consideration of such a new investment, we arrived at an agreement as to a change in the old arrangements, and you expressed your complete satisfaction with our attitude.

"Finally, you wanted to make things simpler for yourself, and suggested a new arrangement with [1284] the Continental Ore Corporation, replacing the old one with Fredet Kuhlmann with a new one by which the Continental Ore Corporation would have to satisfy all demands of the French partner.

"It was also understood that the new investment would entitle you to a quicker amortization. In other words, I really endeavored to be a good sport.

(Testimony of Henry J. Leir.)

I want to remind you, at this point, that on a previous occasion I gave up an arrangement between you and Luxemburg regarding the production of metal powder, and that I also brought about your cooperation with Mr. Leute at a moment when he was on the point of signing up with the U. S. Reduction Company.

"I am disregarding the fact here that upon the outbreak of the war in Europe (September, 1939), you had not moved at all according to the contract concluded in July, 1938. I must remind you that if the Ferro department had been ready at that moment we would have been the beneficiaries of export prices of $3.50 and more per pound Vanadium.

"In our last conversation in Chicago on November 1st and 2nd, you urged us to increase the price of Ferro Vanadium to $2.80, and we promised you not to sell any more below that price. On December 19, 1941, we informed you of the conclusion of [1285] the contract with Latrobe, and you acknowledged receipt of our letter by yours of December 22nd (this is in answer to your letter of February 10th, in which you mention that you have not authorized or accepted any contract from the Latrobe Electric Steel Company).

"The cessation of the Ferro production would be a slap in the face to Latrobe, for instance, and we must remind you that Mr. Zenk of Latrobe made several interventions with Mr. Jenckes' office, and particularly praised the quality of your material.

(Testimony of Henry J. Leir.)

Latrobe is one of the biggest users of Vanadium in the country. They are excellent customers, not only now, but in peace time as well, and they will not hesitate a moment to introduce us to other steel mills the moment we have sufficient material available.

"You know yourself that wherever your Vanadium 70-80% has been shipped, we received new orders. Of course it is important to maintain contacts with the customers just now, during the emergency, if we expect them to give us orders in normal times.

"Now, during the biggest battle of production which the U. S. has ever passed through, is the proper moment to build up new business, and every shipment today means preparation for peacetime business. [1286] Even if we had no contract at all with your firm, you could not let us down just now, thereby wasting all the honest and successful efforts we have made over a period of more than 3 years.

"It is not our fault that you treated the Ferro department as a stepchild from the very beginning. If your set-up for the Ferro department were as modern as it is for the aluminum department, we could have already been in the production of Manganese Metal, for instance. You know that we suggested trials to you in the beginning of last year, when we also suggested the production of Ferro Columbium.

"The moment you have organized an adequate

(Testimony of Henry J. Leir.)

Ferro department, we will have enough business on hand, even without a pound of vanadic acid, viz. tungsten, manganese metal, which can be produced in quantities of 100,000 pounds a month and even more.

"However, everything is now much easier for you because of the intervention of Mr. Nelson in favor of the maintenance of the Apex Smelting Company as producers of Ferro Vanadium, whereby he clearly showed that he does not want to have a vanadium monopoly exercised by the two big producers. [1287]

"This was one of our arguments in contacting Mr. Nelson, and as you see, he agreed completely.

"If your other intended production does not leave any space at all for the Ferro department, then you should be able to find such space outside of your present plant.

"We daresay that the maintenance (and the ultimate growth of your Ferro department) will be a substantial contribution to your standing in Washington, particularly as you are the only aluminum remelter among so many others who had sufficient vision to go into the production of Ferro Alloys by the alumino-thermic process, thereby adding to the production of most essential war products.

"The Thermit department in the Apex Smelting Company, if properly conducted, will help you come to good terms with firms like:

(Testimony of Henry J. Leir.)

"Electromet

"Vanadium Corporation

"Climax Molybdenum

"Molybdenum Corporation

all consumers of granulated aluminum. You know that we do not exaggerate. We are convinced that you can get all their orders for aluminum powder one day, when you are again interested in it, over [1288] competition from the National Smelting Company, which today has practically a monopoly in this grade.

"You mentioned to Mr. Wolf that a new properly equipped Ferro department would mean an expenditure of about $60,000.

"In order to show you our spirit of cooperation, we should like to suggest that the present arrangements be changed to the effect that you retain 75% of the profit, therefore assigning only 25% to the French partner and ourselves. (The exclusive sales rights on the basis of a commission of 2½% would be reserved to us as heretofore.)

"However, if you don't accept even this gesture, and you think you must separate yourself from us just at this moment, thus wasting all the work we have done for years, we are ready to discuss this with you. In other words, we are ready to discuss the terms and conditions under which the present arrangements may be cancelled, but we can do so only if the conditions are reasonable enough to be accepted by our French partner also, which means first of all that no sudden shut-down

(Testimony of Henry J. Leir.)

can be allowed, and that you must promise us to continue the department in good faith for at least another six months, and abstain from any steps which would be detrimental to [1289] our French partner and ourselves."

You consider that a very fair statement of the situation, don't you, Mr. Leir?

A. I consider it as an excellent letter.

Q. I think it is an excellent letter, too.

A. An excellent letter.

Q. Even if I did have to read the whole thing.

A. An excellent letter. I told you, however, that this letter does not state all the reasons which I considered at that time as having been important for the decision of Apex Smelting to withdraw from me: and the additional reason was just exactly what I had not put into the letter, and I tell you the reason.

During the year 1941 Apex Smelting had become, let us say, dissatisfied—let us even say disgusted—about the attitude of certain officials in Washington. These officials in Washington were, first, Mr. Masters, who at that time was in charge of——

Q. Mr. who?

A. Mr. H. K. Masters, who at that time was in Washington, in charge of vanadium, and who really demonstrated a very unfriendly attitude towards us.

Mr. Masters left. He later became employed by the Climax Molybdenum Company. He was replaced by Mr. Jenckes, who I think is several times mentioned in this letter. [1290]

(Testimony of Henry J. Leir.)

Mr. Jenckes was not friendly at all. Mr. Jenckes became, I would say, correct, vis-a-vis, towards Apex Smelting, and to ourselves only when we had appealed to his superior, namely, Mr. Nelson, the chairman of the W.P.A. at that time. And Mr. Jenckes—you know it, yourself—later became an employee of Union Carbide.

Q. And Mr. Morrell, who later became an employee of Continental Ore, was also in the picture, wasn't he?

A. We had nothing to do with Mr. Morrell while he was in Washington. I think he was either employed by RFC, the Reconstruction Finance Corporation, or by Metals Reserve, either one, but we had nothing to do with him. He was absolutely not in charge, to the best of my knowledge, with regard to vanadium.

Q. (By the Court): Just at this point, war was declared in Europe, September, 1939?

A. Your Honor, I think it was exactly September 1, 1939.

Q. When was war declared by the United States against Japan and Germany?

A. At Pearl Harbor on December 6, 1941.

Q. That was Pearl Harbor. But when was war actually declared?

A. A few days later.

Q. Now, after the declaration of war, you refer here to [1291] these agents in Washington. Did the government take control, then, of all war materials?

(Testimony of Henry J. Leir.)

A. The events I just brought out orally happened before December, 1941, before the outbreak of the war.

Q. The government, then, even before the declaration of war, took control of the war materials?

A. There was some restricted control, yes.

Q. After the declaration of war was there very definite control by the United States Government of ferro-vanadium?

A. After the end of December, 1941, there was a so-called allocation system.

Q. And then materials could only be bought, shipped or sold to you under an allocation by the Federal Government?

A. Under allocation, yes.

Q. (By Mr. Holland): In any event, Mr. Leir, as your letter shows, your difficulties in Washington had been solved by the time this letter was written, is that correct, through the intervention of Mr. Nelson?

A. Through the intervention of Mr. Nelson, chairman of W.P.B., yes, sir.

Mr. Holland: I next offer in evidence a letter of June 2, 1942, from Apex Smelting to William M. Bayer, Assistant Secretary, to Mr. Leir.

Mr. Alioto: No objection. [1292]

(The letter referred to was thereupon marked Defendant V Exhibit 2-B in evidence.)

Q. (By Mr. Holland): I believe there is already in evidence, Mr. Leir, the documents on which the termination was based, which were an

(Testimony of Henry J. Leir.)

interchange of letters bringing about the situation that I described. A. I think so.

Q. The ferro department would operate until April 1st, and the Van-Ex would be made until the 1st of July at cost.

A. Something of that nature, yes.

Q. I now read a letter of June 2, 1942, from Apex Smelting to yourself as representative of Fredet-Kuhlmann.

Now, Fredet-Kuhlmann, of course, was still a party to the contract, were they not?

A. I am not quite sure whether we had not taken over their share.

Q. You had taken over a portion of it, isn't that correct?

A. Half of it, or all of it.

Q. But they were the original party?

A. They were the original party, yes.

Q. And therefore a notice of termination would properly be addressed to you as their agent, isn't that correct? A. Yes.

Mr. Holland (reading): "Dear Mr. Leir: [1293]

"We refer to our various conversations during these last weeks, and regret that we have to inform you of our decision to discontinue the production of Ferro Alloys as of April 30th.

"As a matter of fact, this department was an unprofitable one for various reasons, which we shall try to enumerate below:

"A. According to our contract with the Etablissements Fredet-Kuhlmann, they were to provide us

(Testimony of Henry J. Leir.)

with complete technical advice and assistance. The outbreak of the European war resulted in our not obtaining this complete assistance, and we were forced to arrive at our own conclusions by experimentation. This not only caused actual losses from faulty qualities produced, but also resulted in considerable delay.

"B. We had to contend with recoveries which were far below those expected, as far as the Vanadic Acid from Shattuck is concerned. We had correspondence with Brignoud on this point on March 25, April 11, 1940, but in spite of Brignoud's advice, could not materially improve that recovery.

"C. We also had continual trouble with our labor force, because of the health hazard involved in the production of Ferro Vanadium, in view of the [1294] poisonous character of Vanadium fumes and dust.

"D. When it was first decided to go into the production of Ferro Alloys, all calculations were based on the assumption that duraluminum could be used for this manufacture as it was in France."——

Q. (By Mr. Holland): Duraluminum is what?

A. Duraluminum is a mixture of aluminum with some zinc or copper in it.

Q. That is about the character of the product produced at Apex, is it not?

A. They have quite a variety of alloys.

Mr. Holland (continuing reading): ——"It became obvious, however, that the quality standards in this country with regard to copper do not allow

(Testimony of Henry J. Leir.)

the use of impure aluminum, and we therefore had to use material with as high as 99% purity for this manufacture, which considerably influenced the calculation.

"E. Regarding the production of Ferro-Tungsten, you know yourself that the sales prices are fixed at a level which makes it impossible for us to compete with the much cheaper electric furnace production." [1295]

Q. (By Mr. Holland): Do you agree with that, that they could not compete in ferro-tungsten?

A. That they could not compete with ferro-tungsten?

Q. As they say here, as a reason for their terminating the contract.

A. I couldn't accept that statement. I think the thermic reduction is cheaper than the electric furnace.

Q. This sets forth their views, with which you do not necessarily agree? A. Yes.

Q. Your views are set forth in the letter I just read? A. Yes.

Mr. Holland (continuing reading): "We tried by various improvements to overcome these adverse factors, but as the attached balance sheet, covering the period from June 30, 1939 to April 30, 1942 shows, the operations over a two year period resulted in a loss.

"This letter, therefore, is to be considered formal notice to you, as the representative of the Etablissements Fredet-Kuhlmann, that we avail ourselves

(Testimony of Henry J. Leir.)

of Paragraph II of our agreement of July 1, 1938, to discontinue the operation of our Ferro Department, in accordance with its terms. [1296]

"We request that you let us have your agreement to the above by return mail."

Q. (By Mr. Holland): Now, the basic contract provided, did it not, Mr. Leir, that in the event Apex sustained a loss of $7,500 a year over a two-year period, it was privileged to terminate the contract? A. Yes.

Q. And that happened, did it not?

A. That happened, yes.

Q. That was the technical basis for their termination?

A. That was their technical, formal basis for terminating the contract.

Mr. Alioto: The attached balance sheet which they refer to in that letter I have in my hand.

Mr. Holland: Well, put it in.

Mr. Alioto: Do you want to attach it to the letter itself? That will make your offer complete. That is the attached balance sheet. And we will see whether it bears out that statement.

Mr. Holland: I don't know. I have never seen this before.

Q. (By Mr. Holland): In any event, the termination was accepted by you, was it not, Mr. Leir?

A. Without any discussion. [1297]

Mr. Holland: I do not think it is material. This shows a $10,000 loss.

(Testimony of Henry J. Leir.)

Mr. Alioto: That was attached to the letter you read, and referred to in the letter.

Mr. Holland: It was not attached to the copy I had.

Mr. Alioto: If you will read the letter, Mr. Holland, it says "the attached balance sheet."

Mr. Holland: I will be very glad to add it to the exhibit.

(The balance sheet referred to was thereupon added to Defendant V Exhibit 2-B.)

[See Book of Exhibits.]

Mr. Holland: That is all—wait a minute. I have one more letter I wanted to introduce.

Q. (By Mr. Holland): Now, this Apex business terminated on July 1, 1942, is that correct?

A. According to this letter, yes.

Q. Subsequently you produced Van-Ex only at your Long Island warehouse?

A. We also produced some ferro-vanadium in conjunction with Climax Molybdenum Company.

Q. I mean as far as the Long Island plant which you operated is concerned, that just produced Van-Ex, is that correct? [1298]

A. I wouldn't call it a plant. In Long Island we produced Van-Ex only, yes.

Q. And that plant, I believe, has had only one employee regularly employed, who hired other men on occasions, is that correct?

A. There was one foreman, and he had a number of workmen. As a matter of fact, I remember the precise questions in January of this year by

(Testimony of Henry J. Leir.)

Mr. Archer about the names of six or seven, mostly Italians, whether they were employees of our warehouse operation, and I told him they must have been employed at that time. So we had quite a number of people. We had no labor shortage.

Q. No, you had no labor shortage, but actually, you only operated on a two-man eight-hour day, isn't that correct, one shift? You may have had various employees from time to time.

A. I remember we had one foreman, and he would direct the operation.

Q. And it only took two men to operate it, isn't that correct?

A. Two or three men, yes.

Q. All they had to do was to take this vanadium oxide that you received from the West, or from wherever you received it, and dump it into a mixing bowl, isn't that correct?

A. And put some—— [1299]

Q. And put the ingredients in?

A. And put some ingredients in it.

Q. Mix it and then repack?

A. And then put it into suitable cans.

Q. Subsequent to that time, in January, 1943, you again approached Apex with the idea of going back into the ferro-vanadium business, is that not correct?

A. In January, 1943? There might have been such correspondence. I don't recall it at the time.

Mr. Alioto: No objection.

(Testimony of Henry J. Leir.)

Mr. Holland: Will you mark this defendants' exhibit next in order?

(The letters referred to were thereupon marked Defendant V Exhibit 2-C in evidence.)

[See Book of Exhibits.]

Q. (By Mr. Holland): I read a letter from Mr. Lippa of Apex Smelting to you, dated—or rather, from you to Mr. Lippa, dated January 28, 1943, re ferro-alloys (reading):

"Dear Mr. Lippa:

"We are at last able to resume the production of ferro-vanadium since sufficient raw material is available and fully assured by the WPB."

When you say "We are able to resume," you did not mean you had resumed. You now had sufficient supplies so that you could resume, is that correct?

A. We would probably be very close to [1300] the point of resuming production.

Q. (continuing reading) "Inasmuch as we cannot, unfortunately, count on Mr. Starman at the present time, we have made arrangements with a first-class specialist who is familiar with production not only in the electric furnace, but by alumino-thermic and silico-thermic reaction as well.

"While reduction by silicon would be somewhat cheaper, we would of course prefer the alumino-thermic process if only to maintain our business relations with you.

"And we would prefer also to have you join our new enterprise in one way or another so that you could watch it from the first moment on.

(Testimony of Henry J. Leir.)

"We intend to form a separate corporation in any event for this manufacture according to one of the two following plans:

"a) The new corporation to finance the entire business on its own account and keep all the profits. Sales: through C.O.C. on a 2.5% commission basis. Capital: between $50,000 and $100,000 of which approximately $5,000 would be allocated for equipment, the remainder for raw material and working fund. [1301]

"b) The new corporation to be formed with a small capital: $1,000, $5,000 or $10,000, and with the purpose of converting vanadium oxide only on a toll basis for the account of C.O.C. at cost plus 10%. Financing of raw material, etc., by C.O.C.

"We would very much like to have you join us in either combination.

"We can tell you that if you personally prefer Proposition B, we would not ask your aid in financing, not even as regards the aluminum, since we have assurances from our bankers concerning an adequate credit.

"We believe there are such large possibilities for the future in this field that we would like to be associated with you right from the beginning. We are confident that once the war is over you will be more interested than now in this alumino-thermic field.

"If Apex as a firm cannot join us, we suggest that Mr. Singer, you and Mr. Starmann come into the new corporation as individuals.

(Testimony of Henry J. Leir.)

"I am enclosing herewith a balance sheet of our firm as of December 31, from which you can see that we have expanded our business again during the past year. [1302]

"The new enterprise would start with ferro vanadium and later take in

"ferro zirconium

"ferro titanium

"For your information, the business in Van-Ex would be discontinued.

"May we hear from you?"

Well, now, Mr. Leir, then in January of '43 you had assurance of ample supplies of vanadic acid, is that correct?

A. Yes.

Q. And also you wanted to go into the ferro-vanadium business, and you wanted to discontinue Van-Ex, is that correct?

A. Because Mr. Lippa had expressed, in the previous correspondence, the desire not to be interested in Van-Ex.

Q. You say "For your information, the business in Van-Ex would be discontinued," which I assume means that you would intend to discontinue that business.

A. Only in so far as the association with Mr. Lippa was concerned.

Q. If Mr. Lippa and Apex would come in?

A. Yes.

Q. And they replied to you—Mr. Lippa did, on February 1, 1943 (reading): [1303]

(Testimony of Henry J. Leir.)

"Dear Mr. Leir:

"Please accept our thanks for your letter of January 28. I have discussed this matter with both Mr. Starmann and Mr. Singer and we all regret exceedingly to advise that due to the demand upon our time at Apex it would not be advisable to associate ourselves with any other enterprise at this time.

"Furthermore, from an investment standpoint, in view of the high taxes, there really is no great advantage to us. As a matter of information to you, however, I would like to call your attention to your plan 'a'. You will note that you stipulate approximately $5,000 will be allocated for equipment. As you know, our investment and equipment was considerably higher than that and was greatly inadequate for a sound, efficient business. We believe that you are making a mistake in figuring so small an amount for that item."

Now, Mr. Lippa was probably correct in that, wasn't he—$5,000 was a little low to allow for a ferro-vanadium plant, for equipment?

A. A ferro-vanadium plant consists mainly of crucibles, refractory crucibles, which you can make, yourself.

Q. I understand.

A. And by that time I had sufficient knowledge about even [1304] dispensing with the crushing equipment. It was perfectly feasible, and it is perfectly feasible still today, to crush ferro-vanadium or ferro-molybdenum, incidentally, by a very sim-

(Testimony of Henry J. Leir.)

ple method, which doesn't cost a thing, so to speak. You just dump the hot metal into a tank of cold water and the material would fall to pieces.

Q. (By the Court): That's merely a difference of opinion between you and Apex as to that amount.

A. Yes. But as far as for that period of time, in 1943, of course, 1943 dollars are a little bit different from 1958 dollars. In 1943, at the time this letter was written, I think I could have started the equipment with a relatively modest outlay.

Q. (By Mr. Holland): But you did make the statement that Apex had treated the ferro department like a stepchild, in your other letter.

A. Yes.

Q. And they had spent greatly in excess of $5,000 on equipment for their ferro department.

A. Yes.

Q. Is that correct?

A. The main outlay, however, at that time, was the crushing equipment.

Mr. Holland: I think that is all of the letter I want to read. [1305]

Do you want me to read the rest of it?

Mr. Alioto: No.

Mr. Holland: That will be all.

Cross-Examination

Q. (By Mr. Archer): Mr. Leir, as I understand it from your testimony, the companies which you have owned or had a financial interest in have been engaged in the manufacturing of alloys only

(Testimony of Henry J. Leir.)

on the occasions when you had the contracts with Fredet-Kuhlmann, Apex Smelting Company, and Climax Molybdenum Company, is that correct?

A. I think that's correct, yes.

Q. I believe you testified that when you came to this country, commencing about 1939, you made several trips out to the Colorado Plateau, is that not correct?

A. After my arrival here in this country, yes.

Q. From your investigation of the Colorado Plateau, wouldn't you say it is true that anyone who had sufficient financial resources could have acquired sufficient vanadium ore-bearing bodies and constructed a vanadium plant so as to produce oxide, provided he was sure of a market?

A. Yes, definitely.

Q. At the time you terminated your contract with Apex Smelting Company, Mr. Leir, you requested of them that they [1306] not engage in the ferro-vanadium business for a specific period of time, had you not?

A. Most probably I did.

Q. Don't you recall that they did agree to that, that they wouldn't go back into the ferro-vanadium business?

A. Mr. Archer, there was a contract in existence between my French partners and Apex Smelting Company for a period of 14 years, and when such a long contract is being terminated you have, of course, to safeguard the interests of your partners. My partners in France had disclosed to Apex

(Testimony of Henry J. Leir.)

Smelting Company certain, call it recipes, call it experience, and therefore, I most probably took the step of requesting Apex not to continue this production for a certain period of time.

Q. And this French partner is the firm you call Fredet-Kuhlmann? A. Fredet-Kuhlmann.

Q. That is sometimes hyphenated, or it is hyphenated, is it not?

A. Yes, I think it is hyphenated.

Q. And you just sometimes abbreviate that, "F-K"? A. F-K.

Q. And your agreement between your French partners and Apex Smelting Company provided that your French partners wouldn't sell ferrovanadium in the United States and Canada, did it not? [1307]

Mr. Alioto: The agreement speaks for itself.

Mr. Archer: Well, you read it yesterday.

Mr. Alioto: Do you want to call it to his attention?

The Witness: I think we should look up the agreement and look up exactly what it says in this respect.

Mr. Archer: It provides, Paragraph 7—I believe it is on page 6—"The Societe"——

Q. (By Mr. Archer): Refers to Fredet-Kuhlmann? A. Fredet-Kuhlmann.

Mr. Archer: Do you want me to read it?

Mr. Alioto: Read it to him.

Q. (By Mr. Archer): "7. The Societe hereby agrees that it will not, directly or indirectly, en-

(Testimony of Henry J. Leir.)

gage in the business of producing or selling thermit process metals or alumino-thermit stainless steel or other non-ferrous metals employed in alloying steel or iron within the United States or any Territory thereof, or within the Dominion of Canada, during the term of this agreement, nor will it permit any corporation or association affiliated with it to do so."

Does that refresh your recollection on that?

A. Yes, Mr. Archer. [1308]

Q. And your French partners, Fredet-Kuhlmann, were members of the French ferro-vanadium cartel, were they not?

A. What do you understand by "cartel"?

Q. Well, let me—I will withdraw the question and put it this way:

Just prior to your coming to this country hadn't Fredet-Kuhlmann entered into an agreement with Eugene, the other ferro-vanadium manufacturer in France, whereby all Fredet-Kuhlmann's output was sold through Eugene? A. Reluctantly.

Q. But they entered into it?

A. Eugene was the more powerful one, backed up by Union Carbide and by Vanadium Corporation, so we little fellows—little even in conjunction with Fredet-Kuhlmann—had nothing but to accept the conditions of Eugene imposed upon us, and this was done—I can tell you this very clearly—against my objection, because, as you just pointed out yourself, the product was from that moment

(Testimony of Henry J. Leir.)

on sold by Eugene, and not by my company, Luxembourg.

Q. That is what I mean. But you say it was backed up by Union Carbide?

A. I told you that the preponderate position of Eugene in the French market was created by intimate relations—let us call it this way—with Union Carbide and Vanadium Corporation of America.

Q. Do you know that of your own knowledge?

A. I do.

Q. Did somebody tell you that, or were you present?

A. I have seen correspondence to that effect.

Q. Where have you seen it?

A. Right here in San Francisco.

Q. Do you have it with you?

Mr. Alioto: If you would like, I will give it to you.

A. Yes.

Mr. Alioto: I will give it to you right now. The arrangement between your company and Vanadium Corporation of America with Eugene in 1939.

Mr. Archer: Well,——

Mr. Alioto: I will give it to you.

Mr. Archer: What is the date of this?

Mr. Alioto: I will give it to you right now.

Q. (By Mr. Archer): What is the date of this? What is the date of this, Mr. Leir?

A. Between 1938 and 1942.

The Court: How is it material?

Mr. Alioto: I don't know. Mr. Archer asked for

(Testimony of Henry J. Leir.)

it, if your Honor please, and I am simply trying to accommodate him. [1310]

(Discussion between counsel.)

Mr. Archer: You mean we sold them vanadium oxide?

The Witness: Pardon me?

Q. (By Mr. Archer): You mean we sold them vanadium oxide, is that it?

A. At cheaper prices than to anybody else, yes.

Q. We sold you vanadium oxide over in France, in Belgium, did we not? We gave you a contract to sell you vanadium oxide in 1938—the Societe—S. A. des Minerais?

A. Yes. But the conditions to the other fellows which I just mentioned, to the bigger fellows, were much better than to us.

Q. It was at the same price we sold to everybody else in Europe, wasn't it?

A. The conditions to the other fellow you just mentioned in France, and whom I would call the bigger fellow, were more favorable than to us.

Q. At what price were we selling to them?

A. I think you can see it for yourself.

Q. What price were we selling to you?

A. You sold to us at, I think, between $1.30 and $1.70.

Q. It was $1.30, wasn't it?

A. Yes, but at certain moments you asked for a price of $1.70.

Q. Now, at the time you entered into your contract with [1311] the Imperial Paper and Color

(Testimony of Henry J. Leir.)

Corporation in January of 1944 did you still have an arrangement with Fredet-Kuhlmann?

A. There was no arrangement any more in existence, because by that time France was overrun by the Germany Army, and as far as I was concerned, there was no France in existence any more.

Q. Now, in January, 1944, you were negotiating with Mr. Brown, were you not, of the Imperial Paper and Color Corporation? A. Yes, sir.

Q. And you were negotiating with, also, a Mr. Johnson, in regard to the Castletown Manufacturing Company's vanadium oxide plant?

A. I remember.

Q. And at that time you made a memorandum, did you not, of some of your negotiations (handing document to the witness)?

A. (Witness examines document.)

The Court: At this time we will take a recess.

(Short recess.) [1312]

Mr. Archer: Shall I proceed, your Honor?

The Court: Yes.

Cross-Examination—(Continued)

Q. (By Mr. Archer): This plant at Castletown, Mr. Leir, had been producing vanadium oxide from flue dust, had it?

A. From flue dust, yes, Mr. Archer.

Q. It was called Johnson and Whitney, Castle Manufacturing Company, J & R——

A. Something like that, at Castletown near Albany, New York.

(Testimony of Henry J. Leir.)

Q. At that time the bank which was handling it sent you a proposed lease for the plant, you decided not to lease it because you went up and inspected the plant and were not favorably impressed with it, isn't that correct? A. Yes.

Q. Prior to that, Mr. Johnson had told you that he could buy at least 40,000 pounds a year as flue dust with 30 per cent V_2O_5 at about 60 to 65 cents a pound?

A. Yes, he made such a prediction.

Q. Do you recall when Mr. Wolf was on the stand he identified the contract you made with the North Continental or Shattuck Chemicals for their production after the termination of the Apex agreement? It was about in June of 1942?

A. Yes.

Q. Then I went up to the time with him where North Continent [1313] was ordered or actually the utility holding company was ordered to divest itself of the assets of North Continent?

A. Yes.

Q. Prior to the time North Continent was acquired by Union Mines for the Manhattan Project you discussed with the North Continent people the purchase of North Continent and Shattuck by yourself, did you not?

A. There was such a time.

Q. I have here the three letters; you may want to look at them. A. Yes.

Q. You thought that Imperial Paper and Color Corporation might be interested in that along with

(Testimony of Henry J. Leir.)

them, did you not?

A. This is what I told you the last time in New York in January, 1958, yes.

Mr. Archer: I offer these letters.

Mr. Alioto: No objection.

Mr. Archer: I offer these as defendant's exhibit next in order.

(The documents referred to were thereupon received in evidence and marked Defendant U's Exhibit 5-I.)

Mr. Archer: First is a letter from Mr. Leir to North Continent dated November 20th, 1943:

"We read in the papers about the dissolution [1314] of the North Continent Utilities Corporation.

"We would appreciate it very much indeed if you could tell us what the plans are with regard to your own firm; in other words, whether we can expect you to remain independent and sooner or later again become one of our suppliers.

"Any information you can give us will, of course, be treated confidentially."

Then another letter dated February 18th, 1944, from Mr. Leir to W. P. Hendricks, North Continent Mines, Inc., arranging a meeting.

And then on June 2nd, 1944, from Mr. Leir to North Continent Mines, Mr. Hendricks, re vanadium.

"This is to refer to our last conversation, at which time you informed us that you did not anticipate re-opening your mill.

(Testimony of Henry J. Leir.)

"As we have not heard from you since, we assume that you are still shipping crude ore.

"The pleasant relationship which we always maintained with you prompts us to submit the following:

"We would not like to see your mines and mill pass into other hands, which might perhaps be competitors of ours in the vanadium field.

"Some conversations which we had with some friends of ours lead us to think that there is a possibility of concluding a deal with you regarding your property whenever you want to dispose of it. Substantial down payments would be no obstacle, and should you wish to maintain a share in the business rather than sell outright, this too, would be acceptable.

"Will you be good enough to tell us whether you expect to re-open the mill in the not too distant future, or whether you would like to make some sort of a deal, in which case we would appreciate it if you would let us know your terms."

Q. You were also discussing the purchase of North Continent with another company at this time? A. That is right.

Q. That is Mr. Boris Mischel of the Canadian Uranium and Vanadium Company? A. Yes.

Q. Subsequently you did not finally make an offer for the North Continent Mines, did you?

A. No.

Q. The North Continent Mines had their own both oxide plant and ore resources, did they not?

(Testimony of Henry J. Leir.)

A. Yes.

Q. And actually during this period of time it [1316] was the largest supplier of vanadium oxide to both Apex Smelting Company and yourself?

A. With the exception of Blanding Mines, which at certain moments, if I remember correctly, shipped at least as much as North Continent Mines.

Q. I mean over the total period of time?

A. Yes.

Q. You recall I talked with Mr. Nisley in regard to his operations in 1943 under the toll agreement. You were in court. A. Yes.

Q. He said that originally he was only making lumps and then he did change his operations to flakes. A. Yes.

Q. These are the letters on that: one dated October 15th, 1943 from him to you, and your reply dated October 28th, 1943. They are a little difficult to read and so I have typed copies on the back if you want to look at those. If you will look at the second page, it will be a little clearer, Mr. Leir. It is the same letter. It is just typed so it is a little more legible.

A. Shall I read the whole letter? I remember those letters.

Mr. Archer: I offer these as defendant's exhibit next in order, the first being a letter of October 15th, 1943, [1317] from Mr. Nisley to Continental Ore, with the reply dated October 28th, 1943, from Mr. Leir to Frank Nisley.

(Testimony of Henry J. Leir.)

(The documents referred to were thereupon marked Defendant U's 5-J and received in evidence.)

[See Book of Exhibits.]

Mr. Archer:* Mr. Nisley states:

"Some time ago we were corresponding with you concerning the possibility of making a flake material which would be more desirable than crushed material. At the time we were extremely pressed under the Metals Reserve operation and weren't able to do anything about it, equipment being very scarce.

"A few days ago we completed a flaking machine and put it into operation. The material seems to us to be of a very desirable nature, for as far as we are concerned, it can be sacked without further treatment. If it is not fine enough for your work, we could if necessary run the thin flakes through a small set of rollers and make it somewhat finer than it is at the present time.

"We are sending you a small sample of the material we are now making.

"Concerning production we are operating under the same arrangements with M.R.C. However, we are treating somewhat lower grade ore than we used to. Our output has been running in the neighborhood of [1318] 11,000 to 12,000 lbs. of Vanadic Acid monthly. The grade of the product has been extremely good, last month's average being 87.47% V_2O_5.

"We would like to hear from you concerning

(Testimony of Henry J. Leir.)

your reaction to the flake material. I might add that we are turning out this product commercially, in fact all V_2O_5 being produced is of this nature. Perhaps this change will be of value to us both after the war."

And Mr. Leir's reply dated October 28th, 1943:

"We refer to our letter of October 25.

"Your sample has just arrived, and we really want to congratulate you on the fine job you are doing, because these flakes are just what we like best.

"From your letter of October 15, we note that you are making 11,000 to 12,000 pounds of vanadic acid per month at the present time.

"Please let us know what your situation is with regard to crude ore, that is, whether you have some of your own or whether you are dependent upon the U. S. Vanadium Corp.

"We would also like to know whether you believe that after the war you will be in a position to either operate your own mines or to buy ore from independent miners.

"The war may be over in the not too distant future, [1319] and we would like to obtain an idea as to what your situation would be at that time. There are already signs of abundance of basic ores and minerals but we are anxious to cooperate with you and keep your mill running in peacetime.

"Please let us know at the same time when your present contract with the Metals Reserve Company expires."

(Testimony of Henry J. Leir.)

Q. Mr. Nisley's reply to that has already been put in evidence, where he informed you it would expire on January 1st? A. Yes.

Q. Mr. Leir, I believe you testified at your Long Island plant you had a pebble mill or a mill of some kind where you mixed your vanadic acid or you ground it? A. Yes.

Q. The vanadium oxide, and then did you have in addition to this pebble mill something, a machine whereby you mixed it, or was this done by hand?

A. No, the pebble mill was at the same time, of course, mixing the material.

Q. That was the only mechanical equipment you had at the plant?

A. As far as I remember, yes.

Q. The reason I ask you about these accounts, I know [1320] that you are not too interested in this any more, but as I understand it, the man who really kept these books has died. A. Yes.

Q. And that you are really the only one who would be familiar with them at the present time.

A. I will cooperate with you.

Q. If you can't answer any of these questions and you want to talk to your controller about it, feel free to do so, but I will show you your furniture and fixtures account, 1943, and see if that is not the pebble mill that is referred to on February 17th (handing a book of accounts to Mr. Leir). February 17th, 1943 shows the purchase, I believe, of a pebble mill.

(Testimony of Henry J. Leir.)

A. Well, there is the amount of the pebble mill, but there is also another amount in connection with that.

Q. There are two payments.

A. There is another amount hooked up this. I think there are two figures.

Q. $454.50? A. Yes.

Q. You will notice that at the end of the year, I think you have an opening balance for 1944 or for the close of 1943 down here, you see——

A. Of $704.00.

Q. Which would indicate your pebble mill had been sold in [1321] the meantime, hadn't it? You can see it charged off over there in May on the other side. Do you see on the other side of the ledger that it is charged off on May 19th?

A. I am not quite sure.

Q. Turn to Stein Equipment Company under your asset account. Stein Equipment Company, May 19th, the same figure, $454.50, then charged off for $229.50. A. Yes.

Q. That was the date on which it was sold?

A. Yes, most probably.

Q. So you had your pebble mill at your Long Island plant for approximately then five months in 1943?

A. It is possible, Mr. Archer, that we exchanged this machine against another one.

Q. It is not shown in your asset account, is it? You will notice your asset account at the end of the

(Testimony of Henry J. Leir.)

year was down to $700, indicating that this had been cleared out.

A. Well, it would still show $700.

Q. Yes, but there is no other entry there for any other equipment, is there? Do you want to look at it again?

A. How about if this exchange of which I just spoke had taken place?

Q. Wouldn't there be another entry in your asset account for it?

A. I am not quite sure. [1322]

Mr. Alioto: I think you are speculating on books that he did not keep, admittedly.

Mr. Archer: I think it is important in this action to know just how long he had this mill at the Long Island plant. I thought you had just one piece of machinery there, but you think now you exchanged it for another?

A. I have something in my mind as having been in discussion for the exchange of machinery.

The Court: What was the total investment in your Long Island plant?

A. Very little, your Honor, very little.

Q. How much is very little?

A. I would say all told a couple of thousand dollars at that time.

Q. (By Mr. Archer): Actually, Mr. Leir, your total asset account in 1943 is only $700?

A. This refers only to furniture and fixtures. It does not refer, for instance, to the cans, and to other things which we had.

(Testimony of Henry J. Leir.)

Q. Oh, I am sorry. You mean it does not refer to—what about your investment in fixed assets, that is, not inventory and that sort of thing, but fixed assets.

A. Well, as I just said, this was probably in the neighborhood of several thousand dollars.

Q. Your furniture and equipment there was not over $700 for everything, was it? [1323]

A. No.

Q. And the only one that appeared there was, that we could identify as sure in the vanadium business was the $450 and some odd account for a pebble mill.

A. Yes, let us assume this. Go ahead.

Q. What other fixed asset did you have there in which you had an investment?

A. Our vanadium oxide, the fluorspar, ferro-silicon, and the cans, which at that time were quite expensive.

Q. I understand that, but you would not call these other items fixed assets, would you?

A. No.

Q. What I want to get at is what you had invested in the fixed assets.

A. Well, then, let us assume it was only what you call this little pebble mill.

Q. If you want me to check on it, I can show you in 1943 you bought the things that I could identify; you had some purchases of respirators.

A. You are quite right, yes.

Q. But these were of nominal amounts?

(Testimony of Henry J. Leir.)

A. Yes, but there must have been some other expense items.

Q. It may be, very well. I asked you or your counsel to check this Sulzer Bros. account. Do you remember I asked [1324] Mr. Wolf about this sale to Switzerland of the Van-Ex? A. Yes.

Q. To show whether it shows in here that it came from Electro Met?

A. The vanadium oxide?

Q. I will show you your entries in here on it.

Mr. Alioto: I think the evidence already shows it came from Electro Met. There is no question about that.

Mr. Archer: I thought there was. This is what I wanted to show. Sulzer Bros.—this is your Sulzer Bros.' account. It shows the $248 sales and it shows the purchases over here from Electro Met.

The Witness: Yes.

Q. (By the Court): Electro Met, was that a government agency?

A. Electro Met is one of the defendants in this case.

Mr. Archer: It is a subsidiary of Union Carbide.

Q. Mr. Leir, in the use of Van-Ex during this period of time, when you sold it to the steel companies for direct addition, didn't you have some objection from the steel companies because of the sodium content of the vanadium oxide?

A. I don't remember objection by steel companies to the sodium content.

(Testimony of Henry J. Leir.)

Q. You knew at this time that most vanadium oxide was made by the so-called salt roast method?

A. Yes, of course. [1325]

Q. Which leaves large sodium?

A. Yes, more or less sodium.

Q. And if you make ferro-vanadium out of it, it really doesn't make any difference how much sodium is in it, because that goes out when you make the ferro-vanadium, doesn't it, to a large extent? A. Yes.

Q. But if you make Van-Ex, there is no way to take the sodium out, is there?

A. Exactly the same thing, because in one case you make the ferro-vanadium outside of the steel furnace, and in the other case, you make it right in the steel furnace. This was exactly our idea.

Q. But the sodium is added to the furnace in the Van-Ex situation directly to the steel bath, while in the ferro-vanadium situation it has already been removed in a prior furnace, either an electric furnace or a thermit reduction.

A. I beg to differ. The sodium in the steel furnace goes into the slag, it doesn't go into the steel.

Q. All of it?

A. I would say all of it, yes.

Q. Well, isn't that one of the problems, to see that all of it goes into the slag?

A. Well, a good metallurgist knows how to make a pure steel.

Q. And one of the ways to do that is to add as few impurities as possible in your ingredients?

(Testimony of Henry J. Leir.)

A. Yes. But I wouldn't call sodium one of the, let us say, main impurities to which metallurgists, in general, object. The main impurities to which metallurgic people object are sulphur, copper, and such items, but not sodium.

Q. Well, the copper item is the item that you ran into trouble in the aluminum thermit?

A. Yes, that's why I mentioned it.

Q. That's right. And, in fact, you recall—I don't know whether you recall or not, but didn't you finally determine that the best aluminum to use was the aluminum from the Reynolds Aluminum Company, rather than even the aluminum from the Aluminum Company of America? [1327]

A. This I don't recall, but we came, I think, to the conclusion, as you just stated, the best aluminum is called virgin aluminum—in other words, pure aluminum.

Q. And during the time that Apex——

The Court: Just a moment. How is all of this material to this lawsuit?

Mr. Archer: Well, I just wanted to bring out that the aluminum was subject to allocation.

The Court: This is an interesting metallurgical clinic, but how does this affect the issues in this case?

Mr. Archer: Well, your Honor, I wanted to bring out that the aluminum, during the time of the operations at Apex, was also under allocation by the government.

(Testimony of Henry J. Leir.)

Q. (By Mr. Archer): Was it not, Mr. Leir?

A. Yes.

The Court: Well, you have asked him the question.

Q. (By Mr. Archer): I show you now, Mr. Leir, correspondence, some of which you have seen before, in 1939, with the Vitro Manufacturing Company,—some of it is by you with Vitro and some by Mr. Hirschland.

A. In '39. Do I have to read all of this?

Q. Well, who was Mr. Hirschland? [1328]

A. Mr. Hirschland was, at that time, treasurer of my company, Continental Ore Corporation.

Q. (By the Court): He was what?

A. Treasurer of my company, of Continental Ore Corporation.

Mr. Archer: Offer these as defendants' exhibit next in order.

Mr. Alioto: This is long extended correspondence back in 1939 about some controversy with respect to analysis.

Do you propose to read the entire thing in at this time?

Mr. Archer: No, just parts of it.

This was with Vitro Manufacturing Company, which was one of the large producers of vanadium oxide, and which was selling to them during this period, and I want to bring out the reason why they terminated.

Mr. Alioto: Well, we have no objection, then.

(Testimony of Henry J. Leir.)

(The exchange of correspondence referred to was marked Defendant U Exhibit 5-K in evidence.)

[See Book of Exhibits.]

Mr. Archer: This is from Mr. Leir to Vitro, in which an order is placed with Vitro for 6,000 pounds of 83 percent vanadium oxide at $1.25; two shipments, 3,000 pounds, immediately, 3,000 pounds earliest afterward (reading):

"Sampling weighing analysis by Messrs. Ledoux & Company." [1329]

The Court: What is the date of that?

Mr. Archer: July 3, 1939.

It follows with Mr. Leir's letter to Vitro, July 5, saying (reading):

"We further agree with weighing, respectively control checking of weighing by the Pittsburgh Testing Laboratory if this suits you better."

Then Mr. Hirschland — who was your treasurer——

The Witness: Yes.

Mr. Archer: ——writes to Vitro——

Q. (By Mr. Archer): I believe you had returned to Europe by this time, had you not, Mr. Leir? This is July 17, 1939. In the fall sometime I think you returned.

A. I don't think so.

Q. You don't think so?

A. I was in this country. I am pretty much econvinced I was in this country.

Q. Maybe you went out for re-entry?

(Testimony of Henry J. Leir.)

A. No. I was in this country.

Mr. Archer: Well, it is from Mr. Hirschland to Vitro (reading):

"We just received cable from our friends on the other side that they want sampling and testing done by Ledoux & Company. We assume that this is just as [1330] agreeable to you, and would only ask you to kindly confirm that your next shipment of 3,000 pounds will be sampled and tested also with regard to moisture by Messrs. Ledoux in New York."

Then Mr. Strod, the sales manager of Vitro, on July 18, writes to Mr. Hirschland (reading):

"We note that you wish to have the second lot, consisting of 3,000 pounds, now in the course of preparation, sampled and analyzed by Ledoux & Company. You are probably not aware of the fact that in order to have it sampled by Ledoux we must request that a representative comes from New York to Pittsburgh to do so. This involves considerable expense, amounting to possibly $60-$70. If it is agreeable to you to bear this expense, we will be glad to have Ledoux' representative come to Pittsburgh. It is for reason of economy that we have, in the past, had the sampling done by the Pittsburgh Testing Laboratory, and we only charged you for half of the cost of this work. This was only a matter of a few dollars.

"If your clients still insist on Ledoux sampling from now on, we will do so only if you agree to

(Testimony of Henry J. Leir.)

pay this additional expense. Otherwise, we will be obliged to cancel the order."

The next letter is from Mr. Hirschland to Vitro, [1331] in which he passes the information on to your clients.

And the next letter is from Vitro, dated August 18, 1939, and they wanted to know the information on it.

And on August 21, 1939, letter from Mr. Hirschland to Vitro (reading):

"We have your letter of August 18th, and also received a reply from Europe. We hear now from the other side that they cannot see why you do not accept Ledoux, except under additional expenses which they are not prepared to incur, particularly since differences in the analysis results are apparent, on your last shipment.

"As it seems to us under the circumstances an agreement on the basis of your letter of July 18 cannot be reached, accordingly we accept your offer to cancel the order."

And Vitro replies, on August 22, 1939 (reading):

"Under the date of July 3 you wired us, requesting a definite booking of two lots of vanadic acid, each of 3,000 pounds, and confirmed the purchase by letter on July 3. In a letter dated July 5 you also expressly agreed that the weighing and sampling could be done by the Pittsburgh Testing Laboratory. After these definite conditions of sale were mutually accepted and the two lots prepared by us, you now [1332] intend to cancel the second

(Testimony of Henry J. Leir.)

lot for what appears to us no valid or just reason.

"Frankly, we are very much disappointed over the news you have communicated at this late date as we have kept the shipment for over a month and lost a sales possibility in other directions."

Then Mr. Hirschland, on August 23, 1939, writes to Vitro saying he has communicated this to your clients in Europe.

And finally, Mr. Hirschland replies to Vitro (reading):

"Referring to our letter of August 23 we wish to advise you that we received cable today from our friends in reply to our airmail letter of August 23. They have made provision for the requirements elsewhere. We regret that an agreement on the basis of your proposal of August 22 cannot be reached, but we hope that the inconvenience caused to you and us will be made up for soon by some new business."

Q. (By Mr. Archer): Now, actually, you never purchased from Vitro after that, did you, Mr. Leir?

A. I don't remember.

(Discussion between counsel.)

Q. (By Mr. Archer): I show you Plaintiffs' Exhibit 120, Mr. Leir, which [1333] you identified yesterday. I had some questions about it, which I guess I told you. Did you find out what is included in the "Cost of sales" in that exhibit?

A. Yes.

Q. What is included?

A. We visited Mr. Kaplow, who right now is

(Testimony of Henry J. Leir.)

in the hospital, as you know, and he explained to us that in the "Cost of sales" is included not only the amount for the raw material, but the amount for labor, handling, and the ingredients.

Q. In the 1946 entry where it shows a billing, Continental Ore Company, on this Van-Ex shipment of $240—— A. Yes.

Q. ——and "Cost of sales" of $212.80——

A. Yes.

Q. ——were you able to find from the ledger where he got those figures?

A. He explained to us the difference, being, in this case, about $5.00, between the price which we paid to you, $207.80, and $212.80—in other words, $5.00.

Q. Where did he get the $5.00?

A. It was, if I correctly understood, his experience figure based upon previous much larger shipments.

Q. Then it wasn't made entirely from the books, if it was based upon some experience here, was it?

A. This I can't tell. [1334]

Q. Well, what I want to know is whether——

(Discussion between counsel.)

Q. (By Mr. Archer): The reason I am interested in this is because this is the only year where there is just one sale. A. Yes.

Q. And I wanted to see how, from your books, you could get—and the only ingredient I can see from your books, as I just showed you on that

(Testimony of Henry J. Leir.)

Sulzer Brothers, it shows an invoice on the other side from Electro Met. A. Yes.

Q. And it didn't show any other ingredients going in it.

A. But it shows on this little amount of $200 a rather large amount difference—namely, $5.00.

Q. I want to know where he got the $5.00 from the books. A. I don't know.

Q. You don't know?

A. I couldn't tell you.

Q. Now, the cost of sales, then, includes the materials and freight, and what else would it include? A. In this particular item?

Q. Now, just generally.

A. Generally, the raw material, the handling, the freight, the cans, and the ingredients. [1335]

Q. (By the Court): Labor? Is that included?

A. Labor, handling—what I would call handling.

Q. (By Mr. Archer): Well, the labor isn't in there. You don't have any entry in your books for labor.

A. Do you speak, again, of this item of $200?

Q. No; I mean for vanadium labor. You don't have any vanadium labor broken down in your books.

Do you still have the exhibit there? You see, this is related solely to vanadium. A. Yes.

Q. Now, you can pick up your vanadium costs, you can pick up your sales from your invoices,

(Testimony of Henry J. Leir.)

because you can just look at a vanadium invoice and find vanadium, can't you? A. Yes.

Q. And you can pick up your material costs, because you can look to see who the purchaser was, and you will find vanadium oxide, so that it comes right down to vanadium.

A. Yes. But the figures you see here are not only—I repeat—not only the figures for the raw material, but as well for handling, for handling, ingredients, and cans.

Q. Well, I can see "cans."

Now, let me ask—maybe this will make it clear—is there any charge for overhead in here? [1336]

A. It is possible.

Q. Do you know?

A. I wouldn't know that. I think we should ask my comptroller about it.

Q. Well, look at the next entry. Maybe this will help. It says "Gross profit." A. Yes.

Q. Well, if it is gross profit, there couldn't be any charge for overhead in "Cost of sales."

A. Certainly not.

Q. Then probably there isn't labor costs in there, either, if we are still talking about gross profit. By "labor," I mean salaries, and that sort of thing—your general expense.

A. You would have it deducted.

Q. Yes. In other words, you have a gross profit figure there from which matters such as overhead, and whatever goes into overhead, have not been deducted? A. I would say so.

(Testimony of Henry J. Leir.)

Q. Now, the next item, "Percent of gross profit to sales," is just the ratio between gross profit to your total vanadium sales? A. Yes.

Q. Now, your last entry there, it says, "Commission earned," and this is Apex billings——

A. Yes. [1337]

Q. Well, you will notice—do you recall that you had a 2½ percent commission from Apex?

A. Yes.

Q. You will see your commissions there are a little bit higher than 2½ percent.

A. It is a little bit higher, yes.

Q. Well, I think what he has put in there, I think he has put in your ferro-tungsten, or some other commissions, if you had some ferro-tungsten —Mr. Holland just put in that exhibit——

Do you have that accountant's report?

Mr. Holland: I didn't put it in. From Apex?

Mr. Archer: Yes.

Mr. Holland: Here it is, if you want it.

Mr. Archer: I have a copy here.

Q. (By Mr. Archer): This accountant's report shows a total commission of $8,480.49.

A. Eight thousand, you said?

Q. $8,480.49. A. I have $9,400.

Q. Yes. And if there were any ferro-tungsten sold under this it would be even a little bit less than that, wouldn't it?

The Court: How is this material? [1338]

Mr. Archer: I just want to establish where these

(Testimony of Henry J. Leir.)

costs came from, your Honor, so that I can check them.

Mr. Alioto: You have all the books and records.

The Court: I still don't understand how that has anything to do with our lawsuit. Try to get to the main issues.

Mr. Archer: I just have one further question, your Honor.

Q. (By Mr. Archer): Now, the "Commission earned" is, again, a gross commission, is it not?

A. A gross commission, out of which we would pay all our expenses, for traveling and advertising, and so on.

Q. Now, down at the bottom it says "Government billings."

A. This is clearly a mistake. It should have read our own billings.

Mr. Alioto: That is what I was telling you. We will get together and fix this exhibit up. But in copying Mr. Kaplow's handwriting, which wasn't very legible, it should have been "Direct billings," as distinguished from "Apex billings."

Q. (By Mr. Archer): Well, Mr. Leir, you recall yesterday you put in an exhibit showing your suppliers of vanadium oxide?

A. I think we did. [1339]

Q. Which started in 1940?

A. I think we did.

Q. And you will notice your total sales of vanadium in 1939 on this exhibit amount to $59,000?

A. Yes.

(Testimony of Henry J. Leir.)

Q. Now, in 1939 you were purchasing vanadium oxide from Electro Met, were you not?

A. Yes, indirectly.

Q. And it has your entry here of Electro Met Sales Corporation, 1939, it shows $24,990.48 purchases.

A. I am convinced that is correct, yes.

Q. You say that was indirectly, because that was through your Mr. Poliakoff? A. Yes.

Q. But actually, those were handled by Mr. Hirschland, again, were they not? A. Yes.

Q. And they were all sold to you — you will notice from your entry here that you paid Electro Metallurgical Sales directly—is it not shown here in this entry, here (indicating)?

A. I am not quite convinced we paid directly, because we bought it indirectly through a friend of Electro Met.

Q. Well, it was paid for directly to Electro Met. Doesn't it show on your books (indicating)?

A. I am not quite convinced. We might have entered it on the books, as it would be usual, as a sale from Electro Met. However, we might have sent the check to the man who was in between, between Electro Met and ourselves.

Q. At any event, Mr. Poliakoff was also a friend of yours, was he not?

A. I have reason to believe he was a greater friend of Electro Met, because he got the material which I could not get directly.

Q. Did you ask them for it in 1939?

(Testimony of Henry J. Leir.)

A. Either in 1939 or a little later.

Q. Do you recall we went over this in your deposition; your first request was in 1941, was it not?

A. If you say so, then——

Q. Well, that's the first—that was mentioned in your deposition, and you said you checked the records, and it is the first that has been put in evidence here.

A. I would like to look, really—to look into the correspondence about this point.

Q. Well, I will show you the Poliakoff correspondence. A. Yes, sir.

Q. Which was by Mr. Hirschland.

A. Yes.

Mr. Archer: I offer this as defendants' exhibit next in order. [1341]

Mr. Alioto: No objection.

(The letters referred to were thereupon marked Defendant U Exhibit 5-L in evidence.)

Mr. Archer: The first is a copy of a letter from Poliakoff—is that (referring to pronunciation)?

A. You know it as well as I do.

Q. July 26, 1939, to Electro Metallurgical Sales Corporation, Mr. T. F. O'Heir—this came from your files, Mr. Leir? A. Yes.

Q. Confirms a telephone order, 6,000 pounds vanadic acid, in drums of 180 pounds each, at $1.10.

July 28, 1939, letter from Mr. O'Heir to Mr.

(Testimony of Henry J. Leir.)

Poliakoff, just regarding delivery instructions, acknowledging the order.

And then letter dated August 28, 1939, from Continental Ore Corporation, Mr. Hirschland to Mr. Poliakoff.

"We hereby confirm for regularity's sake that we asked you to buy for our account:

"10,000 lbs. of fused Vanadic Acid for shipment:

"5,000 lbs. end of this week/early next week.

"5,000 lbs. one week later.

"Total 10,000 lbs., other conditions exactly as last.

"Please arrange shipment in steel drums of the larger type, containing about 450 lbs. net."

And those are the shipments which are indicated in your general ledger for 1939, are they not, Mr. Leir? A. Obviously.

Q. Now, you have another purchase in here which was not on the list you submitted yesterday, from the O. Hommel Company in [1343] 1941. It shows 4,288.495 pounds of vanadium oxide on July 19, 1949 (sic) at $5,000.

Do you recall your negotiations with O. Hommel & Company for vanadic acid, vanadium oxide?

A. I remember having had some dealings with them, yes.

Q. I show you a memorandum from yourself to Apex Smelting Company, dated June 21, 1941. There is some handwriting on that. Is that your handwriting?

(Testimony of Henry J. Leir.)

A. This is my handwriting, yes. It says: "Hommel, Pittsburgh."

Q. Does that refresh your recollection?

A. Yes.

Mr. Archer: I offer this as defendants' exhibit next in order.

Mr. Alioto: No objection.

(Memorandum, Continental to Apex, June 21, 1941, received in evidence as Defendant U's Exhibit 5-M.)

Mr. Archer: This is to Apex Smelting Company, dated June 21, 1941. "Re: Vanadic Acid.

"Besides the so-called fused vanadic acid (the kind you buy from Shattuck/Blanding/etc.), there is a material available which is called:

"Air-dried, or Gas-dried Vanadic Acid with a moisture content of about 1-2%.

"We can obtain about 5,000 pounds of this material every other month, i.e., about 50,000 pounds per year, [1344] perhaps even more.

"The price for this material is $1.17 f.o.b. New York (per lb. of V_2O_5 contained).

"As you see, this price is higher than that of fused material, but it can be obtained very regularly, and we think we should keep this source open for export orders in ferro.

"They sell this material only in lots of 5,000 pounds, but it so happens that we can just now sell 2500 pounds to a chemical factory, so that you would only have to take 2,500 pounds for trial.

"Please let us have your authorization to reserve

(Testimony of Henry J. Leir.)

these 2,500 pounds for you at $1.17 f.o.b. New York. This price would automatically go down to $1.17 delivered Chicago if and when you decide to buy 5,000 pound lots."

The Court: To whom was that addressed?

Mr. Archer: This is addressed from Mr. Leir to the Apex Smelting Company.

Q. Now, as I show these to you from your books, Mr. Leir, you only bought the one shipment, 5,000 pounds, from O. Hommel in 1941. A. Yes.

Q. And the reason you didn't buy more was because they were charging $1.17? A. No.

Q. That—— A. It was not the reason.

Q. What was the reason?

A. The reason was, Hommel, this outfit in Pittsburgh to which it refers, is just a dealer, a dealer in chemicals, and we became a little while later convinced that this would not be a regular supply. He was not a producer; he was just a dealer.

Q. So your statement to Apex Smelting Company that "We can obtain 5,000 pounds of this material every month, that is about 30,000 per year, perhaps even more" was incorrect?

A. At that time it was based upon actual knowledge, but there must be correspondence in our files with Hommel showing that they withdrew from these vanadium offers. And, as I just explained, they were just merchants and obtained the material from other sources.

Q. I will show you the statement of yearly sales and profit—Vanadium. Now, Mr. Leir, it is correct,

(Testimony of Henry J. Leir.)

is it not, looking at the 1939 sales, those are all of vanadium oxide, are they not?

A. Yes, I would say all oxide sales.

Mr. Alioto: That would appear, Mr. Archer, on Exhibit 119, what is vanadium oxide and what is ferro vanadium (handing to counsel).

Mr. Archer: Is this in evidence?

Mr. Alioto: Yes. It breaks it down between the oxide by year, the vanadium by year, the Van-Ex and the [1346] silicide.

Mr. Archer: I didn't realize that was in evidence.

Mr. Alioto: Yes.

Q. (By Mr. Archer): Well, from this exhibit 119, in 1939 48,000 lbs. of vanadium oxide that you sold, and 38,000 lbs. of vanadium oxide. Here, if you will want to check with the exhibit.

A. (Examining.) Yes.

Q. Now, that was all during the period of the Apex Smelting contract, was it not?

A. Yes.

Q. And this was prior — the reason it wasn't sent to Apex was that they hadn't set up their equipment yet. A. Yes, Mr. Archer.

Q. But you could have stockpiled it for Apex, couldn't you?

A. Yes. It would have been, as I say, irrational to stockpile too much in advance of an operation, but we could have done it.

Q. And most of these sales prior to July, 1940,

(Testimony of Henry J. Leir.)

were for foreign trade, directly or indirectly, one way or another, weren't they?

A. For foreign trade, yes.

Q. And the reason they stopped was because in July, 1940, the export ban went on.

A. Yes, Mr. Archer. [1347]

Q. Then I believe you testified that commencing in about September, 1941, Apex Smelting started to make ferro-vanadium? A. Yes.

Q. It was September, 1940.

A. August or September.

Q. September, 1940. A. Yes.

Q. Yes, that's what it was. September, 1940 they started to make ferro-vanadium, and in May, 1941, you made an agreement with them for your commissions and sales in the domestic market.

A. Yes.

Q. Now, on your Exhibit 120 there, which shows your yearly sales, costs and profits, you don't show any income from Apex other than commissions, do you? That would be Exhibit 120.

A. (Witness examining.) Exhibit 120 shows clearly income not only from Apex but also from independent—what you call direct sales for export.

Q. But from Apex you show only commissions earned. A. Yes.

Q. In other words, you do not show any income because of your profit-sharing agreement with Apex.

A. I don't show any income out of the profit-sharing agreement, that's correct.

(Testimony of Henry J. Leir.)

Q. And that is because there was none?

A. There was no profit. [1348]

Q. Now, you refer to this as a joint venture with Apex. Did you also share in the losses, if any, that Apex had?

A. I don't know what was stipulated, what was set up in the contract. In similar contracts I had a clause, of course, according to which I would share in profits and losses. For instance, in the case of Fredet-Kuhlmann, where I was requested to finance on, we had set up a rather elaborate contract according to which we would share in the profits and losses.

Q. But you don't know whether that was in the Apex contract?

Mr. Alioto: Doesn't the contract speak for itself?

Mr. Archer: All I was getting at——

The Witness: Yes.

Mr. Archer: ——the accountant exhibit showed that Apex had a loss and that hasn't been taken from this exhibit.

Mr. Alioto: No.

The Witness: No.

Mr. Archer: So I would assume that he did not share in the loss, that is, in the contract.

Mr. Alioto: In the contract.

Q. (By Mr. Archer): Also on Exhibit 120 the 1945 sale of ferro-vanadium by Electromet to Continental Ore was omitted, or I guess the 1945 sale is included.

A. 1945 is included; 1948 was omitted.

(Testimony of Henry J. Leir.)

Q. Yes. Our record on that shows around $74,000. A. Yes. [1349]

Q. Do you know what you sold it for? Were you able to check that?

A. Honestly not.

Q. But you are adding that to the exhibit?

Mr. Alioto: Yes. As a matter of fact, we are going to offer all the Electro Metallurgical ledger sheets so there will be no question about it, Mr. Archer.

Q. (By Mr. Archer): Mr. Leir, after September, 1940, I have here the invoices which Continental Ore made of vanadium oxide, sales of vanadium oxide to persons other than the Apex Smelting Company. A. Yes.

Q. In other words, if you will notice, I have added them up from September to December 31, 1940. You sold 28,000 lbs. of vanadium oxide to people other than Apex?

A. Starting when?

Q. You will see it starts in September, 1940.

A. Yes.

Q. And there is one sale in 1941 of 1,858 lbs. of vanadium oxide. A. Most probably.

Q. Wouldn't it have been good judgment to give this vanadium oxide to Apex?

A. Since you attach such importance to 1,858 pounds——

Q. What about the 1940? There were 28,000 pounds in 1940 [1350] after September.

A. We have gone over this yesterday and I

(Testimony of Henry J. Leir.)

think we put in evidence that at that time we were promised regular supplies, so I was not concerned at that time about getting regular supplies from others.

Q. Regular supplies of vanadium oxide?

A. Regular supplies of vanadium oxide, yes.

Q. This is in September, 1940. A. Yes.

Mr. Archer: I offer this as defendants' exhibit next in order.

Mr. Alioto: No objection. May I just take a look at the form in which they are? These are the invoices turned over by us. Do you think you have all of them related to the subject matter?

Mr. Archer: These are all from September 16, 1940, sales of vanadium oxide by Continental Ore to people other than Apex.

Mr. Alioto: We have no objection.

Mr. Archer: Just for 1940 and 1941. There are some later in 1943.

Mr. Alioto: We have no objection.

(Sales of vanadium by Continental to persons other than Apex was received in evidence as Defendant U's Exhibit 5-N.) [1351]

Q. (By Mr. Archer): Mr. Leir, maybe there is something you can help me on. Do you remember when I asked Mr. Burwell—he testified that he thought the price of ferro-vanadium at $2.70, $2.80 and $2.25 in 1938 and 1939 was too high.

A. Yes, I remember.

Q. And he said, in order that it compete with molybdenum. A. Yes.

(Testimony of Henry J. Leir.)

Q. I believe he testified it was his recollection that ferro molybdenum was selling at about $1.75 at that time.

A. He was wrong about this.

Q. It was about 95c?

A. It was 95c, yes.

Q. Incidentally, what was the price at which you sold the ferro vanadium which you did sell?

A. Between $2.70 and $2.80.

Q. Would it be just under the Electromet price or just about the same price?

A. It was under the Electromet prices.

Q. So if the price had been as Mr. Burwell suggested at $2.25, your gross profit in Exhibit 120 would have been considerably lower, at least on ferro-vanadium sales?

A. If we had to buy our raw material at a price which I call an exaggerated price, the whole conception in the vanadium industry, according to Mr. Burwell and according to myself, was wrong. Rather than to go out and do what Henry Ford did [1352] in this country to reduce drastically the prices and to increase production and consumption, you people stuck at the higher price. I am still of the opinion that today even the prices of vanadium should be much lower, and I think there is much evidence in the files by now against the objection of Apex Smelting Company I was nearly throughout the time for lower prices.

Q. But Apex objected to the lower prices, didn't they?

(Testimony of Henry J. Leir.)

A. Apex objected, yes. I know now certainly the reasons why they objected.

Q. My question to you now, Mr. Leir, is that you bought your oxide at Apex from North Continent, Nisley & Wilson, and Blanding Mines, I believe you said. A. Yes.

Q. At the price at which you bought it from them in making ferro-vanadium, if you had been selling at $2.25 instead of $2.70 or $2.80, you would have made less gross profit than is shown on Exhibit 120, would you not? A. You are right.

The Court: I think that is good mathematics.

Mr. Archer: Yes.

Mr. Alioto: If your Honor please, we would like to complete the record on certain correspondence we spoke of earlier. I do not think it is necessary to read all of it to the jury at this time in order that we might get along on it. [1353]

First of all, in connection with the interrogation of both Mr. Holland and Mr. Archer, I would like to offer a letter on the Apex matter, one dated January 13, 1942, with respect to the matter of supplies.

Another dated April 16, 1942, with respect to the matter of sales. There is correspondence on both sides of these dates, if your Honor please.

Mr. Archer: No objection.

Mr. Alioto: We will offer these in evidence, if your Honor please. We will call them to the attention of the Court and Jury at a later point and ask that they be marked as one exhibit.

(Testimony of Henry J. Leir.)

(Whereupon the letters of 1/13/42 and 4/16/42 were received in evidence as Plaintiff's Ex. 127.)

[See Book of Exhibits.]

Mr. Alioto: Your Honor recalls that Mr. Holland introduced in evidence a letter dated October 16, 1940, from Mr. Leir to the Apex Smelting Company; the answer to that letter and to the telegram that has been referred to and not put in we would like to offer as our exhibit next in order.

Mr. Holland: No objection.

Mr. Alioto: We will offer these as plaintiff's exhibit next in order.

(The documents referred to were thereupon received in evidence as Plaintiff's Exhibit 128.)

Mr. Alioto: If your Honor please, Mr. Holland [1354] offered into evidence a letter of the Apex Smelting Company in connection with the fire they had there and the projected meeting, and that letter made the suggestion that they should notify the various suppliers of raw material to stop shipments. We offer as plaintiff's exhibits next in order the reply of Mr. Leir with the direction not to stop the supply of raw materials.

Mr. Holland: No objection.

Mr. Alioto: We ask that these be marked as plaintiff's exhibit next in order.

(Whereupon the letter referred to was received in evidence as Plaintiff's Exhibit 129.)

[See Book of Exhibits.]

Court of Appeals
for the Ninth Circuit

CONTINENTAL ORE COMPANY, a Partnership, and HENRY J. LEIR, ERNA D. LEIR, LINA SCHLOSS, as Individuals and as partners under the trade name and style of CONTINENTAL ORE COMPANY,

Appellants,

vs.

UNION CARBIDE AND CARBON CORPORATION; UNITED STATES VANADIUM CORPORATION; ELECTRO METALLURGICAL COMPANY; ELECTRA METALLURGICAL SALES CORPORATION; ELECTRO METALLURGICAL COMPANY OF CANADA, LIMITED; VANADIUM CORPORATION OF AMERICA,

Appellees.

Transcript of Record

In Seven Volumes

VOLUME IV.

(Pages 1241 to 1664, inclusive)

Appeal from the United States District Court
for the Northern District of California,
Southern Division

(Testimony of Henry J. Leir.)

Mr. Holland: No objection to this, either, but it will necessitate a little recross.

(Documents received in evidence as Plaintiff's Exhibit 130.)

[See Book of Exhibits.]

Mr. Alioto: There was considerable correspondence offered by Mr. Holland between the Continental Ore Company and Blanding Mines, specifically Mr. Daniel Millicent (?) in Colorado who is also a principal in Blanding Mines. Without the necessity of reading it at this time, we will offer the balance of that correspondence for the same period of time as covered by Mr. Holland.

Mr. Holland: If your Honor please, I offered a couple of letters in 1940 and this correspondence is over a [1355] two-year period. It may be a longer——

The Court: How is that material?

Mr. Alioto: It covers the relations of this plaintiff with the Blanding Mine, if your Honor please. I assume I can go at it somewhat laboriously to show what happened to Blandings and how it was taken over by Vanadium Corporation of America so far as certain supplies were concerned.

Mr. Holland: Then we will have to show in 1944 Blandings offered him a lot of supplies and he turned them down.

Mr. Alioto: You can show anything you want.

Mr. Holland: This is coming in for the first time and it is not proper redirect examination. If we want to go into this whole Blanding picture, we

(Testimony of Henry J. Leir.)

Mr. Archer: I think your 1944 figure is wrong, too, but you can check that.

Mr. Alioto: We will check that 1944 figure as to whether it was entirely vanadium oxide. On that basis we won't try to put the books in themselves.

If your Honor please, in connection with offers to buy at an earlier period that were rejected, we will offer a series of correspondence, a group of letters between the witness and the Vanadium Corporation of America. In 1939—— [1358]

Mr. Holland: If your Honor please, this is all improper redirect evidence. This is bringing up totally different transactions that he could have gone into on direct. We could have cross-examined on them. It is complicating the picture a great deal.

Mr. Alioto: If your Honor please, these are very few letters in 1939 in connection with an attempt to get an offer of supply. There was a good deal of evidence on cross-examination about what was and what was not available in the year 1939. We want to show that there was an attempt to get a supply from the Vanadium Corporation of America in May of 1939.

The Court: This witness has testified this morning that at the time he severed his contract with Apex, that Apex could get all the material it wanted.

Mr. Alioto: As of a certain month, and under those certain conditions, if your Honor please, but we want to show the picture was actually otherwise.

(Testimony of Henry J. Leir.)

This is not a matter of impeachment. It is a matter of direct examination to show what the picture was at any given time.

The Court: Go ahead and put it in and let us get along.

Mr. Alioto: All right. If your Honor please, I will offer it as a further exhibit. It shows on its face the attempt to get vanadium oxide and what resulted in those [1359] attempts. We will offer these as plaintiff's exhibit next in order.

(Correspondence re vanadium from VCA was received in evidence as Plaintiff's Exhibit 132.)

[See Book of Exhibits.]

Redirect Examination

Q. (By Mr. Alioto): Mr. Leir, in connection with this matter of gross profit and what went into the gross profit of Van-Ex, I will show you a copy of a document. Did you have this prepared as an illustration of the gross profit on Van-Ex, showing specifically the items that went into the gross profit figures that you and Mr. Archer had discussed?

A. Yes.

Mr. Alioto: We will offer this in evidence, if your Honor please, as plaintiff's exhibit next in order.

Mr. Archer: We object to this. Just a minute.

Q. (By Mr. Alioto): In this connection, Mr. Leir, did you have it prepared on the basis of showing a price of $1.10 for the oxide and a lowered price of 80c for the oxide?

(Testimony of Henry J. Leir.)

A. I think I did, yes.

Mr. Holland: If the Court please, he started making that Van-Ex in the fall of 1941. There is no evidence whatever that anyone was getting any oxide for 80c.

Mr. Alioto: This is simply a computation, if your Honor please, alternately: First at the $1.10 and then at [1360] the 80c price. However, the evidence is clear in this case that in 1939, when the prices were $1.10, with the same prices in 1943, that the Vanadium Corporation of America procured its oxide from Electro Metallurgical at 80c.

Mr. Holland: Some at 80; some at $1.18.

Mr. Alioto: At that time the prices were the same. This is simply a compilation set up alternately. There will be a certain argument made to the jury based upon a lot of economic data already in this record. The computation is simply there for illustration as to what difference there is between the production of Van-Ex at $1.10 and at 80c.

The Court: The objection will be sustained. That is something he prepared in his own office. How would that be binding on the defendants?

Mr. Alioto: It is from an actual sale of Van-Ex to the Atlas Steels Company in August of 1942, and with respect to the questions raised by Mr. Archer, it shows exactly the elements that were taken into consideration as the cost of materials, the freight, the terms and the processing costs, including overhead, the amount set out.

The Court: How is that material in this case?

(Testimony of Henry J. Leir.)

Mr. Alioto: Because it explains, if your Honor please, the gross profit study that has already been made and under the decisions the question of gross profit is one of the elements the jury may consider on the issue of injury and [1361] damage.

The Court: The objection is sustained.

Mr. Alioto: May I have it marked for identification?

(The document referred to was marked Plaintiff's Exhibit 133 for identification.)

Mr. Alioto: I spoke to your Honor this morning about a very short offer of proof in connection with the profits of the defendant companies, that is, profits made in the vanadium business. Prior to this time the Court has rejected the offer of the combined vanadium and uranium profits made, so I assume it will follow that, but in the pre-trial proceeding Judge Harris asked that certain materials be made available in San Francisco subject to certain conditions, which, if the offer is rejected, are important to us.

We would at this time offer to prove the profits made by the Vanadium Corporation of America and the Union Carbide in the production, sale and distribution of vanadium oxide as ferro-vanadium for the years 1938 through 1949.

Mr. Holland: I object, your Honor, on the same grounds urged in our original objection, which evidence was excluded.

The Court: The objection will be sustained. There is no basis here to show that these defendants

(Testimony of Henry J. Leir.)

A. I think I did, yes.

Mr. Holland: If the Court please, he started making that Van-Ex in the fall of 1941. There is no evidence whatever that anyone was getting any oxide for 80c.

Mr. Alioto: This is simply a computation, if your Honor please, alternately: First at the $1.10 and then at [1360] the 80c price. However, the evidence is clear in this case that in 1939, when the prices were $1.10, with the same prices in 1943, that the Vanadium Corporation of America procured its oxide from Electro Metallurgical at 80c.

Mr. Holland: Some at 80; some at $1.18.

Mr. Alioto: At that time the prices were the same. This is simply a compilation set up alternately. There will be a certain argument made to the jury based upon a lot of economic data already in this record. The computation is simply there for illustration as to what difference there is between the production of Van-Ex at $1.10 and at 80c.

The Court: The objection will be sustained. That is something he prepared in his own office. How would that be binding on the defendants?

Mr. Alioto: It is from an actual sale of Van-Ex to the Atlas Steels Company in August of 1942, and with respect to the questions raised by Mr. Archer, it shows exactly the elements that were taken into consideration as the cost of materials, the freight, the terms and the processing costs, including overhead, the amount set out.

The Court: How is that material in this case?

(Testimony of Henry J. Leir.)

Mr. Alioto: Because it explains, if your Honor please, the gross profit study that has already been made and under the decisions the question of gross profit is one of the elements the jury may consider on the issue of injury and [1361] damage.

The Court: The objection is sustained.

Mr. Alioto: May I have it marked for identification?

(The document referred to was marked Plaintiff's Exhibit 133 for identification.)

Mr. Alioto: I spoke to your Honor this morning about a very short offer of proof in connection with the profits of the defendant companies, that is, profits made in the vanadium business. Prior to this time the Court has rejected the offer of the combined vanadium and uranium profits made, so I assume it will follow that, but in the pre-trial proceeding Judge Harris asked that certain materials be made available in San Francisco subject to certain conditions, which, if the offer is rejected, are important to us.

We would at this time offer to prove the profits made by the Vanadium Corporation of America and the Union Carbide in the production, sale and distribution of vanadium oxide as ferro-vanadium for the years 1938 through 1949.

Mr. Holland: I object, your Honor, on the same grounds urged in our original objection, which evidence was excluded.

The Court: The objection will be sustained. There is no basis here to show that these defendants

(Testimony of Henry J. Leir.)

were operating on the same basis as the plaintiff or any other. It [1362] is wholly different from what their profit was. I do not see how that is material to this case.

Mr. Alioto: In that connection we will also offer to show, not their general profits, but their profits broken down to vanadium oxide and ferro-vanadium, and with respect to the Union Carbide and Carbon, such profits as may have been allocated between the United States Vanadium Company Electro Metallurgical Sales Company, the Electro Metallurgical Company itself, which is three separate divisions.

The Court: Objection sustained, exception allowed.

Mr. Alioto: Finally, at this time on the matter of business conditions and with respect to the industry during the period of time involved, we would like to offer the annual reports of the Vanadium Corporation of America covering the years 1938 through 1944, if it please the Court, showing the development of the vanadium industry during that period of time and the rate of growth in the vanadium industry during that period of time.

Mr. Holland: May I see one of those?

Mr. Alioto: These are your printed reports.

Mr. Archer: On behalf of the defendants Union Carbide and United States Vanadium I will object. They can't possibly bind us.

Mr. Holland: We object, your Honor. It is another way of showing the profits. [1363]

(Testimony of Henry J. Leir.)

The Court: What is this?

Mr. Holland: It is our annual report.

Mr. Alioto: Specifically, if your Honor please, this is the annual report of the Vanadium Corporation of America, which discloses from year to year the increase in sales, the matter of increase or decrease in the cost of goods sold, so that the jury may have a picture of increased costs in this industry during this period of time, the increase or decrease over the years in the selling, administrative and general expenses of that company, the net profit from operations and other charges. We think it important to show what the situation was during that period of time in connection with the increase of cost of doing business, the trend of sales and other relevant data.

The Court: The objection will be sustained.

Mr. Alioto: We have nothing further to offer while this witness is on the stand.

Mr. Holland: If the Court please, in view of the fact that the plaintiff has just put in evidence a mass of correspondence affecting this witness, we respectfully would like to defer his cross-examination until Monday morning so we can have a chance to go over it. I anticipate there will be some cross-examination. We have had no opportunity to prepare it.

The Court: Very well. [1364]

Mr. Holland: We thought all the evidence was improperly put in on redirect.

The Court: Let me ask you all a question. Is

(Testimony of Henry J. Leir.)

there any objection next week to beginning at 9:30 instead of 10:00 o'clock?

Mr. Alioto: None so far as we are concerned.

Mr. Holland: None so far as I am concerned.

The Court: How about the jury? How do they feel about it? The reason for that is this: I have been assigned here only for a limited time. I would like to get through with this lawsuit while I am here.

Mr. Alioto: We will be finished, if your Honor please, within about an hour from now.

The Court: We will just arrange, then, to begin next week at 9:30 instead of 10:00 o'clock. That will give us practically one full day more.

Mr. Alioto: May I inquire of Mr. Holland in connection with his request on cross-examination, in the event you determine before the week-end is over that you do not want the witness back for cross-examination, I take it we can have a communication in that respect as soon as you make the determination?

Mr. Holland: I will be glad to. I do not know just when we will get copies of the exhibits.

Mr. Alioto: I would have no objection, if it is [1365] all right with the Court, that the exhibits be given into your custody so there won't be any delay in the matter.

Mr. Holland: Very well.

The Court: It is a great pleasure, gentlemen, to try a lawsuit in which the attorneys are so con-

genial and cooperative as they are in this case. We will recess at this time until 9:30 Monday morning.

(Adjournment to Monday, June 16, 1958, at 9:30 o'clock a.m.) [1366]

* * * * *

LAWRENCE L. VANCE

a witness called on behalf of the plaintiff, being first duly [1371] sworn, testified as follows:

The Clerk: Will you be kind enough to give your name to the jury and the Court, please?

The Witness: Lawrence L. Vance. My address is 1465 Rancho View Drive, Lafayette, California.

Direct Examination

Q. (By Mr. Alioto): What is your present business or occupation, Dr. Vance?

A. My main occupation is Professor of Accounting at the University of California in Berkeley.

Q. Would you be good enough to give us a little bit of your background, both with respect to your studies, your experience in the field of accounting, and any writings that you may have done?

A. Yes. I took a Bachelor of Business Administration degree in accounting at the University of Minnesota in 1932, a Master of Arts degree in corporation finance at that university in 1933, and after working in public accounting with Peat, Marwick, Mitchell & Company for a period of six years I went into the teaching profession and shortly thereafter took a Ph.D. degree in economics at the University of Minnesota, which was completed in 1947.

(Testimony of Lawrence L. Vance.)

My practical experience has been first in the field of public accounting as a full-time member of the staff of the public accounting firm I mentioned; I have a CPA certificate [1372] from the States of Minnesota and California; I have taught in three universities, the University of Kansas, the University of Minnesota and at the University of California in Berkeley. My work has included additional public accounting experience in the San Francisco area; it has included research and writing on the subjects of accounting and economics, and I am the author of three books in this field, two of which apply to scientific sampling methods applied to the problems of auditing and accounting, and one is a cost accounting text. I have also done some consulting work on business problems with firms in the California area.

Q. The accounting firm you mentioned, Peat, Marwick & Mitchell, that is a national accounting firm, is it not?

A. Yes, national accounting firm with international connections.

Q. Dr. Vance, before we get down to any economic questions, I would like, first of all, to ask you whether at my request you prepared a tabular representation of the Total Domestic Production of Vanadium Oxide from 1938-1945 based upon Plaintiff's Exhibit 18 in evidence, which is a compilation prepared by the United States Vanadium Company. A. Yes, I did that.

Q. And I show you this tabular representation,

(Testimony of Lawrence L. Vance.)

Doctor. Will you be good enough to state whether or not that representation accurately sets forth the materials contained [1373] in Plaintiff's Exhibit No. 18?

A. Yes, it does, excluding that Garfield and the other production.

Q. You excluded the Garfield and Gateway production from Exhibit 20 (sic)? A. I did.

Q. And I see aside from that exclusion it represents the total domestic production broken down as to the production by the United States Vanadium Corporation and the Vanadium Corporation of America and then independents, the period of time 1938-1945. A. That is right.

Mr. Alioto: We will offer this, if your Honor please, as Plaintiff's Exhibit next in order. It is simply a graphic illustration of the materials already contained, which come from the files of the United States Vanadium Company.

Mr. Archer: Your Honor, I object to it because it is based on this chart here which I do not believe is correct. So far as I could understand at the time, the chart itself shows that parts of it are estimates and that—I believe that's in Plaintiff's Exhibit—what is the number of this——

Mr. Alioto: It is their own chart, Plaintiff's Exhibit 18.

Mr. Archer: That is the chart that was produced [1374] by Mr. Burwell and had part of it cut off down there and I never did see that part of it and I haven't been able to find it in our files. I

(Testimony of Lawrence L. Vance.)

think the chart itself shows that some of this production is estimated. I object on the ground it is without foundation.

Mr. Alioto: It couldn't possibly affect the percentage figures, if your Honor please. And the document itself is already in evidence. It was rather complicated to read, and this is a shorthand way to read it.

The Court: It can be admitted as merely the opinion of this witness.

Mr. Alioto: All right, if your Honor please.

(Chart, Total Domestic Production of Vanadium Oxide 1938-1945 received in evidence and marked Plaintiff's Exhibit No. 136.) [1375]

Q. (By Mr. Alioto): Now then, Dr. Vance, did you at my request make from the records, the evidence in this case, particularly the evidence of production of vanadium oxide submitted by the defendants in connection with interrogatories and other pre-trial discovery, did you make a chart setting forth the production of vanadium oxide by the United States Vanadium Corporation, by the Vanadium Corporation of America, and the combined total of United States Vanadium Corporation and the Vanadium Corporation of America, and finally the relationship of that combined total to the total United States domestic production?

A. I did.

Q. Is this chart which I hold in my hand the chart that you prepared from the evidence in this case? A. That is right.

(Testimony of Lawrence L. Vance.)

Mr. Archer: May we see the exhibits from which it was prepared?

Mr. Alioto: I will have to take them out. They are all figures on the production of vanadium oxide supplied by you folks.

Mr. Archer: The exhibits in evidence?

Mr. Alioto: Yes. They are part of the interrogatories, I think you will recall, Mr. Archer.

Mr. Archer: They were corrected.

Mr. Alioto: Yes, I know that. These are the ones [1376] we are talking about.

If your Honor please, I do not want to entrench upon a prior ruling of your Honor. This does cover the period from 1933 to 1945, rather than 1938 to 1945. But in a recent case in this Circuit—Moore versus Standard Oil—which I believe your Honor has read, it is stated specifically there that so far as statistics are concerned it is permissible to go back for a few years in order to show the development of the industry. However, if there is any feeling about the thing, I can very easily, I think, take out that portion, cover up that portion up to 1938.

We would like to offer the entire chart. And I will state we will not consider it in any sense as a way of getting into the subject matter because the chart, itself, is offered. But I think it shows the development in that respect. And under the authority of the Moore case I offer it.

The Court: Let it be admitted subject to the elimination of that portion prior to 1938.

(Testimony of Lawrence L. Vance.)

(The chart referred to was thereupon received in evidence and marked Plaintiff's Exhibit No. 137.)

Q. (By Mr. Alioto): Did you also at my request, Dr. Vance, prepare in chart form for the period 1938 to 1947, the ferro-vanadium production of the Electro Metallurgical Company, of the Vanadium Corporation of America, and that small production of [1377] Apex and the Continental Ore Company? A. I did that, too.

Q. And you prepared that from the documents actually in evidence in this case? A. Yes.

Q. Does this chart accurately reflect—is it an accurate reflection of those figures, Dr. Vance, to the best of your knowledge? A. It is.

Mr. Alioto: In this exhibit, if your Honor please, the figures from 1933 to 1938 are physically covered up, so we will offer the chart in this form.

The Court: Very well.

(The chart referred to was thereupon received in evidence and marked Plaintiff's Exhibit No. 138.)

Q. (By Mr. Alioto): Further, Dr. Vance, did you prepare at my request a document setting forth the growth of American business in terms of gross national product, the Federal Reserve Board index of industrial production, and in addition thereto a chart showing the monthly production of steel ingots and steel for casting for the period 1939 to 1957? A. Yes, I did.

Q. Will you be good enough to tell us the source

(Testimony of Lawrence L. Vance.)

of the figure for the national gross product? [1378]

A. That comes from the United States Department of Commerce.

Q. Is that a source that is authoritatively used by economists in connection with that work?

A. It is considered one of the most significant statistics the government provides.

Q. From what source did you secure the industrial production generally?

A. That index of general industrial production comes from the Federal Reserve Board, another well known statistical service of the government.

Q. From what source did you secure the production of steel ingots and steel for casting?

A. That also is reported by the United States Department of Commerce, which gets its figures from the American Iron & Steel Institute, an organization of the steel industry.

Q. And you regard all of those sources as reliable? A. Reliable and authoritative.

Q. And on that basis of those reliable and authoritative sources does your chart accurately reflect the figures it purports to set out?

A. In my opinion it does.

Mr. Alioto: We will offer this in evidence as plaintiff's exhibit next in order.

Mr. Holland: To which we object, your Honor. [1379] This is a graphic illustration of evidence your Honor has already ruled inadmissible in the case.

Mr. Alioto: I do not think that is quite true.

(Testimony of Lawrence L. Vance.)

Mr. Holland: It is the same type of evidence. It is evidence of trying to relate this defendant's business——

The Court: The objection is sustained. He is covering territory there that is not involved in this lawsuit. In other words, it is bordering on the speculative.

Mr. Alioto: May I offer this solely—and we can revise it—with respect to the steel production figures for the period of time shown? I think there is certainly a lot of evidence in this record that the vanadium market is certainly related to the steel market, and I would like to offer the steel production figures.

Mr. Holland: To which we object on the same ground.

The Court: Objection sustained.

Q. (By Mr. Alioto): Finally, Dr. Vance, did you prepare at my request a graphic representation of vanadium sold by the defendants and by the Continental Ore group for the period 1939 to 1949?

A. I did.

Q. From the evidence in this case?

A. I did.

Q. In that connection, Dr. Vance, did you also set out [1380] with a blue line the figure of ten percent of the amount sold by the defendants?

A. Yes, I did.

Q. And that you did at my request?

A. That is right.

Mr. Holland: We do not object to any portion

(Testimony of Lawrence L. Vance.)

of that twelve percent figure, your Honor, but I do not see any basis for showing what ten percent of our production was.

Mr. Alioto: The ten percent figure, if your Honor please, I think we will argue later on that from the evidence in this case the jury would be justified in taking the ten percent, but as of this point it is simply a visual presentation of what ten percent would be in relation——

The Court: Briefly, what is your exhibit? I did not get the first part of your statement.

Mr. Alioto: The green line, the amount sold by the Continental Ore Company, and the blue line shows arbitrarily the figure of ten percent.

The Court: Objection sustained.

Mr. Alioto: To the entire exhibit?

The Court: To the entire exhibit. Exception allowed.

Mr. Alioto: If your Honor please, I would like to show those documents [illegible] re admitted to the jury very hurriedly. [1381]

(Exhibiting charts to the jury.) This is the first chart, which purports to set forth the total domestic production of vanadium oxide from 1938 to 1945. The heavy blue line is the production of United States Vanadium Corporation, which is the Union Carbide subsidiary, of course. The second, the light blue line, shows the production, the domestic production, of vanadium oxide, of the Vanadium Corporation of America. Finally, the green line shows other production.

(Testimony of Lawrence L. Vance.)

Those percentages, the combined percentage of U. S. Vanadium Corporation and the Vanadium Corporation of America for the period 1938 to 1945, is 93 percent; 77.2 for the United States Vanadium Corporation, and 15.8 for the Vanadium Corporation of America. And the period involved is 1938 to 1945.

The second chart, that portion of it that has been admitted, shows from 1938 on, the top red line; the lighter red line is the total United States domestic production. Then the bright red line is the total production of the two defendants in relation to the total United States production of vanadium oxide. And this line has the production of the Vanadium Corporation of America, and this line is the production of the United States Vanadium Corporation. There is the combined production. And that is the total U. S. production from 1938 to 1945.

Finally, with respect to ferro-vanadium production [1382] from 1938 to 1947, the ferro-vanadium production, the blue line is the production of Vanadium Corporation of America, the black line is the production of the Electro Metallurgical Company, the Union Carbide affiliate, and the green line is the production of the Continental Ore and the Apex group, that being the total production of ferro-vanadium for the period of time 1938 to 1947. And the total of that production shows 95 percent of the production for the two defendants—no, it is 99½ percent for the two defendants, and ½ percent for the Continental Ore group, during this period.

(Testimony of Lawrence L. Vance.)

It shows for the years 1938, 1939, 1945, 1946, and 1947, the two defendants were the only producers of ferro-vanadium.

Q. (By Mr. Alioto): Dr. Vance, did you, at my request, prepare a table of figures that sets forth the pounds of vanadium sold by the Continental Ore Company in 1941? A. I did.

Q. The year of the Apex Company.

Then the pounds sold by the defendants in the same year? A. Yes.

Q. And did you then set out the percentage of the Continental Ore sales to the defendants for the year 1941? A. I did. [1383]

Q. Did you thereafter take that percentage for the year 1941, that actual percentage, and apply it to the sales by the defendants for the rest of the years, 1942 to 1949? A. Yes.

Q. And deduct therefrom the actual sales made by the Continental Ore group? A. Yes.

Q. Did you thereafter take that table and multiply it by the gross profit of 12 percent that is disclosed in one of the exhibits here?

A. Yes, I did.

Mr. Alioto: We will offer this document in evidence, if your Honor please. It is a simple tabulation predicated upon the formula given by Dr. Vance.

Mr. Holland: To which we object, your Honor, for the same reason we have objected to all this type of evidence.

The Court: Objection sustained.

(Testimony of Lawrence L. Vance.)

Mr. Alioto: May we have this marked for identification, if your Honor please?

The Court: Yes.

(The tabulation referred to was thereupon marked Plaintiffs' Exhibit No. 139 for identification.)

Mr. Alioto: Since this was predicated in part, if your Honor please, upon an exhibit about which there was some question as to whether we had included the 1948 sales, we have [1384] done it up temporarily, and we would like to substitute a typed copy when we have fully agreed upon the exhibit about which there was some question in connection with 1948.

May I have this marked for identification?

(The tabulation referred to was thereupon marked Plaintiffs' Exhibit No. 140 for identification.)

Q. (By Mr. Alioto): Dr. Vance, did you, at my request, take the Apex capacity in 1941 as testified to by Mr. Leir—that is, 1,600 pounds per day, on the basis of a five-day week in 1941, and arrive at the production capacity of the Apex Smelting Company in 1941? A. I did.

Q. And that production capacity was 416,000 pounds per year based upon that figure?

A. Yes.

Q. Did you thereafter take the percentage which that capacity bore to the sales of the defendants in the year 1941? A. I did.

Q. Did you thereafter apply that percentage for

(Testimony of Lawrence L. Vance.)

each year from 1941 through 1949 and set out in tabular form what 12 percent, on a 12 percent gross profit basis, what that would realize in sales to the Continental Ore Company on that basis?

A. Yes, I did. [1385]

Q. And is Plaintiffs' Exhibit 140 for identification your tabular presentation of those facts?

A. That is correct.

Q. To the best of your knowledge are the figures set out in Plaintiffs' Exhibit 140 for identification accurate in accordance with the formula we just discussed? A. In my opinion they are.

Mr. Alioto: We will offer this in evidence, if your Honor please.

Mr. Holland: I object on the same ground.

The Court: Objection sustained. Too speculative.

(The tabulation referred to was thereupon marked Plaintiffs' Exhibit No. 141 for identification.)

Q. (By Mr. Alioto): Finally, Dr. Vance, did you, at my request, set out in tabular form for the years 1939 through 1949 various computations for each percentage of the industry from one percent to fifteen percent—that is, one percent, two percent, three percent, and four percent — various tabulations as to what one percent of the industry constitutes, taking that as an example, for each of the years 1939 to 1949 separately, and then ultimately multiplying that on the basis of twelve percent of the gross profit, so that we have for each year what

(Testimony of Lawrence L. Vance.)

each percentage is for each year, and then for all the years, a total for each percentage? [1386]

A. Yes, I did that.

Q. Is Plaintiffs' Exhibit 141 for identification that table? A. That is that table.

Mr. Alioto: If your Honor please, we offer this document on a little different theory than we offered the two documents preceding. This purports to be nothing more than a mathematical table, like a multiplication table, and if at some other point we argue, for example, that the evidence in the case properly analyzed in the light of the law discloses that the plaintiff should have two percent, that he was damaged by his not having two percent of the industry, or three percent of the industry, all the way up to fifteen, this table makes a mathematical computation based upon the gross profit study already put in, and nothing more than that. So it does not purport to be a tabulation of damages, but an alternate tabulation, a table for each of the years, on the basis of one percent through fifteen percent, a sliding scale for each of the years. On that basis we submit it should be admitted, so that we can make an argument based upon that, and the argument is accepted, the table will be before the members of the jury. We will offer it in evidence on that ground.

Mr. Holland: To which we object, your Honor.

The Court: Objection sustained.

Mr. Alioto: That offer was of Plaintiffs' Exhibit [1387] 141 for identification.

(Testimony of Lawrence L. Vance.)

In view of your Honor's rulings on these exhibits, I assume I know what your ruling will be on the question which I wish now to propound, but I would like to make a record of the question to this extent.

The Court: Very well.

Q. (By Mr. Alioto): Dr. Vance, you have made a study, have you not, of general business conditions as reflected by the national gross profit, the Federal Reserve Board index of industrial production and steel production for the years 1939 through 1949? A. I have.

Q. And you have been shown the figures in evidence as to the production and sales of the defendant companies, and you have been shown the figures in evidence as to the sales made by the Continental Ore Company? A. Yes.

Q. And you have had an opportunity, have you not, to compare the total percentage of the defendants' production and sales to the industry as reflected by the exhibits that have been admitted into evidence in connection with ferro-vanadium?

A. Yes.

Q. And vanadium oxide. And you have had an opportunity, have you not, to study the books and records of the plaintiff company to acquaint yourself with the managerial skill of the [1388] plaintiff company over a long series of years?

A. That is right.

Q. And you have had an opportunity to study the vanadium industry as it is reflected in, or at

(Testimony of Lawrence L. Vance.)

least you have seen the Bureau of Mines reports on the vanadium industry over a long series of years? A. I have.

Q. On the basis of that information do you have an opinion as to what the Continental Ore Company would have sold in a free market in the period 1939 to 1949? A. Yes, I have.

Q. And what is that opinion?

Mr. Holland: We object, your Honor.

The Court: Objection sustained.

Mr. Alioto: We have no further questions.

Mr. Archer: I would like to ask one or two questions on some of these charts.

Cross Examination

Q. (By Mr. Archer): Dr. Vance, referring to Plaintiffs' Exhibit 136, total domestic production of vanadium oxide, do you have any independent knowledge of how much vanadium oxide was produced during the period 1938 to 1945?

A. Independent knowledge?

Q. Knowledge of your own. [1389]

A. I used the information in the case, rather than trying to get outside information, considering this more germane to the topic.

Q. But you have no experience, yourself, in the vanadium industry?

A. I never worked in the vanadium industry, but I can read the materials as well as any other economist, I presume. [1390]

Q. Why, I presume so. I am not questioning

(Testimony of Lawrence L. Vance.)

that. I was just asking your experience in the vanadium industry.

A. I have no specialized experience in that industry.

Q. What companies did you include for the year 1938? A. I will have to look at my notes.

Q. Do you have your working papers there?

A. I think so. (Examining documents.) I have the U. S. Vanadium Corporation 875,695 pounds——

Q. Just the companies. I don't doubt the accuracy of your figures.

A. Excluding the Gateway Alloys and Garfield Corporation——

Q. Do you have—pardon me.

A. Pardon me. Mammoth St. Anthony lead vanadate production is in there; Vitro Chemical Company production is in there; Blanding production was not present in that year because none was reported.

Q. What about the North Continent Mines and the Shattuck Chemical Company?

A. Let me find North Continent Mines (examining documents.) North Continent Mines, there was no data available in that year. I have——

Q. You mean, there was no data in evidence in this case available for North Continent Mines in 1938? A. Not on my exhibit.

Q. When is the first year for which you included North [1391] Continent Mines in your exhibit?

A. There was data available on that company in 1935.

(Testimony of Lawrence L. Vance.)

Q. Well, after '38.

A. After '38 (examining documents). 1942.

Q. I believe you stated that you were familiar with the plaintiff's books in this case.

A. I had access to their records in connection with various matters, but did not use them in connection with this material obviously because it involves chiefly the production of other concerns.

Q. Well, it also shows their purchases from North Continent, doesn't it?

A. I have not gone into that detail in the books, but used only the exhibit presented in the case.

Q. Well, haven't the plaintiffs introduced in this case evidence of their purchases from North Continent in 1941? A. I don't know.

Q. You don't know whether they have or not?

A. No.

Q. If they had, you would have put it into your chart, I take it?

A. I would have put in whatever was produced by North Continent in that period if I had data on it.

Q. But you have no entries for North Continent prior to the year 19—what? Your first year is '42?

A. And I have data for '35 also.

Q. Yes. And the reason you didn't is because on Mr. Burwell's chart he noted down "No data available for North Continent" in those years.

A. That's correct.

Q. Now, it is also in evidence in this case that the Castletown Manufacturing Company or John-

(Testimony of Lawrence L. Vance.)

son and Whitney produced vanadium oxide during the period 1938 to 1945. Do you have them on your chart?

A. Will you give me the names again, please?

Q. You might have it under one of three names, Castletown Manufacturing Company, Johnson and Whitney, or J. H. R. Products.

A. I do not see those names on my chart.

Q. So then you haven't included them in Plaintiffs' Exhibit 136?

A. I have only what is in this chart.

Q. It is also in evidence in this case that Natural Products Refining Company and the Imperial Paper and Color Corporation produced vanadium oxide, and I take it you don't have them on your chart, either. A. I don't recall those.

Mr. Archer: Well, your Honor, I would like to move to strike Plaintiffs' Exhibit 136 because it is clear the witness himself has no personal knowledge of the exhibit [1393] and that he has omitted from the exhibit production of certain companies, evidence of which is already in the case, so I think the foundation is incorrect.

Mr. Alioto: Submit, if your Honor please——

The Court: It is clear that he didn't include those, as disclosed by your cross examination.

Mr. Alioto: And this doesn't purport to be anything but a visual presentation of an exhibit already in evidence produced by a former director of the United States Vanadium Company.

The Court: Overruled.

(Testimony of Lawrence L. Vance.)

Q. (By Mr. Archer): Oh, you don't have the O. Hommel and Company in there, either, do you?

A. I don't recall that.

Q. No, it is not on the exhibit.

Mr. Alioto: We will stipulate it is not on the exhibit, Mr. Archer, and, therefore, not in that chart.

Q. (By Mr. Archer): One other point: Did you make a check from the plaintiff's books to determine where they had purchased vanadium oxide in order to prepare this exhibit? A. I did not.

Mr. Archer: That is all.

Mr. Holland: No cross examination. [1394]

Redirect Examination

Q. (By Mr. Alioto): Just so there won't be any question about it, Doctor Vance, I think it is fairly clear but the only thing you did in connection with the exhibit, which is 136, is to make a presentation of whatever was on the document produced by Mr. Burwell?

A. Yes, that is a graphic presentation.

Q. Nothing more? A. That's correct.

Mr. Archer: You did use one other exhibit, too, besides the one produced by Mr. Burwell?

A. I don't recall any other information here and I am sure there was none.

Mr. Alioto: That was in connection with the ferro-vanadium.

(Testimony of Lawrence L. Vance.)

Mr. Archer: Oh, ferro-vanadium.

Mr. Alioto: But on the vanadium oxide it is just a visual presentation of that exhibit. [1395]

* * * * *

WILLIAM R. BAYER

called as a witness by and on behalf of the defendants, having been first duly sworn to tell the truth, the whole truth and nothing but the truth, testified as follows:

The Clerk: Will you be good enough to give the Court and Jury your full name?

The Witness: William R. Bayer.

Direct Examination

Q. (By Mr. Holland): Will you state your address, Mr. Bayer?

A. 5104 North Drake Avenue, Chicago 25, Illinois.

Q. What is your occupation, Mr. Bayer? [1400]

A. I am an officer of the Apex Smelting Company.

Q. How long have you been associated with the Apex Company? A. Since June 28, 1937.

Q. Will you please state for the record the various positions you have held with that company during the period since you first went with it, and the dates when you changed your various positions?

A. Well, I started out as accountant and office manager. In 1941 I received the official title of as-

(Testimony of William R. Bayer.)

sistant secretary. In 1948 I became secretary, and in 1956, secretary-treasurer.

Q. Which position you still hold?

A. Still hold. And generally my work is classified as controller — throughout most of the entire period.

Q. During the period July 1, 1938 until December of 1942, who were the men actively in charge at the Apex Smelting Company and what were their positions?

A. Mr. W. A. Singer was president of the company; Mr. Louis Lippa was vice-president and secretary, and Mr. George H. Starmann was treasurer. I was going to say——

Q. Pardon me?

A. That was in 1938. Subsequently, in the years, I think 1940, Mr. Fritz Nussbaum, became a vice-president, and approximately at that time Mr. Edward H. Christianson became a vice-president in charge of sales. [1401]

Q. During that period of time, was there a committee or a group which supervised the operations of the company, other than sales?

A. Yes, there was.

Q. And who formed that group?

A. Mr. Singer, Mr. Lippa and myself.

Q. And did you hold meetings frequently?

A. Practically every day.

Q. Would these be informal meetings or would there be minutes kept of these minutes?

A. Informal.

(Testimony of William R. Bayer.)

Q. And what in relation to the operating policies of the company was taken up at these meetings?

A. Well, I would say every problem or decision in relation to the general operations of the company and, in many instances, the detail of the operations.

Q. And did that apply to the operations of the company's ferro-alloys department?

A. It did.

Q. And did it apply to the relations of the company with Continental Ore and Mr. Leir?

A. It did.

Q. Did you participate in the drawing of the original agreement dated July 1, 1938, between Apex Company and Brignoud, which is in evidence in this case? [1402] A. Yes.

Q. And did you participate in the drawing and final form of the various amendments to that agreement which took place thereafter?

A. I did.

Q. Did you form a part of the group which discussed and took up the company's policy in relation to the termination of that agreement?

A. I did.

Q. Now, under the agreement with Brignoud, Apex undertook to install a ferro-vanadium department, is that correct? A. That is correct.

Q. And was that department installed?

A. Yes.

Q. At whose expense? A. At Apex's.

(Testimony of William R. Bayer.)

Q. Do you recall approximately what the cost was of that installation? A. I do not.

Q. When did that department first go into commercial operation, if you recall?

A. I believe in 1940.

Q. Do you recall when in 1940?

A. If I could refresh my memory——

Q. Certainly. [1403]

A. I have (examining documents) April 19—we made our first commercial heat on April 19, 1940.

Q. Mr. Bayer, there is evidence in this case that in August of 1940 Mr. Leir of Continental Ore advocated the resale by Continental Ore of 20,000 pounds of oxide then under order and expected to be received from Blanding Mines Company. Will you state what the policy of Apex Smelting Company was in respect to the resales of oxide as opposed to stockpiling them for ferro-vanadium production?

A. Well, I would say this, our general policy was to match sales and purchases in all of our metal operations, to attempt to keep as near as possible a balanced position where we were not materially, in relation to sales, either long or short.

Q. Then it was not your policy to stockpile vanadium oxide as against future needs for ferro-vanadium production, is that correct?

A. You say "against future needs"?

Q. Of the oxide.

(Testimony of William R. Bayer.)

A. Will you give me an interpretation of the word "needs"?

Q. Future possible shortages of material for the ferro-vanadium production.

A. I would say it was not our method of operation.

Q. And you did not so operate in connection with your ferro-vanadium production, is that correct? [1404] A. That is correct.

The Court: Just a moment. I don't understand just what was that policy. Did you buy more than you actually used at the time in preparation for future needs, or did you limit your purchases to just what you needed?

A. We would limit our purchases not pound for pound but approximately to what we had definitely sold for the future, trying to keep an even position.

The Court: I understand.

Q. (By Mr. Holland): Now, what was the policy of the Apex Company with respect to financing or helping to finance vanadium oxide mills in the West?

A. We had no policy of either financing or helping to finance vanadium mills.

Q. You were requested on several occasions were you not, to help finance the mills of your suppliers of vanadium oxide? A. We were.

Q. Specifically, Blanding and Morrison?

A. I believe so.

Q. And what did you do with respect to those requests for financing?

(Testimony of William R. Bayer.)

A. We turned them down.

Q. The evidence shows that you also received several requests by suppliers of oxide for contracts under which Apex would agree to take a fixed quantity of oxide over an extended [1405] period of time. Will you state what your policy was in respect to such contracts?

A. Our policy was not to make such contracts. However, we did offer—it all depends what the extended period of time was—. In reviewing my files before I came here, I noted that we did make an offer for a long-term contract subject to quarter review, both as to quantity, price and duration.

Q. In other words, your agreements to take a fixed quantity over a period were limited to a period of three months, is that correct?

A. That is correct, as far as my memory and record shows.

Q. And you were requested on several occasions by suppliers to give them long-term contracts to take a fixed quantity, is that correct?

A. I believe so.

Q. And is it correct to say that you refused such requests? A. That is correct.

Q. Will you state, generally speaking, during the period from April 1940 until the end of 1941 what your situation was with respect to supplies of vanadium oxide?

A. I don't quite get your question.

Q. In other words, during that period of approximately a year and a half, did you have a suffi-

(Testimony of William R. Bayer.)

cient supply of oxide [1406] coming in for your operations in the ferro-vanadium department?

A. To the best of my belief at times we had and there were some short periods where we did not.

Q. Now, those short periods where you did not, occurred, did they not, in the summer and fall of 1941?

A. I would have to—I wouldn't be positive of that.

Q. Can you check any records you have and answer that. A. (Witness examining.) [1407]

A. Yes, I believe so. I have a letter here of June 3rd wherein——

The Court: What year?

The Witness: June 3, 1941, which discusses some problems that Shattuck had at the mill and the quantities were cut from what they had been shipping.

Q. (By Mr. Holland): Can you tell from your records whether at any time your oxide supplies would not have been completely remedied as far as your manufacturing requirements were concerned if you had maintained, say, a one month's supply of oxide on the stockpile?

A. No, I can't. As far as I know, from my records, if we had had that stockpile we would have probably been in good shape.

Q. There has been some evidence introduced in the case that you had difficulty securing aluminum during the latter part of 1941; let us say the last half of 1941, is that correct?

(Testimony of William R. Bayer.)

A. That is correct.

Q. I hand you a letter from Mr. Lippa to Continental Ore Corporation and ask you if you can identify that. That is your copy of the letter.

A. It appears, as far as I can tell, that this letter is from our files. It is our file copy.

Mr. Alioto: We have no objection. It is the witness writing a letter, but we have no objection.

Mr. Holland: I offer in evidence as exhibit next [1408] in order a letter of June 27, 1941, from Apex Smelting Company to Continental Ore Corporation.

(The document referred to was thereupon received in evidence and marked Defendant *D*'s Exhibit V-2.)

Mr. Holland: The letter reads as follows:

"We wish to call your attention to the critical aluminum condition as it affects our ferro department. We have not had any success in securing aluminum from the aluminum companies of America, based on the few priorities which you sent to us, and all the aluminum we have used so far has been such aluminum as we could gather from other concerns and from our own stocks.

"When Mr. Singer was in Washington recently he took this matter up with the Priority Division there, at which time he attempted to get an A rating for the Thermit process. The impression that he got from them was that the concerns now purchasing low carbon alloys would have to take the high carbon alloys. This, of course, is not a final decision,

(Testimony of William R. Bayer.)

but it gives you an idea of the trend of thought regarding this, and we feel that possibly it might be wise if you would have a statement written for us giving the reasons why the high carbon will not take [1409] the place of low carbon.

"It would be well if you could secure statements from the people to whom you are selling ferrovanadium to this effect. It is quite possible that if our present requests are denied that we may need all of this information to substantiate our claims. Any suggestions you may have along these lines will, of course, be very much appreciated."

Q. Mr. Bayer, commencing with December 31, 1941, do you have inventory figures which show the stocks of vanadium oxide that you had on hand on that date and from that time on?

A. I have some.

Q. Have you reviewed those figures recently?

A. I have.

Q. Do those figures or do they not show that for the end of the year 1941 and on January 31, 1942, and February 28, 1942, the Apex Smelting Company had ample stocks of both oxide and finished product to take care of all outstanding orders?

A. They had.

Mr. Alioto: The documents speak for themselves, if your Honor please.

Mr. Holland: Rather than to get all the figures in, I am attempting to do it this way. I will put the figures in if you wish.

(Testimony of William R. Bayer.)

The Court: He may refresh his memory from the [1410] documents.

Mr. Holland: You can cross-examine on it if you wish to.

Q. Before we leave the aluminum situation, at the time you made the contract on July 1, 1938, what type of aluminum was it you anticipated you would use in the production of ferro-vanadium?

A. It was anticipated that we would be able to use the aluminum which we essentially produced—which we produced essentially from scrap aluminum and which is not a very—is not a high purity aluminum and has certain impurities such as copper, magnesium, silicon and zinc.

Q. Were you able to use that type of aluminum in the manufacture of your ferro-vanadium?

A. It was not acceptable. The resultant ferro-vanadium was not acceptable with that type of aluminum because of the copper content.

Q. What type of aluminum did you have to go to?

A. To a high purity aluminum of 99 plus or better.

Q. Is that what is known as primary aluminum?

A. Well, essentially that. In other words, that grade could be secondary but was not readily available in the scrap, and the only readily available supply was from primary production.

Q. And was it the primary aluminum that you had difficulty [1411] getting priorities for?

A. That is correct.

(Testimony of William R. Bayer.)

Q. Was that also more expensive than the secondary aluminum which you produced or was it not?

A. Under price controls at certain times, yes. At times secondary aluminum prior to price controls—and I am not sure of the dates in the various pricing orders, was selling at a much higher figure than primary aluminum, but during most of that period we were under price controls where secondary aluminum was selling at prices under primary.

Q. I believe shortly before October 25, 1941, you had a fire in the ferro-alloy plant, is that correct?

A. That is correct.

Q. At that time you notified the Continental Ore Company, did you not, of the fire and the fact that you wished to terminate your ferro-alloy manufacture? A. That is correct.

Q. I believe shortly after that Mr. Leir came to Chicago on November 1st and 2nd, 1942, and at that time you agreed to go ahead with the production of the Van-Ex, did you not? A. That is correct.

Q. Pending the rehabilitation of your ferro-alloy department? A. Right.

Q. At the time that you went into the Van-Ex production [1412] what was your understanding as to what that production would be?

A. Well, that it would be packaged — I don't know if I am using the right technical word—thermit or exothermit product. In other words, that would contain ferro-vanadium and aluminum so

(Testimony of William R. Bayer.)

that it could, when charged into the steel furnace, would give a thermit reaction.

Q. What did that Van-Ex production turn out to be?

A. A straight packaging of vanadium pentoxide.

Q. (By the Court): What is the difference between pentoxide and oxide?

Mr. Holland: I do not think this witness is qualified.

The Witness: I am not a metallurgist. Isn't pentoxide the correct terminology for V_2O_5?

Q. (By the Court): You are using the terms pentoxide and oxide. I would like to know the difference. A. It is V_2O_5

Mr. Holland: They have been used interchangeably in the case, your Honor, and they mean the same thing. The pentoxide vanadium I think Mr. Alioto will agree is what all the witnesses have referred to as both pentoxide and oxide, is that not correct?

Mr. Alioto: There has been a reference by those witnesses to it, but I was interested in this witness' answer.

The Court: I did not hear what you said.

Mr. Alioto: I have indicated, as Mr. Holland has, that the witnesses have referred to those terms interchangeably, but I wanted to know what this witness had to say about it.

The Witness: It is the term we called it back in those days. I think the "pent" refers to O_5, the fact that it has five parts of oxygen.

(Testimony of William R. Bayer.)

Q. (By Mr. Holland): Mr. Bayer, there is in evidence a wire dated January 27, 1942, from Apex Smelting Company to Continental Ore reading as follows:

"In view of continued losses in our ferro department and the increasing difficulty in securing men to work in that department due to its hazardous nature, we are compelled to advise you that we are forced to discontinue this department. Will do our utmost to fill present orders subject to approval from Washington."

Do you recall the sending of that wire?

A. I do.

Q. Was that the result of a decision made by this operating committee of whom you have referred? A. It was.

Q. Was that the first notice to Continental Ore so far as you know of the desire of Apex Smelting Company to terminate its contract?

A. No, there was that notice in October of 1941.

Q. But I mean subsequent to that, which as I understand you agreed to go ahead with that notice.

A. That is right; I believe so.

Q. Then on the 13th of February, in evidence as Defendant's Exhibit V-1Z, there was a further wire sent to Apex, I mean by Apex to Continental, "cannot see our way to continue production ferro department beyond March 10. We are stopping all shipment of ore." Do you recall the sending of that wire? A. That is right, I do.

Q. Do you recall whether or not you notified

(Testimony of William R. Bayer.)

your shippers of ore to cease shipping ore at or about that time?

A. Upon refreshing my memory I find I did.

Q. I hand you a copy of a letter signed by yourself dated February 14, 1942, to North Continent Mines, and ask you if you can identify that.

A. That appears to be a file copy of a letter that I dictated and signed.

Mr. Alioto: We have no objection.

Mr. Holland: I offer it in evidence as Defendant's Exhibit next in order.

(The document referred to was thereupon received in evidence and marked Defendant V Exhibit 2-E.)

Mr. Holland: This is a letter dated February 14, 1942, one day after the wire I just read, directed to North [1415] Continent Mines, Inc., from the Apex Smelting Company and signed by William R. Bayer:

"We would greatly appreciate if you will refrain from making any shipments of vanadic acid to our plant until further notice.

"This is in accordance with your telephone conversations with our Mr. Lippa."

Mr. Alioto: May I have that date again, Mr. Holland?

Mr. Holland: February 14, 1942.

Q. Mr. Bayer, at the time the decision was made by Apex of its desire to terminate its contract and to cease the operation of its ferro department, which I believe you testified was first sent to Conti-

(Testimony of William R. Bayer.)

nental Ore on January 27th, at that time who participated in the making of that decision?

A. As far as I can remember, it would be essentially Messrs. Singer, Lippa, Starmann, Nussbaum and myself.

Q. Would Mr. Christianson have participated in any such meeting? A. Not generally.

Q. Why not?

A. His function was essentially sales.

Q. Did you or do you know of anyone at the Apex Company who had any communication whatever with Vanadium Corporation of America prior to the time that decision was made regarding your [1416] decision to go out of business?

A. Not that I know of.

Q. Did you have any such contacts yourself?

A. Definitely not.

Q. And if there had been any consultation with Vanadium Corporation of America on that subject would you have known about it?

A. I would have.

Q. Now, there is in evidence on February 20th a memorandum written by Mr. Gustaf Laub.

The Court: What year?

Mr. Holland: 1942, being a week after your second wire to Continental Ore, which indicates that he was called upon by Mr. Christianson, who wanted to sell Vanadium Corporation of America the equipment and materials which you had in your ferro-alloy department and communicated to Mr. Laub at the time that Apex had decided to go out of

(Testimony of William R. Bayer.)

the business and wanted to sell these materials and equipment to Vanadium Corporation of America. Do you recall anything in connection with that visit of Mr. Christianson to Vanadium Corporation of America?

A. I do not, other than what I have refreshed my memory of in the last few days.

Q. And as a result of refreshing your memory what is your recollection?

A. As a result of refreshing my memory——

Mr. Alioto: May we find what he has refreshed his memory from, if your Honor please?

The Court: I didn't hear you.

Mr. Alioto: I am requesting that he find out what it is he refreshed his memory from. He says he doesn't remember. He saw something in the last couple of days.

The Witness: In going over our records I find that when we abandoned the ferro-alloy department we sold the magnasite, which was equipment or—which was really an operating supply. In other words, it was a lining we used for our crucibles to Vanadium Corporation, and that was sold and the sale was arranged with Mr. Christianson.

Q. (By Mr. Holland): Do you know why Mr. Christianson happened to handle this matter?

A. Well, it would be the normal thing. He is the one who is traveling as a salesman, in charge of the sales around the country, to contact somebody in reference to disposing of the equipment after we made a decision to go out of business.

(Testimony of William R. Bayer.)

Q. Do you know what his instructions were in that respect? A. That I don't.

Q. (By the Court): Now, Mr. Witness, at the time you went out of the ferro-vanadium business, up to that time had you been able to secure vanadium oxide sufficiently to operate your business?

A. At times, yes, and at times, as I said before, there [1418] were delays in our production due to supplies not being readily available in our plant. We varied from time to time. At the time we went out of business we did have sufficient inventory. I think at the end of the year, if my memory—and I refreshed my memory a few days ago—serves me well, I think we had about 50,000 pounds, which was more than a normal month's production.

Q. Well, were you influenced in closing your ferro-vanadium business by the fact that you could not secure vanadium oxide?

A. No, that wasn't the reason for closing.

Mr. Holland: Is your Honor going to take a recess at this time?

The Court: Very well. We will take a short recess.

(Recess.) [1419]

Q. (By Mr. Holland): Mr. Bayer, we were discussing the disposal of your equipment and materials when you went out of the ferro-vanadium business, and I believe you testified that the magnesite was bought by Vanadium Corporation of America, is that correct? A. That is correct.

Q. Do you know what became of the raw mate-

(Testimony of William R. Bayer.)

rials, vanadium oxide, and the finished products, ferro-vanadium and Van-Ex, that you had on hand at the time?

A. To the best of my belief and knowledge it was shipped against orders, either orders that we took as Apex, or orders that Continental Ore took and we shipped for them.

Q. And was the equipment offered to Mr. Leir, Continental Ore Company? A. I believe so.

Q. I hand you letters of April 7, 1942, April 8, 1942, and September 30, 1942, and ask you if you can identify them.

A. I believe these letters are from our files.

Mr. Alioto: We have no objection.

Mr. Holland: Offer them in evidence as defendants' next exhibit.

(The letters referred to were thereupon marked Defendant V Exhibit 2-F in evidence.)

Mr. Holland: The first is a letter from [1420] Continental Ore Corporation, signed by Mr. Leir, to Apex Smelting, dated April 7, 1942:

"We thank you for your letter of April 6th. Right at the moment we are unable to tell you whether we will have use for this equipment. We are negotiating with a party that may be interested in going into this business, but our talks are progressing rather slowly. We think that for the time being the best thing would be for you to keep this property in storage in the corner of your plant. The moment ferro-vanadium can be exported again the equipment will become more valuable, because it

(Testimony of William R. Bayer.)

will be very interesting to produce ferro-vanadium on a smaller scale because of the margin of $1.00 between the domestic and export price, which margin is in favor of the producer.

"Please let us know what you are going to do with this equipment."

The Court: Now, that letter was written by whom, to whom?

Mr. Holland: That was written by Mr. Leir to Apex.

And on the next day, April 8th, Mr. Lippa of Apex replied:

"We have your letter of April 7th and would like [1421] to hold this equipment to one side for you; but unfortunately, space is what we really need at the moment. And in addition to this the present market is a very attractive market to dispose of the equipment.

"Jaw crushers and flat cars particularly take up a lot of room, and you can understand that it would be best to dispose of this material, rather than putting it somewhere where it would rust away; and, therefore, unless you can see the possibilities of using this, we will make attempts to dispose of it."

Then on September 30, 1942, five months later, there is a letter from Mr. Leir to Apex:

"Re: Jaw Crusher.

"We thank you very much for your wire regarding the jaw crusher and have offered it by air mail to our friends in New Mexico.

"We urged them to let us have their decision by

(Testimony of William R. Bayer.)

Friday, but there might be a delay until Saturday if the men are away at the mine.

"In any case, we will endeavor to give you a reply by Saturday noon and hope you can keep this matter open for us until then."

Q. (By Mr. Holland): Now, Mr. Bayer, there has been testimony concerning [1422] the agreement reached with Mr. Leir on the basis on which you could close out this contract, to the effect that you filled, I believe, a couple of orders of ferro-vanadium, and that you continued to ship or produce Van-Ex for Mr. Leir at cost until July 1, 1942, is that correct? A. Yes.

Q. And on June 2, 1942, there is a letter in evidence from your company, written by you to Mr. Leir as agent for Fredet-Kuhlmann, giving formal notice of termination. Do you recall that letter?

A. I do.

Q. I had a copy of it here a minute ago. I don't know what I did with it. However, it is in the record.

Q. (By the Court): How was the cancellation or closing of this contract with Mr. Leir, as the representative, due to your failure to secure vanadium oxide?

A. Not essentially. It was due to a number of other reasons, essentially: lack of profit, difficulty with employees, aggravation—I wouldn't call them serious, but minor aggravations throughout the whole period of operation.

(Testimony of William R. Bayer.)

Q. Do you mean to say that your operation in so far as producing ferro-vanadium was concerned was not successful?

A. I would say that that was it, that it was not successful. And then, again, the need for space for production of [1423] aluminum, which was our principal business, and at that time was a very critical war material, the most critical.

Q. (By Mr. Holland): In connection with your statement regarding difficulty with labor, Mr. Bayer, I hand you two letters, dated January 13th and January 19th, the last written a week before your first cancellation notice, and ask if you can identify those.

A. I can. These are from our files.

Mr. Alioto: No objection.

Mr. Holland: Offer them in evidence as defendants' next exhibit in order.

(The letters referred to were thereupon marked Defendant V Exhibit 2-G in evidence.)

[See Book of Exhibits.]

Mr. Holland: First is a letter dated January 13, 1942, from Apex, signed by Mr. Lippa, to Continental, attention Mr. Leir:

"We have your letter of January 12th, and wish to advise that our Mr. Christianson will be in Washington this week, at which time he will go over this entire matter with the vanadium section of the OPM. After receipt of his report, we will contact you and advise you regarding the results."

Then I am skipping the next paragraph.

(Testimony of William R. Bayer.)

The Court: Just a minute. This was from whom, to whom? [1424]

Mr. Holland: This is from Apex to Continental, Mr. Lippa to Mr. Leir.

"We hope to get into production on ferro alloy this week, although we are having some difficulty with the labor, as most of them refuse to go to work in that department. As you know, we have been trying to secure the proper respirators, but somehow or other we have never been able to get any that keep the dust from getting into the men's throats and nostrils."

And then on January 19th, a letter, also from Mr. Lippa to Mr. Leir.

The Court: What year?

Mr. Holland: 1942. [1425]

"We want you to know that we have been attempting to start the Ferro Department every since last Tuesday, but we have had a lot of labor difficulty. It so happens that our men are now organizing, and the men that we have had in the Ferro Department refuse to go back into it, as they claim that it is injurious to their health. We have promises from a sufficient number of men to start the Department tomorrow, but each of these men have not promised to stay in the Department over four days. What the outcome of this will be, we cannot yet determine, but we will keep you advised."

Now, in your letter of June 2nd, 1942, to which I referred, which is Exhibit V-2-B in this case—and this letter was written by you, Mr. Bayer—you

(Testimony of William R. Bayer.)

enumerated the reasons for your going out of the business, and in enumerating them, you say, "As a matter of fact, this Department was an unprofitable one for various reasons, which we shall try to enumerate below:

"A. According to our contract with the Etablissements Fredet-Kuhlmann, they were to provide us with complete technical advice and assistance. The outbreak of the European war resulted in our not obtaining this complete assistance, and we were forced to arrive at our own conclusions by experimentation. [1426] This not only caused actual losses from faulty qualities produced, but also resulted in considerable delay."

Q. Do you want to amplify on that statement at all, Mr. Bayer?

A. I would say that is correct, and we did also, at the suggestion of Mr. Leir, employ a consultant, a Mr. Chubb, I think, from Montreal, Canada, who was supposedly—and I don't say that in any other implication except from what I know of his background, he was an expert in his field, and while he did give us some help, he didn't give us all the—he was unable to give us all the answers that we required. We had difficulty in getting the proper recoveries, and when our ore sources varied from one to the other, there was a difference in the ore, and it took us a while to standardize our mix in order to get the optimum recovery out of the material.

Q. "B. We had to contend with recoveries which

(Testimony of William R. Bayer.)

were far below those expected, as far as the vanadic acid from Shattuck is concerned. We had correspondence with Brignoud on this point on March 25th, April 11th, 1940, but in spite of Brignoud's advice, could not materially improve that recovery." A. That is a fact. [1427]

Q. "C. We also had continual trouble with our labor force, because of the health hazard involved in the production of ferro-vanadium, in view of the poisonous character of vanadium fumes and dust." I believe that the letters I just read amplify that contention.

"D. When it was first decided to go into the production of ferro alloys, all calculations were based on the assumption that duraluminum could be used for this manufacture *was* it was in France. It became obvious, however, that the quality standards in this country with regard to copper do not allow the use of impure aluminum, and we therefore had to use material *which* as high as 99% purity for this manufacture, which considerably influenced the calculation."

I believe you already testified to that, is that correct? A. That is correct.

Q. "E. Regarding the production of Ferro Tungsten, you know yourself that the sales prices are fixed at a level which makes it impossible for use to compete with the much cheaper electric furnace production."

Do you have any amplication of that statement?

A. No, no particular amplification. [1428]

(Testimony of William R. Bayer.)

Q. Mr. Bayer, technically you terminated the contract under its terms which permitted termination under certain circumstances, is that correct?

A. That is right. I would say the failure to achieve a certain profit over a period of two years, which I believe was $7500. I have the contract to check.

The Court: I think that is correct. In the record.

The Witness: That is correct. In the record.

Mr. Holland: That is all.

Cross Examination

Q. (By Mr. Alioto): Mr. Bayer, there has been considerable reference in your examination to a Mr. Lippa. Who was Mr. Lippa in the period 1938 through 1942?

A. An officer of Apex Smelting Company.

Q. He was one of the chief managing officers of the Apex Smelting Company, was he not?

A. That is correct.

Q. And would you say he was the man principally involved in connection with working out this matter of producing ferro-vanadium?

A. What do you mean? I wish you would explain your question.

Q. He was the most active agent, was he not, in the company, in negotiating the contract with Mr. Leir and [1429] then in attempting to put it into effect? A. No, I wouldn't say that.

Q. Who were the men?

(Testimony of William R. Bayer.)

A. I would say Mr. Singer was equally as active, and Mr. Starmann from the technical end, and I from the accounting and quasi-legal end.

Q. Then shall we say that Mr. Lippa and actually Mr. Singer were the two most active officers, weren't they? A. No, I wouldn't say that.

Q. You say quasi-legal. Are you an attorney?

A. No, that is why I say "quasi". I am a C.P.A. and therefore I have always handled the relationships in our firm with the legal profession. Anything that smelled of any legality, contracts, or anything, I have always gone over it first.

Q. What was Mr. Lippa's last position with the company?

A. What do you mean? He is still with the company.

Q. What is his position now with the company?

A. At the present time he is president.

Q. President of the company? A. Right.

Q. And Mr. Singer is the chairman of the board?

A. That is correct.

Q. And they reside in Chicago, do they?

A. That is correct. [1430]

Q. And they work in Chicago?

A. That is correct.

Q. And that is where you reside and work, too, I take it, Mr. Bayer? A. Correct.

Q. Did you participate in the negotiations for the original contract between Apex and the French company represented by Mr. Leir?

(Testimony of William R. Bayer.)

A. If you mean participate in an actual discussion——

Q. Yes. A. In a conference?

Q. Yes.

A. No. As an advisor to the terms, yes.

Q. But you did not take part actually in the negotiations between Mr. Leir and Mr. Singer?

A. No, physically I did not discuss it with Mr. Leir, the terms of the contract, though I was in contact with Mr. Leir at that time when he was in Chicago.

Q. It was actually Mr. Lippa and Mr. Singer who were the ones who did this negotiating with Mr. Leir, is that correct?

A. Essentially Mr. Singer.

Q. But Mr. Lippa also participated, however?

A. That is right, to a degree.

Q. At that time did you, as a member of the policy committee [1431] canvass the ferro-vanadium field to determine whether or not it would be feasible to enter into the manufacture of ferro-vanadium? A. We did make some inquiries.

Q. And I take it that you believed it was feasible at the time to enter into the manufacture of ferro-vanadium?

A. With the information that we had, and with the assurances of Mr. Leir, we believed it was feasible.

Q. Did those assurances relate to a source of supply of getting vanadium oxide?

(Testimony of William R. Bayer.)

A. They related both to supply, sale and technical assistance, all three.

Q. Now, then, taking those three up separately, Mr. Lippa himself made quite a considerable effort beginning in 1938 to get a source of supply, didn't he?

A. Under the direction of Mr. Leir, especially.

Q. Yes, but he himself participated?

A. He participated in that. In other words, Mr. Leir gave him the contacts and the leads, and Mr. Lippa made the contacts in the name of Apex Smelting Company.

Q. Don't you recall that Mr. Lippa on his own or with Mr. Leir's help, either way, secured a list of independent mining companies in the Colorado Plateau, independent miners, from the Bureau of Mines?

A. That was with Mr. Leir's help. [1432]

Q. And do you recall that Mr. Lippa personally wrote letters to all those miners whose names he had secured? A. That is correct.

Q. Without burdening the record, this is a kind of big batch, but let me show you one letter in connection with his trying to get a source of supply in 1938.

A. That is correct. These are form letters which went out under Mr. Lippa's name.

Q. There were many, many of those letters, were there not?

A. Yes, there was a lot of correspondence.

Mr. Alioto: As an example of that type of effort,

(Testimony of William R. Bayer.)

we offer this document as plaintiffs' Exhibit next in order in connection with the cross-examination of this witness.

Mr. Holland: No objection.

Mr. Alioto: I do not think it is necessary to read it now, if your Honor please.

(The document referred to was thereupon received in evidence and marked Plaintiffs' Exhibit No. 142.)

Q. (By Mr. Alioto): Now, Mr. Lippa also followed up on these contracts he made out on the Colorado Plateau among the independent miners and the independent mining companies, did he not?

A. What do you mean by following up? Sending a second letter? [1433]

Q. He followed up the correspondence and tried to nail it down, did he not?

A. I believe so.

Mr. Holland: The only question I have in respect to that letter is the date is prior to July 1, 1938 and I do not want to be held to have waived any position we have taken in that respect.

Mr. Alioto: No, but it is in connection with this very thing we are talking about, the Apex contract, your Honor.

Mr. Holland: If it is understand that we are not waiving our position——

Mr. Alioto: We are not going to make any such point, Mr. Holland.

The Court: Very well, let it be admitted.

Mr. Alioto: So there won't be any question about

(Testimony of William R. Bayer.)

it, this exhibit that has been admitted, the request to get vanadium concentrates and vanadium oxide was made specifically in connection with the collaborative effort between you and Mr. Leir, is that correct, Mr. Bayer?

The Witness: That is correct.

Q. There is no question about that, is there?

A. No, I do not think there is any question about it. Mr. Leir spent considerable time at our office and I remember even my brother acted as his secretary at times. [1434]

Q. He spent about three months in Chicago trying——

A. In Chicago, trying to get sources of information.

Q. That is right. And you folks worked along with him trying to get an independent source of supply, did you not? A. That is correct.

Q. And you got a little discouraged in 1938, didn't you, Mr. Bayer, about getting a steady, independent source?

A. That I don't recall the details of.

Q. Don't you have some recollection that you had difficulty getting an independent source of supply?

A. In 1938 we were not in operation.

Could I ask a question?

Q. Go ahead.

A. What is the date of our contract?

Q. Your contract is dated July of 1938.

A. 1938?

Q. Yes.

(Testimony of William R. Bayer.)

A. That is when we entered into it. Then we didn't require a source of supply—I mean, we didn't require supplies until we were in operation sometime in the 1939 period.

Q. Yes. But there was no doubt that you had difficulty about getting a source of supply?

A. To arrange for it in advance when we got into operation.

Q. And you had trouble getting it, didn't you?

A. I imagine so.

Q. You remember definitely you had trouble, don't you?

A. What do you mean by "trouble"?

Q. Trouble getting a steady, dependable source of supply.

A. I don't know what you mean by "trouble," again.

Q. (By The Court): Was it difficult to get a source of supply?

A. We couldn't just go out and get the supply.

Q. What?

A. We couldn't reach out and freely and easily get it. We had to make arrangements with sources. We started the operations. We had sources of supply prior to our starting the operations.

Q. (By Mr. Alioto): In late 1938 and early 1939 you were complaining to Mr. Leir, were you not, about your inability to get a source of supply that you knew was steady and dependable?

The Court: When?

(Testimony of William R. Bayer.)

Mr. Alioto: The end of 1938, the beginning of 1939.

Q. (By The Court): When did you start your business?

A. Let's see—we were experimenting for quite awhile. Let me get this date again. We made our first commercial heat on April 19, 1940.

Q. At that time were you able to get a supply of vanadium [1436] oxide?

A. To the best of my belief, yes.

Q. (By Mr. Alioto): Were you able to get a regular, steady, dependable source of supply in 1940?

A. If I may refresh my memory—for the amount of production that we did make, yes. Let me put it this way, too: We didn't have a one source of uniform supply, which did help, or add to, production difficulties.

Q. And you were trying to get a source of supply that would be steady and dependable, weren't you?

A. When you call "dependable," I would say this: It would have assisted us in our production if we had a source which would have given us constantly the same size chemical constituents, et cetera, of vanadic oxide, so we could have a standard charge, instead of having to experiment every time a lot came in in order to arrive at a charge, or a mix, in order to try to get the optimum recovery.

Q. Isn't it a fact, Mr. Bayer, that at that time your source of supply was so undependable that as

(Testimony of William R. Bayer.)

a matter of policy you attempted to get it from the Vanadium Corporation of America and from Electro Met? A. That I don't know.

Q. I will show you the documents which have been marked in evidence here Plaintiffs' Exhibit 63. I think the date you [1437] gave the Court was April, 1940. A. Yes.

Q. This date is March 11, 1940. Mr. Lippa writes to the Vanadium Corporation of America and says:

"Please be good enough to let us have your very best price on quantity lots of vanadium pentoxide crushed to one-quarter inch and under. We desire this material for domestic consumption. Your immediate response will be very much appreciated."

He wrote again on April 8th.

The Court: What date was that?

Mr. Alioto: March 11, 1940, if your Honor please.

Q. (By Mr. Alioto): Then you wrote again on April 8th, 1940, Mr. Bayer, and you reminded him that he had not answered your letter, and you enclosed a copy of the letter.

Then on April 20, 1940, Mr. Gustav Laub, the assistant vice-president of Vanadium Corporation of America, wrote back and said:

"In reply to your letter of April 8th enclosing copy of your letter of March 11th, which apparently went astray, would advise that our position is such that we have no material to offer you at present."

(Testimony of William R. Bayer.)

Do you generally recall that correspondence with the Vanadium Corporation of America? [1438]

A. Yes, I do.

Q. Do you also recall that at or about that time you made an oral request to the Electro Met Company to supply you with regular quantities?

A. Yes—that I don't recall exactly, but I do recall a letter I have seen recently in reviewing these files from Continental Ore where he suggests that we make these—Mr. Leir suggests that we make these contacts for certain reasons.

Q. Was this in March of 1940, the letter you are referring to?

A. Yes, at that time, which occasioned this letter.

Q. Now then, do you recall you also inquired of the metallurgical company as to whether or not you could have a source of supply?

A. The suggestion of Mr. Leir encompassed both, if I recall, inquiring of each company, and they talked in terms of an order of about 5,000 pounds.

Q. In any event, getting a regular supply?

A. That is correct.

Q. Now, isn't it your recollection that each of these companies turned you down at that time?

A. It is evident in the fact that we did not buy any vanadic oxide from either of those companies.

Q. Isn't it also your recollection that at or about that time, Mr. Bayer, you complained to the Continental Ore Company [1439] that you weren't able

(Testimony of William R. Bayer.)

to get a steady, dependable source of supply of vanadium oxide?

A. We complained—I don't know if it is exactly that time, but we did complain from time to time.

Q. Yes. And "from time to time" included 1940 and 1941, didn't it?

A. That's right. As I said before, at times we had sufficient good supplies, and at times we didn't. It was irregular.

Q. Now, you recognize that you can't run a manufacturing operation under that kind of a condition, don't you, Mr. Bayer?

A. It is difficult.

Q. And you told Mr. Leir it was difficult because of that situation, didn't you?

A. That's right.

Q. Now then, I believe the Court asked you as of December of 1941 whether or not you had a sufficient source of supply of vanadium oxide, and I recall that you answered to the Court that you did have a sufficient supply, and you predicated that answer upon refreshing your memory from some document that you looked at.

A. That is correct.

Q. Would you be good enough to show me the document that you had reference to, Mr. Bayer, so that we might understand that answer? [1440]

A. Yes.

This was our inventory of our ferro alloy department at December 31, 1941, which shows that we

(Testimony of William R. Bayer.)

had (handing document to Mr. Alioto)—. The top section is your vanadium——

Q. (By The Court): Shows what?

A. Well, I can't say. He has it.

Q. (By Mr. Alioto): Would you be good enough to simply read for us what supply it shows you had on hand?

A. Vanadium ore—in detail, or in total?

Q. Well, read it. A. Just the total?

Q. Read it any way you want to do it.

A. Well, we had 45,827 pounds of vanadium ore on hand at December 31, 1941.

Q. (By The Court): Is that what you call vanadium oxide?

A. Vanadium oxide. That had a V_2O_5 content of, roughly, looking at these figures, which I would say would average about 80 percent.

Mr. Alioto: May we have this marked for identification at this point, so that we will have an opportunity to look at it? This is the first that we have seen of this inventory. [1441]

The Court: Why is it necessary to encumber the record?

Mr. Alioto: I am asking only for it to be marked for identification, if your Honor please—not in evidence. We are not offering it in evidence. I want a chance to look at it during the noon hour, if your Honor please.

The Court: Very well.

(Testimony of William R. Bayer.)

(The inventory referred to was thereupon marked Plaintiffs' Exhibit No. 143 for identification.)

Q. (By Mr. Alioto): Now then, the fact of the matter remains, Mr. Bayer, that you were very much concerned about your supply in December, 1941, doesn't it? A. I do not know, offhand.

Q. So much so that you wrote to the government for help on it. You remember that?

A. In connection with what?

Q. In connection with getting a steady supply of vanadium oxide.

A. In connection with the defense plant, which they were—I am trying to think, now—there was a defense plant coming in.

Q. There was no attempt to catch you, sir. Let me show you a letter that you received from the government, and I think it will refresh your recollection. [1442]

Q. (By The Court): Why was the government mixed up in this?

A. Well, priorities went into effect.

Q. Oh.

A. And we were having difficulty even getting authorization to have, say, Shattuck, and Nisley & Wilson, who were regular shippers, ship to us.

Q. Was that all done under authorization of the government?

A. Yes. Right about that time—I don't know the date, but I think priorities went into effect,

(Testimony of William R. Bayer.)

evidently, some place around November or December of 1941,——

Mr. Alioto: '41.

A. ——when allocations came in.

Q. (By Mr. Alioto): Yes. We have had evidence on that already. And you were assigned the job of working out those allocations with Washington? A. That's right.

Q. And, as a matter of fact, you worked them out in January of 1942? A. Yes.

Q. That is correct, is it not?

A. I had some conversations—I have some records here, memos of conversations and letters, correspondence with Mr. [1443] Jenekes at that time.

Q. But in any event, within a month you had the matter of allocation straightened out; you were given the job to do and you did that job, didn't you?

A. Evidently.

Q. And you had them straightened out in January of 1942? A. That's right.

Q. So allocations were no problem to you, were they, after that, Mr. Bayer?

A. I know they were of an intense problem at that time. Now, what future ones were, I don't know.

Q. (By The Court): Well, now, in January of '42, when these allocations were worked out, as you say, were you able, at Apex, to get the aluminum oxide that you needed and furnished you in your business?

A. In '42 we received 63,000 pounds of vana-

(Testimony of William R. Bayer.)

dium oxide. But that was, again, in the period in which we were going out of business. So we received enough to fill all the orders that we had on our books, and were responsible for, and we more or less turned over the other—we handled it in name, and physically, for Continental Ore. So I can't tell, or testify, as to whether we had sufficient—. We had sufficient for what we were responsible for. In other words, if orders which we had on our books at, say, January 1, 1942, [1444] well, we were in a relatively even position—we had sufficient oxide on hand to cover our orders.

Q. (By Mr. Alioto): You mean you had sufficient to go out of business?

A. We had sufficient to liquidate.

Q. That's it. A. To cover our orders.

Q. And that's all.

A. To cover our orders. And we received sufficient to take care of some new orders that came in.

Q. All right. Now then, in the preceding month, in December of '41, do you recall that you made a contact with the government for the purpose of getting some of the vanadium production from the Monticello plant of the Vanadium Corporation of America which the Defense Plant was building for the Vanadium Corporation of America?

A. I believe we did.

Q. Yes. Well,——

A. I have seen some correspondence.

Q. Take a look at this so we can refresh your

(Testimony of William R. Bayer.)

memory and get the story on the effort made to get a steady supply at the time, Mr. Bayer.

A. (After examining file.) Yes, there was a series of correspondence——

Q. Yes. And I take it you recall that effort to get a [1445] steady supply?

A. That's right. There was a series of correspondence.

Q. You recall that effort to get a steady supply from the Vanadium Corporation of America, is that right?

A. (Examining documents.) Let me see what I have here to refresh my memory.

I have here a letter from Continental Ore dated December 8, 1941, that apparently is pertinent to this. I can't offer anything in evidence, can I? Can I read?

Q. Go ahead and read whatever you want to.

A. (Reading.) "You probably read about four weeks ago that the Defense Plant Corporation, RFC subsidiary, has made an agreement with Vanadium Corporation of America for the construction of a new vanadic acid plant at Monticello, Utah. In order to avoid any misunderstandings, this plant is the property of the Defense Plant Corporation, and would be only managed by Vanadium Corporation. Therefore, it is probable that you can secure certain quantities of vanadic acid from this plant, and we recommend that you send a letter to Washington as per the copy herewith enclosed. A copy of your letter should also be sent to the office of Mr.

(Testimony of William R. Bayer.)

Floyd B. Oldham, Director, Division of Contract Distribution, OPM, Washington, D. C."

Signed "Continental Ore—Leir." [1446]

And then, evidently, as per that letter——

Q. Yes, sir.

A. ——we did then go into correspondence on this Defense Plant.

Q. Did you write on December 13, 1941?

A. Let me—can I have a minute here?

Q. You certainly may. Take as much time as you want, as far as I am concerned.

A. (Examining documents.) Now, here's another letter, then, on December 9th, from Continental Ore to Apex (reading):

"Re: Defense Plant Corporation.

"We refer to our letter of yesterday and want to remind you of the letter which the Contract Division sent to us on September 19th. For your convenience we are enclosing another copy. It might be a good idea for you to refer to this letter when sending them the copy of yours to the Defense Plant Corporation. There is no question but that you are entitled to some of this vanadic acid for conversion. You will agree with *is* it would be very desirable to receive material from the Defense Plant Corporation, because it certainly would arrive in full carloads, and everything would very simple. In any case we hope that your new department will be available to handle easily fifty to a hundred thousand per month." [1447]

Signed "Continental Ore."

(Testimony of William R. Bayer.)

And then based on that I have a file copy of a December 13th letter which we wrote to DPC (reading):

"We understand that you are erecting a new plant near Monticello, Utah, for the production of vanadium pentoxide. To the best of our knowledge, outside of U. S., Vanadium Corporation of America, we are the only producer of ferro-vanadium in this country. Our plant for the production of ferro alloys was built in 1939, and since then we have been producing an excellent quality of ferro-vanadium which is being well received. However, we cannot make use of all of our production facilities due to the lack of raw material, which is fused vanadic pentoxide, and therefore we would appreciate greatly if you would make it possible for us to secure from the new plant a reasonable tonnage of vanadium pentoxide for conversion into ferro-vanadium. We shall welcome your advice from you as to whether this would be possible."

Signed "Lippa," with a carbon copy to Continental and to Floyd B. Oldham.

Q. I take that you were in on the conferences——

Q. (By The Court): Who wrote that letter?

A. Mr. Lippa. [1448]

Q. (By Mr. Alioto): And he was your chief managing agent, together with Mr. Singer, at the time, was he not? A. Essentially, yes.

Q. Can you detach that correspondence that you have read, Mr. Bayer?

(Testimony of William R. Bayer.)

A. You can have the whole thing, right there.

Q. Thank you very much.

Now, I take it that to your knowledge the facts that you represented to the government on December 13 of 1941 were true, were they not, Mr. Bayer?

A. Yes.

Q. And if they weren't true, you certainly wouldn't have made those recommendations to the government, would you?

A. As far as I know.

Q. Well, you would know that. You wouldn't participate in lying to the government, would you?

A. No.

Q. Of course not.

A. I would not participate in any lying.

Mr. Alioto: All right, we offer this in evidence.

The Court: They have been read, haven't they?

Mr. Alioto: I am offering them in evidence.

The Court: He has already read them in evidence.

Mr. Alioto: He hasn't read all, if your Honor please, and we still think that the document ought to be physically a part of the record.

The Court: Very well, let it be admitted.

Mr. Alioto: Thank you. We will ask it be marked next in order.

(The exchange of correspondence referred to was marked Plaintiffs' Exhibit No. 144 in evidence.)

[See Book of Exhibits.]

Q. (By The Court): Whether you were able to

(Testimony of William R. Bayer.)

get material from this Monticello factory in Colorado or not, that was due, or dependent, upon the order of an agency of the United States Government?

A. I imagine so. I haven't here the answers to those letters, so I don't know what was—offhand, my memory is very vague as to the results of that correspondence.

Q. (By Mr. Aiioto): Well, may I supply you the answer to your letter of December 13th that you just read?

I show you a letter dated December 20, 1941, from John W. Snyder, Executive Vice President of Defense Plant Corporation, to Mr. Al Lippa. I see that your name is scribbled on there, and some hand writing, Mr. Bayer. Would you be good enough to tell us whether that letter was received by your company?

A. Yes. That is Mr. Lippa's handwriting. I recognize it. [1450] And he is turning it over to me for action.

Q. When you say that is Mr. Lippa's handwriting, you are referring to the handwriting, Mr. Bayer, "W. Bayer," written on the lower left-hand side of the document, which is dated December 20, 1941? A. That is correct.

Q. All right. So that you received that letter—you are nodding your head, Mr. Bayer. We have a little tyrant here (indicating court reporter); you have to say "Yes."

A. I didn't say anything, yet. I am reading it.

(Testimony of William R. Bayer.)

Q. O. K.

A. Yes, we evidently received this letter.

Q. All right.

A. That explains why I didn't have a knowledge of it at this moment.

Mr. Alioto: Yes.

We will offer it into evidence, if your Honor please, as plaintiffs' exhibit next in order.

The Witness: And subsequent to that, I would say then I contacted, in accordance with instructions, the priority division——

(The letter referred to was thereupon marked Plaintiffs' Exhibit No. 145 in evidence.)

Mr. Holland: Mr. Alioto, do you want the other one in evidence? Have you offered the other one in evidence [1451] yet, the ones that preceded this?

Mr. Alioto: I have already done that, Mr. Holland.

Mr. Holland: I didn't hear you offer them in evidence. However, we have no objection.

Mr. Alioto: They were offered and marked as 144, and this is 145, this document.

Mr. Holland: We have no objection.

The Witness: Can I add one thing at this time?

The Court: We will take them one at a time, and you can add anything, as far as I am concerned, sir.

Let him read the letter, first.

Mr. Alioto: This letter, dated December 20, 1941, —you recall that the first one was to the government, dated December 13, 1941, that the witness

(Testimony of William R. Bayer.)

read—this one states—on December 20, Mr. John W. Snyder, the executive vice-president of the Defense Corporation, writes to Mr. Lippa, the Apex Smelting Company (reading):

"Dear Mr. Lippa:

"Reference is made to your letter of December 13, 1941, requesting information as to the possibility of acquiring reasonable tonnage of vanadium pentoxide for conversion into ferro-vanadium. This corporation has made a commitment to the Vanadium Corporation of America for the construction of a new plant near Monticello, Utah, for the production of vanadium [1452] pentoxide. The entire facilities of this plant will be leased to the Vanadium Corporation, and therefore it is suggested that you contact them with reference to obtaining a portion of the output of this proposed plant. It is further suggested that if you have not already obtained a priority allocation for vanadium pentoxide that you contact Mr. H. K. Masters, Office of Production Management, Social Security Building, Washington, D. C., relative to obtaining such allocation."

And then, members of the jury, you will recall that the witness made reference to a "W. Bayer" direction under that allocation business that was made by Mr. Lippa.

The Witness: What is the date of that letter?

Mr. Alioto: This letter is dated December 20, 1941.

Is there something you wanted to add? I intended

(Testimony of William R. Bayer.)

to go along, but you go ahead and add what you have in mind, and I can take it up later.

The Witness: Just to continue the same topic, as I was looking through here, then coincidental with that we received a letter from Mr. Leir suggesting that we—in reference to General Preference Order M23A, Vanadium, that we contact the vanadium branch in reference to getting allocations, and he gave us a suggested draft of letter, and using [1453] his draft with modifications I wrote a letter to Mr. H. K. Masters of the OPM, starting out—do you want me to read that?—(reading):

"We are writing this letter"——

Q. (By the Court): "OPM." What is that?

A. Office of Production Management. That was——

Q. Oh, this is the Vanadium Company?

A. No, this was the office—OPM was the government agency which controlled allocations and production.

The Court: All right.

The Witness: (reading) "We are writing this letter"——

This is dated December 26, 1941 (reading):

"We are writing this letter at the suggestion of Mr. John W. Snyder, executive vice-president of the Defense Plant Corporation, requesting permission to continue the purchasing of vanadic pentoxide for our ferrovanadium department. This material is used by us in the production of ferrovanadium and vanadium compound which we sell to steel

(Testimony of William R. Bayer.)

mills throughout the country. Our production of ferrovanadium is in a special low carbon form with the following general characteristics: V 70 to 80 percent—C 0.2 percent. [1454]

"Our capacity for production of this material is about 50 to 60 thousand pounds of V contained per month. But at the present time we are producing only a fraction of this capacity due to lack of raw material.

"Our present sources of supply are Blanding Mines Company, Nisley & Wilson vanadium mills, S. W. Shattuck Chemical Company"——

giving the addresses (continuing reading):

"We would appreciate receiving permission from you to continue the purchasing of vanadic pentoxide from these sources and wish to place our facilities at the disposal of your department for the conversion of any additional quantities of vanadium pentoxide you may see fit to allocate to us. We, of course, will ship vanadium to steel mills only upon authorization from your department."

And then—

Q. (By Mr. Alioto): Now, excuse me, sir, who wrote that letter that you just read?

A. Evidently I did, because my initials are down as dictating it.

Q. And then you were authorized by Mr. Lippa to write that letter? [1455]

A. He suggested it.

(Testimony of William R. Bayer.)

Q. Certainly everything you told the government in that letter was correct, wasn't it, Mr. Bayer? A. Essentially so.

Q. Were you manufacturing ferro-vanadium at that time?

A. Yes, we were. That was a time when our—well, you ask if we were manufacturing. At that moment our ferro-vanadium department was shut down due to the fire, and we were in the process of reconstructing it, after we had that conversation with Mr. Leir in November in Chicago.

Q. Well, now, specifically, the statement that you make in that letter with respect to not operating full capacity because of a lack of raw materials, that statement was true when you made it, was it not, sir?

A. As far as I know, yes.

Q. In other words, you wouldn't have made that statement to the government if it weren't true?

A. Deliberately, no.

Q. And what is the date of the letter?

A. The date of that letter is December 26, 1941.

Mr. Alioto: Thank you.

May I take a look at it, sir?

Q. (By Mr. Alioto): Now then, you also made the statement in this letter that you wrote to the government that the ferro-vanadium you [1456] were manufacturing received an excellent reception from the leading steel mills.

(Testimony of William R. Bayer.)

A. I don't think we made that in that letter. I didn't read that. I think you are reading from Mr. Leir's suggested draft.

Q. Well, let me—show me the letter you read.

A. The yellow copy is the one that I sent. The white copy is the suggested draft that Mr. Leir wrote to us.

Q. Fine. A. O. K.

Mr. Archer: I think we should have both of those marked.

Mr. Alioto: What?

Mr. Archer: I think we should have Mr. Leir's draft in.

Mr. Alioto: At counsel's suggestion we will offer this entire thing in evidence.

(The exchange of correspondence referred to was marked Plaintiffs' Exhibit No. 146 in evidence.)

[See Book of Exhibits.]

Mr. Archer: Will you identify for the record which is Mr. Leir's?

Mr. Alioto: I will identify each of them, sir.

I am happy to accommodate counsel in that connection.

The Court: Well, at this time we will recess until two o'clock.

(Whereupon a recess was taken until 2:00 o'clock p.m.) [1457]

Monday, June 16, 1958—2:00 O'Clock P.M.

WILLIAM R. BAYER

recalled as a witness on behalf of the defendants, having been previously duly sworn, resumed the stand and testified as follows:

Cross-Examination—(Continued)

Q. (By Mr. Alioto): Mr. Bayer, did there come a time when you entered into negotiations with the Vanadium Corporation of America to sell that company some of your aluminum products?

A. Some of our aluminum products?

Q. Yes.

A. We have sold the Vanadium Corporation aluminum products from time to time.

Q. Have you sold them any low copper grained aluminum?

A. When we took over on January 1, 1948, we bought the plant in Cleveland, which was formerly owned by National Smelting Company, who at that time were supplying Vanadium Corporation with grained aluminum, and starting with January, 1948, we sold them substantial quantities of grain aluminum in that period until we discontinued our grain department, oh, I would say about four years ago, sold off the equipment. They installed some equipment, and we have been buying some little grain from them since.

Q. Who installed the equipment? [1458]

A. Vanadium Corporation produces some grain.

(Testimony of William R. Bayer.)

We discontinued our grain department and so now we are customers of theirs.

Q. Let me understand this. They helped you build a plant, you say?

A. No, no, we bought a plant in Cleveland——

Q. Yes.

A. *That plant was making* grained aluminum as one of the products and had Vanadium Corporation as a customer.

Q. Yes.

A. When we took over the operations of the plant, we then assumed a selling arrangement or they became our customers as they were customers of the producer.

Q. You sold them grained aluminum?

A. That is right, from January 1, 1948.

Q. Did you sell them substantial amounts of grained aluminum?

A. During that period?

Q. Yes.

A. I would say I don't know how substantial. We sold them regularly.

Q. Could you make a dollar estimate on an annual basis of the amounts sold them? A. No.

Q. Do you have any records here that would show that? [1459]

A. No, I have not.

Q. Then you say there came a time when you dismantled that plant?

A. Not the plant, but the grain department of

(Testimony of William R. Bayer.)

that plant, because we needed space for other production.

Q. (By the Court): When did that occur?

A. I would say offhand—and this is a guess—probably in the early '50s, about '52. That is a guess.

Q. (By Mr. Alioto): Have your sold the Vanadium Corporation of America anything since that time?

A. Since that time we have made them occasional sales of aluminum at times when we bought grained aluminum from them. And they started, about the time we discontinued our grain department, or shortly thereafter, they started producing grained aluminum and we still had one or two customers that called or required a small amount of grained aluminum during the course of a year, and whenever we have a requirement for that, we have bought it from Vanadium Corporation and usually at that time we have sold them an equivalent amount of aluminum ingot, so in effect they have tolled our aluminum ingot into grain.

Q. You have a good working arrangement with the Aluminum Corporation of America?

The Court: What has that got to do with the lawsuit? [1460]

Mr. Alioto: The matter of interest of this witness.

The Court: How?

Mr. Alioto: The matter of the interest of this witness.

(Testimony of William R. Bayer.)

The Court: I don't see the materiality.

Q. (By Mr. Alioto): You have had a good working arrangement with the Vanadium Corporation of America, haven't you?

A. Working arrangement? No, we have no working arrangement with them.

Q. (By the Court): Well, you have dealt with them?

A. We have dealt with them back and forth.

Q. (By Mr. Alioto): And you are still dealing with them today?

A. Very occasionally.

Q. And you still sell them aluminum?

A. I don't think we have sold them any aluminum this year or probably in the last year or so.

Q. In connection with the sale of equipment back in 1942, did you personally participate in the negotiations to sell that equipment to the Vanadium Corporation of America?

A. When you say "personally participate," I would say no. I was cognizant of the fact that after we decided to discontinue the ferro department, the next logical step that we took was to sell for as much money as we could get with the equipment, [1461] and one of the logical people who might be interested in that type of equipment would be anybody who was making ferro-vanadium.

Q. And how many people were making ferro-vanadium at the time?

A. Vanadium Corporation is one and I believe Electromet was another.

(Testimony of William R. Bayer.)

Q. Did you contact both of them?

A. I don't know who we contacted. That was turned over to Christiansen. He was the outside man who made some contacts.

Q. Do you know what ultimately was sold to the Vanadium Corporation of America?

A. Yes, I do.

Q. What was sold?

A. Approximately 40,000 pounds of magnasite.

Q. What did you use that 40,000 pounds of magnasite for?

A. The magnasite was used to make the crucible in which the thermit reaction took place.

Q. That crucible in which the thermit reaction took place was the very heart of your operation, wasn't it, so far as ferro-vanadium was concerned?

A. That was——

Q. That was it?

A. You say the heart of the operation. That was where the production took place, in a crucible.

Q. What did you do with the crucible itself?

A. The crucible itself? [1462]

Q. Yes.

A. I am trying to recall that. We didn't have a crucible, as I recall it. It essentially was a band in which we took this magnasite and made a crucible. The crucible was actually, as I recall it, built by ourselves. Each time you made a heat you built a crucible of magnasite and destroyed the crucible when the heat was completed.

(Testimony of William R. Bayer.)

Q. Was anything else sold to the Vanadium Corporation of America at the time?

A. Not to my knowledge.

Q. Do you know whether at that time there was negotiation between your company and the Vanadium Corporation of America concerning their purchase of grained aluminum from your company?

A. Our company did not make grained aluminum at that time.

Q. What kind of aluminum? Was there a discussion then relating to the sale of any product made by you to the Vanadium Corporation of America at the time?

A. Not to my particular knowledge.

Q. You say particular knowledge.

A. Not to my knowledge, no.

Q. You were asked to come out here as a witness by the Vanadium Corporation of America?

A. That is right.

Q. I take it before you went on the stand you reviewed [1463] certain interoffice memoranda between your company, your Mr. Christiansen and Mr. Laub of the Vanadium Corporation of America. did you not?

A. I didn't have that correspondence in my office.

Q. I am not asking you whether you had it in your office.

A. So I couldn't review it.

Q. I ask you whether you went over it with any of the attorneys in this case.

(Testimony of William R. Bayer.)

A. Before I came up——

The Court: Just a moment. That is not an improper matter for an attorney, to talk to a witness before he puts him on the stand.

Mr. Alioto: I am not suggesting that at all, your Honor. We all speak to them. But this witness has now said he did not speak to him on the subject, so there is no problem about it.

Mr. Holland: He didn't say that, I don't think.

The Witness: I didn't say that.

The Court: He didn't say anything like that.

The Witness: You said before I came out here——

Q. (By Mr. Alioto): No, before you went on the stand did you discuss with anybody the existence of certain interoffice memoranda relating to conversations between your Mr. Christiansen and Mr. Gustaf Laub of the Vanadium Corporation of America? [1464]

A. Yes, I learned about that yesterday.

Q. All right, you learned about that yesterday and you read those memoranda?

A. Yes, I did.

Q. I show you a copy of Plaintiff's Exhibit 62 in evidence in this case. Is that the memoranda you read yesterday — or, rather, are those the memoranda that you read yesterday?

A. Without spending a lot of time, they appear to be.

Q. So far as your knowledge is concerned, are

(Testimony of William R. Bayer.)

the facts stated in those memoranda relating to the Apex Smelting Company true?

A. I don't have much recollection of those facts, but as far as I know there is no untruths.

Q. As far as you know what?

A. There is no untruths.

Q. So far as you know there are no untruths?

A. So far as I know some of it is logical, some of it I would dispute. There are a couple of statements there—can I see it again?

Q. Yes, certainly.

A. For instance, Mr. Leir was getting a 50% cut in the profits. That is something that was an untruth, and actually Mr. Christiansen didn't have much knowledge, or he had hazy or sketchy knowledge, but no intimate knowledge of the details of the ferro-vanadium business. In other words, as I said before, [1465] he was Sales Manager and Vice President in charge of sales. Apparently the disposition, or the attempt to dispose of this equipment was turned over to him, but some of the conversation in here as to the operations of the ferro department he wasn't fully familiar with. That is hearsay. For instance, I happen to remember this part yesterday when I went over it. Mr. Leir was getting a 50% cut in the profits.

Q. That was not so?

A. That is incorrect.

Q. Is there anything else that you recall as being incorrect or glaringly incorrect?

(Testimony of William R. Bayer.)

A. Let me look at it. The second one I have never seen. That I have never seen.

Q. The third one—you saw that third one yesterday, didn't you?

A. Well, the fact that the contract with Mr. Leir extended over the balance of the calendar year, that was incorrect.

Q. O.K.

A. The fact that our attorney said Mr. Leir had a strong case against us, that was incorrect.

The fact that they had come to a definite conclusion—that we had not come to a definite conclusion about turning over the raw material and equipment contracts after that time to Mr. Leir, that was incorrect.

This statement here, he appeared to be [1466] most anxious that he obtain these raw materials—of course, I don't know how—I can't testify as to any anxiety on Mr. Christiansen's part or lack of it to get these raw materials, rather than the possibility of Mr. Leir's getting them, but continuing the vanadium business is incorrect so far as I went, or the company's, because I know at that time, and after that time, we cooperated with Mr. Leir on a number of occasions in the continuity of the turnover of the ferro business from Apex to Mr. Leir.

And then we did not produce low copper grained aluminum, the last paragraph in the letter.

Q. Did this cooperation with Mr. Leir take the form of revealing to the Vanadium Corporation of

(Testimony of William R. Bayer.)

America the sources of supply you had for vanadium oxide and the contractual arrangements you had in that connection?

A. To my knowledge we did not reveal it to them.

The Court: What is this exhibit you hold in your hand?

Mr. Alioto: This is an exhibit that Mr. Gustaf Laub wrote, special reports he wrote, one of them to Mr. Bransome, the President of the Vanadium Corporation of America. They are all interoffice memoranda between these two men about Mr. Laub's negotiations with the Vice President of this company. Suppose I read these exhibits so the jury will know exactly what we are speaking of.

The Witness: Did you say Vice President in charge of sales?

Mr. Alioto: He was a Vice President.

The Witness: Yes.

Q. (By Mr. Alioto): As a matter of fact, Mr. Christiansen was the man who went to Washington in connection with your allocation difficulties in January and worked them out successfully?

A. That one occasion, yes.

Mr. Alioto: We will go over part of this. The first one is as follows, and this is Mr. Gustaf Laub.

Q. Do you know Mr. Laub, by the way?

The Court: Just a minute. If you are going to read the exhibit, read the exhibit and don't interrupt.

(Testimony of William R. Bayer.)

Mr. Alioto: I will read the exhibits hurriedly and then we will go on:

"On February 20, 1942, Mr. Laub in a special report wrote as follows re Apex Smelting Company in Chicago, Illinois:

"Mr. Christiansen, Vice President of the above company, whom I have known slightly for sometime, called on me stating that they have decided to go out of the Vanadium business and that they had certain equipment and some small stock of Oxid on hand that they would like to dispose of if we were interested. [1468]

"He did not have an actual list of the equipment nor of the raw materials they have on hand but from the figures he had, it looked as though they have close to 50,000 pounds of Vanadium Pentoxide containing between 78/87% V_2O_5 and about 40,000 to 50,000 pounds of Magnesite.

"I told him that we might be interested in the Vanadium Oxide and possibly the Magnesite and some of the equipment which included jaw crushers and miscellaneous equipment. He promised to obtain from their Chicago office an actual complete list of the equipment they have to offer as well as the quantities and grades of Vanadium Oxide and Magnesite and to deliver these to me the early part of next week. I told him that I would then refer this to the proper parties of our company and that we would probably be interested in the Vanadium Oxide and the Magnesite if their prices were right. He stated that they would be reasonable

(Testimony of William R. Bayer.)

in their prices and did not expect to make a profit.

"Mr. Christiansen further stated that they had been contemplating going out of the Vanadium business for sometime and their definite decision was reached for two reasons. First, that they had a fire in this department of their plant and secondly, that the sales contract which they had with Mr. Leir, President of the [1469] Continental Ore Corporation had not worked out very well. Mr. Leir was getting a fifty percent cut on the profits. Mr. Christiansen also stated that they had some agreements with the Shattuck Chemical Company and Niley & Smith for deliveries of Vanadium Oxide and that he would also look into this and advise us of the status thereof." [1469-A]

Then the second one, on March 14, 1942, Mr. Gustaf Laub to Mr. E. D. Bransome, the president of the Vanadium Corporation of America:

"Inasmuch as the following information has been conveyed verbally, this memorandum therefore is for our records."

The Court: Now, who is writing this?

Mr. Alioto: Mr. Gustaf Laub, Vice-President of the Vanadium Corporation of America, to Mr. E. D. Bransome, the president of that company, relating to the Apex Smelting Company of Chicago, and this is dated March 14, 1942.

The Court: All right.

Mr. Alioto: "Inasmuch as the following information has been conveyed verbally, this memorandum therefore is for our records.

(Testimony of William R. Bayer.)

"With reference to the writer's memorandum of February 20 (that has just been read), advising that Mr. Christiansen, Vice-President of the above company, had informed us they were going out of the vanadium business and had offered us their stocks of vanadium raw materials, equipment, et cetera, as I have not heard further from Mr. Christiansen in this regard, I had Larry Johnson casually contact him by phone and tell him that I had not received the information that he promised to send, and as a result [1470] Mr. Christiansen phoned the writer and stated that in going into the matter further they had run into some legal difficulties. Mr. Leir, President of the Continental Ore Corporation, with whom Apex had an agreement to furnish their entire production of vanadium, he acting as sales agent, objected strenuously to their breaching their contract, and upon referring the matter to their counsel, Apex were advised that Mr. Leir had a strong case against them and to make the most satisfactory arrangement with Mr. Leir they could. This resulted, Mr. Christiansen advised, in Mr. Leir putting a proposition up to them that they would produce vanadium at full capacity for a period of three months, after which time he would take over their equipment and raw material contracts and produce the material himself. Mr. Christiansen therefore advised that they felt they would be obligated to produce at maximum capacity for a period of three months and had decided to proceed on this basis

(Testimony of William R. Bayer.)

but that they had not come to a definite conclusion about turning over the equipment and raw material contracts after that time.

"The contract with Mr. Leir, he said extended over the balance of the calendar year. In the event that the second part of Mr. Leir's proposition does [1471] not go through, Mr. Christiansen stated that they still propose to offer us such raw materials as they had available as plant equipment.

"The above information at your suggestion was conveyed by phone to Mr. E. K. Jenks, Assistant Chief of the Vanadium Branch, War Production Board."

The final memorandum, dated April 14, 1942, is written by Mr. Gustaf Laub, the Vice-President of Vanadium Corporation, and it is entitled, "Special Report, Re Apex Smelting Company, Chicago, Illinois, Mr. Edward S. Christiansen, Vice-President" of that company:

"With reference to the writer's previous report of February 20, Mr. Christiansen of the above company called again yesterday, stating that they had now gotten their vanadium situation straightened out, and that they had definitely concluded to dismantle their vanadium plant at once and go out of the vanadium business permanently. The equipment from their plant is now for sale. He doubted whether there would be much of the equipment that might interest us, but said that the list of same would be sent to us promptly.

"Mr. Christiansen stated that they had finally

(Testimony of William R. Bayer.)

been able to come to an agreement with Mr. Leir of the Continental Ore Corporation with whom they had 14-year contract to cancel the same. [1472]

"By doing so it was necessary for them, he said, to produce only enough ferro-vanadium to complete the two open orders which Mr. Leir had on his books and to continue producing Van-Ex (a mixture of oxygen and aluminum which they had been supplying) up through June, after which they would be completely out of the vanadium picture.

"Mr. Christiansen further stated that their contract and dealings with Mr. Leir have not proven at all satisfactory to them and they regretted ever having gone into the business.

"He further stated that he would furnish us with the names of all of their suppliers of ores and oxide, the principal ones apparently being Shattuck Chemical Company and Nisley and Wilson.

"He appeared to be most anxious that we obtain these raw materials rather than the possibility of Mr. Leir's getting them and continuing in the vanadium business.

"We had an interesting discussion concerning low copper grained aluminum which they had produced and released with necessary priority approval, and I therefore turned him over to our purchasing department with regard to this item."

Q. Now, Mr. Bayer, do you know what association if any [1473] was had the purchasing department of the Vanadium Corporation in connection with this matter?

(Testimony of William R. Bayer.)

A. Well, about the grained aluminum——

Q. Yes.

A. No, I do not. We did not produce grained aluminum at that time. During that time we did sell them, sell Vanadium Corporation, some dioxidizing ingots but not grained aluminum.

Q. There was a mistake then in the name of the aluminum? A. I don't know.

Q. But it was right at this time that you sold them this product, wasn't it?

A. I don't know if that is the date. In that general period.

Q. And prior to t s time you did not sell them that product, did you? A. No.

Q. This was the first sale you made to them of that product?

A. It was after that contact.

Q. And how long did you continue selling them after this contact, as you call it?

A. A very short time.

Q. Well, how long is a "short time"?

A. I don't think it was during that year or shortly after——

Q. You sold them for a year? [1474]

A. I don't think it was even a year.

Q. All right, do you know how long?

A. It was less than a year.

Q. Do you know what quantities did you sell them?

A. Very small quantities. I think our total sales to Vanadium Corporation before we took over Na-

(Testimony of William R. Bayer.)

tional was roughly in a max of about 150 to 200 thousand pounds over a period of something like six or seven months.

Q. All right. So you sold them then up to 200 thousand pounds?

A. Over six or seven months.

Q. Over six or seven months after April of 1942? A. That is correct.

Q. And what was the price of this material?

A. About 13½ cents a pound. It was OPA ceiling price.

Q. OPA maximum? A. That's right.

The Court: Well, after you operated for this 90 days maximum operation, that is when you disposed of the property?

A. Well, the only property we actually disposed of, your Honor, was the magnasite, which was this refractory from which we built the crucibles; the other equipment we found we could not dispose of at that time, and I could not trace—I tried to a few days before I came here. [1475] I know a lot of it we abandoned and took a tax writeoff, tax loss on abandonment.

The Court: Did you offer to sell it to Mr. Leir?

A. Yes, we tried to sell it to Mr. Leir, and in fact, I believe Mr. Leir tried to sell it for us.

In other words, there is some correspondence floating around.——

The Court: Was he able to buy it himself or for some client of his?

A. He did not care to buy it himself, evidently,

(Testimony of William R. Bayer.)

because we did offer it to him but he tried to sell it to—— I know there was a jaw-crusher which was the principal piece of equipment from the point of view of cost, of single cost equipment, and I know he had somebody in New Mexico he was trying to sell it to, and a couple of others, but I know—— But what I have reviewed, we were not able to effect a sale. This extended for a period at least into the late fall of that year.

The Court: Then how did you finally dispose of this equipment?

A. Well, I said a lot of it I know we abandoned, just let it go by default, we couldn't get rid of it, and we took a—in the year 1943, I believe, we took a tax writeoff as abandoning it for the remaining value on our books.

Q. (By Mr. Alioto): Did not Mr. Leir at the [1476] time suggest that you not sell any equipment and simply keep it stored in the plant so as to go back into production when things may not have been so hard?

A. I think there was such a suggestion made.

Q. Yes. And you declined that suggestion because you had promised the Vanadium Corporation of America that you would stay out of the vanadium business permanently, isn't that a fact?

A. No.

Mr. Holland: I object, your Honor. There are two letters in evidence which specifically state, and I read them this morning, what happened in that respect.

(Testimony of William R. Bayer.)

Mr. Alioto: This is cross-examination, if your Honor please.

The Court: I understand, but your question is leading and suggestive.

Mr. Alioto: I thought I could do that on cross-examination, if your Honor please. You certainly permitted defense counsel.

The Court: Yes, on what the witness testified to, you can do that, you can lead that much.

Go ahead.

Mr. Alioto: That is what I thought I was doing.

Q. Isn't it that fact that you did promise the Vanadium Corporation of America to go out of the vanadium business permanently? [1477]

A. No, we never made that promise.

Q. Didn't Mr. Christiansen tell them that, that they were going out of the business permanently?

A. I have no information as to what he told them other than the memo which Mr. Laub apparently wrote as a recollection of his conversation with Mr. Christiansen, so I don't think I am competent to testify as to that.

Q. All right, sir. I think that's right.

Now then, where it states that "He appeared to be most anxious that we obtain these raw materials rather than the possibility of Mr. Leir's getting them and continuing in the vanadium business," do you recall a conversation with Mr. Christiansen at this time, seeking to elicit information from you as to the status of your raw materials contracts with Nisley and Wilson and Shattuck?

(Testimony of William R. Bayer.)

A. No, I do not. And, as I pointed out before, that is contrary to the actions that I was taking at that time in trying to facilitate the turning over —in fact, I was even filing the priority forms for Mr. Leir at that time so he could get the right to receive this material, so it seems very much contrary to what we were doing.

Q. Well, did you folks in fact tell the Vanadium Corporation of America what your sources of supply were?

A. I have no knowledge of what Mr. Christiansen did in [1478] his conversation, as I said, with Mr. Laub. But I know there was no, to my knowledge, no communication with Vanadium Corporation, to my knowledge.

Q. You mean other than by Mr. Christiansen?

A. Other than this memo, which is Mr. Laub's recollection of his conversation.

Q. And Christiansen was your vice-president?

A. That is correct. I say, that's the only fact I know about it, is this memo of Mr. Laub's, so, as I said before, I don't feel I am competent to testify.

Q. Mr. Christiansen is living, isn't he?

A. Yes.

Q. Mr. Lippa is living and Mr. Singer is living; they are all living?

A. That's right, they are all living.

Q. Where's Mr. Christiansen living now, incidentally?

A. I do not know. He is not connected with our company.

(Testimony of William R. Bayer.)

Q. Mr. Lippa and Mr. Singer are, however?

A. That is correct.

Q. Now then, would Mr. Christiansen in the normal course of his duties have known about your raw material contracts?

A. In the normal course of his duties he would not have been concerned with our raw material contracts.

Q. So he had to get that information from——

A. Wait a minute, let me finish, please. [1479]

Q. Go right ahead, sir.

A. But being a small company, my office was here, his office was there, we ate lunch at one table, everything was open, he would in conversations and discussions around the place he picked up or knew a lot of information or bits of information about the various things doing.

Q. Did Mr. Christiansen ever tell you that he wanted some information about your suppliers to give to the Vanadium Corporation of America?

A. I imagine that if he gave—I mean, I don't recollect directly—at least, it's one year ago or more——

Q. Yes.

A.——but if he gave a list of things that we had to sell to Vanadium Corporation, I am certain that I was the source to get it from, so I would assume that I prepared any list that he may have turned over to Vanadium Corporation.

Q. Including a list of your raw materials, is that correct?

(Testimony of William R. Bayer.)

A. If there was such a list given of raw materials which we wanted to dispose of.

Q. Well, there is a statement here made that you had approximately 50,000 pounds of vanadium oxide. Would Mr. Christiansen have gotten that from you?

A. He would have gotten that information from me.

Q. He would have received it from you? [1480]

A. That's right.

Q. Now, if at the time he received it from you, did he tell you that he wanted to pass it on to V.C.A.?

A. I said he would have received it from me because I was the source to get it. I did not say that I recall giving it to him, so I cannot recall what you are talking about, because, as I said, it was—that was '42 and this is '58——

Q. I understand that, sir.

Now, was it true that in 1942 you consulted your attorneys with respect to your contract, the Apex contract, to produce ferro-vanadium?

A. In 1942 and in other years, yes, right along there.

Q. But this statement that you had consulted your attorneys——

A. I mean, if——

Q. That statement was true, wasn't it?

A. Read the statement.

Q. The statement is this, "Upon referring the

(Testimony of William R. Bayer.)

matter to their counsel, Apex were advised that Mr. Leir had a strong case against them."

A. We weren't advised that he had a strong case. We were advised that——

Let me start this way. I have been with the company 21 years. Outside of my testimony in this case, I have never been in court in conjunction—or, the company has [1481] never had a law case. Our counsel's philosophy is: Stay out of court; don't do things that lead to a law case. And their advise was: You're better off producing for a couple of months and make a settlement than dragging it through a law court.

Q. Mr. Leir——

A. And Mr. Leir had threatened in some of the conversations to hold us to the contract and sue.

Q. Did he say "sue" or simply "to hold you to the contract"?

A. Hold us to the contract, and our attorneys advised us we are better off if we can make a settlement, to do it.

Q. Actually Mr. Leir didn't sue you, did he?

A. No, he never did.

Q. When was it that you finished setting up your plant for the production of ferro-vanadium?

A. Explain that question.

Q. Before I leave that subject, let me withdraw that question, first of all.

Do you have in your folder any correspondence with the Vanadium Corporation of America con-

(Testimony of William R. Bayer.)

cerning the sale of magnasite brick from which you made your crucibles? A. No, I do not.

Q. Do you have any invoices or anything like that?

A. No. My correspondence—let me qualify this again, and I don't know if I am treading on wrong ground here or not. [1482]

Q. If you are, there will be plenty of objections, don't worry about it.

A. But back in about 1944 the Department of Justice came in and went over our files, extracted some papers, and from then on God knows where half our files are.

Q. Well, you have looked for it?

A. So I have searched—— What I did before I came here, I searched the very sketchy files I had in my office, the balance of files, which I believe is the only part of the files that I turned over to the Department of Justice back in '44 or '46 which came to my office, and I shipped out to San Francisco, for the benefit of you and Mr. Holland—I shipped to Mr. Holland with the understanding you were to both go through and get any information. Those files were a jumbled mess. I didn't actually have the time to look at them. Then in the last week or so—I essentially have here a file that I had that covered contract negotiations with Mr. Leir, my priority applications—in other words, discussing with the War Production Board on priorities, and some accounting schedules that I had

(Testimony of William R. Bayer.)

in my accounting files, and I went over my accounting schedules for some of those years.

Q. Well, do you have any actual applications to the War Production Board?

A. I have those all here. [1483]

Q. May I see those, please?

A. Oh, absolutely.

Q. In connection with the examination this morning.

A. Oh, absolutely. I brought everything I thought would be pertinent.

Q. Thanks.

A. Let's see (witness examining documents).

(Handing counsel.) I have more to come. Here (handing counsel). You want to take a look at this? I have got more to come (examining documents).

(Handing counsel.) There is another one.

Q. Let's see that.

A. Here's another one. I have some more correspondence. You want to see that (handing counsel)—you're welcome to that, too. Those, I think, were the priority applications.

Q. Yes.

A. January, February——

Q. These are the priority applications that you processed with the government and went right through, is that correct?

A. Why, you say "went right through," what do you mean by that?

Q. You eventually——

(Testimony of William R. Bayer.)

A. Eventually we got those requests granted. That has our inventories, statistics, our receipts and so on, and from that—that's the only source I had to build up any information [1484] as to what we received, produced and sold on.

Q. Now, do you have with you any accounting schedule that shows how much you spent in putting in the equipment in the plant in 1939?

A. No, I do not have.

Q. Can you estimate for us how much you spent in putting in the equipment to produce ferro-vanadium?

A. I don't want to be held to this figure, but my estimation—and there I am not counting our building which existed, or our building changes—was some place in the vicinity between 30 and 40 thousand dollars, but that is an estimate.

Q. You did produce a good quality ferro-vanadium, didn't you?

A. I don't think I am competent to testify as to that. I know that we had repeat orders from some customers.

Q. In other words, the steel companies continued to buy your ferro-vanadium after the first orders?

A. We had a number of orders from two or three companies.

Q. Now, then, as a matter of fact——

A. Let me put it this way: There was limited distribution among two or three companies.

Q. As a matter of fact, you applied to the government for a letter stating that your vanadium

(Testimony of William R. Bayer.)

was of sufficiently good quality to be sold to the military service and you got such a letter, didn't you? [1485]

A. Not to my recollection.

Q. You don't know anything about that letter from the Navy Department?

A. No, I do not. So you probably know more about my files than I do at this moment.

The Court: How long did you produce ferro-vanadium after you started?

A. We started, according to my notes here—our first commercial production—we had run for about a year in the laboratory production, trying to learn the best way of making it, but our first commercial production was in April, 1940, and we discontinued production some time in March, 1942. So that's roughly two years.

The Court: Was it profitable those two years?

A. No, it was not. We lost money as per the accounting schedule that I have here with me.

Q. (By Mr. Alioto): Didn't you make money in 1942? Didn't you begin to make money in 1942, sir?

A. This accounting schedule shows there was a profit from January 1, to April 30, 1942, of $2,842.

Q. That is when you went out of business.

A. Yes, partly. I would say that was essentially not in the production of ferro-vanadium, but in the sale of vanadium pentoxide as Van-Ex. In other words, we did not make any profit out

(Testimony of William R. Bayer.)

of the manufacturing operation. We merely bought something and sold it at a higher price.

Q. In that connection would you be good enough to tell us how many pounds were handled in the 1942 period when you made that profit?

A. Yes, I will be glad to. I can't tell you the division between ferro-vanadium and Van-Ex.

Q. I might say, sir, the accounting schedule you hold in your hand we have in evidence. It is already in this case. A. O.K.

Q. But can you tell us what you purchased?

A. If you will have one minute of patience.

Q. I certainly shall.

A. I have it some place here.

In 1942, between January 1st and April 30th, we used 98,112 pounds of V_2O_5. Now, the amount that went into ferro-vanadium and the amount that was re-shipped as Van-Ex, as is, I have no breakdown between those two. But the quantity was 98,112 pounds of vanadic oxide that was available to us and used. And we also had 1,134 pounds of ferro-vanadium in inventory on January 1st that was shipped between then and April 30th.

Q. May I see the figures you have?

A. Right here. This is just the work sheet that I have abstracted from these various documents which I gave you. I was just trying to summarize this information.

Q. (By the Court): The year 1941 you say you lost money?

A. We did, sir. This is the statement of net

(Testimony of William R. Bayer.)

receipts—parenthesis, net receipts—as defined in our contract with Brougnod, with the French concern of the thermit department, as certified by Alexander Grant and Company, certified public accountants, which shows that for the period July 1, 1938 to April 30, 1942 we lost $8,420.60.

In the year 1941 we lost $538.24.

In the four months of 1942 we made $2,842.

And in the period July 1, 1938, which is the original contract date, I imagine, through December 31, 1940, we lost $10,725.01.

Q. (By Mr. Alioto): You actually did not start producing until April of [1488] 1940.

A. April of 1940.

Q. Yes.

A. But during that time, subsequent to that, we were attempting to produce, attempting to learn how to produce, and unfortunately, because of Mr. Hitler, we apparently did not get the technical help that we had expected in 1938 to set us up into production. Remmeber, in 1939 the war started.

Q. That was September, 1939, that the war started. A. That is right.

Q. You did not lose contact with the French until June, 1940, did you?

A. But we never did get any technical help from them.

Q. You ultimately produced a ferro-vanadium that was a satisfactory product.

A. That is right. But we had to learn how to

(Testimony of William R. Bayer.)

produce that by our own experiments, rather than by having somebody who had prior knowledge come over and tell us how to do it.

Q. In connection with the statement of your corporation on December 13, 1941, to the Defense Plant Corporation,——

And I see again, if your Honor please, the document from which the witness is reading is in evidence, so that is part of the record in this case.

A. What is it you said?

Q. I say, in connection with the statement of your [1489] corporation on December 13, 1941, to the Defense Plant Corporation, saying:

"Our plant for the production of ferro alloys was built in 1939, and since then we have been producing an excellent quality of ferro-vanadium which has been well received; however, we cannot make use of all our production facilities due to the lack of raw material, which is fused vanadium oxide,——"

on the assumption, Mr. Bayer, that you had been able to make use of your production facilities, and that you did not have a lack of raw material, as you have called it here, do you think you would have made a profit in 1940, 1941, and 1942?

A. 1940, 1941, and 1942?

Q. You have produced to your capacity?

A. No.

Q. Why not?

A. Because during the period of 1940 we had available to us very adequate supplies of raw

(Testimony of William R. Bayer.)

material. In fact, so adequate that Mr. Leir was exporting quantities of it that we could not use in our plant. But we still had not solved, even though we had made our first production in April of 1940, we had not solved our production difficulties. We still did not——

Q. (By the Court): When did you solve them?

A. I don't think we solved our production difficulties until sometime late in 1941, what you might call completely solved them. But in 1940 we didn't start in real production.

Did you take that production sheet that I showed you, those statistics, or did I put those back? That little work sheet of mine.

Q. (By Mr. Alioto): This one?

A. No: that little 8½ by 11 sheet. It went further than I thought.

We produced in 1940 only 26,000 pounds of ferro-vanadium.

In 1941 we produced 94,000.

Now, we were not held down to 26,000 pounds in 1940 because of lack of available supply. We had not solved our production problems. I believe it was only in the last few months that we produced to any great effect, that we had any steady production.

Q. Didn't you, in 1940, make a request to the Vanadium Corporation of America to give you a regular supply of vanadium pentoxide?

A. I don't know offhand right now.

(Testimony of William R. Bayer.)

Q. I will show it to you so there will be no question about it.

A. I am not arguing with you. [1491]

Mr. Holland: I think he already testified.

Mr. Alioto: I know he did. But now he has just said he had plenty of it.

The Witness: I said there were available supplies.

Mr. Archer: He said Mr. Leir was re-selling it abroad.

Q. (By the Court): That is when you stated you sent out letters to these various companies?

A. No, that was sent out in 1938, when we sent that broad mailing list letters.

Q. (By Mr. Alioto): You sent one in 1940 to the Vanadium Corporation of America. Were you just playing games with them, or did you mean it?

A. I couldn't tell you at the moment.

Mr. Alioto: May I have Exhibit 63, please?

This letter is dated March 11, 1940, to the Vanadium Corporation of America (reading):

"Please be good enough to let us have your very best price on quantity lots of vanadium pentoxide crushed to one-quarter inch and under. We desire this material for domestic consumption. Your immediate response would be very much appreciated."

And they don't answer the letter. [1492]

Q. (By Mr. Alioto): And you write again and say (reading):

"We enclose copy of a letter written to you on

(Testimony of William R. Bayer.)

March 11th to which we do not seem to have received a reply. This may have been overlooked, and we would appreciate hearing from you."

Signed by Mr. Lippa.

Finally, on April 20, 1940 (reading):

"In response to your letter of April 8th enclosing copy of your letter of March 11th, which apparently went astray, would advise our position is such that we have no material to offer you at the present time."

Now, do you recall making this request for supplies from the Vanadium Corporation of America?

A. I don't recall, but now that I see the letters, evidently we did.

Q. Did you also——

The Court: Let him answer the question.

Q. (By Mr. Alioto): Go ahead, sir.

A. He asked me a little sarcastic question before—were we playing games? I don't call this playing a game. We wrote a letter, evidently, to the Vanadium Corporation. Remember, as I said, there were supplies. We never enter into [1493] any long term contracts.

Now, I am in the aluminum business. Whether there is adequate, short supplies, or otherwise, of aluminum, we buy from 2,000 sources a year, 3,000 sources. If there are 1,000 sources making vanadium, or tin, we like to be buying from all of them; we don't like to be tied down to a source.

So in the same manner, if at this time, even though we were buying from a source, or two

(Testimony of William R. Bayer.)

sources—say three sources—here is another source. We would contact them to find out if they had material available, and at what price.

Remember, at the same time that this letter was written we were having difficulty, as I said, in making up the proper mix to get optimum recovery, for to our knowledge we wanted to find out—and I am taking Vanadium Corporation as any one company—or it might be Jones Company—had a source which would give us ferro-vanadium, which would give us better recoveries. We were stumbling in the dark in this business. So I didn't like your inference.

Q. Well, then you tell us, so we can get this subject covered finally, in your letter to the government in December, 1941, when you say, "We cannot make use of all our production facilities due to the lack of raw materials," would you tell us to what period of time that refers? You wrote that letter, didn't you, which is Plaintiffs' Exhibit 144 in evidence?

A. I saw some of this. This letter was written, as I [1494] see from here, at the suggestion of Mr. Leir.

Q. Yes, I think we have already established that.

A. And as I understand, the Defense Plant Corporation was setting up a new plant for the future in Monticello.

Q. Yes.

A. And it was our — Mr. Leir's suggestion,

(Testimony of William R. Bayer.)

which we followed then, to make application for the future to get some material from that plant.

Q. Yes.

A. Now, the figures here——

Q. You did write that top letter to the government, didn't you, Mr. Bayer? Is that established in this record?

The Court: He covered all of that this morning, didn't he?

Mr. Holland: Yes, he did.

The Court: He got a form letter from Mr. Leir, and he prepared the letter. He didn't follow it exactly.

The Witness: We modified that letter.

Q. (By Mr. Alioto): Yes. Now, my question is, when you made the statement there that you could not operate for lack of the raw materials, to what period of time were you referring?

A. This does not state to what period of time, and I couldn't testify today what period of time. This seems to be a very broad type of statement which you would write to create [1495] an interest at this time.

Q. You mean the statement was not true when you wrote it?

A. I didn't say it, sir. I said it is a broad statement.

Q. Well, broad or not, was it true or wasn't it? You wrote the letter. Was it true or wasn't it?

A. It was true at times. I have told you that before.

(Testimony of William R. Bayer.)

Q. (By the Court): What time was it now?

A. There were periods when we didn't have—when we had to close down. We had an irregular supply of ferro-vanadium. We never built up—we tried to regulate our purchases in accordance with the orders we received, so that we would not at any time have substantial quantities of ore and no sales orders. We never did receive enough backlog of sales orders to enable us to buy large quantities and stockpile ore. Therefore, most times we were not dependent on receiving ore every week, or every two weeks, or every month, to keep on running. Now, when any of our sources—we had three or four—for various reasons—and I am familiar with one—Shattuck broke down for awhile; something happened to their production—and we didn't get this continuity of shipment, and we were in trouble. If we had had enough orders on hand to enable us to build up a stockpile of raw material to keep a balanced position, we then could be able to continue and face any sudden cut-off because of trouble on our suppliers' [1496] parts.

Q. During this period was there available vanadium oxide that you could have purchased had you done so?

A. Well, yes, because we did—or, let me say Continental Ore did buy through us substantial quantities of vanadium oxide throughout this period which they exported.

Q. (By Mr. Alioto): In 1941 they exported?

A. I didn't say in 1941. I said throughout this

(Testimony of William R. Bayer.)

period. I am talking of the period of operations from which a stockpile could have been built up.

Q. Wasn't the export ban in July, 1940?

A. I can't tell you the date.

Q. What is the date of the letter you are reading?

A. What period of time are we talking about?

Q. (By the Court): We are talking about the period you were operating under this contract with Mr. Leir.

A. That is the period 1938 to 1942. During that period there was vanadium oxide available to us that we did not purchase, but exported.

Q. (By Mr. Alioto): In connection with that letter, so we can get this record clear, where you say you could not operate to capacity because of a lack of raw materials, what did you mean by that? [1497]

The Court: He has explained that. It is clear to the Court, and I think to the jury.

Q. (By Mr. Alioto): All right, let me ask this, then: In connection with your letter of December 26, 1941, to the Office of Production Management, you say at that time (reading):

"Our capacity for the production of this material is about 50,000 to 60,000 pounds of V contained per month, but at the present time we are producing only a fraction of this capacity due to lack of raw material."

Was that statement true when you made it? The present time being December 26, 1941.

(Testimony of William R. Bayer.)

A. To my knowledge on December 26, 1941, we were not in production at all, because we were just rebuilding our plant on that date—still rebuilding our plant after the fire.

Q. Yes. But in that letter will you tell us, then, what you mean "at the present time," when you write a letter in December, 1941, when you say "at the present time we are not operating at capacity because of a shortage of raw material"?

A. At the present time—I am talking of this general period.

Q. 1941? A. At this present period.

Q. 1941? [1498]

A. Two months, three months, four months, I don't know; "at the present time"—we were talking here about a plant—to get material for a plant which was going to have future operations. So we are talking about not a date, not today, but about a distant date, and at the same time we are talking about a broad "present time."

Q. In that broad present time there was a lack of the raw material, is that correct?

A. That is correct.

Q. Finally, do you recall there was a time when your company objected to Mr. Leir selling ferrovanadium below the price of the Vanadium Corporation of America? A. No, I do not.

Q. Did you participate in any negotiations inside your company, or with Mr. Leir, in respect to that matter?

A. Not to my knowledge. I know we objected

(Testimony of William R. Bayer.)

to selling vanadium, ferro-vanadium, at prices which would not give us sufficient profit margin.

Q. Don't you recall exacting from Mr. Leir a promise that he would not sell below the Vanadium Corporation of America price?

A. No, I do not.

Mr. Alioto: We have no further questions, if your Honor please.

The Court: We will recess at this time.

(Short recess.) [1499]

Q. (By Mr. Holland): Mr. Bayer, I hand you a letter from Apex Smelting Company to Vanadium Corporation dated April 23, 1942, to which is attached a list of equipment, and ask you if you can identify it.

A. This is a list of equipment that we did have in the ferro department.

Q. With prices?

A. With prices, yes.

Mr. Alioto: No objection.

Mr. Holland: Offer this as Defendants' Exhibit next in order.

(Letter, April 23, 1942, Apex to Vanadium Corporation, with enclosure, received in evidence and marked Defendant V Exhibit 2-H.) [See Book of Exhibits.]

Mr. Holland: This is a letter of April 23, 1942, from Apex Smelting to Vanadium Corporation, and says:

"Gentlemen:

"In accordance with conversation which our Mr.

(Testimony of William R. Bayer.)

Christiansen had with you we are pleased to enclose an equipment inventory of our ferro-alloy department which we desire to sell. This list does not include all the equipment used in that department since we find use for the rest of it in our aluminum production. We would appreciate very much if you will advise us by return mail whether this will be of any interest to you. [1500] We are greatly in need of the space and therefore are anxious to move these items as quickly as possible.

"Incidentally, if your Chicago office would like to inspect this material, we want you to know that you are welcome to do so."

And attached is a list of eight items of equipment with new values placed opposite.

Q. Mr. Bayer, is this the equipment that was first offered to Mr. Leir and which he refused to buy or did not wish to buy?

A. I can't say offhand.

Q. And this is the equipment that you had for sale from your ferro department?

A. That is right, and undoubtedly that is the equipment we discussed with Mr. Leir. Mr. Leir, knowing our plant and our equipment, was familiar with the equipment and what we had there.

Q. And there was in evidence this morning an exchange of correspondence in which Mr. Leir asked you to store it for him and you said you didn't have the space? A. Yes.

Q. And at that time he said he didn't wish to buy it, is that not correct?

(Testimony of William R. Bayer.)

A. That is my memory now.

Q. And I believe you testified that the Vanadium Corporation bought none of this equipment and that you were unable to sell it subsequently through Mr. Leir, is that correct? [1501]

A. That is correct.

Q. On cross-examination there was considerable discussion about whether you had enough oxide to operate your plant at full capacity.

Generally speaking, Mr. Bayer, did you have enough oxide during this period to fill the orders which you received through Mr. Leir for ferro-vanadium and other vanadium products?

A. I know of no particular orders that we turned down, unless they were orders for immediate shipment, because of lack of materials.

Q. Do you recall any orders you received which you were unable to fill?

A. Not that I recall.

Q. At the time that you made the decision to go out of business did you have enough raw material on hand to fill all existing orders?

A. Yes, exactly.

Q. Were the reasons that determined you to go out of business the reasons that you stated in your direct testimony this morning?

A. The reasons?

Q. Yes, the reasons set forth in your letter of June 2nd.

A. The reasons set forth in our letter of June

(Testimony of William R. Bayer.)

2nd, plus possibly two other reasons not set forth in that letter.

Q. What are they? [1502]

A. Would be that the space was required, was much more valuable to us for aluminum operations than for ferro-alloy operations, and that the ferro-alloy department had been taking an awful lot of our time, too much a proportion of our time commensurate with the return to the company. In other words, accounting for a very small percentage of our sales in our operation, yet we were devoting an awful lot of executive time to it.

Mr. Holland: That is all.

Cross-Examination

Q. (By Mr. Archer): I don't know whether I understood your testimony correctly this morning or not, but did you say that Apex Smelting Company had made an oral request for vanadium oxide to Electromet?

A. I don't believe I said that. I wouldn't have the competency to testify to that.

Q. Well, so far as you know did Apex request vanadium oxide from Electromet?

A. I do not know offhand.

Recross-Examination

Q. (By Mr. Alioto): Mr. Bayer, it is a fact, is it not, that ferro-vanadium was in critical supply by 1941?

(Testimony of William R. Bayer.)

A. I believe so, from the fact that OPM took it over. [1503]

Q. Sure. You are aware of the fact that you could have sold all the ferro-vanadium you produced, aren't you?

A. At the moment, yes.

Mr. Alioto: No further questions.

(Witness excused.)

Mr. Archer: Your Honor, as my first exhibit I would like to offer the Priorities Regulation No. 1 of the Office of Production Management. I thought it would be appropriate at this time. It is dated August 27, 1941. This is one of the first priority orders and it was what was generally known as the defense order system whereby preference had to be given to defense orders. I offer that as Defendants' Exhibit next in order.

Mr. Alioto: What is the date of that?

Mr. Archer: This is from the Federal Register, and it was issued August 27, 1941, and it appears August 30, 1941.

Your Honor will recall——

Mr. Alioto: No objection.

Mr. Archer: Your Honor will recall that specifically the order which required everything to be under allocation was in December, 1941.

Mr. Alioto: We have no objection.

(Priorities Regulation No. 1, Office of Production Management, received in evidence and marked Defendant U Exhibit 5-O.)

Mr. Archer: (Reading) "Office of Production Management. Subchapter B — Priorities Division. (Priorities Regulation No. 1.) Regulations Applicable to the Operation of the Priorities System.

"The following Regulation is issued by the Director of Priorities to promote the defense of the United States and for the purpose of improving and facilitating the operation of the Priorities System."

Then there are some definitions. I will read what appear to be the pertinent ones.

"(b) 'Defense Order' means:

"(1) Any contract or order for material or equipment to be delivered to, or for the account of:

"(i) The Army or Navy of the United States, the United States Maritime Commission, the Panama Canal, the Coast and Geodetic Survey, the Coast Guard, the Civil Aeronautics Authority, the National Advisory Commission for Aeronautics, the Office of Scientific Research and Development;

"(ii) The government of any of the following countries: The United Kingdom, Canada and other Dominions, Crown Colonies and Protectorates of the British Empire——"

And so forth. Well, I guess I should read them.

"——Belgium, China, Greece, The Kingdom of the [1505] Netherlands, Norway, Poland, Russia and Yugoslavia.

"(2) Any contract or order placed by any agency of the United States Government for material or equipment to be delivered to, or for the account of, the government of any country listed above, or any

other country, including those in the Western Hemisphere, pursuant to the Act of March 11, 1941.

"(3) Any other contract or order to which the Director of Priorities assigns a preference rating of A-10 or higher."

All of these are defense orders.

"(4) Any contract or order for material or equipment required by the Person placing the same to fulfill his contracts or orders on hand, provided such material or equipment is to be physically incorporated in material or equipment to be delivered under contracts or orders included * * *" in the above definitions.

"(c) 'Material' means any commodity, equipment, accessories, parts, assemblies or products of any kind."

* * * * *

"Defense Orders for any Material, whether or not accompanied by a Preference Rating Certificate, must be accepted and fulfilled in preference to any other [1506] contracts or purchase orders for such Material, subject to the following provisions:

"(a) Defense Orders must be accepted even if acceptance will render impossible, or result in deferment of:

"(1) Deliveries under non-defense orders previously accepted, or

"(2) Deliveries under Defense Orders previously accepted bearing lower preference ratings, unless rejection is specifically permitted by the Director of Priorities;

"(b) Defense Orders need not be accepted:

"(1) Delivery on schedule thereunder would be impossible by reason of the requirements of Defense Orders previously accepted bearing higher or equal preference ratings, unless acceptance is specifically directed by the Director of Priorities;

"(2) If the Person seeking to place the Defense Order is unwilling or able to meet regularly established prices and terms of sale or payment, but there shall be no discrimination against Defense Orders in establishing such prices or terms;

"(3) If the Material ordered is not of the kind usually produced or capable of being produced by the Person to whom the Defense Order is offered;

"(4) If such Defense Orders specify deliveries within fifteen days, and if compliance with such delivery dates would require the termination before completion of a specific production schedule already commenced."

Then it provides for assignments of preference ratings, delivery schedules.

Then it says:

"When any Order of the Director of Priorities prohibits or restricts deliveries of any Material, such prohibition or restriction shall, in the absence of a contrary direction, apply to all deliveries made after the effective date of the Order, including deliveries under contracts or purchase orders accepted either prior or subsequent to the effective date of the Order. No Person shall be held liable for damages or penalties for any default under any contract or purchase order which shall result directly or indirectly from his compliance with any

rule, regulation or Order issued by the Director of Priorities."

I believe that states it in substance, your Honor.

As Defendants' next exhibit I offer the Proclamation by the President of the United States done on the 2nd day of July, 1940, regarding export controls.

Mr. Alioto: No objection.

(Proclamation, July 2, 1940, President of the United States, received in evidence and marked Defendant Union's Exhibit F-P.)

Mr. Archer: After a preamble, this Proclamation states:

"Now, therefore, I, Franklin D. Roosevelt, President of the United States of America, acting under and by virtue of the authority vested in me by the said act of Congress, do hereby proclaim that the administration of the provisions of section 6 of that act is vested in the Administrator of Export Control, who shall administer such provisions under such rules and regulations as I shall from time to time prescribe in the interest of the national defense.

"And I do hereby further proclaim that upon the recommendation of the aforesaid Administrator of Export Control, I have determined that it is necessary in the interest of the national defense that on and after July 5, 1940, the articles and materials hereinafter listed shall not be exported from the United States except when authorized in each case by a license as hereinafter provided:"

Then lists arms, ammunition, and then: [1509]

"2. The following basic materials and products containing the same:"
And the one in which we are interested in is "Vanadium."

Your Honor, I have several witnesses here in court now. If you would like to have them all sworn.

The Court: Let them all stand; all witnesses stand and be sworn.

(Witnesses sworn.)

Mr. Archer: Your Honor, we will try to keep these witnesses more or less in order among the defendants, but there will be some interspersed because most of these come from some distance and we are meeting their convenience.

Mr. Archer: As my first witness, I will call Walter Remmers.

WALTER EDWARD REMMERS

was called as a witness by the defendants, and having been previously duly sworn to tell the truth, the whole truth and nothing but the truth, testified as follows:

The Clerk: Will you state your full name?

The Witness: Walter Edward Remmers.

The Clerk: Your address?

The Witness: Wee Burn Lane, Darien, Connecticut.

Direct Examination

Q. (By Mr. Archer): Mr. Remmers, what is your present position with the Union Carbide Corporation?

(Testimony of Walter Edward Remmers.)

A. At the present time I am a vice-president of Union Carbide Corporation and trustee of Union Carbide Educational Fund.

Q. What are your present duties for the corporation?

A. My present duties are largely public relations, more particularly to the distribution of funds, of the educational fund to colleges and universities and the support of higher education.

Q. What positions did you hold with Union Carbide or its subsidiaries during the period 1938 to 1949?

A. In 1938 I was division manager of the Electro [1511] Metallurgical Sales Corporation in Chicago. In 1941 I moved to New York without title. I was not an officer, and continued as an administrative assistant, sales correspondent, and working on special assignments until 1944, at which time I became a vice-president of the Electro Metallurgical Sales Corporation.

In April of 1947 I became a vice-president of the Electro Metallurgical Company and an executive vice-president of the U. S. Vanadium Company.

In the late 1940's, the beginning of 1950, I became president of Electro Metallurgical Sales Corporation and president of the U. S. Vanadium Company.

Q. Will you give us some of your experience and training as a metallurgist prior to the time

(Testimony of Walter Edward Remmers.)

you were employed by any of the Union Carbide companies or any of its subsidiaries?

A. In formal training I did undergraduate work in metallurgy and then did graduate work also at the Missouri School of Mines and Metallurgy, some graduate work at the University of Michigan, and a limited amount in a few other places.

When I left graduate school I went to work for Washington University in St. Louis and taught in the engineering school for four years. I taught a metallurgy course that they call thermo-dynamics, which amounted to a power plants course, in the junior and senior classes, and graduate work.

I then left in the summer of 1928 and went to work for the Western Electric Company, and left there in 1936 as chief of metal manufacturing.

Q. Do you belong to any professional societies?

A. Yes, quite a few of them: The American Society for Metals, American Iron and Steel Institute, American Institute of Mining and Metallurgical Engineers, and more recently I have an honorary life membership in the American Foundry Society.

Q. In my examination, Mr. Remmers, I shall be limiting my questions to the period July 1938 to 1949, if you will bear that in mind.

First, Mr. Remmers, I show you an exhibit which has previously been marked Plaintiffs' Exhibit 42, being a letter from Mr. Leir, dated November 30th, 1943, to the Electro Metallurgical Sales Corporation, a letter from Mr. Leir dated November 17th,

(Testimony of Walter Edward Remmers.)

1943, to the Electro Metallurgical Sales Corporation regarding vanadium pentoxide, and your reply dated November 30th, 1943.

Are you the Mr. Remmers who signed the last letter there on November 30th, 1943?

A. Yes, I am. That is my letter.

Q. So we can complete the file on this, I show you now a letter dated December 2nd, 1943, to the Continental Ore Company, which apparently crossed in the mail the second letter [1513] of November 30th, 1943. Did you send the original of that?

A. Yes, I signed that one as well.

Mr. Archer: I offer the letter dated December 2, 1943, from Electro Metallurgical Sales Corporation to Continental Ore Company as our exhibit next in order.

Mr. Alioto: We have no objection to that.

(The letter referred to was thereupon received in evidence and marked Defendant U's Exhibit 5-Q.)

Mr. Archer: So that this will be fresh in our minds, I would like to read these, your Honor. They are not very long. They have already been read, but this subject matter has not been gone into with this witness.

The first is dated November 17th, 1943, from Mr. Leir to Electro Metallurgical Sales Company, re vanadium pentoxide:

"We would appreciate your offering us 10,000 to 15,000 pounds of V_2O_5 contained in fused vana-

(Testimony of Walter Edward Remmers.)

die acid per month. We would be ready to sign a contract with you for a fixed length of time."

On November 30th, Mr. Leir again writes Electro Metallurgical Sales Corporation, attention Mr. T. F. O'Heir, re vanadium pentoxide:

"We have not as yet received a reply from you to our letter of November 17th, of which we enclose a copy, since the original may have gone astray. [1514]

"We would very much appreciate hearing from you regarding this matter at your earliest convenience."

Mr. Remmers' reply was written on the same day. Apparently those crossed in the mail.

"Continental Ore Company, Attention Mr. Henry J. Leir.

"Gentlemen:

"Referring to your inquiry for fused vanadium oxide, in view of the many uncertainties prevailing at the present time, we do not feel that we should undertake supplying your regular requirements for this material.

"Very truly yours, Electro Metallurgical Sales Corporation, W. E. Remmers."

And then on December 2nd, 1943, Mr. Remmers to the Continental Ore Company, Attention Mr. Henry J. Leir:

"Gentlemen:

"Our reply to your inquiry of November 17th has undoubtedly crossed your letter of the 30th in the mail, and we trust that you have it by this time.

(Testimony of Walter Edward Remmers.)

I wish to apologize to you for the delay in answering your letter of November 17th, which has necessitated your sending a follow-up letter."

Q. Mr. Remmers, what were your reasons in November, 1943, which prompted you to state in that letter that you would [1515] not undertake supplying Continental Ore Company's regular requirements for vanadium oxide?

A. Well, there were several. In the early part of that year there was a decided shortage of vanadium. We had many contractural arrangements with steel companies working on war materials. Although there may have been some indications that the situation was easing with respect to vanadium, we did not know how long that might continue or whether there might be a right-about-face, and we felt we could not jeopardize our entered-into agreement by taking on additional commitments to supply the requirements of the Continental Ore Company.

Q. Were there any other reasons that you had at that time?

A. No. I would say that the uncertainty of the business situation at that time caused us to hesitate to enter into additional commitments.

Q. Had you sold the Continental Ore Company vanadium oxide in that year before?

A. Yes; yes, indeed. We sold them, I think it was, in April of that year.

Q. What had occurred on that occasion?

(Testimony of Walter Edward Remmers.)

A. We received an order for, as I recall, 10,000 pounds of vanadium pentoxide which, your Honor, is the same as vanadium oxide in the form of fused black, and we shipped the material and billed the material at our standard spot price at that time of $1.15 per pound contained vanadium pentoxide in [1516] the fused black. Black contained in those days about 88 percent of oxide. And we received protests, pressures and telephone calls objecting to the price of $1.15 per pound. And there was much conversation and correspondence back and forth. Continental Ore Company finally asked a bank in New York to forward a check to our accounting organization on the basis of $1.10, and after this haggling for a special price we wrote to the Continental Ore Company and told them that we would accept payment at the rate of $1.10, but in doing so we were doing it solely to close the file of correspondence and close that particular matter, and that setting the $1.10 price in this case in no way set a precedent. That was, incidentally, five cents below the ceiling price at that time.

Q. In November of 1943 did you know whether or not the Continental Ore Company had another source of supply of vanadium oxide?

A. 1943? Oh, yes, they must have had, because they had been—we encountered sales of material that they were offering.

Q. At that time the United States Vanadium Corporation was a subsidiary of Union Carbide, was it not? A. Yes.

(Testimony of Walter Edward Remmers.)

Q. And it was operating as agent for Metals Reserve, was it not?

A. That is correct. [1517]

Q. Do you know whether or not they had arranged for the production, or Metals Reserve had arranged for the production of the Nisley & Wilson mill in 1943 to be allocated to the Continental Ore Company?

A. I learned that later. I did not know that at the time. I didn't know that in 1943.

Incidentally, late in 1943 one of the other conditions about which there was some uncertainty was the fact that Metals Reserve was about to go out of business, and that was one of the other uncertain factors that caused us to hesitate in offering a contract at that time.

Q. In November, 1943,—in fact, all of 1943, the Union Carbide, or its subsidiaries, was operating three plants—a plant at Durango, Uravan, and Riffle—were they not?

A. That is correct.

Q. Do you know what operations were commenced prior to November, 1943, in those plants, or in some of them?

A. I think I would have to say all three of them commenced before that time.

Q. Had they undertaken any other contracts prior to that time for the production of vanadium oxide or other products?

A. Oh, yes; yes, indeed. We had a U. S. Army contract at that time.

Q. Of what did that call for the production?

(Testimony of Walter Edward Remmers.)

A. That contract was primarily for the production of [1518] uranium, which occurred in the same ores as vanadium.

Q. Did you also produce vanadium under that contract? A. Yes, we did.

Q. Subsequent to November, 1943, do you know whether Union Carbide ever sold vanadium products to the Continental Ore Company?

A. Yes, we did.

Q. Do you know whether or not you ever entered into contracts with them to supply their full requirements? A. Yes, we did.

Q. How soon after the termination of the Army contracts at the Rifle, Uravan and Durango plants, did you enter into contracts with the Continental Ore Company to supply them with their requirements of vanadium oxide?

A. Those dates are not too clear. The termination of the United States Army contract and the- -

Q. I think it is in evidence, the first contract with the plaintiffs is in January, 1946. And I have here what has been marked Defendants' Exhibit U-S, being an historical outline of the operations for the Army at Uravan, Durango and Grand Junction.

Mr. Alioto: I will object to that, your Honor, as leading the witness.

Q. (By Mr. Archer): I ask you whether that refreshes your recollection as [1519] to when you terminated those contracts.

Mr. Alioto: Go ahead.

A. Yes; yes, it does. This reminds me of the

(Testimony of Walter Edward Remmers.)

dates when the contracts were terminated. They were terminated in late summer and fall of 1945.

Q. (By the Court): To what contracts do you refer?

A. These are the Manhattan District contracts under which the U. S. Vanadium Corporation supplied uranium and vanadium for war purposes. Those are the original uranium contracts. There was no A.E.C. in existence at that time, and they were handled under the name of "Manhattan District."

Q. (By Mr. Archer): Did Mr. Van Fleet have anything to do with determining the sales policy of Electro Metallurgical Sales Company toward the Continental Ore Company?

A. No, no. He was in a separate organization. He was in a mining production organization and had no interest whatsoever in the sales organization.

Q. What about Mr. Burwell?

A. No, Mr. Burwell was under Mr. Van Fleet in the mining company, and so he would have less to do with the question of sales.

Q. Mr. Burwell has testified that at this time he had heard from Mr. Van Fleet that it was your purpose or policy to put the Continental Ore Company out of business in [1520] November, 1943. Was this your purpose or policy at that time, or at any other time?

A. Indeed not. In the fall of 1943 it was our program to produce all the vanadium that we could —supply all of the contractual commitments that

(Testimony of Walter Edward Remmers.)

we had to those steel companies that were producing armament, munitions, and so on.

Q. Mr. Burwell, in his testimony, referred to the following persons: Mr. O'Shea, Mr. Gormely, Mr. Haggerson, Mr. Rafferty, and Mr. Van Fleet. Are any of these persons still alive?

A. Will you please repeat those?

Q. O'Shea? A. O'Shea, Gormely,——

Q. Gormely, Haggerson,——

A. Haggerson, Rafferty,——

Q. Rafferty, Van Fleet.

A. Rafferty, Van Fleet. No, they are all deceased.

Q. There is a letter in evidence that was addressed to Mr. *Roser*. Do you recall when he died?

A. Oh, yes, very definitely. I came to work under Mr. Roser in New York. Mr. Roser died early in 1942, or very late in 1941, not more than a few months after I arrived in New York.

Q. In the period involved in this litigation were you aware of any agreement on the part of Union Carbide Corporation [1521] or its subsidiaries on the one hand and Vanadium Corporation of America on the other to set the price at which vanadium oxide, ferro-vanadium, or vanadium-bearing ore, or any of them, would be purchased or sold to others?

A. Definitely not.

Q. Were you aware of any agreement between Union Carbide Corporation and its subsidiaries on the one hand and Vanadium Corporation of Amer-

(Testimony of Walter Edward Remmers.)

ica on the other hand to refuse to sell to each other's customers?

A. Definitely not. I do not know of any such agreement.

Q. Did you ever instruct anyone not to sell to the Crucible Steel Company during the period 1938 to 1941? A. No, I did not.

Q. Mr. Burwell has testified that in 1940 he arranged a sale of red cake to Vitro Chemical Company, or the Vitro Company, Vitro Manufacturing Company, and that in 1940 he was told by Mr. Dutot that he, Mr. Dutot, wasn't selling to Vitro because Vitro was a V.C.A. customer. Were you familiar with the Vitro Chemical Company?

A. Yes, I know of Vitro, Vitro Manufacturing, of Pittsburgh. [1522]

Q. Do you know what position Mr. Dutot had in 1940?

A. Yes. In 1940 Mr. Dutot was Division Manager of Pittsburgh sales.

Q. Now I show you what has been marked Plaintiff's Exhibit 16, which is the list of purchases of vanadium products to Union Carbide. I invite your attention to Vitro Manufacturing Company. You will notice there are asterisks in the years in which purchases were made. It is a list of sales. Would you indicate the years in which sales were made to Vitro?

A. Sales were made to Vitro Manufacturing in 1938, 1939, in 1940——

Q. Well—— A. ——in 1944.

(Testimony of Walter Edward Remmers.)

Q. Have you had occasion to check to see whether those sales included sales of red cake?

A. Yes, I have.

Q. I show you now a document and ask you whether you can identify that document.

A. Yes, I recognize this document as a page out of a summary that we kept in the Sales Department of sales to individual companies. For each company there was a sheet. This happens to be the sheet that covered the sales to Vitro Manufacturing Company.

Q. Would you indicate what that shows for sales to Vitro in the years 1938, 1939 and 1940?

A. In 1938 it shows a sale of $9,388 for four and one-half—in fact, back in these days they were long tons—four and one-half long tons.

Q. Of what?

A. Of red cake. Red cake is the intermediate form of vanadium pentoxide contained about 86% of the actual oxide.

In 1939 sales of $71,811 for thirty-five long tons.

In 1940 $83,004 for forty and one-half long tons.

In 1944—it goes on down——

Q. Well, that's sufficient——

A. ——for each year thereafter——

Q. So, according to the records of Electro Metallurgical Sales Corporation, you sold red cake to Vitro in 1938 and 1939 as well as in 1940?

A. That's correct.

Q. What is ferro-vanadium used for, Mr. Remmers, if you would be so kind to tell us?

(Testimony of Walter Edward Remmers.)

A. Ferro-vanadium is used only exclusively in the steel industry. A portion of it, a susbtantial portion, goes into tool steels, principally to high speed the tool steels, and the other large use is in the engineering steels, steels for which there are definite physical properties specified by the purchaser.

Q. And by engineering steels, are they sometimes called constructional alloy steels?

A. Yes, constructional alloy steels. They are known by [1524] several names of that type.

Q. Well, now, does all the steel that is produced have vanadium in it?

A. Oh, no. No, none of the steel that we normally would see, oh, in a structure, a building going up, that type of structural steel contains no vanadium. Vanadium is only used in the very limited production of tool steels. Those are cutting tools used principally in the metal working industry, and in these heat treatable engineering steels.

Q. Well, during the period 1938 to 1949 approximately how many significant customers for vanadium products did Electro Metallurgical Sales have?

A. They varied. They varied quite a little over the years. Prior to the war, and the year or two prior to the war, we had probably forty to sixty customers. Then beginning in 1941 the number of customers reached a peak of 123 or 125. And it has tapered off since then, so that we were selling for the period thereafter about 55 to 65 customers,

(Testimony of Walter Edward Remmers.)

largely steel companies, although there were about three or four chemical companies who bought materials from us as well.

Q. Would you describe the sales efforts of which you had knowledge which were made by Electro Metallurgical Sales in regard to vanadium products during the period 1938 to 1949 and what competition you met in this regard?

A. Well, the obvious sales effort is to call on the [1525] purchasing agent and ask him for the business. That was the first effort. We changed specifications, hoping that we might have some advantage over our competition. It was of only limited value. Some did buy it.

We ran into competition that was rather vigorous. First of all, our competitor, the Vanadium Corporation of America, had been in business long before we had, in the business of manufacturing and selling ferro-vanadium. They even had an advantage namewise. If they got up to where the going was tough, they seemed to remind the purchaser that after all they were the Vanadium Corporation of America, and that made it a little rough going for us. They came out in about '38 or '39 with a handbook on the use of vanadium in steel, a book about, oh, 5/8ths, 3/4 of an inch thick. It was a well prepared and very scholarly textbook on the use of vanadium in steel. They distributed that not only to their own customers but they distributed that to our customers as well.

Then there was a policy on the part of many

(Testimony of Walter Edward Remmers.)

steel companies, and there still is, to divide their business. In other words, they do not wish to align themselves with only one source of supply in the event of many emergencies. Any one of several emergencies could arise, transportation interruptions, storms, power interruptions, strikes, and so on. So, inasmuch as our line of ferro-alloys—not only ferro-alloys but a number of other things that we supply to the steel industry, electrodes and oxygen, the steel companies, in an attempt to divide their purchases and stay in the good graces with all the ferro-alloy suppliers, very frequently would place with the Vanadium Corporation those materials that they could get there, such as vanadium, and place with us the products that Vanadium Corporation did not make. We made a number of them that Vanadium Corporation did not produce.

Q. Did Electromet have warehouses established?

A. That was another move that we made in an attempt to get a jump ahead of our competition; we established warehouses in various locations around the country in order to give the customer a little more prompt delivery, a little more prompt service. We established those in Chicago and elsewhere. We actually moved vanadium from plants in which we did make it and stocked it in locations where we did not make it, in order to provide prompt delivery.

Q. Did Electromet have a service department?

A. Oh, yes, we had quite an extensive service department of technical people who were spending

(Testimony of Walter Edward Remmers.)

full time in melting departments of the various steel companies working with them in the manufacture of steel.

Q. What training did these men have?

A. Well, these men were all technically trained in metallurgy or engineering, in comparable fields. They were all experienced; some were quite expert in their fields. We also [1527] through this service department conducted quite a campaign of advertising of vanadium, vanadium products, and promoting not only with the steelmakers but with the users of steel, trying to encourage them to specify vanadium steels for their particular purposes.

Q. Well, from that aspect what effect did the users of steel have upon the consumption of vanadium—withdraw that.

You don't sell, then, your ferro-vanadium directly to the ultimate user of the vanadium product, I take it?

A. We sell ferro-vanadium and relatively small amounts of black oxide that have been used at times to the steelmaker, directly to the steelmaker. The steelmaker in turn sells his product to the consumer, the automotive industry, for cutting tools, things of that nature. So although we advertised it in the secondary market, we attempted to have people use vanadium steels, we have no direct sales to what we call the secondary market, the users of steel.

Q. And which is the secondary market, the automobile companies, and so forth?

A. The automobile industry, the aircraft com-

(Testimony of Walter Edward Remmers.)

panies; during the period that you speak about very substantial amount of it went into armament and ordnance for defense purposes.

Q. From your experience as a metallurgist and in the vanadium business would you describe some of the problems a newcomer would have had in the vanadium business during the [1528] period 1938 to 1949?

Mr. Alioto: That is objected to, if your Honor please, as calling for the opinion and conclusion of the witness, who didn't try to break into it as a new business.

The Court: Read the question.

(Pending question read back by reporter.)

The Court: Overruled. You can answer, if you know.

The Witness: There are a number of obstacles that a newcomer would have to overcome. Number one is a very substantial investment in milling, that is, the mill that would convert the raw ore as it is dug from the ground into a product that could be converted into ferro-vanadium. That is a very involved process technically and a very costly type of plant to build. One of the other obstacles that would have to be involved, depending upon the type of process that the producer would use, whether he used the alumino-thermic or electric furnace, could involve very substantial amounts of money to provide such equipment.

There is one very basic factor in the production of ferro-vanadium and that is the matter of recovery. When you are using a raw material that

(Testimony of Walter Edward Remmers.)

is as expensive as $1.10 a pound, and unless you have a skilled operator or skilled operators who are able to produce the maximum percentage of recovery, and that is to deliver in the finished product the [1529] maximum percentage possible of the vanadium in the raw material, it is just not economically possible to compete. In that connection, an individual producer of ferro-vanadium not producing any other ferro-alloys again would find it very difficult economically to compete, because it would be necessary to provide equipment that would be used only a part of the total time. The production of vanadium is so small for any one of us, I am sure that if you provided equipment of sufficient size to produce the material on an economical basis it would only be run a relatively proportionate part of the time, you could not run it full time certainly on that basis, the net result is that unless you had a flexible organization where you could use your structures and be crushing other products at the time that you are not crushing ferro-vanadium; or if you could, then you had to have employment for the men that were involved in the vanadium business.

You go one step farther than that. If you had to provide a nationwide sales organization to call on all the steel companies in the United States that were using vanadium, to sell only the one product of vanadium, it soon would become very uneconomical; you couldn't afford to expend the expenses of such selling.

(Testimony of Walter Edward Remmers.)

The Court: Mr. Witness, who were your competitors in that business over this period?

The Witness: Actually our only competitor, that we looked upon as being of real competition, was the Vanadium Corporation of America.

The Court: Were there any others that were engaged in that business?

The Witness: We had heard of the Continental Ore Company attempting to sell vanadium oxide and ferro-vanadium to some of our customers. Their competition was not serious, however. They were not of the magnitude in their sales compared with the competition that we are meeting from the Vanadium Corporation of America.

The Court: We will recess at this time until 9:30 tomorrow morning.

(Thereupon an adjournment was taken until 9:30 o'clock a.m., Tuesday, June 17th, 1958.)

June 17, 1958, 9:30 o'clock a.m.

Mr. Archer: Shall I proceed, your Honor?

The Court: Yes.

WALTER EDWARD REMMERS

a witness called by and on behalf of the defendants, having been previously duly sworn, resumed the stand and testified further as follows:

Direct Examination—(Continued)

Q. (By Mr. Archer): Mr. Remmers, reference has been made in some of the correspondence to a

(Testimony of Walter Edward Remmers.)

vanadium product containing silicon. What was this product?

A. We made a product called Silvaz, and as the name would indicate, it contained silicon, aluminum and zirconium. It was a product that was used to control grain size in the engineering steels.

Q. Did it also have vanadium in it?

A. Yes, silicon, aluminium, vanadium. The "va" stands for vanadium. It took the first letters of the elements—vanadium.

Q. Why was it brought out?

A. About that time grain size control——

The Court: What do you mean by "grain size"?

A. In steel, in improving the physical properties, the [1533] tensile strength, the resistance to impact and the resistance to abrasion, it became quite important to provide a fine-grain size in the steel itself, and in order to achieve those results it was necessary to add certain elements to the steel to produce a very fine grain size. It improved the physical properties, physical specifications.

Q. By "grain size" then do you mean a very reduced element that enters into the steel?

A. That is right. A small amount of an element that produces a very fine crystal in steel, as opposed to something coarser.

Q. (By Mr. Archer): Was it successful?

A. Grain refinement or——

Q. Was the Silvaz successful?

A. Yes, Silvaz did the job, but it was not a successful product for us. The same end result could

(Testimony of Walter Edward Remmers.)

be achieved through the use of aluminium and other cheaper alloys, so that our Silvaz was never used extensively.

Q. In 1946 or at any other time did you instruct Mr. Dutot not to approach customers of Vanadium Corporation of America?

A. No, indeed, I did not. We were trying to sell all we could.

Q. Did you have the conversation with Mr. Burwell in Grand Junction in the fall of 1947?

A. Yes, I did. [1534]

Q. What was the principal subject of that conversation?

Mr. Alioto: The time, place and persons present? May we have fixed the time, place and persons present, if your Honor please?

Mr. Archer: It is in Grand Junction in the fall of 1947.

Mr. Alioto: Who were the persons present?

Q. (By Mr. Archer): Was there anybody present besides you and Mr. Burwell?

A. No. I spent the entire day in Grand Junction. We went out to dinner and we returned to his office and spent the evening together, just the two of us in his office.

Q. What office did he hold at that time?

A. At that time he had the title of vice-president but he had been relieved earlier that summer of all of his operating responsibilities in California, in Nevada, and in the latter part of that summer he had been relieved of all his operating responsi-

(Testimony of Walter Edward Remmers.)

bilities in the State of Colorado, uranium and vanadium.

Q. What was your position at that time?

A. At that time I was executive vice-president of the U. S. Vanadium Company and I also was the vice-president of E. M. Sales.

Q. What was the principal subject of the conversation at this time? [1535]

A. The principal subject of that conversation and the purpose of that particular trip was to discuss with Mr. Burwell his future status with the company.

Q. Without going into that matter at this time or at any other time, did you discuss with Mr. Burwell the subject of limiting the production of uranium or tieing the production of uranium to vanadium?

A. No, just the opposite. We were out to sell all the uranium, to produce all the uranium that we could. Obviously there is a tie-in because they both occur in the same ore, but we were seeking additional contracts and additional production for the Atomic Energy Commission.

Q. Just what activities of a physical nature in regards to your plants were you carrying on at that time?

A. Well, we had—just prior to that time we had started and completed negotiation with the Atomic Energy Commission to supply uranium out of the Rifle plant. We were beginning to rehabilitate the Uravan plant, which had been out of serv-

(Testimony of Walter Edward Remmers.)

ice, and get that back into production for the purpose of producing more uranium.

Q. It is in evidence in this action that during the war period Union Carbide or its subsidiaries had a contract with the United States Army for the production of uranium oxide for the Manhattan Project and for the acquisition of uranium-bearing reserves in the United States. [1536]

Now, during this period, did Union Carbide or any of its subsidiaries have contracts with the Army regarding other aspects of uranium production?

A. Oh, many of them. I say many—probably ten or twelve. We started out with what was known as the S.A.M. Project at Columbia University in New York City. That was the substitute alloy materials, and that was a research group working on the basic principles of the entire program.

We contracted with the Army for assisting in the engineering and the construction of the gaseous diffusion plant at Oak Ridge. That was and still is the big project at Oak Ridge.

We took over from Tennessee Eastman, who started the electro-magnetic separation of uranium. We took over their project and ran it and are still running it.

We took over the National Research Laboratories at Oak Ridge, and operated those and are still operating them.

Incidentally, the electro-magnetic plant has been

(Testimony of Walter Edward Remmers.)

changed in purpose from a separation to a research and development organization.

At Niagara Falls we built and operated in the middle of our electro-metallurgical plant a plant to reduce uranium metal from the oxide.

At Tonawanda, New York, we built a plant to produce and refine uranium hexafluoride, which is the raw material [1537] which went into the Oak Ridge operation, and still is the raw material that was used there.

In Buffalo, New York, we built not one but two plants to develop the barrier, the old-type barrier and the new type, and the barrier is the essential feature of that entire gaseous separation process.

The International Carbon Company developed special grades of graphite for the Hanford reactor.

The Bakelite Division developed—they built a plant and developed special grades of plastic that were used in the production of uranium. All of this, incidentally, for the Manhattan District.

Q. When was the Atomic Energy Commission formed?

A. The Atomic Energy Commission took over from the Manhattan District on August 1st, 1946.

Q. Subsequent to the formation of the Atomic Energy Commission, has Union Carbide Corporation had any contracts with the Atomic Energy Commission for the production or treatment of uranium?

A. Yes, yes. The present contracts are with the Atomic Energy Commission, and as you speak of

(Testimony of Walter Edward Remmers.)

that I am reminded of one other rather important job that Union Carbide did for the Manhattan District, and that was the Union Mines development.

The Union Mines Development Company was a company, a highly secret company organized during the war, at which [1538] time we investigated sources of uranium all over the world.

The Court: With all of these various organizations that you mentioned, was their principal function to deal with uranium?

A. Oh, no, no, sir. Our principal function was to deal with the usual products of Union Carbide—chemicals, carbons, metals, gases and so on—but because of the technical nature of our operations, I presume we were approached by the Army to take on the research project at Columbia University and subsequently to build the K-25, which is the name under which the gaseous diffusion plant was built down at Oak Ridge, Tennessee, and I presume it was because of the know-how and the technical people in the organization that we were approached to do that for the Army.

Q. Mr. Burwell has testified in his opinion the price of ferro-vanadium should have been reduced from the $2.70 range to around the $2.25 range during the period we are talking about in order to increase sales.

In your opinion as a metallurgist and from your experience, would the sales of ferro-vanadium have

(Testimony of Walter Edward Remmers.)

increased if the price had been reduced from the $2.70 range to a $2.25 range?

A. Oh, no. That would not be a substantial enough reduction. It would be necessary to reduce the price of vanadium until it could compete at least with its nearest competitor, [1539] and that happened to be and still molybdenum. Molybdenum was a very much cheaper alloy and in a few cases it would even compete with aluminum.

Q. What was ferro-molybdenum selling for during this period of time?

A. Ferro-molybdenum was selling for 95 cents per pound of contained molybdenum in ferro-alloy.

Mr. Archer: I have no further questions.

Cross-Examination

Q. (By Mr. Alioto): Mr. Remmers, do you know a man named Van Fleet?

A. Yes, indeed.

Q. He was the president of United States Vanadium Corporation at one time?

A. At one time, yes. I know him in various positions.

Q. He was also the chairman of the board of the United States Vanadium Corporation?

A. That is right.

Q. Do you recall approximately when it was that Mr. Van Fleet left the organization?

A. Yes, Mr. Van Fleet died as president—chairman of the board of the U. S. Vanadium Corporation and that was—I have got to estimate this date

(Testimony of Walter Edward Remmers.)

—that was about—that was in the fall of 1947. He died in Tucson. He went back home.

Q. At the time of his death what was your position with [1540] the company, Mr. Remmers?

A. At that time I was executive vice-president of U. S. Vanadium Company.

Q. What position did you hold with the Electro Metallurgical Company?

A. Vice-president.

Q. At this point you and Mr. Priestley were actually in charge of the United States Vanadium Company and the Electro Metallurgical Company, were you not?

A. Well, if you describe it that way; all the officers were in charge and we reported to others.

Q. You folks were the chief managing agents for those companies, were you not, you, Mr. Priestley and Mr. Haggerson at one point?

A. With others in the corporation, yes, but not solely. No one in an organization of our type had any sole discretion in matters.

Q. Prior to that time, while nobody had any sole discretion, Mr. Van Fleet was the chief managing officer of the United States Vanadium Company, wasn't he?

A. You had better describe chief managing officer. He was president, yes, and prior to that time he was a vice-president, and prior to that he was general superintendent, and prior to that he was chairman of the board.

Q. Would you say during the time he was presi-

(Testimony of Walter Edward Remmers.)

dent he was [1541] the most active man in formulating the policy of that company?

A. No, no, I wouldn't say that.

Q. Who was?

A. Nobody. This is a corporation; this is not a small company.

Q. I understand that, sir. I am not suggesting he was the sole man; I am suggesting that as president he was—— A. He was quite active.

Q. He was the most active of any other single individual in formulating the policies of that company, wasn't he?

A. No, I don't believe so. I couldn't agree with you.

Q. Who was more active than Mr. Van Fleet while Mr. Van Fleet was president?

A. Mr. Rafferty was chairman of the board at that time, and what their mutual relationship was I could not testify. But there was a man to whom Mr. Van Fleet cleared his problems and discussed —and there was also a board of directors in those days. That was a separate company. And the board of directors also functioned.

Now, when you say "Who was the most important man?", you have got to define what are the most important decisions. If he made more decisions, there might have been more important decisions.

Q. Let me put it this way: There isn't any doubt that between Mr. Rafferty and Mr. Van Fleet, they were the men who were more important

(Testimony of Walter Edward Remmers.)

than any other group in formulating the policy of the United States Vanadium Corporation? [1542]

A. With the board of directors and the vice-presidents who recommended things to them, yes.

Q. And then there came a time when you and Mr. Priestley kind of assumed the position that they had in connection with formulating——

A. We didn't assume. We were elected to positions, and we, again, had people to whom we were accountable, and we had vice-presidents who recommended, and we had a board of directors to whom we were accountable.

Q. At the time Mr. Van Fleet died was there any discussion in your organization about some documents that he had taken from the files of your company?

A. No. No, not that I know of.

Q. Did you know, at or about the time that Mr. Van Fleet died, or had you been told by anybody, that he had possession of certain documents?

A. No, I did not. That came out in the Denver trial.

Q. And you knew that for the first time at the time of the Denver trial?

A. In the preparation of the Denver trial is the first time I heard of such a thing.

Q. And prior to that time you had never heard of it? A. I had never heard of it.

Q. Do you know whether or not your company, at the time of Mr. Van Fleet's death, sent one of

(Testimony of Walter Edward Remmers.)

the employees of your [1543] company to his apartment to get back some papers?

A. No, I know nothing of that nature at all. I do know that upon his death one of our employees visited with—this is rather vague; this is nothing of consequence—but one of our employees talked with the housekeeper over there and wanted to know what was going to happen to his personal effects.

Q. Was that employee Mr. Emigh, by any chance? A. Yes, Mr. Donald Emigh.

Q. What was Mr. Donald Emigh's position with the company at the time?

A. He was a mining engineer.

Q. Did you send Mr. Emigh over to that place—— A. No.

Q. ——to the apartment?

A. Indeed not. I reprimanded him a little bit for doing that sort of thing.

Q. When was it that you reprimanded him?

A. When he got back. In a mild sort of way. I just said—I just questioned him on that, "I don't think it was the right thing for you to do."

Q. Why did you question it? What were you concerned about?

A. Because there were personal effects of Mr. Van Fleet, and I would be just as resentful if someone interfered in my [1544] personal affairs to that extent.

Q. Do you think Mr. Emigh was out to get the personal effects of Mr. Van Fleet?

(Testimony of Walter Edward Remmers.)

A. No, he wasn't. His motives were obviously of the finest type. He was a friend of the family; he wanted to be of help.

Q. Well, if you believed his motives were of the finest type, why did you reprimand him?

A. I thought it was a little presumptious on his part to go alone and visit with the—I thought it was probably in order for him to inquire of the family at the time.

Q. Emigh was out after those papers, wasn't he?

A. No, indeed not. I doubt if Mr. Emigh had any idea, or knew anything about any papers.

Q. Didn't he inquire for those papers of a Miss Helen Knoor?

A. You are asking me something that I know nothing about. But I think you are inferring that Mr. Emigh knew something that was not above board, and I don't think that's correct. I don't think that had anything to do with it. I don't think that Mr. Emigh went after any papers whatsoever. I don't know that he knew there were any papers.

Q. Well, you knew about it, did you not?

A. I told you once before, I did not.

Q. And then your reason for reprimanding him was simply [1545] that you thought it indelicate of him to go searching after the personal effects of Mr. Van Fleet, is that it?

A. He was not searching.

The Court: Now, just a moment. Let's defer the argument. Just ask the questions.

Q. (By Mr. Alioto): All right, then let me ask,

(Testimony of Walter Edward Remmers.)

is it or is it not a fact that your purpose in reprimanding Emigh for going to the apartment of Mr. Van Fleet immediately after his death was because you thought it was indelicate of him?

A. Indiscreet, is the word I would use.

Q. Indiscreet. All right. A. Yes.

Q. Did Mr. Emigh, at the time, tell you why he went?

A. No, I don't think so. I don't think we discussed that.

Q. Now then, did there come a time when you sent an employee named King Haldane out to Rifle, Colorado, to destroy some documents?

A. Definitely not.

Q. And you know nothing, I take it, as you sit there, of any facts as to whether or not Mr. Haldane went out to Rifle, Colorado, to destroy documents?

A. I know nothing of a trip of that nature whatsoever.

Q. Did you ever hear of a thing called the MacQuigg Report? [1546]

A. I heard of that in the preparation of the Denver trial for the first time.

Q. For the first time?

A. For the first time.

Q. Do you know whether or not King Haldane went out to Denver for the purpose of destroying the MacQuigg Report?

A. No, I do not. To me, that sounds rather preposterous.

(Testimony of Walter Edward Remmers.)

Q. In other words, you don't think it happened, is that it?

A. I don't think it happened. In the normal conduct of my business I would be surprised if anything of that nature happened.

Q. You have never been informed that that did happen?

A. No. No one has ever even suggested that, until you have right now.

Q. Do you know of a contract called the Maggie C. contract between your company and the Vanadium Corporation of America, Mr. Remmers?

A. Only what I have heard in the preparation of the Denver trial. I never heard of it before then.

Q. You mean prior to the time of the Denver trial you didn't know that your company was mining ore off claims that belonged to the Vanadium Corporation of America?

A. That is what I testified to, and that is what I said [1547] is my knowledge of the Maggie C. claim. In New York I had no interest or responsibility in operating mining claims in the Far West. As a matter of fact, I was a salesman at the time that was—I was interested in sales at the time of the Maggie C. claim.

Q. As a salesman you wouldn't be interested in the fact that the Vanadium Corporation of America, your great competitor, was receiving its vanadium oxide supplies from your claims that you were mining for them? As a salesman, you wouldn't be interested in that fact?

(Testimony of Walter Edward Remmers.)

A. I would have no knowledge of it. It is a separate and distinct entity, a separate corporate structure, and as a salesman in the sales department in Chicago I certainly would have no knowledge of the source of supply of the raw materials any more than I would know the details of the chrome ore company mining our chromium in Africa.

Q. How many competitors did you have in 1939 in the ferro-vanadium field?

A. In 1939 there was only one real competitor, and that is the Vanadium Corporation of America.

Q. You say there was only one real competitor. Do you know whether there were any unreal competitors in 1939,—whether there were any unreal competitors?

A. I'm sorry, I should have used "substantial," instead of "real." [1548]

Q. Do you know whether there were any insubstantial competitors in the production of ferro-vanadium in 1939?

There were just the two of you, now, weren't there, Mr. Remmers?

The Court: Let him answer the question, now.

A. In 1939, so far as I know, there were only the two of us, the only two that I recall in the vanadium business at that time—ferro-vanadium business.

Q. (By Mr. Alioto): And from 1939 right down to 1949, except for the period of the Continental-

(Testimony of Walter Edward Remmers.)

Apex production, you remained the only two in the ferro-vanadium field, didn't you?

A. That's right.

Q. Now, wouldn't it have been a good sales point in connection with this great sales effort that you say you made, wouldn't it have been a great sales point to tell the steel mills that your competitor was actually getting his raw oxide supplies from you?

A. As a salesman, if I had known it, I probably would have said something about it. I would have used everything at my command to sell all the vanadium I could.

Q. What was your position in 1939, '40, '41, Mr. Remmers?

A. I was running the Chicago district sales office. There were two salesmen in that office, but I was the manager of the two men. [1549]

Q. When did you move to New York?

A. I moved to New York in that I was en route from September 28th to October 1st of 1941, and I reported in to the sales office on December 10th in 1941.

Q. Well, then, in 1941, when you reported to New York, you didn't know that there was a thing called the Maggie C. agreement?

A. No. You don't understand the type of organization we have. This is a large company.

Q. Yes, I understand that.

A. And I moved to New York without title, without an office, in the first few months, and I

(Testimony of Walter Edward Remmers.)

worked as an administrative assistant on special assignments, as a sales correspondent, and working in the sales corporation, reporting solely in sales. I had no other responsibilities at that time. Actually, I was working with Mr. Roser.

Q. When did you become an officer of any one of these companies for the first time?

A. Substantially later. I became an officer of Electro Metallurgical Sales Corporation in 1944, a vice-president of the Sales Corporation, and that was a separate corporate entity, and it had nothing to do with the production of ores anywhere in the world.

Q. Weren't you the administrative assistant in connection with sales from 1941 to 1944, right in New York? [1550]

A. I was not "the"; I was "an" administrative assistant. There were several of us working, oh, more or less flunkeys for the officers and the important people.

Q. You were just a flunkey, is that what you are trying to tell us, between 1941 and 1944? Is that what you are trying to tell us?

A. That's right, an assistant. I had no title. I was doing chores. I was working on special assignments, on sales problems. I was more or less understudying Mr. Roser, who was district manager in the New York office.

Q. Didn't you inquire at that time as to what kind of a sales pitch you could use with the steel companies in trying to get more business from them

(Testimony of Walter Edward Remmers.)

as against the Vanadium Corporation of America?

A. Yes, indeed, we used to have sales meetings; we used to discuss that sort of thing; we used to have meetings with the works managers, departments, and with the sales development people, to find what we could use to sell more vanadium than what we were selling.

Q. Did you have meetings with Mr. Priestley?

A. Yes. Mr. Priestley was in charge of the development work at that time.

Q. Did Mr. Priestley ever tell you that the Vanadium Corporation of America was getting its oxide from you folks?

A. No; no, indeed not. [1551]

Q. Did you know in 1941 whether or not your cost of producing oxide was lower than the cost of the Vanadium Corporation of America?

A. I wouldn't have the slightest idea to this day, and all through all the days I was in charge of the vanadium production, I wouldn't have the slightest idea whether our cost of producing vanadium oxide was higher or lower. What opportunity would I have to know that?

Q. You say that you had no opportunity to know that?

A. No, indeed not. I had never seen their cost figures.

Q. Well, didn't somebody in your organization try to find out at what cost your only competitor could produce ferro-vanadium?

A. If you ever took an annual statement of a

(Testimony of Walter Edward Remmers.)

ferro alloy company, which we did regularly, and tried to work backwards and find out what their costs were, you would find that it is utterly impossible to do that, because no two producers sell the same products, and no two producers submit their figures in the same manner. We have tried that in sales, but we get nowhere.

Q. Mr. Remmers, didn't you know as of 1941 that Mr. Van Fleet had at one time in his life made a secret trip down to Peru——

A. No, I did not.

Q. ——to investigate—— [1552]

A. No, I did not.

Q. ——the vanadium mine of the Vanadium Corporation of America?

A. I learned that sitting in the courtroom in Denver for the first time.

Q. For the first time?

A. For the first time, yes, sir.

Q. And didn't you know that Mr. Van Fleet had reported—didn't you know in '41 that Mr. Van Fleet had reported that they were in trouble in their Peruvian mine because their high-grade ore had been mined out? A. I did not.

Q. And when did you find that out for the first time?

A. In the preparation for the Denver trial.

Q. And didn't you know in 1941 that your cost of production for vanadium oxide just a few years before that was 40 cents?

A. No, certainly not.

(Testimony of Walter Edward Remmers.)

Q. And didn't you know in 1941 that you were selling oxide to the Vanadium Corporation of America for 80 cents? A. No, sir.

Mr. Holland: I object, your Honor.

Q. (By Mr. Alioto): You didn't know that?

Mr. Holland: That fact is incorrect. That is not that fact. [1553]

A. I was in the sales department in 1941.

Mr. Alioto: Let's see whether my fact is incorrect. Just hold it a moment. Just a minute, sir.

Mr. Holland: O.K.

Mr. Alioto: Let's see Exhibit 14, please.

Pre-trial discovery in connection with the purchases of vanadium pentoxide for the years 1938-1939. The Vanadium Corporation reported that they made purchases of vanadium pentoxide at prices of $1.10 and 80 cents.

In 1939 at prices of $1.18, at 80 cents, and at 65 cents.

Mr. Archer: What about 1941?

Mr. Holland: 1941 is the year you used.

Mr. Alioto: No.

Mr. Holland: All deliveries of oxide from the Maggie C. stopped in July of 1940.

Mr. Alioto: Now, in connection with Mr. Holland's statement that all deliveries of Maggie C. stopped in 1940——

Q. (By Mr. Alioto): I show you a letter dated August 9, 1941, and ask you if you can identify that signature?

A. It appears to be the signature of Mr. Hal-

(Testimony of Walter Edward Remmers.)

dane, who was superintendent, at one time, at Uravan. [1554]

Q. He was superintendent in 1941 out of Uravan, wasn't he?

A. That is the way he signed it, yes.

Q. By reference to that document can you tell us whether the statement of Mr. Holland is correct, that the magnesite shipments stopped in 1940?

A. I am reading a letter I have never seen before and that I have no knowledge of.

Q. What does it say?

A. This letter is addressed to the Vanadium Corporation of America, Naturita, dated August 9th, 1941:

"Gentlemen:

"We are enclosing herewith Maggie C. report covering July tonnage."

I presume it is July, 1941, although it doesn't say so.

"Yours very truly."

Q. Will you be good enough to flip the page and tell us how much tonnage was reported in 1941, August of 1941?

A. It will take me a minute here. I have never seen these figures before. I have never seen this correspondence.

Mr. Holland: Is that an exhibit in evidence, Mr. Alioto, may I ask?

Mr. Alioto: No; it is going to be offered in a moment.

The Witness: This is dated July 9th over the

(Testimony of Walter Edward Remmers.)

signature of—it is signed "W. G. Haldane, Superintendent, July 9th, 1941, Maggie C. Ore." [1555]

This is not oxide. This is ore that is delivered from the Maggie C. to Naturita.

Q. Yes.

A. Eight and a half tons on the first, 8.9 tons—8 tons up to the one day it went up to 11 tons for a total of 94 tons. Alice run, one and a half up to almost three per cent, and during the entire month there was in ore a total of 3,377 pounds delivered, of which only 2,533 was extracted. That is a summary. I am sorry, I have never seen that before. It took me some time to look at it.

Q. That is all right, sir.

And now, the Maggie C. shipments and reports to the Vanadium Corporation of America were made as late as October 7th, 1941, were they not?

A. Well, as the first letter indicates, no, they were not made that late. This letter of October 7th indicates some shipments were made in September. This is signed—I can't identify the signature. I never knew the man.

Q. Mr. A. H. Coleman.

A. I never met him.

Q. Whether you met him or not, you knew he was a superintendent of yours out at Uravan, did you not?

A. No, I had nothing to do with Uravan or U. S. Vanadium in those days. [1556]

Q. Under the Maggie C. contract, up until October 1st of 1941 you shipped 717,848 pounds?

(Testimony of Walter Edward Remmers.)

A. You are telling me; I am not telling you.

Q. Of the V_2O_5, did you not?

A. I don't know. I will have to take a look. Again this is signed by a man I don't know and I can't identify the signature. I never met him and I couldn't testify as to what his position was at that time. This is a letter with a signature that appears to me to be R. H. or A. H. Coleman, and he signs it as superintendent.

Q. Of what?

A. Or the Uravan plant. The heading is Uravan, Colorado, United States Vanadium Corporation. 3,000 pounds contained involved, and the same quantity, 93.6 tons for the month.

Q. What is the total shipped under the Maggie C. deal up to October 1st, 1941?

A. 717,848.000 pounds, according to this figure here.

Q. Of vanadium oxide?

A. Of contained—no, ore—of contained vanadium oxide in the form of ore as mined, low-grade material. It runs one, two, three per cent.

Mr. Alioto: Mr. Archer, I take it there is no question about Mr. Coleman's signature?

Mr. Archer: If you are going to offer this in evidence, I would like to see it. [1557]

Mr. Alioto: I have no objection to your seeing it, Mr. Archer.

Mr. Archer: Do you want to put it in right now?

Mr. Alioto: I would like to put it in right now.

(Testimony of Walter Edward Remmers.)

Take all the time you want, because I want to inquire about whether he knew about that many pounds of vanadium oxide in 1941.

The Court: That doesn't say that many pounds of oxide. It talks about ore.

Q. What is the difference between ore and oxide?

A. The ore is material as it is dug from the ground, your Honor. It varies in vanadium content as a commercial ore from about 1½ per cent vanadium up to about three per cent vanadium. That ore is taken into a mill where it is ground up, digested and treated, and it then comes out as oxide. I think some has been here. It comes out as red cake, which is oxide plus water. It is then put in a furnace and the water is driven off and it changes from a red color to a black color. There is no difference really between red cake and black oxide except a few per cent of water, and then the black oxide is shipped——

Q. What per cent of this ore, then, was finally reduced to oxide?

A. I don't know what the recoveries would be in the plants of the Vanadium Corporation, but in our plants I would assume that—we used different processes, but I would say [1558] something better than 80 per cent of that would show up as finished oxide.

Q. You mean 80 per cent of the ore?

A. 80 per cent of the contained vanadium in the ore, which would appear as oxide.

(Testimony of Walter Edward Remmers.)

Q. What I am getting at is what percentage of the ore was finally found to be oxide?

A. About one to three per cent. Those are the usual ranges. Once in a while you find some a little higher, some a little lower, that would be milled.

Q. (By Mr. Alioto): Do you want to look at one of these reports again, Mr. Remmers?

A. Yes, please.

Q. If you will just follow the pencil on this. On the side you have a column "Pounds of V_2O_5." What does that mean?

A. That means the pounds of vanadium oxide or vanadium pentoxide or vanadic acid—they all mean the same thing and have been used interchangeably—that is contained in the eight and one-half tons that was delivered on the first of July, 1941.

Q. And you have under that column in July of 1941 under the heading "Previously extracted, 419,000 pounds, etc."

What does that mean? Pounds of what?

A. That is pounds of V_2O_5 contained in the ore.

Q. That is pounds of vanadium oxide, isn't it?

A. Pounds of vanadium oxide contained in the ore. [1559]

Mr. Alioto: Okay. We will offer this in evidence, if your Honor please. These are reports between U.S.V. and Vanadium Corporation of America.

Mr. Holland: Are you going to offer the whole thing?

Mr. Alioto: Yes, we offer the whole thing, which

(Testimony of Walter Edward Remmers.)

includes, first, the minutes of your board of directors approving this, Mr. Holland, and then the reports.

Mr. Holland: This all comes out of the statement that I made that there wasn't any oxide delivered under the Maggie C. after July, 1940, which is correct.

Mr. Alioto: The documents speak for themselves on that.

Mr. Holland: I do not think the witness knows anything about the documents, and I do not think the documents should go into evidence until a witness is on the stand who knows something about them. As a matter of fact, these show ore from Dry Valley that U.S.V. took back for their shipments of oxide from U.S.V.——

The Court: What has that got to do with this case?

Mr. Alioto: The materiality of that in this case, if your Honor please, is that this witness has indicated they were very competitive with Vanadium Corporation of America [1560] during a period of time he has mentioned and to which he has testified on direct examination.

Now, instead of being competitive, the fact remains that they were collaborating. The U.S.V. was mining on the claims of Vanadium Corporation of America and shipping oxide to the Vanadium Corporation of America at a price that was below $1.10, which is the price that they charged everybody else. That is the most direct evidence

(Testimony of Walter Edward Remmers.)

of collaboration, particularly in an industry where the two defendants controlled between them more than 95 per cent of all the oxide.

I think the relevancy is very clear, if your Honor please.

Mr. Holland: That evidence is already in. The agreements are in.

The Court: The objection will be sustained.

Mr. Holland: The resolution of the board that you refer to.

The Court: I do not see how that is material, or how it will help the Jury or the Court. Just a minute. I think we ought to get back to what this lawsuit is about.

Q. What was the relationship between these two companies at this time, these two producers of vanadium oxide?

A. Strictly a competitive relationship. They were selling ferro-vanadium and we were selling ferro-vanadium. They were selling various other ferro alloys, most of which we sold, [1561] perhaps one or two of them which we did not sell. We had a very substantial number of alloys that they did not sell. Ours was a larger company so far as ferro alloys was concerned generally.

Q. What was the relation between you two that was not competitive? Why would you sell to each other? Why did you?

A. I only have ideas as to that. As to the oxide material and the ore we are speaking about, there were times, for example, when Vanadium Corpora-

(Testimony of Walter Edward Remmers.)

tion had a strike and we supplied their customers, and on one or two occasions I recall when we produced a product called calcium silicon and they used it in processing something or other, and they didn't produce it, they came to us.

This is no different than what we would do with any other manufacturer of ferro alloys and there are a number of others.

On occasion, due to plant difficulties, or for manufacturing purposes, or I suspect more for the purpose of making up combination carloads, once in a great while they would place an order on us for materials that we made and they did not make.

Q. It any time was there any agreement or understanding as far as you know between those two companies that they would so operate as to accommodate each other to the exclusion of anyone else?

A. No, sir, definitely not, your Honor. I [1562] have no knowledge of anything of that nature. We were actually competing. I grew up in the Sales Corporation and our instructions were to get all the alloy business we could, not only from the Vanadium Corporation, but from Ohio Ferro Alloys, Pittsburgh Metallurgical, Tennessee Products and all the other competitors we had. There was never any restriction or restraint placed on any selling. Just to the contrary, we were continually urged to do better than what we had been doing.

Q. Was there ever, to your knowledge, any agreement or any understanding that these two companies were to operate with each other and

(Testimony of Walter Edward Remmers.)

conduct business with each other so as to accommodate them but exclude all others that were in the same line of business?

A. No, sir. As a matter of fact, since those days, there have been others who have grown up in the ferro alloy field and some of them, smaller producers, have grown and they have become rather stiff competition for us on other ferro alloy products.

Q. (By Mr. Alioto): Name one independent producer that grew up to any size in the ferro vanadium business right down to this date?

A. I said excluding ferro vanadium. You were not listening very attentively. [1563]

Q. I didn't say excluding ferro vanadium.

A. I said on products other than ferro vanadium.

Q. You will admit nobody got into the ferro vanadium business, won't you?

A. I was telling his Honor people got in the ferro chrome business, they got in the silicon business, they got in the silicon metal business, they got in the nickel chrome ferro alloy business.

There are many people that got into the ferro alloy business since the time we are speaking about, 1939.

Q. But no one got into the ferro vanadium business?

A. I said alloys other—other alloys.

Q. You can answer the question directly, can't

(Testimony of Walter Edward Remmers.)

you? No one got into the ferro vanadium business, is that right?

A. If you are trying to confuse me, Mr. Alioto, I must repeat—I would suggest that you have the reporter read his notes if there is any question in your mind as to what I said.

The Court: Let us not argue the case.

Q. (By Mr. Alioto): Is it not a fact that nobody got into the ferro vanadium business with the exception of Apex for the entire period from 1939 right down to this very moment?

A. Nobody got into the ferro vanadium business. Nobody else got into the Silvaz business. Nobody got—I can name you a number of alloys that we make that nobody else got into. [1564]

Q. Did any officers of either United States Vanadium Company or Electro Metallurgical Company in your presence make the charge that "We ought to stop making deals with V.C.A. and go out and sell on our own merits"?

A. No, indeed.

Q. Did Mr. Burwell ever make that statement to you, or in your presence?

A. No, indeed.

Q. Were you present at a board of directors meeting or a meeting of the executive committee about some time in 1946 or 1947 in New York, relating to the question of uranium production and its relationship to vanadium production?

A. I have never attended a meeting of the board of directors at any time, nor have I ever attended

(Testimony of Walter Edward Remmers.)

a meeting of the executive committee. The executive committee is a relatively small committee of our board members who usually do not deal in problems or policies of operations, sales, and things of that nature.

Q. Mr. Remmers, as you sit there you remember a rather famous meeting, don't you, in which Mr. Priestley and Mr. Burwell got into a dispute?

A. I have heard of it.

Q. You were there, weren't you?

A. I indeed was not. That was a meeting of the [1565] operating committee that has been described in the transcript I read. It was not a meeting of the directors, and I question whether Mr. Burwell ever got into a meeting of the board of directors or a meeting of the executive committee. That was a meeting of the operating committee at which he was asked to present his operating budget, just as the rest of us were asked to present our operating budgets.

Q. Were you there?

A. No. I know what took place, though, by hearsay, because it was a famous meeting. Afterwards it became quite well known.

Q. You were not there?

A. No, indeed not.

Q. Mr. Haggerson was there, was he not?

A. I don't know. I wasn't there.

Q. Mr. Priestley was there, was he not?

A. I just finished telling you I wasn't there. How could I testify as to who was there?

(Testimony of Walter Edward Remmers.)

Q. Did Mr. Priestley ever tell you that Mr. Burwell at this meeting had accused them of having had deals with V.C.A. and that is why they couldn't sell the vanadium?

A. No, definitely not, a preposterous sort of suggestion.

Q. Did Mr. Burwell ever have a discussion with you about a so-called process C for the extraction of uranium as against vanadium?

A. Process C? [1566]

Q. Process C.

A. We were both officers of a company and knew of technical changes, but I know of no process as Process C. I know of no report, that is, on Process C.

Q. Let me show you a copy of a report, Mr. Remmers, that is dated December 28th, 1947, and ask you whether you personally ever saw a copy of that report, and I call your attention to a graph setting out a proposed price for vanadium oxide.

A. I have never seen this report before.

Q. Let me show you a copy of a document——

A. I can't comment. It would take quite a little while to study. It is a technical report. There is a lot of information in it, and it would take a long time to study it.

Q. I asked you whether you ever saw it and your answer was you have never seen the report before?

A. I never saw this report. Incidentally, it was

(Testimony of Walter Edward Remmers.)

restricted and declassified by Blair Burwell, according to the initials here.

Q. Let me show you a document dated December 28th, 1947, and ask you to read the——

A. Just a minute. I would like to check that.

Mr. Archer: May I see the document you are about to hand the witness?

The Witness: December 28th — Mr. Burwell wasn't [1567] with the corporation at the time he wrote this. He had resigned.

Q. (By Mr. Alioto): Wasn't his resignation effective February 1st, 1948?

A. No, I think December 11, 1947. That is the reason I haven't seen it, apparently.

Mr. Archer: Will you indulge me for just a moment here?

Q. (By Mr. Alioto): I show you a copy of a letter marked "Restricted," with a D designation, and ask you if you will be good enough to read the first paragraph of that letter and then state whether or not that refreshes your memory of your having seen a report in connection with the so-called Process C for getting uranium.

A. This is a letter unsigned with the name Blair Burwell typed in the lower left-hand corner, dated December 28th, 1947. It is a copy of a report, apparently. And this is labeled, "Recommendations made for future regional production——"

Mr. Archer: I object, your Honor, to reading this.

(Testimony of Walter Edward Remmers.)

Q. (By Mr. Alioto): I am asking you simply——

Mr. Archer: Unless the witness can identify it.

Q. (By Mr. Alioto): Read that first paragraph to yourself and then state whether or not that refreshes your memory as to whether or not you ever saw that report. [1568]

A. No, that doesn't refresh my recollection that I ever saw that report. We had many technical discussions. Whether this was a summary of that, I couldn't say without reading it and studying that report, as well; that was a part of our job to develop processes.

Q. Just so we can get the record straight on this matter of resignation, as to when it occurred, I would ask you to look at the letter which I am handing you, dated January 27th, 1948, and then would you be good enough to tell us the effective date of Mr. Burwell's resignation from the company?

A. Do you want me to tell you what this letter is all about?

Q. No, just tell me if that refreshes your recollection as to the date of Mr. Burwell's resignation.

A. My recollection is quite clear. I mean, this is an important matter in a corporation. It isn't customary for a man in the position of vice-president to leave a corporation. It was a very unusual situation, so I can remember the dates and the conversations and the correspondence quite well.

Q. Isn't it a fact that Mr. Burwell's resignation

(Testimony of Walter Edward Remmers.)

as vice-president of U.S.V. was accepted as of January 31st, 1948?

A. Well, now, if you will get the rest of the correspondence and provide me with the letter of about December 11th addressed to Mr. James A. Rafferty, I will complete the story and give you the full answer. [1569]

There was discussion back and forth. This was done by correspondence, incidentally.

Q. Mr. Remmers, did you write this letter that I have shown you now?

A. Yes, indeed I did write that.

Mr. Alioto: We will offer it in evidence, if your Honor please.

Mr. Archer: I object, your Honor. This is going into the question of Mr. Burwell's termination and it can't possibly have any relevance to this lawsuit.

Mr. Alioto: If your Honor please, the witness has just made the statement under oath——

The Court: Objection sustained. Let us get something in connection with this lawsuit. We are getting too much into outer space.

You are charging in this suit there is a conspiracy between these two companies. Now, let us have some proof on that. This certainly has nothing to do with the lawsuit.

Mr. Alioto: Mr. Burwell wrote a report at the time he was with the company, although the witness on the stand says he was not with the company. He wrote a report, and I have a letter in

(Testimony of Walter Edward Remmers.)

my hand that shows that his resignation took place two months after, and with respect to that letter, I do not understand how the Court can say that we are getting into outer space. [1570]

The Court: It may have been accepted as of the date of resignation.

Mr. Archer: Mr. Burwell himself testified he resigned on December 11th, 1947. It is in the record.

The Court: Objection sustained. Let us get along with this case. We are spending too much time on matters that I think are wholly immaterial.

Q. (By Mr. Alioto): Did you have a policy at any time between 1938 and 1949 of not selling vanadium oxide to producers of ferro vanadium?

A. Not selling oxide to producers of ferro vanadium?

Q. Yes. A. No.

Q. I take it, then, there was no policy in your organization that would have prevented you from selling vanadium oxide to the Apex Smelting Company? A. No.

Q. For the production of ferro vanadium?

A. No, there was no policy on that.

Q. You testified that in 1943 you did receive a request from the Continental Ore Company for a regular monthly supply of vanadium oxide?

A. That is right.

Q. And prior to that time you had in fact made sales to the Vanadium Corporation of America of vanadium oxide, had you not? [1571]

A. I had not, no.

(Testimony of Walter Edward Remmers.)

Q. Your company had prior to that time?

A. What I learned about later on, yes.

Q. And you know about it now?

A. I know about it now, yes, in the preparation of the Denver suit I learned a lot of things.

Q. And a substantial quantity of those sales were made on the basis of 80 cents per pound?

A. That is correct, as I learned later. [1572]

Q. Now then, in November of 1943 there was a relatively free supply of vanadium available, wasn't there?

A. It was getting to be quite free. The first half of that year it was very, very scarce; it was in very difficult supply.

Q. You, personally, went to Washington around September of 1943, did you not, Mr. Remmers, and asked the government to take the restrictions off vanadium because now vanadium was in free supply?

A. I don't recall whether the specific date—I made many trips to Washington during the war, advisory committee meetings, and things of that nature. I am quite sure that I would have suggested in the latter part of that year—I don't know whether as early as September, but I am sure I would have suggested that it was about time to ease restrictions on vanadium because it was beginning to accumulate. Still not what you might call a burdensome problem. It was beginning to get that way, and we didn't know which way the situation might change from a month-to-month basis.

(Testimony of Walter Edward Remmers.)

Q. Well, do you recall there was a vanadium industry advisory committee meeting held on October 25, 1943?

A. No, I wouldn't recall that. I didn't attend the vanadium industry advisory meetings. Mr. Van Fleet, or somebody from the mining company normally attended the vanadium meetings. [1573]

Q. Mr. Haldane attended them, didn't he?

A. He may have.

Q. Sometimes? A. He was in Washington.

Q. And he was authorized to attend them on behalf of your organization?

A. He was our official representative who attended in response to a telegram, and he was—. You are limited to one representative, and I am quite sure Mr. Van Fleet would send Mr. Haldane at times.

Q. He was authorized to request of the government in October of 1943, was he not, that vanadium be taken off all government controls?

A. That's quite possible.

Q. Because it was in free supply?

A. Yes, it was beginning to become much bigger.

Q. Did your company have any policy with respect to not selling vanadium oxide to the steel mills?

A. I wouldn't say it was a policy. It certainly was technically sound judgment in many cases not to sell oxide. We did sell oxide. We have been selling oxide to steel mills over the years. A number of the people have been using oxide. So we

(Testimony of Walter Edward Remmers.)

had no policy against it. But we didn't feel that the use of oxide in the manufacture of steel was sound technically. It increased the length of the furnace time; it meant more [1574] expenditure in the producing agents. If it was under a time of production stress, as we were during the war, it was very short-sighted economy to put oxide in the furnace and prolong the time of a heat, when additional production could be gotten from that same unit.

So while we did sell it, we didn't encourage it. We also felt it gave you dirtier steel.

And one of the comments that some of us used to make: "If you are going to put tungsten oxide, vanadium oxide, in steel, why don't you put iron oxide and reduce the iron in the furnace at the same time?" It's facetious, but it's going to the extreme.

So, those were the reasons why—some of the reasons why we didn't recommend—our service men—didn't recommend oxide addition. It could be used. Steel is a technological process; it takes a lot of skill. Some people acquire this skill. There is a limited amount of oxide that you can economically add to an electric furnace. And if you are adding tungsten in the form of oxide, obviously you would add less vanadium in the form of oxide. If you are adding all of your ferro-tungsten in the form of the ferro alloy,—your tungsten in the form of ferro alloy—you could get by that with adding a certain amount of vanadium oxide.

(Testimony of Walter Edward Remmers.)

Q. Well, wasn't there another reason for not selling oxide to the steel mills, namely, that you would be competing [1575] with your own ferro alloy profits?

A. Oh, obviously. I mean, our business was ferro alloys. And if you are in the ferro alloy business—we didn't go out and sell chrome ore, for example, because we made ferro-chrome. We bought chrome ore. That was no different than any one of our other products. Our business was making ferro alloys. But that business was built on a very sound technological process, and you couldn't build an organization and a business as great as that unless you were sound technologically.

Q. Well, specifically, though, one of the reasons for your not selling oxide with a flux, or even plain oxide, to the steel mills, was because it was more profitable for you to sell the ferro-vanadium, isn't that a fact?

A. That is a fact, but you can't buck technological developments. For example, there are many processes that we have, more particularly in the chemical industry, where the plant facilities are recognized as becoming obsolete, and you have to just write them off if it is sound technologically to use something else. We didn't oppose the use of oxide in steel; we just did not recommend it, because we did not think it was good steel practice to use it. But obviously, we were in the business of producing the ferro alloys.

Q. Didn't Mr. Priestley ever tell you that the

(Testimony of Walter Edward Remmers.)

principal reason for not encouraging the use of the oxide with the steel [1576] mills was to protect your ferro alloy business against competition from the oxide?

A. No. If you will drop that word "principal," and not exaggerate the case, I will say yes. But if you say "principal," I will say no.

Q. You don't say it was the principal reason?

A. No.

Q. But it was one of the reasons?

A. It was a reason. Certainly, it was a reason.

Q. Was it an important reason?

A. Yes. They were all important reasons. If we are not talking about the unimportant reasons, these are all important reasons that I have enumerated. The technological development, the the cleanliness of the steel, economics; we were in war time conditions. And when you start adding oxide to a furnace and start reducing them in a furnace you are cutting down the steel capacity of that particular plant, that particular unit. And, incidentally, the production of alloy steel that the country at large, in time of war,——

Q. Well, specifically, didn't Mr. Priestley instruct you that he was fearful that the trend of supplying ores with combining reducing agents will lead to direct reduction of other metals like vanadium, and therefore, he tried to stop it?

A. Sure. Mr. Priestley was head of our development [1577] group at that time, and he wrote a letter to us at one time and suggested that.

(Testimony of Walter Edward Remmers.)

Q. Yes. And the letter is a letter which is now in evidence as Plaintiffs' Exhibit 73, isn't it?

A. That's right, there is no question about that.

Q. Yes. It is a letter you received at the time?

A. I received a copy of it. The letter is addressed to Mr. Dutot.

Q. You received a copy of it, didn't you?

A. I received a copy of it. And my initial is on this particular copy. So this is apparently from my files.

Q. Yes, I understand that. That letter was marked "Confidential." Was there any reason for marking it "Confidential"?

A. No, I see no reason for marking this letter "Confidential," except that it is the sort of thing you wouldn't want to circulate around the office.

Q. In other words, you wouldn't want the steel mills to know about this policy of not selling oxide to them?

A. Do you think we could fool the steel mills in their purchasing? You certainly are going to be mistaken, because they figure their costs down to a fraction of a dollar per ton, and they are very cognizant of increased costs, and most of them have a monthly meeting at which they review their costs of steel production. Even if we were recommending a [1578] process that was going to cost them money, you can be assured that we wouldn't stand up very long in the ferro alloy business, the ferrovanadium business, because they all would have

(Testimony of Walter Edward Remmers.)

gone to vanadium oxide if it saved a little money doing it.

Q. You would agree, for example, that nobody could sell Van-Ex, for example, to the steel companies, and fool them about its metallurgical qualities?

A. Yes, I would, because we were all——

Q. Then they can be fooled?

A. In this respect: Van-Ex, so far as I know—I don't know much about it except the name—it has been described to me all the way from straight oxide to something with some mystic compound added, in the Denver trial—I don't know anything about Van-Ex, or Van Ness, or whatever it is you are speaking about.

Q. Well, you heard about it in 1943 when the Continental Ore Company, or Apex. were supplying it to the steel mills, didn't you?

A. That's right, I heard the name. I have never seen any of the product to this day, and we are very active in the ferro alloy business.

Q. Well, as a matter of competition, you would have known that was being sold to the steel mills?

A. I heard of it; yes, I heard. I answered that I heard.

Q. By the plaintiff company? [1579]

A. But I have never seen it. I have never—no one has ever discussed—no one who has ever used it has ever discussed it with me, its results, or anything of that nature.

Q. Do you think it was sound in 1943 for——

(Testimony of Walter Edward Remmers.)

A. Yes, indeed, it was sound for—to get every pound of vanadium you could get from anybody at that time, in the early days.

Q. Was it sound to sell vanadium oxide to the steel mills—metallurgically sound to sell it to them?

A. No.

Q. It was not? A. No.

Q. Why not?

A. Because at that time we needed every ton of furnace capacity in the United States to promote our war effort, and to sell the product that increased the time of production of steel and perhaps jeopardized the cleanliness of that steel, would not be sound technologically, and would not be patriotic at the same time.

Q. Didn't the steel mills know that they were unpatriotic for buying it?

A. No. At that time there was a shortage. At the beginning of the war there was a shortage in vanadium in the country.

Q. What was unpatriotic about a steel company like Diston, [1580] or the Atlas Steel Company of Canada, buying Van-Ex? What was unpatriotic about it? A. May I answer?

Q. Yes.

A. Well, if you will just be quiet I will answer it.

Q. I will be quiet.

A. In the beginning of the war there was a shortage of strategic materials, and in those days people bought all sorts of things. We used grades of ore

(Testimony of Walter Edward Remmers.)

we never thought we would put into an electric furnace. And with the impending war clouds that were gathering on the horizon, steel companies were buying vanadium in all forms. I suspect they were buying even a little ahead of their requirements. You could sell most anything at that time that was vanadium. That is the reason I said——

Q. In 1943 when you folks went to Washington said "Take the restrictions off"?

A. I am speaking at the beginning of the war.

Q. I am speaking in 1943. Was it unpatriotic to sell Van-Ex to the steel mills in 1943?

A. No, not when there was a surplus. I didn't say it was. You are putting words in my mouth.

Q. You didn't say it was unpatriotic——

A. I didn't say it was unpatriotic to sell Van Ness to the steel companies, or any other product of that type. [1581]

Q. What did you say was unpatriotic?

A. I said it would be unpatriotic to recommend to the steel companies any process that reduced the capacity of the steel of the United States at a time when this country needed every pound that could be produced.

Q. Well, does that mean it was unpatriotic to sell Van-Ex to the steel companies in '42 and '43?

A. I am not prepared to comment about that. I told you I had no idea what Van-Ex was. I have heard it described as half a dozen—no, not perhaps half a dozen, but several different products. I know nothing about it whatsoever.

(Testimony of Walter Edward Remmers.)

Q. Let me put it this way: Was it unpatriotic to sell vanadium oxide mixed with a little fluorspar, aluminum, or silicon, in 1942 and 1943, to the steel mills?

A. And charge a fancy price for it, yes.

Q. And charge $2.40? A. Yes.

Q. $2.40 for it?

A. That's my personal opinion. I think it's taking advantage of a situation.

Q. And the ferro-vanadium cost them $2.70 at that time.

A. That's right. They were not interchangeable, mind you. There is a decided technical difference from what you described here; this Van-Ex with a little fluorspar is not very much different than vanadium oxide. You put a little [1582] oxide into—a little fluorspar into vanadium oxide, you get this material you are talking about, this Van Ness.

Q. Now, the steel companies, in 1942 and 1943, were very informed buyers, weren't they?

A. They were——?

Q. Highly informed buyers? A. Oh.

Q. The steel companies.

A. I'm sorry, I misunderstood you. Yes. They still are. They are very well informed.

Q. They couldn't be fooled by something that didn't have any metallurgical qualities?

A. There could be economic pressures to acquire all the raw material they possibly could under those conditions, and we were, too, and we used low-grade

(Testimony of Walter Edward Remmers.)

ores. We did a lot of things to maintain our source of supply to the steel industry.

Q. Aren't you selling Van-Ex today?

A. Van Ness? No. We advertised a product called "Self-Reducing Vanadium."

Q. And isn't that vanadium oxide plus something?

A. That is vanadium oxide plus something. But you ask me whether we are selling it. Are you asking me—please ask me how much we have sold this year, to date.

Q. Are you producing it?

A. I can't tell you whether we produced it, but I can [1583] tell you how much we have sold to date.

Q. Are you advertising it?

A. I imagine we are. It is on our list of products with everything else. I wish you would ask me how much we are selling.

Q. You go ahead; you put that right into the record, now. How much are you selling?

A. Well, I was waiting for that. We have sold 2,500 pounds through the first four months of this year, which hasn't paid for the printing on the tin cans or the advertising, I am sure, that we have done. That's out of quite a few hundred thousand pounds of other vanadium products.

Q. Now, are you——

A. Thank you for asking me, because I wanted to get that in.

Q. Now, aren't you advertising this as a new vanadium alloy?

(Testimony of Walter Edward Remmers.)

A. I don't think we call it an alloy. Probably a vanadium addition, I would think.

Q. Well, let me show you an article from the Daily Metal Report for Thursday, July 4, 1957. Does that refer to this thing you are speaking of now?

A. I can't testify as to what newspaper reporters write, because of the difference between alloy and a compound. I have never seen this, incidentally. But it is labeled here— [1584] I have never seen this at all.

Q. Let me show you something that you call self-reducing vanadium. Have you seen that?

A. No, I have not seen this, but this looks like it came out of one of our price books—a page out of one of our price books. It is called self-reducing vanadium, yes. But it doesn't say anything about alloy.

Q. That is just vanadium plus something else, isn't it—vanadium oxide? A. Yes, sure.

Q. What is the "plus"? What else is in it besides vanadium oxide?

A. I don't know. I have nothing to do with this. I haven't been in sales—or the operation, you know, for four years. I have a pretty good idea.

Q. Well, you wouldn't put out a product unless you thought there was some metallurgical efficacy, or some commercial efficacy——

A. Yes, indeed.

Q. You would?

A. Yes. Sometimes you have to put out a prod-

(Testimony of Walter Edward Remmers.)

net to meet competition. We are still in business to make money, bear in mind.

Q. Whom are you competing with today, except the Vanadium Corporation of America? [1585]

A. We are—that is an outgrowth, actually, of our self-reducing tungsten. We make a—at least, for quite awhile we made self-reducing tungsten material.

Q. That is a change in policy over the policy you were instructed to carry out by Mr. Priestley during this period of time, isn't it?

A. Well, vanadium—at the time Mr. Priestley wrote that letter, tungsten was being purchased as scheelite, and was being used by the tool steel makers well before that time.

The Court: Just a moment, now.

We will recess this clinic for ten minutes.

(Short recess.) [1586]

Q. (By Mr. Alioto): Mr. Remmers, I will try to finish as quickly as possible. I will do my best to do it as unclinically as possible. I do not expect to succeed in that last respect under any circumstances. A. Thank you, sir.

Q. Let me just wind up this matter of vanadium oxide that you folks produced later. Your price for that was $3.00, wasn't it, as against $2.40?

A. I don't know. It is on the sheet there.

Q. You look at it and tell us what it is.

A. I assume this is a price sheet. I have not seen the price sheet in four years. This is ar entirely

(Testimony of Walter Edward Remmers.)

different form from the price sheet used when I was selling.

Mr. Archer: What year is this?

The Witness: There is no date on it. That is why I say it is a price sheet, but I don't know.

Q. (By Mr. Alioto): You started producing this recently, of course, within the last couple of years? A. Yes.

Mr. Archer: You mean after the date of the filing of the complaint?

The Witness: It was first produced—it was first offered in 1956.

Q. (By Mr. Alioto): What was the price that you sold it for? [1587]

Mr. Archer: I object to what price they sold it for in 1956.

The Court: Objection sustained. This suit was filed in 1948.

Mr. Alioto: If your Honor please, this is something they did not like back in 1948. I was wondering if the company was getting worse or getting better when it produces it in 1956.

The Court: Limit your questions to the issues.

Q. (By Mr. Alioto): Your counsel asked you about some Silvaz. Do you recall that interrogation, Mr. Remmers? A. Yes, indeed.

Q. Silvaz was some kind of vanadium compound where you did not use the vanadium oxide, is that right?

A. No, it was not a vanadium compound. It

(Testimony of Walter Edward Remmers.)

was a complex alloy of silicon, vanadium and zirconium—and iron, the ferro.

Q. And you recall there were some moves made to produce that by your company?

A. There weren't moves made. We produced it and we offered it and we still have some, if you are interested. We still have some remaining in stock.

Q. Didn't there come a time when the Vanadium Corporation of America accused you folks of a breach of faith in selling Silvaz? [1588]

A. If they did, they kept it to themselves because I know nothing about it.

Q. You personally knew nothing about that?

A. I never heard of such a——

Q. There is in evidence a letter relating to the production of Silvaz, so-called, from Mr. Van Fleet, and he winds up that letter of September 1st, 1938 by saying, "Confidentially the reason why we must use some product other than fused oxide in this alloy to start with, is that we cannot sell vanadium for less than the market price, unless we can show that we do not use fused oxide and that we are using an impure by-product which cannot be used in any other way. For several years I have been trying to have the sales price of vanadium considerably reduced, and this would be an entering wedge. It has always been my opinion that if we were able to reduce the sales price of vanadium, it would encourage its use."

(Testimony of Walter Edward Remmers.)

Now, you were a member of the sales department, were you not? A. Yes, I was.

Q. At this period of time. Now, in connection with his statement, "Confidentially", which he underlines, "the reason why we must use some product other than fused oxide in this alloy to start with is that we cannot sell vanadium for less than the market price——" [1589]

A. I might ask you——

Q. What was the reason for that statement?

A. ——is Silvaz mentioned in here? Mr. Van Fleet is not talking about Silvaz. You are distorting this picture.

Q. I will read the whole letter. If there is any distortion, we would not want that to appear in this record.

A. May I see if it is the same letter I have in mind?

Q. Yes.

A. "Dear King:

"You will recall, or at least I recall talking with Blair, about the possibility of preparing a vanadium product containing silica, aluminum and iron."

I don't know whether this is the letter. I have seen a letter.

Q. Does silicon and vanadium refer to Silvaz?

A. Not necessarily. I will tell you why I bring up this point. Van—Mr. Van Fleet—had promoted at various times that we use an iron vanadium compound, which is an intermediate in the milling,

(Testimony of Walter Edward Remmers.)

iron vanadate, and at various times he has recommended that instead of going all the way through to a block oxide, which Electro Met has always kicked to Vanadium about the price of it, between themselves in interdepartmental discussions.

He proposed at various times we use an iron vanadate, [1590] which is an intermediate mill product, take that and reduce it with silicon and form a ferro-vanadium directly.

That is what I thought you had in mind when you were quoting Mr. Van Fleet.

Q. Is that what that letter talks about?

A. I don't know. I will have to read the letter.

Q. I believe the second paragraph explains what he wants done.

A. This may be another letter. If it is, I will find it.

Mr. Archer: Just so we know what we are talking about, what is the exhibit number on that.

The Witness: Plaintiffs' X-68.

Mr. Alioto: 68.

The Witness: Yes, this is the letter to which I referred. There is no mention of Silvaz in here.

Q. (By Mr. Alioto): What was the compound he was requesting to be made without the use of vanadium oxide, so we can get that fact established and then go on to this market price question?

A. I would like to read it if I may, please (reading):

"You will recall, or at least I recall talking with

(Testimony of Walter Edward Remmers.)

Blair about the possibility of preparing a vanadium product containing silica, alumina,"——

Remember, these end in "a." These are not the metals; these [1591] are the oxides (continuing reading):

——"silica, alumina, and iron, which could be very cheaply done. I had in mind somewhere around 25 cents to 30 cents per pound for the contained V_2O_5."

Can you imagine producing a black oxide for that price? It would have to be something far ahead of that in the processing. That is why I say he was talking about the ferric vanadate as an intermediate product.

If I may go on, down further he says (reading):

"I am very anxious to supply such a material, and it looks like the Sludge B would answer the purpose."

In other words, he is using an intermediate sludge that is unrefined to produce vanadium products. That is what Van is shooting for, for lower cost of vanadium product. But there is nothing in here about Silvaz. Van had nothing to do with Silvaz.

Q. Now that we understand what the product is we are talking about, I call your attention to the paragraph starting "Confidentially," which is underlined. Will you read that sentence first, and then I will ask you about it?

A. I remind you this is September 1, 1938, at a time when I had never met Mr. Van Fleet for the first time, so I can't surmise what his conclusion is.

Q. I am not asking what his surmises are. I

(Testimony of Walter Edward Remmers.)

want to be [1592] sure you do read it, so you won't have any distorted pictures in connection with that.

A. Are you inferring that I am distorting any pictures?

Q. No. You said I was. I don't want you to conclude that I am. Read it so there will be no question about it, Mr. Remmers, and you won't have to take my word for it. Just read the letter.

A. He says "Confidentially," underlined—I don't know what he means there, or why he should write it that way. He says (reading):

——"the reason why we must use some product other than fused oxide in this alloy to start with is that we cannot sell the vanadium for less than the market price."

Q. Why couldn't you sell vanadium, on September 1, 1938, for less than the market price, if you used the oxide?

A. Because the oxide was costing E. M. Company the market price of $1.10 a pound, and E. M. Company——

Q. It was costing E. M. Company $1.10 a pound, was it? A. Yes.

Q. You know that is not true, don't you, Mr. Remmers? A. No, I do not.

Q. Why were you selling it to Vanadium Corporation for 80 cents if it was costing you $1.10 in 1938?

A. Vanadium was sold to the E. M. Company just as it was [1593] sold to U. S. Vanadium, or

(Testimony of Walter Edward Remmers.)

anybody else. These are separate corporate entities selling their products. You recall price controls at a later time established that practice and said you must transfer between associated companies at the market price and under price controls.

Q. You were selling to Vanadium Corporation at that time for 80 cents, weren't you?

A. I have heard that since the preparation of the case.

Q. All right.

A. I can't testify to that. I was the salesman in Chicago at the time you are asking me about these things, in 1938,—a relatively new salesman of the company. I was with them two years.

Q. Is it your testimony that something that cost you $1.10 to make you sold to your principal competitor so it could make the alloy to compete against you for 80 cents? Is that your testimony?

A. I didn't say it cost $1.10 to make. I never said that at all.

Q. What did you say?

A. I said it was sold to the Electro Metallurgical Company at $1.10 a pound.

Q. How much did it cost to make?

A. I have no idea. It was produced by U. S. Vanadium. They are two separate corporate entities. One sells to the [1594] other as though they are separate companies.

Q. It was sold to you at $1.10 and to Vanadium Corporation of America at 80 cents?

A. They sold some at $1.18.

(Testimony of Walter Edward Remmers.)

Q. But mostly at 80 cents during that year.

A. I don't know. When you say most of it——

Q. Did you ever inquire why they sold to their own company and billed at $1.10, and yet sold to their competitor at 80 cents? Did you ever inquire about that?

A. I was the salesman in Chicago, and I never inquired about the raw material cost, and I am not exaggerating one bit. There were thousands of products of the corporation, and if I inquired what was the source of supply and whether we were selling those supplies to other people, where we were selling it, at what price, I would have no time to call on the customers whatsoever.

Q. Finally, as a member of the sales department, can you give us any reason why the complex of companies that was Union Carbide could not sell——

A. They are not very complex.

Q. All right. The group of companies——

A. There are two of us involved in this.

Q. The group of companies——

A. Group of two.

Q. Can you tell us why you could not sell vanadium [1595] contained in fused oxide at less than the market price?

A. Because I was in the sales department, and sales had nothing to do with the transfer from one unit to another. If the E. M. Company could have bought it for less money they certainly would have purchased it for less money.

Q. Then you do not know why you could not sell

(Testimony of Walter Edward Remmers.)

the fused oxide for less than the market price, is that it?

A. Who are you speaking of when you say "you"? What company? U. S. Vanadium or Electro Metallurgical Company? I can answer the question in one case; in the other I can't. That is the reason I ask you that question.

Q. Just read that letter and tell me if you know any reason why Mr. Van Fleet says (reading):

"We cannot sell vanadium for less than the market price,"——

and specifically, if you know, was the reason that you had a price-fixing agreement with the Vanadium Corporation of America.

A. Mr. Van Fleet wrote this letter as head of the mining department of U. S. Vanadium Company. He wrote to two men in his organization to whom he reported. Mr. Van Fleet didn't know any more about selling prices of ferro-vanadium than I knew about his manufacturing costs out in the Colorado Plateau.

Now, this is an inter-company bit of correspondence. He is proposing something to his two associates. And as I [1596] read this thing, he is proposing that they take a product out of process much earlier than black oxide and use that, recommend that its use be utilized in the manufacture of the metallurgical products in order to reduce the price. Mr. Van Fleet was always looking for some way to

(Testimony of Walter Edward Remmers.)

reduce the price of ferro-vanadium. That was his job, one of his responsibilities.

Q. Of ferro-vanadium?

Q. (By The Court): Do you know whether his recommendation was followed in this matter?

A. No, it was never followed. I know that definitely, because we were selling.

Q. (By Mr. Alioto): You say Mr. Van Fleet was always trying to reduce the price of ferro-vanadium?

A. By reducing tl raw material costs. I mean, he was interested only in the raw material that went into ferro-vanadium, yes, in increasing the sales.

Q. You do not know of any reason why he could not sell below the so-called market price if it contained vanadium oxide, do you?

A. Will you state that again?

Q. Why couldn't he sell below the market price, as he says in the letter, if the material contained a vanadium oxide? [1597]

A. I don't know what he refers to, selling below the market price—the oxide or the ferro-vanadium.

Q. Isn't it clear that he meant the ferro-vanadium?

A. No, no, it is not. It says here "vanadium." It could be oxide.

Incidentally, we have tried this process only in the last two or three years, again trying to reduce the cost by taking this intermediate product, ship-

(Testimony of Walter Edward Remmers.)

ping it to Niagara Falls, putting it in an electric furnace there and attemping to reduce it.

Q. When he says (reading):

"It has always been my opinion that if we were able to reduce the sales price of vanadium, it would encourage its use."——

you do not think he is talking about the ferro-vanadium?

A. That is a generic term, "vanadium." It could be oxide; it could be anything—ore. It could even be the famous Silvaz we made at one time.

Q. So he wanted to encourage its use in your own companies and not the steel companies?

A. No; Van was interested in encouraging the use of vanadium by all persons in order to promote the prosperity of the mining company he was head of. That would be quite obvious.

Q. During the time you were in the sales organization of [1598] Electro Metallurgical Company did you ever hear a discussion of policy as to three possible actions that the company could take in its relations with the Vanadium Corporation, one being that it take no aggressive action, but continue to let V.C.A. dominate the market; the second being that "We sell to V.C.A., but compel them to take an aggressive attitude toward stimulating the demand"; and the third being that "We set our own lowered price, and by an energetic campaign we eliminate V.C.A. from the field"? In 1938, or any time thereafter while you were with the company, did you ever

(Testimony of Walter Edward Remmers.)

hear any discussion about those three alternative positions which the company faced?

A. Yes, I did. I heard that in the preparation of the Denver suit for the first time, and that sounds very similar to recommendations—you are probably reading from the MacQuigg Report. I have not read the MacQuigg Report, except those recommendations at the time the Denver suit was being prepared. If you are speaking about 1938 and the time I was in the sales company, my answer is no. If you ask me about any time I was with the Electro Metallurgical Company, which was the operating unit, the answer is no. I have never heard anyone consider that report or discuss it. The only time I heard it come up for any discussion was in the preparation of the Denver suit.

Q. When you became vice-president of the Electro [1599] Metallurgical Company and U. S. Vanadium was there any discussión about the three alternatives which the company faced, and was there any further discussion about which of the alternatives the company adopted?

A. Never. It was never discussed to my knowledge, either in the U. S. Vanadium Company, while I had anything to do with it, or in the Electro Metallurgical Company.

Q. When you said awhile ago Mr. Priestley was in charge of the development company, what did you mean by that?

A. The department—in the earlier days Mr. Priestley was our vice-president in charge of tech-

(Testimony of Walter Edward Remmers.)

nical sales and development, and things of that nature—the field metallurgist, and the metallurgist working in the secondary markets. We had metallurgists working with the steel companies in the sale of their products, advertising, and things of that nature, customer search. Those items all came under Mr. Priestley's direction in the earlier days.

Q. Do you know of an organization known as the Union Carbide and Carbon Research Laboraties, Inc., at 30 East 42nd Street, New York City?

A. Yes, indeed. That is not the location of the laboratories; that is the location of our main offices, but the laboratories are at Niagara Falls.

What year was that, incidentally?

Q. Let me just ask you first if there was such an [1600] organization in 1938, 1939, 1940, 1941,——

A. Oh, yes, indeed. It is still in existence under a different name.

Q. There was in existence during the period 1938 to 1947, when you were with the Electro Metallurgical Company,——

A. Electro Metallurgical Sales, yes.

Q. The Research Laboratories, Inc., was in existence then, was it not?

A. No; Research Division. The Union Carbide & Carbon Research Laboratories were in existence in the earlier years. They were later known as the Metals Research Laboratories of the Electro Metallurgical Company, which name the use to this day. Actually, that whole name has been dropped.

(Testimony of Walter Edward Remmers.)

Q. From the period 1938 on what was it known as? A. On until when?

Q. On until 1947.

A. Union Carbide & Carbon Research Laboratories, Inc.

Q. And they had laboratories located at Niagara Falls, and didn't they have offices located at 42nd Street? A. Yes.

Q. Their main office?

A. There were people there, some people.

Q. And weren't economic problems referred to that organization as well as metallurgical problems and technical problems? [1601]

A. No, definitely not. That was the metallurgical laboratory.

Q. Do you mean that was never a time when economic problems were not referred to that organization?

A. My life time is relatively short with the organization. That is an old organization. I couldn't say "never." But during my employment with the corporation I can think of no problem that would be referred to the research laboratories metallurgists, because they were not qualified to write reports and pass judgment on economic problems. They had no economists, they had no sales people. They were highly trained men in the field of science.

Q. Well, is it your testimony that as of 1938 you were not aware of the fact that the whole vanadium problem had been referred to that group and that

(Testimony of Walter Edward Remmers.)

they were to work in collaboration with Mr. Priestley, Mr. Van Fleet, Mr. Burwell, as of 1938?

Mr. Holland: There is no such testimony in the case and he is trying to go back behind 1938 now. This case, it seems to me, is extensive enough.

The Court: Well, you have been instructed a number of times this is limited to '38, to the date of filing this suit.

Mr. Alioto: If your Honor please, in that connection, in a recent private action, the More Case, that your Honor is familiar with, they cite with approval the American Tobacco opinion in the Supreme Court which says it is permissible to go back for a short while before.

The Court: The Court has ruled.

Mr. Alioto: All right.

The Court: The Court has ruled on that matter.

Q. (By Mr. Alioto): What I am asking you is as of 1938, when you were in the organization, weren't you aware of the fact that a study had in fact been made and——

A. No, indeed not. Indeed not.

Mr. Holland: He is trying by the method of asking of what he remembers in 1938 to go back to 1935.

Mr. Alioto: When I try you can stop it, but right now I am talking about 1938.

A. What you're trying to do, something that is not the case, because in 1938, as I have testified, I was in Sales Office in Chicago, and I, to answer your question, I was not aware of anything of that nature, I had never heard of anything of that na-

(Testimony of Walter Edward Remmers.)

ture until it was brought out in the preparation for the Denver suit.

Q. Did Mr. Priestley ever tell you that there had been a study made and certain recommendations made and on the basis——

A. No, indeed not.

Q. ——and on the basis of the recommendations of that they had a policy from '38 on through?

A. No, indeed not.

Q. He never did?

A. We did not have a policy of that type that you just described there.

Q. You produced while you were there, approximately 74 percent of the vanadium oxide, didn't you Mr. Remmers, from '38——

A. Your figures would probably be more accurate than my memory.

Q. It was about three-quarters of all——

A. I don't know the basis of this chart, but——

(Counsel showing witness a chart in evidence.) [1604]

The Court: What is your question now? Let's get down to the question.

Q. (By Mr. Alioto): What was your understanding of what percentage of vanadium oxide, domestic production in the United States, was controlled by Union Carbide while you were there, taking 1938 to '45?

A. I couldn't testify as to that. I don't know anything about production of vanadium oxide in Colorado in '35.

(Testimony of Walter Edward Remmers.)

Q. Well, you knew that you produced a lot more than the Vanadium Corporation of America, didn't you?

A. No, I didn't. I thought we did. As a matter of fact, I knew nothing about it all the way through until '45.

I had some pretty good ideas. You know, at one time the Bureau of Mines' figures did not include publication of figures where only two producers were involved.

Q. Well, they still do not even today. You can't get ferro-vanadium figures from the Bureau of Mines, can you? A. I don't know.

Q. Because there are——

A. This was their original policy because it would be——

Q. Regardless of the Bureau of Mines, didn't you, as one of the chief managing officers of Union Carbide, have some notion as to what percentage of the vanadium oxide market you controlled?

A. Oh, yes, we had a pretty good idea, but I couldn't [1605] testify as to percentage.

Incidentally, you have mislabeled me, in a very complimentary fashion, but I was not one of the chief officers of Union Carbide in the period you are talking.

Q. The Electro Metallurgical Company.

Now, didn't you know at that time approximately how much oxide you produced as against your principal competitors, for example?

(Testimony of Walter Edward Remmers.)

A. We knew how much ferro-vanadium we were selling as opposed to our competitors.

Q. Well, the fact remains during that period of time, does it not, Mr. Remmers, that while you were producing more oxide than the Vanadium Corporation of America, that it was the Vanadium Corporation of America that was selling almost twice as much ferro-vanadium as your company?

A. If you can tell me how I in my position at that time could determine what percentage the Vanadium Corporation was producing at Naturita and other points in Colorado and what they were producing in Peru, it would be very helpful to us in our future analysis of the problem, but I don't know how we could determine——

The Court: You have just answered, you don't know.

Let's get along.

Q. (By Mr. Alioto): You mean you don't know —You [1606] didn't know while you were one of the chief managing officers of Electro Metallurgical Company, that you were producing more than the Vanadium Corporation of America from domestic sources?

A. Oh, sure, I knew that. You asked me percentage a minute ago.

Q. All right. Didn't you know that percentage was approximately three-quarters? A. No.

Q. You didn't?

A. I knew it was substantial. It was more than theirs. But in percent——

(Testimony of Walter Edward Remmers.)

The Court: You have answered the question.

Q. (By Mr. Alioto): All right. You certainly knew that, you certainly knew that you were supplying the Vanadium Corporation of America with vanadium oxide, didn't you? A. No.

Mr. Holland: What period?

A. No, I did not.

Q. (By Mr. Alioto): You didn't know in 1938 on?

A. No, I did not. I told you that about two or three times. No. I was a salesman in Chicago, and a salesman in Chicago certainly has no knowledge of what the mining division of his company is doing in Africa, in Colorado or other places around the world to produce materials. [1607]

Q. However, you knew as a salesman that Vanadium Corporation of America, which was buying oxide from you, was selling about two-thirds to one-third as against you; you knew that, didn't you?

A. I did not know that until a later date.

Q. While it was going on you had no estimate as to whether you were selling more than Vanadium Corporation?

A. I had a pretty good picture of what it was in my district but I didn't know what it was across the United States.

Q. When you became the chief managing agent of Electro Metallurgical——

A. I never became that.

Q. When you became the Vice-President——

A. All right.

(Testimony of Walter Edward Remmers.)

Q. We'll get to the exact phrase. — the Vice-President, the Executive Vice-President, didn't you know then——

A. I never was Executive Vice-President, except for U. S. Vanadium, and that is an ore producing company or raw material producing company.

Q. When you became Executive Vice-President of U. S. Vanadium and you were the Vice-President of Electro Metallurgical, you mean you didn't know at that time that your ferro-vanadium sales were only one-third as against approximately two-thirds of the Vanadium Corporation of America?

A. I knew that our — I told you that I knew what our sales of ferro-vanadium were, approximately.

Q. Well, did you know the relationship of your sales to VCA, that they were selling——

A. Of ferro-vanadium, yes. You asked me what percentage of the source of domestic vanadium we produced, and I told you I couldn't testify to that figure.

Q. All right.

A. In 1947 we were under contract, we were entering into contracts with the government, and through a good period that you are talking about we were producing at the direction of the United States Army and the Atomic Energy Commission for their benefit, and the vanadium that we did not sell to the trade, to the industry, to the trade, to the industry, they accepted. Vanadium was a strategic material, it was required for stockpiling purposes,

(Testimony of Walter Edward Remmers.)

and they accepted from us at a preferred price—to the government. I hope you won't object we sold to the government at something less than the trade.

Q. Now, my question is, sir, did you know that your ferro-vanadium sales were approximately one-third to two-thirds for the VCA, did you know that relationship?

A. The first time that I heard those two fractions used was sitting in Mr. Burwell's office in Grand Junction, Colorado, when we talked about his future with the company [1609] and he proposed that to me, he said that to me on that occasion.

Q. What I am asking is what you knew as the Executive Vice-President of one company and as the Vice-President of the Electro Metallurgical Company during that period from '38—from '44, we will say, to '47—. So there won't be any question about it, take from '41, when you were in New York, to 1947; didn't you have any idea what the ratio of your sales to the industry——

A. I told you I knew what we were doing in the sale of ferro-vanadium.

Q. All right.

A. That is what I was concerned about.

Q. And you knew that Vanadium Corporation of America was selling about twice as much ferro-vanadium as you?

A. I didn't know it was twice as much. There were times when we have sold probably 40 per cent —I don't know what period you are asking—but

(Testimony of Walter Edward Remmers.)

that thing fluctuated from year to year. There is no fixed amount.

Q. Let me show you one of the charts in evidence here. You can see——

A. I have never seen that chart before and I know nothing about it or its preparation.

Q. You knew, though, that Vanadium Corporation was selling approximately twice as much as you folks over the period [1610] from '41 to '45, didn't you?

A. If you will say "more," I will say yes. If you tell me—try to pin me down to a specific figure, I can tell you no, because that was not the uniform figure. It fluctuated and I wouldn't — I had never thought of that as being in a certain percentage of the market, never, and I was very closely associated with the sale of ferro-alloys.

Q. You also knew that your price for ferro-vanadium remained unchanged from a period before you got there, $2.70, right down to 1945, we will say? A. Yes, indeed.

Q. You knew that? A. Yes.

Q. You knew that that price remained unchanged even though your cost of business obviously increased during that period of time, did it not?

A. Yes, indeed.

Q. Was there a time when you proposed that the price be reduced in order that you might get more business that was going to the Vanadium Corporation of America?

A. If you recall, at that period the cost of every-

(Testimony of Walter Edward Remmers.)

thing was going up, there in the War time period. It certainly would not have been good business under those conditions to consider—in fact, in some cases we couldn't possibly consider reducing selling prices. Stability was going up, [1611] it just would not have been good business to reduce prices under those conditions.

Q. How about 1938?

A. In 1938, to begin with, I had nothing to do with setting prices.

Q. You were in the selling division?

A. I was a salesman, yes.

Q. In 1939 did you ever suggest that you might reduce the price so that you could sell more to the Vanadium Corporation of America customers?

A. No. I was a salesman at that time. I was out in Chicago and was not in New York, and it was not my responsibility to determine prices.

Q. All right. In connection with your salesman's activities would you be good enough to tell us whether you have ever heard the expression of 50-50 requirements contract?

A. Oh, sure, I have heard 50-50 contracts, 75%-25%, 60-40, full requirements, and I also heard, as a salesman, "Nothing doing."

Q. All right, you heard. You had some requirements contracts for certain customers——

A. Yes.

Q. ——based upon a 50-50 split, did you not?

A. We had depending upon what the steel company asked for. We tried to get all the business,

(Testimony of Walter Edward Remmers.)

obviously, and there [1612] are many steel companies that would not give us all the business. They insist on a policy of dividing their business between several suppliers.

Q. Can you tell us which of the customers you had in which the requirements would split 50-50, between your company and the Vanadium Corporation of America?

A. We would have no idea how we could determine that, who would get the other 50%.

Incidentally, we have relatively few 50-50 contracts.

Q. You say you couldn't determine who got the other 50 percent? A. No.

Q. Of ferro-vanadium?

A. You think that the steel companies are going to open their purchasing books to us as a supplier?

The Court: He has answered the question: No, he didn't.

Q. (By Mr. Alioto): There was only one other competitor, wasn't there, the Vanadium Corporation of America?

A. Are you speaking of ferro-vanadium?

Q. Yes. A. You spoke of alloy contracts.

Q. I am speaking about ferro-vanadium, sir.

A. Oh, in the case of ferro-vanadium, if they were not [1613] buying from us, the steel company refused to buy from us, obviously they were Vanadium Corporation's customer.

Q. All right. The ferro-vanadium contracts were made separate with the steel companies, weren't

(Testimony of Walter Edward Remmers.)

they? You didn't put all ferro-alloys on one contract?

A. They were separate. Every ferro-alloy was separate, except that we had different grades in some cases——

The Court: Getting back to the lawsuit, was there any agreement on your part—that you know anything about, that is — that you know anything about, whereby you provided how much of this ferro-vanadium you would sell and how much the other company, your competitor, would sell?

A. No, your Honor, there was not.

Mr. Alioto: If your Honor please, in view of your Honor's question, in connection with that specific question, we will offer the document which has previously been marked as Plaintiff's Exhibit 47 in evidence, to show a document and an agreement that was made earlier but which was in existence in 1938.

The Court: The Court ruled on that matter some time ago.

Mr. Alioto: I do it in connection with the specific question raised by your Honor.

Q. Let me ask you this: Was there some change in the policy of the company in 1938? [1614]

Mr. Holland: If the Court please——

The Court: Objection sustained.

Mr. Holland: He shouldn't refer to that as an agreement. It is not an agreement.

Mr. Alioto: Well, we don't know what it is.

Mr. Holland: You shouldn't call it an agreement.

(Testimony of Walter Edward Remmers.)

Mr. Alioto: I think it is. It shows exactly what it is. But in any event——

Mr. Holland: No, it isn't.

Q. (By Mr. Alioto): Was there some change——

The Court: Just a moment. The question that the Court asked covers the time that you were inquiring about, '38 to '49.

A. Yes, sir.

The Court: Now, what I want to know is: At that time did you know of any agreement or understanding by which—that is, agreement between your company and your competitor—how much each one would sell to your various customers?

A. No, your Honor, I did not.

Q. (By Mr. Alioto): Was there ever such an agreement or understanding between the Union Carbide Subsidiary and the Vanadium Corporation of America?

A. I can't answer that question. "Ever" is a long time. [1615] The Company dates back for many years. I can only speak of the time I was associated with it and——

The Court: Limiting your answer now from '38 to '49.

A. There was no agreement of that type at that time, and I don't know how you can implement it if your sales manager — somebody didn't tell you to hold back on a certain customer, and I was in sales and nobody told me at any time to hold back on any selling of any alloy to any customer.

Q. (By Mr. Alioto): Was there such an agree-

(Testimony of Walter Edward Remmers.)

ment about which the Court has inquired, was there such an agreement in the 30 days preceding January 1st of 1938?

A. I wouldn't have any way of knowing, not the slightest. I had no interest in——

Q. In other words, you can't deny that there might have been that agreement.

The Court: Just a moment. You can argue the case later.

Q. (By Mr. Alioto): Now, I have some questions about—I just want to complete that line of inquiry about the 50-50 requirements contracts.

There were some, were there not, in which you had 50 percent of the requirements and the Vanadium Corporation of America——

A. I can't testify that there were, but if a customer [1616] insisted upon that type of contract we would sign that. We had, as I said, anywhere from 25 percent in increments of 5 percent, or some such figure, all the way up to 75 percent, some of them 90 percent of their business. They wanted to keep the door open to buy a certain amount from somebody else——

Q. Can you recall some of the steel companies that split their requirements between you and the Vanadium Corporation of America?

A. Yes, there were some——.

Incidentally, when we are talking about "Vanadium" and "some of the steel companies," I don't know whether we all understand, but when we speak of all of the steel companies we are talking

(Testimony of Walter Edward Remmers.)

about a very small fraction of the total amount of steel that uses vanadium. We use that word "all" rather freely.

The Court: Well, the steel companies with which you did business?

A. Yes. There were some that purchased from us and some that gave some of their business to the Vanadium Corporation.

Q. (By Mr. Alioto): Based on annual contracts where you each had a designated percentage, is that correct?

A. Yes. I am not so sure they always adhered to the percentage—at least, we suspected, in sales, that [1617] sometimes our competitor was getting more or that we were getting more.

Q. Now, my question, I would like to just conclude, I would like to just conclude as quickly as possible because we have been here a long time, is: Name some of those companies, those steel companies, which split their requirements between you and the Vanadium Corporation of America?

A. Oh, my, you are asking me a very difficult question. I can think of some. This goes back a long time.

The Court: Let's go back to '38. I don't want to go back——

Q. '38. Well, I would say that there were many of them split: Carpenter, Allegheny, Bethlehem split some of their business, Crucible—I am thinking of the larger tool steel people. Those are some of the major companies in which their business—

(Testimony of Walter Edward Remmers.)

not necessarily 50-50 basis — that would be utterly impossible for me to review, how their business was divided, and I wouldn't know.

Q. But they were taking the various percentages, is that it, on an annual basis?

A. No. It varied. I am sure if we would take a look at sales—. That is the reason I say "suspect"—We suspected at times the steel companies in their purchasing didn't adhere too closely to that percentage figure because one year were selling them what we suspected was a certain [1618] percentage of their business and then the next year it would go up and down and there was really quite a fluctuation from year to year.

Q. But the contracts themselves designated——

The Court: Getting to the point, did you know of any agreement now between the company you represented and the Vanadium Corporation of America by which your sales would be divided as you have indicated?

A. No, your Honor. Not only for—. I knew of no agreement of that type of ferro-vanadium or any other product that we made between our companies.

Q. (By Mr. Alioto): Just so we can conclude this matter, the contracts themselves designated a specific percentage? A. Some of them did.

Q. A specific percentage of requirements, did they not?

A. Some did, not all of them.

Q. All right. And those you named were some of the companies that did designate on the contracts?

(Testimony of Walter Edward Remmers.)

A. No. No. No, don't jump at conclusions.

Q. That is what I am trying not to do. Please don't give me any conclusion. Will you state the fact with respect to that. Did you have some contracts——

A. The facts can only be determined — I don't think there is anyone anywhere that could answer that question [1619] without going through the files and determining that——

Q. Then you don't know, is that it?

A. No one knows.

Q. Now, you were asked a series of questions by Mr. Archer about what were the problems of a new business in ferro-vanadium—— A. Yes.

Q. ——as of a specific period of time, you recall that? A. Yes, I recall that.

Q. And you gave out those problems. As a matter of fact, in 1938 was a pretty good time to get started in business, wasn't it, in this country?

A. Yes. Business was a little bit slow in '38.

Q. And it just anticipated — it was just before—— A. Just before——

Q. ——a big upsurge in business?

A. Big rush, yes.

Q. So you will concede that 1938 and 1939 was a good time to get started in business, as good as any, wasn't it? A. That's right.

Q. The economic factors were such that a new business in 1938 had a pretty good chance of prospering?

A. If the business had been established in '38

(Testimony of Walter Edward Remmers.)

and had their contacts and their lines all laid, they were all set to go when the rush came on and to meet the demands as they [1620] arose, yes, they were in an enviable position.

Q. Now, then, on the assumption that a new business in the vanadium business had a production of 5,000 pounds a month of ferro-vanadium, say in 1939, the very beginning of 1940, that business would have been, so far as the economic factors are concerned, in a good position to succeed, would it not?

Mr. Holland: I object, your Honor. That is making an assumption that is not in evidence. There is nothing in evidence about any company having 5,000 pounds a month.

Mr. Alioto: Mr. Archer's assumptions were the same way. He asked him to give a general statement to the problems of a business of this kind.

The Court: The objection is sustained. Exception allowed.

Mr. Alioto: All right.

Q. Do you recall that there came a time in 1944 when you were called upon to sell ferro-vanadium with a 70 to 80 vanadium content, to the Russians, specifically?

A. Oh, yes, indeed, I recall that distinctly.

Q. And at that time you were not producing a 70-80 vanadium, were you?

A. We had produced higher percentages. At that particular time we were producing 30-35, 50-55, we had [1621] produced some 60-65. And I recall

(Testimony of Walter Edward Remmers.)

that very definitely because I went to Washington, to the Russian Purchasing Commission, and tried to convince them to take what we had on hand instead of asking us to make speak heats and producing this material for them.

Q. But they ultimately wanted the 70-80 material, is that it?

A. Oh, they wanted everything under the sun that was different from what we were making.

Q. That was a large order, about a quarter of a million pounds, wasn't it?

A. I think that was about 200,000 or 210,000—about 210,000. I am not sure that is the figure.

Q. Was that order split between you and the Vanadium Corporation of America?

A. Oh, gee, I don't know. I don't believe so. I don't—I wouldn't know. I don't think it was.

Q. Well, was there any company producing ferro-vanadium with a 70 to 80 content in America at that time or shortly before that time?

A. Not at that moment. I can't say what anyone was doing, but I can only speak for ourselves. We were not producing at that moment and we tried to get them to accept standard material because it was very costly and this was Lend-Lease, our Government bought it and gave to the [1622] Russians.

Q. In other words, the Government actually paid you—— A. Yes.

Q. ——for the material and gave it to the Russians?

(Testimony of Walter Edward Remmers.)

A. Our negotiations were with the United States Treasury Department, but when it came to working out the technical details, the specifications and the impurities and that sort of thing, they directed me to the Russian Purchasing Commission in Washington. I talked with one of their people there.

Q. Now, you knew that prior to that time, Continental Ore Company was marketing a ferro-vanadium with a 70-80 percent, didn't you?

A. No, I did not.

Q. Well, didn't you at the time that this new competitor came into the field, didn't you acquaint yourself with the nature of the product that the competitor had?

A. I never inquired as to the percentage that he produced because it was all sold on the basis of pounds contained and actually it makes very little difference to the steel user whether he uses a 35 or a 70 percent. There are preferences. We make three grades, we make the 30-35, we make the 50-55, we make the 70-75, and it is a matter of choice. Some of the steelmakers are even so economically minded that they place a value on that excess iron that is in the ferro-vanadium and other ferro-alloys. But we offer [1623]all of them.——

The Court: I think you have answered the question.

Q. (By Mr. Alioto): You weren't offering all of them in 1941, '42, '43, '44—— A. Oh, no.

Q. Were you——

(Testimony of Walter Edward Remmers.)

A. We were trying to standardize as few specifications during the war time period as we could.

Q. It was only later you started producing the 70-75?

A. No. No, we produced higher grades. My recollection is that we were in the upper 60's, which is essentially 70—It is less than 70, depending upon how you look at it. But anyway, we were in the upper 60's before that.

Q. Since '45 haven't you gone more and more to the higher grade vanadium, higher vanadium content, in your product?

A. Yes. I think we probably produced more of the higher grade since '45. Oh, definitely, we have. As a matter of fact, we didn't sell very much of it in the earlier days. It is still sold on the basis of pounds contained valuable element in the ferroalloy, however. The percentage means little except individual preference.

Q. Now, just one other thing, in connection with your comment on molybdenum during your examination by Mr. Archer. [1624] It is a fact, is it not, that it takes approximately two pounds of molybdenum to do the same job as one pound of vanadium?

A. You can't make any general rules of that nature.

Q. Well, what is the situation with respect to the use of molybdenum in the manufacture of steel as against the use of vanadium in the manufacture of steel? You say that you can't say generally there is

(Testimony of Walter Edward Remmers.)

a two to one ratio to achieve approximately the same property?

A. No, not—. Bear in mind, I am not a steelmaker or a steel metallurgist, but in my association with the steel industry—. For example, are you speaking about high speed tool steel? When you add molybdenum as a substitute for tungsten you have to double the vanadium content. In the case of some of the structural steels, you may add ten to 1500 of vanadium or, oh, two and a half, three times that much molybdenum. So there you have got to speak of the individual steel, the type of steel that you are making, and so on.

Q. What is the type of steel in which vanadium is most used?

A. Strange as it may seem, the distribution of vanadium over the years—and this hasn't held either, but it varies so—is rather equally divided between cutting tools and engineering steels. [1625]

Q. Now, with respect to those two types of steel——

The Court: Just a moment. How is this material?

Mr. Alioto: Well, there was a previous discussion about comparative costs as between vanadium and molybdenum and I think I can wind this up with one further question, if your Honor please.

The Court: If you can do that, all right.

Mr. Alioto: The witness answered these questions that Mr. Archer put to him and I assume that Mr.

(Testimony of Walter Edward Remmers.)

Archer felt there was some relevancy on the price of molybdenum, for example.

Q. Now, in connection with these two types of steel that you have mentioned, is it not generally true that it requires approximately two times as much of molybdenum as vanadium to do about the same job?

A. If you are speaking in very rough numbers—fairly rough—yes.

Q. Yes.

A. Yes, that's right. It's extremely rough, though. I would personally say, closer to almost three to one.

Q. All right.

A. My estimate, that I have used and the figure that I have given the Atomic Energy Commission when they have asked repeatedly, in more recent times when vanadium has become plentiful; How far would we have to reduce the price of [1626] ferro-vanadium (this is the Atomic Energy)—how far would the price of vanadium have to be reduced in order to solve the surplus production that comes out with uranium? And my comment—I have stuck with this figure over the years, pulling it out of the air—my answer has always been: Until it competes with its nearest competitor, and its nearest competitor is molybdenum. And they usually reply: What price for vanadium does that mean? And I have pretty well stuck to my figure, that about $1.25 per pound of vanadium and until you get down to a figure of that type I do not believe you will cut

(Testimony of Walter Edward Remmers.)

down the molybdenum business to any appreciable extent.

Q. Finally, Mr. Remmers, so far as the use of vanadium oxide directly in the steel bath is concerned, there is matallurgical soundness, is there not, in putting fluorspar in the mixture?

A. You put fluorspar in every slag, in every electric furnace heat. It contributes nothing. You put it in a teaspoonful, in a tin can, that is one thing, but the melter that is making that heat who scoops a scoop shovel and heaps it in there is making a slag. It does no harm but it doesn't contribute anything.

Q. Specifically, is it your opinion then the introduction of fluorspar in a package of vanadium oxide makes no metallurgical contribution at all with respect to the steel [1627] industry, is that your opinion?

A. No more than a tablespoonful of fluorspar, a minute amount, compared a wheelbarrow load that they are shoveling in. It's just that little bit extra slag.

Q. But there is some metallurgical efficacy in putting fluorspar in the vanadium oxide?

A. No.

The Court: How is this material?

Mr. Alioto: Because there is a great deal of testimony as to whether we were selling Van-Ex and fooling the people with fluorspar. Mr. Holland inquired at great length about that.

(Testimony of Walter Edward Remmers.)

The Court: If you will ask that question. But you are asking a technical question. [1628]

Q. The implication has been that putting fluorspar in vanadium oxide was just like putting French dressing into the mix so far as metallurgy is concerned?

A. I think that is not true. It would be less effective than French dressing. French dressing is an oil and a reducing agent. I mean, if you are going to become facetious in this thing, you are adding oil as a reducing agent.

Q. Let us become facetious about it. So far as the metallurgy is concerned, is it your testimony that there is no efficacy at all or effectiveness in putting fluorspar into vanadium oxide?

A. Not a bit, except to get around price controls.

Q. In other words, not at all. It is just a pricing factor and a marketing factor, and you can say that as an expert who has read the literature on oxides, I take it? A. Oxides of what?

Q. Vanadium oxides or the literature on vanadium oxides.

A. I have studied metallurgy. Do you want to go into that?

Q. No. Are you saying this as an expert, as a man who has acquainted himself with the background of the literature on oxides, that there is no efficacy in putting fluorspar into it?

A. I might say——

The Court: Just a minute. This witness has

(Testimony of Walter Edward Remmers.)

[1629] stated his qualifications and he has answered the questions.

Q. (By Mr. Alioto): All right. Just let me ask: Do you plan to leave almost immediately, Mr. Remmers, or are you going to be around a few days?

A. I have no plans as yet. I had some plans to get away early, but if it is necessary, I will be happy to stay if I can contribute anything.

Mr. Alioto: We have no further questions at this time, if your Honor please.

Mr. Archer: I have no further questions of this witness, your Honor.

The Court: Very well. You may be excused.

(Witness excused.)

Mr. Archer: Shall I proceed with my next witness?

The Court: Yes.

WILLIAM JOHN PRIESTLEY

a witness called by and on behalf of the defendant Union Carbide and Carbon Company, and having been previously duly sworn, testified as follows:

The Clerk: Will you please state your name and address?

The Witness: William John Priestley, 105 Broadview Avenue, New Rochelle, New York.

Direct Examination

Q. (By Mr. Archer): Mr. Priestley, what is your present occupation?

(Testimony of William John Priestley.)

A. I am retired. I was——

Q. Well, I am going to limit my questions to the period 1938 to 1949, and I am going to ask you: Do you recall what offices you held in the Union Carbide Companies during that period of time?

A. 1938, did you say?

Q. Yes, to 1949.

A. I was at different times vice-president of the Metallurgical Company; I was president and director of the Metallurgical Company; I was a vice-president and director of Electro Metallurgical Sales; I was—did you say Union Carbide?

Q. Well, yes.

A. I was a director and president of U. S. Vanadium and I was a vice-president and a director of Union Carbide Corporation—not all of those at one time.

Q. I believe you became a director of United States Vanadium in 1945 and president of United States Vanadium in 1947?

A. That is correct.

Q. And in 1948 you became a director of Union Carbide and Carbon Corporation, the parent corporation? [1631] A. That is correct.

Q. During the period 1938 to 1949 why didn't Electro Metallurgical Sales decrease the sales price of ferro-vanadium from the $2.70 range to the $2.25 range?

A. It wasn't reduced because it would have been futile for us to have reduced the price. Vanadium

(Testimony of William John Priestley.)

still had been diminishing in production, oh, from back in 1920's——

Q. Just start with the period 1938.

A. Well, within that period I made some figures at one time and I figured that in order to compete with the steels that had been introduced in industry, molybdenum steel, manganese steel, plain carbon steel, we would have had to have reduced the price of vanadium to 60 cents per pound in order to compete with the carbon steel or the steels I have mentioned.

Q. You mean 60 cents per pound of vanadium oxide, or per pound of ferro-vanadium?

A. Per pound of ferro-vanadium.

Q. That is per pound of contained vanadium?

A. Per pound of contained vanadium, that is right.

Q. Did you have any knowledge during this period of any agreement between the officers of Union Carbide and its subsidiaries on the one hand and officers of Vanadium Corporation of America on the other hand as to the prices to be charged for vanadium products or ore? [1632]

A. There was never any agreement like that during that period—or any other period, so far as I know.

Q. We are just talking about the period 1938 to 1949.

A. Yes. There was no price agreement.

Q. Did you or do you have any knowledge during that period of time of an agreement during that

(Testimony of William John Priestley.)

period of time between the officials of Union Carbide and its subsidiaries on the one hand, and the officials of Vanadium Corporation of America on the other hand as to particular customers for vanadium products which would be given to one or the other of the companies or sharing the purchases of particular customers?

A. There was never any allocation of the business.

Q. Mr. Burwell has testified that Mr. Dutot told him in July of 1946 that he had received instructions from you and from Mr. Remmers not to approach customers of Vanadium Corporation of America.

Now, first, in July of 1946, what was Mr. Dutot's position?

A. Mr. Dutot was sales manager in the Pittsburgh office of Electro Metallurgical Sales Company.

Q. Did you give Mr. Dutot or anybody else such instructions? A. I never did.

Q. Did you ever hear Mr. Remmers giving Mr. Dutot [1633] or anybody else such instructions?

A. I never did.

Q. Mr. Burwell has testified that in the summer or latter part of 1946, there was a meeting of certain officials of Union Carbide and Carbon Corporation consisting of Mr. Haggerson, yourself, Mr. Rush, Mr. Davison, Mr. McClure and Mr. Burwell on the 18th floor of the general offices in

(Testimony of William John Priestley.)

New York City. Were you present at such a meeting? A. I was.

Q. Were all those individuals present at the meeting?

A. I can't say that, because my memory does not serve me well enough, but they were all members of the operating committee, not the executive committee. I think you said executive committee.

Q. I said executive officials.

Well, what kind of a meeting was it?

A. It was an operating committee, composed of the presidents of the different companies of the corporation who met weekly to discuss general operations, budgets and expenditures.

Q. What was the purpose of this particular meeting which Mr. Burwell attended?

A. Well, this was no special meeting, but he was invited to attend the meeting which you refer to, and he had prepared for the U. S. Vanadium Company a budget for expenditures for [1634] the following year. Normally a budget of that kind would have been presented by myself as vice-president in charge of the alloys and metals division. I did not agree or consider that all the money he requested was necessary. I thought some of it was decided to be very unnecessary, and I felt the proper step would have been for Mr. Van Fleet to propose the budget and argue it with the committee if the question came up. Van Fleet didn't want to handle it.

So I wanted to get the thing settled and I ar-

(Testimony of William John Priestley.)

ranged with the—I explained the situation to the president of the corporation, with the chairman of the operating committee, and asked if he would have any objection to Burwell, who was very much interested in getting this approved, presenting his own facts and figures to the committee, and he didn't.

And that was how he got into the meeting.

Mr. Archer: Before I go into the meeting, does your Honor want to adjourn?

The Court: I think we will rest a little while. We will stand recessed until 2:00 o'clock.

(Whereupon an adjournment was taken until 2:00 o'clock p.m. this date.) [1635]

June 17, 1958, 2:00 o'clock p.m.

WILLIAM JOHN PRIESTLEY

a witness called by and on behalf of defendant Union Carbide and Carbon Corporation, having been previously duly sworn, resumed the stand and testified further as follows:

Direct Examination—(Continued)

Q. (By Mr. Archer): Mr. Priestley, when we finished at noon, you had just described a meeting of the operating committee in the latter part of 1946 which you attended and which Mr. Burwell attended and you had stated the purpose of the meeting had to do with the United States Vanadium budget.

Now, would you tell us what occurred at that meeting?

(Testimony of William John Priestley.)

A. The budget covered the tungsten, vanadium and uranium products. And my controversy, my objection to approving the budget, was the amount of money that was to be spent at the tungsten chemical plant at Henderson, Nevada. When the members of the committee started to question Mr. Burwell, he became very indignant and he created a very bad impression.

Mr. Alioto: I make a motion to strike the conclusion and have him state what was said or done.

The Court: State what was said or done.

The Witness: Beg pardon, your Honor?

The Court: You answered that he made a very bad impression. That is a conclusion.

Just go ahead. Just state what was said and done.

A. Well, Burwell was very much in favor of building this plant and making metal chemicals at Henderson, Nevada, and I opposed it from the beginning because he had not worked out or found any progress with the products that he was making.

Q. (By Mr. Archer): Well, what we want, Mr. Priestley, is just what happened at the meeting, what was said at the meeting, as best you can recall the substance of what was said or—let me put it this way, Mr. Priestley:

Was the budget for Henderson, Nevada, approved at this meeting, or not?

A. The entire budget was not approved until later, after that was taken out. The plant at Henderson was closed down early the following year.

(Testimony of William John Priestley.)

Q. Was either vanadium or uranium produced at the plant at Henderson, Nevada?

A. No.

Q. Mr. Burwell has testified that at this meeting or at the time of this meeting you took him somewhat to task for spending money for uranium when Union Carbide would produce vanadium it couldn't sell, and that you indicated that you didn't think uranium was of any immediate importance to the corporation.

Did you do this or did you make these statements to [1637] Mr. Burwell?

A. That is not correct. We were purchasing for the——

Q. Well, just answer the question. Thank you.

Mr. Burwell also testified that at this time you told him that you did not see any justification for producing more vanadium at the uranium plant and that he told you that it was not his business to sell vanadium and that if you couldn't sell vanadium to please say so and he would take over the job of selling vanadium and that he would assure you that he wouldn't sell vanadium or make a deal with the Vanadium Corporation of America.

Did you make these statements to him or did he make these statements to you at that time?

A. Not to my memory.

Q. Mr. Burwell further testified that in the fall of 1946, you called him and told him not to agree to a sale to the Treasury Department of vanadium oxide and that you said that it would be better to

(Testimony of William John Priestley.)

give the Vanadium Corporation of America part of the business, and that he, Burwell, should withdraw the offer or go to Washington and tell them that they ought to consider the other vanadium producer in the business.

Did you make such statements to Mr. Burwell?

A. I certainly did not.

Q. Mr. Burwell further testified that in October of 1946 you and he and Mr. Rafferty had a meeting in Mr. Rafferty's [1638] office on the 18th floor of the general offices in New York City.

Do you recall such a meeting? A. I do.

Q. What subjects were discussed at this meeting? A. Tungsten and vanadium.

Q. At this meeting in Mr. Rafferty's office, Mr. Burwell has testified that Mr. Rafferty asked you what you meant about giving Vanadium Corporation of America a part of the business and that you stated that Mr. Burwell ought to go to Washington and tell them that Vanadium Corporation of America ought to be considered.

Were these statements made at that time?

A. No, they were not.

Q. Mr. Burwell further testified that Mr. Rafferty said that it would be very unwise to go down to Washington and ask for V.C.A. to be included in the business (by V.C.A. I mean Vanadium Corporation of America) and that you replied that you had heard from Mr. Swain that Mr. Swain had prevailed upon Vanadium Corporation of America to increase the price of ferro-chrome silica

(Testimony of William John Priestley.)

to the point that it would not be used as a substitute for low-carbon ferro-chrome, and that you did not want to antagonize Vanadium Corporation of America at this time.

Did you make these statements? [1639]

A. Swain had never told me that and I have never made those statements.

Q. What was Mr. Swain's position at that time?

A. President of the Electro Metallurgical Sales.

Q. Mr. Burwell further testified that Mr. Rafferty asked you whether you were still conniving on this business with Vanadium Corporation of America.

Did Mr. Rafferty make such a statement to you?

A. I can't remember any such statement like that, no.

Q. While you were president of United States Vanadium Corporation did you personally handle the production of uranium for the Atomic Energy Commission or the negotiations for those contracts?

A. No, I did not.

Q. Who handled this matter?

A. Walter Remmers.

Q. That is the witness who previously testified?

A. The witness who was on the stand before me.

Q. Did you ever discuss the production of uranium with any member or employee of the Atomic Energy Commission?

A. No, I did not.

(Testimony of William John Priestley.)

Q. Do you know Mr. Gustafson of the Atomic Energy Commission?

A. I knew of him, but I never met him.

Q. Were you an advisor to the Atomic Energy Commission? [1640] A. No, I was not.

Q. I now show you a copy—this is my own copy—of what is Exhibit 73 in this case.

It is a letter dated May 10, 1944 from yourself to Mr. Dutot. I think it is a little more legible than the court copy, and I ask you whether you are familiar with that letter.

A. (Witness examining.) I remember this letter. I wrote it.

Q. You state in the letter that you have recently refused to supply vanadium oxide and columbite with combined reducing agents on the ground that you are primarily in the ferro-alloy business and are not interested in the sale of ores, especially when you can make use of large smelting facilities.

To what kind of purchaser did you refer when you stated that you had recently refused to supply vanadium oxide and columbite with combined reducing agents?

A. Well, the reference was to steel companies, and this letter primarily was written in reference to the sale of calcium tungsten briquettes.

Q. Why had you refused to supply vanadium oxide and columbite with combined reducing agents to steel companies, if you had?

A. Well, we were manufacturers of ferro alloys,

(Testimony of William John Priestley.)

and we [1641] were interested in selling ferro alloys, when we could sell them. And I wrote this letter because evidently one of our enthusiastic salesmen had apparently taken an order for calcium tungsten briquettes from some customer to whom he couldn't sell ferro tungsten, and at that particular time that I wrote this letter, as I say in here, we were buying tungsten ore in order to take care—to fill our orders that we had for ferro tungsten, and if we had started the business of selling oxides instead of smelted products, that we had a big plant and capacity for, we would soon be out of business.

The Court: Did you need this particular material? Did you need that in your business? This oxide.

A. Yes, we did, Judge. In order to make the ferro-tungsten we had to have tungsten ore, and these products, the calcium tungsten briquettes that I referred to here, would have deprived us of having that much ore to make ferro-tungsten, for which there was a big demand at that time, and deprive us the use of our smelting capacity.

Now, our situation on making ferro alloys is something like this, we will project our requirements of ferro alloys months and years ahead. As the steel industry increases their capacity, we have to be prepared to serve them, because of the long-term requirement contracts we have from them. So we build up our plants to correspond what they do in increasing their steel capacity. [1642]

(Testimony of William John Priestley.)

Now, if we went into the practice of selling ore, we would have all these idle plants on our hands, for which we spent millions of dollars.

The Court: Can you state approximately what the investment of Union Carbide Company is in these plants?

A. Well, one plant would have cost us 15 or 20 million dollars, and we had six or seven plants, some of them larger than others, and these plants had supplementing them large power plants. Instead of buying power, we would build steam plants and those steam plants would run up to 160 kilowatts, which is a huge plant. We also had two hydro-electric plants.

Now, you can see what would result if we sold ourselves out of raw materials to keep those plants in production. It would not only have put us out of business, we would have thrown a lot of men out of work.

The Court: In other words, your position is that you declined to sell this material because you needed it in the ordinary operation of your business? A. That's right, your Honor.

The Court: Proceed.

Mr. Archer: I have no further questions of Mr. Priestley, your Honor.

Cross-Examination

Q. (By Mr. Alioto): Mr. Priestley, do you remember in 1938 you sold large [1643] quantities

(Testimony of William John Priestley.)

of vanadium oxide to the Vanadium Corporation of America at 80 cents a pound?

A. We sold—I am not sure of the date, but we sold them large quantities of the oxide, that is true.

Q. Well, the record in this case shows that in 1938—we won't go behind that at the moment—or any moment—in 1938 you sold the Vanadium Corporation of America 130,052.27 pounds of vanadium oxide at 80 cents a pound of V_2O_5 contained. Now, it also discloses, and I want to read you from the record in this connection, under an agreement between the Vanadium Corporation of America and the United States Vanadium Corporation, dated June 30, 1939, the United States Vanadium Corporation milled vanadium ore belonging to Vanadium Corporation of America and delivered to Vanadium Corporation of America 75 percent of the vanadium oxide content of such ore.

United States Vanadium Corporation made a processing charge to Vanadium Corporation of America for this service of 65 cents per pound vanadium oxide contained on all amounts delivered in 1937, and 75 cents per pound vanadium oxide contained per all amounts delivered during 1940.

And then here are the figures following:

517,847 pounds were delivered under this contract in 1939, and 200,000 pounds in 1940.

Now, you recall that this contract was referred to [1644] as the Maggie C. contract, don't you, Mr. Priestley?

A. No, I don't. I was not in the United States

(Testimony of William John Priestley.)

Vanadium Company at that time and I had nothing to do with that transaction. I was in charge of the service and development work of the Electro Metallurgical Company. [1644-A]

Mr. Alioto: We will get the figures down, and then we will go back to whether or not you had anything to do with this.

In 1939, 517,847;

1940, 200,000.

That is not very artistic, but that looks like 717,847 pounds.

Q. (By the Court): Who was handling that deal for your company? Who would have handled it?

A. I am not sure at that time whether the Electro Metallurgical Sales Company would have handled it, or whether the U. S. Vanadium representatives would have handled it. You are giving figures that I can't verify, because I don't think I ever saw them before.

Q. (By Mr. Alioto): Sir, these figures are already in evidence, so we won't ask you to verify them, but I want to ask you about them particularly in respect to certain questions the Court asked you a moment ago as to whether or not you needed this material and therefore did not sell it.

A. I beg your pardon.

Q. I don't indicate there was anything wrong about that.

You do recall, however, that there were some transactions between the Vanadium Corporation of

(Testimony of William John Priestley.)

America and the [1645] United States Vanadium Company?

A. I heard, as you would in a company like that, that they had sold a large quantity of ore.

Q. I am talking about vanadium oxide.

A. I am talking about vanadium oxide, not ore.

Q. Yes.

A. And the reason they did it was because—this was before we got into the war.

Q. This was 1938?

A. Yes. And they had vanadium oxide and vanadium ore running out of their ears—stockpiles for years and years ahead. And we needed cash. The company needed cash. So the logical thing to do when someone comes along and wants to buy something that you don't need, the logical thing to do is to take it for the cash you need.

Q. Is that your explanation as to why you sold your competitor 130,000 pounds in 1938?

A. As far as I know. I did not make the deal. That is what I was told.

Q. Weren't you, at or about the same time, buying vanadium oxide from independent sources for approximately a dollar?

A. I don't know. I wouldn't know that, because I wasn't dealing with the—had no dealings whatever at that time with the U. S. Vanadium Company.

Q. Your testimony is that in 1938 vanadium oxide was [1646] coming out of your ears. There was a great supply.

(Testimony of William John Priestley.)

The Court: He has answered the question. Eliminate the argument.

Mr. Alioto: I am going to call this to his attention.

The Court: You have asked him the question. He has answered the question. Eliminate the comment.

Q. (By Mr. Alioto): My questions is whether in 1939 that same condition prevailed. Was it still coming out of your ears in 1939?

A. I don't know. I wasn't in a position to know.

Q. Weren't you consulted with respect to the advisability of making a transaction with your only competitor in ferro-vanadium by the terms of which your competitor winds up with 717,000 pounds of the raw material to make the products with which they were competing with you?

A. No, I was never consulted, because it was not my responsibility whether that was sold or not. I was in charge, as I told you, of the technical service and development work, or selling more ferro alloys, but I would never have been consulted on a thing like that. I did not become president of the Electro Metallurgical Company until 1944.

Q. Mr. Priestley, wasn't it perfectly plain in 1938 that to the extent that you supplied your only competitor with vanadium oxide, that that was going to make more difficult [1647] your task of selling the ferro-vanadium as a finished product? That was plain, wasn't it?

A. No, I don't think so.

Q. Do you think that you could have converted

(Testimony of William John Priestley.)

this oxide that you sold to V.C.A. at 80 cents into ferro-vanadium and make more money out of it?

A. No, we would have had ferro-vanadium on our hands, then, instead of vanadium oxide.

Q. I am sorry.

A. I will end that right there.

Q. Go ahead.

A. That is sufficient. We would have had ferro-vanadium on our hands that we couldn't sell, instead of vanadium oxide.

Q. Mr. Priestley, wasn't there a market in 1938 for all of this vanadium oxide at $1.30 a pound in Europe at the same time that you were selling it to V.C.A. for 80 cents?

A. Who would have bought it?

Q. I am asking you whether——

A. I am asking you who would have bought it?

Q. The vanadium used was in Europe.

A. What is that?

Q. The vanadium use is in Europe.

A. I knew nothing about that.

Q. You do not know that the market price of the vanadium oxide in Europe in 1938 was $1.30?

A. I couldn't tell you that, because I didn't follow that. That didn't come into my line of activity.

Q. If that were a fact——

The Court: He has answered your question. He doesn't know anything about it. Let us not have any more argument on that.

Q. (By Mr. Alioto): Mr. Priestley, if the evi-

(Testimony of William John Priestley.)

dence in this case otherwise establishes that the price of vanadium oxide in Europe at this time was $1.30, if that is already in this record, can you tell us what business reason there was in 1938 for selling it to your only competitor for 80 cents a pound?

A. I can't give you the reason because I don't know the facts. I don't know what the market was in Europe. I don't know whether there was a demand for it there. I don't know what the price was. And I assume that our people, in disposing of that oxide, sold it to whom they could sell it at the highest price they could get.

Q. I want to ask you about this Maggie C. arrangement. Maybe we can find somebody who does know something about it.

You have certainly heard before you came to the stand today that there was this arrangement whereby your company mined the ores from the V.C.A. mines?

A. That is all I know about it, what I heard this morning, and I couldn't tell you what the story was if you asked me now, [1649] because it was far removed from my activities.

Q. Mr. Priestley, in 1938 weren't you very vitally concerned with fixing the policy of your company with respect to vanadium sales?

A. We were—yes, I was interested, and shared —probably was consulted in ferro-vanadium sales, but not ore sales.

Q. Weren't you, as early as 1934, given the

(Testimony of William John Priestley.)

special job of making a study of the automobile industry for the purpose of determining what the policy of your company should be from there on in? A. Yes.

Mr. Holland: I object, your Honor.

The Court: Don't answer the question. Disregard it.

The Court has told you several times not to go back beyond 1938.

Mr. Alioto: May I make plain what I am doing here, if your Honor please?

The Court: No, I don't want any explanation. I just want you to follow the order of the Court.

Q. (By Mr. Alioto): In 1938, Mr. Priestley, did you have a policy for vanadium which had actually been conceived and formulated prior to 1938? [1650]

Mr. Holland: I object.

The Court: Objection sustained.

Q. (By Mr. Alioto): In 1938 did your company have a policy of supplying the Vanadium Corporation of America with vanadium oxide so that that company would get most of the ferro-vanadium sales?

A. Oh, you are stretching a point.

The Court: Just answer yes or no.

The Witness: Give me your question again.

(Question read by the reporter.)

A. I never heard of a policy like that.

Q. (By Mr. Alioto): What was the reason for

(Testimony of William John Priestley.)

supplying the Vanadium Corporation of America with the raw materials?

The Court: Just a moment. Argumentative. He has stated that he didn't know anything about it and he didn't have anything to do with that.

Mr. Alioto: He has also stated that there was no such policy, if your Honor please. Now, it seems to me that I should have a right, as they were given the right, to cross-examine as to the nature of that policy and its origin.

The Court: You can cross-examine, but not argumentatively.

Mr. Alioto: All right, if your Honor please. I will attempt not to cross-examine argumentatively. [1651]

Q. (By Mr. Alioto): Had you, in 1938, a policy which was predicated upon the supply by your company of raw materials to the Vanadium Corporation of America?

A. I never heard of any policy. When you talk about a policy, my interpretation of a policy is some rule that you set that you follow from time to time. This is only an incidental incident, as I understand it, and I had nothing to do with the sale of that vanadium oxide, so I can't tell you whether anyone else had a policy. I never heard of a policy.

Q. Is it your testimony that the 1938 sale of 130,000 pounds was just an incidental, casual sale?

A. I understand it was. I didn't make it, but I understood, as I have told you, that we had—I don't

(Testimony of William John Priestley.)

know how many years—or the U. S. Vanadium Company—how many years of stock of vanadium oxide they had ahead, and they could never see that the demand for ferro-vanadium would use that. So they did the best thing they could to get their money out when they could. That is what I had been told and that is all I know about it.

Q. Mr. Priestley, you are not, in fact, referring to a much earlier period than 1938 when you say they had these big stocks on hand?

A. I am not familiar with the ore situation enough to even discuss it with you. [1652]

Q. In 1938 was the Vanadium Corporation of America in some kind of trouble with the Peruvian deposits, or with their deposits in the Peruvian Andes?

A. I don't know. That did not come under my duties as vice-president in charge of research and development.

Q. We previously had testimony in this case, Mr. Priestley, that Electro Metallurgical Company was a subsidiary of the Union Carbide, and that the United States Vanadium Corporation was a subsidiary of the Electro Metallurgical, and that the Sales Company was a subsidiary of Carbide, as was Electro Metallurgical Sales.

In 1938 what was your position with Electro Metallurgical Company, if you recall it?

A. I was in charge of research—I mean technical service and development.

Q. And that included, didn't it, some consider-

(Testimony of William John Priestley.)

able voice in the marketing policy of the company, did it not? A. Yes.

Q. Didn't that service also extend to activities which were carried on by United States Vanadium Corporation?

A. No, I did not become active in the United States Vanadium Company until 1947.

Q. And then you became vice-president of that company? A. I became the president.

Q. The president of that company. [1653]

Now, then, weren't there regular meetings from 1930 on between the various operating men in U. S. Vanadium, Electromet, and the Sales Company?

A. No. The United States Vanadium group never attended one of these meetings that you refer to, these weekly meetings, or semi-weekly meetings.

Q. You had some weekly meetings with the Electro Metallurgical Company, then, didn't you?

A. Yes.

Q. Beginning when?

A. Oh, they went back I don't know how long.

Q. At least in 1938 on? A. Yes.

Q. That is correct, is it not?

A. That is right.

Q. We won't go beyond that.

At those meetings didn't anybody ever say "Our only competitor in the ferro-vanadium business is getting supplies from us, its raw material and supplies from us, at an 80-cent price"?

A. I never heard that.

(Testimony of William John Priestley.)

Q. You never heard that?

A. The men in there wouldn't have known about it. Well, there would have been men from our research laboratory, men from our works department, and our service men. [1654]

Q. The men from your research department. You mean the Union Carbide research organization? A. Yes.

Q. They wouldn't know you were getting——

A. No, no, they had absolutely nothing to do with marketing, or the policy of marketing anything. Their function was to develop new uses for alloys, new types of steel, which would enable us to sell more alloys and to improve the process of making ferro alloys so as to lower the cost.

Q. Isn't it a fact that the men in your research department in 1938 had known for at least three years that you were supplying the Vanadium Corporation of America?

A. I can't answer that. I don't know. I don't think they did.

Q. Let me show you a copy of the document marked 47 for identification in this case. Would you examine that, and without revealing what it is, or anything else, state to me whether——

A. This refers to——

Q. Just a minute. Don't tell us what it is.

Let me ask you this question——

A. There is no use of my telling you anything, because this is 1935.

Mr. Holland: I object. [1655]

(Testimony of William John Priestley.)

Q. (By Mr. Alioto): My question is this: Isn't it a fact that in 1938 the men in your research department, the Union Carbide research department, were intimately acquainted with the fact that the Vanadium Corporation was getting its supply of raw material in part, in very substantial part, from the United States Vanadium Company?

A. Well, if they knew it, I don't know. There was no reason for them knowing it unless somebody told them about it.

Q. Hadn't that department made a very exhaustive study——

The Court: He has answered the question now.

Mr. Alioto: I would like to cross-examine him on it.

The Court: You can cross-examine, but you can't argue with the witness.

Mr. Alioto: I won't argue. I just want to cross-examine him on that fact.

The Court: Put it in the nature of a question, instead of an argument.

Q. (By Mr. Alioto): State whether or not, in 1938, your research department, with whom you were having these weekly meetings, had, prior to the 1938 meetings, made an exhaustive study of the whole vanadium situation, including the extent to which the Vanadium Corporation of America was dependent upon the United [1656] States Vanadium Company for its supplies of raw material.

Mr. Holland: Same old objection to the same old question.

(Testimony of William John Priestley.)

The Court: Objection sustained.

Now, in this case, in order that the jury may understand, this action was brought for damages because of the acts of these defendants. Now, this plaintiff did not come to America until 1938, and so nothing that these defendants could have done prior to that time would have any effect on him, because he was not here; he was not in business.

Now, the Court has limited this examination, therefore, to what acts these defendants committed after this plaintiff came into the business himself.

Mr. Alioto: If your Honor please, I think it ought to be fair on my behalf to state that our contention is that there existed in 1938——

The Court: No, I don't want you to make any argument at this time. You have filed your complaint and you have asked for damages because of conduct of these defendants, certainly after your man came here; not what they did back in 1935, 1926 or 1927. That is immaterial.

Mr. Alioto: Even if it evidences the agreement in 1938 and 1939?

The Court: Absolutely. It is immaterial.

Mr. Alioto: For example, your Honor, the witness [1657] said this was a casual sale in 1938. I can prove it was not, if your Honor will let me.

The Court: No, I don't want your argument. If you will just limit yourself to asking questions, we will get along.

Q. (By Mr. Alioto): I asked you about a joint operation on vanadium oxide between your com-

(Testimony of William John Priestley.)

pany and its only competitor in the ferro-vanadium field in 1939 and 1940. That is referred to as the Maggie C. claim. You said you had not heard about this until you came to this court. Was there another deposit called the Dry Valley deposits, which were the subject matter of some kind of joint operation between your company and its only competitor, the Vanadium Corporation of America?

A. I don't know.

Q. Which carried down to 1942?

A. I don't know about that.

Q. You never heard of the Dry Valley deposits?

A. No. If I did I have forgotten about it. I don't know.

Q. Did it ever come to your attention, sir, after 1938, that the Vanadium Corporation had purchased certain rights in properties which were known as the Dry Valley properties—rather, that the United States Vanadium Company had purchased certain rights, and that they thereafter transferred their rights to your company, to the Vanadium Corporation of America, [1658] rather, and that the Vanadium Corporation of America thereafter let your company mine those deposits after 1938?

A. That is a detail I knew nothing about.

Q. Do you know whether or not the chief managing agents of United States Vanadium Company—well, let me—I will not assume who they are—Mr. Van Fleet was certainly your chief managing

(Testimony of William John Priestley.)

officer, of the United States Vanadium Corporation, was he not? A. He was the president.

Q. Yes. A. Yes, sure.

Q. He was the main man, actually. And who was his assistant in connection with the carrying on of his duties?

A. I think Burwell was his assistant.

Q. And Burwell was also the mining superintendent, wasn't he?

A. I am not sure whether he came in to that or John Hill or——

Q. And Burwell was at one point the vice-president of this company, the United States Vanadium Corporation, was he not?

A. I think so.

Q. And he was also a director of this company?

A. I think so.

Q. Now, did it ever come to your attention, Mr. Priestley, that Mr. Burwell and Mr. Van Fleet had meetings with Mr. Bransome of the Vanadium Corporation of America at which they discussed the prices of ore to be paid to miners?

A. I never heard of such meetings, and I wouldn't know [1659] because they didn't report to me. They were working independently. Van Fleet was running the United States Vanadium Company. I don't know who he talked to.

Q. So if there were meetings with your competitor, you wouldn't have known about it?

A. No.

Q. In 1938 or any other time?

(Testimony of William John Priestley.)

A. No. I told you that over and over.

Q. All right, sir.

Did it ever come to your attention, sir, that the plaintiff company, the Continental Ore Company, had made requests of your company to be supplied with vanadium oxide at $1.10 per pound?

A. When?

Q. 1940 on.

A. I never heard of the Continental Ore Company until this suit was brought against our corporation.

Q. How about the Apex Smelting Company?

A. I knew the Apex Smelting Company because as the service and development man I had called on them in the line of duty selling them silicon metal and other ferro alloys and—or other alloys, possibly, but I never knew that they were interested in making ferro-vanadium until I heard about this suit.

Q. You mean that in 1942 you did not know that there was [1660] one other ferro-vanadium producer in this country, namely, the Apex Smelting Company, under a joint arrangement?

A. I hadn't heard about it, to my recollection, no.

Q. Well, weren't you the chairman in Washington of a W.P.B. industry committee that had to do with this steel?

A. Well, this is not steel.

Q. No, I understand that. But weren't you such a chairman?

(Testimony of William John Priestley.)

A. I was director or head of a—I was trying to think of the proper name—they had so many committees. The alloy steel division of the steel branch.

Q. Yes. And you had a vanadium director under you, didn't you, a man named Jenks?

A. That didn't come under the steel division.

Q. Well——

A. Or the steel branch, either.

Q. In this alloy branch, did ferro vanadium come within the scope of its work?

A. No, oh, no. No, that was a separate thing altogether.

Q. In any event, your testimony is that even in 1942 you didn't know there was another competitive producer of ferro-vanadium?

A. I can honestly say I don't recall that.

Q. All right.

A. I don't think I knew. [1661]

Q. Now, Mr. Priestley, your counsel asked you about a meeting in December of 1946 which you called a meeting of the operating men.

A. Yes.

Q. Do you have that meeting in mind? That is the meeting that Mr. Burwell was invited in to make a request, a budget request, with respect to the production. A. That's right.

Q. All right. Now, isn't it a fact that at that meeting the principal business discussed by Mr. Burwell was the fact that he and Mr. Van Fleet had gone over their budget by about $70,000 in

(Testimony of William John Priestley.)

fixing up the Rifle plant for the production of uranium and vanadium, wasn't that the thing that was discussed by Mr. Burwell at that time?

A. It was the whole budget that was presented. As I said before, the thing I objected to was the money that he was planning to spend at Henderson, Nevada, making tungsten chemicals. He had been spending money there for many months, for which he had no appropriation, and the accounting department told me when I got into this thing that he was planning to reimburse the—reclaim the money for his treasury when he sold the products that were going to be made at that plant, and when we closed the plant down, in 1947, after I became the president, he had spent about a million and a half dollars that we got no return for. [1662]

That was my objection to that budget, why I wouldn't present it to the operating committee.

Q. Well, don't you recall there was also a discussion about some expenditures he had made at the Rifle plant which were over-budget expenditures? A. Well, they were minor.

Q. About $70,000, wasn't it?

A. That's likely to happen. That wasn't the crucial thing or the critical thing.

Q. All right, regardless of whether it was crucial or critical, that was discussed at that time, was it not, this $70,000 amount that he went over the budget on?

A. No, that wasn't the thing he was criticized for.

(Testimony of William John Priestley.)

Q. No, I am not saying he was criticized for that or anything else at the moment. That was discussed at this meeting, was it not, though, Mr. Priestley?

A. I judge it was. The budget was discussed. Yes, he presented it and told what the facts were.

Q. Now, it was customary in the usual course of the business of your company that if a man did go over his budget, even by $70,000, that that would have to be brought up in connection with the budget approval, isn't that correct?

A. Well, he would have to explain it.

Q. Sure.

A. And the budget would probably have—the budget would [1663] have been increased. But there was never any objection to the operating committee doing that.

Q. Now, don't you recall that Mr. Burwell explained at that meeting that he had gone over his budget at Rifle by $70,000 because he was getting the plant ready for uranium?

A. That is why they didn't object to it.

Q. All right. And then don't you recall further that at that juncture you said to him: "Where are you going to sell the vanadium that you are going to get from the uranium production?"

A. I never made a statement like that. That wasn't worrying me one bit, because we were selling the vanadium oxide that was produced along with the uranium oxide, we were selling all the vanadium oxide to the government.

(Testimony of William John Priestley.)

Q. Isn't it a fact, Mr. Priestley, that your company adopted as its policy of recommendation to the United States Government that the uranium production should be geared to the vanadium sales?

A. No, no such thing at all. We were more patriotic than that.

Q. I am not suggesting any patriotism here.

A. ——we never would have gone to Paducah with all this atomic energy——

Q. Mr. Remmers is the expert on patriotism. I am not suggesting there was anything unpatriotic here at this juncture.

A. I don't want you to think we weren't, either.

Q. Now, Mr. Priestley, do you recall that there came a time in 1947 when Mr. Gustafson of the Atomic Energy Commission issued a statement to the effect that its policy on the production of uranium would be geared to vanadium sales?

A. I never heard that. Walter Remmers was following that all the time. Walter would be familiar with that, I wouldn't.

Q. Let me——

The Court: Now, if he didn't know anything about it——.

Go ahead.

Mr. Alioto: Let me show it to him, if your Honor please. Maybe he will remember something about it.

The Court: Go ahead.

Q. (By Mr. Alioto): I want to show you and call your attention to the statement of Mr. Gustaf-

(Testimony of William John Priestley.)

son, which is in evidence here as 59-A, that "Since the estimated annual production of the Colorado Plateau, even under an accelerated program, would be small in relation to the total U. S. requirements, and to supplies available from foreign sources, it appeared more economical to obtain the uranium as a by-product from vanadium operations which were geared to the vanadium market."

A. What year was that?

Q. I call your attention——. December '48.

Now I call your attention to that statement and ask if [1665] that is not in fact the policy declaration which your company advised the Atomic Energy Commission on.

A. I don't believe we ever——. Who wrote this thing?

Q. Mr. Gustafson.

A. Well, he was in the Atomic Energy Commission.

Q. Yes. I thought I made that plain. I am sorry, sir.

This is a release by the Atomic Energy Commission. Now, my question is——

A. Well, who advised him about that?

Q. That is what I want to know. Was it your company his advisor on the potential of the Colorado Plateau, its adequacy or inadequacy to meet the uranium demands of this country?

A. I never remembered hearing of advice being given to him on the subject.

Q. Was it not a fact that your company was the

(Testimony of William John Priestley.)

advisor to Mr. Gustafson and the Atomic Energy Commission on the potential of the Colorado Plateau?

A. I think the Atomic Energy Commission, I assume or would judge, would get it from everyone that was there that was interested in producing uranium. We weren't their sole advisors.

Q. But you were one of them, were you not?

A. I think we were, yes.

Q. And weren't you the advisors that was most familiar with the Colorado Plateau because of your history there? [1666]

A. I can't answer that. I couldn't answer that. I never heard of him getting advice like that.

Q. To complete this meeting, is it not a fact that at that meeting Mr. Burwell told you that if you would stop making deals with the Vanadium Corporation of America you wouldn't have any trouble selling vanadium? A. No.

Q. Did Mr. Burwell——

A. I never heard that from anybody.

Q. Did Mr. Burwell or Mr. Van Fleet ever tell you, sir, that you ought to stop making deals with the Vanadium Corporation of America and sell vanadium on your own?

A. We never made a deal with them.

Q. My question is: Did Mr. Burwell ever tell you? A. No.

Q. Did Mr. Rafferty ever tell you that you were not to make deals with them?

A. No. Well, we never made deals with them.

(Testimony of William John Priestley.)

Q. Then your statement is that no officer or director of any Union Carbide's subsidiary, including the United States Vanadium Corporation, ever told you that you ought not to make deals with the Vanadium Corporation of America?

A. No, because we never made deals. They had no reason to tell me not to make deals.

Q. Did you ever hear from any officer or director of the [1667] United States Vanadium Corporation that you ought not to supply the Vanadium Corporation of America with the raw material with which they were going to compete with you? Did you ever hear that statement made?

A. No. I think they were—they were shut down. I think they were shut down when they shipped some of that stuff.

Q. You mean the Vanadium Corporation of America were shut down?

A. No, the United States Vanadium Corporation.

Q. But in any event, nobody ever told you that you ought not to supply raw material to them, is that the statement? A. No.

Q. Did Mr. MacQuigg at any time after January 1st of 1938 tell you that you should not supply—— A. Who?

Q. Mr. MacQuigg. A. MacQuigg?

Q. Yes. At any time after January 1st of 1938 did he ever tell you you shouldn't supply the raw material to the Vanadium Corporation of America

(Testimony of William John Priestley.)

but instead you should sell it in the form of ferro-vanadium and take their customers away?

A. MacQuigg never told me that. And he was not in a position to tell me or anyone else what they should do with raw materials, because he was in charge of metallurgical research at our research laboratory. [1668]

Q. Mr. Priestley, I show you a letter which has been marked 81 for identification: it is a letter from Mr. Henry J. Leir to Mr. M. D. Arronet, dated January 29, 1943. It is not in evidence in this case but only has been marked for identification.

A. (Witness examining.)

Q. Have you ever seen that letter before, Mr. Priestley? A. Never.

Q. Did you ever have a discussion with anybody inside any of the Union Carbide subsidiaries about the shipment of vanadium and Van-Ex from the United States to Canada? A. No.

Q. At any time?

A. No. Well, excuse me. Let me correct that. After I gave you a deposition——

Mr. Archer: Well, I object to this, your Honor.

The Witness: That goes back further——

Mr. Archer: This is after the filing of this lawsuit, isn't it, Mr. Priestley?

The Witness: Oh, yes. Yes.

Mr. Archer: Well, I object——

The Witness: I didn't know about it until after the filing of the lawsuit.

Q. (By Mr. Alioto): Didn't know what?

(Testimony of William John Priestley.)

A. Anything about ferro-vanadium or Van-Ex or anything [1669] being shipped to Canada.

Q. Well, do you know of any dispute between the Continental Ore Company and your company about shipments to Canada?

A. Not until after——

Mr. Archer: I object.

The Court: Sustained.

Q. (By Mr. Alioto): Now, then, finally, Mr. Priestley, do you recall there was an occasion when your company bid on some vanadium products that was sold to the United States Government about 1946? A. A vanadium product?

Q. Yes.

A. Do you mean ferro-vanadium?

Q. Either ferro-vanadium or vanadium oxide. Do you have any recollection about a bid to the U. S. Government where you had a discussion with Mr. Burwell about letting the Vanadium Corporation of America take the business instead?

A. No.

Q. You have no recollection of any such discussion? A. What?

Q. You have no recollection of any such discussion?

A. No, no. That would have been handled by our sales.

Q. Now, what was the period of time when you became the president of the Electro Metallurgical Company, when did that start? A. 1944.

Q. And you remained the president of the

(Testimony of William John Priestley.)

Electro Metallurgical Company from 1944 to what time, Mr. Priestley?

A. Let me think back a minute.

Q. Was it at least after 1949, sir?

A. Yes, it was after 1949, I think.

Q. Well, that is all we are concerned about. You were president——

A. I was vice-president until five years ago and I think it was about '50——

Q. Now, from the time that you became the president of the Electro Metallurgical Company—. Excuse me, prior to that time, you were the vice-president of the company?

A. One of the vice-presidents.

Q. Of the Electro Metallurgical Company?

A. Yes.

Q. And when did you first occupy that position?

A. I think I was made a vice-president of the Electro Metallurgical Company in 1932 and I was given the job of research and development.

Q. Now, I am going to direct this line of questioning to the period 1930 on. Let's forget anything that happened prior to that time.

Mr. Holland: You mean 1938 on?

A. 1938—that's back of 1938, isn't it? [1671]

Q. (By Mr. Alioto): Didn't you say you were made vice-president in 1932, or did you say '42?

A. I said '32.

Q. '32. That is what I thought. I don't want any questions, however—I am not relating my ques-

(Testimony of William John Priestley.)

tions to the period prior to '38, but only after that period of time.

After 1938 you were aware of the fact, were you not, that the Vanadium Corporation of America was selling more ferro-vanadium that Electro Metallurgical Company? A. I knew it very well.

Q. And you knew, as a matter of fact, that they sold twice as much as you sold?

A. No, I never knew any exact figure, but we could tell from the percentages of contracts that we got from our customers that they were selling more than we were.

Q. All right. A. And—go ahead.

Q. You knew at that time, didn't you, that your cost of production was lower than that of the Vanadium Corporation of America?

A. I did not. I never knew what their cost was.

Q. Well, for example, on the oxide that you sold to the Vanadium Corporation of America for 80 cents, didn't you make a profit on that?

A. Oh, that profit, I think, was credited to United States Vanadium Corporation, not Electro Metallurgical Company. [1672]

The Court: Do you know anything about that that he is talking about?

A. No, I am not sure where the profit went, but I told you I thought the profit went to the United States Vanadium Company, and the Electro Metallurgical Sales Company were only agents for the United States Vanadium Corporation.

Q. (By Mr. Alioto): Regardless of where it

(Testimony of William John Priestley.)

reposed, it reposed somewhere in the Union Carbide organization, didn't it? A. Yes, sure.

Q. This profit? A. Sure.

Q. And you knew that in 1938, didn't you, Mr. Priestley? A. Knew what?

Q. You knew you were making a profit on goods that you were selling to the Vanadium Corporation of America, the raw materials?

A. Well, I hoped they made a profit at 80 cents. I guess they did.

Q. If you knew that, you must have known from 1938 on that your cost of production was lower than your competitor who was selling more goods than you were?

A. Well, you are a better analyst than I would be.

Q. You did not know about it. Didn't you know in 1938 the Vanadium Corporation of America had had some trouble down in Peru with its mine?

A. If I did, I have forgotten about it.

Q. Did you ever inquire at any time from 1938 on as to why it was that the Vanadium Corporation of America was selling more ferro-vanadium than your company?

A. I knew why they were selling more.

Q. Why?

A. The United States Vanadium Company or their predecessor—I have forgotten the name—I think they had a predecessor before they took the name—they were the original producers of ferro-vanadium.

(Testimony of William John Priestley.)

Q. I take it you mean the Vanadium Corporation of America?

A. I beg your pardon. The Vanadium Corporation of America were the original producers of ferro-vanadium in this country. I think they started back somewhere ten or twelve years before we did, maybe more, and when we got into the production, or bought out the U. S. Vanadium Company in 1926, we had to go out and compete with the Vanadium Corporation of America and take business away from some of their old customers which they had had from the beginning of time vanadium was first put on the market. We had a lot of trouble and I knew about it, getting these customers to give us the business, because they were loyal to the Vanadium Corporation. They said they had been in the business before we were and they had a feeling we were just interlopers, breaking into a big company, much larger than Vanadium Corporation, and they had a feeling that the Vanadium Corporation was still entitled to their business.

Now, many of them would not give us contracts. We tried to get contracts from every potential ferro-vanadium user, every steel company we knew that used vanadium. We were after them and after them strong. I was after my men in charge of the development work to get in there and get more business, and if we got more we had to take it away from the Vanadium Corporation.

That is one reason why I knew they were making

(Testimony of William John Priestley.)

more than we were, but I never knew how much more.

Q. In 1938 you admittedly had better resources than they had, didn't you, better domestic resources?

A. We had good resources. I wouldn't say they were better. I don't know whether they were better than theirs or not.

Q. Your domestic resources were better than theirs to the extent that they had to buy from you, isn't that a fact, in 1938?

A. I don't know why they did, except they needed the ore.

Q. They needed the ore to make ferro-vanadium?

A. Yes. I grant you we were in a better position than they were, yes.

Q. If you were, why didn't you go after more of that market? [1675]

A. We did go after it more, but we couldn't sell the amount of vanadium we were already making because the market for vanadium still had dropped in consumption to a very small percentage of what it had formerly been.

The Court: At this time we will take a recess.

(Recess.)

Q. (By Mr. Alioto): Mr. Priestley, in answer to certain questions of the Court with respect to your investment in plants, I think you said that you had one plant that cost 15 to 20 million dollars, and there were six or seven of them.

(Testimony of William John Priestley.)

A. Six or seven plants.

Q. Six or seven plants.

A. They didn't all cost that much.

Q. I understand that, but you did not mean by that that all of that was a ferro-vanadium investment. You were talking about all your ferro-alloy business, weren't you? A. Oh, sure.

Q. Yes, including low-carbon ferro-chrome, for example?

A. The ferro-vanadium business was a very, very small part of that business, but the point I made when I told you about the magnitude of our plants and the investment we had in them, was what would happen to us if we had plants of that magnitude idle because we were selling oxides instead of ferro alloys.

Q. Yes, I understand that point very well.

A. I never tried to give you the idea that it was all ferro-vanadium. [1676]

Q. I know you didn't, sir, but I wanted the record to be clear on that because the Court asked the question.

In any event, as a matter of fact, your ferro-chrome business is larger than your ferro-vanadium business, isn't it? A. Yes, many times.

Q. Many times larger, and that is a very important business to you, your ferro-chrome business, is it not? A. Yes, sure.

Q. Who was your competitor in the ferro-chrome business?

A. Vanadium Corporation, Pittsburgh Metal-

(Testimony of William John Priestley.)

lurgy Company, Ohio Ferro Alloys Company, and let me see, there's another one.

Q. In the 1930's was it true that the Vanadium Corporation of America was your principal competitor?

Mr. Holland: I object to the question, "in the 30's."

Q. (By Mr. Alioto): All right, starting with 1938. Say as of 1938 the Vanadium Corporation of America was the other principal producer of ferro chrome, was it not?

A. No, there were several producing in 1938.

Q. Wasn't the Vanadium Corporation——

A. I think all those that I mentioned were producing in 1938.

Q. Wasn't the Vanadium Corporation of [1677] America the most substantial of them?

A. I don't know what their relative tonnages were. Pittsburgh Metallurgy was pretty large.

Q. Did anybody in your organization ever tell you that there was an arrangement on ferro vanadium with the Vanadium Corporation of America as a reciprocal part of an arrangement on ferro chrome?

A. No, and there never was during that period you are talking about.

Q. During that period?

A. No, certainly not.

Q. Was there at some other period?

A. No. I say that I know of at any time, and

(Testimony of William John Priestley.)

there certainly was not during the period I was president of the company.

Q. Do you know Mr. Sneath? A. Oh, yes.

Q. Mr. Sneath was kind of in charge of your foreign business, wasn't he, so far as vanadium was concerned?

A. Well, Mr. Sneath was interested in our foreign plants. I don't know about the vanadium business.

Q. Did he ever tell you that there was an arrangement on vanadium with the Vanadium Corporation of America predicated upon a reciprocal arrangement on ferro chrome, which was more important to you than the vanadium? [1678]

A. No, he never did.

Q. I think you stated in your testimony, sir, that the Union Carbide research organization never had anything to do with marketing, is that right?

A. That is right.

Q. Is that your best recollection of your testimony?

A. I know what duties they had.

Q. They never did have anything to do with marketing?

A. Not to my knowledge, not in my time.

Q. Didn't in fact the board of directors of the Union Carbide or Electro Metallurgical Company entrust that organization with the task of making

(Testimony of William John Priestley.)

an important study with respect to the marketing of vanadium? A. No.

Mr. Holland: Will you fix the date on that?

The Witness: No.

Mr. Alioto: At any time.

The Witness: No.

Mr. Holland: I think you are getting into——

The Witness: Yes, you are getting into before 1938, but they didn't, anyway.

The Court: He has answered the question.

Q. (By Mr. Alioto): You said even before 1938 they did not?

A. No. I know what you are driving at, this MacQuigg report, and he made a report that [1679] he was never expected to make or asked to make. MacQuigg was supposed to have come up with four or five different kinds of steel that was used, that would use more vanadium. That is what we had our research laboratory for, was to find new uses for ferro alloys, new kinds of steel that would use those alloys. That was the problem that was given to him. But he never came up with that at all. That is why, as I told you in my deposition, I wouldn't even read the report because he did not give us what we were looking for from the research laboratories.

The Court: When was that report made?

Mr. Alioto: The report was made in 1935 and discussed from there on in.

(Testimony of William John Priestley.)

The Court: The Court has ruled on that matter a number of times.

Mr. Alioto: Yes, if your Honor please, but after——

The Court: The Court has ruled on that matter and I don't want you to ignore the ruling of the Court any further on that matter.

Mr. Alioto: I am not ignoring the ruling. I think I ought to state that for the record because I think I have been deferential in that matter.

The Court: You offered that and it was declined.

Mr. Alioto: I offered, if your Honor please, Plaintiffs' Exhibit 47 for identification only in connection [1680] with the testimony that was given just before the recess that the research organization never had anything to do with marketing. I offer it to disprove that fact.

I take it the offer is rejected.

The Court: Yes, it is rejected.

Mr. Alioto: We have no further questions of the witness.

Mr. Archer: I have no further questions of Mr. Priestley, your Honor.

The Court: Step aside.

(Witness excused.)

Mr. Archer: My next witness, your Honor, I should like to call Mr. John Mitchell.

JOHN MITCHELL

called as witness by and on behalf of the defendants, and having been previously duly sworn, testified as follows:

Direct Examination

Q. (By Mr. Archer): Will you state your name and address for the record, Mr. Mitchell?

A. John Mitchell, 630 Willow Drive, Pittsburgh, Pa., 16.

Q. What is your present occupation, Mr. Mitchell?

A. I am the assistant manager of sales of the Constructional Alloy Steel Sales Department, U. S. Steel Corporation.

Q. What experience have you had in the field of alloy steels? [1681]

A. You mean my connection with companies?

Q. You can start with that.

A. Well, in 1917, I started with Frost Gear Forge Company, Jackson, Michigan, in the metallurgical department and the heat-treating department, until 1924.

In 1924 with Sizer Steel Corporation in Buffalo, in charge of metallurgical inspection.

In 1924 to about 1928, with the United Alloy Steel Corporation in Canton, Ohio, in the metallurgical department, and in the rolling divisions of rear axle shafts for automobiles.

Their successors, Central Alloy Steel Corporation, moved me into the metallurgical department again in metallurgical contact service work, and

(Testimony of John Mitchell.)

studying the constructional alloy steel applications and uses and the servicing of that product in the trade.

In 1936 I was hired by the United States Steel Corporation to go to Chicago and set up their metallurgical bureau for technical trade service work.
